P R E F A C E .

EVERY reader of a book, a magazine, or a newspaper, is sometimes at loss for a date or fact, and meets with frequent references to historical and biographical subjects which he knows nothing about, or obscurely remembers, or only partially understands. If he has at hand a volume which will readily answer any inquiries that arise in his mind, he will turn to it, and thus remove his ignorance, or clear away the doubt and obscurity that rest upon his understanding. If he has no such work at easy command, he will in most cases let the matter pass, and the need for knowledge goes unsatisfied.

Such extensive works as the *Encyclopædia Britannica* and the *American Cyclopædia* are costly, and are therefore in the hands of comparatively few persons; besides, they are too cumbrous for easy and frequent reference. The value of a volume like *THE COTTAGE CYCLOPEDIA OF HISTORY AND BIOGRAPHY*, to lie familiarly upon the table or the shelf, ready at call to answer the thousand questions that arise, is too plain to require discussion. It will prove a great convenience even to those who possess ample libraries, and whose minds are stored with historical data. But it is more especially designed for family use, and for the young.

THE COTTAGE CYCLOPEDIA is intended to supply to every general reader such a book of reference as that of which the need has been shown. It is particularly commended to the attention of parents: let them place

it within the reach of their children, and inculcate the habit of consulting it as a dictionary of history and biography, whenever curiosity, doubt, or want of information may suggest. There will be thus laid up a store of precise practical knowledge, incalculable in value.

It is not, however, as a mere book of reference, that this volume is offered to the public. The materials are, it is true, gathered to a great extent from books familiar to the public. The Compiler, however, has culled many traits, anecdotes, and adventures, from less common sources; and interspersing these and other illustrative sketches throughout the pages, he has sought to enliven the work, and thus render it amusing, attractive, and readable. Many of the articles are more extensive than in the voluminous encyclopedias. Interesting topics not found in those are also introduced. The history of our own country will be found fully treated of, under different heads; and at the close of the volume a Chronological View of American History is appended. The present condition of the various countries of the earth is sketched in connection with their history. The lives of eminent political characters in all ages, as well as the lives of those whose greatness in science or literature made their names enduring, are given, some of them at considerable length, and with many characteristic anecdotes. Extended sketches will be found of several royal families; as the houses of Hanover, Plantagenet, Romanoff, Stuart, Tudor, &c. Such topics as Oracles, Druids, El Dorado, Knighthood, Chivalry, Fairies, the Argonauts, the Man in the Iron Mask, Don Carlos, the Gulf Stream, Jesuits, &c., &c., which are frequently alluded to in literature, are treated of with particularity.

The dates of important inventions, discoveries, and improvements in the arts and sciences, and remarkable and interesting facts generally, will be found appropriately arranged. Among such topics may be mentioned the following:—Abdications; Alliances; Amazons; Ambassadors; the Armada; Bachelors; Banks; order of the Bath; Bells; Bible; the vicar of Bray; the Cinque Ports; Coin; the Continental Congress; Conspiracies and Insurrections; the English Constitution; the Constitution of the United States; Councils of the Church; Declaration of Independence, with those passages in the original draught which were

omitted or changed by Congress; Discoveries in modern times, Dress; Earthquakes; order of the Garter; Labor; Libraries; Luxury; Lynch Law; Marriage; Massacres; Metals; Naval Battles; North-west Passage; Painting; Plague; Planets; Poet Laureate; Popes; Printing; Time; Wandering Jew; Wonders of the World.

The great battles of the world, ancient and modern, by land and by sea,—Thermopylæ, Marathon, Cannæ, Pharsalia, Blenheim, Austerlitz, Marengo, Waterloo, Bunker Hill, Saratoga, Yorktown, New Orleans, Buena Vista, Cerro Gordo, Chapultepec, Alma, Inkermann, Balaklava, &c.; Salamis, Actium, Aboukir, Trafalgar, Erie, Champlain, &c.,—are duly chronicled.

The work is liberally illustrated with wood-cuts, of a superior execution; the most of them designed by Baker & Andrew. A list of them is given on another page.

The COTTAGE CYCLOPEDIA is arranged with a view to compress a great amount of matter into a small compass, that the bulk of the volume may not render it inconvenient, and that its expense may not hinder its general circulation. In preparing so extensive a publication for the press, the Compiler can not hope that he has wholly escaped error or that omissions may not be noticed; but he trusts that the volume may be found sufficiently accurate and complete to fulfill the proper design of such a work, and that it may prove a valuable accession to the means of diffusing useful knowledge.

COTTAGE CYCLOPEDIA

OF

HISTORY AND BIOGRAPHY.

A.

AARON, the brother and associate of Moses, and the first high-priest of the Jews, born about B.C. 1574, and died B.C. 1451.

ABAUZIT, FIRMIN, a Protestant author of celebrity and learning, born in Languedoc, 1679, and died in 1767, having long filled the office of public librarian at Geneva. His knowledge was great, and embraced the whole circle of the sciences. He enjoyed the friendship of Sir Isaac Newton.

ABBAS, SHAH, the Great, ascended the throne of Persia in 1589, and distinguished himself in arms, by his victories over the Ottomans, and by wresting Ormus from the Portuguese in 1622, aided, however, by the British. During his reign, Ispahan became the capital of Persia. His death took place in 1629.

ABBASSIDES. The caliphs who, during the eighth and ninth centuries, made Bagdad their capital, are distinguished in history as the Abbassides. Their sway extended over Persia, Arabia, and Syria. Al-Mansur, in 762, built Bagdad, and raised the Saracenic empire to its highest point of splendor and fame. Al-Modi, to whom the empire was transmitted, did not let its reputation wane, and, under Haroun al Raschid, the dignity of the caliphate was preserved and adorned. After Haroun, reigned Al-Amin and Al-Mamun. Under Al-Motasser the governors of several provinces asserted their independence, and Bagdad alone was governed by the caliph.

ABBEY, or monastery, is a house erected for the dwelling of men or women who have taken the monastic vow, which binds them

to relinquish all worldly interests, and devote themselves to the performance of religious duties, living in a state of celibacy. A monastery receives its title from that of the ecclesiastic governing it. An abbey is governed by an abbot or abbess; a priory, by a prior or prioress, &c. The term nunnery is applied to a religious house inhabited by women. The buildings inhabited by religious communities were originally of the plainest kind, but increased in extent and splendor with their revenues, until, from the humble dwellings of unpretending ecclesiastics, they became the abodes of luxury, brilliant with costly architectural decorations, and hiding, within their lofty walls, the revels of men whose piety was but a cloak for unlimited indulgence. The buildings constituting an abbey or monastery, consisted principally of churches, cloisters, refectories, chapters, parlors, dormitories, courts, gardens, &c. The choir and interior buildings of convents were fenced in by grates, and inaccessible to visitors. The church consisted of the choir, an altar, a nave, aisles, chapels, and a tower. The cloister comprehended the galleries or covered porticoes of a monastery, in which the monks took their exercise, and surrounded an open space, generally devoted to the cultivation of flowers, neatly distributed in parterres, interspersed with grass-plats, and refreshed by careful irrigation. The cloisters were sometimes adorned with valuable paintings, and were generally finished specimens of art. The refectory of an abbey was the hall in which the fathers ate. The refectory

furnished at first frugal fare, and the holy fathers did not tarry long in it; but with the declension of ecclesiastical simplicity, the character of their meals was changed, and they made the walls ring with the merriment of high living and rich wines. The refectory of the Abbey of St. Denis, at Paris, has been celebrated for its architectural beauty. The chapter was for the reception of assemblies to discuss the private affairs of the house. The chapter-houses were sometimes ornamented with splendid pictures. The parlor was a kind of cabinet, where visitors conversed with the monks or nuns through a grated window. Formerly, convents contained parlors, in which novices were allowed the privilege of conversing together, at hours of recreation, but even then they were overheard by their superiors, who were provided with places for eavesdropping. The dormitories were usually wings in the building, containing the cells of its inhabitants. Here the monks enjoyed their brief repose, from which they were awakened to acts of devotion, or to bend in solitude before the crucifix, with its accompanying mementos of mortality, and lose themselves in the reveries of religious enthusiasm. The gardens of monasteries generally exhibited neatness, and were not the least favorite appendage to the dwellings of the monks.

The monks, in the ages of general darkness (that is, from A.D. 600 to 1500), preserved in their monasteries many valuable volumes, and kept alive the spark of learning, which, but for their exertions, would have been extinguished. Religious houses were, for ages, the sole depositories of literature and science, and their inhabitants were actively employed in the duties of education. In England, one person or more in each convent was appointed to instruct pupils, and these were the children of those neighbors who chose to send them. They were instructed in grammar and church music, free of expense. In the nunneries, females were taught to read and work, and the daughters of noblemen and gentlemen, as well as of the poorer people, were indebted to the nuns for a large part of whatever knowledge they possessed. Many poor descendants of noble families looked to monasteries for refuge, and having taken the vow, made use of the influence of

friends to gain high ecclesiastical offices. Many of the monks were men driven to enter religious houses by the pangs of remorse, and who hoped to expiate a career of crimes by seclusion from the world, and the observance of the most austere rites of the church. These, as well as some who were unaffectedly pious, lived a blameless life; but there were others whose profligacy was unrepressed, because hidden by that veil of hypocrisy which they closely drew around them. Many monks were skillful painters, as the richly illuminated manuscripts of other days prove, and numerous were the legends of saints, gorgeously blazoned upon pages of vellum, that filled the shelves of the holy fathers. Living a life of undisturbed seclusion, those who possessed a literary turn, had ample time to indulge their propensity, though very few literary works of any merit issued from the monasteries.

The year 305 is that in which the earliest monasteries were established in Egypt, under the conduct of St. Anthony, and hence sprang shortly afterward, many others in various places. In 360, the earliest monastery in France, that of Saint Martin, at Poitiers, was established. In the beginning, monasteries were inhabited by laymen. For more than six centuries all the eastern monasteries were independent of each other, and governed by abbots who were answerable to their bishops only. The first monasteries, in times of trouble and darkness, preserved the spirit of religion, and were sanctuaries in which piety and learning sought refuge from the ignorance, irreligion, and persecutions of the world. A mild light, denied to the rest of mankind, was shed upon those who took upon themselves the fulfillment of monastic vows. The conduct of the monks was regulated by the plain commands of the Scriptures, and antiquity was followed in the celebration of religious ceremonies, and the practice of Christian virtues. The monks, as remarked above, were, for many centuries, the preservers of literature, many valuable works of the present day having been rescued from destruction by monastic libraries. But with the revival of letters, and the triumph of the Reformation, the usefulness of monastic establishments passed away.

Constantine IV. ordered a vast number of friars and nuns to appear at Ephesus, where

he bade them change their black habits for white, and to destroy their images. They remonstrated that because of their vows, to obey was impossible; whereupon their eyes were put out, they were banished, and their monasteries forfeited and sold for the uses of the state. The suppression of monastic houses has been frequent, even in Roman Catholic countries. All those in England were swept away by Henry VIII. Their revenues, treasures, and lands were either retained by the crown or bestowed upon favorite courtiers.

The diminution of the papal power, and the enlightened spirit of the age, in the eighteenth century, exerted a strong influence upon the public mind with regard to monasteries in Catholic countries, and they lost many of their privileges and much of the protection previously given them by law. Joseph II. of Austria, in 1781, abolished some orders of monasteries and limited the number of inmates in others. In France they were all abolished in 1790. During the reign of Napoleon, all the states incorporated with France, as well as other Catholic countries of Europe, abolished them, with the exception of Spain, Portugal, Naples, Austria, Poland, and Russia. Pope Pius VII. procured means for the maintenance of old, and the foundation of new ones in France, Bavaria, and Naples, while in Austria they became extinct.

ABBOT, GEORGE, born in 1562, and made Archbishop of Canterbury in 1610. He was a cloth-worker, and early remarkable for polemical skill. He strenuously opposed some measures of King James, thereby disproving the assertion that he owed his rise to acts more worthy of a courtier than an ecclesiastic. Having the misfortune to kill a gamekeeper of Lord Zouch, he ever afterward fasted upon Tuesday, the day on which the unhappy event took place. He was supplanted in favor at court by Laud, and died at the age of seventy-one in 1633.

ABBOT, CHARLES, Viscount Colchester, was speaker of the British House of Commons, from 1802 to 1817. He was born in 1757, and died in 1829.

ABDICATIONS OF MONARCHS: of Sylla as perpetual dictator of Rome, B.C. 79. Dioclesian, A.D. 304. Ceawlin, king of the

West Saxons, 593. Henry IV. of Germany, 1080. Stephen II. of Hungary, 1114. Albert of Saxony, 1142. Lestus V. of Poland, 1200. Uladislaus III. of Poland, 1206. John Baliol of Scotland, 1306. Otho of Hungary, 1309. Eric IX. of Denmark, 1439. Eric XIII. of Sweden, 1441. Amurath II., emperor of the Turks, 1447. Charles V. of Germany, and as Charles I. of Spain, 1556. Christina of Sweden, 1654. John Casimir of Poland, 1668. James II. of England (really dethroned), 1688. Frederick Augustus II. of Poland, 1704. Philip V. of Spain, 1724, January 15th, but resumed the scepter in about fourteen months afterward, on the death of his son Louis, in whose favor he had abdicated. Victor Amadeus of Sardinia, 1730. Charles of Naples, 1759. Stanislaus of Poland, 1795. Victor of Sardinia, June 4th, 1802. Francis II. resigns his title as Emperor of Germany, August 11th, 1804. Charles IV. of Spain, March 19th, 1808. Joseph Bonaparte from Naples to take the crown of Spain, June 1st, 1808; fled before the British from Madrid, July 29th, 1808. Gustavus Adolphus, IV. of Sweden, March 19th, 1809. Louis Bonaparte of Holland, July 1st, 1810. Jerome Bonaparte of Westphalia, Oct. 20th, 1813. Napoleon Bonaparte of France, April 5th, 1814. Emmanuel of Sardinia, March 13th, 1821. Pedro IV. of Portugal, May 2d, 1826. Charles X. of France, Aug. 2d, 1830. Pedro I. of Brazil, April 7th, 1831. Miguel of Portugal, May 26th, 1834. William I. of Holland, Oct. 8th, 1840. Christina of Spain (queen dowager and regent), Oct. 12th, 1840. Louis Philippe of France, Feb. 24th, 1848 (deposed immediately afterward). Louis Charles of Bavaria, March 21st, 1848. Ferdinand of Austria, Dec. 2d, 1848. Charles Albert of Sardinia, March 26th, 1849.

ABEL, son of Waldemar II. of Denmark, gained the scepter by assassinating his brother Eric in 1250. A revolt of the Frisons caused the loss of his life, in 1252. His appellation was certainly a misnomer.

ABELARD, PETER (properly ABAILARD, PIERRE), was born in 1079, of a noble family, at Palais, near Nantes in Brittany. The stirring incidents of his chequered life, and especially his passion for Heloise, with its melancholy fruits, have thrown a peculiar and

romantic charm around the name of Abelard. From his youth he devoted himself to study. Coming to Paris at the age of twenty, and having soon rivaled and eclipsed his tutor, Guillaume de Champeaux, he removed in two years from Paris to Melun, thence to Corbeil, and thence to Palais, his birthplace, teaching philosophy all the while with great success. The attractions of Paris soon drew him again to the metropolis, where he attacked the realism of his old master with such dialectic dexterity and vigor, that Champeaux's school was speedily extinguished. By and by his antagonist was made Bishop of Chalon-sur-Marne, and Abelard commenced to study theology under Anselm at Laon. Having, by his transcendent talent, made the seminary at Laon his envious enemy, he returned to Paris, and opened a school of divinity with unrivaled popularity. In that school were trained many men, from various countries, who afterward arrived at high ecclesiastical honors; one pope, nineteen cardinals, and above fifty bishops. In this zenith of his fame, when, according to his own confession, pride and luxury had misled him, he loved and seduced his pupil, Heloise, a young and fatherless lady, not twenty years of age, and a niece of Canon Fulbert, a Parisian ecclesiastic. Heloise was conveyed to Brittany, and bore a son in the house of Abelard's sister. The canon insisted upon a marriage, which accordingly took place; a union which Heloise openly denied, to her uncle's great vexation. Abelard placed her in the convent of Argenteuil; but her uncle took a terrible revenge for the abduction of his niece. Hired ruffians broke into Abelard's chamber, and inflicted on his person a disgraceful mutilation. Heloise became a nun, and Abelard retired as a monk into the abbey of St. Denis. At length he resumed his prelections, but had the misfortune of being suspected of heresy, and was condemned in 1121, by a council which met at Soissons. He retired to Troyes, and selected a retreat which his subdued and chastened spirit named the Paraclete, or Comforter; and in this convent Heloise was at length established as superior. But the unfortunate recluse provoked the ire of his neighbor, Bernard of Clairvaux, and again, for suspected heresy, did the council of Sens put its brand upon him. He appeal-

ed to Rome, but did not follow out his appeal. Worn out with fatigue, persecution, and infirmity, he at length took refuge in the priory of St. Marcel, where he died April 21st, 1142, at the age of sixty-three. His body, first interred at Cluni, was soon removed to the Paraclete; and twenty years afterward Heloise was buried beside him at her own request. Their ashes lay undisturbed for three hundred years; but in 1497 they were transferred to the church of the abbey; then in 1800 removed to the garden of the Musée Français, in Paris; and lastly, in 1817 they were deposited beneath a Gothic shrine in the cemetery of Pere la Chaise. The brilliant talents and oratory of Abelard are beyond dispute. As a subtle and accomplished dialectician he had no rival.

ABERCROMBIE, JOHN, M. D., a writer of some note in intellectual philosophy, born at Aberdeen, Scotland, Nov. 11th, 1781; attained high rank as a physician at Edinburgh; died Nov. 14th, 1844.

ABERCROMBIE, SIR RALPH, an eminent British general, was born in Scotland, in 1738. He entered the army at eighteen, and rose from cornet to general. He distinguished himself in the Duke of York's campaigns in Holland, from 1793 to 1795. He was then made commander-in-chief in the West Indies, and conquered several islands from the French. He commanded the expedition to re-conquer Egypt in 1801, and fell at the battle of Alexandria, March 21st. In this action, by whose decision Egypt was lost to France, Gen. Abercrombie displayed the chivalric valor of a knight of the olden time. Dismounted, and suffering from two mortal wounds, he disarmed his adversary, and gave the sword into the hands of Sir Sydney Smith. He survived about a week. His memory was honored by his countrymen, and a costly monument erected in St. Paul's, a public token of the respect of England for as brave and true a soldier as ever fought beneath her banner.

ABERNETHY, JOHN (1763-1831), was a native of the north of Ireland. He was a pupil of John Hunter, and became an eminent surgeon in London. He was as eccentric and brusque in his manners as he was skillful in his profession.

ABINGER (JAMES SCARLETT), Lord, an

eminent English barrister and judge, was born in Jamaica, about 1769, of an influential West Indian family. He studied at Cambridge and the Middle Temple, and was called to the bar in 1791. He was a successful lawyer; sat in parliament, at first acting with the Whigs; going over to the Tories, he was attorney-general under Canning, and afterward under Wellington. In 1834 he was made chief baron of the exchequer, and raised to the peerage by the title of Baron Abinger. He died April 7th, 1844, of paralysis, by which he was attacked while on the circuit.

ABOUKIR, the site of the ancient Canopus, is an Arabian village containing but about a hundred inhabitants. Its bay is spacious, and has, upon the western side, a castle of considerable strength. It is thirteen miles north-east of Alexandria, upon the coast of Egypt. Aboukir is rendered famous by the important naval battle fought here between the French and English fleets, the latter commanded by Admiral Nelson, on the 1st of August, 1798. Bonaparte's army was conveyed to Egypt by the French fleet, which sailed from the harbor of Toulon, on the 19th of May, 1798. As soon as intelligence of this reached the English fleet before Cadiz, Admiral St. Vincent despatched Rear-Admiral Nelson with fourteen ships of the line, to the Mediterranean, with orders to find and attack the French fleet. Nelson, burning for fame, and eager to meet the enemy, at length found them in the road of Aboukir. The signal for battle was immediately given. The French captains, who had been assembled on board the admiral's ship, hastened to their posts, and an English ship instantly commenced the attack. The French fleet was disposed in the form of a crescent, following the curve of the bay, and anchored as close as possible to an island on which was erected a powerful battery of cannon and mortars. Nelson ordered a part of his fleet to break through between the island and the French line of battle, and to coast along until they gained the enemy's rear, while the remainder of the English fleet approached the enemy's front, and anchored within pistol-shot. These orders were executed with skill and daring, and, at half past six in the evening, the battle began, just as the setting sun threw a fiery

hue upon the fearful scene. The fire of the English was well directed and deadly. At the end of one hour, five French ships were disabled and captured. Admiral Brueys was shot as he was directing the fight from his ship *l'Orient*. After the admiral was shot, Capt. Casabianca and crew, determined to maintain the honor of the flag-ship, fought her with great spirit. *L'Orient* blew up after having been fought for four hours. She was a superb vessel, a hundred-and-twenty gun ship, with a crew of a thousand men, out of whom but eighty or ninety were saved from destruction. The scene of the combat must have been awfully sublime, for the cannonading continued all night, and day dawned upon a scene of destruction and dismay. The French suffered severely. Only two of their ships of the line, and two frigates, got off clear. Nine ships of the line were taken, one blown up, and one frigate sunk. The French themselves set fire to and burned a ship of the line and a frigate. The success of the British was a severe blow to Bonaparte, as it cut off his communication with France, and inspired his enemies with fresh hope and resolution, giving spirit to the coalition formed against the power which had so suddenly attained a giant strength. The conflict is also sometimes called the battle of the Nile: it obtained the victorious admiral a peerage, by the title of Baron Nelson of the Nile. His exclamation upon going into the fight was, "Victory or Westminster Abbey!" Aboukir was also the point where Abercrombie's forces debarked, and it surrendered to him after an obstinate and sanguinary struggle with the French, March 8th, 1801.

ABRADATES, a king of Susa, of whom Xenophon relates that his wife, Panthea, having been taken prisoner by Cyrus, was well treated, in consequence of which her husband joined the troops of the conqueror, but was killed in the very first battle which he fought for him. His wife, in despair, killed herself upon his corpse. Both were honored and lamented by Cyrus.

ABRUZZO is divided into three provinces: Abruzzo Citra, and Abruzzo Ultra, I. and II.; so named from their relative position with regard to Naples. It is the northern extremity of the Neapolitan kingdom, and bounded on the north and west by the territories of the

church, and on the east by the Adriatic. Its population in 1845 was estimated at 825,940. The country is crossed in all directions by the lofty Apennines and their off-shoots. The spring rains and thaws often swell the streams to such an extent, that bridges are swept away, and all communication broken up. The inhabitants of the valleys, which are fertile, are generally shepherds, and fine herds feed upon the eminences and pasturage spots of the valleys. Abruzzo is a very important division of the Neapolitan states, of which it constitutes the chief defense on the land side. During the numerous invasions and civil wars of that kingdom it has often been the scene of protracted contests. The chief towns are, Chieti, population 15,000; Teramo, population 10,000; Aquila, population 14,000.

ABULFEDA, or Ishmael, prince of Hamah in Syria, an Arabian, famous for his historical and geographical writings, and surnamed the Pillar of Religion, and the Prince of Victory. He was a native of Damascus, and born A.D. 1273. Although inheriting the throne of Hamah from his uncle, he was debarred for a long time from the enjoyment of his rights, but when gained, the kingdom remained undisturbed under his sway, until the time of his death, which took place A.D. 1333.

ABYDOS, a city on the Asiatic side of the Dardanelles, of Milesian origin, famed for the bridge of boats constructed by order of Xerxes, and familiar to all readers as the residence of Hero, the mistress of Leander, who swam the Hellespont to meet her, until

"That night of stormy water,
When Love—who sent—forgot to save
The lone, the beautiful, the brave,
The only hope of Sestos' daughter."

Lord Byron, whose lines we quote, performed Leander's feat in company with Mr. Ekenhead, an Englishman. The turbulence of the currents renders the passage a critical undertaking. The inhabitants of Abydos gallantly defended their city against Philip of Macedon.

Another ABYDOS in Upper Egypt, was famed for the magnificence of the palace of Memnon and the temple of Osiris. Some splendid ruins, manifesting its former grandeur, are to be found in the village of El-Kherbeh.

ABYSSINIA is a large tract of elevated table-land in eastern Africa, the north-eastern edge of which is directed toward the Red Sea, and is from thirty to sixty miles from the coast. It lies between 8° 30' and 15° 40' N. lat., and between 35° and 42° E. long., and is drained by the principal branches of the Nile. The name is thought by most authors to be derived from the Arabic *Habesh*, which signifies a mixed people. The Portuguese gave this country the name of Prester or Presbyter John's empire, but it appears that there is no foundation for the supposition that any such person ever dwelt or was heard of in Abyssinia. The ancients, who were very little acquainted with the kingdom, represented its extent as far greater than the reality proved. Its three grand divisions are Tigre, Amhara, and Shoa and Efat. There is an ancient tradition that Abyssinia was the kingdom of Sheba or Seba, the visit of whose queen to Solomon is spoken of in the sacred writings, and that the Queen of Sheba had a son, of whom Solomon was the father. From this prince, whose name was Menileh, the sovereigns of Abyssinia claimed to be descended. The Jewish religion, some think, was prevalent in Abyssinia until nearly the middle of the fourth century, when missionaries from Alexandria converted the people to Christianity. Others conjecture that Abyssinia was the kingdom of that queen Candace, whose eunuch was baptized by Philip, and that Candace and her people embraced the same faith. In the fifteenth century the Portuguese assisted the Abyssinian monarch against his enemies and in return he adopted the Catholic religion. The Romish priests were finally expelled in 1632.

For more than a century this country has been in anarchy. There is a sovereign, but his authority is only nominal, and civil wars are frequent. The population is estimated at between three and four millions. The bulk of the people are of the Circassian race. There are many Mohammedans in the land, but the prevailing faith is Coptic Christianity. The head of the church, called *Abuna*, (meaning "our father"), receives his ordination from the Archbishop of Alexandria. Wheat and barley are grown; in some places Indian corn, and in others cotton. The country is poor in minerals. Iron-ore of good quality

is found. Rock salt is found abundantly in the eastern extremity of Tigre, and the common currency consists of pieces in the shape of a whetstone, weighing nineteen or twenty ounces. The manufactures are rude, but what progress in these the Abyssinians have made, is original, for they have had little intercourse with Europeans. They tan skins well, make rough iron implements, and weave coarse cotton cloth. Coarse black pottery is made in every part of the country. They have some traffic with the interior of Africa, in slaves, ivory, coffee, civet, gold, cloth, iron, and cattle.

Bruce gives a sorry picture of the people. The punishments in Abyssinia are severe, and frequently as well as unfeelingly inflicted. Death on the cross, hanging, stoning to death, flaying alive, and plucking out the eyes, stand foremost in the dark catalogue. The bodies of those who suffer death for treason, murder, and the commission of some other crimes, rarely receive the rites of sepulture. Pieces of dead carcasses are frequent in the streets of Gondar, and nightly attract numbers of wild beasts. The hyenas, whose craving for human flesh is well known, rush to their banquet as soon as night settles on the town, howling over the bones for which they have contended fiercely. The manners and customs of the Abyssinians prove the shocking cruelty and brutality of this people. Their festivities are disgraced by the most revolting practices. When the guests are assembled, the cooks cut steaks from the cattle at the door while they are yet alive, and roaring with agony. The guests wipe their fingers upon the cakes which they afterward eat. The people are illiterate and depraved, and their whole country exhibits the appearance of hopeless wretchedness and poverty.

ACARNANIA, a division of ancient Greece, now Il Carnia, or Il Despotato, Albania, was formerly called Curetis, a country of Epirus, separated from Ætolia by the Achelous, and long an independent state. After having been conquered by the Romans, it was permitted to retain its own laws until the destruction of Corinth by Mummius, when it was united to the province of Achaia.

ACHAIA was a narrow strip of the Peloponnesus, and stretching along the Bay of Corinth. The name is sometimes employed

by the early poets to distinguish all Greece. After Greece became a Roman province, Achaia included all the Grecian states but Macedonia and Thessaly. Eighty years after the Trojan war, the descendants of Achæus, who first dwelt in the country near Argos, being driven out by the Heraclidae, seized upon the twelve Ionian cities, and kept them. These were Pellene, Ægira, Æges, Bura, Tritæa, Ægion, Rhypæ, Olenos, Helice, Patræ, Dyme, and Pharæ. These twelve little states of Achaia were independent republics, and were combined in the famous confederacy known as the Achaian League, about B.C. 281. This was much like the federal union of our own states. Aratus and Philopœmen by their talents and bravery raised it to a high rank. It was conquered by the Romans 146 B.C.

ACHILLAS, a general of Ptolemy, and the murderer of Pompey the Great.

ACHILLES, as the poets tell us, was the son of Peleus, a Thessalian king, and Thetis, daughter of Nereus, grandson of Æacus. Thetis, in order to preserve her beautiful boy from the dangers of war, dipped him in the Styx (a river of hell), which rendered him invulnerable, with the exception of the heel by which she held him. Having been warned that if Achilles went to the Trojan war, he would meet death after a glorious career, while, in remaining at home, he would attain a good old age, Thetis disguised her boy in a female dress, and sent him, under the name of Pyrrha, to be educated at the court of Lycomedes, king of Scyros, who brought him up with his daughters. The Greeks were informed by the prophet Chalcas, that Troy could not be taken without the aid of Achilles, and accordingly, Ulysses, the most wily of the Greeks, went as a merchant to the court of Lycomedes. Here he was surrounded by the princesses, before whose eager eyes he spread out his sparkling store, taking care to mingle implements of war with feminine articles. While the daughters of the king seized upon the trinkets, Achilles possessed himself of the arms. The gleaming breastplate and the burnished spear ill matched the garb he wore, and the fiery young hero was soon induced to cast it off, and take part with the Greeks in their expedition. Phoenix and the Centaur Chiron had instructed him in mental

and bodily accomplishments, and the former accompanied him to Troy. Achilles is one of the bravest and most beautiful of the Homeric heroes, being the subject of some of the finest verses in the "Iliad." The following glowing description is from the nineteenth book of the immortal poem.

"In the midst was arm'd the godlike Achilles,
Grinding his teeth, and whose eyes
Roll'd glowing like a flash of fire, into whose
heart
Enter'd intolerable pain: raving against the
Trojans,
He donn'd the gifts divine which the artist Vulcan
had made for him.
First around his thighs he placed the cuirasses
Beautifully form'd, and fix'd with silver clasps,
Next the cuirass on his chest he placed,
Then around his shoulders he threw the baldric
of his sword studded with silver knobs
And brass; and then his shield, large and broad,
He took, whose refulgence spread far and wide
like that of the moon,
As when from the sea, there shines to mariners
a beam
Of flaming fire, which blazed aloft from the
mountains,
In a shepherd's solitude: them reluctant, the
tempests
Bear far away from their friends over the fishy
sea:
In like manner the gleam mounted heavenward
from Achilles' shield
Beautiful, Dædalæan. His mighty helmet up-
lifting
On his head he placed; like a star, shone
The horsehair-crested helmet: there waved
around him the hair
Of gold, with which in great abundance Vulcan
had surrounded the crest.
The godlike Achilles essayed himself in his
armor,
Whether it might fit him, and if his fair limbs
should move easily:
To him it was like wings, and buoyed up the
Shepherd of the people.
From the sheath his paternal spear he drew,
Ponderous, huge, strong: which none other of
the Greeks was able
To brandish, and which Achilles alone knew how
to rear,
—That ashen spear of Peleus which Chiron had
hewed for his father
From the summit of Pelion,—to be death to
heroes!"

Achilles proved himself no wavering or weak partisan. His presence was a host, but he also sailed with fifty ships well manned, and destroyed twelve island cities, and eleven on the main-land. Minerva and Juno aided him. Agamemnon, whom the Greeks had chosen their leader, having taken prisoner

Chryseis, daughter of Chryses, priest of Apollo, was forced to restore the maid to avert from the Greeks the plague which Apollo, moved by the prayers of his aged worshiper, sent upon them. Agamemnon offended Achilles by taking from him his beautiful captive, Briseis, daughter of Brises, and wife of Mines, king of Lyrnessus. Enraged at his loss, the formidable warrior retired from the field, permitting the Trojan Hector to carry terror and slaughter through the ranks of the Greeks. He, however, suffered his friend Patroclus to assume his arms, and take the field at the head of his own warriors; but this hero soon fell beneath the arm of Hector. Burning to revenge the death of his friend, Achilles determined again to confront the Trojans. His mother brought him the splendid arms which Vulcan had forged for him, so finely described above. Again he burned with a warrior's ardor, was reconciled to Agamemnon, and, refreshed by nectar and ambrosia sent by Minerva, plunged into the heat of battle.

Achilles speedily rolled back the tide of war. He pursued the retreating Trojans into the river Xanthus, which became choked with bodies, and crimson with carnage. The river-god, resenting this sanguinary pursuit as an insult, commanded Achilles to desist, and on the refusal of the impetuous warrior, overflowed his banks, and opposed him, assisted by the waters of Simois. The west and south winds, and the aid of Vulcan, sent by Juno, chastised the assumption of the river-god and reduced him to his original limits. Achilles was only prevented from taking the city by the interference of Apollo, the protector of the Trojans. Hector confronted and fought Achilles, by whom he was slain. His body, after being attached to the chariot of the victor, and dragged round the city, was ransomed by Priam, the venerable father of the slain warrior. Achilles, falling in love with Polyxena, daughter of Priam, purchased her hand by a promise to defend Troy; but while standing at the altar with her, an arrow from the bow of Paris pierced his heel and slew him. His body was a prize for which a fierce contest arose. The Greeks sacrificed his bride upon his tomb, according to his dying request, that he might enjoy her society in the Elysian fields, the paradise of the heathen.

Alexander the Great, who venerated and imitated Homeric heroes, visited the tomb of Achilles, and crowned it, saying, "Achilles was happy in having Patroclus for a friend, and Homer for a poet."

ACHMET I., sultan of the Turks, began to reign in 1603, and died in 1617. The tranquillity of this sovereign was disturbed by insurrections, and the intrigues of a pretender to his throne. ACHMET II. was sultan of the Turks from 1691 to 1695. ACHMET III., son of Mahomet IV., was raised to the throne of the Ottoman empire, in 1705, by the revolt of the Janizaries, who deposed his brother, Mustapha II. Achmet, although he apprehended and punished the leaders of the revolt, yet availed himself of the fruits of their crime. His reign, however, was by no means passed in tranquillity, and repeated changes of the viziers marked the insecurity felt by the monarch. Achmet placed his principal reliance on the power of gold, which he sometimes used for good ends. When Charles XII. had been defeated at Pultowa, he was hospitably received at the Turkish court, where his intrigues soon kindled the flame of war between Russia and Turkey; but Achmet III. was unable to compete with Peter the Great, and the military views of his vizier were by no means clear. When the fortunes of the czar were in the hands of the Turks on the borders of the Pruth, the Muscovite purchased of the vizier permission to retreat, but surrendered Azof to the Ottomans. Against the Venetians Achmet was more successful, wresting the Morea from their grasp in a single campaign. But the imperialists, under the able conduct of Prince Eugene of Savoy, trampled on the laurels of the Turks, and humbled the pride of their sultan. Achmet, by the loss of Peterwaradin, and the taking of Belgrade and Temeswar, was forced to sign the treaty of Passarowitz. In 1718, the sultan lost Temeswar, Orsova, Belgrade, Servia, and part of Wallachia; a loss which was compensated, in the ensuing year, by his Persian successes. A revolt of the Janizaries made Achmet sultan, and a similar rebellion hurled him from the throne in 1730. The celebrated Caliph Patrona headed this revolt. Achmet went in person to seek his nephew, Mahmoud I., and, saluting him as ruler, said, "Profit by my example.

Had I always adhered to my old policy of permitting my vizier but a short stay in office, I should have ended my reign as triumphantly as I commenced it. Farewell! May your career be happier than mine! I commend to your especial care my son." He then went into the obscurity of that prison from which he had drawn his nephew. He died of apoplexy, on the 23d of June, 1736. Achmet possessed a brilliant wit, and much shrewdness, with a ready turn for public business. He loved money, and was the first to levy imposts on the Turks, but he was no less attached to science, which he patronized. He established the first printing-press at Constantinople, 1727. He was fond of pleasure, and the Turks yet cherish the recollection of those splendid festivals at Constantinople, which sprang from his luxury, and were graced by his presence. Achmet gave concerts of nightingales, numbers of those birds being inclosed in cages, delighting the court with their rare and plaintive melody.

ACRE, called also, Akka, St. Jean d'Acre, and, in the middle ages, Ptolemais, is a town on the coast of Syria. The famous Mount Carmel overlooks the city, which contains 16,000 inhabitants, and is the emporium of the cotton trade of Syria. Its harbor is good, although containing many sand-banks. Acre has been a noted scene in war. It was taken by Richard I. and other crusaders, July 12th, 1191, after a siege of two years, which cost the lives of six archbishops, twelve bishops, forty earls, five hundred barons, and three hundred thousand soldiers. It was held by the Knights of St. John of Jerusalem till 1291, when it was retaken by the Saracens. Sixty thousand Christians perished in this capture, which was also memorable for the slaughter of the nuns, who had mangled their faces to avoid the lust of the conquerors. In the siege of Acre by Bonaparte in 1799, the Turks were relieved by a British fleet under Sir Sydney Smith. Twelve assaults were repulsed between March 6th and May 27th. Baffled by the British squadron on the water and the Turks on shore, Bonaparte raised the siege. On the retreat from St. Jean d'Acre, it is said that a body of French soldiers, who were sick of the plague, were poisoned by order of Bonaparte; but this has been frequently denied. Of the kindness

of Bonaparte to his sick soldiers we have many proofs. Louis Philippe, when king of the French, having his attention called to an old veteran who had been in the army of Napoleon, rode up and shook hands with him. The old man was not flattered. "When I was sick with the plague at Jaffa," said he, bluntly, "the emperor shook hands with me; but he didn't have gloves on." The siege of St. Jean d'Acre lasted sixty-one days, and was attended with great loss to both parties. Acre was seized by Ibrahim Pacha in 1832 when Egypt revolted from Turkish rule. In 1840 it was stormed by an Anglo-Austrian fleet, given up by the Egyptians, and restored to the sultan.

ACTIUM, a promontory on the Gulf of Arta on the western coast of Greece, at the extremity of Acarnania. Here was fought

the most memorable naval battle of antiquity, since the stake was the empire of the world, Sept. 2d, B.C. 81. The leaders of the hostile forces were Marc Antony and Octavius. The latter had 80,000 infantry, 12,000 cavalry, and 260 ships of war; while Antony had 100,000 infantry, 12,000 cavalry, and 220 ships of war. The battle was hotly contested. Cleopatra, the beautiful Egyptian queen who had captivated Antony, seized with a panic, fled from the battle with her sixty galleys, the most brilliant vessels brought into action. Antony, whose energies had been prostrated by dissipation, followed his leman, and a disgraceful rout among the troops on shore completed his ruin, while the sovereignty of the world was the prize of Octavius, afterward Augustus Caesar.

RESIDENCE OF ADAMS FAMILY, QUINCY, MASS.

ADAMS, JOHN, the second president of the United States, was born October 19th (o.s.), 1735, in that part of Braintree, Mass., which has since been incorporated as the town of Quincy. He was the fourth in descent from Henry Adams, who fled from persecution in Devonshire, and settled in Massachusetts, about 1630. Another of his ancestors was John Alden, one of the pilgrim founders of

Plymouth. He received his early education in his native town, and in 1751 entered Harvard College, where he graduated in regular course four years afterward. He commenced the study of law at Worcester with Mr. James Putnam, defraying his expenses by his income as instructor in Greek and Latin. In 1758 Mr. Adams entered the office of Jeremy Gridley, attorney-general of the province,

who had previously directed the law studies of James Otis, and who, in allusion to his two talented pupils, said, "I have trained up two young eagles, who are, one day or other, to pick out my eyes." In 1759, Mr. Adams was admitted to the Suffolk bar, and commenced practice in Braintree. In 1761, he was admitted to the degree of barrister at law, and very soon afterward his father's decease put him in possession of a small landed property. In the February of this year the British cabinet enjoined the Massachusetts custom-house officers to execute their oppressive acts of trade, applying to the supreme provincial judicature for writs of assistance, a kind of general search-warrants. The applications made in consequence to the court at Salem, were resisted on the ground of their unconstitutionality. When it was determined to argue the matter by counsel in Boston, Mr. Otis was engaged to defend the rights of the Salem and Boston merchants, and, that he might do it with the more freedom, he relinquished his lucrative office of advocate-general in the court of admiralty. Mr. Adams, who took a deep interest in the affair, was present at the discussion, and thus eulogizes the orator: "Otis was a flame of fire! With a promptitude of classical allusion, a depth of research, a rapid summary of historical events and dates, a profusion of legal authorities, a prophetic glance of his eyes into futurity, and a rapid torrent of impetuous eloquence, he hurried away all before him. *American independence was then and there born.*"

In 1764, Mr. Adams married Abigail, daughter of the Rev. William Smith, of Weymouth, and grand-daughter of Col. Quincy. She was a lady of uncommon endowments and excellent education, and her patriotism and piety rendered her worthy of her husband. He had previously imbibed a prejudice against the prevailing religious opinions of New England. He was Unitarian in his predilections, and a firm believer in the Christian faith. In 1765, he published anonymously a series of articles in the *Boston Gazette*, under the title of "An Essay on Canon and Feudal Law," the object of which was to show the conspiracy between church and state to oppress the people. It was re-

printed in England and gained high commendation.

In 1766, by the advice of Mr. Gridley, he removed to Boston, where his superior talents soon won him a prosperous practice. At an earlier period of life he had turned his thoughts to politics and the condition of the harassed colonies. Soon after leaving college, he wrote a letter to a friend, dated at Worcester, Oct. 12th, 1755, which evinces so remarkable a foresight that it is fortunate it has been preserved. "Soon after the reformation, a few people came over into this new world for conscience' sake. Perhaps this apparently trivial incident may transfer the great seat of empire into America. It looks likely to me, if we can remove the turbulent Gallies, our people, according to the exactest computation, will, in another century, become more numerous than England herself. The only way to keep us from setting up for ourselves, is to disunite us. *Divide et impera.* Keep us in distinct colonies, and then some great men in each colony, desiring the monarchy of the whole, will destroy each other's influence and keep the country *in equilibrio*. Be not surprised that I am turned politician: the whole town is immersed in politics. I sit and hear, and, after being led through a maze of sage observations, I sometimes retire, and, by laying things together, form some reflections pleasing to myself. The produce of one of these reveries you have read above."

After his removal to Boston, the friends of the crown attempted to lure him by the offer of the office of advocate-general in the court of admiralty, but he refused "decidedly and peremptorily, though respectfully." He was appointed, in 1769, chairman of the committee chosen by the town of Boston to draw up instructions to their representatives to resist the unpardonable and increasing encroachments of the crown. At this time the indignation of the friends of liberty was excited by the presence of an armed force in the town, while a band of hirelings surrounded the state-house, and cannon menaced its doors. Mr. Adams displayed his sense of honor and firmness by advocating the cause of the soldiers who, when attacked by the mob, in State street, on the 5th of March, 1770, fired upon them and killed several.

Such was the excitement of the public mind that a word in defense of the British was almost sure of being punished by the loss of popularity, and yet, Adams, in company with Josiah Quincy and Mr. Blowers, scrupled not to defend the soldiers on their trial. In consequence of this, all were acquitted but two, who, being found guilty of manslaughter, were dismissed with a slight branding. But in May, 1770, Mr. Adams received a proof that he had not lost favor with his fellow-citizens, being chosen a representative of the town of Boston in the legislature. The active part which he took in resisting despotism in every shape, and espousing the cause of his countrymen in every way, brought him under the displeasure of Gov. Hutchinson, who negated the choice of Mr. Adams as councilor, in 1773. In 1774, Gov. Gage also rejected him, and he was soon chosen member of the committee employed to prepare resolutions on the Boston port-bill. That same year Gov. Gage dissolved the assembly. Before separation, Thomas Cushing, Samuel Adams, John Adams, and Robert Treat Paine had been chosen to act as delegates in the first continental congress.

Mr. Adams took his seat in Congress on the first day of the session, September 5th, 1774. He was one of the most efficient and able advocates of liberty, and his voice was decided for prompt and vigorous action. The following spring he was instrumental in putting Washington at the head of the army. He was the adviser and great supporter of the Declaration of Independence. May 6th, 1776, Mr. Adams moved a resolution, recommending the colonies "to adopt such a government as would, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents and of America." It was not without a hard struggle that this passed on the 15th of the same month, and preluded Richard Henry Lee's daring resolution of the 7th of June following, declaring the dissolution of the connection with Great Britain. On the 4th of July, the Declaration of Independence, with but few alterations from the words of Mr. Jefferson, passed. The committee who had been chosen to prepare it was composed of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R.

Livingston. Mr. Jefferson and Mr. Adams were deputed a sub-committee to prepare the instrument, and the former did so at the instigation of the latter. The declaration did not pass without the most strenuous opposition by many members, including some leading and able men. Mr. Adams overcame all arguments offered against it, by an overwhelming torrent of splendid eloquence. In the words of Mr. Jefferson, "the great pillar of support to the Declaration of Independence, and its ablest advocate and champion on the floor of the house, was John Adams." His speech on the subject of independence is said to have been unrivaled. Mr. Webster has done honor to the style and sentiments of Mr. Adams, in alluding to his brightest effort. He tells us that he spoke right on, and that the torrent of his manly reasoning carried conviction along with it. Mr. Webster gives what we may well suppose to be a portion of Mr. Adams's speech, concluding with this powerful and patriotic language. "Sink or swim, live or die, survive or perish, I am for the declaration. Living, it is my living sentiment, and, by the blessing of God, it shall be my dying sentiment—*Independence now and independence forever!*"

On the recall of Silas Deane, who (with Dr. Franklin and Arthur Lee) was a commissioner at the court of Versailles, Mr. Adams was appointed to fill his place, Nov. 28th, 1777. Mr. Adams, embarking on board the frigate Boston, arrived safely at his place of destination, notwithstanding the efforts of an English fleet to intercept him. On his return, in the summer of 1779, being chosen member of the convention to form a plan of government for Massachusetts, he was placed upon the sub-committee whose task it was to draught the plan of a constitution. His plan was, in most of its important features, adopted by the convention. He went abroad again upon public business and visited Holland and France. The definite treaty of peace which he visited Paris to negotiate, in 1782, with Dr. Franklin, Mr. Jay, Mr. Laurens, and Mr. Jefferson for colleagues, was ratified, Jan. 14th, 1784. The next year Mr. Adams was appointed the first minister to London, an office at that time peculiarly delicate and interesting. His reception by George III. was favorable and courteous, but the cabinet were

cold and unfriendly, and Mr. Adams was unable to negotiate a commercial treaty. Having assisted in forming treaties with Prussia and Morocco, he resigned, and in June, 1788, arrived in his native land after an absence of nearly nine years. That fall he was chosen vice-president, the first elected under the new constitution, and was re-elected in 1792. On the resignation of Washington, Mr. Adams was chosen president, entering upon office March 4th, 1797. The administration of Mr. Adams though at first popular, was strongly opposed toward its close. At the expiration of his term he was the candidate of the Federal party for re-election. He was defeated, and was succeeded by Mr. Jefferson, his warm personal friend and decided political adversary.

After Mr. Adams's retirement from public life, he occupied himself with literary and agricultural pursuits at his seat at Quincy, and with the exception of severe afflictions, the loss of his wife in 1818, and the death of his only daughter in 1813, his days glided calmly away until the 4th of July, 1826. On that day he died, with the sentiment upon his lips which he had uttered with such force fifty years before upon the floor of Congress—*independence forever!* On the morning of that eventful day, the peals of the bells and the report of cannon awakened him. He was asked if he knew what day it was. "Oh! yes," he replied, "it is the glorious Fourth of July: God bless it, God bless you all!" In the course of the day, he said, "It is a great and glorious day!" Before his death, he said, "Jefferson survives." He was mistaken. On that very day, an hour after noon, Jefferson breathed his last.

The services of John Adams to the cause of independence were unsurpassed. They were not so readily appreciated by the people, as exploits in the field, and though he was of great worth in the public councils, others may have outshone him there. But he was an indefatigable man of business, lofty in his patriotism and honest in his devotion to what he considered the true interests of the country. He has been called the Great Leader of the American Revolution.

ADAMS, JOHN QUINCY (sixth president of the United States, and the son of John Adams, the second president), was born at

Braintree, July 11th, 1767. The boy was cradled and bred amid the most ardent patriotism, and when but a lad of nine years, heard the first reading of the Declaration of Independence from the old state-house in Boston. His father took him abroad, and he studied at the public school of Amsterdam and the university of Leyden. In 1781, Francis Dana, of Massachusetts, who had been designated as minister to Russia, selected young Adams as his private secretary. In the winter of 1782-3 he returned to Holland, and till May, 1785, he was chiefly with his father in England, Holland, and France. It was at this time, that he became acquainted with Mr. Jefferson, who was his father's intimate friend and then minister at Paris. He was now a youth of eighteen. His life had been one of unusual wandering and changes. His studies had been interrupted and irregular. When his father, in 1785, was appointed minister to England, he obtained permission to return to America, studied at Harvard College, and graduated in 1787. After preparatory law studies under Theophilus Parsons at Newburyport, he began practice at Boston. His essays and speculations on the politics and public questions of the day attracted attention, and won him high reputation as a statesman and political thinker. They drew upon him the notice, and gained him the confidence, of Washington, to whom he had been warmly recommended by Jefferson; and in 1794 he was honored with the mission to the Netherlands, where he remained for two years. His father was then vice-president, but the appointment was made by Washington without any intimation to him. Toward the close of the administration, Washington made Mr. Adams minister to Portugal. On his way from the Hague to Lisbon he received a new commission, changing his destination to the Prussian court. This transfer to Berlin was made by his father, who had succeeded Washington in the presidency. Fearful that the change might be imputed to paternal partiality, the senior Adams had consulted his predecessor, and had received the following letter.

"MONDAY, February 20, 1797.

"DEAR SIR: I thank you for giving me a perusal of the enclosed. The sentiments do

honor to the head and heart of the writer; and if my wishes would be of any avail, they should go to you in a strong hope that you will not withhold merited promotion from John Q. Adams because he is your son. For, without intending to compliment the father or the mother, or to censure any others, I give it as my decided opinion, that Mr. Adams is the most valuable public character we have abroad; and that there remains no doubt in my mind, that he will prove himself to be the ablest of all our diplomatic corps. If he was now to be brought into that line, or into any other public walk, I could not, upon the principle which has regulated my own conduct, disapprove of the caution which is hinted at in the letter. But he is already entered; the public, more and more, as he is known, are appreciating his talents and worth; and his country would sustain a loss, if these were to be checked by over-delicacy on your part.

"With sincere esteem and affectionate regard,

"I am ever yours,

"GEORGE WASHINGTON."

Mr. Adams was recalled by his father in 1801, and after serving in the state senate, was chosen United States senator in 1803. He pursued an independent course in the senate, and for supporting the embargo recommended by Jefferson, was censured in 1808, by the Federalist legislature of his state. Not choosing to represent constituents whose confidence he had lost, he resigned his seat. Soon after Mr. Madison sent him to Russia, the first minister from the United States to that country. Through his influence the Emperor Alexander offered himself as a mediator to conclude the difficulties between Great Britain and our country; and although the proffer was declined by the British, it led them to an offer to treat directly, which resulted in peace. Mr. Adams was therefore fitly put at the head of the American commission by which the treaty of Ghent was negotiated. His colleagues were, James H. Bayard, of Delaware, Henry Clay, of Kentucky, Jonathan Russell, of Rhode Island, and Albert Gallatin, of Pennsylvania. In the counsels and labors of the important conference, Mr. Adams bore his full part. With Messrs. Clay and Gallatin he was afterward

employed in adjusting a commercial convention with Great Britain, and in February, 1815, he was appointed minister to the British court. Mr. Monroe recalled him in 1817 to take the post of secretary of state in his cabinet. During the eight years of Mr. Monroe's administration, Mr. Adams continued at the head of that department, and his experience abroad was of great service in directing the foreign policy of the government. With Mr. Clay he was instrumental in obtaining the recognition of the independence of the South American republics. Long standing difficulties with Spain were also honorably and successfully closed under his direction, and the important acquisition of Florida was made.

At the close of Mr. Monroe's second term, Mr. Adams was a prominent candidate for the succession, and of many who preferred Jackson, or Clay, or Crawford, he was the second choice. When the votes of the electoral college were counted, it was found that Mr. Calhoun had been elected vice-president, while for president there was no choice. General Jackson had received ninety-nine votes, Mr. Adams eighty-four, Mr. Crawford forty-one, and Mr. Clay thirty-seven. The choice of president from the three leading candidates, accordingly devolved upon the house of representatives. The friends of Mr. Clay in that body voted for Mr. Adams, and his election was effected on the first ballot. He received the votes of thirteen states, General Jackson seven states, and Mr. Crawford four states. The Crawford men and Jackson men combined in opposition to the administration, and although Mr. Adams's course was not partisan, but conciliatory to his opponents, his efforts to conduct the public affairs with integrity and usefulness could not turn the flood of popular opinion that set steadily against him; and in 1828, General Jackson was elected president by a large majority over him. Mr. Adams retired to private life at Quincy, esteemed by his political friends and respected by his opponents. But his neighbors and friends were not willing that the country should have no more the benefit of his services, and they elected him to represent the district in Congress. In December, 1831, being then in the sixty-fifth year of his age, and already forty years in active public ser-

vice, he took his seat in the house of representatives, a member of which he continued till his death, more than sixteen years after.

In this position he maintained the stand to which his distinguished services and experience, no less than his eminent talents, well entitled him. At the opening of the twenty-sixth congress, a singular scene was exhibited in the house of representatives. Eight seats were contested, and the clerk of the last house, upon whom it fell to preside till a speaker should be chosen, in calling the roll of members elect, refused to call the gentlemen holding certificates for the contested seats. An angry and discordant debate, amid confusion and disorder, ensued for three days, and on the fourth there was little better than anarchy. The clerk persisted in his contumacy, no speaker could be chosen, and the mode of extrication could not be discerned. At this point Mr. Adams rose. The tumult hushed. After a short, pointed speech, aimed at the impudence of the acting clerk, he submitted a motion that that official should at once proceed with the call of the roll in due and usual order. The clerk, as he had previously done, refused to entertain the motion. "How shall the question be put?" anxiously cried several voices. "I intend to put it myself!" replied Mr. Adams. This restored order. Richard Barnwell Rhett, of South Carolina, sprang to the floor and loudly moved that John Quincy Adams should take the speaker's chair until the house should be constitutionally organized; put the question himself, and declared it carried. Mr. Adams presided several days, till Mr. Hunter, of Virginia, was chosen speaker.

A striking feature of Mr. Adams's congressional career, was the earnestness and firmness with which he adhered to the right of the people to petition Congress, and to be heard through their representatives, on any subject whatsoever. He took an active part in debate, on nearly every topic of public interest, and his speeches were marked with a fervor that won him the name of "The Old Man Eloquent." Like Lord Chatham, he died at his post. The 22d of February, 1848, he was stricken by paralysis in his seat, was borne to the speaker's room, and there died the next day, being in his eighty-first year of age. His last words were, "This is the last of

earth." A committee from Congress accompanied his remains to the family's place of burial at Quincy, and solemn honors were paid to his memory in the towns and cities through which the corpse was borne.

Mr. Adams was of middle stature and full person, his eyes dark and beaming, and piercing with intelligence. He always led an active life, and enjoyed good health to an advanced age, the fruit, no doubt, of his early rising and bodily exercise. His mind was highly cultivated, and he was considered one of the most accomplished among American scholars and statesmen. In May, 1797, he was married to Louisa Catherine, daughter of Joshua Johnson, Esq., of Maryland, who then resided in London. By this lady who survived him, he had three sons and one daughter. Only one child, Charles Francis, survived him.

ADAMS, SAMUEL, a distinguished patriot in our revolution, born in Boston, Sept. 27th, 1722, was descended from a family which had been among the earliest settlers in New England. Mr. Adams graduated at Harvard, with the usual academical honors, in 1740. On taking the degree of master of arts he discussed the question, "Whether it be lawful to resist the supreme magistrate, if the commonwealth can not be otherwise preserved?" and maintained the affirmative with great ability. He commenced the study of divinity, but found his attention completely absorbed by politics, which then excited an universal interest. His vigorous support of republican principles soon endeared him to the patriotic party, who placed him in the legislature in 1766. Thenceforward he distinguished himself as one of the most active, able, and uncompromising advocates of independence. He was on every committee, his hand was employed upon every report, and his voice heard upon every subject, involving opposition to the tyrannical measures of the colonial government. The enemies of America heard that Mr. Adams was poor, and those among them who believed in the omnipotence of British gold, asked why this demagogue was not silenced by a bribe. Governor Hutchinson answered, "Such is the obstinacy and inflexible disposition of the man, that he can never be conciliated by any office or gift whatever." In 1774, he was sent to the first con-

gress of the old confederation. He was one of the signers of the Declaration of Independence in 1776. He was active in the convention which formed the constitution of Massachusetts, was placed in the senate of the state, presided for several years over that body, and was elected lieutenant-governor in 1789. In 1794, at the death of Hancock, he was chosen governor, and was yearly re-elected until 1797. His retirement from public life took place in that year; and, on October 2d, 1803, he expired at his house in Winter street, Boston, in the eighty-second year of his age.

Mr. Adams foresaw the course which the colonies were obliged to take from the beginning. He was aware that, upon the side of the British, there would be no concessions, no retractions; that they entertained a contemptuous opinion of the force and spirit of the colonies, and would abide by their own measures. He received warning at Lexington, on the night of the 18th of April, of the intended British expedition, which turned out so disastrously for them, and prepared to make his escape at dawn across the fields. Turning to the friends who accompanied him, he exclaimed, "This is a fine day!" His remark was thought to allude to the weather, and one of his companions answered, "It is really a pleasant day." "I mean," said he, his eye lighting up, as he spoke, "I mean, this is a glorious day for my country!" There was a certain narrowness and sternness in the political and religious opinions of Samuel Adams. He was a strict Calvinist, and regarded with no favor opinions at variance with those of his sect. He was firmly attached to habits and principles in which he had been bred, and too fond of making important measures conform to a certain code of his own. He undervalued the services of Washington during the war, thinking him too slow and cautious, and being impatient for some decisive stroke, which the commander-in-chief would not have failed to strike whenever the opportunity occurred. After the war was happily concluded, and there could be but one opinion of the services of Washington, Mr. Adams feared for his country, when the man who had led her through the perils of the armed struggle was made her chief magistrate. He feared the popularity of Wash-

ington; but his was the error of judgment. No unprejudiced man who had regarded the previous course of the Father of his country, could fear that he could prove either a Cæsar or a Cromwell. Mr. Adams possessed those manly virtues which eminently fitted him for a revolutionary epoch, and when the cloud hung darkest over his country, his character and resources appeared most strikingly. Of an austere and unyielding mind, he was yet dignified and courteous to a high degree. He was never shackled by pecuniary considerations, and would have died in poverty, had not the death of an only son supplied his wants, while it grieved him to the soul. A colleague of Mr. Adams thus described him in good-humored caricature: "Samuel Adams would have the state of Massachusetts govern the Union, the town of Boston govern Massachusetts, and that he should govern the town of Boston, and then the whole would not be intentionally ill-governed."

ADDISON, JOSEPH, an author of celebrity, was the son of a clergyman, and was born at Milston, Wiltshire, in 1672. He was educated at the Charter-House in London, and at Oxford, where he distinguished himself by his Latin poetry. Having obtained a pension, he set out on his travels, remaining abroad two years. Of his "Travels," which he published on his return, Dr. Johnson said, that "they might have been written at home." In 1704, a poem on the victory of Blenheim procured him the office of commissioner of appeals. In 1796 he was chosen under-secretary of state, and in 1709 went to Ireland as Lord Wharton's secretary, at the same time deriving an income of £300 a year from his appointment of keeper of the Irish records. The "Tatler," "Spectator," and "Guardian," periodical papers commenced by Steele, owed their celebrity in a good degree to the essays of Addison. In these papers, which were read with avidity by all classes, Addison displayed that chaste humor, refined observation, and worldly knowledge, that poetical imagination, deep vein of feeling, and purity of style, which make his prose a model in our language. The success of his tragedy of "Cato," produced in 1713, was owing less to the merits of the piece (which is better adapted to private perusal than public exhibition), than to the high state of party feeling; anything

liberal in tone being warmly supported by the Whigs.

The pen of Addison was devoted to political subjects for a long time, and he was employed a second time as secretary to the viceroy of Ireland, and afterward was appointed one of the lords of trade. Having fixed his affections on the dowager Countess of Warwick, he obtained her hand with difficulty, and was married in 1716. The union, however, was anything but happy. The lady awarded him the "heraldry of hands, not hearts," treated him with contempt, and made his fireside so uncomfortable that he often forsook it for a tavern. In 1717 he was appointed secretary of state, but finding himself incapable of filling the office with honor, he retired with a pension of £1,500. He wanted the physical boldness and ready resources of an effective public speaker, and was unable to defend his measures in parliament. He is also said to have been slow and fastidious in the quieter duties of office. When he was under-secretary, it fell to him to send word to Hanover of the death of Queen Anne. The critical nicety of the author so distracted him in the choice of expressions, that the task was abandoned to a clerk, who boasted of having done what was too hard for Addison. In retirement he engaged himself in writing a work on "The Evidences of the Christian Religion," which he did not live to complete. Throughout his life he was a sincere Christian. He died in 1719, and on his death-bed he sent for Lord Warwick, a youth of dissolute habits, and said to him: "I have sent for you, young man, to show you with what calmness a Christian can die."

The temper of Addison was jealous and taciturn, until cheered by wine. "I have never seen a more modest or more awkward man," was the remark of Lord Chesterfield, one of the best judges and most accurate observers of manners that ever lived. Button's coffee-house was the favorite resort of Addison and contemporary wits in London.

ADRIAN, or HADRIAN, PUBLIUS ÆLIUS, the fifteenth emperor of Rome, was born A.D. 76, and brought up under the eye of Trajan, his father's kinsman, who adopted him as his son, and to whom he succeeded, 117. He was a successful soldier, and a great

lover of literature and the arts, but disgraced by the indulgence of sensuality. In the course of his reign he visited nearly every part of his dominions, and when in Britain, 120, built a wall eighty miles in length, from the mouth of the Tyne to Solway Frith, to prevent the incursions of the Caledonians. He was the restorer of Jerusalem, which he named Ælia Capitolina, and on Mount Calvary he erected a temple to Jupiter; died 138.

Six popes have also borne the name of Adrian.

ADRIATIC SEA, or Gulf of Venice, washes the shores of Italy, Illyria, Dalmatia, and Albania. It is about 480 miles long, and generally 130 broad. Venice claimed the exclusive sovereignty of this sea. The ceremony of the Doge of Venice wedding the Adriatic was instituted in 1173. Annually, upon Ascension day, the doge dropped a ring into its waves from his bucentaur or state barge. On these occasions he was attended by all the Venetian nobles and the foreign ambassadors in gondolas. The ceremony was intermitted, for the first time in centuries, in 1797.

ÆGINA, an island thirty miles in circumference, between the coasts of Attica and the Peloponnesus, formerly independent, populous, wealthy, and famed for the commercial spirit of its inhabitants. Its capital bore the same name.

ÆLFRIC, a brave and talented Archbishop of Canterbury, who lived in the tenth century. He translated the historical books of the Old Testament, and distinguished himself for his resistance to the Danes. His death took place in 1005.

ÆMILIUS PAULUS, a brave and noble Roman, father of Scipio Africanus the Younger. He defeated Perseus, king of Macedon, and celebrated his success by a triumph, B.C. 168, which was rendered memorable by the death of his two sons, and the heroic fortitude with which he bore their loss, thanking the gods that they were chosen for victims, so that the Roman people might be shielded from calamity.

ÆNEAS, a Trojan prince, the hero of the "Æneid" of Virgil, who represents him as the son of Anchises and the goddess Venus. The former he bore in safety, from the flames of Troy, which he had defended until valor

was of no avail. He retired to Mount Ida, where he built a fleet, and sailed in quest of a settlement. He is said to have been contemporary with Dido, and, after plighting his faith to the Carthaginian queen, to have left her a prey to pangs so poignant as to deprive her of judgment, in which state she threw herself upon a funeral pile and was burned alive. This, however, is a poetical anachronism. Æneas, after various adventures, and great sufferings, landed on the coast of Latium, in Italy, where he was hospitably received by king Latinus, who bestowed upon the stranger the hand of his daughter Lavinia. This gift involved Æneas in a war with Turnus, a disappointed rival, who was signally defeated by the son of Venus. The history of Æneas is wholly traditional.

ÆOLIANS, a Thessalian tribe, who established several small states in Greece, while a portion settled Æolis, in Asia Minor, in the ancient Troad. They united themselves in a confederacy, and were free while they preserved it. The name Æolic is applied to a dialect of the Greek language, very nearly resembling the Doric.

ÆSCHINES, an Athenian orator, the rival of Demosthenes, born 393, died 323 B.C. He at first led a life of wandering poverty, but became an actor, a pupil of Plato and Socrates, and attained some distinction. Having lost the favor of the people, he fled to Samos and Rhodes, where he taught rhetoric until his death. Another **ÆSCHINES**, a philosopher, was a poor disciple of Socrates.

ÆSCHYLUS, a celebrated Greek dramatic writer, was born of a noble family at Eleusis in Attica, B.C. 525, and died at Gela in Sicily, B.C. 456. At the age of twenty-five, B.C. 499, he first presented himself at the festival of Bacchus as a competitor for the public prize, and fifteen years afterward, B.C. 484, gained his first victory. The pre-eminence which he thus acquired was successfully maintained till B.C. 468, when he was defeated in a similar contest by his younger rival, Sophocles. Mortified at the indignity he thought thus put upon him, he quitted Athens and went to the court of Hiero, king of Syracuse. Of the remaining portion of his life but little is known, except that he continued to prosecute his favorite pursuit; and that his residence in Sicily was of some dura-

tion, may be inferred from the fact that it was sufficient to affect the purity of his language. His thirteenth and last victory was gained B.C. 458. On the manner of his death, which was singular, the ancient writers are unanimous. While sitting motionless in the fields, his bald head was mistaken for a stone by an eagle which happened to be flying over him with a tortoise in her bill. The bird dropped the tortoise to break the shell, and the poet was killed by the blow. Æschylus is said to have been the author of seventy tragedies, of which only seven are now extant. The improvements which he introduced in the economy of the drama, were so important as to gain for him the distinction of the Father of Greek Tragedy. To the single actor of Thespis he added a second, and thus presented the regular dialogue. He abridged the length of the choral odes and made them subservient to the main interest of the plot; substituted a regular stage for the movable wain of his predecessor; provided appropriate scenic decorations, and dresses for the actors; and removed all deeds of murder and bloodshed from public view. His style is bold, lofty, and sublime, full of gorgeous imagery and magnificent expressions, suitable to the elevated characters of his dramas. His plays have little or no plot; and have therefore been blamed as deficient in dramatic interest. But Æschylus was illustrious not merely as a poet. Along with his brother Cynægius he distinguished himself so highly in the battle of Marathon, B.C. 490, that his exploits were commemorated by a descriptive painting in the theater of Athens; and it is probable that he took part in the subsequent battles of Artemisium, Salamis and Plataea.

ÆSCULAPIUS, believed to have been the inventor of medicine, and worshiped as a divinity in many cities of Greece. He is generally represented with a long beard, and grasping in one hand a staff entwined by a serpent, the emblem of convalescence, the other hand supported by a serpent. Sometimes he was denoted by a serpent only. He was believed to be the son of Apollo.

ÆSOP, whose fables have been so celebrated, was born in Phrygia, a country of Asia Minor, about the fifty-second Olympiad, the first year of which corresponds with 572 B.C. The age in which he lived is noted in Grecian

history as that in which Solon, the famous lawgiver, flourished. In his youth Æsop was a slave. Among the Greeks the condition of the slaves was abject and pitiable indeed; the Spartans, in particular, regarding them in the light of brute beasts, whom it was allowable to kill upon the least provocation, and even without the slightest offense. It does not, however, appear that Æsop experienced any great severity of treatment. His first master was one Dinarchus, who resided at Athens. Æsop passed into the hands of Xanthus of Samos, who afterward sold him to Iadmon of the same place. There were no fewer than three islands to which the ancients gave the name of Samos. That of which we speak was situated off the coast of Ionia. It was supposed to have been the birthplace of the goddess Juno, to whom a magnificent temple was erected, no remains of which have escaped the ravages of time. The fertility of the island, and the salubrity of its climate, gained it universal admiration, and made its possession an object of great importance. It was formerly not so much noted for its wine as it is at present, the Samian wine being considered by the moderns as equal to that of Cyprus, while it was very much underrated by the ancients.

After he had obtained his freedom, Æsop distinguished himself by his art of inculcating useful truths under the cloak of fiction. This invention is attributed to him, and Phædrus acknowledges this in his own fables. "The words," says the latter, "are mine, but the invention belongs to Æsop." It is, however, probable that fables originated with the oriental nations, from whom Æsop borrowed them.

Croesus, king of Lydia, whose wealth was so immense, hearing of the fame of Æsop, invited him to his court. It has been said that the personal appearance of Æsop was far from being prepossessing; that he was of small size and dreadfully deformed; that Croesus was at first disgusted at beholding a figure so entirely at variance with his preconceived ideas of the man; and that Æsop speaking of his own deformity, said, "It is not the exterior of the vase that we should regard, but the quality of the wine which it contains." The conduct of Æsop and Solon, both of whom were at the same time at the

court of Croesus, exhibited a marked contrast. The fabulist played well the part of an accomplished courtier, but the stern lawgiver rigidly adhered to the truth in all he said. Solon having displeased the monarch by the independent tone which he assumed, Æsop said to him, "You should never speak to kings, or only tell them what will flatter them." "Not so," said Solon; "we must never speak to kings, or only tell them useful truths."

Æsop had lived too long in slavery not to have acquired habits of submission and deference toward those whom circumstances made his superiors. He found no difficulty in winning the entire confidence of Croesus. The latter, wishing to consult the oracle of Delphi with regard to Cyrus, who menaced him with ruin, sent Æsop with instructions to offer up sacrifices to the deity in the name of the king of Lydia, and to present to each inhabitant of Delphi a considerable sum of money. Æsop came to Delphi, and offered up his sacrifices, but having quarreled with the Delphians, he sent away the money which the Lydian monarch had intended for them, and declared that they were unworthy of such benefactions. The cause of this quarrel is not exactly known, but perhaps the natural shrewdness and intelligence of Æsop enabled him to make a discovery of the artifices employed to deceive those who referred to the oracle for instruction, and his indignation impelled him to reproach the priests with their imposition. The Delphians, enraged at the conduct of the bold stranger, and fearing that, if permitted to depart, he might reveal enough to destroy their character and hopes forever, determined, if possible, to effect his ruin. To accomplish their purposes, they hid a golden cup which had been consecrated to Apollo, among his effects, and then charged him with having stolen it. He indignantly denied the charge. His enemies were inexorable; a search was made, and the golden cup having been found in his possession, he was condemned to death, and, pursuant to his unjust sentence, hurled from the summit of a high rock. Soon after this bloody deed, heavy calamities fell upon the Delphians, which they did not fail to attribute to the indignation of the gods, aroused at their inhuman conduct. Various methods were resort-

ed to in order to appease the just indignation of their deities. At length they offered to make restitution to the descendants of Æsop, if any such existed. Æsop, however, was a solitary being, the last of his race. But a relation of Iadmon, his last master, came forward, claimed, and received, the proffered indemnity.

The authorship of the fables attributed to Æsop has been a source of much dispute among different writers. It is thought that many of the fables which have descended to us with his name were not of his invention. The fables of Æsop attained a very great celebrity in Greece. Æsop was peculiarly happy in the application of his fables. Having visited Athens soon after Pisistratus had usurped the authority, and found the Athenians shrinking beneath the yoke which had been imposed upon them, he related to them the following fable. "Once upon a time, the frogs, thinking it a fine thing to have a ruler, petitioned Jupiter to give them a king. Yielding to their wishes, he threw down a huge log, from which they at first fled in dismay. But finding it quiet and harmless, they at length ventured to approach, and soon after grew weary of its inaction, and complained bitterly to Jupiter of their stupid ruler, desiring one more active. Indignant at their querulous cries, Jupiter sent down a stork, whose activity made up for the long sloth of the log; in fact, he was never idle, but darting here and there, preyed upon his subjects with restless ferocity, until the remnant of the frogs groaned to be restored to their former liberty." The moral of this fable was apparent to the meanest understanding. The Athenians honored the memory of Æsop, by erecting a fine statue, executed by Lysippus, to the man who was once a slave. Its design was to show that the road to fame was open to all, and that, with perseverance and mental power, a man requires few external advantages, to succeed in what he undertakes. The life of Æsop was checkered with light and shade: perhaps the latter predominated, for, in allusion to the misfortunes of humanity, he was wont to say that "Prometheus formed man of clay, and tempered it with tears." His death took place about the year 531 B.C.

ÆTIUS, the brave general of Valentinian

III., who repulsed Attila, and was stabbed by his suspicious master in 454.

ÆTNA, the greatest volcano in Europe, is on the north-eastern coast of Sicily, and now called Mongibello. Its elevation above the surface of the sea is 10,784 feet. Towns and villages are scattered on its sides. It exhibits three distinct climates, the hot, temperate, and frigid; and three distinct regions, the fertile, woody, and barren. It measures ninety miles round the base, and its crater forms a circle of three or four miles in circumference. The crater's shape and size are liable to constant change from the eruptions. The summit is enveloped in smoke and snow at the same time, while the sides of the mountain present a rich prospect of cultivated fields and smiling vineyards. The mountain furnishes snow and ice to Sicily and Malta, and thus yields quite an income to the Bishop of Catania, the exclusive proprietor of the trade. A chestnut-tree, wonderful for its gigantic size, stands upon the side of Mount Ætna. It is known by the name of the Castagno de Cento Cavilli, because it is said to be capable of sheltering a hundred horses beneath its boughs. It still bears rich foliage and much small fruit, though the heart of the trunk is decayed, and a road leads through it wide enough for two coaches abreast.

Here were the fabled forges of the Cyclops. Diodorus Siculus mentions an eruption as having happened 1693 B.C. Thucydides speaks of three eruptions, occurring 734, 477 and 425 B.C. To the second of these, both Æschylus and Pindar allude. The awful eruption of 1169 overwhelmed Catania, and fifteen thousand persons perished among the burning ruins. There were destructive eruptions in 1329, 1408, 1444, 1536, 1537, 1564. In that of 1669, tens of thousands lost their lives in the streams of lava that flooded the land. The hot flood reached the walls of Catania, which had been raised to save the town, swelled over the barrier, and fell in a fiery cascade. The wall was not thrown down, and the solid lava may still be seen, curling over the rampart like a torrent in the act of falling. There were eruptions in 1766, 1787, 1809, 1811, and in May, 1830, when several villages were destroyed and showers of lava reached near to Rome. By the violent outbreak of November, 1832, Bronte, a town of

GREAT CHESTNUT-TREE OF MOUNT ÆTNA.

13,000 inhabitants was destroyed. A violent eruption occurred in August and September, 1852.

ÆTOLIA, a country of antiquity, in the middle of Greece, whose boundaries varied greatly from time to time. It was strong, but unfruitful, and the inhabitants illiberal, given to plunder and avaricious. Divided into small tribes, they were proud of their independence, and ardent lovers of freedom. After the ruin of Athens and Sparta, they attained an eminence which they had not before possessed, and ranked with the Macedonians and Achæians as a leading power in Greece. As allies of the Romans, they rendered themselves formidable, and were no less so when they forsook the former for the Macedonians. They were conquered by Fulvius. In war, their fine cavalry was famed for the fierce impetus of its attacks. Their commonwealth was much like that of Achæia.

AFGHANISTAN, in Asia, has an area somewhat larger than that of France. To the north of it is Turkistan, to the east the Punjaub, to the south Beloochistan, and on the west Persia. Beloochistan is properly a part of Afghanistan, but is at present politically separated from it. Afghanistan is an elevated table-land, the eastern base of which is washed by the Indus. The mountain range of Hindoo-Coosh on the north, rises to eighteen and twenty thousand feet, and may be considered as an offshoot of the Himalaya chain. The valleys are fertile. The snow on the mountains feeds numerous streams, but there are no navigable rivers. The population is estimated at 14,000,000, inclusive of Beloochistan. The large towns, such as Cabul, Candahar, Ghuznee, Jellalabad, and Herat, are inhabited chiefly by Persians and Hindoos; an Afghan never keeps a shop or labors at a trade. The only Afghans found

in the towns are officers of government, and their followers, with soldiers and priests. The Afghans, who number little more than a third of the people, are of moderate stature, remarkably hardy and athletic. Their high cheek-bones and prominent noses distinguish them essentially from the Tartars. Their manners are frank and open. Little respect is paid to rank, but great reverence is shown for old age. They are sociable, and like singing, dancing, and music. Of games of chance or skill they are fond. In long genealogies they feel pride, scarcely allowing a man to be a genuine Afghan, if he can not prove six descents. Hospitality is a point of honor. A man may travel without money from one end of the country to the other, and the bitterest enemy is safe if he claims the protection of hospitality. They have, however, more of such honor than conscience, and robberies are frequent in the more remote districts. Social intercourse with women is less restrained than among other Mohammedans. Women are generally well treated, not being permitted to engage promiscuously in the labors of the men, but being employed in domestic avocations. Wives, are, however, regarded as property, being invariably purchased, and those of the upper classes live in total seclusion, though their privacy is luxurious, and their style of life magnificent. Want of feeling is not in general a fault of the Afghans, and the females are frequently regarded with a tenderness and devotion worthy of the chivalric age. Many a young Afghan, in consequence of passionate attachment to some young woman to whom his plighted faith belongs, resolutely bids a farewell to home, and labors for a long time in a distant place, until he procures sufficient money to buy her from her father. Instances of cruelty to women are of infrequent occurrence. The Afghans are not insensible to the advantages of education, and are rather liberal in their allotments of land for the support of public teachers, who are also ministers of religion. They are an imaginative people, and take delight in those wild narratives which it is the sport and province of oriental imaginations to create. The spirited lyrics of their poets breathe a strong love for liberty.

The Afghans are divided into tribes, almost independent in their government. Their re-

publican spirit has saved them from sinking into the common oriental despotism. The Duranees and the Ghiljies are the leading tribes. The tribes are subdivided into clans, often at feud with one another. To an English traveler, who expatiated on the freedom from alarm, blood, and discord, that a steadier government would give, this reply was made: "We are content with discord, we are content with alarms, we are content with blood, but we will never be content with a master." There are three independent political states, Cabul, Candahar, and Herat, the chiefs of which have but a limited authority.

Afghanistan was known to the Greeks as Ariana. As part of the Persian empire, it passed under the dominion of Alexander the Great. The origin of the Afghan race and the date of its settlement in the land are uncertain. They have a tradition that they are the descendants of Afghan, the son of Irmia, or Berkia, son of Saul, king of Israel; and their histories begin with narrating the transactions of the Jews, from Abraham down to the captivity. Various tides of conquest, Scythian, Arab, Tartar, and Mogul, have swept over the land. Ahmed Khan established its independence of Persia in 1747, and founded the Duranee dynasty. In the early part of this century the sway was disputed by various rivals. In 1838 the British espoused the cause of Shah Soojah against Dost Mahomed. Candahar, Ghuznee, and Cabul were taken; Shah Soojah was put on the throne; the conquest was considered complete; and the main body of the British army returned to India. The next year insurrections broke out and grew more and more troublous. In September, 1841, the neighborhood of Cabul swarmed with predatory bands. On the 2d of November, the house of Sir Alexander Burnes, one of the British envoys at Cabul, was fired, and he and every man, woman, and child on the premises, murdered. The British officers seemed to be stupefied. General Elphinstone held the chief command, but was in such a state of nervous weakness from ill health as to be utterly incapable of acting with the energy necessary for such an emergency. The Afghans grew bolder; the British became more confused and indecisive. The 23d of December, Sir William MacNaghten, the other envoy, was

murdered by Akbar Khan, (son of Dost Mahomed), who had invited him to a conference. Three days later the despairing Europeans agreed to yield all but six guns, to relinquish all the treasure, to leave four officers as hostages, and to pay forty thousand rupees, in bills drawn upon India, but negotiated on the spot by Hindoo bankers, for a safe escort to Peshawur. Akbar Khan undertook to conduct them in safety to Jellalabad. The disastrous retreat from Cabul was commenced on the 6th of January, 1842. The British force was estimated at forty-five hundred soldiers, twelve thousand men of camp-followers, besides a great number of women and children. Massacre began at once. The cold was intense; the attacks of the Afghans were incessant; the fugitives were almost without food; only a handful escaped; twenty-six thousand individuals were destroyed. This terrible reverse aroused the British to great effort; victories were gained, and before the close of 1842 the war was at an end, and the British army withdrawn. Shah Soojah had been assassinated, and Dost Mahomed regained the sovereignty.

AFRICA formed a third part of the world, known to the ancients. They gave it the name of Libya, and divided it into Africa Propria and Africa Interior. The former of these, or the territory of Carthage, included several countries inhabited by twenty-six different nations, comprehending two provinces, the *Regio Zeugitana* and *Byzacium*, corresponding with the kingdom of Tunis. Ham and his descendants are thought to have first peopled Africa. Egypt was peopled by Mizraim. Africa Interior included the distant portions of Africa little known to the ancients, whose knowledge did not extend much beyond the tropic of Cancer, the limit of both their victories and researches. Those parts of Africa which they did not visit, their fertile fancies peopled with various races of men endowed with strange attributes; and singular tales, thus originating, have been handed down even to modern times. Thus we hear of nations of curious dwarfs, of men who dwelt in trees like monkeys, of races forming a connecting link between man and the brutes, and tribes whose history has been invented by wild imaginations in their wildest flights. Herodotus states that Africa is surrounded

with water except at the narrow neck of Suez. He reports its circumnavigation by Phœnician mariners between the years 610 and 594 B.C. "Necho, king of Egypt," he says, "dispatched some Phœnicians in vessels, with instructions to sail round Libya and through the Pillars of Hercules [straits of Gibraltar] into the northern [Mediterranean] sea, and so to return to Egypt. They set out from the Red Sea and navigated the southern ocean. When the rainy season came on, they would land on whatever part of the coast they happened to be, sow the ground, and wait for the harvest. After reaping it, they would again put to sea; and thus after two years had gone, in the third they passed through the Pillars of Hercules and arrived at Egypt. And they said (but for my part I do not believe the assertion, though others may) that in their voyage round Libya, they had the sun on their right hand."

Africa was an important division of the ancient world. Many of her nations and states, at a very early period, had made great advancement in the liberal arts. The northern part was inhabited by several enterprising nations, whose extensive commerce rolled abundant wealth into the land. With their riches the power of these states increased: Egypt and Ethiopia became famous, and Carthage sent forth her fleets to every part of the then known world. The career of discovery by which Africa has become known to the modern world, was commenced by the Portuguese in the fifteenth century. Prince Henry, a younger son of John I., devoted his life to the task. The Azores, the Cape Verde Isles, and various points on the coast, were colonized under his auspices. His zeal excited long-continued ridicule and opposition, but African discovery became a national passion, and after his death, was prosecuted by the government. Bartholomew Diaz rounded the continent's farthest promontory in 1487. The storms that tossed him there led him to call it the Cape of Tempests, but John II., thinking the discovery a precursor of brighter revelations beyond, changed the name to the Cape of Good Hope. Vasco de Gama doubled it in 1497, sailed along the eastern coast, and found the path to India. Portuguese mariners had now navigated the whole extent of the African coast, from the Straits of Gib-

raltar to the Straits of Bab-el-mandeb, with the exception of the thousand miles between the latter point and Magadoxa. They had ascertained the general shape of the continent to this extent, and the position of most of the principal rivers and headlands. At the beginning of the century, the line of coast thus traced was entirely unknown to the nations of Europe, excepting the extent of six hundred miles between the Straits of Gibraltar and Cape Nun. But the Arabs had long been acquainted with the greater part of the eastern coast along which Vasco de Gama passed after doubling the Cape of Good Hope; and the great towns which he saw or heard of, from Sofala onward to Magadoxa, were for the most part settlements that they had founded. The chief of these was the town of Quiloa. In course of time the Portuguese gained considerable knowledge of the interior also, partly by means of the establishments they formed at divers points, and partly from information brought them from other parts by the natives. Very early they heard of a great Christian potentate whom they called Priest John; anglicized to Prester John. The expeditions to find the domains of this mysterious personage, and the missions of a later date, all helped to increase the scanty and confused knowledge of the vast country. The French, the English, the Dutch, and others, followed the lead of Portugal, and founded settlements on the coast, and penetrated a little into the interior.

The discoveries of Bruce in his long and perilous journey toward the sources of the Nile, gave a new impetus to African exploration at the close of the last century. An association for its promotion was formed in London, under whose auspices Mungo Park searched for the secret of the Niger's course. Since then important discoveries have been made; discoveries bought by the lives of the explorers, the most of whom have died either from the malaria of the clime or at the hand of treacherous barbarians. Eminent are the names of Park, Burckhardt, Ledyard, Hornemann, Laing, Denham and Clapperton, Lander, Richardson, Overweg and Barth, in the north; and Sparrman, Vaillant, Cowan and Donovan, Lichtenstein, Campbell, Alexander, and Livingston, in the southern part. Dr. Livingston, who was a missionary at Kolobeng, (24° 30' S. lat., 26° E. long.,) made

several journeys thence into the interior, and in 1849, reached Lake Ngami. The existence of this large inland sea had been reported to the Portuguese as early as 1508. In a subsequent journey Dr. Livingston penetrated as far north as 10° S. lat., came out unexpectedly at the Portuguese settlement of Loanda, pushed back into the wilderness, and at last returned to England in 1856. The river Leeambye, after innumerable windings, he traced to the river Zambezi, which discharges itself into the Mozambique Channel. The Leeambye consists of a system of rivers, which spread out periodically into a great sea, filling hundreds of lateral channels. The principal stream is about a thousand yards broad. But a small portion of its waters reaches the sea, the remainder being absorbed by vast lakes and marshes. It is so diminutive when it reaches the sea as not to be navigable for vessels. It will, however, be of great use, as a means of communication with the interior. Dr. Livingston ascertained that a large portion of the blank in South African maps consists of fertile countries, inhabited by populous tribes, and intersected by large rivers. The farther he traveled into the interior of Africa, the more civilized and numerous he found the inhabitants. They were less ferocious and suspicious, had better and more settled forms of government, and more comforts than the coast tribes. He met with tribes who practiced inoculation, knew the medicinal virtues of quinine, and had a tradition of Noah's deluge. He found the climate of eastern Africa more humid than the other sections. The natives were athletic and brave. The next or middle zone is comparatively arid and flat. The inhabitants are not as well developed as the Kafirs. The western portion is nearly flat and sandy, but it is not a desert. There is abundance of vegetation, but water is scarce. The inhabitants manage to subsist on a very small supply of the precious fluid, some of which is obtained from tuberous roots, which contain in their cellular tissues supplies of pure water. In the plains are immense numbers of ostriches and antelopes, which can subsist for months without water.

Mr. Anderssen, in 1851, penetrated from the western coast to Lake Ngami. He there heard of the existence of a large town called Liberbe, nineteen days journey to the north-

east, which was said to be a great place of trade. Between 1847 and 1850, Messrs. Krapf and Rebmann, missionaries stationed near Mombaz on the eastern coast, made several journeys inland, and discovered two lofty mountains, crowned with everlasting snow, Kilimandjaro and Kenia. From the latter a river flows northward, which is conjectured to feed the Nile.

One of the most important expeditions ever undertaken to the interior of Africa was that sent out by the British and Prussian governments in 1849, and conducted by Messrs. Richardson, Barth, and Overweg. The travelers departed from Tripoli in March, 1850. On the way across the desert Dr. Barth visited Agadez, the capital of Air, a city of eight thousand inhabitants, situated in a fertile valley. The kingdom has a population of seventy thousand. The climate is healthy for Europeans. The people are tall and finely formed. The children are taught to read the Koran and to write. No European had wandered there before Dr. Barth. The party arrived on the borders of Soudan Jan. 1st, 1851. Here they separated. Richardson sickened under the heat and fatigue, and died in the following March. Dr. Overweg visited Mariadi and Guber, two independent pagan nations toward Sackatoo, where he was kindly received by the natives, who are a cross between the Tuareicks and the negro races, and obtained much curious information. Dr. Barth at Kano heard of a large kingdom in the south, called Adamawa, said to be the most beautiful portion of Central Africa. The sultan of Bornou furnished him an escort; he traveled three weeks over broad, fertile plains and through a forest infested with lions and elephants. He found Adamawa thickly populated. The inhabitants have large herds of cattle. The soil is tilled by slaves, who greatly outnumber the free inhabitants. On the 18th of June Dr. Barth came to the great river Benueh. The name signifies the 'mother of waters,' and the stream is half a mile wide and nine feet deep in the channel. His conjecture that it was the same as the Chadda, the eastern arm of the Niger, has been confirmed. Yola, the capital of Adamawa, is a town two miles and a half in length by one and a half in breadth, sited on a plain at the foot of Alantika, a mountain

ten thousand feet in height. Dr. Barth was allowed to tarry in Yola only three days, returned by the route he came, and rejoined Dr. Overweg at Kuka the 22d of July. During his absence the latter had launched his boat on Lake Tchad, and explored the islands and shores. He found the lake to be about eighty miles in breadth, quite shallow, and filled with islands inhabited by the Biddumas, who treated him with great kindness. Barth and Overweg planned an excursion to Kanem and Borgou, an unexplored region north-east of Lake Tchad, and extending midway to Egypt. Their party was driven back by the Zibboos, and they returned to Kuka. They accompanied an expedition sent to subjugate Mandara, a country north-east of Bornou. The campaign lasted from the 25th of November to the 1st of February, 1852. The army of twenty thousand men penetrated to the distance of two hundred miles, and returned with a booty of five thousand slaves and ten thousand head of cattle. The country was level, and abounded with marshes. The next year, Dr. Barth after great difficulties and dangers, succeeded in reaching Masena, the capital of Baghirimi, a powerful kingdom east of Bornou, never before visited by an European. Unable to penetrate further to the east, he returned to Kuka in August. Dr. Overweg had unsuccessfully attempted to enter the great Fellatah kingdom of Yakoba, on the river Benueh. He succumbed to the heat, and died at Kuka in September. Thus left alone Dr. Barth relinquished the design of journeying from Kuka to the shores of the Indian Ocean, and turned his steps toward the Niger. He left Kuka on the 25th of November, 1852, reached Sackatoo in April, 1853, and entered the famous city of Timbuctoo on the 7th of September. Nothing was heard of him for a long time; then rumors reached Tripoli that he had been murdered. At last came the joyful news that he was yet alive. He had tarried in Timbuctoo nearly a year, had explored the whole middle course of the Niger, and had found two large kingdoms, Gando and Hamd-Allahi, the very names of which were before unknown. He finally returned safe to Europe in the autumn of 1855.

The country traversed by Dr. Barth in this expedition extended over twenty-four degrees of latitude and twenty of longitude. He had

crossed deserts of frightful desolation, and traversed fertile lands watered by navigable rivers and large central lakes, covered with the finest timber and fruitful in grain, rice, nuts, sugar-cane, cotton, and indigo, products found abundantly all over Central Africa. The people wear cotton of their own weaving, and dyed with native indigo. The Niger, by means of its eastern branch, affords uninterrupted navigation into the interior for six hundred miles. At a distance of about three hundred miles from the coast, the western branch is interrupted by rapids and cataracts, but higher up, the river opens an unobstructed highway a thousand miles long, into the heart of western Africa, so rich in vegetable, animal, and mineral products. These regions exhibit an equal variety in the human race. Starting from Tripoli, on the north, the traveler proceeds from the Arab villages, remnants of the empires of the middle ages, into a country dotted with ruins of the Roman dominion, through the wild roving hordes of the Tuaricks, to the Negro tribes and the natives of Southern Africa. Throughout this vast region the greatest diversity of race and idiom prevails. Mohammedan learning is ingrafted on ignorance, and magnificent ceremonial rises side by side with the simplicity of barbarous Negro tribes. A thread of history, even, can be traced through this labyrinth of tribes and overthrown kingdoms, and a commerce is found radiating from Kano, the great emporium of Central Africa, in every direction, and spreading far and wide the manufactures of that industrious region. Dr. Barth says that the people of the interior, although in a low, are not at all in a degraded state of civilization. Between the farthest points reached by Barth and Livingston, only a strip of fifteen degrees in latitude remains. We venture the prediction that before the close of the present century Ethiopia, so long unknown to the world, will be explored and her casket of wealth opened to traffic and industry.

Africa comprises an area of 10,786,000 square miles. Its population, roughly estimated of course, is set down at 61,689,000. Its chief rivers are the Nile, in Egypt; the Senegal and Gambia, in Senegambia; the Niger or Quorra, the Congo or Zaire; the Orange, the northern boundary of the Cape

colony; and the Zambezi on the eastern coast. The great feature of Northern Africa is the Sahara or Great Desert, the most barren, parched, and terrific waste on the globe. The mineral treasures of this immense continent are of course as imperfectly known as its geography. Salt is widely diffused; gold dust is found in the sands of almost all the streams; copper, iron, and some tin are also met with. The southern regions of this continent are occupied by two distinct races, Hottentots and Kaffirs; the former one of the most indolent, shiftless, and dirty of the human family; the latter higher in the scale. The most widely extended race in Africa is the Negro, varying in intelligence and power with different localities. The Moors of the north are of mixed descent, since the Barbary region has been occupied by various races. The Arab stock has produced the most marked effect.

AGAMEMNON, leader of the Greeks in the Trojan war, was king of Mycene and Argos, son of Plisthenes, and brother of Menelaus, the seduction of whose wife lighted the flames of war. Returning, after the destruction of the city, he was murdered by his wife, Clytemnestra, either from jealousy, or on account of her love for another.

AGATHOCLES, a potter, who, from being a private soldier, made himself master of Syracuse and Sicily, B.C. 317. This he accomplished by the death of thousands. Although defeated by the Carthaginians in Sicily, he carried the war into Africa, where he was successful. After having lost his sons and army by a mutiny in Africa, he succeeded in establishing tranquillity, B.C. 306. In Italy he conquered the Brutii, and took and sacked Crotona. He was killed by his favorite, Menon, who poisoned the feather with which the king usually cleansed his teeth after dinner.

AGESILAUS, king of Sparta, signaled himself by his valorous resistance to the Persians, and successfully opposed the arms of the Thebans under Epaminondas. Agesilaus was lame and of small stature, but brave, and almost idolized by his troops. He was eighty-four years old at the time of his death, B.C. 360.

AGINCOURT, or AZINCOUR, a village in the department of Pas de Calais, France, where Henry V. of England, with an army of

little more than fifteen thousand men, defeated the flower of the French troops, amounting to seventy or a hundred thousand. Henry entrenched his archers against onsets of cavalry, within fences of pointed stakes, then first used, and in modern times, known under the name of *chevaux de frise*. The rashness and disordered impetuosity of the French, and the coolness and orderly intrepidity of the English, produced the same effects at Agincourt as at Poitiers. The English had spent the previous evening in preparing their weapons, confessing themselves, and receiving the sacrament; while the French gamed and drank the night away. The narrowness of the field prevented the French from profiting by their superior force. The Constable d'Albret, the Count de Nevers, and the Duke of Brabant, the Dukes of Alençon and Bar, the Counts of Vaudemont and Marle, scorning to survive defeat, rushed into the thickest of the fight and died, with upward of ten thousand of their followers. The number of captives taken by the English was fourteen thousand, a number about equal to that of the conquerors. Among the captives were the Dukes of Orleans and Bourbon. The loss of the English was about twelve hundred, and the Duke of York almost the only person of rank who fell. This nobleman was Henry's uncle, and was slain in defending the king against the Duke of Alençon, who rode furiously upon him. Alençon dashed Henry's crown from his head, with a blow of his battle-axe, and was preparing to dispatch him, when the king's attendants closed around him in a steely circle, and he fell, covered with wounds, the blood pouring from every joint of his armor. This great battle was fought October 25th, 1415.

AGNESI, MARIA GAETANA, born at Milan, in 1718. In a Latin oration, delivered in her ninth year, she advocated the study of the ancient languages by females. At the age of eleven, she was conversant with Greek, which she spoke with great fluency, and she afterward mastered the oriental languages. Geometry and philosophy next engaged her attention. She was the ornament of brilliant and talented circles, and her loveliness added to the magic of her words. In mathematics she was no less successful, and at thirty she published a treatise on the rudiments of

analysis, thought to be the best introduction to Euler's works extant. She acquired such fame by this performance, that she was appointed professor of mathematics in the university of Bologna. Incessant application seems finally to have rendered her melancholy; she renounced society, and died in a nunnery, 1799.

AGRICOLA, CNEIUS JULIUS, a brave Roman commander, and a distinguished statesman. He subjected a great part of Britain, A.D. 70. Domitian recalled him, and he died in retirement, A.D. 93.

AGRIPPA, HENRY CORNELIUS, a native of Cologne, born in 1486, and noted for his acquirements, talents, and eccentricity. For his military services, he was knighted. He was acquainted with eight languages, and made pretensions to magic, which procured him invitations from various personages of celebrity, who sought to acquire a knowledge of futurity. After a life full of change and incident, he died at Grenoble, in 1535.

AGRIPPA I., grandson of Herod the Great, and king of Judea. St. James perished in a persecution commenced by him. The occasion and manner of his death are related, Acts xii. 20-23, under his patronymic name of Herod.

AGRIPPA, MARCUS VIPSANIUS, the son-in-law and friend of Augustus, whose fleet he commanded in the battle of Actium; died B.C. 12.

AGRIPPINA, the elder, daughter of the above, wife of Germanicus Cæsar, whom she accompanied in his German expeditions. She was banished A.D. 33, by the cruel Tiberius, who hated her for her virtues and popularity, to the island of Pandataria, where she starved herself to death.

AGRIPPINA, the younger, daughter of the former, was born at Cologne. She was possessed of talents, but intriguing, dissolute, and ambitious. She was married to her uncle Claudius, the emperor, whom she poisoned to clear the throne for her wicked son Nero, who assassinated her when she became troublesome after his elevation.

AHASUERUS, the king of Persia whose marriage with Esther, and protection of the Jews, are described in the Scriptures. He is probably the Artaxerxes Longimanus of the Greeks, whose reign began B.C. 465.

AIX-LA-CHAPELLE (AACHEN), a Prussian city on the borders of Belgium, lying between the Rhine and Meuse, in a rich valley encompassed by hills; population 45,000. It was the birth-place of Charlemagne, according to some authors, and contains many buildings and monuments of historical interest. It was the northern capital of Charlemagne, who held a splendid court here, and was buried in its cathedral. Succeeding emperors conferred so many privileges on the city, that it was remarked that "the air of Aix-la-Chapelle gave freedom even to the outlaws." By the celebrated treaty signed here in 1784, peace was concluded between England, France, Holland, Hungary, Spain, and Genoa. A congress of the sovereigns of Austria, Russia, and Prussia, with ambassadors from England and France, was held at Aix-la-Chapelle in 1818, to decide upon the terms for the evacuation of France by the allied army.

AKBAH, a Saracen conqueror, who overran Africa from Cairo to the Atlantic, was killed in a revolt of the Greeks and Africans, 682.

AKENSIDE, MARK, the son of a butcher, born at Newcastle-upon-Tyne, November 9th, 1721. He was intended for the ministry, but preferred the study of medicine. He never had much success in the practice of his profession, but as a poet acquired renown. His "Pleasures of the Imagination" is his best poem. He died of a fever, June 23d, 1770.

ALABAMA was originally settled by Frenchmen and Spaniards. In 1800 the region between Georgia and the Mississippi river was organized as a territory. It was divided in 1817, the western portion forming the state of Mississippi; the eastern territory of Alabama, now the state of that name, having been so constituted by Congress in 1819. It contains 50,722 square miles. The state is divided into several regular terraces, or belts, as it were, which rise above each other from the Gulf of Mexico. Of these the southern is flat and swampy, containing several savannahs. In the center of the state the wide spread plains or gently waving lands of the prairies are covered with herbage, grass, and flowers. The greater part of Alabama is separated from the Tennessee valley by abrupt and precipitous hills, or rather

mountains, which, in some places, rise to an elevation of two thousand feet above the gulf level. The swamps in the vicinity of Florida are numerous, and covered with cypress, gum, and loblolly pine-trees, while the uplands are timbered with the long-leaved pine. What are termed the hummock lands, the fertility of which is lasting, form a belt between the pine ridges and the bottoms. The French imagined that they were well adapted to the rearing of grape-vines. Attention is now being more than ever turned to wine-growing, and it may not be long before these slopes will be clustered with smiling vineyards, and echo the joyous song of the vine-dresser, and the merriment of the autumnal vintage. Corn, cotton, wheat, and rice constitute the main products of the state. Groves of orange-trees, undoubtedly of Spanish origin, are not infrequent. Tobacco and sugar are grown to some extent. Iron and coal are found in various parts of the state. Nearly every part of the state is amply watered by large streams, admitting of extensive steam-boat navigation. The most important of these rivers are the Tennessee, Chattahoochee, Alabama, and Tombigbee.

The French who settled on the borders of the Mississippi at an early period, did not meet with much success at first, and for a long time the French settlements were insignificant and unnoticed. Instead of drawing their support from the fertile bosom of the earth beneath their feet, they are said to have subsisted on provisions obtained from France and the Spanish colonies. So slow were they in appreciating the richness of the soil, and so tenacious of established opinions and prejudices, that on a superficial examination of facts, we are surprised to find that, in the northern and more sterile parts of North America, where a thousand obstacles presented themselves in the path of the adventurer, the work of colonization went on with the greatest rapidity. This appears to have been a wise ordination of providence. The French settlers, while they wanted the perseverance of the English and the colonial experience of the Spaniards, had a singular facility in winning the friendship and esteem of the savages. Yet, in spite of this advantage, few of the colonies they founded at the south, went on without many interruptions,

while the Spanish settlements were generally permanent.

After the English had obtained possession of the whole country east of the Mississippi, which was ceded to them by the French, in the treaty of peace concluded between France and Great Britain, Feb. 10th, 1763, they encountered the hostility of the Spanish, who were in possession of Louisiana, and were inflamed against the English by hostility and jealousy. The war of the American revolution placed the British colonists in this section in a peculiarly embarrassing and dangerous situation. On the one hand they were threatened by the Spanish colonists of Louisiana, while, on the other, they feared the hostility of the new states. The Spanish colonists in turn, although fearful of the spread of liberal principles, and aware that the discomfiture of the British in the south-west would be a source of congratulation to the Americans, yet so ardently desired the conquest, that they laid aside all minor considerations, and determined on attempting it. At this time, Galvez, a gallant and enterprising officer, was the Spanish commander of Louisiana. He took the field against the British with twenty-three hundred men. Natchez and Pensacola capitulated, and Galvez, in 1780, sailed against Mobile with a powerful armament. A storm overtook him in the gulf, and the wreck of one of his armed vessels, with the wetting of his provision and ammunition, gave

no good omen of ultimate success. Many commanders so circumstanced, would have despaired, but Galvez, keeping up a tolerable appearance, landed near Mobile, and halted in the momentary expectation of an attack from the British. He saw that such an attack would be ruinous, and entertaining no doubt that the British would commence hostilities, made preparations for relinquishing his artillery and military stores, and falling back, in what order he might, upon New Orleans. Whether from want of foresight, or from cowardice, the English did not attempt to disturb him.

Finding himself, much to his surprise, unmolested, Galvez took heart again, and having carefully dried his stores and ammunition, which, upon examination, were found not to have been spoiled, though badly wet, he marched upon Mobile, which was garrisoned and defended by regulars and militia. Six Spanish batteries, playing, with well-directed aim, upon the place, opened a breach, and the garrison immediately capitulated! At Pensacola, only sixty miles off, General Campbell was stationed with an overwhelming force; yet he marched not to the relief of Mobile, until it was in the hands of Galvez.

Toward the close of the year 1811, the troops of the United States were employed against the Indians, who formed powerful hostile combinations in the western country. During the war with Great Britain, many

bloody engagements were fought with the Indians. After the surrender of Detroit, an event which produced such a universal feeling of shame and degradation in the west, the Indians sent news of their triumph even to the most southerly extremity of the Union, and invited the neutral tribes of the south to assume the hatchet. The Creeks and Seminoles, with many other tribes, were not slow in responding to the summons, and became involved in the war, which was felt, in hostile incursions, by the entire frontier, from Tennessee to the bay of Mobile. Tecumseh, arming himself with the persuasive predictions of his brother, the Prophet, arrived among the Creeks in 1812, and urged them forward to deeds of blood. The most dreadful outrages were consequently perpetrated by the Creeks along the Alabama frontier, which suffered extremely during this war.

In 1814, Mobile was attacked by the British, and defended by Major Lawrence, with a gallantry which gained him no inconsiderable renown. His Spartan band of one hundred and thirty men were resolved to suffer no stain to dim the brilliancy of their starred banner, and to uphold it while life-blood ran warm in their veins. On the 12th of September, intelligence was received at the fort of the landing of a pretty large force of Indians and Spaniards in its vicinity. In the course of that day two British brigs and sloops hove in sight, and anchored at no inconsiderable distance. At half after four in the evening of the 15th, the *Hermes*, *Charon*, *Sophia*, and *Anaconda*, with ninety guns, anchored at such a distance from the fort, as to admit of firing upon it conveniently. A simultaneous land attack was begun by Captains Nicholls and Woodbine. Their fortifications were made of sand, and they brought a howitzer to bear upon the fort at point blank distance; but they were soon compelled to abandon their position. Still a severe firing was maintained by the ships and fort. The *Hermes*, receiving a raking fire, ran ashore, was abandoned, and blew up. The *Charon* was almost wholly disabled. When the flag-staff of the fort was shot away, Woodbine and Nicholls, thinking the foe vanquished, rushed forward to the fort, but were awakened to a sense of their error by a murderous fire which sent them to the right about

with enviable facility. What praise is too warm for the conduct of the few who composed the garrison, when we consider the numbers and advantages of the enemy? Six hundred men attacked the fort by sea, supported by ninety heavy guns. Four hundred Indians and others made an attack in the rear. Captain Lawrence had but about a seventh of the enemy's numerical force, and twenty guns, all badly mounted, and some of them quite ineffective. Yet, while he lost but ten men, he compelled the enemy to retire with a loss of their very best ship, and two hundred and thirty men.

The state seceded January 11, 1861; at its capital, Montgomery, the rebel congress assembled, Feb. 4, inaugurated the rebel government, and adjourned to Richmond, March 16, 1861. It underwent a fair share of the miseries of war, having been penetrated and traversed a number of times by the Union troops, particularly by Gen. Rousseau with a strong cavalry force in July, 1864, during Sherman's investment of Atlanta, by Gen. Wilson with an army of 10,000 cavalry in March and April, 1865, and by the forces operating against Mobile, in 1864 and '65. Farragut, with a fleet of 32 vessels and 231 guns, forced an entrance into Mobile Bay, Aug. 5, 1864, defeating the rebel fleet and taking the ram *Tennessee*. Operations against the city itself began March 25th, 1865, when Smith and Canby broke ground before Spanish Fort. Mobile was evacuated Apr. 10th and 11th, and Gen. Canby's troops entered it on the 12th. This was the last important fighting of the rebellion, Lee having surrendered to Grant some days before.

Alabama has a long death code. Murder, treason, rape, man-stealing, arson, robbery, burglary, counterfeiting and forgery, are punishable with death. Killing in a duel is made willful murder. A system of common schools was established in 1854, and a state university is sustained at Tuscaloosa.

The capital of Alabama is Montgomery, a thriving city, built on a high bluff at the head of steamboat navigation on the Alabama river; population in 1860, 35,902. The most important town is Mobile, which except New Orleans is the largest cotton mart in the United States. It is a handsome city, and rapidly growing in business and prosperity.

Population in 1860, 29,258. Tuscaloosa, the former capital, stands at the head of steam-boat navigation on the Tuscaloosa River; population in 1853, 3,500.

By the U. S. census of 1860, Alabama had a population of 964,201: consisting of 526,431 whites, 435,080 slaves and 2,690 free colored. There were 17 colleges, 160 academies, 1,074 common schools, 40,280 children at school, and 93,443 white children between eight and sixteen years of age.

ALANI, or ALANS, a warlike tribe that left their abodes near Mount Caucasus, in Asia, when the Roman empire was declining, and aided in its overthrow. After 412, they became lost among the Vandals.

ALARIC, king of the Visigoths, and conqueror of Rome. But little is known of his early history. His wild ambition was excited by overtures from intriguers against Arcadius, emperor of the eastern empire, and he commenced his famous march from the Danube, through Thrace, Dacia, Macedonia, and Thessaly, into Achaia. Everywhere the Goths were victorious, and in their ravages some of the finest monuments of Grecian art were lost. Honorius, the emperor of the west, sent an army to the aid of his brother, and for a few years a truce was had between Alaric and the Romans. But in 405 his army entered the eternal city. The Romans bought his forbearance by a ransom of five thousand pounds of gold, thirty thousand pounds of silver, four thousand garments of silk, three thousand pieces of fine scarlet cloth, and three thousand pounds of pepper. In 410 his bands returned and sacked the city. The treasures which had been accumulated during a thousand years, vanished in three days beneath the hands of the rapacious conquerors. The flames destroyed works of art which the barbarians were unable to carry off, but Alaric spared the churches and those who had sought refuge in them. Alaric died at a Calabrian town (Cosenza), A.D. 410, when he was preparing to lay waste Sicily and Africa. In order to conceal his remains from the Romans, slaves were employed to divert the waters of the Busento, and hollow his last resting-place in the channel of the stream. When the earth had received the body of the conqueror, the waves were permitted to rush in above it, and the slaves

were murdered, that Alaric's secret might be in the keeping of the waters and the voiceless dead.

ALBERT I., emperor and duke of Austria, the son and successor of Rudolph of Hapsburg. He was crowned in 1298, after defeating and slaying Adolphus of Nassau, his competitor. The rival leaders engaged in single combat, and Adolphus exclaimed, "Your crown and life are lost!" "Heaven will decide," was the answer of Albert, as he forced his lance into the face of his adversary and unhorsed him. Albert was assassinated in 1308, by his nephew John, son of the Duke of Suabia, whose paternal estates he had seized. John had often asserted his claims, and urged them upon Albert when he was departing for Switzerland, on account of the revolt of the Swiss. The emperor contemptuously offered his nephew a garland of flowers. "Take this," said he, "amuse yourself with botanical investigations, but leave the cares of government to those who are old and wise enough to understand them." Albert breathed his last in the arms of a poor woman, who was sitting by the road-side at the time of his assassination.

ALBERTUS MAGNUS, or ALBERTUS GROS-TUS, was born in Lauingen, in Suabia, about the commencement of the thirteenth century. In youth he is said to have been singularly obtuse; but he afterward studied at Paris, Padua, and Bologna, displayed prodigious capacity, and became a wonder of erudition. He was a Dominican, and was made Bishop of Ratisbon in 1260; resigned his episcopate in 1263, and died in 1280. Cologne was his chief place of residence. Thomas Aquinas was among his pupils.

ALBIGENSES, the Protestants of Savoy and Piedmont, in the middle ages; the objects of cruel persecution and of several crusades. They are said to have originated at Albigeois, in Languedoc, about 1160. They professed a hatred of the corruptions of the Church of Rome.

ALBRET, JEANNE D', daughter of Margaret, Queen of Navarre, was married at the age of eleven to the Duke of Cleves, but the marriage was annulled in 1548, when she espoused Anthony de Bourbon, Duke of Vendome, by whom she became mother of Henry IV. In 1555, her father dying, she became Queen

of Navarre, and in 1562, the death of her husband left her independent. She then set herself to establish the Reformation in her kingdom, although opposed by France and Spain. She expired suddenly, at Versailles, in 1572, and her death was attributed to poison.

ALBUERA, BATTLE OF. Between the French, commanded by Marshal Soult, and the British and Anglo-Spanish army, commanded by Marshal Beresford, May 16th, 1811. After an obstinate and sanguinary engagement, the latter obtained the victory, one of the most brilliant achievements of the peninsular war. The French loss exceeded 7,000 men, and the allies lost an equal number.

ALBUQUERQUE, the name of two Portuguese brothers, distinguished for bravery, who founded the Portuguese dominion in the Indies. They took Cochin, in India, in 1505. Francis was lost on his passage home. When Alphonso captured Ormus, the Persian king demanded the tribute which he had been accustomed to receive from the princes of the island. Upon this Albuquerque laid down a sword and a bullet, saying haughtily, "This is the coin in which Portugal pays her tribute." After a rash and unsuccessful attempt upon Calicut, he took Goa and Malacca. The envy of courtiers, and the suspicions of King Emmanuel, did not spare even the distinguished merit of Albuquerque, who died at Goa, in 1515, after his ungrateful master had appointed his personal enemy, Lopez Soarez, to fill his post.

ALCIBIADES, an Athenian, famous for his enterprise, gallantry, versatility, and natural foibles. He was the son of Clinias and Dinomache, and was born at Athens, about 450 B.C. He inherited high rank and vast wealth, while nature had endowed him with a person unusually handsome, manners the most fascinating, and talents of high order. Left early an orphan, he was educated in the house of Pericles, who was too much occupied with state affairs to pay much attention to the youth. The impetuosity of Alcibiades displayed itself early, as the following anecdote shows. While he was playing dice in the street with some juvenile companions, a wagon came up. Alcibiades requested the driver to stop, but he refused. The daring

ALCIBIADES.

youth then threw himself before the wheel, and exclaimed, "Drive on, if thou darest!" The instructions of Socrates restrained for a time his vain and wanton propensities. Socrates fought by his side in his first battle, and, when he was wounded, defended him, and bore him off safe. The dissipation and extravagance of Alcibiades were unbounded. One night, being at a banquet, he laid a wager that he would box the ears of the rich Hipponicus, and did so. This excited general indignation, but Alcibiades went to the injured party, threw off his garment, and, placing a rod in his hand, bade him strike and revenge himself. Hipponicus not only pardoned him freely, but gave him his daughter in marriage with a goodly portion. At the Olympic games, Alcibiades would enter seven chariots, and at one time won three prizes.

In the Peloponnesian war he encouraged the Athenians to engage in an expedition against Syracuse. He was chosen general in that war, and in his absence, his enemies, having found all the statues of Mercury broken, charged him with being concerned in the deed and confiscated all his property. He then fled to Sparta, where he attempted to gain popularity by adopting the temperate habits of the Spartans, whom he wished to rouse against the Athenians. Finding this of no avail, he went to Tissaphernes, the

ALC

satrap of Lydia. He was afterward recalled by the Athenians, and having compelled the Spartans to sue for peace, and been successful in Asia, was welcomed to Athens with high honors. The failure of an expedition, with the command of which he was intrusted, again aroused the resentment of the people, and Alcibiades fled to Pharnabazes, satrap of Bithynia. Lysander, the Spartan general, induced Pharnabazes to assassinate him. The attendants sent for that purpose, found him in a castle in Phrygia, in company with his favorite Timandra. They set the building on fire, and the warrior rushed out sword in hand. Dreading his valor, the cowardly assassins retreated to a safe distance, and shot him with their arrows. Thus perished Alcibiades, in the forty-fifth year of his age, about 404 B.C. Though he wanted firm moral principles, he was generous, brave, persevering, and gifted with distinguished qualities. His eloquence won the hearts of men imperceptibly and unostentatiously; although it is said that he stuttered, and was unable to pronounce the letter 'r.'

ALEMANNI, the ancient inhabitants of Suabia and Switzerland, united in a league, from whence Germany derives its French name of Allemagne. They were the determined opponents of the Romans. They finally submitted to the Franks.

ALEXANDER THE GREAT, son of Philip of Macedon, was born at Pella, B.C. 356. Olympias, daughter of Neoptolemus of Epirus, was his mother. At an early age, he showed a veneration for great deeds and a determination to achieve them. Hearing of the victories of Philip, he exclaimed, "My father will leave nothing for me to do." Aristotle instructed him in the most elegant as well as the most profound branches of knowledge, and never for a moment forgot that it was his duty to fit him for governing a great kingdom. That he might become acquainted with military virtues and ambition, Aristotle put the "Iliad" into the hands of his noble pupil. Alexander was so fond of this, that he never lay down without having read some pages in it. His exclusive ambition is well illustrated by the letter which he wrote his preceptor on the publication of his "Metaphysics." "You did wrong in publishing those branches of science hitherto not to be

acquired but from oral instruction. In what shall I excel others, if the more profound knowledge I gained from you be communicated to all? For my part, I had rather surpass the majority of mankind in the sublimer branches of learning, than in the extent of power and dominion."

It was no part of the ancient Grecian plan of education, to permit the culture of the mind to supersede that of the body. The instructors of the young trained the intellectual and corporeal powers at the same time. Alexander was early accustomed to gymnastic exercises, and at a tender age, displayed his strength and skill in an extraordinary manner. His father had been presented with a superb charger (Bucephalus), which no one dared to mount. Alexander sprang upon his back and succeeded in completely taming him, after which the steed would permit none but the noble youth to mount him. He bore him through some of the most perilous scenes of his career, and, when he died, was honored by a splendid memorial, the erection of a city called Bucephalia. At the age of sixteen years, Alexander was appointed by his father, regent of Macedon, when the latter departed on his expedition to Byzantium. In 338, at the battle of Chæronea, he so distinguished himself, that Philip, embracing him, exclaimed, "My son, seek another empire, for that you will inherit is unworthy of you."

When Philip married Cleopatra, and divorced, or at least disgraced, Olympias, Alexander, having taken the part of his mother, incurred the displeasure of his father, and was forced to fly to Epirus, whence, however, he was soon recalled. Soon after this he saved his father's life in an expedition against the Triballi. Philip was assassinated, B.C. 336, when preparing to make war upon Persia, at the head of all the Grecian forces. Alexander, then twenty years of age, ascended the throne, and soon gave proof of talents to govern and to conquer. He conquered the Illyrii and Triballi, and forced a triumphant passage through Thrace. Urged by the eloquence of Demosthenes, the Athenians were about to join the Thebans, who had taken up arms, to throw off the yoke of Macedon. Alexander promptly repaired to Thebes, and on the refusal of the citizens to surrender, took it and destroyed it, with the exception

of the poet Pindar's house. Six thousand individuals were put to the sword, and thirty thousand reduced to captivity. The Athenians, although punished, were not so severely handled, and the fate of Thebes had the intended effect of striking terror into all Greece. The general assembly of the Greeks confirmed Alexander in the chief command against Persia, and he determined to leave Antipater, who had been a minister of his father, at the head of the government. The confidence reposed in this man was great, as appears from the following anecdote. Philip was fond of wine, and occasionally indulged himself to excess. One night, observing one of his companions unwilling to drink deeply, "Drink, drink," said he, "all's safe, for Antipater is awake."

In the spring of 334, Alexander crossed into Asia with 30,000 foot and 5,000 horse. In the plains of Ilium, he offered sacrifices to Minerva, and crowned the tomb of Achilles. Approaching the Granicus, he learned that Persian satraps, with 600,000 foot and 20,000 horse, were prepared to oppose his progress. The passage of the river was effected in the teeth of this force, and Alexander was completely triumphant. During the heat of battle, the Macedonian monarch was a mark for the weapons of the enemy, by the splendor of his equipments, and the conspicuous beauty of his superb charger. The cities of Asia Minor, with few exceptions, now opened their gates to the youthful conqueror. In passing through Gordium, Alexander cut the Gordian knot. Lycia, Ionia, Caria, Pamphylia, and Cappadocia, were successively conquered. The conqueror was seized with a severe illness in consequence of imprudently bathing in the Cydnus, which proved a check to his career. While in a dangerous state, he received a letter from Parmenio, his general, warning him against his physician Philip, whom Parmenio accused of the design of poisoning his master. Philip was at that time preparing a potion for the king; and Alexander, handing him the letter, looked steadily in his face while he drank off the draught. He recovered.

Darius, instead of waiting for Alexander on the plains of Assyria, had advanced with an immense army to the defiles of Cilicia, whither the Macedonian followed, defeating the Per-

sians in the battle of Issus, which placed the treasures, and the mother, wife, and children of Darius in the hands of the conqueror. His generous treatment of the family of Darius conferred as much honor upon Alexander, as the victory which preceded it. He turned toward Coelosyria and Phœnicia for the purpose of cutting off Darius, who had fled toward the Euphrates. The Persian monarch sent a letter to Alexander suing for peace, and the latter answered him, that if he would come to him, he should receive his mother, his wife, his children, and his empire; but no notice was taken of this liberal proposal. Damascus, and all the towns along the Mediterranean, were entered and taken possession of by Alexander. The resistance of Tyre was severely punished; it stood a siege of seven months; the inhabitants were massacred or sold as slaves. This is one of the blackest acts in Alexander's career. In Palestine, Gaza, which resisted the conqueror like Tyre, shared a like fate. Gaza was the emporium for the productions of Arabia, and a place of considerable wealth and importance. Among the plunder, the conqueror gained great quantities of frankincense, myrrh, and other aromatics, the sight of which recalled a long forgotten incident of his juvenile days. His governor, Leonatus, observing him one day at a sacrifice throw incense into the flame by handfuls, remonstrated, and said, "Alexander, when you have conquered the spice countries, you may be thus lavish of your incense; meantime use what you have more sparingly." Alexander now sent his governor several large bales of spices, with the following note: "Leonatus, I have sent you frankincense and myrrh in abundance; so be no longer a churl to the gods." On his way through Palestine it is said that Alexander marched against Jerusalem to destroy it; but when he saw Jaddus the high-priest clad in his solemn robes, he declared he had seen such a figure in a vision in Macedonia, inviting him to Asia and promising to deliver the Persian empire into his hands. The holy city was spared, and in the temple Alexander offered sacrifices to the God of the Jews.

He proceeded into Egypt, and founded the city of Alexandria. The Egyptians, to whom the Persian yoke had been a galling burden,

were well pleased with the arrival of Alexander, whom they gratefully regarded as a deliverer. His next expedition was a visit to the temple of Jupiter Ammon, in the deserts of Libya, where, having consulted the oracle, the crafty god is said to have acknowledged him as his son. In the ensuing spring, learning that Darius had gathered an immense force in Assyria, and was determined to fight to the last, rejecting all proposals for peace, Alexander marched in that direction. In 331, a furious battle was fought at Gaugamela, not far from Arbela, in which the army of Darius was not less than 500,000 strong. Notwithstanding this overwhelming force, the Macedonian was irresistible, and scattered the thronged Persians like leaves before the tempest. Alexander's principal object was to capture the Persian monarch, or prevent his flight by death. In the midst of the crowd and crush of battle, Darius was no inconsiderable figure, for he was mounted on a chariot of great height, and surrounded by guards splendidly armed and equipped. These, however, no sooner perceived the extraordinary success of Alexander, than, forgetful of their duty, they took to flight. Darius was saved by the speed of a horse upon which he hastily threw himself.

The immense wealth of the East was deposited in Babylon and Susa, both of which opened their gates without hesitation to the mighty victor, who continued his march toward Persepolis, then the capital of Persia. Ariobarzanes, with 40,000 men, had thrown himself into the only passage which opened on Persepolis, to defend it as long as he was able. He did not hold out long, for the troops of Alexander, flushed with success, and impatient of opposition, swept away all obstacles. Persepolis, with all its wealth and luxury, was won. In Persepolis, Alexander forgot his duty and his interest in unexampled riot and dissipation. He was intoxicated with success, and inclined to believe himself the god which his flatterers would have made him. In a moment of intoxication and unbridled pleasure, Alexander, yielding to the persuasions of an abandoned woman, Thais, the Athenian, fired the capital of Persia, which was soon reduced to ruins. On the right bank of the Medus and Araxes, near Istakar, the ruins of the royal

palace of Persepolis are still visible; tall columns yet attesting its former magnificence, before the vengeance of the Greek was wreaked upon the pride of art.

The burning of Persepolis filled Alexander with remorse, and he set forth in pursuit of Darius. He soon learned that Bessus, the perfidious satrap of Bactria, kept his master in custody, but before he could save Darius, Bessus had the unfortunate monarch assassinated, B.C. 330. He was found lying in his chariot covered with wounds. The perfidy of Bessus was subsequently punished with death. Darius was interred with great solemnity, and Alexander caused himself to be proclaimed king of Asia. While occupied in the formation of plans of vast importance, a conspiracy broke out in the camp of Alexander, in which Philotas, the son of Parmenio, was found to be concerned. Philotas, though brave and hardy, was addicted to pleasure, to expensive amusements, and given to boasting. He frequently spoke slightly of Alexander to the companions of his pleasures, calling him the *boy*, and saying that the victories were rather the result of his own exertions and those of his father, than of the bravery and skill of Alexander. Parmenio endeavored to check his son, saying, "Make yourself less conspicuous," but his counsel was of no avail. Alexander heard of the boastings of Philotas with indignation; and when the conspiracy broke forth, his anger knew no bounds. Philotas was executed, and, by the orders of Alexander, the veteran Parmenio was secretly put to death, a criminal act which excited the displeasure of the whole army.

Meanwhile Agis, king of Sparta, threatened the destruction of the power of Alexander in Greece, and raised a powerful army to obtain independence, but he was defeated by Antipater, and the dissolution of the Grecian league ensued. Neither the severity of the winter nor the want of local knowledge prevented Alexander from marching into the north of Asia and reaching the Caspian Sea. He attacked the Scythians, urged on by an insatiable thirst for distinction. On his return to Bactria, he assumed the dress of the Persians, which disgusted the Macedonians, who thought the flowing robes of the orientals too effeminate. The Persians were dis-

pleased at beholding the Macedonian officers entering the royal presence without those tokens of respect, which the kings of their nation invariably exacted from their subjects. The low inclinations of reverence could only be claimed from the Greeks on the plea that Alexander, as a god, was entitled to them. A blunt Spartan once satisfied the master of ceremonies and his own scruples, by first dropping a ring and then stooping to pick it up in the presence of the king. Offended with the independence and freedom of Clitus, Alexander slew him with his own hand at a banquet. As soon as he saw the lifeless body of his most faithful friend and bravest general stretched before him, he was seized with all the agonies of remorse.

The next year Alexander subdued Sogdiana, and married the Bactrian Roxana, loveliest of Asiatic women. The Asiatic women, but particularly the ladies of Persia, were famous for the richness of their attire, and the art with which they heightened their native beauty. The Persian ladies wore the tiara or turban, richly adorned with jewels. They wore their hair long, and both plaited and curled it; nor, if the natural failed, did they scruple to use false locks. They penciled the eye-brows, and tinged the eye-lid, with a dye that was supposed to add a peculiar brilliancy to the eyes. They were fond of perfumes, and the delightful attar was the favorite. Their tunic and drawers were of fine linen; the robe or gown, of silk, with a long train that on state occasions required a supporter. Round the waist they wore a broad zone or cincture, flounced on both edges, and embroidered and jeweled in the centre. They also wore stockings and gloves, but history does not record their materials. They used no sandals; a light and ornamental shoe was worn in the house; and for walking they had a kind of coarse half boot. They used shawls and wrappers for the person, and veils for the head; the veil was large and square, and when thrown over the head, descended low on all sides. They were fond of glowing colors, especially of purple, scarlet, and light-blue dresses. Their favorite ornaments were pearls; they wreathed these in their hair, wore them as necklaces, earrings, amulets, bracelets, anklets, and worked them into conspicuous parts of their dresses.

Of the precious stones they preferred emeralds, rubies, and turquoises, which were set in gold and worn like the pearls. No fewer than ten thousand Greeks, captivated with their charms, married Asiatic brides, and each couple received a present from Alexander.

Soon after the marriage of Alexander with Roxana, a conspiracy was discovered among his troops, headed by Hermolaus. All were condemned to death but Callisthenes, who was mutilated and carried about with the army in an iron cage, until his tortures became insufferable, and he killed himself by poison. Alexander penetrated into India and was highly successful. His most determined enemy was Porus, an Indian king, whom he effectually subdued. When this warlike monarch was asked how he should be treated, he answered Alexander, "Like a king," and was consequently restored to his kingdom.

Alexander established Greek colonies in India, and is said to have built no fewer than seventy towns, one of which was erected in honor of his horse Bucephalus, killed on the banks of the Hydaspes. He would have penetrated as far as the Ganges, but for the murmurs of his fatigued army. He returned to the Hydaspes, and built a fleet upon its banks, dispatching part of his army by water, while the remainder marched down by land. His march through the country was not unopposed, and he himself received a severe wound, from which, however, he recovered, and sailing down the Indus, reached the sea. Nearchus, the admiral of Alexander, sailed to the Persian gulf, while the conqueror reached Babylon by land, in the spring of 324 B.C., after encountering incredible fatigues, which cost him the loss of many men. At Susa, he was married to two Persian princesses. At Opis, on the Tigris, he sent home the invalids with presents, and quelled a mutiny of his troops. Not long after this, his friend and favorite, Hephaestion, died. It is asserted that the fever of Hephaestion was brought on by hard drinking. Alexander's grief at the loss of his favorite was excessive, and even endangered his reason; for three days he tasted no food, and lay stretched upon the ground, either in silent sorrow or loud lamentation. The money expended on the funeral pile might have

erected a palace; and all the barbarian subjects of Alexander were ordered to go into mourning.

When Alexander went from Ecbatana to Babylon, which he meant to make the capital of his empire, he is said to have been warned by the astrologers that the latter place would prove fatal to him. Despising these warnings, he went to Babylon and gave audience to the several foreign ambassadors who awaited his arrival. His mind was engaged in forming vast plans of future conquest, when he was seized with sickness, after a banquet, and died in the spring of 323 B.C. Alexander had reigned twelve years and eight months, and was thirty-two years old at the time of his death. The vast possessions which he had acquired by force, were deluged by continual bloodshed when he was no more. When asked to whom he left his kingdom, he answered, "to the worthiest." The body of Alexander was interred with all the pomp and circumstance of regal burial at Alexandria, where Ptolemy inclosed his remains in a golden coffin. The Egyptians and other nations paid divine honors to him after his death. A modern writer has said: "The history of Alexander forms an important epoch in the history of mankind. Unlike other Asiatic conquerors, his progress was marked by something more than devastation and ruin; at every step of his course the Greek language and civilization took root and flourished; and after his death, Greek kingdoms were formed in all parts of Asia, which continued to exist for centuries. By his conquests the knowledge of mankind was increased; the sciences of geography, natural history, and others received vast additions; and it was through him that a road was opened to India, and that Europeans became acquainted with the products of the remote East."

ALEXANDER SEVERUS, a Phœnician by birth, related to Heliogabalus, who attempted his life, in consequence of which the prætorian guards slew the monster, and made Alexander emperor in his seventeenth year. He proved himself worthy of the sceptre, and having gained a great victory over the Persians, on his return to Rome was honored by a triumph. When he marched into Gaul, where an irruption of the Germans

required his presence, he fell, by a mutiny of his troops, in the year 235, after a reign of twelve years. He was temperate, frugal, humane, and so favorably disposed to Christianity, that he placed the statue of Jesus in his private chapel.

ALEXANDER, the name of seven popes, the first of whom introduced the use of holy water. The sixth was remarkable for his cruelty and the infamy of his son, Cæsar Borgia. He died in 1503, having greatly extended the papal dominions in Italy.

ALEXANDER NEVSKOI, grand duke of Russia, a hero and saint of the Russian church, was born in 1218, and died 1263

ALEXANDER I., of Russia. [*See* ROMANOFF.]

ALEXANDRIA was the Greek capital of ancient Egypt, and under the Ptolemies, whose favorite residence it was, was celebrated for its wealth, splendor, and arts. It was founded in 332 B.C. by Alexander, who employed the celebrated architect, Dinocrates, in beautifying and embellishing it, and sprang at once into beauty and importance. The situation of Alexandria, and the excellence of its fine harbors, appeared to adapt it to the rank which its founder hoped that it would hold among the cities of the world. Ptolemy Soter, or the Savior, and Ptolemy Philadelphus, conferred great benefits upon the city, which became the seat of literature, the resort of the learned of all countries, and an important mart. Its earliest inhabitants were Greeks and Egyptians. The population was augmented by colonies of Jews transported thither for that purpose. These people made themselves familiar with Grecian lore, and translated into the Greek language the whole of the Old Testament, a version called the Septuagint. Four hundred thousand volumes of the royal library were contained in a magnificent edifice belonging to the academy and museum, in which Euclid taught; 300,000 more were deposited in the temple of Jupiter Serapis. As all these works were in manuscript, their value was immense. The Ptolemies spared no pains to enrich their library, which became the finest in the world. When Julius Cæsar besieged Alexandria, 47 B.C., the library was injured by fire, but the loss was repaired by the library of Pergamus which Antony presented to Queen Cleopatra.

CLEOPATRA'S NEEDLE.

It was much injured by the Christians under Theodosius the Great, and the Arabs completed the devastation. When the division of the Roman empire was effected, Alexandria, together with the country of which it was the capital, was included in the Eastern empire. Alexandria came into the hands of the Arabs in 640. It received the attention of the Caliph Motawakel, who, mindful of its former state, restored both the library and academy, in 845. In 868, it was taken by the Turks, and under their sway, very rapidly declined. Still its commerce was in a flourishing state, and continued so until the close of the fifteenth century, when the Portuguese, by the discovery of the passage to the Indies by the Cape of Good Hope, altered the commercial channel, and enriched themselves at the expense of the Egyptians. The modern city of Alexandria occupies only a part

of the site of the ancient city. The remains of ancient Alexandria are unimportant, the red granite obelisks called Cleopatra's needles, and Pompey's pillar, being the most conspicuous. The latter was erected by a prefect of Egypt, in honor of the Emperor Diocletian; but the equestrian statue which formerly surmounted it, is gone. Some years past, a party of English sailors resolved to amuse themselves, and astonish the natives, by mounting to the top, and refreshing themselves at an elevation which should put them above the cares and turmoils of humanity. How to accomplish their purpose was the next question. This was soon settled. They raised a line by means of a kite, and dropped it over the pillar, and by this means drew up a rope, by which they gained the top, whence, looking down upon the spectators from a giddy elevation of eighty-eight feet, they con-

ALE

gratulated themselves on their success. The island of Pharos yet bears the ruins of the light-house erected by the Ptolemies. This celebrated building was of white marble. Ptolemy directed his name to be inscribed upon the tower, but the cunning architect carved the name of his employer upon a tablet of plaster, which, decaying in time, displayed the name of the builder, with a dedication to the gods, claiming for himself all the honors due to his sovereign. One of Cleopatra's needles was presented to England by the pacha, but its weight, 400,000 pounds, was a serious bar to its transportation. The ancient Alexandria had a population of 600,000; the modern contains about 60,000. It is the seat of a patriarch. It is the only port of Egypt, and the ancient canal communication with the Nile has been reopened. This, and the establishment of the overland route to India, have increased its importance.

A battle was fought at Alexandria, March 21st, 1801, between the French under Menou and the British under Abercrombie. The latter gained the day. Abercrombie was mortally wounded.

ALFIERI, Victor, Count, was born at Asti in Piedmont, in 1749. His family was rich and distinguished, but, an orphan from childhood, his education was neglected, like that of most of the young Italian nobles of his age and rank. Thus he quitted the academy of Turin, with an undisciplined and uninformed mind, and joined a regiment in the hope of finding something exciting in military pursuits. But here he was disappointed: the regiment was mustered only a few days in the year, and he was compelled to seek some other mode of killing time. For several years he led a dissipated and wandering life through Italy, France, England, and Holland, but wanted the information to render his wanderings profitable. A love for horses and horsemanship was one of his two strongest passions. The other involved him in a swarm of profligate amours. Yet by one of these affairs, his poetical susceptibility and his literary ambition were for the first time aroused. Aware of his deficiencies, he resolved to educate himself. He studied assiduously Latin and Tuscan. In Tuscany, he became acquainted with the Countess of Albany, the unhappy wife of the Chevalier

Charles Edward Stuart. To her love he owed much of his inspiration. Settling his fortune on his sister, he resided alternately at Florence and Rome, until the death of Charles Stuart put an end to the woes of the Countess of Albany, and enabled her to marry him. They lived together in Alsace and at Paris, until the revolution in France drove Alfieri from a country he loved, to his native land, where he resided at Florence till his death, in 1803. Alfieri's talents were great, but misapplied, and his tragedies are rather valuable as indicating his powers, than as establishing his fame.

ALFRED THE GREAT, was born 849, and died 900. He was the youngest son of Ethelwolf, king of the West Saxons, and was born at Wantage, in Berkshire. He went to Rome at the age of five years, and was anointed by the pope, although he then had an elder brother. This brother, Etheldred, fell in battle with the Danes, and in 872, Alfred ascended the throne. This was an unpropitious time, for the power of the Danes was then great and employed in harassing the Saxons, whose country they ravaged in various directions. Alfred concluded some treaties with them, but they were not kept, and unable to make head against the invaders, he was compelled to fly, and in concealment to await a moment when his reappearance would be advantageous for his country. The old chronicles tell that he found refuge in a peasant's hut at Athelney in Somersetshire. The goodwife set the disguised monarch to watch the baking of cakes. His mind was busy with the Danes; the cakes burned to a coal; and the words of his mistress were loud and sharp. In the disguise of a harper, he penetrated the Danish camp to gain information of the strength and hopes of his foes. Having satisfied himself of both, he directed his nobles and their vassals to assemble at Selwood. Here he headed the troops, and, attacking the Danes at Eddington, gained a signal victory. A series of successes soon restored him his throne. He permitted those Danes who were willing to embrace the Christian religion, to remain in the kingdom of East Anglia, which he surrendered to them. He built forts to secure his subjects, augmented and strengthened his navy, and established the prosperity of London on a

firm basis. He defeated the Danes who still persisted in attempting to obtain footing in England, and made his name a terror to the pirates. He had fought fifty-six battles by sea and land, in every one of which he was personally engaged. His zeal for the reformation of laws and manners is as honorable to him as his military prowess. He composed a valuable code. By some he is said to have instituted the trial by jury, and to have divided England into shires, hundreds and tithings. But it is probable that the jury trial and these municipal divisions had previously subsisted among the Anglo-Saxons, and that Alfred confirmed them upon a surer basis. He so arranged the business of the nation that all measures passed through three councils. To the first of these only those high in the king's confidence were admitted, and here were debated all affairs that were to be laid before the second council, which consisted of bishops and nobles, appointed by the king. The third was a general assembly of the nation, called Wittenagemote, to sit in which quality and offices gave a right independent of the king. In these councils we discern the origin of the present cabinet, privy council, and parliament of England.

Alfred was an ardent lover of learning, and was himself a distinguished scholar. He invited learned men from all parts, and established schools throughout his kingdom. He is said to have been the founder of the university of Oxford, or, at least, to have exalted it to a height which it had never before attained. University College sprang from his liberality. He composed several works, and translated others into Anglo-Saxon for the benefit of his subjects. Among his translations may be mentioned the "Consolations of Philosophy" of Boethius, and perhaps the Psalms of David and the Fables of Æsop. He was industrious and fond of order, dividing the twenty-four hours into three equal portions; one devoted to religious duties, another to public affairs, and the third to rest. Alfred laid the foundation of the navy of England, by building galleys of a size superior to that of any of the age. In private life, he was distinguished by piety, affability, and cheerfulness. His person was commanding and stately.

ALGIERS. The state formerly known as

the regency of Algiers is now in possession of the French, and called by them L'Algerie. It comprises the territory of the kingdom of Numidia, which was reduced to a Roman province 44 B.C., and afterward subjugated by the Vandals, then by the Byzantine Greeks, and finally by the Arabs, who invaded the north of Africa at the beginning of the eighth century and established Islamism. The city of Algiers was founded by Zeiri, an Arab of distinction, in 944, and his family were endowed with hereditary power by one of the Fatimite caliphs.

The Zeirite dynasty ruled until 1148, when Roger, king of Sicily, and the Moravites, possessed themselves at different times of the whole of the territory of Hassad Ben Ali. Algiers was again an independent sovereignty after 1270. The regency of Algiers, tributary to the Turkish sultan, was founded about 1518, by Horush (nicknamed *Barbarossa*) and his brother Khair-ed-din, two Turkish corsairs who were summoned by the Algerines to beat back Ferdinand of Spain, and who usurped the government. It was about this time that the Christian knights, having warred against the Mohammedan states, and almost annihilated the Moorish commerce, the Moslem rulers exhorted their subjects to make reprisals, and to annoy their foes by extensive piracies. The call was obeyed without reluctance, and the Mohammedans, crowded beneath the crescent, spread the terror of their name upon the seas. The piratical republic founded by the fierce chieftains above named, was the stronghold of religious fanaticism and authorized piracy. The barks of the corsairs swept the seas in triumph, and the Algerines distinguished themselves above the inhabitants of the other Barbary states, by the fierce perseverance with which they pursued their career of crime.

Charles V. undertook the siege of Algiers, in the latter part of 1541, with an armament of two hundred sail and thirty thousand men. But his ships and camp were destroyed by storms of uncommon violence, followed by the ravages of earthquakes. He lost his cannon, military stores, and baggage, and was compelled to abandon some of his scattered troops, while fifteen ships of war, a hundred and forty transports, and eight thousand men perished in the storm. This success

inspired the Moors with the liveliest joy, but they attributed it entirely to the pious exertions of Sid-Atica, a marabout who employed himself diligently in beating the sea with his stick, until the waves lost all patience, and, rising in a body, destroyed the Christian fleet. The worthy old gentleman was buried with great solemnity, and his bones rested beneath a monument erected by his countrymen. They were said to be gifted with the magic power of his stick, and, employed upon the waves with proper emphasis, capable of raising the wind to an incredible extent. Antiquity furnishes precedent for a belief in the efficacy of chastising the waters, for Xerxes, enraged at the turbulence of the Grecian waves, caused them to be whipped with rods.

The corsairs continued the scourge of Christendom. On even the coasts of England and Ireland they swooped, and "took prey of men to be made slaves." "They carried their English captives to France, drove them in chains overland to Marseilles, to ship them thence with greater safety for slaves to Algiers," an old historian says. Admiral Blake taught the pirates to respect the flag of England, in 1653; but they repulsed later attacks of that and other European powers. Many nations paid tribute to the dey, and thus bought freedom for their flags. In 1815 Commodore Decatur compelled the Algerines not only to renounce their claim to black mail from our shipping, but to make indemnification for the losses which we had experienced from their piracies. The city of Algiers was vigorously bombarded by a British fleet under Lord Exmouth, Aug. 27th, 1816. The dey was forced to conclude a treaty, by which all Christian slaves were set free, and he promised that no more captives should be reduced to that ignominious condition. This last stipulation was afterward evaded. The Algerines claimed the right, as an independent power, of declaring war against any state they chose, and of seizing its merchantmen, and keeping the crews in prison till peace was agreed on. In 1817 their corsairs penetrated the North Sea, and there, with surprising audacity, captured ships which did not belong to tributary powers, or to those who were exempted from their depredations by treaty. Prisoners were only ransomed at

enormous prices. Their treatment, now, instead of being ameliorated was more harsh than ever, and the corsairs, although they respected the flags of America and other strong powers, warred with the ships of weaker states, and enforced the superiority of might over right. The jealousy of the European states for a long time favored the encroachments of the Algerines, until the French prepared for conflict with stern decision. One of the last events in the reign of Charles X., was the entire prostration of the power of Algiers. The dey, with his personal treasures and his women, was permitted to retire, and selected Italy as a retreat. The French took possession of the town, the castle, and all public property whatsoever. Among the spoil were twelve ships of war, fifteen hundred brass cannon, and forty-eight million francs in gold and silver. They secured their conquest, and since then Algiers has been a military province of France.

During the prosperity of Algiers, a struggle was kept up with the Sublime Porte about the appointment of the deys, till the sultan finally relinquished the claim of choosing them to the soldiery, and retained but a nominal authority over Algiers. The deys, whenever they displeased the ferocious soldiery they affected to rule, were deposed and put to death. The lives of these men were proverbially short, but we admit an exception in the person of Mohammed III., who died in 1791, after a reign of twenty-three years, at the age of ninety-three. Omar Pacha, the opponent of Lord Exmouth, was murdered in 1817. Ali Hodya, his successor, shut himself up in the castle of Casaba, where, by means of his fifty-six cannon, and a garrison on which he could rely, he maintained ascendancy over the city and the cruel Turkish troops, who had murdered Omar. Hussein, successor of Hodya, rendered cautious by experience, likewise occupied this strong castle. The government of Algiers was despotic, the dey possessing unlimited power, but being assisted by a divan composed of his chief officers of state and first ministers. The common soldiers elected the dey, but no election was permitted without unanimity in the electors. Therefore, when there was a difference, the majority compelled the weaker party to concur with them. The new dey espoused the principle

of proscription, and frequently put to death incumbents, for the sake of opening state offices to his partisans. He held a court of justice on four days in the week, where proceedings were summary, and condemnation was followed by punishment at no long interval.

By the capitulation of the dey, the French became possessed "of the city of Algiers, and the forts and harbors depending on it." No mention was made of the provinces, or of the native tribes in the interior, over which the authority of the dey was little else than nominal. Ahmed Bey of Constantine and the Bey of Titteri refused allegiance, and were not subdued for several years. The grasping policy of the French alienated the Arab tribes moreover. In May, 1833, Abdel-Kader, the Emir of Mascara, took up arms against the invaders, and his leadership was soon recognized by all the Arabs. The contest between him and the French was not closed till December, 1847, when he surrendered and was sent with his family and attendants to France. There he remained a prisoner, treated however with much courtesy, till October, 1852, when he was released by Louis Napoleon. He swore upon the Koran never to disturb Africa again, and was to reside thenceforward at Broussa, in Asia Minor. In consequence of the earthquake at that place, Feb. 28th, 1855, he removed to Constantinople.

The French keep a large army in the colony. The European emigration settled in Algeria up to 1852, amounted to about seventy thousand, and it has since been rapidly augmented. The native races of the country consist of Berbers or Kabyles (the aboriginal inhabitant), Arabs, Moors, Kooloolis (descendants of Turks), Jews (who flocked hither when extirpated from Spain and Portugal), and negro slaves from Soudan. Slavery has been abolished by the French. The population of the city of Algiers in 1852 was 54,041, of whom 24,649 were native Mussulmans and Jews. The French have much improved its appearance; they have opened wide streets and squares, built fine houses in the European style, hotels, coffee-houses, a theatre, &c. The activity of the new settlers will soon change the look of the whole coun-

try. Constantine, the ancient Cirta, has a population of about 80,000.

ALHAMBRA was the fortified palace of the Moorish kings of Granada, a possession to which they clung with their latest grasp, and which was the best beloved spot in their terrestrial paradise. The meaning of the Moorish name is 'the red,' and it was so called from the deep red brick of which the pile is built. The Spanish term it the Sierra del Sol, because, from its situation on an eminence, it catches and reflects the first beams of the rising sun. The palace composes but a small portion of the fortress, whose walls encompass the crest of a lofty hill rising from the Sierra Nevada, or 'snowy mountain.' The fortress was at one time capable of containing forty thousand men. The Alhambra originally consisted of a summer palace and a winter palace. The latter was pulled down to make room for the palace commenced and never finished by Charles V. The pile that remains exhibits traces of the splendor of the arts among the Moors. A striking portion of the palace is the Court of Lions, which is a hundred feet in length, and fifty in breadth, surrounded by a beautiful colonnade seven feet broad at the sides, and ten at the ends. Two splendid porticoes, fifteen feet square, project into this court. The square is paved with tiles, the colonnade with white marble. The walls are covered with arabesques. The columns upon which the roof and gallery rest, are grotesquely ornamented and irregularly distributed. Over the columns is inscribed in Cufic characters, "And there is no conqueror but God." The capitals abound with curious devices. The fountain consists of twelve ill-shaped lions, bearing on their backs a large basin, out of which rises a smaller one. Here water gushed from the inner basin, and, passing through the lions, communicated by channels with other apartments. The fountain is of white marble and inscribed with Arabian distiches, like the following: "See'st thou how the water flows copiously like the Nile?" "The fair princess that walks by this garden, covered with pearls, ornaments its beauty so much, that thou mayest doubt whether it be a fountain that flows or the tears of her admirers."

ALH

THE COURT OF LIONS. ALHAMBRA.

The hall beyond the colonnade on the south side was the place chosen by Boabdil for the execution of the chiefs of the Abencerrages, and their bleeding heads fell, as fast as they were decapitated, into the limpid waters of the fountain. The hall of the Two Sisters (*Torre de las dos Hermanas*) was named from two beautiful slabs of white marble, inserted in the pavement. *El Tocador*, or the Tiring Tower, was appropriated to the toilette of the sultana, who in one part had a marble slab in the floor perforated with holes, to admit vapor and perfumes for the purification of her person. The king's bed-chamber was furnished with fountains to cool the atmosphere, and the royal baths were commodious and superb. Beneath were vaults used as a cemetery by the Moorish monarchs. The regret of the Moors at leaving this place, which wealth, art, and taste had brought to such splendor, can easily be conceived. They never ceased to offer up prayers in their mosques for their restoration to Granada. After it fell into the hands of the believers, Alhambra continued to be a royal dmesne. Charles V. abandoned it as a residence in consequence of earthquakes; and Philip V., with his beautiful queen, Elizabeth of Parma, was the last royal tenant of this princely abode. Subsequently it became infested by a lawless population; this was expelled; but, owing to culpable negligence, the palace was permitted to fall into decay, from which the Moorish portion was partially rescued by the exertions of the French troops garrisoned in it from 1810 to 1812. The French, on their departure, blew up part of the walls of the fortress, and destroyed its importance as a military post. To the historian, the poet, the antiquary, and the artist, this relic of Moorish splendor possesses an indisputable interest. Nothing could be more plain and unattractive than its exterior, but within it was probably the most gorgeous specimen of Moorish architecture and decoration that has ever existed.

ALI, the cousin and son-in-law of Mahomet. When Mahomet, assembling his kinsmen, and making known to them his pretended mission, asked who would be his vizier, Ali, then only fourteen years of age, started up and exclaimed: "I will! Let but a man advance against thee, I will pluck out his

eyes, dash in his jaws, break his legs, and tear up his belly. O prophet, I am thy vizier." So well did he keep his word, that he was called the 'lion of the Lord,' the 'ever victorious.' He should have succeeded Mahomet, but being opposed successfully by Omar and Othman, he formed a sect of his own, and gained many followers. On the death of Othman, he was declared caliph, but was assassinated in a mosque, at Cufa, in the sixty-third year of his age, 669. The Persians belong to the sect of Ali.

ALI, Pacha of Janina, commonly called Ali Pacha, was born in Albania, in 1744, and at the age of sixteen, headed the followers whom the death of his father left with no other leader. In freebooting he was so unsuccessful, that he was forced to pawn his sabre to keep himself from starving. As he was sitting, ruminating upon his hard luck, and carelessly turning up the ground with his staff, he struck upon something hard. Curiosity induced him to search further, and he dug up a chest of gold! He now equipped a band of followers whose cruelty and rapacity made them formidable. Having rendered some service to the Porte, he obtained the pachalic of Janina in southern Albania, and maintained himself in almost independent sovereignty. He subjugated the Suliotes, became a formidable military potentate between 1790 and 1821, and raised Albania to power and renown that recalled the memory of its ancient Epirote princes. Having declared himself independent, and his capital, Janina, being taken, he was put to death by order of the sultan, in 1822. He was brave and able, but cruel, rapacious, false, ambitious, and suspicious. He had a Greek lady, Euphrosyne, and fifteen other women thrown into the sea, because he suspected that they exerted an undue influence over his son. If he wished to possess himself of a beautiful Greek girl, he sent his executioner to her parents, with this message, "Your daughter has found favor in the eyes of Ali." They were forced to surrender her, or fly.

ALLEN, ETHAN, brigadier-general in our revolutionary army, was born in Litchfield, Conn., Jan. 10th, 1737. His parents removed to Vermont, when he was quite young. In the contest between the settlers of Vermont and the colony of New York, which

began about 1770, he took so active a part that he was outlawed by New York and five hundred guineas were offered for his capture. Soon after the battle of Lexington, in compliance with the request of the legislature of Connecticut, he headed two hundred and thirty Green Mountain boys, and marched against the fortresses of Ticonderoga and Crown Point. At Castleton he was to have been joined by a reinforcement under Benedict Arnold, but the latter, unable to raise the proposed force, set forward with the Spartan band of Allen. On the night of the 9th of May, 1775, Allen landed eighty-three men near Ticonderoga, having with difficulty procured boats for that purpose. Day surprised him before his rear-guard was brought over, and he found himself compelled to attack the fort. He concluded an animated speech by saying, "I am going to lead you forward! The attempt is desperate. I wish to urge no man onward against his will. Those who will follow me, poise firelocks!" Every firelock was immediately poised. "On then, my boys!" said Allen, and led the central file to the wicket gate. He was opposed by a sentry, but brought his men through the covered way, and formed them on the parade. The huzzas of the assailants roused the commanding officer, Captain de la Place, from his slumbers. He awoke to find Allen holding a drawn sword over his head and demanding the surrender of the fortress. "In whose name?" asked the commander. "In the name of the Great Jehovah, and the Continental Congress." On the same day, by the capture of Crown Point, and the only armed vessel on Lake Champlain, that important lake was placed in Allen's power.

In the autumn, in conjunction with Col. Brown, he attempted the reduction of Montreal, but being attacked by the British before Col. Brown's troops came up, he was defeated and made prisoner. He was treated with great barbarity in his captivity; carried to England, and then to Halifax; thence to New York, where he remained a year and a half, before he was exchanged. His health having been greatly impaired, he returned to Vermont, where he was appointed to command the militia. He indignantly rejected the bribes offered by the British to attempt a union of Vermont with Canada. He died sud-

denly, at his estate at Colchester, Feb. 13th, 1789. He published some pamphlets, one of which contained an open declaration of infidelity. He adopted the most absurd ideas of the ancients, with regard to the transmigration of souls, often saying that he expected to live again in the form of a large white horse; but if we may believe the following anecdote, his atheism was insincere. When his daughter was dying, she sent for him, and said, "Father, I am about to die: shall I believe in what you have taught me, or in the Christian principles my mother teaches." After a moment of convulsive agitation, he replied, "Believe in what your mother has taught you."

ALLIANCES. Between the confederate Greeks, against Troy, B.C. 1194-84. Between the Romans and the Carthaginians, B.C. 508. Between the Athenians, Thebans, Corinthians, and Argives, against the Lacedæmonians, B.C. 395. It is not a little remarkable, that in the long course of Roman conquest, not one well arranged and conducted alliance was formed and contributed to restrain her power. In modern ages, alliances in the true sense of the term, are recent. The crusades were really a species of alliance, but with very little of the system of modern alliances. The league of Cambray, formed Dec. 10th, 1508, between Louis XII. of France, Maximilian of Germany, Pope Julius II., and Ferdinand of Spain, against the Venetians, was the first of those coalitions so disastrous or beneficial, as the case may be, which have so deeply influenced modern European policy. By it Venice was forced to cede to Spain her possessions in the kingdom of Naples. Those of most importance since have been, a league between Henry VIII. of England and the Emperor Charles V., against Francis of France. The league of the princes of Germany in favor of Protestantism, at Smalcald, Dec. 22d, 1530. Between Francis I. of France and Sultan Solymán, against Charles V., 1536; renewed in 1542. Between Charles V. and Pope Paul III., against the Protestants, 1546. Between Spain, Venice, and Pope Pius V., against the Turks, 1570. Between England and the states-general of Holland, against Spain, 1578. Union of Utrecht, whereby began the Dutch republic of the Seven United Provinces, 1579. Evangelical league,

formed in 1626, between the Protestant princes of Germany and Denmark (Sweden afterward acceded), against the Emperor Ferdinand I. Triple alliance between England, Sweden, and the states-general of Holland, against France, 1668. Alliance of the empire and Holland against France, July 15th, 1672. League of Augsburg against France, July 11th, 1686. Grand alliance between Emperor Leopold I., the states-general of Holland, and William III. of England, against France, May 12th, 1689. First treaty of partition, between England and Holland, for regulating the Spanish succession, 1698. Second treaty of partition, between France, England, and Holland, declaring the Archduke Charles heir presumptive of the Spanish kingdom, 1700. Alliance of Germany, England, and Holland, against France, Spain, and Portugal, 1701. Barrier treaty of Antwerp, between Germany, Holland, and England, by which the Low Countries were ceded to the empire, Nov. 15th, 1715. Quadruple alliance between Great Britain, France, Germany, and Holland, to guarantee the succession of the reigning families in Great Britain and France, and to settle the partition of the Spanish monarchy, Aug. 2d, 1718. Defensive alliance between Great Britain and Prussia, 1742. Between Great Britain and Prussia, Feb. 16th, 1756; renewed April 11th, 1758, without any regular compact. France, Austria, Russia and Sweden, were at the epoch of the last mentioned alliance between Great Britain and Prussia, actually in the field against Prussia. To the United States, if not to the world, the most important of all alliances or confederations was that of the British North American colonies. This great union, not for war, but defense, after many incipient steps, was formed in 1775; announced to the world as free and independent, July 4th, 1776; received the general name of the United States, by a resolution of Congress, Sept., 1776, and was consummated by the adoption of a federal constitution of government, March 3d, 1789. First coalition against France, by Great Britain, Prussia, Austria, Sardinia, &c., 1793. Second, by Great Britain, Germany, Russia, Naples, Portugal, and Turkey, June 22d, 1799. Third, by Great Britain, Austria, and Naples, Aug. 5th, 1805. Fourth, by Great

Britain, Russia, Prussia, and Saxony, Aug. 6th, 1806. Fifth, by Great Britain and Austria, April 6th, 1809. Sixth, by Russia and Prussia, March 17th, 1813. Sweden joined the grand alliance against Napoleon, March 13th, 1813. Alliance of Toplitz between Austria, Russia, Prussia, and Great Britain, Sept. 13th, 1813. Holy Alliance, between Austria, Russia, and Prussia, 1815. Alliance of England, France, and Turkey, against Russia, signed at Constantinople, March 12th, 1854; ratified by the first two powers, April 3d, 1854; joined by Sardinia, Jan. 26th, 1855.

ALLSTON, WASHINGTON, was born in Charleston, S. C., Nov. 5th, 1779. He fitted for college at Newport, R. I., and entered Harvard University in 1796, graduating four years after. He had inherited a handsome patrimony, and he determined to devote himself to art. For this purpose he repaired to London in 1801, and entered as a student in the Royal Academy. Benjamin West, who had just succeeded Sir Joshua Reynolds as president of the institution, warmly welcomed his young countryman. Two years were well spent in London; then Allston enriched his pencil awhile amid the rich collection of the Louvre, richer than ever with the spoils that Napoleon had borne there; and soon after we find him settled in Rome, where he dwelt four years. There he formed an acquaintance with Coleridge, which became a close friendship. He studied his art diligently, and by fellow-artists was held in high esteem. He returned to America in 1809. The public mind was absorbed in politics, and Art could not gain its attention. Allston had married, and needed that the profession in which his genius and skill were so great, should support him. After two years' trial he repaired to London again. There he was embarrassed by the hostilities which arose between the two countries. He lost heart, was laid low by a long and serious illness, and had but a little while recovered when he was bereft of his cherished and lovely consort. When again he resumed the pencil, he found his pictures sought for by the most approved judges, and he was no less beloved for the qualities of his heart than admired for his genius. He returned to America in 1818, and for the remaining

twenty-five years of his life Boston or its vicinity was his residence. Here he found cordial welcome from a wide circle of friends, and a patronage only limited by his power of producing. His great historical painting, "Belshazzar's Feast," unfinished as it is, furnishes decisive proof that in the highest branch of the art he has had no equal in the present century. His relative, Mr. Dana, in the preface to Mr. Allston's "Lectures on Art," thus describes his last hours: "His death occurred at his own house, in Cambridge, a little past midnight, on the morning of Sunday, the 9th of July, 1843. He had finished a day and week of labor in his studio, upon his great picture of 'Belshazzar's Feast;' the fresh paint denoting that the last touches of his pencil were given to that glorious but melancholy monument of the best years of his later life. Having conversed with his retiring family with peculiar solemnity and earnestness upon the obligation and beauty of a pure spiritual life, and on the realities of the world to come, he had seated himself at his nightly employment of reading and writing, which he usually carried into the early hours of the morning. In the silence and solitude of this occupation, in a moment, 'with a touch as gentle as the morning light,' which was even then approaching, his spirit was called away to its proper home." Allston was an author as well as an artist, and published a volume of poems and several works of fiction.

ALMA, BATTLE OF THE. The English and French armies moved out of their first encampment in the Crimea, Sept. 19th, 1854, and bivouacked for the night on the left bank of the Bulganac. The Russians (commanded by Prince Menschikoff) mustering 40,000 infantry, had 180 field-pieces on the heights of the Alma, and on the morning of the 20th were joined by 6,000 cavalry. The English force, under Lord Raglan, consisted of 25,000 men; the French, under Marshal St. Arnaud, of 23,000. At twelve o'clock the signal to advance was made, and the river Alma crossed under the severe fire of the Russian batteries. After four sanguinary hours the allies were completely victorious. The Russians flung away their arms and knapsacks in their hasty flight, having lost about 5,000 men, of whom 900 were made

prisoners. The loss of the English was 353 killed, 1,612 wounded; that of the French, 236 killed, 1,087 wounded.

ALPS, the loftiest system of mountains in Europe. Mont Blanc, the highest, is 15,777 feet high, Monte Rosa, 15,206 and Monte Cervin, 14,835. Separating Italy from Spain, France, and Germany, it would seem as if they opposed an insurmountable barrier to the march of conquest; but they have been several times crossed by large armies, the expeditions of Hannibal and Bonaparte being the most celebrated. Bonaparte passed the Great St. Bernard, in the year 1800, and swooped like a hawk upon the plains of Italy. His army met with obstacles which only genuine enthusiasm enabled them to surmount. They had to draw their artillery along narrow paths, in many places almost perpendicular, and over mountains of snow. A very small force would have arrested their progress, but they met no opposition. They reached St. Peter, near the Great St. Bernard, on the 15th of May, General Berthier acting as Bonaparte's lieutenant. Here the whole park of artillery was collected. The mountain they had to pass over was wild and barren, with a vast extent of snow and ice, mingled with terrific silence. Over this frightful route the mind of Bonaparte had conceived the possibility of passing his army with all its artillery, baggage, &c. The cannon, caissons, forges, &c., were immediately dismantled, piece by piece; a number of trees were hollowed like troughs, in which the pieces of cannon might safely slide, and five or six hundred men drew them up these tremendous heights; the wheels were carried on poles; sledges conveyed the axle-trees; and empty caissons and mules were loaded with the ammunition-boxes made of fir.

The consul took no more baggage than was absolutely necessary. Five hours were consumed in climbing as high as the monastery of the Bernardines, where the good fathers gave each individual a glass of wine; this, though frozen, was to them delicious, and not one would have exchanged it for all the gold of Peru. There were still six leagues to go, and the rapidity of the descent made that distance truly terrible; men and horses constantly falling, and often recovering with the greatest difficulty. The march commenced

MONT BLANC.

at midnight, and did not finish till about nine o'clock the next evening. For nearly fourteen leagues the army had scarcely had a meal, or any repose, and at the end of the journey, sleep hung so heavily even upon the most robust of them, that they resigned themselves to it without a struggle, or a thought of their evening repast. Bonaparte traversed a portion of the way attended only by a peasant. He was dressed in the little gray surtout and cocked hat, in which artists delight to represent him. He conversed with his companion, and learned that his wishes centered in the possession of a little farm. The farm was afterward presented to the peasant, whose delight and surprise may be readily imagined.

Over the pass of the Simplon a magnificent road leading from Switzerland into Italy was constructed by order of Napoleon in 1801-6.

It winds up passes, crosses cataracts, and tunnels through solid rock. It has eight principal bridges. Between thirty and forty thousand workmen were employed upon this undertaking at once.

ALVA, FERDINAND ALVAREZ, Duke of, descended from a high Castilian family, born in 1508, distinguished himself in the career of arms at the age of seventeen, and was at the siege of Pavia. Charles V. made him a general, and he was commander at the siege of Mentz, where he fought with desperate but unavailing valor, for the siege was raised. He was noted for excessive cruelty and superstition. In the campaign against the pope, Alva compelled the pontiff to sue for peace, and then went to Rome to supplicate pardon for the offense. In 1567, he was sent to the Netherlands by Philip II., to reduce them more completely to the Spanish yoke, and

ALV

extirpate the Protestant heresy. The trucity of the Council of Blood, a military tribunal which he established, deluged the United Provinces in their best blood. At first the arms of Alva were successful, but the maddened malcontents afterward gaining head, he was recalled. In Portugal, he acquired renown by his success in driving Don Antonio from the throne. He died in 1582.

AMADEUS, the name of several of the Counts of Savoy, of whom Amadeus VI. was the most famous. He lent his powerful aid to John of France, against Edward of England, and was the ally of John Paleologus (Emperor of Greece), in 1365. His reign of forty years was glorious, and his death in 1383, deeply lamented.

AMAZONS, a fabulous race of female warriors in antiquity. They are said to have been the descendants of Scythians in Cappadocia, whose husbands were all slain in war. The widows resolved to form a female dominion. Having firmly established themselves, they decreed that matrimony was a shameful state. They were said to have been conquered by Theseus about 1231 B.C. These warlike women burned their right breasts off, that they might hurl the javelin with more force; whence their name, from the Greek *a* (no) and *μαστος* (*breast*). Orellana, the discoverer of the river Amazon, saw bands of armed women on its banks, whence he gave the stream that name.

AMBASSADORS and ministers plenipotentiary, have been from time immemorial, considered in some measure, privileged characters. Those of King David, about 1030 B.C., being insulted by the king of the Ammonites, led to a war destructive to the aggressors. The Roman ambassadors at Clusium, B.C. 390, mixing with the inhabitants in battle with the Gauls, Brennus, king of the latter, considered their conduct an act of hostility on the part of their country, raised the siege of Clusium, marched toward Rome, defeated the Romans at the Alia, and took, plundered, and burned Rome. In modern times the privileges of ambassadors have been more distinctly defined. In England during the protectorship of Oliver Cromwell, Don Pantaleon Sa, brother to the Portuguese ambassador in London, committed a murder in open day, and sought refuge in his brother's house; but the pro-

teCTOR refused to sanction such an asylum in a case of murder, and Sa was seized, tried, and hanged, 1653. About twenty years afterward, the Prince of Furstenburg was arrested at the diet of Ratisbon, for murder, by order of the Emperor of Germany, and the case of Sa given as a justification. In 1709, in England, the Russian ambassador was arrested for debt by a lace merchant, which led to an act of parliament exempting ambassadors, or their immediate suit, from arrest in civil cases.

The first ambassador from Russia to England, arrived in London, 1556. First from India to any part of Europe, was from Tippoo Saib to France, 1778. First from the United States was Silas Deane to France, 1776. First from the Ottoman emperor to Great Britain, 1793. The first from the United States to England was John Adams, presented to George III. June 2d, 1785. The first from England to America was Mr. Hammond, in 1791.

AMBROSE, St., was born at Treves about 340. He was Bishop of Milan, and died in 397. He introduced anthems into the church service, and the glorious "*Te Deum Laudamus*" is ascribed to him and Augustin, although some say a later date belongs to it.

AMERICA, one of the twin continents of the earth, including a vast extent of territory, embracing every variety of climate, and bearing within it, besides its precious ore and gems, the germs of immense wealth, remained undiscovered until the 11th of October, 1492, when Christopher Columbus, a native of Genoa, who had sailed from Spain with three small vessels under the patronage of Ferdinand and Isabella, seeking a westward way to India, first beheld a light on the shores of the new world, two hours before midnight. On the ensuing day he set foot in the virgin isle. Columbus felt the importance of the discovery, as, erecting the cross, and surrounded by his crew and the wild and wonder-stricken natives, he took possession of the new country in the name of the sovereigns of Spain. The Christian adventurers did not fail to kneel upon the sand, and offer up their thanks for having been preserved through the perils of a long voyage, and favored with such brilliant success to compensate for all their perils. This island was called Guanahani by the na-

tives, a name which Columbus altered to St. Salvador, and was one of the Bahamas. He then visited other adjacent islands, and proceeded to Cuba and Hayti; the latter he called Hispaniola. In subsequent voyages he discovered Jamaica and Trinidad, and landed on the coast of South America near the mouth of the Orinoco.

It is worthy of remark, that the vast continent which Columbus discovered was not called by his name, but derived its appellation from Amerigo Vespucci, a Florentine navigator, who made some subsequent discoveries, in company with Alonzo de Ojeda, in 1499, and was the first to publish an account of the new countries. The work which he issued became very popular and was soon translated into several different languages. Thus Amerigo Vespucci attained a greater degree of celebrity than he merited, and, by the concurrence of all classes, gave his name to that extensive and important country which another had discovered. Neither was Columbus the first to reach the continent. He did not touch upon South America till May 30th, 1498. Almost a year sooner, June 24th, 1497, Sebastian Cabot had reached the coast of North America.

The wondrous field for exploration and discovery that Columbus had opened was soon thickly occupied. In 1498, Cabot in a second expedition visited Newfoundland. In 1500, Pedro Alvarez Cabral, admiral of a Portuguese fleet bound for the East Indies around the Cape of Good Hope, blundered upon Brazil. Nunez de Balboa saw the Pacific Ocean from a mountain near Panama, in 1513. He was transported with delight as he beheld its waves sparkling in the light of the sun, and appearing to glitter with that gold which the natives told him abounded in the country to the south. He imagined that he had found the Indies, a region then the greatest ambition of European adventurers to reach. He acquainted the Spanish court with his discovery, and solicited an appointment proportionate to the extent of his services. He was, however, grievously disappointed; the government of Darien was obtained by Davila, and this rival, finding a pretext for wreaking his vengeance upon Balboa, had him executed publicly in 1517. In 1513, Diaz de Solis landed on the south-east coast of South America, about the mouth of the Rio de la Plata, where he and several of

his crew were killed, roasted, and eaten by the savages. In 1520 Magellan passed through the straits that bear his name and crossed the Pacific.

The Spaniards entertained the most exaggerated ideas of the wonders of the New World. To most of them, it appeared a realm of magic, a fairy-land, in which supernatural occurrences were by no means infrequent. Thus Juan Ponce de Leon, in 1512, fitted out three ships from Porto Rico, of which he was governor, and set forth in search of a fountain which was fabled to restore all who bathed in it, even if they were tormented by the infirmities of extreme old age, to the freshness, vigor, and beauty of youth. Although he failed to find the fountain, he made the discovery of Florida. As the Spaniards had been foremost in American discovery, so they were first in conquest and settlement. Early in the sixteenth century Cortez conquered Mexico, and not long after Pizarro subjugated Peru. More than a hundred years elapsed after North America was first visited by Cabot, before an English colony was established in the country.

The external appearance of the New World has much which presents a very marked contrast to the superficial features of the Old. A stupendous chain of elevated mountains traverses the whole continent, running from north to south, and even under the equator, where, upon the low lands the most intense heat is felt, these tall mountains elevate their heads into the region of intense cold. Everything in the New World appears to be of greater magnitude than the corresponding objects in the Old. The lakes are vast inland oceans, exhibiting in storms the striking and sublime aspects of the great deep, rolling as mighty waves, and shaken by an equal convulsion. The rivers are of prodigious size, and the plains of extraordinary extent. Over those of South and North America, countless herds of wild cattle roam at will. The American continent stretches from the icy ocean of the north to the cold regions of the south. It is composed of two great peninsulas linked by an isthmus. The Atlantic washes its eastern coast, the Pacific its western. Its length, from 80° N. lat. to 55° S. lat., exceeds 9,000 miles; its greatest breadth is between Cape St. Roque in Brazil and Cape Parina in Peru, where it is upward of 3,250 miles wide. The

narrowest part is the Isthmus of Panama, which divides it into North and South America; the isthmus is only twenty-eight miles wide. The area of North America, not including the West Indies, may be estimated at 7,779,218 square miles, and its population at 35,774,498; the area of South America at 6,199,080 square miles, and its population at 18,033,465. About half the population of the continent are whites; the other half, native Indians, negroes, and mixed races.

The New World was inhabited by a race of men differing, in many respects, from the natives of the eastern hemisphere. The Indians of North America varied, in many particulars, from those of the southern portion of this vast continent, and the aboriginal inhabitants of Mexico, at the time when they were first visited by the Spaniards, had attained a greater degree of refinement than was found by the Europeans in any other quarter of the New World. Malte Brun has thus described the general personal appearance of the aborigines: "The natives of this part of the globe are in general large, of a robust frame, well proportioned, and without defects of conformation. They have a bronzed or coppery red complexion, as it were ferruginous, and very like cinnamon or tannin; the hair black, long, coarse, shining, and scanty; the beard thin, growing in tufts; the forehead short, the eyes elongated, and having the corners pointing upward to the temples; the eyebrows high, the cheek bones projecting, the nose a little flattened, but marked; the lips wide, the teeth serrated and sharp; in the mouth an expression of mildness, which is contrasted with a sombre, and severe, and even hard expression of countenance; the head rather square, the face large without being flat, but diminishing toward the chin; the features taken in profile, projecting and strongly marked; the belly high, the thighs large, the legs bowed, the foot large, and the whole body squat." Such are said to be the general characteristics of the aborigines of this continent, with perhaps two exceptions, the Esquimaux at the northern extremity and the Patagonians at the southern. The copper or bronze hue of the skin is, with some slight exceptions, common to almost all the native nations of America, whatever the climate, the situation, or the mode of living.

In regard to the peopling of the continent, various conjectures have been formed, and nothing is known. Some have supposed that the lost tribes of Israel wandered hither; others that the Mexicans were of Egyptian ancestry; some that the Carthaginians, and others that the ancient Celts, made expeditions to America. What surmise too fanciful to meet with supporters, when facts are few and doubtful. Perhaps the theory of the Asiatic origin of the Americans has been most generally accepted. The question is buried in obscurity. The great number of separate languages goes to show that the American tribes must have long existed in the savage solitude in which the Europeans found them plunged. There are scattered over the continent traces of the labor of man that belong to no race known since its discovery by Europeans. The mounds in our western states, overgrown with primeval trees; the teocallis of Mexico, the strange remains of Central America, and the ruins of Peru; these, their buried trinkets and utensils, their hieroglyphics, idols, ornaments, and sculpture, speak variously of arts, religions, civilizations, and races that were above the savage, and were gone before the European came.

North America is politically divided into the republics of the United States, Mexico and Central America, the British and Russian possessions, and the tracts still possessed by native tribes. The north-western coast has been discovered and held by the Russians. Greenland is subject to Denmark. The population of Danish America is stated at 10,000, that of Russian America at 66,000. Over the broad tract usually called British America the Hudson's Bay Company have control. The British provinces lie between this territory and the United States. They consist of Canada, New Brunswick, Nova Scotia, Cape Breton, Prince Edward Island, and Newfoundland. The extent of these, in square miles, is about 2,425,000, and the present population may be computed at 2,515,000. [See CANADA, UNITED STATES, MEXICO, CENTRAL AMERICA.] The Bermudas are under the control of England, and the West Indies are possessed by various European powers. [See WEST INDIES.]

South America is thus divided. The northern portion, formerly Colombia, is now cut into the three republics of New Grenada, Ven-

ezucla, and Ecuador. To the south of these on the western coast, lie the republics of Peru, Bolivia, and Chili. The states of the Argentine Confederation, formerly known as the United Provinces of La Plata, lie between the two last-mentioned states and the Atlantic. Buenos Ayres once belonged to this confederacy, but is now a distinct republic. The empire of Brazil is the largest of South American states. South of it lies the republic of Uruguay. Paraguay lies south-west of Brazil, between the rivers Paraguay and Parana. Guiana is a tract on the north-eastern coast between the mouths of the Amazon and the Orinoco. The southern part of the continent is called Patagonia. Further information concerning the countries of America will be found under the articles devoted to them separately.

AMERICUS VESPUCCIUS, a Florentine navigator, of an ancient family, born 1451. His first voyage to America was made under Ojeda, a year after its discovery by Columbus, and yet the vast continent bears his name, while that of the great discoverer is applied to it only by poetical courtesy. In the glowing narrative which he wrote, he appropriated the laurels of Columbus to his own brow, and strengthened his claims by a tale of a voyage made before that in which Columbus touched South America. This was afterward proved a falsehood, but the old world had already named its new-born sister America. Vespucci died in Spain in 1512 or 1514.

AMES, FISHER, was born in Dedham, Mass., April 9th, 1758. He was educated at Harvard College, which he left with high character. After instructing a school for some years, in 1781 he commenced the practice of law, and becoming distinguished for his oratorical powers, and his success as a political essayist, was chosen member of the legislature. He was the first representative of the Suffolk district in the Congress of the United States, in which he remained during Washington's administration. On the retirement of Washington, Mr. Ames, whose health had been impaired, occupied himself in farming at Dedham, and practicing law. But although his voice was unheard in public, his pen was not inactive, and the publication of various essays proved the interest which he continued to take in politics until the time of his death,

July 4th, 1808. Fisher Ames had fine features, and a commanding person, and his manner in speaking was expressive, although not characterized by studied grace. His conversational abilities are said to have been of the highest order. His father, Nathaniel, was a physician, and well versed in astronomy.

AMHERST, JEFFERY, Lord, was born in 1717. He commenced his military career in 1731, and regularly rose to the rank of field-marshal. He was at Dettingen, Fontenoy, Rocoux, commanded at the siege of Louisburg, and reduced the Canadas. He was successively governor of Virginia, and of the isle of Jersey, and commander-in-chief of the British army. He died in 1798.

AMIENS, an ancient city of the old province of Picardy in France, ninety-two miles north of Paris, having a population of 47,000. Its cathedral is one of the most magnificent Gothic edifices in the world. Here, March 27th, 1802, peace was concluded between Great Britain, Holland, France, and Spain.

AMPHICTYONIC COUNCIL, established at Thermopylae by Amphictyon, for the management of all affairs relative to Greece, 1498 B.C. It consisted of twelve delegates. Other cities in process of time sent also some of their wisest and most virtuous men, till the number was increased to thirty. This is the first instance on record, of a free representation of independent states, meeting to deliberate and settle their concerns by the force of reason, in place of arms.

ANABAPTISTS, a fanatical sect which arose about 1525 in Germany. They taught that infant baptism was a contrivance of the devil, that there is no original sin, and that men have a free will in spiritual things. Munster in Westphalia they called Mount Zion, and one Mathias a baker was declared to be the king of Zion. Their enthusiasm led them to the maddest practices, and at length they rose in arms under pretense of gospel liberty. Their fanatical leader, John of Leyden, a tailor, defended himself in Munster for a whole year. After this, the execution of the leaders quelled the insurrection. Munster was taken, June 24th, 1535.

ANACREON, a Greek lyric poet of Teos, in Ionia, who flourished in the sixth century B.C. Polycrates, King of Samos, was his patron until his death. At Athens he was en-

couraged by Hipparchus, but the fall of the latter drove him from Athens, and he passed an old age of gayety at Abdera, where he was choked by a grape-stone in his eighty-fifth year. He was the poet of love and wine, practiced what he praised, and was much honored by the Greeks. Verse of a jovial or bacchanalian strain is called Anacreontic.

ANAXAGORAS, one of the Ionic philosophers, born at Clazomene, in Ionia, 500 B.C. died at Lampsacus at the age of seventy-two. Anaxagoras is celebrated as the friend of Pericles, and for his trial and condemnation at Athens for alleged impiety and a suspicion of favoring the interests of Persia. The intercession of Pericles softened his sentence from death into banishment. The researches of the Ionic school were confined to the nature and laws of physical phenomena, and Anaxagoras in his investigations groped near the thought of a great First Cause.

ANAXIMANDER, a disciple of Thales, whose chief study was mathematics and astronomy, born at Miletus, 610 B.C., died 546 B.C. He is said to have been the first who constructed maps and spheres.

ANDRE, JOHN. Among the various events which contributed to give a distinctive character to the war of our Revolution, the fate of Major Andre, a young English officer, can never be forgotten, nor the sad story of the close of his life ever read without a deep and painful interest. This young man was handsome, talented, brave, enthusiastic, generous, and accomplished, beloved by all his acquaintance, without distinction of country. He was born in England in 1749, entered the royal army with high hopes in 1771, and was well fitted to adorn an elevated station. His history is connected with that of the worst traitor who ever disgraced the name of America. This man was Benedict Arnold. His unrepressed extravagance had led him to incur heavy debts which he saw no means of discharging but by accepting the gold of the British as the price of treason to his country. In September, 1780, Arnold was in command of West Point, a post on the Hudson, of vast importance to the Americans. Arnold had selected for betrayal this fortress, which was almost impregnable from natural defenses, and from fortifications on which no care or expense had been spared. Arnold had opened

a correspondence with Sir Henry Clinton, under fictitious names and the pretense of mercantile business, through Major Andre, then holding the rank of adjutant-general. The young officer was conveyed up the river in the Vulture sloop-of-war, and, under a pass for John Anderson, came on shore in the night, and had an interview with Arnold. Morning surprised them before their business was transacted, and, as it was impossible for Andre to get on board the Vulture by daylight, he consented to remain hidden till the next night. In the course of the day, the Vulture altered her position, in consequence of a gun being brought to bear upon her, and the boatmen, at night, refused to take Andre on board.

The young officer found himself compelled to attempt to get to New York by land. Arnold gave him a pass, granting permission to John Anderson "to go to the lines of White Plains, or lower if he thought proper, he being on public business." Changing his uniform, which he had previously worn under a surtout, for a plain coat, he mounted a horse, passed the American guards in safety, and was congratulating himself on his escape, when three militia men, suddenly appearing, seized his bridle-rein, and demanded his business. Surprised, and off his guard, he did not produce his pass, but hastily asked the men where they belonged. "Down below," was the answer. "So do I," replied Andre, rejoiced to find them friends. But he was mistaken, and being pressed, he finally declared that he was a British officer. He begged them to suffer him to pursue his way, offering them gold, and a watch of great value. John Paulding, David Williams, and Isaac Van Wert were poor men; their dress bespoke it; but they loved their country, and despised a bribe. They might have answered Andre, in the words of another American, on another occasion, "Your king has not gold enough to buy us." They carried Andre before Lieutenant-Colonel Jameson, who commanded the troops on the lines. The captors of Andre were rewarded by Congress with an annual pension of two hundred dollars each, and a silver medal bearing on one side a shield inscribed "Fidelity;" and on the other the motto "Amor Patriæ."

Andre still passed as John Anderson. He

generously wished to save Arnold, and asked permission to write to him. This the commanding officer incautiously permitted, although in Andre's boots there had been found, in the handwriting of Arnold, returns of the state of the forces, and the condition of West Point, with other important papers. Arnold was at dinner when the letter arrived. Abruptly leaving the table, he ran down a steep bank, threw himself into a boat, and was rowed to the Vulture, which immediately got under sail, and carried the traitor to New York. Gen. Washington was soon apprised of the circumstances, and the same express which conveyed the intelligence, carried a letter from the prisoner, frankly avowing his name and the circumstances under which he had been forced to appear as an impostor. All the American officers who saw Andre, were struck with his candor and manliness, and there was not one who did not feel for his situation.

The consideration of his case was referred by Gen. Washington to a board of fourteen general officers, of which Gen. Green was president, and Steuben, Knox, and La Fayette were members. It was decided that he ought to be regarded as a spy, and the stern rules of war, and the necessity of an example, required that he should die upon the gibbet. He begged of Washington to be allowed to die as a soldier, but the patriotism of the general refused what his feelings would have granted. Led to the place of execution, Andre, surveying the instrument of his fate, asked with concern, "Must I die by this? I am reconciled to my death, but oh! not to the mode." Recovering his composure, he added, "It will be but a momentary pang." His countenance was unruffled and calm, to the very last moment of his life; the instant before he was launched into eternity, it exhibited a sunny serenity and high magnanimity which touched the hearts of all! At the last moment he was asked if he wished to say anything. "But this," he replied: "You will witness to the world, that I die like a brave man."

The kindest attentions were bestowed on Andre by the American officers, particularly by Alexander Hamilton, who did all in his power to soothe him. Far different was the treatment of the pious and patriotic Captain

Hale, a young American officer, who was taken as a spy, and ordered to be executed the next morning. He begged the use of a Bible, which was refused; to be allowed to write a letter to his mother, which poor privilege was also denied him. "The Americans," said the British commander, "shall not know that they have a rebel in their army who can die with so much firmness." On the occasion of the capture of some young American officers upon Long Island, they were brought before Sir Henry Clinton, who thus addressed them: "Gentlemen, do you know that I can hang every man of you as rebels, taken in arms against the king?" "Hang and be hanged!" bluntly exclaimed Lieut. Dunscomb, with the energy of a rough soldier; "I have lived for my country, and I am not afraid to die for her."

Andre's ashes, several years ago, were secured by the British, and conveyed to England, where a monument was erected to him in Westminster Abbey.

ANDROCLUS, a Dacian slave, of whom a story is told that he was exposed in the arena of a Roman circus, to fight a lion; but the animal forbore to injure him, because he had formerly extracted a thorn from his foot while in the Dacian wilds. Androclus was released, and used to lead the friendly lion about the city.

ANDROMACHE, the faithful and affectionate wife of Hector, prince of Troy, of whom she was so fond, as to feed his horses with her own hands. After his death, she was married to Neoptolemus, to whose share the lovely captive fell, and afterward to Helenus, son of Priam.

ANDROMEDA, daughter of Cepheus, king of Ethiopia, by Cassiopeia. She is fabled to have been exposed by Neptune to a sea-monster, from which she was delivered by Perseus. An explanation of the fable is offered in the supposition that she was courted by the captain of a ship, who attempted to carry her away, but was baffled by the enterprise and activity of a more faithful lover.

ANDROS, Sir EDMUND, royal governor of New York from 1674 to 1682, of New England from 1686 to 1689, and of Virginia from 1692 to 1698. His tyrannical administration in New England rendered his name obnoxious. His failure to seize the charter of Connecticut

AND

is told in another place. [See CHARTER OAK.] In April, 1689, the people of Massachusetts, irritated by his exactions, deposed Andros, put him in prison, and declared for William and Mary. The subsequent career of Andros in Virginia was more moderate. He died in England in 1714.

ANGLES, a tribe which occupied the country between the Weser and the Elbe, now a part of Prussia. In the fifth century, uniting with the Saxons, their powerful neighbors of the north, under the name of Anglo-Saxons, they effected the conquest of England. A small tract of land near the Danish peninsula, where some of them remained, is called at the present day Angeln.

ANGLESEY, HENRY WILLIAM PAGET, Marquis of, was born May 17th, 1768, the eldest son of the Earl of Uxbridge. At an early age he entered the army, and his first active service was in Flanders under the Duke of York in 1794. Toward the close of the year 1808, having been raised to the rank of a major-general, he joined Sir John Moore, and took a brilliant share in the Peninsular campaign. On his return to England he was a member of the Commons from 1806 to 1812. On the death of his father in the latter year, he took his seat in the upper house, as Lord Uxbridge. When Napoleon returned from Elba, Lord Uxbridge was given the command of the British cavalry in Flanders, and fought with great gallantry at Waterloo, where he lost a leg. Five days after the battle he was created Marquis of Anglesey. During the trial of Queen Caroline, the wife of George IV., he took the unpopular side in favor of the king, and when he was surrounded by a crowd who insisted upon his hurrahing for the queen, he cried out at last, "Well then, the queen! may all your wives be like her!" In April, 1827, he held office under Canning, and in 1828 was lord-lieutenant of Ireland under Wellington. Having expressed a strong sympathy with Catholic emancipation, he was recalled from Ireland and resumed his place in parliament, where he continued to advocate the Irish cause. The bill of Catholic emancipation having passed, Lord Anglesey was restored to the lord-lieutenancy of Ireland, and continued at that post until his resignation in 1833. He died in 1854.

ANHALT was an ancient principality in the north of Germany. The house of Anhalt traced their origin to Ascanius, grandson of Japhet the son of Noah! whose descendants were reputed to have migrated from the marshes of Ascania in Bithynia, and at last to have settled among the forests of Germany. Whether this somewhat lengthy pedigree be correct or not, it is certain that no family in Germany has produced a greater number of brave and skillful warriors than the house of Anhalt; beginning with Bernhard, who declined the imperial sceptre in 1198, because he deemed himself "too corpulent" for such a dignity; or from Wolfgang, one of the staunchest soldiers of the Reformation, who on being reinstated in his possessions exclaimed, "Old and poor as I am, I would give a thousand florins could I gibbet a pope;" down to Leopold, at the beginning of the last century, who led the Brandenburg troops to victory in the Low Countries and Italy, created the Prussian infantry, and invented the iron ramrod. The principality is now divided into three duchies, the former two of which are under the same monarch: Anhalt-Dessau, area 360 square miles, Anhalt-Köthen, area 318 square miles, population, of the united duchies in 1855, 114,850; Anhalt-Bernburg, area 339 square miles, population in 1855, 53,475.

ANNA, a heathen goddess, in whose honor the Romans instituted festivals. Several fabulous explanations of the origin of these celebrations have been given, but the most probable is the least poetic; that Anna was an industrious old lady of Bovillæ, and her apotheosis the reward of her kindness in daily supplying the Romans at Mount Sacer with cakes.

ANNA COMNENA, daughter of Alexis I., Emperor of the East, celebrated for her beauty and acquirements, born in 1083. Being defeated in a conspiracy for placing the crown on the head of her husband, she devoted her life to letters, and wrote the history of her father's reign. She died in 1148.

ANNE of Austria, was daughter of Philip III., of Spain, and was born in 1602. She became the wife of Louis XIII. of France, in 1615, but lived upon bad terms with him. On the death of Louis, she became sole regent during the minority of her son, Louis XIV., but made herself unpopular among her sub-

jects by reposing unbounded confidence in Cardinal Mazarin. Affairs assumed so threatening an aspect, that she was compelled to leave Paris. Tranquillity was restored at length, and when her son assumed the reins of power, in 1661, she went into retirement, in which she lived till her death, in 1666.

ANNE, daughter of John III., Duke of Cleves, was married in 1540, to Henry VIII. of England, who had fallen in love with her picture. He was soon, however, disgusted with the Flanders mare, as he coarsely termed her, and she quietly returned to her native land, where she died in 1557, happy in escaping the dangers by which Henry's queens were beset.

ANNE, Queen of England. [See STUART.]

ANSON, GEORGE, Lord, was born in 1697, in Staffordshire, and entered the navy at an early age. In his twenty-seventh year he gained the rank of post-captain, and when, in 1739, a war with Spain appeared inevitable, he was made commander of a squadron for the South Pacific. He sailed Sept. 18th, 1740, but encountering a violent storm, was prevented, for three months, from doubling Cape Horn, and was rejoined at Juan Fernandez, by only three of his eight vessels, in a wretched condition. He sailed for the coast of Peru, made some prizes, and burned the town of Paita, but found himself compelled to destroy all his disabled vessels but one. Having equipped this one, the *Centurion*, he retreated to Tinian, one of the Ladrone Islands. He refitted at Macao, and there formed the plan of taking the *Acapulco* galleon, which brought every year treasure from Mexico to exchange for goods at Manilla. To accomplish this bold purpose, he gave out that he had returned to England. Meanwhile, he directed his course to the Philippines, cruising in the vicinity of Cape Espiritu Santo. After about a month, the long expected galleon appeared, and, confident in her superior strength, eagerly commenced the fight. The British fought with cool, dauntless valor, and succeeded in making a prize of the galleon, whose gold and precious wares some have estimated at the worth of a million sterling. The whole amount of the booty previously taken was £600,000. Anson then returned to Macao, where he disposed of his prize. The Chinese were inclined to insult

his flag, but he maintained his rights with his characteristic pertinacity. From Macao, he sailed for England, which he reached June 15th, 1744, having escaped the French fleet which lay in the channel. Anson's perilous voyage threw new light upon the geography and navigation of the southern ocean.

He was liberally rewarded for his bravery and perseverance, being made, soon after his return, rear-admiral of the blue, and at no great distance from that period, rear-admiral of the white. In 1747, he gained a brilliant victory over the French under Admiral Jonquiere, off Cape Finisterre, and was consequently raised to the peerage with the title of Baron Anson of Soberton. *L'Invincible* and *La Gloire*, two French vessels, were taken by Anson on this occasion, and the captain of the former, on surrendering his sword, said, "Monsieur, you have conquered the *Invincible*, and *Glory* follows you."

Lord Anson was made first lord of the admiralty, four years after his elevation to the peerage. In 1758, he commanded the fleet before Brest, protecting the landing of the English, and receiving them after their repulse. He died in 1762.

ANTEUS, the fabulous son of Neptune and Terra (the Earth), of a gigantic stature. He resided in Libya, where he challenged every stranger to single combat. What made him peculiarly formidable, was the circumstance of the renewal of his strength by his mother, every time he was thrown to the earth. Hercules, having found out the secret of his prowess, overcame him by lifting him in the air, and crushing him in his iron grasp. The dwelling of this monster was adorned with the skulls of his vanquished adversaries.

ANTARCTIC OCEAN, a name properly applied to the seas between the Antarctic Circle and the South Pole, and used to denote generally those cold oceanic regions without strict regard to the limits of the Antarctic Circle. It was long considered beyond the pale of navigation because of the ice, which extends much farther than in the polar regions of the north. During the present century important discoveries have been made in these high southern latitudes. The South Shetland and the South Orkneys were discovered, and various navigators saw bits of apparent coast. The expedition under

Capt. Wilkes, sent out by the United States in 1839, found a coast line in $154^{\circ} 27'$ E. long., and in a westward course as far as $97^{\circ} 30'$ E. long., had either always a coast in sight or unequivocal indications that land was not far. The same year (1840), a French expedition under d'Urville reached this coast in $140^{\circ} 41'$ E. long., traced it to 130° E. long., and called it Adélie Land. This coast, as well as Trinity Land, Palmer's Land, Graham's Land, and Alexander's Land, points previously seen between 36° and 70° W. long., and Enderby's Land (between 49° and 51° E. long.), all lie close upon the Antarctic Circle. In January, 1841, Sir James Clarke Ross discovered a mountainous coast, on which he landed, trending to the southward, near $70^{\circ} 41'$ S. lat. and $170^{\circ} 36'$ E. long. He traced a continuous shore over six hundred miles as far as 78° S. lat. To this tract he gave the name of Victoria Land, and he supposed it to be a continent. In $77^{\circ} 30'$ S. lat. and 167° E. long., he placed Mount Erebus, an active volcano, about 12,400 feet high, and an extinct crater of somewhat less elevation, to which he gave the name of Mount Terror. A main object of his expedition was to seek the position of the south magnetic pole. This he found to be $75^{\circ} 5'$ S. lat., $154^{\circ} 8'$ E. long. No traces of vegetation have been observed on these far southern coasts, and no quadrupeds. Some birds, whales, and seals are found.

ANTHONY, St., the Great, first institutor of the monastic life. His native place was Coma, a town of Upper Egypt, where he was born, A.D. 251. In 285, he retired into solitude from a devotional spirit, and in 305, established the first community of monks. Being disappointed in his attempts to gain the honor of martyrdom at Alexandria, he left the cottages of his monks to the care of his pupil Pachomius, and, in company with two of the brethren, retired to a very remote desert, where he died, A.D. 356. The disease, called from him St. Anthony's fire, is a malady of peculiar violence with frightful accompaniments, in which every limb attacked, becomes withered, shrunk, and blackened, as if under the influence of flame. The life of St. Anthony in the wilderness, was believed to have been fearfully eventful, in combats with devils.

ANTIGONE, a daughter of Œdipus, king of Thebes, by his incestuous connection with Jocasta. Antigone was the faithful guide of Œdipus, after his loss of sight; having buried the corpse of her brother Polynices, against the express commands of Creon, the tyrant ordered her to be buried alive, but she killed herself before the execution of the sentence. [See ŒDIPUS.]

ANTIGONUS, 'the Cyclops,' one of the generals of Alexander the Great, after whose death he attempted to gain the sovereignty of Asia, but was defeated by Seleucus, Ptolemy, Lysimachus, and Cassander, at Ipsus, 301 B.C. In this battle Antigonus fell. The first profile on record is that of this Antigonus, whose likeness was thus taken because of the loss of one of his eyes.

ANTINOUS, a Bithynian youth, of whom the Emperor Adrian was excessively fond. When the latter was on his travels, Antinous threw himself into the Nile and was drowned, A.D. 132, but whether the act was committed with the intention of saving the life of the emperor, or from weariness of existence, has not yet been decided. The grief of Adrian was intense, and the honors of divinity were, by his command, paid to his young and unfortunate favorite. He named a newly discovered star Antinous, and gave this name to cities, while various images of the lost youth emanated from the hands of different artists. Those which have come down to us bearing the name of Antinous, are distinguished for a languid loveliness, and a roundness of contour, which resemble the traits of female rather than manly beauty.

ANTIOCHUS. Several distinguished kings of Syria bore this name. [See SYRIA.] The first was the general of king Philip, a Macedonian by birth, whose fame was eclipsed by that of his son Seleucus. ANTIOCHUS SOTER, the son of Seleucus, was unsuccessful in war, but is chiefly distinguished by his passion for his step-mother, the beautiful Stratonice. His struggles to quell his misplaced affection, threw him into a lingering disorder, the cause of which he was unwilling to divulge. Erasistratus, the king's physician, penetrated his secret in the following manner. As he was holding the hand of his patient, he perceived by the accelerated motion of his pulse on the entrance of Strat-

once, that love for her was the cause of his disorder. The king, to save the life of his son, relinquished to him his young and lovely bride. ANTIOCHUS THE GREAT succeeded his brother, Seleucus Ceraunus, 223 B.C. Molo, governor of Media, felt the power of his arms, and Ptolemy Philopater was by him compelled to give up the whole of Syria. Over the Parthians, also, he was completely triumphant, and favoring the cause of Hannibal, he made war upon the Romans. He was, however, dispirited by ill success in the commencement of this contest, and not fully comprehending or seconding the views of the Carthaginian general, was several times defeated, but signally at Magnesia, the consequence of which was the conclusion of a peace disgraceful to the Syrian monarch. He was killed in an attempt to plunder a temple of Jupiter.

ANTIOCHUS EPIPHANES, second son of Antiochus the Great, oppressed the Jews cruelly and laid siege to Alexandria. He was compelled to desist by the interference of the Romans in behalf of their ally Ptolemy. Nothing can show in a more striking light the terror of the Roman name, than the following anecdote. When Antiochus was on the point of marching against Ptolemy, Popilius Lænas arrived at his court as ambassador from the Roman senate. He was instructed to command Antiochus to relinquish his hostile project. Any other but a Roman citizen would have been awed at the presence of the courtiers and army of the king, sitting as he was, surrounded by all the imposing splendors of a regal camp. But Popilius sternly delivered the message of the senate, and with such an air of haughty authority, that Antiochus was embarrassed. He endeavored, however, to satisfy the ambassador with an evasive answer; but Popilius, with his staff, drew a circle around the king's seat, and said sternly, "Pass not that boundary, I command you, O king, until you have given a plain answer to the senate's demand." The king overawed by this boldness, promised to sacrifice his project to the wishes of the Romans.

ANTIPATER, a Macedonian, the faithful minister of Philip and Alexander, and pupil of Aristotle. He obtained the European provinces on the death of Alexander. His

war with the states of Greece terminated successfully. He died, B.C. 317.

ANTISTHENES, founder of the sect of the Cynics, was born at Athens between 424 and 421 B.C. From Socrates he imbibed an enthusiastic love of virtue. He thought that virtue consisted in independence of circumstances, and to maintain this, he thought it requisite that our wants should be reduced to the smallest number. He affected a contempt for wealth, honor, the delights of the senses, and knowledge, and sturdily walked the streets, in the ragged garb of a beggar. Plato was one of the first to penetrate his whims, and guess at their design, and his brilliant remark to the Cynic, has not escaped oblivion: "I see your vanity," said the sage, "through the holes of your coat." Antisthenes is worthy of high praise, if it be true that he attacked the accusers of Socrates, and by his perseverance obtained the banishment of one, and the death of another.

ANTIUM, a city of the Volsci on the Tuscan Sea, traces of which are still visible in Porto d'Anzo. Camillus took it, B.C. 337, and carrying the beaks of the vessels to Rome, employed them in ornamenting a tribunal in the forum, thence called the *Kostra* (beaks). The city was dedicated to the goddess of Fortune, whose statue nodded answers, when consulted as an oracle, being probably formed upon some simple mechanical principle. In Antium Coriolanus sought refuge. It became a favorite residence for the opulent Romans. Cicero had a splendid villa here, Augustus a palace, and here Caligula and Nero were born. In the excavations made among the ruins of the imperial villa, two of the noblest works of ancient sculpture were found, the Apollo Belvidere and the Fighting Gladiator.

ANTONINUS, ANNIVS VERUS, best known by the name of MARCUS AURELIUS, born A.D. 121, assumed the imperial dignity, A.D. 161, on the death of Antoninus Pius. He chose for his colleague, Lucius Verus, but the latter, dying a few years after, left the government solely in the hands of Antoninus. In the prosecution of the war against the Quadi, his army was on the point of perishing of thirst, when there fell an abundant shower of rain, which was attributed to the prayers

of the tenth (a Christian) legion, and they were thenceforth termed the 'thundering legion.' Though justly celebrated for beneficence and equity, Antoninus was not free from religious fanaticism, and authorized a persecution of the Christians in Gaul. His want of foresight in introducing the profligate Commodus, his son, into the government, was productive of most unhappy consequences. After his death, which took place in the fifty-ninth year of his age, and the nineteenth of his reign, he was deified by the Romans.

ANTONINUS PIUS, TITUS AURELIUS FULVIUS, originally of a Gallic family, was born near Rome, A.D. 86. He succeeded to the consulate in A.D. 120, and was adopted by, and succeeded Adrian in 138. He was tolerant to the Christians, humane, dignified, and just, and his reign was one of undisturbed tranquillity. He was wont to say, with Scipio, "I had rather save the life of a single citizen, than destroy a thousand of my enemies. He died A.D. 161.

ANTONY, MARK (MARCUS ANTONIUS), the triumvir, was born 86 B.C. He attracted notice at an early age by his bravery and dissipation. He attached himself to the party of Cæsar, whose favor he gained by the employment of all the arts of which he was master, and was appointed by Cæsar his colleague in the consulship, B.C. 44. After the fall of Cæsar, Antony obtained from the senate a confirmation of the acts of his colleague, and a public funeral, at which he delivered an harangue so eloquent and stirring that he roused the indignation of the people, and forced Brutus and Cassius to fly. Octavius, the heir of Cæsar, was supported by the enemies of Antony, who wished to curtail the authority of this ambitious man, but Antony, uniting with Lepidus and Octavius, formed the triumvirate, which speedily manifested the most sanguinary designs. Each of the triumvirs agreed to sacrifice his friends, and their alliance was cemented by the blood of Rome's bravest and best citizens. Antony affixed the head and hand of Cicero to the rostrum dignified by his eloquence. Brutus and Cassius being defeated at Philippi, Antony went to the East, and surrounded by Asiatic luxuries, forgot the manliness he had once possessed. Captivated by Cleopatra, his ambition was lost in the indulgence of his

passions. Fulvia, his wife, having taken up arms against Octavius, the latter quarreled with Antony, but a reconciliation was effected, and Antony, on the death of his wife, married Octavia, the sister of his colleague, to strengthen the bonds which united them. His renewal of the amour with Cleopatra drew down upon him the vengeance of Octavius, and war was declared against Egypt by the Romans. How Antony fought and fled at Actium has been described. [See ACTIUM.] Finding himself deserted on all sides, and hearing of the death of Cleopatra, Antony desired his slave Eros to slay him. This humble friend, affecting to consent, requested his master to turn away his face, and then falling on Antony's sword, died at his feet. Antony, touched at this heroism, snatched the weapon, and gave himself a mortal wound, but had strength enough left to be carried into the presence of Cleopatra, in whose arms he died, B.C. 30.

APELLES, a celebrated painter of antiquity, was born about 365 B.C. at Cos, or at Colophon in Ionia. The date of his death is unknown. He seems to have earned skill and reputation by his unflagging industry, which became proverbial among the Romans, and their saying, *Nulla dies sine linea*, "no day without a line," is reported to have had its origin with Apelles. His most celebrated work was "Venus Anadyomene," (Venus rising out of the ocean), which centuries after was such a favorite with the Romans, that Ovid says but for this picture, Venus would still have remained buried beneath the waves of the sea. He received the patronage of Alexander the Great, and for a painting representing the Macedonian monarch as Jupiter hurling his thunderbolts, he is said to have received twenty talents of gold, about \$250,000. Having limped Campaspe, a beautiful slave and favorite of Alexander, he had her in recompense for the picture. The pictures of Apelles were probably mostly painted upon panels of larch, in distemper. They were celebrated for the beauty of the horses introduced in them. It is said that he had painted a horse which was severely criticised by a person who examined it, and in such a manner that the pride of the artist was wounded. Resolved to put his performance to the test, he had a horse led into his paint-

ing-room, where the animal, on beholding the picture, neighed, and thus secured the triumph of Apelles.

APOLLO, the fabled son of Jupiter and Latona, and twin brother of Diana, born on the island of Delos. He was the god of all the fine arts, of medicine, music, poetry, and eloquence, and considered by physicians, shepherds, and founders of cities, as their patron. A few days after his birth, he killed the serpent Python with an arrow, and is generally represented with a bow and quiver. He fought bravely against the Titans, under Jupiter. When his son Æsculapius was killed by Jove's thunder-bolt, Apollo slew the Cyclops, who forged the thunderer's weapons. Having conquered the satyr Marsyas, in a musical dispute, Apollo flayed him alive. Pan having disputed the superiority of Apollo in music, a day was appointed for deciding their merits, and Timolus and Midas were judges. The latter, denying the merit of Apollo, was punished by having a pair of ass's ears affixed to his head. When he built the walls of Megara, he laid his lute upon a stone, which ever afterward sent forth a strain of music upon being touched. The Romans celebrated games in his honor which were called Apollinaria, and consisted of bull-fights, contests of athletæ, and theatrical shows. Temples and statues were erected to him in Egypt, Greece, and Italy. The most splendid shrine of Apollo was at Delphi, built 1263 B.C. The laurel was sacred to Apollo, and from the earliest times was used for crowning successful poets and victorious generals.

APOLLÓDORUS, of DAMASCUS, one of the most celebrated architects of antiquity, built the forum and column of Trajan at Rome, of which there are still magnificent remains, A.D. 113. His most remarkable work, however, was the great bridge over the Danube in Bulgaria. It stood on twenty piers, one hundred and fifty feet high above the foundations, sixty feet wide, and one hundred and seventy feet apart. It was built for the emperor Trajan; the bridge was of wood, the piers of stone. The woodwork was afterward destroyed by Hadrian, as it gave the barbarians too great facilities for crossing the Danube. Remains of the piers are still standing. Apollodorus is said to have fallen a

victim to the jealousy of Hadrian, who dabbled in architecture as well as in other arts.

APPIUS CLAUDIUS CRASSINUS, the profligate decenvir, who attempted to destroy the virtue of Virginia. His conduct produced a revolution, and he killed himself in prison, according to Livy. He was at the height of his power about 450 B.C.

AQUINAS, THOMAS (often called the Angelic Doctor), was a younger son of the Count of Aquino, and was born at the castle of Rocca Sica in Italy, in 1227. From his earliest years he was smitten with a love for solitary study. Force was used to prevent his becoming a monk, but in vain; he entered the Dominican order when a very young man. So much was the youthful scholar wrapt up in his own cogitations, that when he studied under Albertus Magnus at Cologne, his fellow-pupils nicknamed him *Bos Mutus* (mute ox) on account of his taciturnity and apparent stupidity. He received a doctorate in theology from the university of Paris in 1255, and lectured with brilliant success in Paris, in several Italian universities, and afterward at Naples. Being summoned by the pope to attend a general council at Lyons in 1274, he died at Merracina on his way thither. He was canonized by Pope John XXII. in 1323. His works are numerous, but his mental vigor surpassed even his amazing industry. He is the most famous of the medieval schoolmen and divines.

ARABIA has an area about four times that of France. It presents the form of a vast peninsula, lying between 12° and 30° N. lat., and 32° and 59° E. long., partly within and partly north of the tropical region. Arabia is mostly populated by independent tribes each governed by its own sheikh. Muscat or Oman is quite an important state. The following are the other principal divisions now generally adopted: *Yemen*, bordering upon the Red Sea and upon the territories of Hejaz, Nejd, and Hadramaut. It includes the towns of Sana, Mocha, and Aden, which is now in the hands of the British as a depot for the overland mail to India. *Hadramaut*, on the southern coast, a country once famous for its trade in frankincense. *Hejaz* is the holy land of the Mohammedans, and contains the cities of Mecca and Medina [which see]. The greater portion of Arabia is occupied by long, dreary

deserts of sand; while, in some parts, as on the western side of the Arabian desert, the soil is rendered fertile by the irrigation of rivulets, and various flowers, both indigenous, and transplanted from India, spring up, bud, and blossom, filling the air with their ravishing perfume. Some precious stones are found in Arabia, but its principal riches are flocks and herds. Of the natural history of Arabia we can say but little. Ferocious animals pursue their prey in the deserts, which they render terrific by their presence and ferocity, while the mountains produce animals yielding many and great advantages to commerce. Of these we may mention the civet-cat, the bezoar-goat, the musk-rat, and others of domestic habits and importance.

Concerning the old Arabians, who are now destroyed, or merged and lost in other tribes, there is no distinct history extant. Kahtan or Joktan, son of Eber, and Adnan, the direct descendent of Ishmael, were the ancestors of the present races of Arabians. The posterity of Joktan are termed genuine or pure Arabs, that of Ishmael, naturalized Arabs, or Mostarabi. More than thirty-six hundred years ago, Yarab, Joktan's eldest son, is said to have succeeded his father in the kingdom of Yemen, while Jorham, the younger, founded the kingdom of Hejaz, which his posterity possessed until the time of Ishmael. In the time of Alexander the Great, the inundation of Arem overwhelmed with misery the tribes settled in Yemen, eight of which were forced to fly their dwellings and migrate to other lands. Ishmael, marrying the daughter of Modab, one of the princes of Hejaz, had twelve sons. The descendants of Ishmael, driving out the Joramites, took possession of their country. The government appears to have been in the hands not of one ruler, but of the leaders of the different tribes. An aristocracy prevailed at Mecca until the time of Mahomet. Sesostris, of whom Josephus speaks under the name of Sesac, conquered Arabia. Yet this conquest was but in name, for the Arabs were too proud and independent to bow their necks beneath the tread of the conqueror, and subsequent events show, that even during his reign, they made themselves formidable to the Egyptians, and Sesostris was forced to erect a wall between Heliopolis and Pelusium, to guard his native subjects against the attacks

of the Arabs. Although he had a powerful fleet upon the Red Sea, he did no more than skirt the shores of Arabia Felix, or at most, take possession of some of its maritime provinces. It may safely be asserted that the whole peninsula of Arabia never was, or at least never for any length of time, subjected to the Egyptians.

The Hycsos or Shepherd Kings, who invaded Egypt, and for a long time held undisputed sway in that country, were Arabians. Neither the Assyrians, the Medes, nor the Persians, ever obtained firm footing in Arabia. The Persian monarchs were regarded by the Arab chiefs in the light of friends, and received annually a voluntary present of frankincense as a tribute of respect, but other ties than those of the heart never bound the free dwellers of Arabia to the proud potentates of Persia. Cambyzes, when flushed with ambitious pride, and rushing forward to the conquest of Egypt, paused in his impetuous career, and respectfully asked of the Arabians permission to pass through their country. The Spartans, warlike and daring as they were, had reason to repent of an incursion which they made upon the Arabs. Alexander the Great, when inflated with the success of his arms, was surprised to find that the Arabs so little dreaded his tremendous power, as to neglect sending ambassadors to him. This gave the Macedonian a high opinion of them as "warriors worthy of his steel;" but death put an end to his hostile projects. His successors attempted the conquest of Arabia, but were completely defeated. The Romans made different incursions into Arabia with but partial successes to compensate for heavy losses, until Ælius Gallus, in the reign of Augustus, penetrated into the interior of the country, and gained victories which the deadly heats his army encountered rendered unavailing. The Arabs were not again disturbed by the Romans until the reign of Trajan. The north-western part of Arabia, the country of the Nabachæi, was called Arabia Petræa, from their chief town, Petra. In the reign of Trajan it became a Roman province. Petra sunk into insignificance; its dwellers forsook it for the freedom of the deserts; even its site was forgotten till Burckhardt discovered the ruins of its temple and tombs in the Wady Musa.

At the commencement of the seventh cen-

tury a few small provinces in the north were subject to the Byzantine empire, while those bordering on the Euphrates acknowledged Persian supremacy, and an Ethiopian dynasty ruled temporarily at Yemen. This latter fact had a melancholy importance for the world, through the small-pox which the victors brought into Arabia and which, by the conquests of the Mohammedans, was soon carried far and wide. But the great mass of the land was possessed by wandering tribes whose freedom, even of each other, was unbounded. The union of these tribes into a nation, a nation which conquered old empires and founded new, dates from the day of Mohammed. Before the close of the century the Saracens had overcome a large part of Europe, Asia, and Africa. Disunion had heretofore weakened their forces, but now, uniting, they showed their power was indeed formidable. If they had no knowledge of those military arts by which alone the strongholds of power are prostrated, they possessed that wild and desperate valor which carried them triumphantly through their predatory expeditions. Mohammed, and after him the caliphs, called forth the energies of the Arabs and the display of every quality which fitted them to bear arms, but that of implicit obedience. The Arabs were too proud of their hereditary independence to submit blindly to the yoke of any man or combination of men, and they accordingly, for the most part, acknowledged only the spiritual authority of the caliphate. When the power of the Turks gained the ascendant, the Arabs shook themselves free from fetters, rejoicing in the chainless spirit of liberty. It is not difficult to conceive the wild delight of roaming the desert on a fleet horse, and beholding all around a plain which seems interminable, and presents to the Arab horseman the idea of solitary existence in a world of his own.

In the sixteenth century, during the war between the Turks and Portuguese, Solyman Pacha seized upon all the towns on the Arabian Gulf. His successors also were victorious, and almost all Arabia became subject to the Ottoman empire. These events occurred between 1538 and 1568. Still all the sheikhs and princes were not subdued, but many of them, remaining independent, continued to harass the Turks, until, about the middle of the seventeenth century, the latter were forced

to relinquish all the conquered places on the coast of Arabia. The independent spirit of the Arabs has gained them great celebrity.

Arabia is celebrated as being the scene of many of those wonderful events which are commemorated in the Holy Scriptures. It was for a long time the dwelling-place of Moses, who married the daughter of Jethro and fed his flocks upon Mount Horeb. The children of Israel, under the guidance of the Lord, passed into Arabia, when they went from the grinding bondage of the Egyptians. In the desert of Sinai, rises that lofty mount which was clad in thunder and lightning, when God gave his commandments to the people. Mount Sinai commands a view of Mount Horeb, where again the Lord appeared in the burning bush to Moses. There is still to be seen that rock, which, when the people thirsted for water, Moses smote; where, from twelve mouths, the living waters gushed profusely. Again, when they were in want of water, in the wilderness of Paran, Moses smote a rock twice before the water flowed. That rock also remains at the present day, an impressive memorial of the miracle, exhibiting the various fissures whence the clear element gushed forth, cheering, by its presence, the many hearts of those who had panted for the succor.

The Bedouin Arabs, although possessed of not a few good qualities, are inveterate robbers. When a Bedouin describes a traveler at a distance, he puts his horse to his speed, and rides furiously up, exclaiming loudly, "Undress thyself, thy aunt [my wife] is without a garment." There is no way to avoid death in this case but submission, as the possession of the meanest article of wearing apparel is an object important enough to warrant the shedding of human blood, in the eyes of the Arabs. There are many singular contradictions in the character of these wild people. A stranger who confides his safety to their honor will be treated with the utmost kindness, and share the wealth or poverty of his entertainer, who bids him welcome to what is his. The patriarchal form of government has ever subsisted among the Arabs. The dignity of grand sheikh is hereditary in certain families, but the inferior sheikhs choose a successor out of his family, on the death of a grand sheikh. The greater portion of the inhabitants are ill fed and clad, simply because they prefer a

wandering life of freedom, to one of confinement and restraint, even if it bring the greatest luxuries. These they profess to despise. One trait in their character is highly praiseworthy; their extreme kindness to the domestic animals to which they owe so much. They free these creatures from work in their old age, and permit them to die a natural death. The Arab horses are reared with extreme care; spirited, docile, fleet, handsome, and hardy, they always command the highest prices. The Arabs, proud of the antiquity of their own origin, are no less careful of the fame of their horses, of which they preserve authenticated pedigrees. For chargers, the Arab horses are unrivaled. A war-horse of this country appears delighted with the din of battle. His spirit rises with the ardor of the conflict, and he dashes into the "current of a heady fight," reckless of the volleys of musketry and cannon pealing around him, even when struck with shot,

"Staggering, yet stemming all, his lord, unharmed he bears."

He will watch his master if he falls from his saddle in the fight, and not only shield him, but neigh for assistance. The price in England for an Arabian horse has been 1,000, 2,000, or even 3,000 pounds sterling. Sometimes even the poorest Arabs will not part with their faithful chargers, even though the most tempting offers be held out. "No, my jewel, was the affectionate exclamation addressed to his mare by that Arab who, after he had agreed to relinquish the beautiful creature to grace the stud of the King of France, at an enormous price, could not find it in his heart to tear himself from his faithful servant: "No, my jewel! they shall never part us! we have lived and we will die together." Saying this with tears in his eyes, he sprang upon her back, and rushed back to the desert, happy in having escaped the temptation and the sacrifice. The camel, which the natives call the ship of the desert, is also an invaluable treasure. Like the Bedouins themselves it learns from early youth to endure hunger, thirst, and fatigue.

ARAGO, FRANÇOIS DOMINIQUE, was born in Estagel, in the south of France, Feb. 26th, 1786. His father had originally intended him, in accordance with his humble position, for a simple agricultural life. But the taste

and aptitude he evinced for the natural sciences were such, that he was presented for admission into the Polytechnic school of Paris. His examiner sent him to the institution, with high compliments of his ability and attainments. He distinguished himself by the ardor and success of his studies while a student of the Polytechnic, and was attached to the observatory of Paris. Such was the rapid acknowledgment of his ability, that in 1806 he received the appointment of assistant to M. Biot, in the scientific commission for the measurement of an arc of the meridian in Spain. While Arago was at Galazo in the island of Majorca, engaged in this scientific duty, war broke out between France and Spain. The fires which he made, to aid his observations, excited the suspicions of the ignorant populace, who, fancying them beacons to guide the French in their march, attempted to seize the young philosopher. He escaped to the coast in disguise, could not get off, and sought security for his life by yielding himself to the authorities. On his way to the prison he was beset by a rabble, and his life put in great danger. By the connivance of the Spanish captain-general he escaped to Algiers. There he embarked on an Algerine vessel for Marseilles. In sight of that port the vessel was captured by a Spanish privateer, and Arago was thrown into prison at Rosas. An attempt was made to frighten him, by the show of preparation for his execution, into a confession that he was a renegade Spaniard, that the government might confiscate the vessel. He lay in a loathsome dungeon, overrun with vermin, and almost starved to death. Two lions had been sent by the Dey of Algiers as a present to Napoleon, in the vessel in which Arago had taken passage and which had been captured. One of these animals had died, and Arago bethought himself of writing word to the dey that it had been starved to death by the Spaniards. He succeeded in sending off a letter to that purport, which was received by the dey, who, much enraged at the treatment of his beast, called the Spanish government to account, and demanding compensation for the seizure of the vessel, threatened war if the demand was not instantly complied with. Arago was now permitted to set sail for Marseilles, but under the guidance of an ignorant pilot, his

vessel drifted about for several days, until by hazard the coast of Africa was made. The vessel had been so much damaged that it was determined to abandon her. Arago resolved to make his way to Algiers by land, and disguising himself as an Arab, he succeeded in reaching that place with safety. He found that the dey had just died, and a revolution resulted in the death of the legitimate successor. The usurper made a demand upon France for a pretended debt, and as the French government positively refused compliance, the names of the French residents were placed on the list of slaves. The galleys threatened the philosopher. After much suffering and anxiety, Arago, in 1809, obtained permission to leave Algiers with a convoy of Algerine vessels and a corsair of that nation, in which he himself embarked. The convoy had not sailed out of sight of Algiers when they were pounced upon by a brace of English frigates. The corsair, on board of which Arago had taken passage, succeeded in eluding the English, and landed him in safety on the French coast.

On his arrival at Paris he was welcomed with great enthusiasm and elected with acclamation a member of the institute. It is impossible here to enumerate all the brilliant discoveries with which Arago has illuminated natural science. The determination of the diameters of the planets, the discovery of colored polarization of light, and of magnetism by rotation, are among the most remarkable. The "Transactions of the Academy of Sciences," of which society he was secretary, are enriched by his scientific contributions; and various published memoirs testify to his industry and philosophical genius. Arago always advocated the cause of progress, and in the revolution of 1830 he boldly presented himself as a champion of democracy. During the reign of Louis Philippe he was a member of the chamber of deputies and sat on the extreme left. His interest in politics was never allowed to interfere with his philosophic pursuits. He was appointed head of the Paris observatory, and directed with undiminished ardor its astronomical observations. In the provisional government of 1848 he held the office of minister of marine, and fulfilled its duties to the manifest advantage of the republic, of which he was an ardent supporter. On

the violent accession of Louis Napoleon to the imperial throne, Arago refused to take the oath of allegiance to the usurper, but in consequence of his fame and the glory he had shed over his country, he was left undisturbed in his position at the head of the observatory, and continued to devote himself with exclusive ardor to his scientific pursuits until his death in the year 1853.

ARAM, EUGENE, whose erudition and fate have rendered him remarkable, was born in Yorkshire, England, in the year 1704. His father was forced to contend with depressing poverty. Eugene was sent to school, and learned to read the New Testament in English; but from that period, with the exception of a month's tuition from a clergyman, Aram owed nothing to teachers, all his learning being self-acquired. His father was gardener to Sir Edward Blackett, at Newby; and, when about thirteen or fourteen years of age, Aram joined him. In the house of the baronet, Eugene first displayed his love of literature and science. Apart from the bustle and turmoil of the world, he passed his solitary hours in incessant study. Mathematics early engaged his attention, and he became a proficient in the exact sciences; indeed, his fondness for mathematics recommended him to Mr. Christopher Blackett, of London, whom he served for some time in the capacity of book-keeper, commencing his London life at sixteen years of age. After residing with Mr. Blackett for a year and a half, he was taken with the small-pox, and suffered greatly from the terrible disorder.

He afterward returned to Yorkshire, where he pursued his studies with increasing avidity, but with altered views, having discovered that polite literature possessed greater charms for him than mathematics. He made himself acquainted with the works of the most celebrated poets, and went through a course of historical reading. He went to Netherdale for the purpose of engaging in teaching, and here, considering himself satisfactorily settled, he married. His marriage proved unhappy, and to his matrimonial connection he afterward attributed the evils which befell him, and the crime which he committed. Finding himself deficient in classical learning, he resolved to master the learned languages and applied himself to the study of the Latin and Greek

grammars with great spirit. He soon perused the Latin classics, poets, and historians. He next read the Greek Testament, and finished his course with Hesiod, Homer, Theocritus, Herodotus, and Thucydides, with the Greek tragic poets.

At the seat of his friend, William Norton, Esq., of Knaresborough, he learned the Hebrew language, and read the Pentateuch, in 1734. In 1744, he was engaged in London, as usher, and gave instruction in Latin and writing. Here he became acquainted with the French language. Afterward, he was employed as usher and tutor in various seminaries in England, and never suffered a single opportunity of making new acquisitions to escape. He was acquainted with the voluminous and quaint details of heraldry, and with the gentle lore of flowers. He acquired the Chaldee and Arabic languages, and investigated the Celtic dialects. Having discovered an affinity between the Celtic, English, Latin, Greek, and Hebrew tongues, he was employed upon a comparative lexicon of these languages, when a frightful event arrested his literary progress. Aram was accused of having murdered Daniel Clark, a shoemaker. The murder had been concealed for nearly fourteen years, when the discovery of a skeleton, at first supposed to be that of Clark, set on foot investigations which resulted in the arrest of Aram. At the time of his being taken into custody, he was usher of a school at Lynn, in Norfolk. The murder was committed on the 8th of December, 1744-5. Its object was a little paltry gain, although the murderer assigned jealousy as the motive. Remorse had preyed upon the spirits of Aram from the time of the commission of the deed, and he is said to have conversed with the boys at Lynn on the subject of murder, and related to them tales of murders, commencing with the crime of Cain.

Upon his trial at York assizes, on the 3d of August, 1759, he displayed great calmness and self-possession. The principal evidence against him was his wife, from whom he had been a long time separated. Circumstantial evidence, in addition to that of Richard Houseman, helped to convict him. His defense displayed talent and consummate address acknowledged by the judges. He was found

guilty. He subsequently confessed his crime, and acknowledged the justice of his sentence. While in prison, he attempted to commit suicide by opening his arm in two places with a knife which he had concealed for the purpose. He almost succeeded, and was in a state of excessive weakness, when conducted to the scaffold. Standing beneath the fatal tree, he was asked if he had anything to say, but he silently shook his head. He was instantly executed, and his body hung in chains in Knaresborough forest.

ARARAT, a mountain in Armenia, where it is supposed Noah's ark rested. It rises majestically from a fertile plain in two conical peaks, one of which rises far above the limits of perpetual snow, and is the highest point in western Asia. The whole country is full of traditions about the ark and the flood. Various attempts have been made to gain the top of Ararat; none of which were successful till July, 1856, when the toilsome and perilous ascent was achieved by five Englishmen. The dwellers about its base regard the snowy summit with mingled awe and veneration, and as a spot not to be profaned by the impious tread of man. None had stood there since the days of Noah. Ararat shows traces that at some period it has been subjected to violent volcanic action. Major Stuart, one of the party mentioned above, pronounces the summit an extinct crater filled with snow. The highest peak of Ararat is 17,323 feet above the sea, and 14,300 feet above the table-land on which it stands.

ARCADIA, a mountain country in the heart of the Peloponnesus. Originally called Pelasgia, from the Pelasgi, its first inhabitants, it received its name of Arcadia, from Arcas, grandson of Lycaon. The shepherds inhabiting the sequestered valleys were for a long time rude and uncivilized, but when they cultivated the arts of agriculture, and sweetened their labors by occasional intervals of relaxation, in which they occupied themselves with music and dancing, they became famous in song, and Arcadian felicity was a phrase expressive of unalloyed enjoyment. But Arcadia was far from being a paradise, and its inhabitants were not so devoted to pastoral pursuits, that they forgot the excitements of war. On the contrary, when no quarrels of

MOUNT ARARAT.

their own occupied them, they engaged in the service of other states. It was finally united to the Achaian league.

ARCHIMEDES, the most celebrated geometrician of antiquity, born at Syracuse, 287 B.C. He was famed for the mechanical contrivances which he employed to defend his native city, when besieged by the Romans (212 B.C.), whose fleet, Lucian says, he set on fire with burning-glasses. Marcellus, who took the city, wished to spare the life of Archimedes. When the Romans entered the city, Archimedes was found by a soldier, poring over some figures which he had drawn in the sand. He begged the Roman to spare his circle, but the man heedless of his request, rushed forward and killed him with a blow. He was then seventy-five years old. He is said to have declared that he could move the globe, if he only had a place to stand upon. To Archimedes we ascribe the discovery of the fundamental properties of the lever, inclined plane, and pulley, of the screw for raising water, which yet bears his name, and much advancement in geometry and mensuration.

ARCOLA, BATTLE OF. Between the French under Bonaparte, and the Austrians under Marshal Alvinzy, fought Nov. 19th, 1796. This bloody conflict continued eight successive days and resulted in a disastrous defeat to the Austrians, who at the outset had the advantage.

ARGENTINE CONFEDERATION, comprises an area of 927,000 square miles, and has a population of 800,000. This estimate does not include Buenos Ayres, which is now a distinct republic. [*See* BUENOS AYRES.] The population consists of descendants of Spaniards and wandering tribes of Indians. There are twelve states in the confederacy, Santa Fe, Entre Rios, Corrientes, Cordova, Santiago, Tucuman, Salta, Catamarca, La Rioja, San Luis, Mendoza, and San Juan. Diaz de Solis visited the mouth of the La Plata in 1512, but formed no settlement. Before the end of the century the Spaniards founded the towns of Salta, Tucuman, Cordova, Buenos Ayres, &c. These regions formed a part of the viceroyalty of Peru till 1777, when they were made into the separate viceroyalty of Buenos Ayres. Like the other colonies of Spain in South America, these provinces did not submit to the authority of Joseph Bonaparte, and in 1810 they organized an independent government in the name of Ferdinand VII. In 1816 they threw off Spanish dominion altogether. Since then they have been torn by intestine commotions. Rosas was placed at the head of affairs in 1835. His commercial policy had for its object to secure Buenos Ayres the monopoly of the trade of the Plata; his political policy was to obtain a similar superiority. His sway was marked by cruelty and despotism, and his ambitious designs against Paraguay, Uruguay, and Bra-

ARG

zil, interfering with commerce and the rights of European merchants, caused the interposition of England and France. Buenos Ayres was blockaded by their fleets from 1845 to 1847, and the free navigation of the Parana thus maintained. Rosas was at last deposed in 1851, and fled to Europe. Civil war continued between Buenos Ayres and the other states, which resulted in the establishment, in 1856, of the Argentine Confederation and the distinct republic of Buenos Ayres. In 1865 the Confederation under President Mitré, took sides with Brazil and Buenos Ayres, against Paraguay, after having long endeavored to remain neutral. The seat of government for the confederation is Parana, the capital of Entre Rios, population, 6,000.

ARGOLIS lay in the eastern part of the Peloponnesus, bounded on the north by Achaia and Corinth, on the north-east by the Saronic gulf, and on the west by Arcadia, and on the south by Laconia. The Argolic gulf lies upon the south-west. Fertile plains and swelling hills vary the surface of this region. Pelops, who reigned over Argos, gave his name to the peninsula. It was the kingdom of Atreus and Agameinnon, Adrastus, Eurystheus, and Diomedes, the birth-place of Hercules, and the scene of his victory over the Lernaean Hydra. The fine arts, and music in particular, were successfully cultivated by the Argives. The modern Argolis is but a shadow of the ancient city. Argos was anciently divided into small, independent states. These were Argos, Mycenæ, Tirynthus, Trœzen (now Damala), Hermione (now Castri), and Epidaurus.

ARGONAUTS. The story of the expedition of Jason and his adventurous companions, to procure the golden fleece of Colchis, is chiefly fabulous, and has probably little connection with any known facts. Jason was not permitted to ascend the throne of his father by Pelias, who filled it, except on condition of bringing from Colchis the golden fleece of the ram, which bore Phryxus and Helle away from their cruel step-mother, Ino. Most of the heroes of Greece embarked with Jason in the Argo, a splendid vessel built for the adventure, and superior to any which had previously floated on the waves. After encountering many vicissitudes, they came to the country of Æetes. This monarch,

whose life depended on the preservation of the golden fleece, without refusing to surrender it, first imposed upon Jason three labors which he hoped would destroy him. He was to yoke the bulls of Vulcan to a plough of adamant, and turn up a field consecrated to Mars, which had never been opened; in the furrows thus formed, he was to sow the serpent's teeth of Cadmus, which would instantly start forth as armed men, whom he was to slay; and finally, he was to kill the dragon that was the watchful guardian of the golden fleece. The magical arts of Medea, who had fallen in love with the young hero, assisted him to achieve these enterprises with success, and when the king determined on the murder of the Argonauts, enabled him to possess himself of the fleece, and escape with the enamored lady and all his companions. The king soon missing the fleece and the fleet, pursued and came in sight of them; Medea then murdered her brother Absyrtus, whose limbs she strewed upon her father's path. The afflicted old man, by staying to collect them, gave the fugitives time to escape. After many adventures, the Argo returned safely. The time of the undertaking is placed in the middle of the thirteenth century B.C.

ARGUS, the fabled son of Arestor, whose hundred eyes caused him to be selected by Juno as the keeper of Io. Having been slain by Mercury, he was changed into a peacock, and his eyes were placed in his tail.

ARION, a musician and poet, born at Methymna, in Lesbos, and flourished B.C. 625. His fabulous fate has been often celebrated. When at sea with all his treasures, the mariners sought his life; but he leaped overboard, and it is related that a dolphin, charmed with his music, carried him safe to land.

ARIOSTO, LUDOVICO, the author of the celebrated "*Orlando Furioso*," was born at Reggio, Sept. 8th, 1474, and died at Ferrara, in 1533. Having lost the favor of Cardinal d'Este, he entered the service of Duke Alfonso of Ferrara, whose rewards, however, were but trifling. He experienced many vicissitudes. His minor works alone would entitle him to high rank in Italian literature.

ARISTIDES, son of Lysimachus, a noble Athenian, surnamed, from his high integrity,

ARI

the Just. He was instrumental in gaining the battle of Marathon. There were ten generals, of whom he was one, each having the command of the army for one day. Thinking this arrangement injurious to the troops, Aristides prevailed on the other generals to give up their days of command to Miltiades, and this measure secured the triumph of the Greeks. Becoming obnoxious to the party of Themistocles, he was banished by ostracism. Each person wrote the name of the man he wished banished, on a shell (*ostrakon*); these were then counted, and the person whose name occurred most frequently was banished. An ignorant fellow, in the public assembly, not knowing him, turned to Aristides, and asked him to write Aristides. "What reason have you for disliking him?" asked Aristides. "Oh," replied the fellow, "I am tired of hearing him called the Just." When the Athenians were alarmed by the approach of Xerxes, they recalled Aristides, who, casting away the remembrance of former wrongs, assisted Themistocles in the public cause. At the battle of Salamis his services were eminent. Aristides refused to countenance the banishment of Themistocles, when he incurred the displeasure of his countrymen. Nothing displays more clearly the reputation of Aristides, than his being appointed to apportion the contributions to be paid by the several states of Greece toward the expenses of the war. This delicate duty he discharged to the satisfaction of all. He died poor about 467 B.C. His countrymen bestowed a magnificent funeral upon him, pensioned his son, and portioned his two daughters.

ARISTIPPUS of Cyrene, a pupil of Socrates and founder of the Cyrenaic, 392 B.C. This sect, which flourished for several ages, maintained that the supreme good of man in this life is sensual pleasure, and that virtue ought to be commended only so far as it conduces to delight. He had no sternness. Gay, brilliant, careless, and enjoying, Aristippus became the ornament and delight of the court of Dionysius, already made illustrious by the splendid genius of Plato and the rigid abstinence of Diogenes. The grave deportment of Plato and the savage virtue of Diogenes had less charms for the tyrant than the easy graces of Aristippus, whose

very vices were elegant. His ready wit was often put to the test. On one occasion three *hetere* were presented for him to make a choice: he took them all three, observing that it had been fatal even to Paris to make a choice. On another occasion, in a dispute with Æschines, who was becoming violent, he said, "Let us give over; we have quarreled, it is true; but I, as your senior, have a right to claim the precedence in the reconciliation." Scinus, the treasurer of Dionysius, a man of low character, but immense wealth, once showed Aristippus over his house. While he was expatiating on the splendor of every part, even to the floors, the philosopher spat in his face. Scinus was furious. "Pardon me," exclaimed Aristippus, "there was no other place where I could have spat with decency." One day, when interceding with the tyrant for a friend, he threw himself on his knees. Being reproached for such a want of dignity, he answered, "Is it my fault if Dionysius has his ears in his feet?"

ARISTOGITON, and HARMODIUS, two of the most famous patriots of Athens; finding their country oppressed by Hipparchus and Hippias; sons of Pisistratus, they formed a conspiracy against them. Hipparchus was slain 514 B.C., but owing to the backwardness of the people, Harmodius was killed by the guards, and Aristogiton seized. Being tortured to make him disclose the names of his accomplices, he named the friends of the tyrant, and they were put to death in rapid succession. "Now," said Aristogiton to Hippias, "there only remains yourself worthy of death." Hippias was expelled three years afterward, and the Athenians paid the greatest honors to the memory of the two friends. Praxiteles executed their statues, which were erected in the forum, their praise was sung in hymns, and it was forbidden to give the name of either to a slave.

ARISTOPHANES, a celebrated Greek dramatist, author of numerous comedies equally remarkable for the beauty of their composition and their pungent satire, flourished in the fifth century B.C. But little is known of his life. Out of forty-four compositions of his, only eleven are extant.

ARISTOTLE, the most famous philosopher of Greece, founder of the Peripatetic sect, was

born at Stagira, a city of Thrace, 384 B.C. He died 322 B.C., having taken poison to avoid the persecution of his enemies. He enjoyed the instructions of Plato. He was selected by Philip of Macedon as the preceptor of Alexander. When the latter went forth on his Asiatic campaign, Aristotle repaired to Athens. There in the charming retreat of the Lyceum, he delivered his teachings to a throng of pupils, while walking amid the groves and fountains. Envy of his fame rankled into persecution, and he was forced to flee to Chalceis, where he died. He is considered the founder of the philosophy of botany; he was the first to write of mechanics; and with him the term 'metaphysics' originated. His writings, on various branches of science, have been of great value to the world, although much of his philosophy has been supplanted in the progress of truth.

ARIUS, the noted schismatic, was born about the middle of the third century. His entire life was embroiled with disputes, principally with Bishop Alexander and with Athanasius, on the divinity of Christ. He held that God created the Son, that the Son had not existed from eternity, and was not in dignity and essence equal with the Father. This doctrine was condemned by the great council which met at Nice in 325. After numerous vicissitudes, intrigues, and strifes, Arius was in the act of celebrating a triumph

at Constantinople, and suddenly died at a very advanced age.

ARKANSAS derives its name from a tribe of Indians now extinct. It is between 33° and 36° 30' N. lat., and 89° 40' and 94° 40' W. long., having an area of 52,198 square miles. By the U. S. census of 1860, the state had a population of 324,191 whites, 111,115 slaves, and 144 free negroes, in all 435,450. This was a very rapid increase since the year 1854, when the whole population was only 251,458. The land on the Mississippi, and from forty to fifty miles back from it, is low, interspersed with lakes and swamps, and, with few exceptions, annually overflowed by that river and its tributaries. West of this tract, the ground rises, and near the centre of the state, becomes hilly, and farther west, mountainous. Its rivers are the Arkansas, which has a course of 2,000 miles and traverses the whole state, the Mississippi, which washes its eastern side, the Red River, which furnishes steamboat transportation to the southern section, the St. Francis, the White River, and the Washita.

The Ozark Mountains run through the western part of the state. The soil on the river bottoms is fertile, the other parts generally are sterile. Cotton and Indian corn are the staple productions. Wild fowls and animals are abundant. A variety of minerals are found in the state, such as iron, gypsum, coal. Some salt is obtained. The

country is well adapted for raising horses and cattle. Considerable quantities of wheat, oats, sweet potatoes, and tobacco are raised. The peach is cultivated with success, but the apple does not flourish.

Arkansas was included in the Louisiana territory purchased from France in 1803. Settlements were made within its limits by French adventurers as early as 1685. It was organized as a territory in 1819, and was admitted into the Union in 1836.

Arkansas seceded March 20, 1861, and was during the rebellion more or less penetrated by Union troops, several desperate battles having been fought in the rugged, mountainous country in the north-west corner of the state, the north-eastern part having been long held by the Union forces, and the Union navy controlling the chief rivers and their banks. The state returned to the Union apparently with readier and kinder feelings than most of the seceding states. A loyal state government was early organized with Isaac Murphy at its head, and at an election held March 16, 1864, this government was confirmed and a new constitution adopted abolishing and prohibiting slavery. Tracts of land have been set apart for school purposes, but an indifference on the subject of education has pervaded the public mind. The prevailing religious denominations in Arkansas are Methodists and Baptists, while there are also considerable bodies of Episcopalians, Presbyterians, and Roman Catholics.

Little Rock, the seat of government, is on the Arkansas, about a hundred and fifty miles from its confluence with the Mississippi. The river is navigable for steamers to this point at all stages of water. The rocky bluff on which the town stands is the first stone met on the Arkansas west of the Mississippi. The town was founded in 1820, and in 1850 had 2,167 inhabitants. None of the other towns are very populous. Among the chief are Fulton, on the Red River, Helena, on the Mississippi, and Fort Smith, a government post on the western frontier.

ARKWRIGHT, Sir RICHARD, was born in Preston in 1732, and in early life was a barber. He became interested in machinery for spinning cotton, and in 1769 obtained a patent for an improvement upon Hargreaves' spinning-jenny. Combinations were formed

against him, and his patent was set aside in 1785. His business energy was equal to his mechanical skill; he could not be crushed. When he died in 1792, he had accumulated a property of £500,000, which his heirs, in their generation, increased to one of the most colossal fortunes ever realized in the kingdom.

ARMADA, THE INVINCIBLE, a famous armament fitted out against England in the time of Elizabeth (1588), by Philip II. of Spain. It consisted of one hundred and fifty large ships, with 20,000 soldiers, 8,250 seamen, and 2,000 volunteers, under the Duke of Medina Sidonia. The number of guns the ships bore was 2,650, some of them of extraordinary calibre. The English navy at that time consisted of but thirty ships of war. It was reinforced, however, by volunteers. The proud armament was shattered by storms. The size of the Spanish vessels prevented them from acting with advantage on the seas in which they were engaged. Admiral Howard, ably seconded by the officers under him, attacked and beat the fleet for several days, and very few of the Spanish vessels entered port again. Sir Francis Drake, Captain Hawkins, and others, greatly distinguished themselves at this time. The preparations on land, superintended by the queen herself, were fully commensurate to those at sea.

ARMENIA, a country of western Asia, lying south of the Caucasus, in ancient times a powerful kingdom. The name lingers merely in geography; the greater portion of the territory is in the hands of the Turks, the eastern part belongs to Persia, the northern to Russia. The early history of Armenia is not well known. The Assyrians, Medes, Persians, and Macedonians by turns possessed it. After the death of Alexander, it was united to Syria, of which it formed a part until it revolted from Antiochus the Great, when it was possessed by two different rulers and divided into Armenia Major and Minor. Tigranes, king of the former in 95 B.C., reduced Armenia Minor, and other provinces, and united the two countries. Under him it became tributary to Rome, in 63 B.C., and Trajan made it a Roman province in 106. After Sapor of Persia vainly attempted its conquest from the Romans, it was governed by native princes, until the Arabians

conquered it in about 650. It was conquered by the Seljukian Turks about 1046, after which it suffered many changes, till it was reduced by the prince of Kharasm in 1201, who was driven out of it by Genghis Khan in 1218. In 1335, the Ilkhanian dynasty began here, and continued till 1385, when Armenia was conquered by Tamerlane, from whom it was soon after recovered by the Ilkhanian princes. On the death of Ahmed Jalayr, the last of the line, in 1405, Kara Yusef, the chief of the Turcomans, got possession of it. This dynasty had the name of the Black Sheep, and in 1488, it fell by conquest to the family of the White Sheep. In 1500, it was conquered by Ishmael Sosi, and reduced by Selim I. in 1514. During the late war between Russia, and England, France, and Turkey, Armenia was a seat of hostilities, and the siege of Kars attracted much interest. The population is scanty, considering the extent of the country, and consists of Armenians, Turks, and the wild Kurds. Oppression has driven the Armenians somewhat widely from the land of their fathers. They have much aptitude for business, and Armenian merchants are now established in nearly all the countries of Europe and Asia. At almost every great fair or mart, from Leipzig and London to Bombay and Calcutta, they are to be seen. Originally the Armenians were worshipers of fire, but toward the close of the third century they became converts to Christianity. To their fidelity to their faith they owe their existence as a separate people through long centuries of servitude. The Armenian church is a corrupt form of the Roman Catholic. It does not acknowledge the supremacy of the pope, and is governed by patriarchs.

ARMINIUS (VAN HARMINE) was born at Oudewater, South Holland, in 1560. After studying at Leyden, he went to Geneva and enjoyed the prelections of Beza. His mind seems to have had an early itching to oppose established forms of thought and belief, and he became a romantic supporter of the philosophy of Peter Ramus. At twenty-six he was ordained minister of one of the churches in Amsterdam, and there preached with great acceptance. He was soon entangled in controversy. In 1603 he succeeded Junius in the chair of theology at Leyden. There he

attacked the doctrine of predestination, and based it upon foreknowledge of faith and merit. From this a hot theological war grew. Arminius died in 1609. His candor is unimpeached and his ability undoubted. The system that bears his name, was elaborated after his death, several of its distinctive tenets not being held by Arminius.

ARMSTRONG, JOHN, a native of Pennsylvania, was a brigadier-general in the Continental army, and fought well at Fort Moultrie, Germantown, and Brandywine. Piqued at certain promotions, he resigned his commission in 1777, and afterward sat in Congress. He died in 1795.

ARMSTRONG, JOHN, son of the former, was the author of the celebrated "Newburgh Addresses." He was aid-de-camp to Gates. He was United States senator from New York, and minister to France from 1804 to 1811. Mr. Madison made him secretary of war. The capture of Washington by the British, led to his retirement from office. He died in 1843, in his eighty-fifth year.

ARNE, THOMAS AUGUSTINE, was the son of an upholsterer, and born in London in 1710. His father educated him at Eton and placed him in an attorney's office; but such was his love for music, that he had no relish for the quiddities of law. After a few lessons from a German violinist, he made such progress with the bow, that he left his master the attorney, and took music for a profession. His father happening accidentally to call at the house of a neighboring gentleman, was amazed and consternated to find his Thomas Augustine playing the leading violin. But the old gentleman acquiesced. The world gained an excellent musician and lost a discontented pettifogger. Arne became a popular lyrical composer, writing several pleasing operas, many charming songs, besides a large number of fine glees, catches, and canons. His song and chorus, "Rule Britannia," has been said "to have wafted his name over the greater half of the habitable world." In 1769, the university of Oxford conferred upon Arne the degree of doctor in music. He died March 5th, 1778. His last moments were cheered by a Hallelujah sung by himself.

ARNOLD, BENEDICT, was born in Norwich, Conn., Jan. 3d, 1740, and before the outbreak of the Revolution was a druggist and book-

seller in New Haven. He engaged early in the struggle between the colonies and the mother country, espousing the cause of the former. His reckless bravery gained him general applause. He was at the taking of Ticonderoga, and his expedition to Canada has been celebrated as a great military enterprise. The troops marched to Canada by the way of Maine, encountering the severity of midwinter, threading tangled forests, and suffering every hardship. In 1777, Arnold displayed great gallantry, and bore a conspicuous part in those efforts which led to the capitulation of Burgoyne. Being unfitted for active service by a severe wound received in the battle of Stillwater, he was placed in command of Philadelphia. He plunged into expensive pleasures, soon became involved in debt, and saw no means of escaping from his embarrassments, but by flying into the arms of the British, and earning their gold by treason to his country. Having been reprimanded by Washington for misbehavior, he solicited and obtained the command of West Point, for the basest of purposes. The ill success of his traitorous scheme to yield this important fortress to the British has been told in our sketch of Andre. Arnold escaped to the British camp. After joining the enemy, he published two manifestoes, in which he attributed the change in his opinions to the declaration of independence, and the alliance of America with France, although long after the adoption of these measures, he had fought beneath the colonial colors, had been wounded at Quebec, and was pledged to support the cause of his country. A large sum of money, and the rank of brigadier-general in the British army, were the rewards of his apostasy. After his treason, he made war upon his former friends more after the manner of a bandit chieftain, than that of a high-souled warrior. Upon the recognition of the independence of the United States, Arnold retired to England, where he died in June, 1801. In the country for which he had given up his own, his reception was anything but flattering. On one occasion the British monarch desired to make Arnold known to the high-minded Earl of Balcarras. After the usual form of introduction, Arnold extended his hand to the earl. "What, sir!" said the latter to the king, drawing himself up

to his proudest height; "is this the *traitor* Arnold?" He walked haughtily away.

"The hand of Douglas was his own."

Arnold challenged the earl. They met, and Arnold missed his antagonist. The proud nobleman, instead of discharging his pistol, dashed it to the ground. "Stay, my lord," exclaimed Arnold, "you have not had your shot!" "No," replied the earl indignantly, "I leave you to the hangman."

ARNOLD, THOMAS, D. D., was born at West Cowes in the Isle of Wight, June 13th, 1795. After completing his collegiate studies at Oxford, and receiving deacon's orders, he was for nine years the principal of a private school of high repute, at Laleham near Staines. His success as a Christian teacher caused him to be chosen head-master of Rugby school in 1827. It was Dr. Arnold's aim to combine Christian with secular instruction.

He taught the upper classes, governed and guided the whole great school, edited classics and wrote histories, and yet found time to watch over the careers of all his pupils, without taking the least credit to himself, or seeming to know, or let any one else know, that he ever thought particularly of any boy at all. It is related by an old Rugby pupil that one of the boys died, on a bright Saturday afternoon, while the cricket was going on as usual. The doctor coming from the death-bed, passed the merry crew cheerfully, and no one knew what had happened till the next day. His allusion, in the afternoon discourse, to the fact that while they were at their sports, their playmate was dying, was at once cheerful, grand, and impressive. "When I came yesterday from visiting all but the very death-bed of him who has been taken from us, and looked around upon all familiar objects and scenes within our own ground, where your common amusements were going on, with your common cheerfulness and activity, I felt there was nothing painful in witnessing that; it did not seem in any way shocking or out of tune with those feelings which the sight of a dying Christian must be supposed to awaken. The unsuitableness in point of natural feeling between scenes of mourning and scenes of liveliness did not at all present itself. But I did feel that if at that moment any of those faults had been brought before me which

sometimes occur amongst us; had I heard that any among you had been guilty of falsehood, of drunkenness, or of any such sin; had I heard from any quarter the language of profaneness, or of unkindness, or of indecency; had I heard or seen any signs of that wretched folly, which courts the laugh of fools by affecting not to dread evil and not to care for good, then the unsuitableness of any of these things with the scene I had just quitted would indeed have been most intensely painful. And why? Not because such things would really have been worse than at any other time, but because at such a moment the eyes are opened really to know good and evil, because we then feel what it is so to live that death becomes an infinite blessing."

He is known as an author by several volumes of discourses and by a "History of Rome" written on Niebuhr's plan. He was appointed to the chair of modern history at Oxford; but he had only given his inaugural lecture, when a spasmodic affection of the heart cut him off suddenly at Rugby, June 12th, 1842.

ARTHUR, a mythical prince of ancient Britain, whose story Hume thinks has some foundation in fact. He is said to have been born about 501, and died 542. The institution of an order of chivalry, called the Knights of the Round Table, is attributed to him, and also the establishment of Christianity at York.

ARUNDELIAN MARBLES, containing a chronology of ancient history from 1582 to 355 B.C., and said to have been sculptured 264 B.C. They consist of thirty-seven statues and one hundred and twenty-eight busts, with two hundred and fifty inscriptions in Greek characters. They were found in the isle of Paros about 1610, purchased by the Earl of Arundel, and given to the university of Oxford, 1627.

ARUSPICES, or HARUSPICES, priests among the Romans who foretold future events by observing the entrails of the animals sacrificed, and the manner in which the victim behaved. They existed from the time of Romulus to that of Constantine (337 A.D.), when all soothsaying was prohibited on pain of death. Their number at this time was seventy.

ASBURY, FRANCIS, a Methodist preacher who came hither from England in 1771, and

was one of the first bishops of the Methodist Episcopal church in the United States. His labors were crowned with great good. He died suddenly at Spotsylvania, Va., March 31st, 1816, aged seventy.

ASCALON. In this battle, Sept. 7th, 1191, Richard I. of England, commanding the crusaders, reduced to 30,000, defeated ten times that number of Saracens under Saladin. It is said that 30,000 of the paynim foe were left dead on the field of battle.

ASHANTEE, a nation of negroes, on and near the Gold Coast of Guinea. They are in the vicinity of Cape Coast Castle, the British settlement at Sierra Leone. Warlike and unyielding, they carried on a bloody war with the English from 1807 to 1826. The kingdom of the Ashantees has been in existence more than a hundred years. The king has a band of devoted attendants, one hundred in number, who are slain upon his tomb, that he may be properly accompanied on his arrival in the infernal regions. His 3,333 wives are regarded with reverence, and on that mystical number the safety of the state depends. The empire of Ashantee, consisting of several conquered states, has a population of three million souls. The Ashantees display some ingenuity and taste in their architecture, and manufacture cloths which are skillfully dyed in brilliant colors. Coomassie, the residence of the king, has been forcibly described by an intelligent traveler. "A prospect of the capital (if such it may be called) at last opened in front of us; it was a partial glimpse, at the distance of twenty or thirty paces, of a few mud-built hovels, surrounded in part by plantations, and some straggling walls of the same material, covering a contracted space gained from the surrounding waste."

ASIA is the largest of the great divisions of the earth. Hesiod and Herodotus give a mythical origin of the name from the nymph Asia, daughter of Oceanus and Zethys, and mother or wife of Prometheus. Strabo preserves an old statement that Asia was the original name of Lydia. Orientalists have concluded that the root-syllable in 'Asia' means the 'Sun,' especially as an object of religious worship; that the Asians are 'the people of the Sun,' or 'the people from the east;' and that 'Asia' is thus the correlative of 'Europa,' which is derived from the Phœ-

nician or Hebrew word 'Ereb' or 'Oreb,' signifying 'evening,' 'sunset,' and hence the 'West.' The ancient Greeks were acquainted with little more than Asia Minor. The establishment of the Persian empire, B.C. 550, advanced geographical knowledge, because many nations and extensive regions being gathered under one rule, the intercourse between them, which before had been difficult, was much facilitated. The conquests of Alexander brought still farther advance. He had almost reached the valley of the Ganges, when a mutiny in his wearied army forced him to give over his scheme of penetrating India. He founded the city of Alexandria at the mouth of the Nile; the commerce of Tyre and the Phenicians was diverted thither; and Egyptian vessels pushed from the Red Sea as far as the shores of Malabar and the isle of Ceylon. The extreme eastern boundary of the Roman empire was formed by the Tigris, the Euphrates, and the mountains of Armenia. In one instance their armies passed beyond the limits of the known world. When warring with Mithridates they arrived at Mount Caucasus, and on the shores of the Caspian Sea they learned of a commercial road through Bactria, by which an active traffic was had with India. Shortly after another route was discovered, leading over the high table-land of upper Asia to the Seres, or Chinese; probably the road which still passes through the town of Kashghar. Though the Roman eagles did not swoop in victory over these regions of the remote East, the wealth of the imperial city caused a demand for the productions and the luxuries of the orient; so that these newly discovered paths were much frequented by merchants, while the maritime trade was also duly enhanced. The dominion of the Saracens cut off the intercourse of Europe with Asia, and till the time of the crusades no new knowledge was gained by Europeans of its geography. The Arabians, however, began to nourish geography among other sciences. To them we owe its establishment upon mathematical and astronomical principles. They renewed trading intercourse with India, and extended it to the Chinese seas. Zeal for propagating their creed inspired them, as well as the love of gain.

In the thirteenth century, Genoa, Venice, and Florence commenced their lucrative trade

with the East. In this century too, the Mongols under Genghis Khan crossed the Volga, subjected Russia, and laid prostrate the power of Poland. All Europe trembled, but the death of Genghis stayed the Tartars in their western march. The policy of Innocent IV. and of Louis IX. of France suggested the plan of turning the Mongols against the Saracens. For this it seemed necessary to convert the barbarians to the Christian faith. Friars were accordingly sent among them. They did not succeed in their mission, but their journeyings made Europeans for the first time acquainted with the immense extent of those regions vaguely known as Scythia, which thenceforth were called Mongolia or Tartary. Genghis Khan had extended his dominion over all inland Asia, from the boundary of Siberia to that of India and Thibet. After his death the Mongols continued in their career of victory, and at length in the reign of his most able successor, Kublai Khan (1259-1294), China came under their sway. At the court of this monarch at Pekin, Marco Polo dwelt from 1275 to 1292, and under his favor had the best opportunities for visiting the wide Mongol realm. The account which he published of his travels added more to geographical knowledge of Asia than all that was previously known. It very materially influenced the views of Columbus, and directed the course of Vasco de Gama. [See *POLO*.]

After the circumnavigation of Africa by Vasco de Gama in 1498, the Portuguese rapidly explored the Indian seas, founded many colonies, and carried on a rich commerce. At the close of the sixteenth century, Portugal passed under the yoke of Spain; and one result of the struggle of the Netherlands against Philip II., was the gradual transfer of the Portuguese possessions in the Indies into the hands of the Dutch. About this time Siberia was subjected by Russia, and the Jesuits obtained a footing at the Chinese court which gained them considerable knowledge of that vast empire. India was longer involved in obscurity than almost any part of Asia. The progress of the East India Company of England during the last two centuries, has rapidly opened its recesses.

Yet this quarter of the world, concerning which modern civilization has so slowly and imperfectly gained any information, was the

first peopled; here the law of God was first promulgated; here many of the greatest monarchies of the world have had their rise; and hence most of the arts and sciences have been derived. To its immensity of extent, the importance of its history, and the vastness of its monumental remains, justly correspond. It has been the theatre of some of the most important events which history records, the clime of wonders and of wealth, the chosen region of romance. If we search for the fate of proud monarchies, for the tale of powerful dynasties, for the doom of splendid cities, we shall find the name of Asia constantly recurring, and the fame of Asia the theme of unfailing wonder and of praise.

Its extent is estimated at 17,500,000 square miles, and its population set down at more than 600,000,000. We give a summary of the principal divisions of Asia. More detailed accounts may be sought in the appropriate place. Siberia, a division of the Russian empire, occupies the north. The Chinese empire comprises one-fourth of the surface of Asia, and one-half the inhabitants. The British dominions are for the most part in India, the peninsula within the Ganges, but their rule has extended over a great number of dependent native sovereigns. Nepal and Ava are the only important states of India that have remained independent of the British. The Portuguese have saved from the wreck of their once mighty possessions little more than Goa on the Malabar coast, Daman, a small portion of the peninsula of Guzerat, the island of Macao in the bay of Canton, and some districts in the island of Timor. These are supposed to contain about 60,000 square miles and 600,000 inhabitants. The French have a small foothold in Asia at Pondicherry, at Chandernagore in Bengal, and at Nahé on the coast of Malabar. The Dutch have been driven from the mainland. Their power begins on the west with Sumatra, and extends beyond Java to the Moluccas or Spice Islands. Their possessions are roughly guessed to comprehend about 612,000 square miles, with 16,500,000 inhabitants. In the south-eastern corner of Asia lie the empires of Birmah, and the kingdoms of Siam and Annam, which latter comprehends the ancient sovereignties of Camboja, Cochin China,

and Tonkin. East of China is the insular empire of Japan. In the west we have Afghanistan, Beloochistan, Arabia, Turkey in Asia, and Persia. The tract between Persia and China, sometimes called Independent Tartary, is inhabited mostly by nomadic tribes. Here are the states of Bokhara and Khiva, and many petty sovereignties in the mountain regions. But none of these have any fixed government.

The islands in the Asian seas are many and important. Besides those belonging to Japan, the larger are Borneo, Sumatra, Java, Celebes, the Philippines, the Moluccas, Ceylon, and Formosa.

ASPERNE, BATTLE OF. Between the Austrian army under the Archduke Charles, and the French; fought on the 21st, 22d, and 23d of May, 1809. In this very sanguinary fight the loss of the Austrians exceeded 20,000, and that of the French was more than 30,000. It ended in the defeat of Bonaparte, who commanded in person, and was the severest check that he had yet received. This success, however, benefited the Austrians but little in the end.

ASSASSINS, the followers of an Arab chief in the time of the crusades, who professed a blind devotion to his will. When Henry, Count of Champagne, was passing through the dominions of their chief, Aloadin, the "Old Man of the Mountains," he boasted of his power at home. "Are any of your vassals as devoted as my followers?" asked the chieftain. On this he gave a signal to ten young men, clad in white, standing on the top of a tall tower, and they instantly threw themselves from it and were dashed to pieces! To the stealth with which they took the lives of those they hated, the word 'assassin' owes its adoption and its meaning in European languages.

ASSAYE. The British army under Gen. Arthur Wellesley (afterward the Duke of Wellington), entered the Mahratta states on the south, took the fort of Ahmednugger Aug. 12th, and defeated Scindiah and the Rajah of Berar at Assaye, Sept. 23d, 1803. This was the future Wellington's first great battle, and the opposing force was ten times his own. The enemy retired in great disorder, forsaking all their artillery, ammunition, and stores.

ASSYRIA, a kingdom of Asia, said to have been founded by Asher, whose boundaries varied greatly at different times. It was anciently bounded as follows: north by the mountains Niphates, and Armenia Major, east by Media, south by Susiana, and west by Mesopotamia. Ninus, the son of Belus, (2069-2017), subdued the Babylonians and Medes, and Semiramis, his wife and successor, increased the fame of the kingdom. The kings of Assyria degenerated from this renown. Such were the indolence and voluptuousness of Sardanapalus as to encourage the successful revolt of Arbaces the Mede, and Assyria was then divided into the Median, Assyrian, and Babylonian kingdoms. It was over this second Assyrian kingdom that Sennacherib reigned, whose great army besieged Jerusalem and was swept away in a single night by the angel of the Lord. Nineveh was razed by the Medes and Babylonians, 621 B.C., and the Assyrian monarchy divided by the conquerors. Through the conquest of Cyrus these countries became one of the most important satrapies of the Persian empire, sometimes called Babylonia and sometimes Assyria.

ASTRONOMY. The history of the science of the heavens dates backward into the morning of time. Observations on the apparent and real revolutions of the stars must have been made, and a really great advance attained in the science, long before any form of record preserved the fruits of discovery. Some of the principal constellations, as they are now named, are mentioned in Job. The earliest accounts we have of the science are those of Babylon, about 2234 B.C. The study of astronomy was much advanced in Chaldea under Nabonassar. It was known to the Chinese about 1100 B.C., some say many centuries before. One tradition is that the Chinese knew the periods of the sun, moon, and planets, and were acute astronomers, in the reign of Jao, which is set down 2357 B.C. Lunar eclipses were observed at Babylon with exceeding accuracy, 720 B.C. Thales taught the spherical form of the earth, and the true cause of lunar eclipses, 640 B.C. Pythagoras, who made further discoveries, taught nearly the true doctrine of celestial motions and believed in a plurality of habit-

able worlds, 500 B.C. Hipparchus began his observations at Rhodes, 167 B.C., and continued them thirty-four years, making great advances. He began his new lunar cycles from the new moon of Sept. 28th, 143 B.C. The precession of the equinoxes was confirmed, and the places and distances of the planets discovered, by Ptolemy, A.D. 130. The system he taught, in which the earth was made the immovable centre of the universe, remained in vogue till the time of Copernicus. After the lapse of nearly seven centuries, during which astronomy was neglected, it was resumed by the Arabs, about 800, and was brought into Europe by the Moors of Barbary and Spain, about 1200, geography being introduced at the same time. The celebrated tables known as the Alphonsine, were composed by command, and under the direction, of Alphonsus X. of Castile, at an expense of four hundred thousand crowns, in 1284. Alphonsus was justly surnamed the Wise. Clocks were first used in astronomy about 1500. In 1530 Copernicus completed his immortal work, "*Astronomia Instaurata*," although it was not published until the year of his death, 1543. This treatise, in which the true doctrine of the motions of the planetary bodies was revived, did more for astronomy than was ever done for any other science by a single production. The science was also greatly advanced by Tycho Brahe in the latter part of the same century. Kepler discovered the true laws of the planetary motions in 1619. Nearly a century before Copernicus had shown that the planets moved round the sun; now Kepler showed in what manner and by what laws they moved: it was left for Newton to show why they moved. Kepler had before found that the planetary orbits were elliptical, and had demonstrated the equality of the spaces described by the *radii vectores* in equal times; and now he enunciated the important law that the square of the periodic times of the planets' revolutions are as the cubes of their distances. Telescopes and other instruments were used about 1627. The discoveries of Galileo were made about 1631. Horrox, an Englishman, was the first who ever observed a transit of Venus over the sun's disk, Nov. 24th, 1639 (o.s.) Hor-

rebow, in 1659, discovered the aberration of the light of the fixed stars. Hevelius constructed a map of the moon, 1670. Halley demonstrated the motion of the sun round its own axis, 1676. Huygens discovered the rings of Saturn, 1686. In 1687 Newton's "Principia" was published, and the system initiated by Copernicus and confirmed by Kepler, was incontrovertibly established. Flamsteed catalogued the stars, 1688. La Grange demonstrated the harmony of the perturbations of the solar system, 1780. Herschel discovered Uranus, 1781. The "*Mécanique Céleste*" of La Place was published in 1796. Ceres was discovered in 1801; Pallas, in 1802; Juno, in 1804; Vesta, in 1807. [For the several planets recently discovered, see PLANETS.]

The distances of the fixed stars is supposed to be about four hundred thousand times greater from us than we are from the sun; that is to say, thirty-eight millions of millions of miles; so that a cannon-ball would be nine millions of years in reaching one of them, supposing there was nothing to hinder it from pursuing its course thither. As light takes about eight minutes and a quarter to reach us from the sun, it would be about six years in coming from one of those stars: yet the calculations of later astronomers prove some stars to be so distant, that their light must take centuries before it can reach us, and the light by which we now see these started on its journey three or four hundred years ago.

ATHANASIUS, a great theological champion in the fourth century, was born about 296. He was an active member of the council of Nice. His rising fame led to his elevation to the see of Alexandria, upon the death of his patron, Bishop Alexander. He was immediately involved in contests with the Arians concerning the divinity of Christ, that ended only with his life. Deposed most unjustly in 335, he was reinstated in 338. Deposed again in 340, he was reinstated in 342. The unscrupulous charges of his foes he refuted with overwhelming proof and eloquence. But in 355 he was again sentenced to be banished, when he retired to the deserts, till again he was welcomed back to the Egyptian capital. Once more, Julian the apostate exiled him, and once more he was restored. A fifth time was he banished by

the Emperor Valens, who soon recalled him, however, and Athanasius, after holding the primacy for the long space of forty-six years, passed into peace in 373. He was a man of devout life, an orator of ready and forcible eloquence, and a prelate of heroic and indefatigable activity.

ATHENS. The early period of Athenian history is so far beyond our ken as to be but dimly discerned. It is not till the time of Solon that the story becomes definite. Something is said of Ogyges, who reigned in Bœotia, and was master of Attica, then called Ionia. In his reign a deluge took place (by some supposed to be no other than the great flood), that laid waste the land, and so it remained until the arrival of Cecrops and his colony, by whom it was peopled, 1556 B.C. Originally Athens was called from its founder, Cecropia, but in time his name was only retained by the citadel, the Acropolis, while the Greek name of Minerva (Athena) was applied to the city. The position of Athens is peculiar, and the surrounding scenery luxuriant and interesting. The blue Saronic Gulf, so often swept by victorious navies, the opposite shore of the Peloponnesus, the rocky steep of the Acropolis, and the beauty of the surrounding plains, are prominent features in a landscape which antiquity has made interesting, and fame immortal. Nor were the natural beauties of the scene its chief recommendation. Art here successfully vied with nature, and erection of most noble edifices bore witness to the taste, industry, skill, and public spirit of the Athenians. Cecrops, the founder of Athens, was an Egyptian, skilled in the arts of his countrymen, and possessing more than their customary enterprise; he founded the kingdom of Athens, dividing the country into twelve districts, over which he ruled for a long time with the title of king. He instituted the senate called the Areopagus, which met upon a hill in the vicinity of the citadel, dedicated to Mars. This court acquired an active influence in the affairs of government. To it the examination of the laws and state of public morals was committed, while crimes against religion and the state, required its peculiar attention. In 1498 B.C., Amphietyon, one of the successors of Cecrops, established the Amphietyonic council, an

THE HILL OF THE AREOPAGUS.

assembly which ultimately attained a high degree of celebrity. At first they assembled at Delphi, where was the oracle of Apollo, but finally at Anthela, a village in the vicinity of the famous Thermopylae.

To both of these monarchs the Athenians owed much. If Cecrops softened the manners of the inhabitants of Attica, taught them how to clothe their lands with the verdure of the olive and the vine, and instructed them in the love of order, the worship of the gods, the rites of Hymen, and those of sepulture, Amphietyon strengthened and secured the advantages which his subjects had begun to reap. No longer they feared the incursions of predatory neighbors, but sat in the shade of their vineyards, enjoying the happiness which security and peace bestow. Theseus was the greatest warrior among these early kings of Athens. He is said to have united in one confederation the hitherto independent twelve states of Attica founded by Cecrops. Codrus was the last of the line. In a battle with the Heraclidæ, 1068 B.C., he sought and found death, for the oracle had promised that victory should rest with the side whose leader was slain. The government assumed a republican form. The

change was but in name, for the archon had nearly all the power of the king, whose place in the state he filled. The archon was originally chosen for life. After a lapse of little more than three centuries, the term of office was curtailed to ten years, and less than a century afterward, the number of archons was increased to nine, and they served for a term of one year only.

Originally all the Grecian states had a regal government, which was abolished in consequence of the tyranny of the various princes, and supplanted by republican forms. Recovering their liberty at an early period, the Greeks acquired that love of freedom which characterized them throughout their long career, and it was only when luxury and wealth had banished the temperate and unostentatious life of their ancestors, that the Greeks found themselves unable to contend against the encroachments of hostile power, and fell beneath the arms of more enterprising rivals. The rivalry of Athens and Sparta produced, together with much good, an infinity of evil. The Spartans were of a sterner cast than the Athenians, and even more distinguished for their love of freedom and their invincible courage. They

despised those triumphs of the arts which the Athenians made their glory, and relied for fame on stern contempt of the elegancies and the common comforts of life.

What their Lyncurgus was to them, Solon was to the Athenians. Solon was one of those great characters whom their countrymen regard with veneration for ages, and whose memory they recall even in the midst of oppression, and the darkness of disgrace; one of those rare spirits whose virtues and self-possession are most conspicuous when most needed, and whose knowledge, like the lamp of the glow-worm, shines brightest when the darkness is most heavy. At a time (B.C. 594-578) when the turbulence and ambition of the archons threatened the Athenians with a multitude of evils, all eyes were turned upon Solon, as the pilot who alone could guide the vessel of state through the rocks and surges that surrounded it. He was at once created archon extraordinary with unlimited power, for his high character and calm demeanor inspired confidence among the people he was destined to assist. Solon introduced a mild code of laws, in opposition to that of Draco, his predecessor in legislation, whose appalling severity had raised him many enemies. The government was placed in the hands of a senate of four hundred members chosen by the people. After an acquittal of their debts, the people were divided into four classes. The members of the three first classes were eligible to office, while those of the fourth, whose poverty was thought to incapacitate them from serving, were yet allowed the privilege of voting in the popular assemblies. The power of the commonwealth was vested in these assemblies, but there was a restrictive influence in the senate.

Whatever merit we may be disposed to allow the constitution of Solon, framed as it was at a very early period, it was much too artificial to be permanently successful. Solon lived to see this. During his retirement from Athens, factions disturbed the peace of the people, and Solon, after having vainly endeavored to stem the current, retired to the isle of Cyprus, where he died, B.C. 560. A change of government was effected by Pisistratus, a popular but ambitious man, who headed the poorer class of

people (a class who considered themselves peculiarly oppressed by the constitution of Solon) and gained possession of the supreme power. The plans of the usurper possessed plausibility and brilliancy. His benevolence was undoubted; he governed with equity and moderation. At his death Pisistratus bequeathed his power to his two sons, Hipparchus and Hippias, who, for a long time, by a liberal patronage of the arts and of learned men, gave a brilliancy to their administration which was unhappily not destined to endure. Among the most brilliant ornaments of the court was Anacreon, the elegant though effeminate poet of love and wine. The cruelty of Hippias at length roused the spirit of the Athenians, who broke forth into an open revolt, in which Hipparchus was slain, and Hippias banished. Pisistratus and his sons governed under the title of tyrants, a term at that time not necessarily implying an abuse of power. They held the tyranny for thirty-six years, during which time we may naturally infer that all tendency toward a democratical form of government was suppressed, but under their rule the arts began to flourish. Upon the downfall of Hippias, two factions contended for the mastery in Athens; the one headed by Cleisthenes, of the aristocratical family of the Alcmaeonidae, the other by Isagoras, son of Tisander. Cleisthenes effected some changes in the laws of Solon, increasing the number of the divisions of the people to ten, and of the members of the senate to five hundred, and by these and other measures he gained the favor of the Athenians. His rival called in the aid of Cleomenes, the mad king of Lacedæmon. But Cleomenes was baffled, his allies the Bœotians and Chalcidians defeated by the Athenians, and the territory of Chalcis in the fertile isle of Eubœa colonized by four thousand Athenians. Athens lent some aid to the Ionian Greeks, who were in revolt against Darius. Hippias had finally sought refuge at the Persian court, and when the Athenian force burned Sardis he easily excited the hostility of Darius against the city of his former rule. But the bravery of the Athenians was not wasted in words, and they joined against the invaders with heart and hand. When the heralds of Darius came with the insolent demand of earth and water,

the usual signs of submission, they were seized and thrown, the one into a ditch and the other into a well, whence they were contemptuously told to satisfy their wants. The troops of Darius entered Attica, encamping at Marathon, a small town upon the sea-coast. Against an army of 500,000 horse and foot, the brave Miltiades led forth a band of 10,000 Athenians, who were victorious in the most sacred of causes, 490 B.C. Ten years afterward when Xerxes poured his forces into Greece, the Athenians, under Themistocles, were triumphant, and the victory of Salamis bore witness to the terrible energy and roused spirit of freemen. Yet it is painful to mark the fickleness and ingratitude of the Athenians. One would think that while Marathon was remembered, the services of Miltiades could not be forgotten. Yet the noble Athenian, in consequence of misfortune, was thrown into a prison where he perished. Aristides, whose virtue procured him the surname of "the just," was banished by ostracism, without any adequate cause. The practice of ostracism was so called, because the citizens wrote upon a tile or shell (*ostrakon*) the names of those who were obnoxious to them. The shells being counted, the person whose name occurred most frequently, was banished. Themistocles was also persecuted and forced to seek refuge at the Persian court; yet so fond was he of his ungrateful country, that rather than serve against her, he killed himself. It was men like these who reflected a lustre on the Athenian name.

Xerxes in his march through Attica had entered Athens. After his defeat at Salamis he hastily retreated into Asia, leaving his general Mardonius with 300,000 men. Mardonius re-entered Athens, applied the torch, and reduced the city almost utterly to ruins. His defeat at Plataea, B.C. 479, by the combined Greeks, rid the land of its invaders.

When the Persians, humbled to the dust, no longer had the audacity to threaten Greece, the glory of the Athenians brightened, day by day. The people saw with delight the extension of their privileges. All orders, feeling the benefit of equal institutions, labored in common for the aggrandizement of their country. Members of all classes were now made eligible to office, and the poor felt that they stood upon an equal footing with

the rich, and might, by exertion, rise superior to them. The period from the close of the Persian war, B.C. 479, to the time of the Peloponnesian war, B.C. 431, includes days of uncommon splendor in the history of Athens. The naval supremacy of Attica arose. Cimon and Pericles introduced elegance into Athens, and the age of the latter is commonly quoted as the golden era of the country. The arts under his liberal patronage, flourished to a great degree. In his time, that glorious temple to Minerva, the most perfect example of Grecian art, the Parthenon, was erected. Magnificent temples sprang up in every direction, the marble breathed, the pencil glowed, and the lips of the orator and poet were gifted with kindling eloquence. To this age belong the tragic verse of Æschylus, the lofty dramas of Sophocles and Euripides, and the biting satire of Aristophanes. In this time, too, Herodotus read his history publicly in the Athenian council. Yet, in the midst of much apparent prosperity, the foundation of misfortune was laid. The abundance of wealth was not without deteriorating influence, and the Athenians became so enamored of the elegances of life, that they began to prefer them to manliness and independence. Pericles was at the zenith of his greatness B.C. 444. He engaged in the Peloponnesian war, B.C. 431, the end of which, after twenty-seven years, was that the Lacedæmonians, ever more hardy if not more brave than the elegant Athenians, made themselves masters of Athens, and granted peace to the vanquished on the most humiliating conditions. For eight months the Athenians groaned under the yoke of the thirty magistrates, or, as they were called, the thirty tyrants, whom the Lacedæmonians imposed upon them, and kept under the protection of their garrison. The man who led to the overthrow of this oppression, was Thrasybulus. Again the star of Athens rose to the zenith, bright as if no cloud had ever covered it and hid its silvery brilliancy beneath a veil. The Athenians joined the Thebans against Sparta and were successful. They were yet to feel, however, the importance of a power hitherto unacknowledged or despised. Philip of Macedon descended from the north. In vain did Demosthenes urge the Athenians to die in defense of their liberty. In vain did this

extraordinary man hurl his tremendous anathemas against Philip. He was doomed to see the subjugation of his countrymen. Philip was neither daunted by eloquence, nor repulsed by bravery. The battle of Cheronæa, B.C. 338, struck a death-blow to Grecian liberty. Athens remained, with the other states of Greece, dependent upon the Macedonian power for existence. She did not sink without a struggle, but all her struggles were of no avail against the giant power which had prostrated her, and fettered her with bonds of adamant.

When Athens was taken by Cassander (B.C. 317), the oligarchy was restored, and Demetrius Phalerius, upheld by a Macedonian garrison, enjoyed the office of governor of the state for ten years. The Athenians entreated the assistance of Demetrius Poliorcetes, who, having taken the city, restored the form of the ancient constitution. To this dissolute ruler the corrupt Athenians paid the honors due only to the gods; temples were erected to his mistresses; nor did the abode of the Virgin Goddess herself, on the Acropolis, escape desecration from the unbridled licentiousness of the time. Demetrius was overthrown, 287 B.C. Antigonus Gonatas of Macedon conquered the Athenians, 268 B.C. After twelve years under his yoke they were delivered by Aratus, and joined the Achæan league. The Romans gladly availed themselves of the co-operation of the Athenians against the last Philip of Macedon. After having drawn down upon themselves the vengeance of Rome by espousing the side of Mithridates, 88 B.C., the Athenians trembled for the consequences. Sylla took their city, B.C. 86, and the show of liberty which it afterward retained, was but a bitter mockery. Yet under the Romans, Athens continued to be the centre of the arts, of philosophy, and of all the learning of the time. Vespasian made Athens a Roman province, and it was included in the empire of the east, after the division of the Roman empire. But it was destined to feel the terror of that power beneath which the queen of cities was prostrated to the dust. Alaric the Goth, A.D. 396, conquered and devastated the country. From this period, the liberty of Athens existed but in the recollection of the past. In 420, paganism was abolished in Athens, and

the Parthenon converted into a church of the Virgin Mary. In 1456, the Turks gained possession of the city. A black eunuch held the place which Pericles once adorned, and the Parthenon, no longer a Christian church, was forced to answer as a mosque. In 1687, the Venetians besieged Athens, and some of the works of the immortal Phidias, the sculptor, were destroyed by the explosion of a magazine, fired by a bomb thrown into the Parthenon by the besiegers. On the 29th of September, Athens came into the hands of the Venetians, after its inhabitants had suffered severely from the siege, but was again relinquished to the Turks in 1688. From the erection of many barbaric structures, some of the most valuable remains of antiquity have been covered and concealed, to be brought to light by the researches of the curious of later days. From the Turks, the Greeks of Athens experienced a milder treatment than many of their brethren, and were permitted to retain many of their ancient observances. In 1822, the Acropolis sustained a long siege, which was terminated by its falling into the hands of the patriots. News of this was heard with delight by all the Greeks, who loved their country, and rejoiced to behold

"The flag of freedom wave once more
Above the lofty Parthenon."

When at last Grecian independence was established, Athens was made the capital of the new kingdom.

ATHOS, a mountain of ancient Macedonia, now Agion-oros, or Monte Santo, in the Turkish province of Saloniki. On its sides are many hermitages, and twenty monasteries, with over eight thousand monks, chiefly Russians and Greeks, of the order of St. Basil. No female, even of the animal kind, is allowed to enter the peninsula on which the holy mountain stands. Some of the monasteries are said to contain very ancient and valuable manuscripts. Not long since, a manuscript of the eighth century, a translation of the Bible into the Georgian language by St. Euphemius, was discovered here. The summit of this mountain is about 6,350 feet above the level of the sea. At the foot of it, Xerxes caused a trench a mile and a half long, to be cut and filled with sea-water. This was for

the passage of his fleet, and of such width that two ships could sail abreast.

ATLANTIC OCEAN. There is not in the multitude of natural wonders, a more sublime spectacle than that afforded by the world of waters, under whatever view it is contemplated. Impressive and beautiful it is, when stretched out in the tranquil repose of an unbroken calm, reflecting the still splendor of the heavens by day, or their diamond brilliancy by night. Far as the eye can reach, there is hardly a ripple on the wave, and at the horizon, the azure of the air and that of the ocean join in the bridal of the sea and sky. Yet more impressive is the aspect of the deep sea in a tempest; when the elements are awakened from their slumber, and abroad in their terrible strength, and the wild winds of heaven sport with gigantic mountains of water, heaving them to and fro, with the ease of zephyrs sporting with dew-drops.

The formation of the bed of the Atlantic, from latitude 20° S., up to the north pole, has been ascribed to the concussion of immense masses of water, produced by the deluge, when, it is conceived, the waters of the great southern ocean below the equator, rushed upon the northern hemisphere. From Cape Frio to the river of the Amazons, in South America, there is a vast protuberance answering to the incurvation of the African shore from the river of Congo to Cape Palmas; while, from the Straits of Gibraltar to Cape Palmas, there is an immense protuberance, corresponding to the incurvation between New York and Cape St. Roque. This conjecture is thought probable, since the depression caused by such an immense body of water could not be otherwise than enormous, considering the shock and weight of the opposing body.

Until the successful issue of the voyages of Columbus, it was imagined that there was one unbroken extent of water between the western shores of Europe and Africa, and the East Indies; and the great navigator himself imagined that he had reached the Indian realms, by a shorter route than that pursued by the Portuguese. The name of the Atlantic Ocean is connected with a tradition which is lost in the night of antiquity, and which, reaching the Greeks from the Egyptians, has been commemorated by Plato. It was said

that there originally existed an isle called Atlantis, which rose from the bosom of the ocean, and surpassed in extent Asia and Libya together. Plato's testimony has caused a controversy among modern authors respecting the situation and nature of Atlantis. Of course, it is impossible to determine the situation of an isle which existed before the ages of history, but still shall we disregard the truth of the tale? What interest had the Greeks in imagining a fable, which bore no relation to their history, and which was not calculated to affect their religious belief? Why should the Greeks have adopted it? "The islanders," says Plato, "subdued Libya, Egypt, and Europe, as far as Asia Minor; at last, Atlantis was swallowed by the waters, and for a long time afterward, the sea was full of earth and sand-banks, in the vicinity of the place which the island had occupied." This last passage proves the existence of a tradition of a terrible outbreak of the waters of the Atlantic Ocean, which overwhelmed Atlantis.

The depth of the Atlantic is various, being in some parts unfathomable. Its saltness and specific gravity diminish gradually from the equator to the poles. Near the British islands, the salt is said to be one thirty-eighth of the weight of the water. The temperature of the Atlantic is influenced, considerably, by the masses of ice which float from the northward toward the equator, reaching frequently the fortieth degree of latitude. Dangerous as are these icebergs to the mariner, they yet present a splendid appearance as they float onward to southern latitudes, gleaming in the sunbeams, which, while they impart dazzling brilliancy, hasten the dissolution of the floating masses. The continual melting gives a very fanciful appearance to the icebergs, which is heightened by the rivulets pouring from point to point, like the streams trickling down a cavern of stalactites. Passages between North America and Europe in the months of June and July, are sometimes rendered perilous by the frequency of icebergs from the northward.

Much important information concerning the currents and winds of the Atlantic has been gained by the observations planned and directed by Lieut. Maury. The waters of the tropical seas have a westward motion, known as the equatorial current. This oceanic stream

flows from the African coast to Cape St. Roque, where dividing, one branch sets southward along the coast of Brazil, while the larger branch rushes impetuously along the shore of Guiana, and through the Caribbean Sea. The Gulf Stream, the most famous of all the Atlantic currents, is described in a separate article. A powerful current takes its start from the sea between Ireland and Spain, and sweeps down the African coast as far as the shores of Guinea. The Arctic current has its origin in the polar seas of the north, skirts the coasts of Greenland and Labrador, and off the banks of Newfoundland is bifurcated by the Gulf Stream. The forks continue southward in deep submarine currents. These are the great arteries of the Atlantic. The heart of the ocean never ceases to beat. A strong current, far down in the depths of the sea, is supposed to flow from the Atlantic into the Arctic seas. Lieut. Maury tells us of a Grassy (Sargasso) Sea, midway the Atlantic, in the triangular space between the Azores, Canaries, and Cape Verde Islands. Covering an area equal in extent to the Mississippi valley, it is so thickly matted over with gulfweed that the speed of vessels passing through it is often much retarded. The comrades of Columbus thought it marked the limits of navigation, and were much alarmed. Patches of the weed are always to be seen floating along the Gulf Stream. Now, if bits of cork be put into a basin, and a circular motion given to the water, they will be found crowding near the centre of the pool, where there is the least motion. Such a basin is the Atlantic to the Gulf Stream, and the Sargasso Sea is the centre of the whirl. Columbus found this grassy sea, and there it is at this day.

The steady easterly breezes that prevail within the tropics are known as trade-winds. Without this region the winds are variable, but generally westerly. In the latitude of the equator and of the two tropics, calms prevail. Those of the tropic of Cancer have long been known as the 'horse latitudes,' from the fact that vessels carrying horses from New England to the West Indies were often becalmed here till their water was almost exhausted, and some of the cargo must be thrown overboard, to save the remainder. By taking advantage of the prevailing winds and currents, voyages have been almost incredibly

shortened, and the old adage made true, that "the longest way round is the shortest way home."

ATLAS is the historical and geographical name of the extensive mountain system whose ranges, branches, and table-lands cover the north-west of Africa, and form a barrier between the Barbary states and the sands of the Sahara.

ATTERBURY, FRANCIS, Bishop of Rochester, an eloquent English preacher, born in 1662, arrested on a charge of conspiracy in favor of the Stuarts, 1722; died in exile, 1732.

ATTICA, a country of ancient Greece, is a peninsula, united with Boeotia toward the north, and partially with Megaris on the west. At Cape Sunium (now Colonna), it projects far into the Ægean Sea. [See ATHENS.] Attica was once famous for its gold and silver mines, which constituted the best part of the public revenues, and were worked by twenty thousand men. The inhabitants were numbered, in the sixteenth Olympiad, at 31,000 citizens, and 400,000 slaves, in a hundred and seventy-four villages, some of which were considerable towns. The fragrance and abundance of flowers in Attica made the mountain slopes of Hymettus famous for their honey.

ATTILA, king of the Huns, ravaged Europe between 434 and 453. He rendered the Greek empire tributary, and invaded Gaul, but was defeated on the Maine. He threatened Rome, but was induced by a vast ransom to retire. Attila was given to excess, and died from the bursting of a blood-vessel on the night of his nuptials with the beautiful Ildico, 453. His body was put in three coffins, the outer of iron, the next of silver, and the inner one of gold. His personal appearance has been described by Jornandes. He had a large head, a flat nose, broad shoulders, and a short, misshapen body. The dread inspired by this fierce warrior, at the head of hundreds of thousands of barbarians, gained him the surnames of the 'terror of the world' and the 'scourge of God.'

AUDUBON, JOHN JAMES, born in Louisiana 1782, died Jan. 27th, 1851. His life was devoted to ornithology, and his great work, "The Birds of America," was pronounced by Cuvier, "the most gigantic and most magnificent monument ever erected to Nature." His parentage was French, and in youth he

enjoyed the tuition of the great painter David. His love of nature led him to the forest, and he had crowded portfolios with drawings of birds long before he had any thought of publishing. "The Birds of America" was a costly publication. There were one hundred and seventy-five subscriptions of a thousand dollars each, eighty of which were obtained in this country, and the remainder in Europe. The work was issued in Edinburgh.

AUERSTADT. In this bloody conflict between the French and Prussian armies, Oct. 14th, 1806, they were commanded by their respective sovereigns, and Napoleon gained a decisive victory. The Prussians, routed on every side, lost two hundred pieces of cannon, thirty standards, and 28,000 prisoners, leaving 30,000 slain upon the field. Napoleon at once entered Berlin.

AUGEREAU, PIERRE FRANCOIS CHARLES, Duke of Castiglione, was one of those men who emerged from obscurity, and obtained a high rank among the officers that surrounded Napoleon, giving such unrivaled brilliancy to his court and camp. Augereau was the son of a fruit-merchant, and was born at Paris, 1757; serving, as soon as he was able, as a carbineer in the French army. Having subsequently entered the Neapolitan service, he was banished from Naples, in 1792. He then served as a volunteer in the army of Italy, and attracted attention by his bravery and military talent. In 1794, we find him a general of brigade, and, in 1796, general of division. He distinguished himself, at the pass of Millesimo, at Lodi, at Castiglione, at Arcola, &c. In 1799, he was chosen member of the council of five hundred. He was intrusted by Bonaparte with the command of the army in Holland, joined Moreau, and fought with varying fortune, until the campaign was ended by the battle of Hohenlinden. In 1803, he was appointed to head the expedition against Portugal, which enterprise failed. Returning to Paris, he was named, in 1804, marshal of the empire, and grand officer of the legion of honor and the next year, Duke of Castiglione. In 1805, he was in Germany, contributing to the successes of the French. Wounded in the battle of Eylau, he was forced to return to France. In 1811, he had a command in Spain. In 1813, he was engaged in the battle of Leipsic. After the success of the allies,

Louis XVIII. named him a peer. In consequence of his speaking disrespectfully of Napoleon after his fall, the latter, on his return from Elba, declared him a traitor, although Augereau had again acknowledged him as emperor. Augereau took no active part in affairs until the return of the king, when he resumed his seat in the chamber of peers. He died of the dropsy, June 11th, 1816.

AUGSBURG, BATTLE OF. Between the Austrians and the French, the latter commanded by Moreau, who gained a victory so decisive, that Augsburg and Munich were opened to him; fought Aug. 24th, 1796. Moreau, Sept. 2d, again defeated the Austrians on the Inn, and again Sept. 7th, at Mainburg.

AUGUSTINE, Bishop of Hippo, eminent among the church fathers, was born in Numidia, A.D. 354. In early life he was loose, roving, and sensual, but he was rescued for a higher existence by the influence of his mother, Monica, and the preaching of St. Ambrose. When Hippo was menaced by the Vandals, the good bishop died in the third month of the siege, at the ripe age of seventy-six.

AUGUSTIN, or AUSTIN, St., has been surnamed the Apostle of the English. The time at which he flourished, was the reign of Ethelbert, toward the close of the sixth century. Ethelbert was then seated on the throne of Kent, to which he had succeeded on the death of his father Hermenric, about 560. After a determined struggle, he had mastered all the states of the heptarchy, with the exception of Northumberland. Ethelbert formed a matrimonial alliance with France, claiming in marriage the hand of Bertha, a Christian princess, from her father, Caribert, king of Paris. The princess, distinguished for her piety and virtue, exacted a promise from her husband that she should not be molested in the enjoyment of her religion, and that, on the contrary, she should be permitted to bring over to England with her a French bishop. Ethelbert, who was tenderly attached to her, made no objections, and the French bishop was received with every mark of respect. The conduct of the queen was such as to reflect honor on herself and the court of her husband, and excited the admiration of Ethelbert and his subjects. The king could not but perceive the salutary

influence of Christianity, and was strongly prepossessed in its favor. Pope Gregory the Great received the intelligence of the favorable disposition of the king with unfeigned gladness, and dispatched a mission of forty monks, headed by Augustin, A.D. 596.

Augustin found the king ready to lend a willing ear to his arguments, and displayed in a striking and happy light the truth and beauty of the gospel. The king was not long in avowing his belief in the doctrines of Christianity. With his subjects, Augustin was no less successful; they embraced the true religion with readiness, and crowded to baptism. It is said that Augustin baptized no fewer than ten thousand in one day. He desired to be made Archbishop of Canterbury, with supreme authority over all the churches in England. The pope was by no means disposed to refuse any of his requests, considering that he had fairly earned any distinction which it was in papal power to bestow. The archiepiscopal pall was granted him, with permission to establish twelve sees in the province. The British bishops in Wales refused to acknowledge the authority of the church of Rome, under whose jurisdiction they had never placed themselves. They were descendants of the British converts of the second century, and sternly resolved to maintain their independence. Augustin urged, then threatened. The bishops were neither pliant nor timid, and adhered to their original determination. A dreadful tragedy was acted, twelve hundred Welsh monks being ruthlessly put to the sword. Augustin was suspected not only of having sanctioned, but of having instigated the massacre. He had been irritated by the refusal of the Welsh ecclesiastics to unite with the English church, and he thought their contumacy deserving of the severest punishment. He died in 604 or 614, and his relics were deposited in the Cathedral of Canterbury.

AUGUSTUS, CAIUS JULIUS CÆSAR OCTAVIUS, son of Caius Octavius and Accia, niece of Julius Cæsar, was born during the consulate of Cicero, 63 years B.C. His education was carefully attended to, and he was adopted by Julius Cæsar. He was studying eloquence at Apollonia, when his grand-uncle was assassinated, and at nineteen years of age, placing himself at the head of the veterans, he

marched to Rome, which he found distracted by the republicans and the followers of Antony and Lepidus. Here he announced publicly his adoption, and took his uncle's name. Antony treated him with a contempt which the magistrates and leading men were far from feeling, and Octavius joined the army that was sent against Antony after his proscription. Thinking it politic, however, to conciliate him, he joined Antony, and they with Lepidus formed the triumvirate, which was to last for five years, each enjoying an equal share of authority. Octavius sacrificed Cicero to the malice of his associates, and Rome became the theatre of the most sanguinary tragedies. Brutus and Cassius having been defeated, a new partition of spoils took place, Octavius and Antony obtaining the Roman empire, while Lepidus was forced to content himself with the African provinces, and was finally deposed. Octavius gave his sister Octavia in marriage to Antony. The conduct and fate of Antony have been related. [See ANTONY.] Octavius was soon firmly established in the empire. The senate gave him the title of Augustus, and, finding his power confirmed, he seems to have endeavored strenuously to render his conduct worthy of his dignity. He made regulations for the safe conduct of the government; reducing the number of senators from a thousand to six hundred, and raising the degree of wealth which was to qualify them for a seat. He set about the reform of the public manners and morals, and carried his arms successfully into Gaul, Germany, and the east. In the latter part of his reign, however, he met with severe losses in Germany, when Hermann roused his enthralled countrymen to arms.

He died at Nola, A.D. 14, in the seventy-sixth year of his age, and forty-first of his reign. On the approach of death, he called for a mirror, and arranged his hair. He then asked those about him, if he had played his part well? On their answering in the affirmative, he said, after the manner of the actors, "Then farewell—and applaud!" He greatly improved the appearance of the capital, and it was said, that "he had found Rome brick, and had left it marble." He liberally patronized men of letters, and, 'Augustan age' is a phrase applied to any era distinguished for literature and the arts. Virgil and Horace

were among the brightest ornaments of his reign. Two conspiracies formed against him miscarried, Cinna, the leader of one, being generously pardoned. The emperor's private griefs were heavy, and he suffered great misery from the debauchery of his daughter Julia.

AURELIAN, LUCIUS DOMITIUS, emperor of Rome, distinguished for his military talents and severity, was the son of a peasant of Illyricum, born A.D. 212, and having served with distinction under Valerian II. and Claudius II., was recommended as his successor by the latter, and raised to the throne to the satisfaction of all. He subdued Zenobia, queen of Palmyra, erected a new wall round Rome, and was assassinated, A.D. 275.

AURENG-ZEBE ('ornament of the throne') was born October 20th, 1619. His father, Shah Jehan, succeeded to the Mogul throne when Aureng-zebe was in his ninth year. In youth, he was distinguished by his great sanctity of appearance, and he used the arts of hypocrisy to cloak his designs. He looked forward to the possession of the throne of Hindostan, in the life-time of his father. In 1658, he seized Agra, and imprisoned his father. Having murdered his relatives in succession, he ascended the throne in 1659, and took the name of Aalem Guyr. Notwithstanding his crimes in gaining the throne, he governed with ability and success. He greatly enlarged his dominions, and became so formidable, that all the eastern princes sent him ambassadors. He died at the age of eighty-nine, bequeathing his possessions to his sons. Wars broke out immediately after his decease, and many of the conquered provinces sought their former independence.

AUSTERLITZ, a town of Moravia, in the circle of Brunn, has been rendered famous by the battle fought in its neighborhood, on the 2d of December, 1805, in which the troops of France, under the command of Napoleon, defeated the combined forces of Russia and Austria, headed by their respective emperors. The combined troops amounted to 100,000 men, of whom one-fourth were Austrians; while Napoleon had but 80,000, twenty battalions of which, with forty pieces of artillery, he kept back as a reserve. At sunrise the battle began, and shortly afterward, a most furious cannonade wrapped the combatants

in fire and smoke. Two hundred pieces of cannon created an appalling uproar. At one o'clock in the afternoon, the French were victorious, and the Russians and Austrians retreated. The French found themselves in possession of forty stands of colors, and a hundred and fifty pieces of cannon, while twenty generals, and upward of 30,000 prisoners were taken.

An artillery officer of the Russian imperial guard, having just lost his guns, met Napoleon: "Sire," said he, "order me to be shot, for I have lost my pieces." "Young man," replied the emperor, "I appreciate your tears; but you may have been defeated by my army and yet have indisputable claims to glory." The French artillery caused a heavy loss to the enemy, and Napoleon in noticing their exploits, said, "Your success has given me great pleasure, for I do not forget that in your ranks I commenced my military career." The soldiers called this battle the day of the three emperors, while Napoleon named it the day of Austerlitz. The commencement of the action was striking. The French emperor, surrounded by his marshals, in brilliant uniforms, refrained from giving his orders until the first rays of the sun shot a splendor on the scene, and the horizon became illuminated. He then issued his orders distinctly but rapidly, and the marshals parted at full gallop, each to his corps. The emperor, passing in front of several regiments, thus addressed them: "Soldiers! we must finish this campaign by a thunder-clap, which will astound our enemies and crush their pride!" Thousands of hats waved on bayonets, and cries of "Long live the emperor," were the signals of attack. "Never," said Napoleon, "was field of battle more dreadful."

On the 4th of December, Napoleon had an interview with the Emperor of Germany, in which an armistice and the principal conditions of peace were agreed upon. Meanwhile, the French troops having nearly surrounded the retreating Russians, Savary, Napoleon's aid-de-camp, was dispatched to the Emperor of Russia, to inform him that he could retire in safety if he adhered to the capitulation, retreating by stages regulated by Napoleon, and would evacuate Germany and Poland. "On this condition," added Savary, "I am commanded by the emperor to repair to our

PLACE WHERE GOLD WAS FIRST DISCOVERED IN AUSTRALIA.

advanced posts, which have already turned you, and give them his orders to protect your retreat, the emperor wishing to respect the friend of the first consul." "What guarantee must I give you?" "Sire, your word." "I give it." Orders were accordingly given, and the retreat of the Russians protected.

This decisive battle led to the treaty of Presburg, by which Austria confirmed the independence of the Helvetic republic, abandoned the Venetian territories to the kingdom of Italy, and renounced her possessions in the Tyrol and Suabia. The latter, Napoleon transferred to the sovereigns of Bavaria, Wurtemberg, and Baden, in reward for their aid.

AUSTRALIA is the present name of a large island formerly known as New Holland, lying south-east of Asia. The Dutch discovered it in 1606. The British began the transportation of convicts to Botany Bay in 1787, and abandoned it in 1853. The discovery of gold has worked a startling revul-

sion in the condition of Australia. As early as 1841 Sir R. I. Murchison called attention to the similarity of the geological formations of the mountains of Australia to those of the Ural range in Russia, and asserted his belief that gold must exist in Australia. In 1849, a Mr. Smith informed the colonial government that he had found gold, and offered to make known the locality for a certain reward. Smith and the government could not agree upon the amount of bonus, and the matter dropped till 1851, when Mr. Hargraves, who had come from gold-digging in California, also found gold, and disclosed the places. The colony was seized with a frenzy, and almost the entire population sought the golden realm. An immense emigration from Great Britain ensued, and has steadily continued. The precious metal has been found in profusion, and to all appearance this golden garner of ages will not be exhausted for years to come. Copper, iron, lead, and coal have also been found in abundance.

Australia is divided into the colonies of New South Wales, Victoria, South Australia, Western Australia, and the district of North Australia. By the immigration rapidly pouring in, and the consequent swift development of its resources, Australia is in a transition state which precludes a detailed description. The truth to-day is far outstripped to-morrow. New South Wales, occupying the south-eastern portion, is the oldest colony. Sydney, its capital, a city on the south shore of Port Jackson, had a population of 50,000 in 1851. Bathurst, two hundred miles north-west, is a thriving town. Victoria, or Port Phillip, the most prosperous of the Australian colonies, lies between New South Wales and South Australia, and was first settled in 1835. Melbourne, its capital, is on the Yarra-Yarra River, near the head of Port Phillip Bay. It is a spacious city, the seat of extensive commerce, and had a population of 100,000 in 1852. Geelong is an important port on the south-western shore of Port Phillip. The discovery of the gold-fields of New South Wales and Victoria checked for a while the growth of South Australia, but could not destroy its prosperity. Adelaide is its capital. Western Australia, or Swan River Settlement, is the least of the colonies. Perth is its seat of government.

We have mentioned only the principal towns of Australia. Myriads of villages and settlements are springing from the wilderness. Railroads are being constructed. The commerce is an important item in the merchandising of the mother country. From the fertile soil excellent crops of all the common grains are gained. Sheep and cattle are largely bred. Nearly all the vegetables of Europe are cultivated. Australia was destitute of indigenous edible fruits, but those of almost every land and clime are successfully raised, and the grape and olive bid fair to take rank among the most valuable productions. The most unfavorable characteristics of the climate are the long droughts that prevail, apparently every ten or a dozen years, and the sudden transitions from heat to cold. In spite of these, the climate in the settled parts is commonly delightful, and not unhealthy.

AUSTRIA. The Austrian empire occupies nearly a twelfth of the surface of Europe. In its dominions are comprised, the archduchy

of Austria and circle of Salzburg; the duchy of Styria; the earldom of the Tyrol and territory of Vorarlberg; the kingdom of Bohemia; the margraviate of Moravia and Austrian Silesia; the kingdom of Illyria, comprising Carinthia, Carniola, Trieste, and circle of Carlsstädt; the kingdom of Galicia and Lodomeria, including the duchy of Aufschwitz and Zator and the Buckowine; the kingdom of Hungary, with Slavonia, Croatia, and the military frontier; the principality of Transylvania with the military frontier; the kingdom of Dalmatia; the kingdom of Lombardy and Venice; and the territory of Cracow. These have an area of 255,722 square miles, and had in 1854 a population of 39,411,309. The only sea-coast which this great empire possesses is on the Adriatic, so that its commerce is restricted. Vienna, on the Danube, is the capital of the empire, and the principal seat of trade and manufactures. [See VIENNA.]

The house of Hapsburg has been one of the most illustrious families in Europe. Hapsburg was an ancient castle of Switzerland, on a lofty eminence in the canton of Berne. This castle was the cradle as it were of the imperial line of Austria, whose ancestors may be traced back to the thirteenth century, when Rodolph, Count of Hapsburg, was chosen to wear the imperial diadem of Germany. He wrested the Austrian duchy from Bohemia, and conferred its sovereignty upon his son Albert, as an appendage to the Hapsburg possessions. The house thus founded was much indebted for its rise to power, to the good fortune of successive marriages and the beauty of its daughters; whence it came to be a common saying, that "Venus was more favorable to it than Mars." Albert succeeded to the imperial crown. This monarch deputed harsh and tyrannical governors to rule the Swiss, and, in consequence of continued oppression, that brave people revolted in 1307, headed by the famous Tell. Frederick, son of Albert, found himself forced to relinquish the empire into the hands of Louis of Bavaria. The crowns of Germany, Hungary, and Bohemia, were united in the person of Albert II., Duke of Austria, who ascended the throne, A.D. 1438. Hungary and Bohemia were his by inheritance, and the empire by universal suffrage.

The Emperor Maximilian, grandfather of Charles V., married the heiress of Burgundy,

in consequence of which alliance, the Netherlands were subjected to Austria in 1477. In 1496, the marriage of his son Philip to the heiress of Castile and Arragon, led to the junction of the broad domains of Spain with the already ample territories of Austria. Charles V., desirous of retiring from public life and passing his days in gloomy seclusion, resigned the crown in 1556; Philip II., his son, gained possession of Spain and the Netherlands; Ferdinand, his brother, received Austria, Bohemia, and Hungary, and was also chosen Emperor of Germany. The house of Austria was noted for its bigotry and cruel intolerance. In 1570, Maximilian granted liberty of conscience (a great grant in a monarch!) to the Protestants of Austria, but those in other portions of his dominions, particularly in Bohemia, were most cruelly persecuted. In their distress the Protestant German princes finally sought the assistance of the famous Gustavus Adolphus, King of Sweden. This famous warrior, the "Lion of the North," as he was called, broke upon the empire like a whirlwind, and its very foundations tottered beneath the shock. France, espousing the cause of the Protestants, hoped thus to weaken the power of Austria, and the country experienced no release from the tumults and horrors of war, until the treaty of Westphalia was signed in 1648.

The sword was idle for a time, but the war with France broke out afresh during the reign of Leopold I., and was continued under his successor. The Turks, emboldened by success, in 1688, pushed their arms into the heart of the empire, and the walls of Vienna echoed back the clangor of the oriental cymbals. The siege of Vienna by the Turks, is a memorable and impressive event. In the war of the allies with France, Joseph I., son of Leopold, joined with heart and hand, and acquired a share of their good fortune. His queen was a daughter of John Frederick, Duke of Hanover. Charles VI. dying without issue, on the 20th of October, 1740, the extinction of the male line of the house of Austria was the signal for the movement of the Elector of Bavaria, to contest the succession. He seized the kingdom of Bohemia, was elected emperor in 1742, and died in 1745. Francis of Lorraine succeeded to the Austrian dominions in right of his queen, Maria Theresa, daughter of Charles

VI. The throne is still occupied by his descendants. He was elected Emperor of Germany in 1745, and the crown, though nominally elective, descended to his successors with the regularity of an hereditary sovereignty.

Francis II. was crowned emperor in 1792. In 1795, when the second division of Poland took place, Austria received an immense accession of territory. In 1797, she relinquished to France her possessions in the Netherlands, as well as the duchies of Milan and Mantua. To compensate for this, the greater part of the Venetian states was transferred to Austria. The military power of France was so formidable, that even the strongest sovereignties of Europe feared they should be unable to resist its encroachments. The French threatened to attain the empire of the world by rapid strides. Involved in the wars of 1799 and 1805, Austria met with repeated defeats and continued discomfiture. After she had lost the great battles of Marengo and Hohenlinden, Ulm and Austerlitz, her Venetian possessions, the Tyrol, and other territories were wrested from her grasp. In 1809, Austria took the field against Napoleon, but having to contend, not only against the French, but against Russia, and the confederation of the Rhine, found herself defeated, and when Bonaparte entered the capital, she was compelled to relinquish again immense territories. After a hopeless inaction of some years, the failure of Napoleon's Russian expedition roused the Austrians to arms, and the subsequent success of the allied powers restored the power and splendor of the Austrian empire, which gained the addition of some Italian territories. Of the subject kingdoms and states of Austria, Hungary since 1563 has continued an appanage of the house of Austria; Transsylvania came into possession of the Austrians in 1699; Croatia, anciently a part of Illyricum, was annexed to Austria in 1540; Slavonia, also anciently a part of Illyricum, fell into the hands of the Austrians in 1687; the crown of Bohemia passed to the house of Austria in 1526.

In the eventful year of 1848, revolutions broke out in Lombardy and Venice, in Hungary, and in Austria proper. At first they were everywhere successful: the Austrian troops were driven back from Hungary and Italy, and the insurgents held Vienna. Hun-

gary asserted its independence ; Venice united itself to Sardinia ; and this vast empire seemed rapidly falling to pieces. Ferdinand abdicated in favor of his nephew Francis Joseph ; a liberal constitution was proclaimed for a sop, in March, 1849, and the German subjects were satisfied or silenced. Radetzky conquered obedience in Italy, and with the assistance of Russia Hungary was crushed. In 1852 the constitution of 1849 was revoked, and the emperor now wields an absolute power.

The early sovereigns of Austria will be found in the list of emperors of Germany. Francis II. surrendered the dignity of the empire, Aug. 11, 1804, and took the title of Francis I., Emperor of Austria. The Austrian emperor was one of the six leading members of the German confederation, by virtue of his sovereignty over certain states of Germany.

This Confederation after half a century ceased to exist on the 14th of June, 1866. Early in the year trouble began between Austria and Prussia respecting the Danish Duchies, which Prussia desired for the development of her naval force. Austrian influence prevailing in the German Diet it authorized overt measures against Prussia. The very next day, June 15th, Prussia, who had been girding herself for war, invaded Saxony. Austria counted upon her foe being as slow as herself, and relying upon her military resources, thought hers would be an easy victory. Her General Benedek arrogantly cast disdain upon the soldiery and military science of Prussia. The armies, after several small affairs, met at Gitschin on the 24th of June, and at Sadowa July 3d, in decisive conflict. The Austrians were thoroughly routed. The battle of Sadowa will rank among the greatest of battles, there being 195,000 Austrians and Saxons, and 250,000 Prussians engaged. And thus, in 19 days, Austria was so thoroughly broken and humbled by her foe that she surrendered Venetia, lost her place and provinces in Germany, and her position as one of the leading continental governments. Peace negotiations were concluded August 23d, just 70 days after the decision of the Diet.

EMPERORS OF AUSTRIA.

1804. Francis I. : died March 2d, 1835.

1835. Ferdinand, his son March 2d : abdicated in favor of his nephew, Dec. 2d, 1848.

1848. Francis Joseph, Dec. 2d.

AZORES, or WESTERN ISLANDS, a group of nine islands, lying in the Atlantic, about 800 miles west of Portugal. Population in 1843, 214,300. They were discovered by the Portuguese, prior to 1439, and have ever since belonged to that nation. The name was given from the abundance of falcons (*azores*) found here. When discovered by the Portuguese they were void of inhabitants. In 1466 these islands were presented to the Duchess of Burgundy, by her brother, the King of Portugal. They were colonized by Germans and Flemings, who appear, however, always to have acknowledged the sovereignty of Portugal. The Azores are recognized at sea from a great distance, by Pico, a tall mountain, which, like the Peak of Teneriffe, towers far above the deep, and stands a lasting landmark to mariners. The islands are subject to earthquakes and volcanic eruption, and, in 1574, St. George's, Pico, Fayal, and Terceira, although detached and distant from each other, were violently convulsed. The ocean overflowed from the shock, which produced eighteen little islands. A similar convulsion of nature occurred in July, 1638. And after a commotion of six weeks, an island of nearly six miles in circumference, arose near St. Michael's, but was subsequently absorbed. In 1720, the most horrible and tumultuous scenes occurred, and, amidst an almost unequalled combination of horrors, causing the death of many persons from fright, an island nearly as large as that of 1638, emerged from its submarine birth-place. The islands are supposed to rest on volcanic foundations, which extend to the western shores of Portugal, though the communication may be in many parts obstructed. In 1811 a volcano appeared in the sea near St. Michael's, where the water was eighty fathoms deep, throwing up an island a mile in circumference. This new isle was called Sabrina. It gradually disappeared. Fayal is frequently visited by American and European ships for provisions or refitting.

AZTECS, a race supposed to have migrated from the region north of the Gulf of California, to Mexico, where they founded the extensive empire which was conquered by the Spaniards. They were possessed of knowledge in astronomy, architecture, sculpture, and other arts of social life, and their antiquities have been a puzzle for the learned.

B.

BAALBEC, a ruined city in Syria, forty-two miles east-north-east of Beirut. The name signifies 'the city of the sun;' and accordingly by the Greeks and Romans it was called Heliopolis. Its origin and history are obscure. By some it is conjectured to be the Baalath reared by Solomon in Lebanon, as mentioned in the eighth chapter of the second book of Chronicles. Its ruins are magnificent.

BABYLON, a famous city of Assyria, and once the greatest in the world. Its ruins still exist on the banks of the Euphrates, near Hillah. Herodotus tells us that its walls, three hundred and fifty feet high, and eighty-seven feet thick, were cemented with bitumen, and were more than sixty miles in circuit. They had a hundred brazen gates, and two hundred and fifty towers. Nothing is left of this mighty town but rubbish and desolation, among which the recent excavations of Mr. Layard, Col. Rawlinson, and M. Botta, have brought to light many relics of interest. According to the Mosaic record, the Babylonian empire was founded by Nimrod, supposed to be the Belus of profane history, 2245 B.C. After the destruction of Nineveh, B.C. 604, Babylon was the metropolis of the east. To this period is assigned the reign of Nebuchadnezzar, under whom the power of Babylon was extended over all the lands between Persia and Egypt. The great city was taken by Cyrus, B.C. 538, and Babylonia became a Persian province. Alexander the Great intended to make Babylon the capital of the vast empire which he had won in war. Death forbade him, and the city never again regained its prosperity.

BACHAUMONT, FRANÇOIS LE CORSEUX DE, born at Paris, 1624, died in the same city, 1702. He was a counselor of parliament, and opposed to the court party in the disturbances of 1648. He said that the members of the parliament put him in mind of the little boys that played with slings in the street, who dispersed on the appearance of a police officer, but collected as soon as he was out of sight. Pleased with this comparison, the enemies of Mazarin adopted hatbands in the form of a sling (*fronde*), and

hence were denominated Frondeurs. Bachaumont was distinguished for his epigrams and lively songs.

BACHELORS. The Roman censors frequently imposed fines on unmarried men, and men of full age were compelled to marry. The Spartan women at certain games laid hold of old bachelors, dragged them around the altars, and put upon them various marks of disgrace. Bachelors have been taxed in England. Among the illustrious men of antiquity, the following eschewed matrimony: Plato, Pythagoras, Epicurus, Bion, Anaxagoras, Heracitus, Democritus, and Diogenes. Their example has been followed among the moderns, by Newton, Locke, Boyle, Gibbon, Hume, Adam Smith, Harvey, Leibnitz, Bayle, Hobbes, Hampden, Sir Francis Drake, Pitt, Michael Angelo, the three Caraccis, Sir Joshua Reynolds, Haydn, Handel, Wolsey, Pascal, Fenelon, Pope, Akenside, Goldsmith, Gray, Collins, Thomson, Jeremy Bentham, and Washington Irving.

BACON, FRANCIS, son of Sir Nicholas Bacon, lord-keeper of the great seal, was born in London, Jan. 22d, 1561, and died in 1626. He was entered in the university of Cambridge, in his thirteenth year, and distinguished himself for his early proficiency in the sciences. At sixteen he wrote against the Aristotelian philosophy, and at nineteen his work "Of the State of Europe," the fruit of a journey in France, attracted general attention from the clearness of perception and maturity of judgment which it displayed. At the age of twenty-eight, his legal reputation was such that he was appointed counsel extraordinary to the queen, a post of more honor than profit. Three years afterward he sat in parliament. Ben Jonson highly extols him as an orator. Bacon at first crouched for the favor of the Cecils, till disregarded by them, he attached himself to their rival, the Earl of Essex, who with generous ardor strove in 1594 to procure him the vacant office of attorney-general. Being unsuccessful, he soothed Bacon's regret with a gift of a fine estate. Yet when Essex sank into disfavor, Bacon not only abandoned him, but unnecessarily appeared as counsel against him, and with

barbarous ingenuity aided greatly in bringing the unfortunate nobleman to the scaffold. Similar baseness stains all his public career. When first in parliament he made show of maintaining popular rights against exactions of the court. Royal frowns soon brought him to his knees, and he disgraced himself by servility that was unmanly for even a courtier. He stood high in the good graces of James I., and was knighted by him in 1603. His marriage was fortunate, and he at length saw himself free from those pecuniary embarrassments by which he had been so long shackled.

In 1613 he reached the attorney-generalship. Here he lent himself to the most arbitrary measures of the court, and even assisted in an attempt to extort from an old clergyman, of the name of Peacham, a confession of treason, by torturing him on the rack.

In 1617 he was made lord-keeper of the seals; in 1619, lord high chancellor of England, and Baron Verulam, and not long afterward, Viscount of St. Albans. He had not now the poor plea of necessity for making offices and privileges venal, yet he was charged with receiving bribes for his decisions. Rather than submit to a trial which would stamp his name with indelible disgrace, he confessed his guilt, supplicated the lenity of his peers, and begged to be dismissed with the loss of his office. His sentence was severe but just. He was sentenced to pay a fine of £40,000, to be imprisoned in the Tower as long as the king should choose, declared incapable of office, forbidden to take his seat in parliament, or to show himself within the verge of the court. He was soon released from the Tower, but did not long survive his fall. His errors sprang more from weakness than from avarice or want of principle, for he displayed through life a strong sympathy for Virtue, if he did not have firmness enough to be faithful to her cause.

It is as a writer and philosopher that Lord Bacon is illustrious. Walpole called him the prophet of art. He examined the whole circle of the sciences. In so masterly a way did he expound the inductive method of philosophizing, that posterity has called him the father of experimental science. His

prose is among the foremost in our tongue. He died in 1626. In his will this passage was found: "My name and memory I bequeath to foreign nations, and to mine own country after some time be passed over."

BACON, ROGER, an English monk, born at Ilchester in 1214. He made many discoveries in the sciences, which caused him to be regarded as a sorcerer by the common people, whose prejudices were espoused by the clergy, against whom Bacon had openly spoken. He was imprisoned in consequence of their denunciations, and at one time, kept in confinement for ten years. He died in 1292. He had an idea of gunpowder, for he distinctly says in one of his works that thunder and lightning could be imitated by means of charcoal, sulphur, and saltpetre. Like all philosophers of that day he dabbled in astrology; he discovered the polarity of the loadstone; he invented the camera-obscura and the magic lantern; and he foreshadowed the invention of telescopes and spectacles, even if he did not really construct the latter. He was well versed in the Greek, Hebrew, and Latin languages, the last of which he wrote with facility and elegance, and although not free from many of the prejudices of his age, was altogether a very extraordinary man. Many of the old English ballads and romances contain accounts of the wonderful exploits of Friar Bacon, who is gifted with magical arts of the most tremendous nature. The "Famous Historie of Fryer Bacon," toward the conclusion, informs us that Friar Bacon broke his magic glass, burned his books of the 'black art,' devoted himself to theological studies, and lived in a cell which he had excavated in a church wall. "Thus lived he two yeeres space in that cell, never coming forth: his meat and drink he received in at a window, and at that window he did discourse with those that came to him; his grave he digged with his own nayles, and was laid there when he died." "He lived most part of his life a magician, and died a true Penitent Sinner, and an Anchorite."

BACTRIANA, or BACTRIA, before the time of Cyrus was a powerful kingdom, and gave to the Persians their mythology and architecture. It lay between the Oxus, Scythia, Mount Paropamisus, and Margiana. After the destruction of the Persian monarchy,

it was held by the Parthians and Scythians, until they were expelled by the Huns.

BADAJOS, the Pax Augusta of the Romans, a fortified city of Spain, on the left bank of the Guadiana, contains about 12,000 inhabitants. It is 220 miles south-west of Madrid. This important barrier fortress was besieged without success by the French under Kellerman and Victor, in 1808 and 1809. It surrendered to Soult March 11th, 1811. It was invested by Wellington March 16th, 1812, and taken by storm on the night of the 6th of April. The carnage was terrible. For two days and nights the city was sacked, British generals endeavoring in vain to check the atrocities of the infuriated soldiers. The fall of Badajoz forced the French to a precipitate retreat from Portugal.

BADEN, a grand-duchy in the south-west of Germany, on the right bank of the Rhine, was erected into a grand-duchy in 1806. In 1855 it had a population of 1,314,837, upon an area of 5,712 square miles. The surface of Baden is mountainous, and it contains the elevated range of the Black Forest, which derives its name from the dark tint of its foliage. The capital of the duchy is Karlsruhe, population 23,219. Freiburg has a population of about 16,000. Its cathedral, built in the eleventh and twelfth centuries, is perhaps the most beautiful and perfect specimen of Gothic architecture in Germany. The university of Freiburg, founded in 1454, is famous as a school of Catholic theology. Mannheim, at the junction of the Neckar and the Rhine, has 25,000 inhabitants. The ancient city of Heidelberg stands on a narrow ledge between wooded vine-clad hills and the left bank of the Neckar, having about 16,000 inhabitants. It is famous for its Protestant university, founded in 1386, and the oldest in Germany, except that of Prague. In 1850 there were seventy-one professors and teachers, and six hundred and three students. On a hill overlooking the town is the vast ruin of the castle where once the electors palatine held their court. Here in a damp vault moulders the great tun that once was kept full with eight hundred hogsheads of best Rhenish wine. In a picturesque valley, twenty-three miles south-west of Karlsruhe, lies Baden-Baden; population 6,000. These springs were a resort for the Romans. In

some late years the number of visitors has exceeded 14,000. The well-known gaming tables of this glittering haunt are farmed by the grand-duke, and thence he derives a handsome slice of his income.

The Catholic and Protestant faiths are each sanctioned by the state, and full liberty of conscience and private worship prevails. The sovereign must be a Protestant. Executive and judicial powers are vested in the grand-duke and a ministry of state; the legislative powers are shared by the sovereign with an upper and lower chamber. In 1848 Hecker and Struve headed an attempt to establish a republic in Baden. The grand-duke fled from his throne, but was restored by Prussian bayonets in 1849.

BAERT, or **BARTII**, JOHN, was born at Dunkirk, 1651. He was the son of a poor fisherman, but his bravery and talents raised him to the rank of commodore in the reign of Louis XIV., whose navy he greatly improved. The Dutch, English, and Spanish called him the French devil. "I have made you a commodore," was the king's annunciation of his promotion to Jean Baert, at Versailles. "Your majesty has done well," replied the sturdy seaman. The courtiers tittered. "It is the reply," said Louis, "of a man who knows his own worth." He received a patent of nobility for one of his naval exploits, and died in 1702.

BAFFIN, WILLIAM, an English navigator of the seventeenth century, was the first to determine longitude at sea by observations of the heavenly bodies. In 1616 he discovered and explored the bay which bears his name. He was killed near Ormuz in 1621, while engaged in an expedition against the Portuguese.

BAGDAD, a large city of Asiatic Turkey, contains about 60,000 inhabitants. It lies on the east bank of the Tigris, over which a bridge is thrown. The city is surrounded by a brick wall; the houses are of brick, and but one story high, and the unpaved streets so narrow as to admit of two horsemen abreast with difficulty. The palace of the pacha forms a contrast to the other buildings of the city, being spacious and splendid. European manufactures, as well as the productions of India, Arabia, and Persia, find a sale here, and the thronged bazaars present a brilliant and animated appearance. From Bag-

dad, East Indian goods were formerly supplied to Asia Minor, Syria, and part of Europe, but of late its traffic has declined. The population consists of Turks, Persians, Armenians, and a small number of Christians and Jews. The ancient city, founded in 762, by the Caliph Abu Giafar Almanzor, once the residence of the caliphs, and containing 2,000,000 inhabitants, is now in ruins. The prosperity of this city completed the ruin of the neighboring city of Babylon. It was twice taken by the Turks and Tartars, and nearly destroyed. In 1638, it was taken by Amurath IV., after a memorable siege, and the greater part of the inhabitants were butchered in cold blood. In the eighteenth century, Nadir Shah was defeated in an attempt to take it.

BAHAMAS, or LUCAYA ISLANDS, are near the coast of Florida, in the Atlantic Ocean. The soil of the islands is rich, but thin, and soon exhausted. A large portion of the residents are descendants of the loyalists who emigrated from Carolina and Georgia when the royal cause was lost in America. The wreckers, a large class of the population, are hardy mariners, employed in assisting shipwrecked vessels. They display admirable skill and courage in the working of their small flat-bottomed sloops, in which they frequent the most dangerous places, receiving legal salvage on all rescued property. They are licensed by the government. These islands were discovered by Columbus, Oct. 12th, 1492, St. Salvador being the first land he saw. In 1667, Charles II. of England granted the Bahamas to the Duke of Albemarle and others. The first settlement was made on New Providence, one of the largest of the group. The settlers suffered severely from the ravages of pirates and the inroads of the Spaniards. Black-beard, the noted leader of the buccaneers, was killed off here in 1718. The town of Nassau on New Providence was fortified in 1740. Nassau was taken by the Americans during the Revolution, but was soon abandoned. Afterward the whole group was held by the Spaniards, but was regained by the English.

Turk's Islands are well known for their salt. The entire population of the Bahamas in 1845 was 26,500: deducting Caicos and Turk's Islands (since set off under a separate

government), it was 22,841, which in 1857 had increased to 27,519.

BALÆ, a town of Campania, a favorite resort of the ancient Romans, many of whom had country-seats here. Its sheltered bay, breezy hills, and baths gave it a high reputation, but the dissoluteness practiced here was so notorious and infamous, that Cicero, in his defense of M. Cælius, thought it necessary to apologize for defending a young man who had lived at Baia.

BAILLIE, JOANNA, born in 1762, was the daughter of the parish minister of Bothwell in Lanarkshire, Scotland. Her mother was sister of John Hunter, the great anatomist. Her brother, who became Sir Matthew Baillie, having settled as a physician in London, she removed thither at an early age, and resided either in London or its vicinage, till her death in 1851. She published several volumes of dramas and minor poems.

BAINBRIDGE, WILLIAM, a distinguished commodore in the American navy, was born at Princeton, N. J., on the 5th of May, 1774. He died at Philadelphia, July 27th, 1833.

BAJAZET I. Sultan of the Turks, son of Amurath, whom he succeeded in 1389. By strangling his brother and rival, Jacob, he established a precedent which has since been frequently followed by the Turkish court. The rapidity of his conquests gained him the name of Ilderim, 'lightning.' He carried his conquering arms far into Europe and Asia, and on the 28th of September, 1395, defeated the army of Hungarians, Poles, and French, who were headed by Sigismund, King of Hungary. In 1402, he was defeated near Ancyra, in Galatia, by Tamerlane, and was himself taken prisoner, and treated with great courtesy by the conqueror. The story of his being confined and carried about in an iron cage, is deemed unworthy of belief. He died in the camp of Tamerlane in 1403.

BAJAZET II., son of Mohammed II., Sultan of the Turks, succeeded his father in 1481. He extended his empire, gained some Grecian towns from the Venetians, and by ravaging Christian states, sought to avenge the expulsion of the Moors by the Spaniards. He finally resigned his throne to his rebellious son Selim, by whose order, it is supposed, he was murdered in 1512.

BALBOA, VASCO NUNEZ DE, was born in 1475. He was one of the numerous adventurers who sought to retrieve their fortunes, by following up in the New World the discoveries which Columbus had commenced. He formed a colony on the isthmus of Darien. An Indian, who was the scornful witness of a dispute between two of Balboa's companions about some gold, agreed to show him a country where the precious metals might be obtained in abundance. He led Balboa to the shores of the Pacific, and pointed the path to Peru. Considering his force of a hundred and fifty men too feeble to attempt the conquest, Balboa took possession of the vast ocean that rolled before him in the name of the Spanish king, and after an absence of four months led back his followers to the colony, enriched with gold and pearls. Here he was required to obey a new governor, Pendrarias Davila, who held a royal commission. He was appointed, the ensuing year, viceroy of the South Sea, but seized by Davila, on pretext of neglect of duty, tried, condemned, and beheaded in 1517.

BALAKLAVA, a small town in the Crimea, with a fine harbor, ten miles south-east from Sebastopol. After the battle of the Alma, the allies advanced upon this place, Sept. 26th, 1854. Oct. 25th following, 12,000 Russians, commanded by Gen. Liprandi, captured some redoubts in the vicinity, which had been intrusted to a scanty force of Turks. They next assaulted the English, by whose heavy cavalry they were compelled to retire. After this, from a disastrous misconception of Lord Raglan's order, Lord Lucan ordered the Earl of Cardigan with the light brigade to charge upon the Russians, who had formed again on their own ground with their artillery in front. This desperate gallop into the jaws of death was at once made, and great havoc dealt upon the enemy; but out of 607 British horsemen only 198 returned. A sortie from the garrison of Sebastopol led to another desperate engagement here on the night of March 22d, 1855, in which the Russians were repulsed with a loss of 2,000 killed and wounded, the allies losing about 600.

BALDWIN. There were five kings of Jerusalem of this name. **BALDWIN I.** succeeded his brother Godfrey Bouillon, 1100, and died 1118. The second reigned from 1118 till his

death in 1131. He founded the order of Templars. **BALDWIN III.**, king from 1143 to 1162, was one of the bravest and most honorable of the crusaders. The Christians possessed territories of vast extent, but the vassals of Baldwin were divided by dissensions among themselves this was also the case with their adversaries, although the latter warred with more success. The reign of Baldwin was unhappy, and convinced the Christians of the impossibility of establishing Christian chivalry in the east. When Noureddin, his valiant and proud opponent, was counseled to fall upon the Christians during the funeral of their leader, he answered: "No! Let us respect their grief, for they have lost a king whose like is rarely to be met with."

BALIOI, JOHN, was a claimant for the Scottish crown on the death of Queen Margaret. Edward III., being made arbiter, awarded it to Baliol against Robert Bruce. Baliol afterward allied himself with France, and took up arms in consequence of the interference of the English king in his government, but was defeated at the battle of Dunbar, and consigned to the Tower, whence he was liberated by the intercession of the pope. He died on his estate in France, 1314. His son Edward afterward gained the crown, but finally resigned it to Edward III. of England.

BALK, or **BALKAN**, anciently *Hæmus*, a chain of rugged mountains, extending from the Black Sea, in European Turkey, to the Adriatic. The summit of Orbelus, the highest peak, is 9,000 feet above the surface of the sea. The passage of the Balkan by a hostile army was deemed impracticable till effected by the Russians under Diebitsch, whose march through the mountains in July, 1829, was a memorable achievement in the war then pending between Russia and Turkey. Its consequence was an armistice, and this was followed by a treaty of peace in September.

BALLOONS. From the earliest ages men have longed to mount into the air and rival the easy flight of the birds. The first balloons on record were made in France by the brothers Montgolfier, and the first ascent made by M. Rozier and the Marquis d'Arlandes at Paris, Nov. 23d, 1782. The elevating power of the Montgolfier balloon was air rarefied by fire. M. Rozier and M. Romain perished in

THE BALLOON.

an attempted voyage from Boulogne to England, the balloon having taken fire, June 14th, 1785. Hydrogen balloons were successfully used soon after the Montgolfier. The parachute was invented by Blanchard, in 1784. At the battle of Fleurus, June 17th, 1794, the French used a balloon to reconnoitre the opposing army. In 1802, Garnerin ascended in a balloon to the height of four thousand feet, and descended safely by a parachute. Gay Lussac ascended at Paris to the height of twenty-three thousand feet, Sept. 21st, 1802. The first ascent in England was by Sig. Lunardi, from Moorfields, Sept. 15th, 1784. Blanchard and Jeffries crossed from Dover to Calais in 1785. The first experiments with balloons in this country, were made by Dr. Rittenhouse and Francis Hopkinson, in December, 1783. They connected several small balloons together, and thus enabled a man to ascend to the height of one hundred feet, and to float to a considerable distance. Afterward an ascent was made by Blanchard, at Philadelphia, January 9th, 1793.

Attempts to steer the balloon have proved futile, and it is now a mere toy. Its history is darkly marked with risk and loss of life. Madame Blanchard ascended from Tivoli at night in the midst of fireworks, from which her balloon caught fire, and she was dashed to the ground and killed, July 6th, 1819. An Italian aeronaut ascended from Copenhagen, Sept. 14th, 1851; his shattered corpse was found on the shore of a contiguous island. Mr. Arnold ascended near London, and was ducked in the Thames; Major Money went up from Norwich and fell into the North Sea, but was saved by a revenue cutter; Sadler, a veteran in the air, fell into the sea near Holyhead, but was picked up, Oct. 9th, 1812. A large balloon was sent up from London on an experimental voyage, having three persons in the car, and after being in the air eighteen hours, descended at Wielburg in the duchy of Nassau, Nov. 7th, 1836.

The navigation of the air has ever been a favorite scheme, and artificial flying has been attempted in all ages. The fable of the waxen

wings of Dædalus and his unlucky son Icarus, is familiar to all. Its interpretation is found in the tradition that Dædalus invented sails for ships. Friar Roger Bacon maintained the possibility of the art of flying, and predicted it would be a general practice. Dr. Wilkins (brother-in-law of Cromwell, and Bishop of Chester), amused himself with dreaming of a voyage to the moon, and said it would yet be as usual to hear a man call for his wings when he is going on a journey, as it is now to hear him call for his boots.

BALZAC, HONORE DE, a brilliant French novelist, born at Tours about 1799, and died at Paris, in August, 1850.

BANCA, an island off the north coast of Sumatra; area 7,533 square miles; population in 1849, 43,000; since 1816 in the possession of the Dutch. Tin mines were discovered here in 1810, and their stores of ore seem inexhaustible.

BANKS. The first bankers were the Lombard Jews in Italy about 808, of whom some settled in Lombard street, London, where many bankers now do business. The mint in the Tower of London was used by merchants to lodge their money in, till Charles I. made free with it in 1640; after which they trusted to servants, till too many of these ran to the army; they then lodged it with the goldsmiths in Lombard street, whose business it was to buy and sell plate, and foreign coins. These at first paid fourpence per cent. *per diem*, but lent it to others at a higher interest, and so became the first bankers in England, 1645.

The Bank of England was first incorporated in 1694, in consideration of £1,200,000, then the amount of its capital, being lent to the government. It suspended specie payments from 1797 to 1817.

In the United States, banks were commenced in the early part of the Revolutionary war; the first by a number of gentlemen in Philadelphia, June 17th, 1780, with a capital of \$839,160; instituted for the purpose of supplying the American army with provisions. Bank of North America, at Philadelphia, incorporated by Congress, Dec. 31st, 1781; the Massachusetts Bank, the first at Boston, began in 1784, and the Bank of New York commenced the same year.

The Bank of the United States was in-

corporated March 2d, 1791, with a capital of \$10,000,000, the government holding \$2,000,000. Its charter expired March 11th, 1811, and was not renewed; but the financial burdens of the ensuing war with Great Britain, induced the creation of a similar institution, the United States Bank, with a capital of \$35,000,000. This was chartered for twenty years in April, 1816, with power to form branches, and went into operation at Philadelphia, Jan. 1st, 1817. The United States deposits, \$9,868,435, were removed from it by Gen. Jackson, at the close of 1833, and at the expiration of the charter in 1836, Congress declined to renew it. A bank under the same name and with the same amount of capital was chartered by Pennsylvania, and continued in operation several years.

BANKS, Sir JOSEPH, bart., a celebrated botanist and traveler, was born in London in 1743, and died in 1820. Inheriting at an early age an ample fortune, his love of botany led him to visit lands at that time little known to naturalists. He made a voyage to Newfoundland and the coast of Labrador; he accompanied Capt. Cook to the South Seas; he visited the coasts of Scotland, and spent some time in Iceland. He made a vast collection of objects in natural science, and introduced many valuable species of plants and trees into Britain. In 1771 he was elected president of the Royal Society, over which he presided till his death. Soon afterward he was created a baronet. With George III., who was fond of botany and agriculture, he was a great favorite. He was a generous patron of science and scientific men, both in England and abroad.

BANNOCKBURN, a village in Scotland about three miles south-east from Stirling. Here was the field where the king of England had to flee before peasants ennobled by the struggle for freedom. The battle was fought June 24th, 1314. The English army consisted of 100,000 men under Edward II., 52,000 of whom were archers, and the Scottish army of only 30,000, commanded by Robert Bruce. The Scottish leader had selected the ground of Bannockburn to meet his enemies, because on its rugged and broken surface his light-armed troops could better encounter the heavy men-at-arms of the English. He strength-

ened his position among the morasses that lined the burn of Bannock by digging pits close together. These were slightly covered with brush and sods, so as not to be seen by an impetuous enemy. The English floundered into them, and while they were in confusion, the trembling scale of battle was turned by the sudden appearance of Bruce's camp-followers, on an upland behind the Scottish force. The wavering English, thinking them an army of reserve, fled in utter rout. Edward barely escaped capture. His loss is estimated at upward of 30,000 men, and 700 barons and knights.

When the son of James III. (afterward the clever and popular James IV., who fell at Flodden), was in rebellion, a fight occurred between the king's forces and those of the insurgent son, about a mile from Bannockburn. King James, who was a weak man, was bade by some of his followers to see to his own safety, and all clad in burnished armor he galloped along an unfrequented road. The mill still stands whence issued a woman to draw water. Alarmed by the startling apparition of a knight in full armor, she dropped her pitcher and fled into the mill. She, in turn, had scared the king's horse, which fell, and smothered in his heavy armor the bruised monarch lay as if dead. He was carried into the mill, and put upon a bed. Abjectly depressed and fearing immediate death, he told the people of the mill that he was the king, and prayed for a confessor. Thereupon a woman ran abroad, calling frantically for a priest to come and shrive the king. Friends and enemies soon gathered round. A man clothed in a dark mantle, like an ecclesiastic, said, "I am a priest," and followed the woman into the house. Bending down over the king as if to receive the whispered confession, he stabbed him over and over again, and vanished as mysteriously as he had come. The people of the mill had only the word of the man killed on their bed that he was their king. There was a mystery over the whole affair, and all that is absolutely known is that James III. was never seen again. The miller, apparently not knowing what to do with the body, cast it forth by the wayside. Thence it was borne to the gray abbey of Cambuskenneth, whose monks bestowed upon it royal obsequies.

BANQUO, Thane of Lochaber, from whom the royal house of Stuart was descended. He was murdered by Macbeth about 1046.

BARBADOES, the most eastern of the Caribbean Islands, was discovered by the Portuguese, but belongs to the English, who planted here their first settlement in these seas, in 1605. Longitude $59^{\circ} 41' W.$, lat. $13^{\circ} 5' N.$ It is fifteen miles long, and ten broad, containing an area of 106,500 acres. Population, 135,939. The climate is hot, but the air uncommonly salubrious; though hurricanes are unhappily not unfrequent. The soil is various and fertile, and greatly undulating. Bridgetown is the capital of the island. Barbadoes has often been sorely visited by tremendous hurricanes and sweeping conflagrations, and in 1854 the cholera carried off nearly seventeen thousand persons.

BARBARY STATES, are Tripoli, Tunis, Algiers, and Morocco, and lie on the northern coast of Africa, extending westerly from Egypt to the Atlantic. The snow-capped Atlas range intersects them almost from east to west. The tract south of the mountains extending to the great desert, is sandy and unproductive of any fruit but dates. Between the mountains and the Mediterranean lie fertile tracts, of which the climate is salubrious, the sea air tempering the heat, which is, however, of a degree to permit the growth of vegetation in April and May. Barley, wheat, figs, grapes, olives, oranges, pomegranates, melons, cypress, cedar, and almond trees, spring from the luxuriant soil. The sugar-cane, palm-tree, and lotus are abundant; and, in the early part of the spring, the country is bright and fragrant with roses, from which the purest attar is obtained. The domestic animals are valuable, and wild ones are found in abundance. Among the minerals of the mountains, are silver, copper, iron, lead, and antimony. Salt is abundant. The commerce between these and the European states on the Mediterranean, is by no means inconsiderable. In antiquity, the countries now composing the Barbary States, were distinguished for the activity of the inhabitants in commercial pursuits. The Carthaginians were the most wealthy and enterprising of the possessors of these places, but the Romans, Vandals, and Saracens did not permit commerce to be prostrated. Now,

BAR

a country capable of sixty millions of inhabitants, contains barely ten millions and a half. The patriotism of the Carthaginians induced them to labor for the promotion of the best interests of their country, but their power could not stand against that of a nation of victorious and hardy warriors. The Romans endeavored to make the most of their conquered provinces, and the vast influx of wealth, which conquest poured in upon them, subdued that stern spirit of temperance which had carried their banners in triumph through the troubled tide of war. Then came the Vandals and Saracens, who endeavored to render the possessions they wrested from the Romans as available as possible.

The present population of the Barbary States, is composed of Moors, Jews, who carry on the greater part of the business done here, Turks, and Arabs. The last are the descendants of the Saracenic conquerors of the country. Their habits are migratory, and they dwell in tents, ten or a hundred families gathering together, each family being under the government of a sheikh. They are generally at war with the Berbers, the descendants of the original inhabitants of the country. On these, and on the Turkish collectors of tribute, the Arabs wage war, and, when their hands are not full of personal quarrels, enter the service of any chieftain who may require them. The Moors are Moslems, indolent, unsociable, luxurious, superstitious, and uncultivated. They treat the Jews, whom they despise and hate, with great harshness. In addition to the races above enumerated, there are many negroes in Barbary.

BARCELONA, capital of Catalonia, and one of the largest cities in Spain, contains 140,000 inhabitants. It is built in the form of a crescent, and stands on the shores of the Mediterranean. The harbor is commodious, but rather difficult of access. In the middle ages, Barcelona was one of the most flourishing ports of Europe; its trade has dwindled to a trifle. Its citadel, built in 1714, has a secret connection with the fort of San Carlos; and it may be considered as a strongly fortified place. Until the twelfth century, Barcelona was under the government of its own counts, afterward united with the kingdom of Arragon, but withdrew and united to the French crown in 1640. In 1652, it again

submitted to the Spanish government, but was taken by the French in 1697. Its restoration was made at the peace of Ryswick. In the war of succession Barcelona adhered to the Archduke of Austria. It is famous for the resolute, but unavailing defense it made against the troops of Philip V., under the command of the Duke of Berwick, in 1714, when the sufferings of the inhabitants were unparalleled. In 1809, it was taken by the French, and remained in their power until 1814. In 1821, the yellow fever committed great ravages in it. The candor of a Barcelona galley-slave, is brought to remembrance on seeing the name of this city. The Duke of Ossuna, as he passed by Barcelona, having obtained leave from the king to release some slaves, went on board the galley, and, passing through the benches of slaves at the oar, asked several of them what their offenses were. Every one excused himself; one saying he was put there out of malice; another by the bribery of the judge; but all of them unjustly. Among the rest was a little sturdy fellow; and the duke asked him what he was there for? "Sir," said he, "I can not deny that I am justly sent here; for I wanted money, and so I took a purse from the highway to keep me from starving." Upon this, the duke struck him gently with a little stick he had in his hand, saying, "You rogue, what do you do among so many honest men? Get you gone out of their company."

BARCLAY, ROBERT (the celebrated Apologist for the Quakers), was born in 1648, at Gordonstown, county of Moray, Scotland, of an ancient and honorable family. The unsettled state of affairs induced his father to send him abroad, and he received the greater part of his education at Paris, under the guidance of his uncle, who was rector in the Scots college. His parents, fearful lest he might be perverted to Romanism, called him home. An accomplished scholar, and of great natural abilities, he rapidly rose to distinction. His family having become Quakers, he did likewise, and valiantly combated the violent prejudices against the sect, by several treatises in defense of its tenets. He was enthusiastic in his faith, and in 1776 accompanied William Penn in a tour of propagandism through England, Holland, and Germany. While at Amsterdam, he published his great

work on which he had been long engaged: "An Apology for the true Christian Divinity, as the same is preached and held forth by the people in scorn called Quakers." The original was in Latin, but it was speedily translated into most of the languages of Europe, and widely spread the author's reputation. On his return to Scotland he suffered severely from the cruelties practiced on the nonconformists. Latterly he was smiled on by Charles II. and James II. Through the royal favor he received a commission as governor of East Jersey, America, for life. On a visit to his native land in 1690, he was seized with fever, and died among his kinsmen at Ury in Aberdeenshire.

BARCLAY DE TOLLY, field-marshal of Russia, born 1755; director of the war against Napoleon in 1810; commander of the Russians at the battle of Leipzig 1812, and in France 1815; died 1818.

BARDS. The Bards, among Celtic nations, in battle, raised the war-cry of their people, and in peace, sang the exploits of their warriors. They appear to have acted, as the heralds, legislators, and priests of the free Celtic tribes of Europe, until the gradual progress of southern despotism and civilization drove them into the strongholds of the Welsh, Irish, and Scotch mountains, which echoed to the wild notes of their harps and patriotic songs. Their music and poetry kept alive the spark of national patriotism and enthusiasm, and inspired a stern resistance to the attacks of despotism. Hence Edward I. of England caused the Welsh bards to be slain, as the instigators of sedition. Ossian flourished in the Highlands in the third century; Merlin in the fifth. The poems of Ossian were gathered and translated by Macpherson, who was suspected of being their author. Of these poems, Bonaparte was passionately fond, and the influence they exerted upon his style, may be traced in many of his declamatory harangues.

BAREBONES, PRAISE GOD, a fanatical leather seller, by whom one of Cromwell's parliaments gained the nickname of 'Barebones Parliament.'

BARLOW, JOEL, was born at Reading, Conn., about 1755. He was educated at Dartmouth and Yale Colleges, where he distinguished himself by his poetical talent. In

the college vacations he served as a volunteer, and was present at the battle of White Plains. His first publication was a collection of minor pieces called "American Poems." After leaving college, he commenced the study of law, but afterward became a chaplain in the American army. His patriotic lays are said to have exerted an animating influence upon his countrymen. His "Vision of Columbus," which was afterward expanded into "The Columbiad," met with a flattering reception, both in America and England. The first edition was printed in 1787. About this time, in pursuance of the request of the general association of the clergy of Connecticut, he revised the psalms and hymns of Dr. Watts. To further the sale of these works, he became a bookseller, at Hartford, but soon quitted the business. In Europe, whither he went to effect the sale of lands in Ohio, he made himself conspicuous by the publication of prose and poetical works of a political nature. He was in France at the outbreak of the revolution and was intimate with the Girondist leaders. He also found time to write a mock heroic poem, in three cantos, called "Hasty Pudding," doubtless the happiest of his efforts. In 1795, he was appointed American consul at Algiers, concluded a treaty of peace with the dey, and procured the liberation of all American citizens who were held as slaves within that territory. By the conclusion of a similar treaty at Tripoli, he was enabled to redeem and send home all the American prisoners found there. In 1797, he returned to Paris, where, by commercial speculations, he amassed a very considerable fortune. In Paris, he lived in sumptuous style, and lost no opportunity of serving his countrymen. When the rupture between America and France took place, on account of the maritime spoliations of the latter, he endeavored to adjust the differences between them. After an absence of nearly seventeen years, he returned to his country early in the year 1805. In 1808, appeared his "Columbiad," a splendid volume, ornamented with engravings by London artists. It was so expensive a work that but few copies were sold. In 1811, Barlow was appointed minister plenipotentiary to the French government. In 1812, while repairing to Wilna, in order to

have a conference with the Emperor Napoleon, he died of an inflammation of the lungs, Dec. 22d, at Zarnawica, an obscure Polish village, near Cracow.

BARNEVELDT, JOHN D'OLDEN, grand-pensionary of Holland, born 1547, became one of the greatest diplomatists of his age, but by adopting the opinions of Arminius, was involved in the religious controversies which then distracted his country. By his influence in great part, Spain, in 1609, acknowledged the independence of the seven united provinces. Under frivolous charges he was beheaded in 1619.

BARNEY, JOSHUA, was born at Baltimore, July 6th, 1759. He was put into a retail shop at an early age, but manifesting a dislike for that employment, went to sea. At sixteen years of age, the illness of the captain and discharge of the mate of a vessel on board of which he was, put him in command of her, a station which he retained for eight months. At the commencement of the Revolution, he espoused the cause of the colonies, and was made master's-mate on board the *Hornet* sloop-of-war, Capt. William Stone. In 1775, the *Hornet* was concerned with Hopkins' fleet, in the capture of New Providence, one of the Bahama Islands. In 1776, in consequence of his conduct in the engagement between the American schooner *Wasp* and the English brig *Tender*, which was captured under the guns of two hostile vessels, he was presented with a lieutenant's commission, being then not seventeen years of age. Soon afterward, he became lieutenant of the *Sachem*, and assisted in the capture of an English brig, after a severe engagement. Being placed on board of a captured vessel as prize-master, Barney was taken, on his return from the West Indies, by the *Perseus*, but prisoners were exchanged in Charleston, S. C. In 1777, Barney was on board the *Andrew Doria*, and assisted in the defense of the Delaware. Having been ordered to Baltimore, to join the *Virginia* frigate, Capt. Nicholson, his vessel was run ashore by the pilot, and taken by the British. Barney was exchanged in 1778, but while commanding a small schooner, was again taken in Chesapeake Bay. In November, 1778, he sailed with Capt. Robinson in a ship from Alexandria, with a letter of marque. They

arrived at Bordeaux, after a warm action with the *Rosebud*, shipped eighteen guns and seventy men, and took on board a cargo of brandy. On their return, they captured a valuable prize. Barney reached Philadelphia in October, 1779. In the following year, he married Miss Bedford, and, a month afterward, was robbed of his whole fortune, on the road to Baltimore. Saying nothing of his misfortune, he returned to Philadelphia, and served on board the United States ship *Saratoga*, sixteen guns, Capt. Young. He was taken prisoner and sent to England, escaped, was retaken, again escaped, and reached Philadelphia, March, 1782.

Soon after, he received from the state of Pennsylvania the command of the *Hyder Aly*, a ship of sixteen guns. With a loss of four killed and eleven wounded, the *Hyder Aly* captured the ship *General Monk*, twenty guns, after an action of twenty-six minutes. On board the captured vessel were thirty killed and fifty-three wounded, fifteen out of sixteen officers being either killed or wounded. For this exploit Barney was presented with a sword by the legislature of Pennsylvania. The *General Monk* having been purchased by the United States, Barney was put in command of her, and sailed for France with sealed dispatches for Doctor Franklin, in November, 1782. He returned to America, after having been favorably received at the French court, with a large loan from the French king, a passport from the king of England, and assurances that the preliminaries of peace were signed. Barney then served in the French navy from 1795 till 1800, when, resigning the command of a French squadron, he returned to America. In 1812, on the breaking out of the war between England and the United States, he commanded the flotilla designed for the defense of the Chesapeake. He set out for Bladensburg, with a small force of marines and five pieces of artillery, in July, 1814, but found the Americans in full retreat. Notwithstanding, he made a most gallant opposition to the enemy, was wounded in the thigh, and taken prisoner. He received a sword from the corporation of Washington, and a vote of thanks from the legislature of Georgia for his gallant conduct. In 1815, he was intrusted with a mission to Europe. Commodore Bar-

ney died at Pittsburg, in 1818, while on his way to Kentucky, whither he had resolved to emigrate.

BAROMETERS. Torricelli, a Florentine, having discovered that no principle of suction existed, and that water did not rise in a pump because nature abhorred a vacuum, imitated the action of a pump with mercury, and made the first barometer, in 1643. Descartes explained the phenomena. Wheel barometers were contrived in 1668; pendant barometers in 1695; marine in 1700.

BARRAS, PAUL FRANCIS, Count de, was born about 1755, of a noble family of Provence, of whom it was proverbial to say, "Noble as the Barrases, old as the rocks." After a somewhat adventurous youth he returned from the East Indies to France, dissipated and reckless, ready to share in the troubles of 1789. He was one of the Jacobin club; and as a member of the convention in 1792 he voted for the king's death, and declared against the Girondins. In 1793, he was sent to the south of France, in command of the left wing of the army besieging Toulon, and there became acquainted with Napoleon, then a captain of artillery. He did not participate in the savage excesses of the revolutionists, and it was only his popularity that saved him from Robespierre. At the close of the reign of terror he was foremost in effecting Robespierre's downfall. He was appointed general-in-chief, called in Bonaparte to suppress revolt, and when the directory was established, Barras was a member of it. For a while he had great power, but the directory waned, and was supplanted by the consulate. Barras died in retirement, Jan. 29th, 1829.

BARRERE DE VIEUZAC, BERTRAND (1755-1841), styled by Burke, "the Anacreon of the guillotine," was a conspicuous character in the French revolution, and a colleague of Robespierre, Danton, &c. He voted for the death of Louis XVI., saying, "The tree of liberty only grows when watered by the blood of tyrants."

BARROSA, or BAROSSA, BATTLE OF, a long conflict in the Peninsular war, between the British army under Major-General Graham (afterward Lord Lynedoch) and the French under Marshal Victor, March 5th, 1811. The British at last forced the French to retreat,

leaving nearly 3,000 dead. The loss of the victors was 1,169 killed and wounded.

BARROW, ISAAC, D.D., an eminent English divine and mathematician, was born in London in 1650, and died in 1677. He was the predecessor of Newton as Lucasian professor of mathematics at Cambridge. His sermons are still held in high estimation. Charles II. called him "an unfair preacher, because he exhausted every subject and left nothing for others to say after him."

BARRY, JOHN, the first naval officer that held the rank of commodore in the service of the United States, was born in the county of Wexford, Ireland, in 1745. His father was a respectable farmer, and made no opposition to his son's wish to lead a seafaring life. Barry acquired a good practical education, and was between fourteen and fifteen years of age, when he came to the country of his adoption. The experience which he had gained in the merchant service, and the naval skill which he displayed, procured for him a commission in the continental navy on the breaking out of hostilities with Great Britain. He was appointed commander of the brig Lexington, sixteen guns, in February, 1776. After cruising with success, he was transferred in the same year, to the frigate Effingham, at Philadelphia, but the ice in the Delaware preventing immediate operations, Barry served on shore as aid-de-camp to General Cadwalader, and was present at the occurrences near Trenton. While the American vessels were shut up near Whitehill, he conceived the daring plan of descending the river in boats and capturing the supplies sent to the enemy. He succeeded in taking not only a valuable stock of provisions, but military stores, for which exploit he received the thanks of Washington. After the loss of his frigate, he was appointed to command the Raleigh of thirty-two guns, but ran her on shore in Penobscot Bay, on being chased by a large squadron. In February, 1781, he was in command of the Alliance, a frigate of thirty-six guns, and sailed from Boston, for L'Orient with Colonel Laurens and suite, on an embassy of importance to the court of Paris. After having taken several prizes, he was severely wounded in the action with the ship Atalanta, and her consort the brig Trepasa, which were taken after an en-

BAR

gagement of several hours. Throughout the war, Commodore Barry behaved with gallantry, and on the termination of hostilities he was appointed to superintend the building of the frigate *United States*, which he was to command. In the short naval war with France, Barry was of great service to this country, and he remained in command of the *United States* till she was laid up in ordinary. He died Sept. 13th, 1803, with the reputation of a virtuous, brave, and talented man.

BARRY, MARIE JEANNE DE VAUBERNIER, Countess du, was in early life a milliner, then a courtesan, and in 1759 succeeded Madame Pompadour as mistress of Louis XV. She was corrupt, even for that age of harlotry. Louis XVI. sent her into retirement. She died under the guillotine in 1793, at the age of forty-nine, uttering on her way to the scaffold piteous cries for mercy.

BARTHELEMY, JOHN JAMES, an eminent French writer, author of "The Travels of the Younger Anacharsis," born at Cassis in Provence, 1716, died April 30th, 1795.

BARTHOLOMEW, St., martyred Aug. 24th, A.D. 71. The festival was instituted in 1130. The horrid massacre of Bartholomew's day was perpetrated on the Huguenots of Paris, by the Catholic faction, during the reign of Charles IX., in 1572, according to secret orders from the king at the instigation of Catherine de Medicis, his mother. The massacre extended throughout the kingdom, and the victims were not fewer than seventy thousand. Women and infants were not spared. At Rome the news was received with every demonstration of joy, salutes of cannon were fired, a procession went by order of the pope to the church of St. Louis, and the "Te Deum" was chanted.

BARTLETT, JOSIAH, was born in Amesbury, Mass., in 1729. He commenced the study of medicine at the age of sixteen, and at the age of twenty-one the practice of it, in which he was highly successful. In 1754, he was a representative of the town of Kingston, N. H., in the provincial legislature, where he took the side of the minority, firmly opposing all violations of right. In 1775 he was deprived by the governor of his commission in the army, and of that of justice of peace. From the provincial congress, however, he received a regiment, and, as a delegate to the

Continental Congress, was the second signer of the declaration of independence. In 1780 he was appointed judge of the superior court of New Hampshire, and chief justice in 1790. In the same year he became president of New Hampshire, and its governor in 1793. He retired from office in 1794, and died in 1795.

BARTON, BERNARD, the 'Quaker poet,' a banker's clerk in England, 1784-1849.

BARTON, ELIZABETH, a country girl of Ad-dington, in Kent, commonly called the Holy Maid of Kent. She appeared in the reign of Henry VIII., with pretensions to miraculous powers, and was executed at Tyburn, April 30th, 1534, after a full confession of her imposture. It was at the time that the king was about to be divorced from his first wife, and the English church separated from Rome, and this girl was deluded by priests to warn Henry of the vengeance of Heaven if he persisted.

BARTON, WILLIAM, lieutenant-colonel in the American army during the Revolution, was a native of Providence, R. I. He headed the party which seized Gen. Prescott of the British army near Newport, July 10th, 1777. For this bold deed Congress gave Barton a sword and a large grant of land in Vermont. Some irregularity in the transfer of this land led to his imprisonment in Vermont for many years. La Fayette, on his visit to this country in 1825, heard of his incarceration, liquidated the claim, and set the veteran free. He died at Providence in 1831, aged eighty-four.

BARTRAM, WILLIAM, an American naturalist, born in Pennsylvania, 1739. He accompanied his father (John, also a learned botanist) on an expedition to explore the natural productions of East Florida, and in 1773 commenced an examination of the natural productions of the Floridas, and the western parts of Carolina and Georgia, at the request of Dr. Fothergill of London. This employment lasted nearly five years. In 1790 he published an account of his travels and discoveries. He belonged to many learned societies in Europe and America. He assisted Wilson in the commencement of his "American Ornithology." On the 22d of July, 1823, a few minutes after writing an article on the natural history of a flower, he ruptured a blood-vessel and died.

BASHKIRS, a tribe of Mongol origin, under Russian rule. They are Mohammedans, but

little civilized, and live by hunting, raising cattle and keeping bees. They intoxicate themselves on a beverage made from fermented mare's and camel's milk. They dwell about Orenburg on the Ural.

BASIL, St., an Eastern patriarch, called the Great, born 326, and made Bishop of Cæsarea, in Cappadocia, in 370. Here he died in 379. The rules for the regulation of the monastic life, which he prepared, were followed by all the orders in Christendom.

BASSOMPIERRE, **FRANÇOIS DE**, Marshal of France, enjoyed the favor of Henry IV. and Louis XIII., and was one of the most amiable and accomplished men of their courts. He was born in 1579 and died in 1646. He served in a military and civil capacity. Having become enamored of the charms of the daughter of the Constable de Montmorency, he relinquished his hopes when he discovered that he was the rival of Henry IV.

BASTILE, a royal castle commenced by Charles V. for the defense of Paris against the English, and completed in 1383. It was of great strength. It was afterward used as a state prison, like the Tower of London, and became the scene of deplorable suffering and frightful crimes. Prisoners were confined by the authority of *lettres de cachet*, that is, letters of arrest, written in the king's name, with blanks for the names of individuals, which were to be filled up by the ministers who possessed these letters. Heads of families among the nobility, who wished to confine any unworthy member of the family, claimed the privilege of confinement by a *lettre de cachet*, and this privilege was next claimed by the ministers of government, to be used for the punishment of refractory servants and others. It will easily be conjectured that it was not long before unprincipled ministers abused this right by imprisoning worthy persons, who, in the actual discharge of their duties, had incurred the displeasure of men of power by thwarting their interests. In fact the use of the *lettres de cachet* was the mainstay of despotism, and used not merely by the throne, but by many of its satellites. Men were imprisoned for offenses too trifling to be registered, and remained thirty or forty years in the Bastile, or even till death, without any examination into the charges on which they were imprisoned. At the commencement of

the French revolution, the attention of the people was called to this enormity. In July, 1789, they assembled in force and attacked the Bastile, which surrendered after a few hours. The governor and other officers were murdered. The prisoners were feasted in Paris, and the building was completely demolished.

M. Mercier has given an interesting account of a prisoner who was confined for some expressions of disrespect toward Louis XV. He was set at liberty by the ministers of Louis XVI. He had been in confinement for forty-seven years, and had borne up against the horrors of his prison-house with a manly spirit. His thin, white, and scattered hairs, had acquired an almost iron rigidity. The day of his liberation, his door was flung wide open, and a strange voice announced to him his freedom. Hardly comprehending the meaning of the words, he rose and tottered through the courts and halls of the prison, which appeared to him interminable. His eyes by degrees became accustomed to the light of day, but the motion of the carriage which was to convey him to his former abode appeared unendurable. At length, supported by a friendly arm, he reached the street in which he had once resided, but on the spot formerly occupied by his house, stood a public building, and nothing remained in that quarter that he recognized. None of the living beings of the vast city knew him; his liberty was a worthless gift, and he wept for the solitude of his dungeon. Accident brought in his way an old domestic, a superannuated porter, who had barely strength sufficient to discharge the duties of his office. He did not recognize his master, but told him that his wife had died of grief thirty years before, that his children had gone abroad, and that not one of his relations remained. Overcome by this intelligence, the captive supplicated the minister to take him back to the dungeon from which he had been liberated, and the man of office was moved to tears by his misery. The old porter became his companion, as he was the only person who could converse to him of the friends he had lost, but so wretched was the isolated condition of the victim of the Bastile, that he died not long after his liberation.

BATH, ORDER OF THE. Its origin is uncertain. The ancient Franks, when they

conferred knighthood, bathed before they performed their vigils. Henry IV. instituted a degree of knighthood of the Bath, and on his coronation in the Tower, he conferred the order upon forty-six esquires, who had watched the night before and had bathed. To each of these he gave green side-coats reaching down to their ankles, with straight sleeves, and furred with miniver; they also wore upon their left shoulder two cordons of white silk, with tassels hanging down.

It was usual in former times to create knights of this order from the flower of the nobility, who had not previously received the order of knighthood, at the coronation of kings and queens, and at their marriages; sometimes also, when their sons were invested Prince of Wales, or dukes, or when they solemnly received the cincture or military girdle of knighthood; and that accompanied with many ceremonies, which at present are for the most part disused. After the coronation of Charles II., the order was neglected until 1725, when it was revived by George I., who fixed the number of knights at thirty-eight, the sovereign and thirty-seven knights-companions.

By statute, January 2d, 1815, it was ordained that, "for the purpose of commemorating the auspicious termination of the long and arduous contest in which this empire [Great Britain] has been engaged," the order should be composed of three classes.

First class: to consist of Knights Grand Crosses; number not to exceed seventy-two, exclusive of the sovereign and princes of the blood royal, one-sixth of which may be appointed for civil and diplomatic purposes. The remainder must have attained the rank of major-general in the army, or rear-admiral in the navy, and must have been previously appointed to the second class.

Second class: Knights Commanders; number not to exceed, upon the first institution, one hundred and eighty, exclusive of foreign officers holding British commissions, of which not exceeding ten may be admitted as honorary knights commanders. In the event of actions of signal distinction, or future wars, the number of this class may be increased. To be entitled to the distinctive appellation of knighthood; to have the same rights and privileges as knights bachelors,

but to take precedence of them; to wear the badge, &c., pendent by a ribbon round the neck, the star embroidered on the left side. No officer can be nominated, unless he shall have received a medal or other badge of honor, or shall have been especially mentioned in dispatches in the *London Gazette*, as having distinguished himself in action. No person is now eligible to this class under the rank of major-general in the army, or rear-admiral of the navy.

Third class: Companions of the Order; not limited in number; they are to take precedence of esquires, but not entitled to the appellation, style, &c., of knights bachelors. To wear the badges assigned to the third class, pendent by a narrow red ribbon to the button-hole.

Motto of the order, *Tria juncta in uno*—the Trinity.

BATTHYANY, Count CASIMIR STRALTMAN, a Hungarian revolutionist, whose large estates were confiscated. He died in exile and poverty, at Paris, July 12th, 1854.

BATTHYANY, LOUIS, a Hungarian nobleman, who was seized by the Austrians, sentenced to death by an unjust court-martial, and shot Oct. 6th, 1848.

BATUTA, IBN, an Arab Moor of Tangiers, was one of the greatest travelers that ever lived. Between 1324 and 1354, he wandered from his native place to Timbuctoo, the Ural Mountains, Ceylon, and the eastern coast of China, visiting all the countries between these extreme points.

BAUTZEN, or BUDISSIN, capital of Upper Lusatia, situated on a height washed by the Spree. It contains about 12,000 inhabitants. The Catholics and Lutherans worship together in the large cathedral, divided by a screen of trellis-work, the former possessing the altar and the latter the nave. On the 20th and 21st of May, 1813, Napoleon here defeated an army of Prussians and Russians, whose masterly retreat left him but little advantage. In the evening of the 21st the field of battle presented a grand but terrible spectacle, more than sixteen thousand men being stretched in their last sleep, and the scene illuminated by the red glare of thirty burning villages.

BAVARIA, a kingdom of Germany, a waste in the time of Cæsar, and a Roman

province (Vindelicia and Noricum) under Augustus. At the end of the fifth century, a confederacy was formed by several German tribes, under the name of Boioarians, Ratisbon being their chief seat. Their country was called Noricum, and was never subject to the Ostrogoths. They became subject however to the Franks, when the latter gained possession of Rætia. Otho, Count of Wittelsbach, who after the death of Charlemagne, and the occurrence of convulsions incident to the division of the empire, gained possession of Bavaria, died in 1183. Louis I., his successor, enlarged his territories, and added the palatinate of the Rhine. Bavaria was divided into Upper and Lower, in 1255; Maximilian I., a distinguished leader of the league against the Protestants, gained the upper palatinate in 1623. He died in 1651. After the battle of Blenheim, the emperor treated Bavaria as a conquered country. Charles Albert of Bavaria was elected emperor of Germany in 1742, but in 1743 the states of Bavaria were constrained to swear homage to Maria Theresa, and in the war, Charles's fortunes sank rapidly, and he was forced to abandon Bavaria. His son and successor, Maximilian Joseph III., assumed, like his father, the title of Archduke of Austria, but making peace with Austria, in 1745, received from Francis all the Bavarian territories which had been conquered by that power. Maximilian Joseph devoted himself to the promotion of the interests of his people, and favored their industry by every means in his power; the foundation of the academy of sciences at Munich proves his liberality, and the extension of his views.

By the treaties of the house of Wittelsbach, and by the terms of the peace of Westphalia, the right of succession reverted to the palatinate, on the extinction of the Wittelsbach line in the person of Maximilian Joseph, who died 30th of December, 1777, but the claims of Austria to Lower Bavaria were enforced by arms, and Charles Theodore, in 1778, was persuaded formally to renounce the Bavarian succession. The Duke of Deux-Ponts, however, the presumptive heir, relying on the encouragement afforded by Frederick II. of Prussia, refused to acknowledge the surrender of the succession. This was the cause of the Bavarian war of succession, which was ter-

minated by a treaty of peace, signed May 13th, 1779, in consequence of war being declared against Austria by Russia, and Bavaria was secured to the elector palatine of Bavaria. The Austrians yet coveted the country, and, in 1784, Joseph II. proposed to exchange the Austrian Netherlands for Bavaria, with the sum of three million florins for the elector and the Duke of Deux-Ponts, and the title of King of Burgundy. This, however, was formally refused by the Duke of Deux-Ponts, who declared he would never barter away the inheritance of his ancestors. Charles Theodore revived the order of Jesuits, and restrained the freedom of the press, and on the breaking out of the French revolution, the elector sent troops to aid the empire. In 1796 Bavaria became the theatre of war. Maximilian Joseph, Duke of Deux-Ponts, now came into possession of Bavaria. At the beginning of the war of 1805, the elector joined the French with 30,000 troops, and at the peace of Presburg received from Napoleon a vast addition of territory, and the title of king. A matrimonial alliance connected the interests of Bavaria still more closely with those of France. Bavaria took part against Prussia and Austria, in 1806 and 1809. In the war of 1812 between France and Russia, Bavaria brought 30,000 men into the field, and but a few fragments of her fine army survived the expedition to Moscow. In 1813, the King of Bavaria abandoned the confederation of the Rhine and turned his arms against Napoleon. In 1825, Louis Charles succeeded to the throne, and reigned till 1848, when he abdicated in favor of his son Maximilian Joseph II. His abdication was mainly caused by his attachment to the celebrated Lola Montez, whom he had created Countess of Landsfelt. She was expelled from the kingdom.

The kingdom of Bavaria is among the principal of the secondary continental powers. Bavaria, exclusive of the province west of the Rhine, is bounded north by Hesse-Darmstadt, Hesse-Cassel, and Saxony; east and south by Austria, and west by Wurtemberg, Baden, and Hesse-Darmstadt. The kingdom contains 28,435 square miles, and had in 1855, 4,541,556 inhabitants. It is a mountainous country, having, however, many extensive plains and valleys wide and fertile. Agri-

culture is the chief branch of industry. The soil is mostly owned in small estates. Bavaria's most important manufacture is beer, of which more than ninety-six million gallons are yearly brewed. Coarse linens are largely woven by the country women. Marriage is forbidden without permission from the authorities, who do not grant it unless there is sufficient probability that adequate means for maintaining a family will be possessed. Liberty of conscience, and equality in civil rights, are guaranteed to both Protestant and Romanist. Education is supervised by the government, and no children are excused attendance at the schools, except such as have received permission for private tuition. No printing-press can be established without the previous sanction of the king. The government is a limited monarchy. There are two legislative chambers. Bavaria has a right of way by a military road through Baden, which gives direct access to its dominions on the Rhine.

Munich (München) is the capital of Bavaria, and perhaps the handsomest city in Germany. Its population in 1853 was 127,385. The city is indebted mostly to the ex-king Louis for its splendid buildings and its treasures of ancient and modern art. It has a library of 400,000 volumes and 22,000 MSS. Here lithography was invented by Sennefelder, in 1796. Fraunhofer's astronomical and optical instruments are unsurpassed. Munich surrendered to the Swedes and German Protestants, under Gustavus Adolphus, in 1632; in 1704 it fell into the hands of the Austrians. In 1741, it shared the vicissitudes of the war, and in 1796, the French army under Moreau obliged the elector to make a separate treaty. In 1800, Moreau again occupied Bavaria, and secured his superiority by the victory of Hohenlinden; and from that time, to 1813, Bavaria remained in alliance with the French.

Nürnberg (incorrectly called Nuremberg), an ancient city in the province of Franconia, once a flourishing member of the Hanseatic league, has 45,000 inhabitants. This "quaint old town of toil and traffic, quaint old town of art and song," was in the olden time one of the chief marts of Europe. It received the rich merchandise of Italy, and forwarded it

to the north. Four hundred years ago its artisans in metals were famous.

"Here when Art was still religion, with a simple
reverent heart,
Lived and labored Albrecht Dürer, the Evangel-
ist of Art."

Here sang Hans Sach, the cobbler bard. Here were invented watches (first called Nürnberg eggs), the air-gun, the clarionet, brass, and the lock for fire-arms. Nürnberg continued a free city till 1803, when it was parceled to Bavaria.

Augsburg, population 36,000, is a town of important trade and manufactures. Here dwelt the great family of the Fuggers. In the best days of Augsburg, the front of every respectable dwelling shone with the glories of the pencil, and the whole Scriptures might be studied in these fresco paintings out of doors. The first tulip known in the west of Europe, was brought to Augsburg from Constantinople in 1557. Here paper was made from rags as early as 1330. Printing was early established here, and is now largely carried on. The *Allgemeine Zeitung*, called also the *Augsburg Gazette*, the most widely circulated journal in Germany, is printed here. Augsburg was a free imperial city from 1276 to 1806. Melancthon drew up the celebrated confession of faith protesting against the abuses of the church of Rome, whence the Lutherans were called Protestants. By him and Luther, in 1530, it was presented to the Emperor Charles V. in the palace of the Bishop of Augsburg, whence it is called the confession of Augsburg. Here in 1555 was signed the celebrated treaty by which religious liberty was secured to Germany.

BAXTER, RICHARD, a noted divine among the English nonconformists, was born at Rowton, Shropshire, November 12th, 1615. At first connected with the established church, he became a dissenting minister. Though he sided with parliament during the civil war, he did not approve of the execution of the king and other extreme action of the day. During the persecution of the nonconformists in the reign of James II., Mr. Baxter was tried and abused by the infamous Jeffreys, but the king remitted the fine imposed upon him. He was a volumi-

nous author upon theological and religious subjects. "The Saints' Everlasting Rest" and "A Call to the Unconverted" are still much read. He died in 1691.

BAYARD, JAMES A., an eminent American lawyer and politician, born at Philadelphia, in 1767. He was educated at Princeton College. He represented Delaware in both houses of Congress, and distinguished himself by his patriotism and ability in debate. He was sent to Europe as one of the commissioners to treat for peace in 1813, but after the treaty of Ghent, the state of his health induced him to return home with all possible speed. He accordingly embarked at Havre, in May, 1815, arrived in the United States, and died in the bosom of his family.

BAYARD, JOHN, an eminent patriot in our Revolution, born in Maryland, 1738, died in 1807.

BAYARD, PIERRE DU TERRAIL, Chevalier de, called *Le chevalier sans peur et sans reproche* (the knight without fear and without reproach,) was born near Grenoble, 1476, of one of the most ancient families in Dauphiny. Educated under the eye of his uncle, the Bishop of Grenoble, he early displayed those traits for which he was afterward so much beloved and celebrated. Modest, pious, affectionate, tender, brave, and honorable, all who beheld him augured well of his future career. Charles VIII., who saw him at Lyons, managing a stately steed with ease and grace, begged him of the Duke of Savoy, whose page he then was, and committed him to the care of Paul of Luxemburg, Count de Ligny. He won his earliest laurels in tournaments, but he was destined to shine upon redder fields of glory, and at the age of eighteen accompanied Charles VIII. to Italy, and took a standard at the battle of Verona. When, in the reign of Louis XII., he was taken prisoner by following some flying adversaries into Milan, Ludovico Sforza generously returned him his horse and arms, and dismissed him without ransom. His exploit at the bridge over the Garigliano was worthy of a Roman in Rome's best days, for like Horatius Cocles he gallantly defended the bridge against the victorious Spaniards, until the French army were safe. On account of this action, he had for his coat of arms a porcupine, with the following motto: *Vires agminis unus habet*,

'alone he has an army's strength.' When Julius II. declared himself against France, Bayard hastened to the assistance of the Duke of Ferrara. Defeated in his attempt to take the pope prisoner, he yet sternly refused to listen to an offer to betray him. He was wounded in the assault on Brescia, and carried into the house of a nobleman who had fled, leaving his wife and two daughters exposed to the brutal insults of a licentious soldiery. Bayard protected them faithfully, refusing their offers of reward, and returning, as soon as he was cured, to the French camp, whose stay and hope, Gaston de Foix, had been killed in consequence of neglecting the advice of Bayard. The latter received a second wound in the retreat from Pavia, which it was thought would prove mortal. On learning this, the gallant chevalier said, in the true spirit of a warrior, "I grieve not to die, but to die in my bed like a woman."

The military misfortunes of the latter part of the reign of Louis XII. did not cast a shadow on the glory of Bayard, but his personal bravery was conspicuous even in reverse. He was ever the foremost in the charge, and the last in the retreat. Francis I. had no sooner ascended the throne, than he gave proof of the confidence he reposed in Bayard, by sending him into Dauphiny to open a passage for his army over the Alps, and through Piedmont. Bayard captured Prosper Colonna, who lay in wait for him, hoping to surprise him. Elated with this success, in the battle of Marignano, to which it was a prelude, he performed prodigies of valor by the side of the king, who emulated the bravery of the gallant chevalier. After this day of glory Francis received knighthood from the sword of Bayard. Bayard defended the town of Meziere, when Charles V. invaded Champagne, with such spirit and resolution, that at Paris he was called the savior of his country. He received from the hands of the king the order of St. Michael, and a company of a hundred men to command in his own name, an honor never before conferred but on princes of the blood. Bayard reduced to obedience the revolted Genoa, but the fortunes of the French changed, and they were obliged to retreat. Bonnivet the commander, his rear-guard beaten, and himself severely wounded, committed

the care of the army to the gallant Bayard. Compelled to pass Sesia in the presence of a superior force, Bayard, the last man in the retreat, was combating the Spaniards, when a stone from a blunderbuss shattered his back-bone, and he exclaimed, "Jesus Christ, my God, I am a dead man!" He was removed at his request, under the shadow of a tree; "From this spot," said he, "I can behold the enemy." He confessed his sins to his squire, and, in default of a crucifix, kissed the hilt of his sword. Bidding a farewell to his friends, his king, and his country, he died, surrounded by admiring and weeping friends and enemies, April 30th, 1524. His enemies, who retained possession of the body, embalmed it, and restored it to his countrymen, by whom it was consigned to a tomb in a church of the Minorites, near Grenoble. A simple bust, and a Latin inscription, mark the place of his repose.

BAYLE, PIERRE, a French writer, born at Carlat, in Languedoc, in 1647. He died, pen in hand, in 1706, at the age of fifty-nine. His "Historical and Critical Dictionary" is a grand monument of the logic and learning for which the author is so celebrated. He modestly called it "an ill-digested compilation of passages tacked together by the ends." Voltaire calls him "the first of logicians and skeptics," but adds, that his warmest apologists can not deny, that there is not a page in his controversial writings, which does not lead the reader to doubt, and often to skepticism. He himself says, "My talent consists in raising doubts; but they are only doubts."

BAYONNE, a fortified city in France, about two miles from the Bay of Biscay, at the confluence of the Nive and Adour. It is in the department of the Lower Pyrenees, and was formerly the capital of a district of Gascony. Population, 17,000. Bayonne has considerable commerce with Spain, and is much engaged in the cod and whale fishery. Its hams, wines, brandies, and chocolate are famous. It is said that in 1564 Bayonne was the scene of an interview between Catherine de Medici and the Duke of Alva, at which was planned the murder of the Huguenots, carried into effect seven years afterward on St. Bartholomew's day. When the massacre took place, however, D'Orchez, commandant of Bayonne, refused to execute the orders of

the court, returning this noble answer: "Sire, I have communicated your majesty's letter to the garrison and inhabitants of this city. I have found only brave soldiers and good citizens, and not a single executioner." At Bayonne, in 1670, the bayonet was invented, whence its name. Here in 1808, Napoleon met the King of Spain, Charles IV., and his son Ferdinand, Prince of Asturias, when they signed an agreement by which they and the king's other children renounced their rights in the European and Indian territories of Spain, in favor of Bonaparte. During Wellington's invasion of France from Spain, the neighborhood of Bayonne was the scene of desperate fighting, Dec. 10th, 11th, and 13th, 1813. Soult then retired within the intrenchments of the city, and it was invested by Lieut.-Gen. Sir John Hope, Jan. 14th, 1814. On the morning of April 14th, Soult made a sortie with much success, though driven back in the end. Sir John Hope was wounded and made prisoner. News of Napoleon's abdication arrived shortly after. A treaty was signed at Bayonne, Dec. 2d, 1856, establishing the frontier line between France and Spain.

BEATON, DAVID, Archbishop of St. Andrew's in Scotland, and cardinal, born in 1494. On the coronation of the young Queen Mary, he renewed his cruel persecutions of the heretics, and among others, brought George Wishart, the famous Protestant preacher, to the stake. Seated at his window, he beheld with fiendish joy the cruel sufferings of this estimable man. He was openly licentious, and, although endowed with some good qualities, was disgraced by flagrant vices. He was murdered in his chamber, May 29th, 1546.

BEATTIE, JAMES, a miscellaneous writer, and pleasing poet, born at Lawrencetown, in Kincardine county, Scotland, in 1735, died in August, 1803. The poem by which he will be remembered as a follower of the muses, is the "Minstrel," the first book of which was published in 1771. He wrote an "Essay on Truth," and some other metaphysical works, in which, however, he did not shine so much as in his poems.

BEAUFORT, HENRY, cardinal, half-brother of Henry IV. of England, Bishop of Lincoln, afterward of Winchester, and chancellor of

the kingdom. In 1431, he crowned Henry VI., in the great church of Paris. He is strongly suspected of having directed the assassination of Humphrey, Duke of Gloucester. He was one of the judges of Joan of Arc. He died in 1447.

BEAUHARNAIS, EUGENE DE, son of Viscount Beauharnais and Josephine, born 1781. He was a general under Napoleon; viceroy of Northern Italy, 1805; married to the daughter of the king of Bavaria, 1806; made Duke of Leuchtenburg by his father-in-law; died in 1824.

BEAUHARNAIS, HORTENSE EUGENIE DE, daughter of Josephine, was born at Paris 1783, and married to Louis Bonaparte in 1802. This forced union proved unhappy to both husband and wife. They were separated, after Hortense had borne three sons, the eldest two of whom died early, and the other has become famous as Louis Napoleon. Hortense joined her mother in retirement at Malmaison, but the speedy fall of Napoleon left her a desolate wanderer, till at last the Bavarian king gave her a refuge at Augsburg. She died Oct. 5th, 1837.

BEAUMARCHAIS, PIERRE AUGUSTIN CARON DE, artist, politician, projector, painter, merchant, and dramatist, was the son of a watchmaker, and born at Paris, in 1732. He was teacher of the harp to the daughters of Louis XV., and by a wealthy marriage, laid the foundation of his immense fortune. His "Eugene," "Mère Coupable," "Mariage de Figaro," and "Barbier de Seville," keep possession of the stage in several languages. His "Memoirs" exhibit Beaumarchais in his true character. He increased his fortune by his contract to supply the United States with military stores, during the Revolutionary war. He died in 1799.

BEAUMONT, FRANCIS, and FLETCHER, JONN, two English dramatic writers of great power, who united their interests and wrote conjointly. Beaumont, born in 1585, died in 1616; Fletcher, born in 1576, died in 1625, of the plague, in London. They used to frequent ale-houses, as Shakspeare is said to have done, for the sake of studying human nature, and were once arrested in a very dramatic manner. They were disputing in an ale-house about the fate of a king in one of their plays, one insisting upon his assas-

sination, the other on his preservation. Some of their uninitiated auditors procured their arrest, imagining that a conspiracy against the reigning sovereign was on foot.

BECCARIA, CESAR, Marquis of Bonesana, author of a celebrated treatise on crimes and punishments, born 1720, died November, 1794.

BECKET, THOMAS A., a celebrated prelate, was born in London, in 1117. He was the son of a merchant who, while a prisoner in the East, is said to have engaged the affections of a Saracen lady; she followed the merchant to London, where he married her. Becket's advancement was rapid: he was a favorite with Henry II., who made him tutor to his son in 1158, and heaped spiritual and temporal honors upon him. He rivaled royalty in the splendor of his living. On his election to the see of Canterbury, in 1162, he resigned the office of chancellor, and assuming all the arrogance of a sovereign pontiff, lent himself to oppose the reformation intended by the king among the clergy. Their enormities had disgusted the whole kingdom; and the archbishop screened the most abandoned, under the pretext that they were not amenable to the civil power. After a series of hostilities between the king and Becket, many references to the pope, excommunications and anathemas, reconciliations and fresh quarrels, on the archbishop's refusal to withdraw his excommunication of some bishops, which was felt to lie very hard upon them, the king, in a fit of passion, reproached his courtiers for permitting him to be so long and so ignobly tormented. On this, four knights went down to Canterbury, and killed Becket before the altar as he was at the vesper service, December 29th, 1170. The perpetrators of this deed were finally admitted to penance, but the king was compelled to expiate his guilt at the tomb of the archbishop, who was canonized two years after his death. He became a popular saint, and miracles were abundant at his tomb, which was much visited by pilgrims till the reformation. His bones, which had been enshrined in gold, and set with jewels, in 1220, were taken up and burned in the reign of Henry VIII., 1539.

BECKFORD, WILLIAM, was the son of Alderman Beckford, the lord mayor of London

who bearded George III. on his throne. At nineteen he wrote in French the gorgeous romance of "Vathek." He inherited a princely estate. At Cintra in Portugal he reared a palace for his residence. Abandoning this, he built on his estate in Wiltshire, the magnificent Gothic structure of Fonthill Abbey, where he realized those lavish splendors which he had imagined in his oriental romance. His last years were spent at Bath, where he died in 1844, in his eighty-fourth year.

BEDÉ, commonly called the Venerable Bede, was born in the neighborhood of Wearmouth, in the year 672 or 673, and pursued his studies in the monastery of St. Peter, Wearmouth. He died in May, 735. His "English Ecclesiastical History," his greatest and most popular work, was translated by Alfred the Great. He was modest and moderate, and although a monk, wished to have the number of monasteries lessened. Bede led a life of pious and studious retirement, and on the day of his death, he was dictating a translation of the gospel of St. John to his amanuensis. "Master," said the young man, as he raised his eyes, "there is but one more sentence wanting." Bede bade him write rapidly, and when the scribe said, "It is done," replied, "It is indeed done," and expired a few minutes afterward in the act of prayer.

BEDFORD, JOHN, Duke of, the third son of Henry IV. of England. In 1422, he commanded the English army in France, and the same year was named regent of that kingdom for Henry VI., whom he caused to be crowned at Paris. He defeated the French fleet near Southampton, entered Paris, beat the Duke of Alençon, and made himself master of France. The greatest stain upon his character, is his cruelty to the Maid of Orleans, whom he caused to be burnt in the market-place of Rouen. He died at Rouen, in 1435.

BEETHOVEN, LUDWIG VON, was born at Bonn, Dec. 17th, 1770. His musical education began at the age of five, under his father, who was a tenor singer in the electoral chapel of Cologne. While yet a youth, his success was foretold by Mozart. At one time he enjoyed the instruction of Haydn. The last twenty years of his life he was afflicted

by severe deafness, which conspired to make him distrustful and taciturn. He made his residence at Vienna. He died March 26th, 1827. His musical compositions are well known and very beautiful.

BEGUINES, females who bound themselves to obey the rules of an ecclesiastical order, forming societies for purposes of devotion and charity, living together in beguinages, without taking the monastic vows. They originated in Germany and the Netherlands, in the thirteenth century, and some of their societies still exist in the Netherlands. Some of these nuns once fell into the error that they could in this life arrive at the highest moral perfection, even to impeccability.

BEHRING, VITUS, a Dane by birth, and captain in the Russian navy, who in the year 1728, explored the coasts of Kamtschatka, and proved that Asia was disjoined from America. He died on a desolate island of the Aleutian group, during a voyage of discovery, December 8th, 1741. The strait between Asia and America, has received the name of Behring's Straits from him. The uninhabited island on which he died, is called Behring's Island.

BELGÆ, a collection of German and Celtic tribes, who inhabited the country extending from the Atlantic to the Rhine, and from the Marne and Seine, to the southern mouth of the Rhine, which is united with the Meuse. Cæsar has borne witness to the bravery of the Belgians, particularly of those who resided on the northern frontiers of Germany, declaring that they were the most valiant of the Gauls. When Cæsar invaded Britain he found the south of the island occupied by the Belgæ, who had crossed over and driven the original inhabitants into the interior.

BELGIUM, the name of that part of the Netherlands which formerly belonged to Austria. It was a part of the kingdom of Holland till 1830, when the Belgians revolted, and it was recognized as a separate kingdom. Prince Leopold of Saxe Coburg, widower of Princess Charlotte of England, and uncle of Queen Victoria, was elected to the crown, which had been refused by Louis Philippe for his son, the Duke of Nemours. The area of the kingdom is nearly 11,400 square miles, and in 1856 its population was 4,530,228. It comprises the provinces of Antwerp, Brabant,

BEL

West Flanders, East Flanders, Hainault, Liege, Limburg, Luxenburg, and Namur. It is generally a low and level country, and its short sea-coast of forty miles is carefully embanked against the encroachments of the sea. The principal rivers are the Maas, or Meuse, and the Schelde. It has not such a network of canals as Holland, but there are many, both for draining and for commercial intercourse. The country is everywhere intersected by wide and well-kept main roads, either paved or macadamized, having commonly a double row of lime-trees. Belgium was the first of the continental states to adopt a general system of railways. Coal and iron are extensively mined. The grains are extensively grown, and Belgian flax is of high repute. The heavy Flemish horses are in much demand for draught, and are largely exported. The Flemings were once great weavers in woollens, but the tyranny of Spain drove the artisans away. Still, woollens are an important branch of industry. Linens, cottons, and silks are made. The laces of Brussels and Mechlin are famous. The inhabitants of the northern provinces of Belgium, comprising about two-thirds of the population of the kingdom, are mostly Flemings, speaking the Flemish tongue. Those of the southern provinces are French, speaking on the western side the Picard and on the eastern the Walloon dialect of the French language. The Belgians are mostly Catholics, but freedom is enjoyed by all religious persuasions, and the Catholic and Protestant clergy are both supported from the public treasury. The government is a limited constitutional monarchy. There are two legislative chambers, both elective. The king may confer titles of nobility, but no peculiar privileges are granted thereby, since all distinction of orders is expressly repudiated by the constitution. The French language is used in all public affairs. The French decimal system is also adopted for money, weights, and measures.

The capital is Brussels (Bruxelles); population 210,400. It is a miniature of Paris, and one of the best built cities in Europe. Its laces and carpets have long been noted. St. Gery, Bishop of Cambray, founded it in the seventh century. In 1695, during its memorable bombardment by Marshal Villeroy, fourteen churches and four thousand houses were

destroyed. It was taken by Marshal Saxe in 1746, and again by Dumouriez in 1792. Till 1814 it was held by France. The Hotel de Ville of Brussels is the finest of all municipal palaces. Its Gothic tower, three hundred and sixty-four feet high, is surmounted by a gilded copper statue of St. Michael, seventeen feet tall, which serves as a weathercock.

Antwerp is the great port of Belgium. It is strongly fortified, containing several beautiful public buildings, and 90,000 inhabitants. Its manufactures are important, especially its black silks and velvets, and recently its commerce has been flourishing. Antwerp in the eleventh century was a small republic. The spirit of its inhabitants raised it to the rank of the first commercial city in Europe. In 1585 it was taken by the Prince of Parma, after a long and memorable siege, and the exactions of Spain drove its trade to Amsterdam. In the beginning of the seventeenth century, the Schelde, on which it is situated, was crowded with vessels; but its harbor was closed by the peace of Westphalia in 1648. This completed the ruin which the siege under the Prince of Parma commenced. When Napoleon declared the Austrian Netherlands free, he prevented the revival of its commerce by making Antwerp a military depot. In 1814, Carnot gallantly defended the city against the English and Saxons. In 1832, the Dutch garrison under General Chassé, held out for a long time against the French and Belgians under Marechal Gerard, but the latter were victorious. Rubens was a native of Antwerp, and here are preserved his finest paintings, as well as many masterpieces of Vandyck and other Flemish painters. Ghent (Gend) the capital of East Flanders, is a handsome city of 103,729 inhabitants, and the seat of thriving manufactures. Its origin dates to the fifth century. Here the third son of Edward III. of England was born, and hence called John of Gaunt. Here also Charles V. of Spain was born. The woolen manufacture was early established here. With wealth and freedom the men of Ghent waxed turbulent, and led on first by Jacques van Artevelde, and afterward by his son Philip, they gave many a proof of their sturdy valor and their strong purses in brunts with the counts of Flanders and the dukes of Burgundy. Its population was once greater than now. Pa-

cification of Ghent, signed Nov. 8th, 1576. Peace concluded here between Great Britain and the United States, Dec. 24th, 1814. Liege, on the Maas, has 76,500 inhabitants. Its staple manufacture is that of fire-arms, and it owes its prosperity to the valuable coal fields adjacent. On account of the number of its churches and convents, it was once termed "the paradise of priests, the purgatory of men, and the hell of women." Bruges, the capital of West Flanders, has a population of 49,457. It was to commemorate the high perfection which the woolen manufacture had reached in Bruges, that Philip the Good in 1430 instituted the order of the Golden Fleece. While under the dominion of the dukes of Burgundy, Bruges became a principal emporium of the commerce of Europe, the great centre of the English wool trade, and the connecting link between the Hanseatic league and the rich republics of Italy. Then it had a population of 200,000. Bruges was famous for its carillons, or chimes, as early as 1300. They are the finest in Europe, and are played by machinery every quarter-hour.

BELGRADE ('white city'), an important commercial city of Servia, with 50,000 inhabitants, situated at the confluence of the Save with the Danube. It is well fortified, commanding the Danube, and is at present occupied by a Turkish garrison. It has been an object for the attainment of which the hostile nations have struggled during the various wars between Austria and Turkey. At different times it has been possessed by Greeks, Hungarians, Bulgarians, Bosnians, Servians, and Austrians. The Turks besieged the city in 1456, and a battle was fought between the German and Turkish armies, in which the latter was defeated with the loss of 40,000 men. Belgrade was taken by Solyman, 1522, and retaken by the Imperialists in 1688, from whom it again reverted to the Turks in 1690. A siege of it was undertaken in May, 1717, under Prince Eugene. On Aug. 5th of that year, the Turkish army, 200,000 strong, approached to relieve it, and a sanguinary battle was fought, in which the Turks lost 20,000 men; after this battle Belgrade surrendered. It was held by Austria till 1789, when it was ceded to the Turks, after its fine fortifications had been demolished. It was again taken in 1789, and restored at the peace of Reichen-

bach, in 1790. The Servian insurgents had possession of it in 1806.

BELISARIUS, general of the armies of the Emperor Justinian. He defeated a superior force of Persians, in the year 530, and in the year after he took Carthage, made prisoner Gelimer, king of the Vandals, and entered Constantinople in triumph. He was next sent against the Goths in Italy, and arriving on the coasts of Sicily, took Catania, Syracuse, Palermo, and other places. He then proceeded to Naples, which he took, and marched to Rome. After this he conquered Vitiges, king of the Goths, sent him to Constantinople, and refused the crown which was offered him by the Goths. For his exploits he was regarded as the savior of the empire, and medals are extant with this inscription, *Belisarius Gloria Romanorum*, 'Belisarius, the glory of the Romans.' Having fallen under suspicion of Justinian, he was deprived of his property and honors, but there is reason to believe that he was subsequently restored to them. Marmontel in his romance, adopts a story which is related by no contemporary historian; that Belisarius was deprived of his eyes by his cruel master, and forced to beg his bread in the streets of Constantinople. Others say that he was imprisoned in a tower, whence he used to let down a bag by a rope, addressing the passengers in the following words: "Give an obolus to Belisarius, whom virtue exalted, but envy crushed." He died in 565.

BELKNAP, JEREMY, an American clergyman, born in June, 1744, educated at Harvard College, and ordained pastor of the church in Dover, N. H., 1767. For some years previous to his death, which took place in 1798, he officiated in a church in Boston. He was an easy and correct writer, and his reputation rests on his "History of New Hampshire," and two volumes of his unfinished "American Biography." He was one of the founders of the Massachusetts Historical Society.

BELL, Sir CHARLES, an eminent surgeon, born at Edinburgh, 1774, died in 1842. He made important discoveries respecting the spinal marrow and the nerves.

BELLAMY, JOSEPH, D.D., an eminent Congregational minister in Bethlem, Conn. He died in 1790, at the age of seventy-one.

BELLINGHAM, RICHARD, deputy-governor and governor of Massachusetts colony for

twenty-three years, came to America in 1634, and died in 1672, aged eighty. He somewhat shocked the old Puritans by marrying for his second wife a lady affianced to another, performing the ceremony himself without license.

BELLINI, VINCENTIO, was born at Catania in Sicily in 1806. He received his musical education from Zingerelli in the *conservatorio* of Naples, and produced, at the theatre San Carlo, in that city, his opera "Bianco e Ferdinando," before he was twenty years old. He died of consumption in 1835 at Paris. During his brief life he composed a number of operas, the most of which are yet highly popular: "Il Pirata," "La Straniera," "La Sonnambula," "I Capuletti ed i Montecchi," "Norma," "I Puritani," &c.

BELLOT, Lieut., a young officer of promise in the French navy, who volunteered in an expedition dispatched by Lady Franklin to search for her husband Sir John, in 1851. He was of much service, and on his return at once entered upon a second task of the same nature. On the 21st of August, 1852, while bearing dispatches to Sir Edward Belcher across the ice, he was overtaken by a storm, borne by a floe out to sea, and drowned. A monument to his memory stands in the yard of Greenwich Hospital.

BELLS were used among the Jews, Greeks, and heathen. The responses of the Dodonean oracle were in part conveyed by bells. Pliny tells us that the monument of Porsenna was decorated by pinnacles, each surmounted by bells. They were introduced by Paulinus, Bishop of Nola, in Campagna, about 400; first known in France, 550; first used in the Greek empire, 864; were introduced into monasteries in the seventh or eighth century. Pope Stephen III. placed three bells in a tower on St. Peter's at Rome. In the churches of Europe they were introduced in 900, and about this time they were used, by order of Pope John IX., as a defense, by ringing them, against thunder and lightning. They were first introduced into Switzerland 1020. The first tunable set in England were hung up in Croyland Abbey, in Lincolnshire, 960; baptized in churches, 1020. Bells of the church of Notre Dame at Paris baptized and received the names of Duke and Duchess d'Angouleme, the Prince de Foix and Duchess de Damas being proxies, Nov. 15th, 1816.

BELOOCHISTAN extends along the coast of the Indian Ocean from the Indus nearly to the Persian Gulf, comprising about 200,000 square miles. It is a rough region, and some of the mountains are of great height. The heat of summer is intense, and water scarce. The desert of Beloochistan is three hundred miles long, and two hundred broad. Among the minerals of this country, are gold, silver, lead, iron, copper, tin, alun, saltpetre, sulphur, rock salt, &c. Cotton, indigo, grain, assafetida, and madder are productions of the soil. The natives are divided into three tribes, the Belooches, the Dewars, and Brahmoes. They are Mohammedans, warlike, half-civilized, and pastoral in their habits. Kelat is a place of considerable strength, and has about 20,000 inhabitants. The Khan of Kelat has only a nominal authority over the country.

BELZONI, JOHN BAPTIST, was born at Padua, and educated at Rome, being destined for a monastic life. Having a taste, however, for an active life, he served in the French armies, and went to England in 1803. Here his finances were probably at a low ebb, for he was reduced to exhibit postures at Astley's. From London he afterward went, with his wife, to Egypt, passing through Portugal, Spain, and Malta. Here he succeeded in opening the pyramid of Cheops, which had defied the ingenuity and efforts of the French, that of Cephrenes, and several catacombs near Thebes, one of which is believed to have been the burial place of Psammis, who died 400 B.C. He exhibited great accuracy and skill in the drawings which he took. In 1816, he accomplished an undertaking of great difficulty, the removal of the enormous bust of Jupiter Memnon, and a sarcophagus of alabaster, from Thebes to Alexandria, whence they were shipped for England. On the 1st of August, 1817, he opened the temple of Ipsambul, near the second cataract of the Nile, discovering a subterranean chapel in its ruins. He discovered the ruins of the ancient Berenice, four day's journey from the spot where Cailliaud asserted that he had found it. Belzoni died on his way to Timbuctoo, Dec. 3d. 1823, at the age of forty-five. In person he was tall and well-proportioned, and his gigantic stature protected him from attack, even when alone amidst ferocious barbarians. His

BEL

wife, who accompanied him to Egypt, displayed great intrepidity amidst the dangers which they encountered.

BEM, JOSEPH, was a native of Galicia, and born in 1795. Bred to arms, he entered the army of Napoleon, and served in the divisions of Davoust and Macdonald, and, after peace was concluded, was for a while an officer in the Russian service. During the Polish revolution he commanded the artillery. At Ostrolenka he was wounded, but as he lay upon the ground, he directed the movements of his guns. When the cause of Poland was lost, he sought refuge in France, and there and in England tasted the bitter bread of poverty and exile. Upon the breaking out of the revolutions of 1848, he drew his sword in aid of the Hungarians, and as a general in their army brilliantly combated the Austrians. When Austria and Russia triumphed, Bem fled to Turkey, where he embraced Islamism, and entered the Turkish army under the name of Murad Bey. He died at Aleppo in December, 1850.

BENAVIDES, an outlaw and pirate, whose singular perseverance and ferocity rendered him for many years the terror of the southern parts of Chili. Under pretext of establishing a navy, he seized upon English and American vessels that stopped for refreshment near the town of Arauco, the centre of his operations. In 1821, the Chilians fitted out an expedition, and succeeded in breaking up his stronghold, and capturing him. He was condemned and executed, February 23d, 1822. In the early part of his career, he espoused the cause of the Chilians against Spain, but soon deserted them, and having been taken prisoner in the battle of Mapu, 1818, he was sentenced to be shot, and actually sustained the fire of a file of soldiery. He was covered with wounds and believed to be dead, but had his senses left when he was dragged to the field where the bodies of criminals were exposed. Here a man who had owed him a grudge, smote the supposed corpse with a sword, and such were the powers of endurance possessed by Benavides, that he did not flinch in the least, or give the slightest sign of vitality, or of the agony he suffered. As soon as it was dark, he crawled away to the house of a friend, and had his wounds dressed. His bravery and fortitude would have honored a better cause.

BENBOW, JOHN, an English admiral, born in 1650. His gallantry in repelling the attack of a Barbary corsair, when in the merchant service, procured him the command of a ship of war, from James II. Being sent by William III. to the West Indies, he relieved the colonies, and in a subsequent engagement with the French fleet, off Carthage, Aug. 19th, 1702, a chain-shot carried off one of his legs. He was carried below, but, as soon as his wound was dressed, brought on deck again, and persisted in continuing the action. He was abandoned at this moment, through the cowardice of several captains under his command, who signed a paper expressing their opinion that nothing more could be done, and the whole fleet of the enemy was suffered to escape. Shortly after Benbow's arrival at Jamaica, where he died of his wounds and chagrin in the following October, he received a note from the French admiral, of which the following is a literal translation:

"Carthage, Aug. 22d, 1702.

"SIR: I had little hopes, on Monday last, but to have supped in your cabin: yet it pleased God to order it otherwise. I am thankful for it. As for those cowardly captains who deserted you, hang them up, for by G-d they deserve it. "DU CASSE."

Two of the cowardly captains were tried and shot upon their return to England.

BENEDICT, the name of several popes. Of these, Benedict XIV. (Prosper Lambertini) was the most noted. When, on the death of Clement XII., in 1740, the conclave was divided, and the cardinals could not agree, Lambertini said, in his good-natured way, "If you want a saint, take Gotti; if a politician, Aldobrandi; if a good old man, take me." The humorous manner in which this quaint speech was delivered, operated like magic, and Lambertini became sovereign pontiff. He reformed abuses, introduced good regulations, cultivated letters, encouraged men of learning, and was a patron of the fine arts. He died May 3d, 1758.

BENEDICT, St. (480-543), founded the first religious order of the west. Besides performing religious duties, the monks of his order gave instructions to youth, in reading, writing, ciphering, religion, and manual labors, including all the mechanic arts. Benedict caused the aged monks to copy manu-

scripts, and thus many literary works of great importance were preserved from ruin. From the sixth to the tenth century, almost all the monks in the west were Benedictines. The rules of the order were severe. At an early period the dress of the brethren of the different monasteries varied, but after the sixth century, when union was enjoined, the monks of this order all wore black. The Cluniacs were a branch of the Benedictines, proceeding from the convent of Clugny in Burgundy, founded in 910. Their regulations were at first strict, but in the twelfth century, when the order had two thousand monasteries, they declined, from the excess of their luxury.

BENEZET, ANTHONY, was born at St. Quentin, in France, January, 1713. His parents were opulent, and his descent noble. The confiscation of his father's estates, in consequence of his having joined the Protestants, in 1715, drove the family to England, where Anthony was educated. Of his early life little is known, but he was fourteen years of age when he joined the society of Friends. In 1731, he came to Philadelphia in company with his parents. His first employment was that of instructor in a school at Germantown. About 1750, being struck with the enormities of the slave-trade, he determined to employ all his energies in bettering the condition of the blacks. He established an evening school for them in Philadelphia, and taught them gratuitously. On the subject of negro slavery he published numerous short essays in almanacs and newspapers, which he circulated with unwearied assiduity. He printed and distributed at his own expense, many valuable tracts. The circulation of these was not confined to America; in Europe they procured Benezet the notice and correspondence of many eminent men. He undoubtedly gave the first impulse to the measures which resulted in the abolition of the slave-trade in the United States. His philanthropy was unbounded; the whole human race were his brethren. The wrongs inflicted on the aborigines of North America, excited his strong sympathy about the year 1763, and his efforts in their behalf excited the warmest admiration in all high-minded observers of his course. In 1780, he wrote and published a "Short Account of the Religious Society of Friends, commonly called Quakers," and in 1782, "A Dissertation on

the Plainness and Innocent Simplicity of the Christian Religion." He also published and circulated several tracts against the use of ardent spirits. In the spring of 1784, he was taken ill; after his case was pronounced hopeless, he conversed intelligently with hundreds who came to see him. He died on the 5th of May, at Philadelphia, extensively known and beloved. His naturally strong understanding was improved by extensive reading. His private habits endeared him to his friends, and his small estate was devoted to the furtherance of his benevolent purposes.

BENNINGTON, a town in Vermont. Here a battle was fought, Aug. 16th, 1777, between a detachment of Burgoyne's army, under Lieut.-Col. Baum, and a body of American militia commanded by Gen. Stark. Baum was mortally wounded. Seven hundred of the enemy were captured, and two hundred and seven killed. The loss of the Americans was about one hundred dead, and as many wounded. A good quantity of arms and ammunition fell into the hands of the victors.

BENTHAM, JEREMY, an English philosopher upon jurisprudence and morals, born Feb. 6th, 1749. He was entered of Queen's College, Oxford, when only twelve years of age, and was even then known by the name of 'the philosopher.' He attained the ripe age of eighty-four. This eccentric man, who made utility the basis of his philosophy, bequeathed his body to the dissectors, in order to benefit the science of anatomy.

BENTLEY, RICHARD, a celebrated English divine and classical scholar, was born in 1662. His father was a blacksmith, and he received his earliest instruction from his mother, a woman of much talent. He entered St. John's College, Cambridge, at the age of fourteen. He was victorious in a controversy with the Hon. Charles Boyle, afterward Earl of Orrery, relating to the genuineness of the Epistles of Phalaris. Bentley was opposed by a host of wits, Pope, Swift, Garth, Atterbury, Conyers, Middleton, &c., but he satisfactorily proved that the Epistles were not the production of the tyrant of Agrigentum, who lived more than five centuries B.C.; but of some late sophists, who borrowed the name of Phalaris. The tyrant Phalaris had a hollow brazen bull, in which, when hot, he used to place those who were unfortunate enough

to displease him, and whose cries were thus made to resemble the roarings of the animal. Conyers Middleton, whose enmity to Bentley arose from the epithet of fiddling Conyers, applied to him while an university student, was suspected of being the author of a punning caricature representing Bentley on the point of being thrust into the brazen bull of Phalaris, and exclaiming, "I had rather be roasted than Boyled." Bentley was presented by the crown to the mastership of Trinity College, Cambridge, worth nearly £1,000 a year; and, in 1701, he was called to the archdeaconry of Ely. Among the accusations brought against him, as head of the college, he was accused of embezzling money, a charge which occasioned a lawsuit that was terminated in the doctor's favor near twenty years afterward. He was appointed Regius professor of divinity at Cambridge, in 1716. In 1726, he published his edition of Terence and Phædrus, his notes to which brought on a dispute with Bishop Hare, on the metres of Terence, when Sir Isaac Newton observed that "two dignified clergymen, instead of minding their duty, had fallen out about a play-book." Bentley's edition of "Paradise Lost," with conjectural emendations, his last work, was a decided failure. He died, July 14th, 1742.

BENYOWSKY, MAURICE AUGUSTES, Count of, was born in 1741, at Werbowa, in Hungary. His father was a general, and he himself entered the Austrian service, and served as a lieutenant in the seven years' war till 1758. Having joined the Polish confederation against Russia, and served with the rank of colonel, commander of cavalry, and quartermaster-general, he was taken by the Russians in 1769, and sent to Kamtschatka. On his voyage thither, he saved the vessel during a storm, and thus, on his arrival, secured a favorable reception from the governor, Niloff, whose family he instructed in the French and German languages. In May, 1771, he escaped from Kamtschatka, accompanied by Aphanasia, the governor's daughter, and ninety-six other persons, sailing for Formosa, whence he departed for Macao. Here he lost many of his companions, and the faithful and unfortunate Aphanasia. Arrived in France, he was commissioned to found a colony in Madagascar, where he arrived in June, 1774. He was not long in gaining the

good will of the natives, who appointed him their king. He went to Europe to obtain recognition as an independent prince in Madagascar, but was forced by the persecution of the French ministry, to enter the Austrian service. In the battle of Habelschwerdt, 1778, he commanded against the Prussians. In 1784, receiving assistance from private persons in London and America, he set out for Madagascar, and arrived in 1785. Here he commenced hostilities against the French, and the authorities of the Isle of France sent a force against him; in contending against which he was wounded mortally, May 23d, 1786. The fate of Benyowsky's only son was singular: he is said to have been devoured by the rats of Madagascar.

BERANGER, PIERRE JEAN DE, was born in Paris, Aug. 19th, 1780. During the storm of the revolution he dwelt with an aunt at Peronne, and there became apprentice to a printer. This vocation led him to study, and he determined to be a poet, a vocation the adoption of which naturally included poverty. It was such extreme poverty that he thought of suicide. The kind aid of Lucien Bonaparte rescued him from this wretchedness. Beranger was a warm admirer of Napoleon, and deeply deplored his fall. The unequalled political songs of Beranger, for which at times he was incarcerated or mulcted, helped to make the Bourbons unpopular and bring on the overturn of 1830. One of his fines was paid by a national subscription opened by his friend Lafitte, the banker. "Beranger," said Benjamin Constant, "writes sublime odes when he imagines he is only composing simple songs." He enjoyed the friendship of Chateaubriand, Victor Hugo, Lamartine, and Dumas. Adversity visited Beranger late in life. His publisher failed, and he was menaced with losing the eighteen or twenty thousand francs he had in the bankrupt's hands, all he had in the world. Lafitte knew very well it would be lost time to persuade the poet to accept money. He sent for M. Hector Bossange, the well known publisher, and said to him, as he placed eighteen bank notes of a thousand francs in his hands, "Go and see Beranger, M. Bossange. Propose to him to become the publisher of his works for the next three years. Offer to take them at six thousand francs a year certain, and such a

BER

percentage on all sales over that amount, and give him these eighteen thousand francs. You will pay me when you clear thirty-six thousand francs yourself." M. Bossange called instantly on Beranger and made him these propositions. Beranger accepted them with delight, and expressed warm gratitude to M. Bossange. The latter, embarrassed at receiving thanks not his due, revealed the secret he had been charged to keep inviolate. Beranger's manner changed instantly, and he refused to take the money. Foiled in this way, Lafitte took the affairs of the ruined publisher in hand, and managed them so well that the creditors were paid in full, Beranger among the rest.

When the revolution to which the lyrics of Beranger had aided, happened in July, 1830, he did not salute it with any pæans. Nevertheless his popularity at this time was unbounded. On the stages of every theatre in France, his bust was crowned by the favorite actress. The orchestra would play his airs, and the audience would sing the words. He fled from all this boisterous popularity, and, what vexed him even more, the annoying visits of office seekers, anxious to procure his recommendation. The last years of his life were spent quietly in Paris, where he died, July 16th, 1857. He had published nothing since 1838. His decease caused all France to mourn. He was buried by the French government the day after his death, and great precautions were taken to avoid a popular outbreak at his funeral.

BERCHTOLD, LEOPOLD, Count, born in 1758. He was a distinguished philanthropist, and spent thirteen years in traveling through Europe, and four in Asia and Africa, to relieve the distresses of humanity. He died July 26th, 1809, on his estate at Buchlan in Moravia, where he had fitted up an hospital for sick and wounded Austrian soldiers.

BERESFORD, WILLIAM, Baron, Duke of Elvas, and Marquis of Campo Mayo, a distinguished British general. In 1810 he defeated Soult at Albuera. In 1812, having a command under Wellington, he shared in the dangers and glory of the battles of Vittoria, Bayonne, and Toulouse. He died in 1854, at the age of eighty-six.

BERESINA, a river in the west of Russia,

famous for the passage of the French army under Napoleon on the disastrous retreat from Moscow, Nov. 26th and 27th, 1812. The ice with which the morasses on both sides of the river were covered, was not strong enough to bear. The Russian army were threatening the fugitives, whose discipline was lost, and who, despairing of escaping by means of the two crowded bridges, trusted themselves to floating masses of ice and were lost. Seventy-five hundred men and five generals, according to the Russian account, were taken, and twice as many more lost their lives.

BERGHEM, NICHOLAS, a famous painter, born at Harlem in 1624, died in 1683. His landscapes and representations of animals are much valued. Once, when pursued by his father, he fled for safety to the workshop of Van Goyen, who shouted to his pupils, "*Berg hem*" (hide him); and this expression was adopted as his name.

BERKELEY, GEORGE, Bishop of Cloyne in Ireland, famous for his ideal theory, that there is nothing material, and that objects which are called sensible material objects, are not external, but only impressions made upon the mind by an act of God, according to certain laws of nature, which are invariable. Lord Byron says:

"When Bishop Berkeley said there was no matter,
And proved it, 'twas no matter what he said."

He was born at Kilerin, Ireland, 1684. In furtherance of his project for converting the American savages to Christianity, by the establishment of a college in the Bermuda Islands, he considerably impaired his fortune. He resided some time in Rhode Island. His estate at Newport he gave to Yale College, by which it is still held. Pope, who was much attached to him, says that he had "every virtue under heaven." It was when inspired by his transatlantic scheme that he penned those fine moral verses, the last stanza of which seems almost prophetic:

"Westward the course of empire takes its way;
The first four acts already past,
A fifth shall close the drama with the day;
Time's noblest offspring is the last."

He died in 1753, expiring without a groan or sigh in the midst of his family, just as he had concluded a commentary on that beautiful and consoling portion of Holy Writ, the

BER

fifteenth chapter of the first epistle to the Corinthians.

BERKELEY, WILLIAM, governor of Virginia under Charles I. and II. He was a hot royalist, and on the death of Matthews, whom Cromwell had made governor in his stead, being asked by the people to resume the executive, would only do so on condition that Charles II. should be proclaimed king. The consequences of this bold step might have been serious, had not Cromwell's death soon followed. During the latter part of Berkeley's term, the colony was convulsed by Bacon's rebellion, and the governor's severity caused Charles II. to complain that "the old fool shed more blood in that naked country than he had done for the murder of his father." Berkeley died in England in 1677.

BERLICHINGEN, GOETZ, or GODFREY VON, 'with the iron hand,' a brave and honorable knight of the middle ages, who headed the rebellious peasants of Bavaria, against their oppressors. Before this time, having lost his right hand, he had substituted one made of iron. He died July 23d, 1562.

BERLIN DECREE, a memorable interdiction launched by Napoleon against the commerce of England. It declared the British islands to be in a state of blockade, and all Englishmen found in countries occupied by French troops were to be treated as prisoners of war. The whole world, in fact, was to cease from any communication with Great Britain. It was issued from the palace at Berlin, Nov. 21st, 1806, shortly after the battle of Jena.

BERMUDAS, or SOMMERS' ISLANDS, a cluster of about three hundred small islands in the Atlantic. They were discovered by Juan Bermudas, a Spaniard, in 1522. In 1609, Sir George Sommers, an Englishman, who was wrecked here, founded the first settlement. Many are so unimportant as to have no name, but the principal islands are St. George, St. David, Cooper, Ireland, Somerses, Long Island, Bird Island, and Nonesuch. The air is healthy and invigorating to invalids, the winter being hardly apparent. The islands, however, are subject to frequent storms. The soil is generally rich and fertile. Ship-building is the principal occupation of the islanders. The whole shore is surrounded by rocks, dry at low water, but covered at

high tide. The Bermudas lie about five hundred and thirty miles easterly from Cape Hatteras. They are a British colony, and have a population of 14,000. A small convict station is maintained here. During the wars between parliament and the crown, many Englishmen of character and opulence sought refuge in the "still vexed Bermoothes;" among others the poet Waller, who sang of their beauty in "The Battle of the Summer Islands."

BERNADOTTE, CHARLES JOHN, was born 1764. From a sergenty in the French army he rose under Napoleon to the rank of marshal of the empire and Prince of Ponte Corvo. In 1810 he was chosen crown-prince of Sweden. Sweden joined the allies against France, and Bernadotte led her forces against his former master. He defeated Ney at Dennewitz in 1813. In 1818 he ascended the Swedish throne, whereon he reigned till his death in 1844. He was succeeded by his son Oscar. Bernadotte had a singular aversion to dogs, and could not bear the smell of tobacco.

BERNARD, St., Abbot of Clairvaux, born of noble family at Fontaines, in Burgundy, 1091. He was austere, eloquent, and bold, and had the reputation of being a prophet. He was called a honeyed teacher. Bernard was the principal promoter of the crusade of 1146. Luther says of him, "If there ever has been a pious monk who feared God, it was St. Bernard; whom I hold in much higher esteem than I do all other monks and priests throughout the globe." Bernard died in 1153, and was canonized in 1174.

BERNARD, GREAT ST., a mountain of the Alps, 11,006 feet high, between the Swiss Valais and the valley of Aosta, in Piedmont. The two hospices, on the Great and Little St. Bernard were built by Bernard de Menthon, a pious Savoyard nobleman, in 962. They were under the care of Augustine monks, indefatigable in the discharge of their hospitality to wayfarers. The monks were assisted in their search for lost travelers, by great dogs, of whom many interesting tales are told. Owing to the severity of the weather, the dead bodies in the vault decayed so slowly, that their features were frequently recognized by friends, after the lapse of years. The monastery of Great St.

BER

Bernard is the most elevated fixed habitation in Europe, and close upon the limits of perpetual snow. After the revolution of 1847 in Switzerland, the monks were expelled from these hospices, and they are now managed by the government. It was by the pass of the Great St. Bernard that Hannibal crossed the Alps, and that Napoleon led his troops to the plains of Lombardy and the contest of Marengo. Charlemagne and Barbarossa also led armies over the Alps by this pass. In the chapel of the hospice of Great St. Bernard, is the monument of General Desaix, who fell at Marengo. He was embalmed by order of the first consul. The sculptor has represented the warrior wounded, and sinking from his horse into the arms of his aid. On the stairs of the convent stands the statue of Desaix in marble.

BERNINI, GIOVANNI LORENZO, born at Naples, in 1598. He has been called another Michael Angelo, on account of his success as a painter, statuary, and architect. He was patronized by several popes, and died, exhausted by his labors, November 28th, 1680. He left a fortune of about 3,300,000 francs to his children. So early did his talents shine forth, that at the age of eight years, he executed the head of a child in marble, which was thought a fine production. He was not eighteen years old when he completed his "Apollo and Daphne," a work which he examined at the close of life, and declared that he had made little progress since that time. So true it is that genuine enthusiasm often supplies the place of experience.

BERRI, CHARLES FERDINAND, Duke of, second son of Charles X. of France, born at Versailles, Jan. 24th, 1778. He fled from the revolutionary tempest, but was actively engaged in the scenes at Paris, in 1814, on the return of the Bourbons, and vainly endeavored to secure the fidelity of the troops in and about Paris, when Napoleon returned from Elba. He was assassinated in 1820, by Louvel, who had long sought to extirpate the house of Bourbon, and met his death with great firmness. He was father of the Duke of Bordeaux, one of the claimants of the French crown.

BERRY, MARY, died in 1854, at the advanced age of almost ninety. She and her sister, whose death preceded hers by eighteen

months, were known in the literary circles of London, from the time of Dr. Johnson to that of Macaulay. They had read Miss Burney's "Evelina" when fresh from the press, and lived to weep in sympathy with the world over Dickens's pathetic story of Little Nell. The two sisters were left, with their father, the literary executors of Horace Walpole. Both of them had received the offer of the hand of that male gossip. Both had rejected it.

BERSERKER, in Scandinavian mythology, a descendant of the eight-handed Starkader and the beautiful Alfhide. Disdaining the protection of mail in battle, he obtained his name, which signifies 'the armorless.' In battle, his rage was ungovernable. He married the daughter of Swafurlam, whom he had slain, and had twelve sons who equaled him in fierceness.

BERTHIER, ALEXANDER, Prince of Neuchatel and Wagram, marshal, vice-constable of France, &c., born at Paris, 1753. At an early age, he served under La Fayette, in America. He was a great favorite of Napoleon, under whom he acted as chief of his staff, assisting in those great victories which made France master of Italy, Germany, and Prussia. At the downfall of Napoleon in 1814, Berthier professed allegiance to the Bourbons, showing more zeal for them than became the favored friend and well paid servant of the fallen emperor. When Napoleon returned from Elba, Berthier left France with the Bourbon princes, and soon ended his life by suicide.

BERTHOLLET, CLAUDE LOUIS, born in Savoy, December 9th, 1748, died at Paris, November 6th, 1822, one of the most illustrious of chemists. He wrote a valuable work on dyeing, was the first to use in bleaching the decolorizing properties of chlorine gas, and discovered the chlorate of potash, a salt which not only, as an indispensable ingredient in the lucifer match, administers to the convenience of every one, but enables many a shivering outcast to supply his daily wants. He was aided by the friendship of Napoleon. Upon the restoration he fell into reduced circumstances.

BERTRAND, HENRI GRATIEN, count, general of division, aid-de-camp of Napoleon,

BER

grand marshal of the palace, &c. He early distinguished himself in the engineer corps. He served near the person of Napoleon, particularly at Austerlitz, where he was the emperor's aid-de-camp. He and his family shared the last residence of Napoleon, after his fall. He died in 1844, aged seventy-four.

BERWICK, JAMES FITZ-JAMES, Duke of, was born in 1670. He distinguished himself as a general in the Bourbon cause in Spain, where he won the battle of Almansa, and captured Barcelona, after a resistance, by the citizens, of fifteen months. He was a natural son of James II. of England, nephew of the great Marlborough, and a marshal of France. He was killed at Phillipsburg, 1734.

BESSIERES, JOHN BAPTIST, Duke of Istria, one of Napoleon's generals, marshal of France, born Aug. 6th, 1768, killed at Rippach, May 1st, 1813.

BEZA, THEODORE, after Calvin, the most distinguished among the Calvinistic preachers of the sixteenth century, born in 1519. At the age of twenty, he published his Latin poems, collected under the title of "Juvenilia," a work of which he was afterward ashamed. At an early age he was dissipated, but reformed by marriage, and a dangerous illness. He distinguished himself in the service of the reformed church, and, in 1564, became Calvin's successor. Vain were the efforts of his adversaries to gain an advantage over him. His truth and wit were a splendid defense, and at the age of seventy-eight years, his intellectual faculties appeared as clear as ever. The pope made him brilliant offers, but he nobly rejected them. He died Oct. 13th, 1605, of old age. He was a great Greek scholar, and his edition of the New Testament was taken as the basis of the English version.

BIBLE. The first translation of the Old Testament from the Hebrew into the Greek was made by seventy-two interpreters, by order of Ptolemy Philadelphus, at Alexandria, 277 B.C., or according to others 284 B.C. From the number of translators this is called the Septuagint. The oldest version of the Old and New Testaments is that in the Vatican, which was written in the fourth or fifth century. The next in age is the Alexandrian MS. in the British Museum, presented by the Greek patriarch to Charles I., said to have been copied about the same time. The Old

Testament was divided into twenty-two books by the Jews, according to the number of letters in the Hebrew alphabet. The Christians divided it into thirty-nine. The Hebrew division into chapters was made by the Rabbi Nathan, about 1445. Our Bible was divided into chapters, and partly into verses, by Archbishop Langton, who died 1228; and the latter division was perfected by Robert Stephens, the eminent French printer, about 1534. The following are curious computations:

<i>In the Old Testament.</i>	<i>In the New.</i>	<i>Total.</i>
Books,	39	27
Chapters,	929	260
Verses,	23,214	7,959
Words,	592,493	181,253
Letters,	2,728,100	838,380
		3,566,480

The Apocrypha has 183 chapters, 6,081 verses, and 125,185 words. The middle chapter, and the least in the Bible, is the 117th Psalm; the middle verse is the 8th of the 118th Psalm; the middle line is the 2d book of the Chronicles, 4th chapter, and 15th verse. The word 'and' occurs in the Old Testament 35,535 times; the same word in the New Testament occurs 10,684 times; the word 'Jehovah' occurs in the Old Testament 6,855 times. The middle book of the Old Testament is Proverbs; the middle chapter is the 29th of Job; the middle verse is in the 2d book of Chronicles, 20th chapter and 13th verse; the least verse is the 1st book of Chronicles, 1st chapter, and 1st verse. The middle book of the New Testament is the second epistle to the Thessalonians; the middle chapter is between the 13th and 14th of the Romans; the middle verse is the 17th of the 17th chapter of the Acts; the least verse is the 35th verse of the 11th chapter of the Gospel by St. John. The 21st verse of the 7th chapter of Ezra has all the letters of the alphabet in it. The 19th chapter of the 2d book of Kings, and the 37th chapter of Isaiah, are alike. The book of Esther has 10 chapters, but neither the words Lord nor God in it.

The Bible was translated into Saxon in 939. The Vulgate version in Latin was made by St. Jerome, and is that acknowledged by the Roman Catholic church as authentic: it was first printed in 1462. In 1604, a great conference was held at Hampton Court, between

the established and the puritan clergy. The existing English version was condemned. James I. therefore appointed fifty-four men, many of whom were eminent as Hebrew and Greek scholars, to commence a new translation. In 1607, forty-seven of these met, in six parties, at Oxford, Cambridge, and Westminster, and proceeded to their task, a certain portion of Scripture being assigned to each. Every individual of each division, in the first place, translated the portion given to the division, all of which translations were collated; and when each party had determined on the construction of its part, it was proposed to the other divisions for their examination. When they met together one read the new version, whilst all the rest held in their hands either copies of the original, or some valuable version, and on any one objecting to a passage the reader stopped till it was agreed upon. The result, known as King James's version, was published in 1611, and is that still in use throughout Great Britain and the United States. It is an excellent specimen of the language of the time, and being universally read by all classes of the people, it has contributed most essentially to give stability and uniformity to the English tongue. Martin Luther's translation of the Bible made the dialect of Upper Saxony the language of all Germany. The Holland tongue or Low Dutch, as now spoken, has for its basis the German language in use before this time.

The Bible was printed in Spanish, 1478; in German, 1522; in French, 1535; in Swedish, 1541; in Danish, 1550; in Dutch, 1560; in Russian, 1581; in Hungarian, 1589; in Polish, 1596; in modern Greek, 1638; in Turkish, 1666; in Irish, 1685; in Portuguese, 1748; in Manx, 1771; in Italian, 1776; in Bengalee, 1801; in Tartar, 1813; in Persian, 1815; in African, 1816; in Chinese, 1820. A polyglot Bible, edited by Walton, Bishop of Chester, in the Hebrew, Syriac, Chaldee, Samaritan, Arabic, Ethiopic, Persic, Greek and Latin languages, was printed in 1657. The books known as the Apocrypha, in an old preface to which it is said, "These books are neyther found in the Hebrue nor in the Chalde," were not in the Jewish canon, but were received as canonical by the Romish church at the council of Trent in 1545.

We present a succinet sketch of the history

of our English Bible. The English version of the Scriptures now in use, is itself the result of repeated revisions. In the preface to the Bishop's Bible (A.D. 1568) a distinct reference is made to early Saxon versions, and there are still extant, parts of the Bible in Saxon, translated by Bede, by Alfred the Great, and by Ælfrie of Canterbury. Early Saxon MSS. of the Gospels are still preserved in the libraries of the British Museum, and Corpus Christi College, Cambridge. The first complete translation of the Bible was made by Wicliffe, about A.D. 1380. It existed only in manuscript for many years, but the whole is now in print (New Testament 1731; Old Testament, 1848). The work was regarded with grave suspicion; and a bill was introduced into the House of Lords for suppressing it; but through the influence of John of Gaunt, this was rejected. In 1408, however, in a convocation held at Oxford, it was resolved that no one should translate any text of Scripture into English, as a book or tract, and that no book of the kind should be read. This resolution led to great persecution, though there is reason to believe, that notwithstanding, many manuscripts of Scripture were at that time in extensive circulation throughout England. The first printed edition of the Bible in English, was published by Tyndale, the New Testament in 1526, and the Bible in part, in 1532. Tonstall, Bishop of London, and Sir Thomas More took great pains to buy up and burn the impression, but with the effect thereby, of enabling the translator to publish a larger and improved edition. On the death of Tyndale (who died a martyr to the truth), Miles Coverdale revised the whole, and dedicated it to Henry VIII., 1535, and in 1537, John Rogers, who had assisted Tyndale, and was then residing at Antwerp, reprinted an edition, taken from Tyndale and Coverdale. This edition was published under the assumed name of Thomas Matthews. A revision of this edition again was published (A.D. 1539) by Richard Taverner. The Great Bible appeared in 1539. It was Coverdale's, revised by the translator, under the sanction of Cranmer. It was printed in large folio. For the edition of 1540, Cranmer wrote a preface, and it is hence called Cranmer's Bible. It was published "by authority," and was ordered in 1549 to be read in the churches.

READING THE BIBLE TO THE PEOPLE.

During the seven years of the reign of Edward VI., eleven editions of the Scriptures were printed: but no new version or revision was attempted. During the reign of Mary, was published the Geneva Bible, A.D. 1557-60. Coverdale and others who had taken refuge in Geneva, edited it, and added marginal annotations. Archbishop Parker obtained authority from Queen Elizabeth, to revise the existing translations, and with the help of various bishops and others, published in 1568 what was called the Bishops' Bible. It contains short annotations, and in the smaller editions (from 1589) the text is divided, like the Genevan, into verses. The same text was afterward printed, in 1572, in a larger size, and with various prefaces, under the name of Matthew Parker's Bible. It continued in common use in the churches for forty years, though the Genevan Bible was perhaps more read in private. The Rhemish New Testament, and the Douay Old Testament, form the English Bible of the Romanists. The former was printed at Rheims (A.D. 1582),

and the latter at Douay (A.D. 1609-10). In 1603, King James resolved on a revision of the translation, and for this purpose appointed fifty-four men of learning and piety. Forty-seven only undertook the work, and in four years (from 1607-11) it was completed. The text as thus prepared and printed in 1611, is the authorized version.

The first Bible printed on the continent of America was in native Indian; the New Testament in 1661, and the Old in 1663; both translated by Rev. John Eliot, and printed at Cambridge, Mass. As the title records, it was "translated into the Indian language, and ordered to be printed by the Commissioners of the United Colonies in New England, at the charge and with the consent of the Corporation in England for the Propagation of the Gospel among the Indians in New England." Printed by Samuel Green and Marmaduke Johnston. In the emphatic words of Dr. Cotton Mather, this was then "the only Bible that ever was printed in all America from the very foundation of all the world."

The second was in German, a quarto edition published at Germantown near Philadelphia, by Christopher Sower, in 1676. The first edition in English was printed by Kneeland and Green, at Boston in 1752, in small quarto. It was published by Henchman, a bookseller; but to avoid prosecution from those who had a royal patent, the title-page of the English copy, London imprint and all, was reprinted. The next edition was issued by Robert Aitken, of Philadelphia, in 1781-2. He sent a memorial to Congress, praying for their patronage. His memorial was referred to a committee, who obtained the opinion of the chaplains of Congress as to the general typographical accuracy of his impression; and thereupon a resolution was passed Sept. 12th, 1782, recommending this edition of the Bible to the people of the United States.

BIDDLE, JAMES, commodore in the navy of the United States, was born in Philadelphia in 1783. He distinguished himself in the war of 1812, and was an officer on the Wasp when she took the British brig Frolic. March 23d, 1815, Biddle, then in command of the sloop Hornet, met with the British brig-of-war Penguin, off Tristan d'Acumha, and captured her after an action of only twenty-two minutes. He served as a diplomatist, and signed the commercial treaty with Turkey in 1832. In 1845 he was *interim* commissioner to China in the place of A. H. Everett. He died in 1848.

BIDDLE, NICHOLAS, captain in the United States navy, was born at Philadelphia in 1750, and was a midshipman in the British service. He served in the infant navy of his country during the war for independence, and was very successful, till March 7th, 1778, when, in action in the West Indies with the *Yarmouth*, the *Randolph*, which he commanded, blew up. His crew numbered three hundred and fifteen. But four escaped, and Capt. Biddle was among the lost.

BIDDLE, NICHOLAS, an eminent financier, was born in Philadelphia, Jan. 8th, 1786. His father was a strong patriot during the Revolution. Nicholas graduated at Princeton College in 1801 with high honor, studied law, and accompanied Gen. Armstrong, minister to France, as private secretary in 1804, and was afterward secretary to Mr. Monroe at the court of St. James. Returning from foreign

travel, he commenced practice at Philadelphia in 1807, and also engaged in literary occupations, preparing the account of Lewis and Clarke's expedition to the Pacific shore. In 1823 he was chosen president of the United States Bank, and was active in defense of that institution against the hot war that was waged upon it. After its bankruptcy, he retired in 1839 to his estate of Andalusia, on the Delaware near Philadelphia, where he died in 1844.

BIEVRE, Marquis de, marshal, born in 1747, died in 1789. He was much celebrated for ready repartees and puns. When presented to Louis XV., the following dialogue took place. *Louis.* Give me a specimen of your wit. *B.* Give me a subject, sire. *Louis.* Take me. *B.* Sire, the king is no subject.

BINGEN; a town in Hesse Darmstadt, on the left bank of the Rhine; population, 5,000. In its vicinity is the famous Mouse Tower, connected with which is the following tale. In a time of great famine, Bishop Hatto played the usurer, to the distress and ruin of many poor people. For this he is said to have met a dreadful punishment. Thousands on thousands of mice pouring into his dwelling, compelled him to seek refuge in his tower on the Rhine. But here he enjoyed but a brief interval of rest. The army of mice swam the river, sealed the rocky precipice, and leaped into the tower, at every cranny, grate, and loop-hole. The bishop attempted to pray, but his utterance failed; he listened to the noise of the mice as they swiftly approached his turret-chamber. At length they gained an entrance, and devoured the prelate, tearing the flesh from his bones, and leaving him a mere skeleton.

BIRD, WILLIAM, 1540-1623, an admired English musician, the composer of the great canon, "Non Nobis Domine."

BIREN, ERNST JOHN VON, Duke of Courland, born 1687, died 1772. He is said to have been the son of Buhren, a peasant of Courland. He gained the favor of Anna, Duchess of Courland, afterward Empress of Russia, by his beauty and accomplishments, and when his mistress was raised to the throne, was not forgotten by her. While in power, he was fierce, resentful, and ambitious, and caused the death of thousands. After the death of Anna, a conspiracy was formed against him, and he was banished to

Siberia. But he was recalled on the accession of Elizabeth, daughter of Peter the Great, to the throne. After another exile of twenty-five years, he was again recalled by Peter III., and, during the reign of Catherine II., continued to enjoy the royal favor until his death.

BIRMA, or the Birman empire, extends over more than a fourth of the peninsula beyond the Ganges, having an area of about 184,000 square miles, and a population of four millions. The Birmans of Ava made themselves independent of Pegu, in the sixteenth century, but were reconquered in the eighteenth. The spirit of independence, however, was abroad, and Alompra, one of the leaders of the Birmans, kindled anew the flame of revolt in 1753, and recovered the city of Ava. Various fortunes followed, till Alompra finally made himself master of the city of Pegu. This monarch, whose abilities were devoted to the good of his subjects, died in 1760, at the age of fifty years, leaving his throne to his son Namdogee, who inherited his father's spirit and talent, and died in 1764. Shambuan, his brother, was victorious in a war with China, during which Siam, which he had previously conquered, regained its independence. In 1776, this prince left his empire, greatly extended, to his son Chengenza, who in consequence of excessive debauchery, was dethroned and put to death in 1782. Shembuan Menderagan, the fourth son of Alompra, was placed by the revolution on the throne. In 1783, he subdued Arracan. A war with Siam, in which he next engaged, resulted, in 1793, in the submission of that kingdom upon certain terms. The refusal of the East India Company to deliver up some Birman refugees, who were robbers, brought on a war with Shembuan, which was soon amicably concluded. Shembuan's grandson ascended the throne in 1819. In 1826, a war which had broken out between the Burmese and English, ended in a treaty, by which the king of the white elephant and the golden feet (titles of the monarchs of Birmah) ceded to the East India Company large tracts on the western coast of his empire, including Arracan, Merguy, Tavay, and Yea. Assam became independent, and Rangoon was declared a free port. The Birmese also paid a million

sterling as indemnity. In 1852, further hostilities were ended by the British conquest of Pegu. The Birmans are gay, irritable, active, and fond of show. No man is permitted to have more than one wife, and capital punishment is extended to confirmed opium eaters and drunkards in general. The bodies of the dead are burned. The commerce of the Birmese is extensive, and the merchants make use of bars of gold, silver, and lead in the place of coin. The people are fond of amusements, particularly dramatic spectacles. Education is not wholly neglected among them, every one learning arithmetic, reading, and writing. They have uncleanly fashions in eating, gormandizing on reptiles, lizards, iguanas, and snakes. Fried worms and ants are choice dishes. Their faith forbids the killing of animals for food; hence they eat those that die of disease. They are Buddhists in religion.

BIRON, CHARLES DE GONTAUT, Duke of; an intriguing nobleman in the reign of Henry IV. of France, tried on a charge of treason, and beheaded July 31st, 1602.

BITHYNIA, an ancient country of Asia Minor, also called Bebyrcia. It lay on the Pontus Euxinus, the Thracian Bosphorus, and the Propontis, and was bounded on the south by Phrygia. It was held successively by the Assyrians, Lydians, Persians, and Macedonians. It afforded for some time an asylum to Hannibal, who was at last delivered up. Nicomedes III., the last king, bequeathed the kingdom to the Romans, B.C. 75. In 1298, the Ottoman Turks founded their empire here; previous to which, the Seljuks had conquered it in the eleventh century.

BLACK HOLE. One hundred and forty-six British gentlemen, merchants and others, in the service of the East India Company, were seized by order of Surajah Dowlah, June 20th, 1756, and thrust into a dungeon at Calcutta, called the Black Hole, in the fort, by his soldiers. These latter saw that the place was too small for such a number, but they feared to awaken the nabob, then asleep, for further orders. One hundred and twenty-three of the sufferers died before morning, having been suffocated by the heat, crushing, and stench of a dungeon only eighteen feet square.

BLACK SEA, the Euxine of the ancients, BLA

an inland sea between Europe and Asia Minor, covering about 170,000 square miles. It is connected with the Sea of Azof by the Strait of Yenikalé, or Kertsch, and with the Mediterranean through the Bosphorus, Sea of Marmora, and the Dardanelles. This sea was navigated early by the Greeks, and well frequented by the Romans. It was also much visited by the Genoese, till it was closed to all nations by the Turks from the fifteenth to the eighteenth centuries. The Russians gained admission by treaty in 1774. In 1779, it was partially opened to British and other traders. It was entered by the British and French fleets, Jan. 3d, 1854, at the requisition of the Porte, after the destruction of the Turkish fleet at Sinope by the Russians, Nov. 30th, 1853.

BLACKLOCK, THOMAS, a poet and clergyman, born at Annan, in 1721. Although deprived of sight in infancy, he became famous for his acquirements, and took a high station among the literati of Scotland. He died July, 1791.

BLACKMORE, Sir RICHARD, an inferior English poet and superior physician, born 1650, and died October 8th, 1729.

BLACKSTONE, Sir WILLIAM, an English lawyer of great celebrity, and a writer on the British constitution, was born in London, in 1723. He was the son of a silk mercer, but being left an orphan, was brought up and educated by Mr. Thomas Bigg, his uncle, a surgeon. He left Pembroke College, Oxford, with a high reputation, and, in 1746, after faithful preparatory study, was admitted to the bar and commenced practice. His progress was slow, owing to his deficiency in elocution; and he accordingly determined to forsake the practice of the law, and retire to his fellowship at Oxford. In 1759, when several of his legal works had attracted the attention of the public, he resumed practice, and honors and emoluments poured in upon him. In 1761, he was chosen member of parliament from Hindon, made king's counsel, and solicitor-general to the queen; about this time, also, he married. In 1765, the first volume of his "Commentaries on the Laws of England" appeared, and was pronounced superior to any work upon the same subject which had before been published. In 1770 he was made one of the justices of

common pleas, and he died in his fifty-seventh year, 1780.

BLACKSTONE, WILLIAM, the first white inhabitant of Boston, was a clergyman of the church of England, and had built his cottage among the Indians five years before the arrival of Winthrop in 1630. He did not relish the neighborhood of the Puritans. "I came," said he, "from England because I did not like the lord bishops, but I can not join with you, because I would not be under the lord brethren," and in 1634 he removed to the bank of the Pawtucket or Blackstone River, near Providence, where he died in 1675.

BLADENSBURG, Md., six miles north-east of Washington, is memorable for a severe skirmish, Aug. 24th, 1814, between a small force of Americans and a portion of the British army marching to destroy the capital. Bladensburg was formerly much resorted to as a dueling ground. Decatur and Barron met here.

BLAIR, JAMES, was born in Scotland, about 1660. In 1683, he was sent out to America, as a missionary, by Dr. Compton, Bishop of London; and by the same prelate, was appointed in 1685, his commissary in Virginia. It was at the latter epoch, that he conceived the plan, and by unwearied exertions, succeeded in founding a college at Williamsburg. The patent for the college was granted by William and Mary, about 1693, and from its founders the institution was named William and Mary College. Mr. Blair was first president; and having filled the ministry sixty, and the presidency of the college fifty years, he died in 1743.

BLAIR, Hugh, an eloquent divine, was born at Edinburgh in 1718, and made preacher of the High Church in that city in 1758. Having acquired a high reputation by his lectures on composition, he was made professor of rhetoric and belles-lettres at Edinburgh, in 1762.

BLAIR, ROBERT, a Scotch clergyman, author of "The Grave." Born at Edinburgh in 1699, he died in 1746.

BLAKE, ROBERT, one of the most renowned of England's naval heroes, was born at Bridgewater, in August, 1599. At Oxford where he was educated, he was noted for his strictness in religion, and his liberality in

BLA

politics. At the outbreak of the civil war he raised one of the first troops, and was among the ablest of the soldiers who fought for the parliament. He held Taunton during a long siege, and successfully defended it against a large body of royalists under Goring. When the war was over, he was put in command of the ships that were sent against Prince Rupert's piratical squadron. The navy was not then the separate branch of defense that it now is. A successful general was thought competent to command a fleet. Blake was fifty years of age, but he adapted himself at once to the element on which he was to surpass all his former prowess. War broke out between the English and Dutch in 1652. Desperate naval battles ensued. Once, and once only, was he beaten by Van Tromp, but then the Dutch force was twice the English. He nearly destroyed the Dutch navy in two years, and Holland sued for peace. Cromwell sent him to the Mediterranean. He forced Algiers and Tunis to surrender their English captives. He compelled the knights of Malta and the Tuscan government to pay for the seizure of English merchantmen, and made the pope smart for having allowed them to be sold in his ports. When the Spanish war began, he blockaded Cadiz. His last and most daring exploit was at Santa Cruz in Teneriffe in April, 1657. Here he destroyed sixteen Spanish ships, secured with great nautical skill, and protected by the castle and forts on the shore. Lord Clarendon said, "It was so miraculous, that all who knew the place wondered any sober man, with what courage soever endowed, would have undertaken it; and the victors could hardly persuade themselves to believe what they had done; whilst the surviving Spaniards thought that they were devils and not men, who had destroyed their ships in such a manner." The terror of Blake's name was so great, that it was used by the Dutch and Spaniards to quell their children. The great admiral sickened upon his return to England, and died in sight of the shores he had so stoutly defended. Cromwell caused him to be buried with fitting pomp in Westminster Abbey, but after the restoration his body was torn from its vault and coffin, and thrown into a pit in the neighboring church-yard of St. Margaret's.

BLAKELEY, JOHNSTON, born in Ireland 1781, was a distinguished naval officer in the service of the United States. In 1800 he received a midshipman's warrant, and, in 1813 was appointed to the command of the *Wasp*. In an action with the *Reindeer* in 1814, he took her in nineteen minutes, but was forced to abandon her, as she was so completely cut up. The loss of the Americans in killed and wounded was twenty-one; that of the British sixty-seven. After an engagement with the brig *Avon*, which was forced to strike, although three other English vessels were in sight, the *Wasp* was spoken by a vessel off the Western Isles, since which time she has not been heard of. Blakeley left an only daughter, who was educated by the state of North Carolina.

BLANCHARD, FRANCOIS, one of the earliest aeronauts, born at Andelys, in France, in 1738. He showed an early fondness for mechanics, and in his sixteenth year, invented a self-moving carriage, which carried him eighteen miles. In his nineteenth year he invented a hydraulic machine, and soon afterward a sort of flying ship. When the Montgolfiers made their discoveries, Blanchard eagerly made use of them. In 1785, he crossed the channel from Dover to Calais, with Doctor Jeffries, a gentleman of Boston, Mass. At one time the balloon sank so rapidly, that although the aeronauts had lightened the car by throwing over all superfluous articles, even their clothes, they were in danger of losing their lives. However, the voyage was finally accomplished in safety, and Blanchard was presented by the King of France with 12,000 francs, and a pension of 1,200. In the same year he made use of a parachute in London. His forty-sixth ascent was made in the city of New York, 1796. In 1798 he went up from Rouen in a large balloon with sixteen persons. He died in 1809, after having made more than sixty-six aeronautic voyages. Madame Blanchard, after his death, continued to make voyages in the air. In June, 1819, she ascended from Paris, and was thought to be in safety, when her balloon took fire from some fireworks which she carried with her; she fell from an immense height, and was dashed to pieces in the Rue de Provence.

BLenheim, a village in Bavaria, on the

Danube, is celebrated for the important victory obtained there by the allies under the Duke of Marlborough and Prince Eugene, over the French, commanded by Marshals Tallard and Marsin, and the Elector of Bavaria. In the war of the Spanish succession, Louis XIV., with the Elector of Bavaria for his only ally, was forced to contend against the strength of Holland, England, Austria, Savoy, Portugal, and the German empire. At the battle of Blenheim, which was fought August 13th, 1704, the allied forces amounted to about 52,000, and the French to 56,000, with great advantage of situation; the latter, however, were completely beaten, with the loss of 27,000 killed, and 13,000 prisoners, Tallard being among the latter.

BLOOD, circulation of, through the lungs, first made public by Michael Servetus, a Spanish physician, in 1553. Cæsalpinus published an account of the general circulation, of which he had some confused ideas, and improved it afterward by experiments, 1569; but it was fully confirmed by Harvey, 1628.

BLOOD, THOMAS, commonly called Col. Blood, a disbanded officer of Oliver Cromwell's household. With confederates he seized the Duke of Ormond in his coach, and had got him as far as Tyburn, intending to hang him, when he was rescued. Blood was afterward notorious for his attempt to steal the crown and regalia from the Tower, in the disguise of a clergyman. Charles II. pardoned him, and even bestowed an estate of £500 per annum on him, while poor Edwards, keeper of the regalia, who was severely wounded in defending them, was passed by unnoticed.

BLOOMFIELD, ROBERT, an English poet, born at Honington, in 1766. He was the son of a tailor, and, in 1781, he was sent to London, with his brother, to learn the shoe-making trade. He visited various places of public worship, the theatre, and a debating society, and found his faculties developed in a striking manner. His brother, hearing him one day repeat a song which he had composed, induced him to offer it to the editor of the *London Magazine*, by whom it was accepted and published. His poem of the "Farmer's Boy," composed in his London garret, was published by Capel Lofft, to

whom it was first shown. The versification in this, as well as in the other poems of Bloomfield, is easy and correct. He was made by the Duke of Grafton under-sealer for the seal office, but ill health compelled him to relinquish this situation. He afterward worked at his trade, and engaged in the book-trade, but he became bankrupt. He died in August, 1823.

BLUCHER, GEBHART LEBRECHT VON, a celebrated Prussian general, who distinguished himself in the wars with France, particularly in 1813, 1814, and 1815, and who, by his timely arrival on the field of Waterloo, decided the victory. The soldiers, in allusion to his promptitude in attack, called him Marshal Forward. He died Sept. 12th, 1819, aged seventy-seven.

BLUM, ROBERT, a martyr for liberty in the German revolution of 1848. An obscure artisan in Cologne, his native city, he attracted the attention of friends of freedom by his contributions to the press, and especially his exposure of the Romish humbug called "The Holy Coat of Treves." In the revolution of 1848 he was foremost for action, and full of fiery eloquence. Mixed up with the outbreak in Vienna, he was seized by the Austrian government, and shot November 9th, 1848, in the forty-first year of life.

BLUMENBACH, JEAN FREDERICK, a celebrated comparative anatomist, physiologist, and naturalist, born at Gotha, 1752, died at Göttingen, 1840. He was the first to establish the division of the human race into five varieties, the Caucasian, Mongolian, Ethiopian, American, and Malay. His great desire was to prove the unity of the human species.

BOADICEA, a British heroine, Queen of the Iceni. Her husband, for the security of his family, had made the Roman emperor co-heir with his daughters. But the Roman officers took possession of her palace, exposed the princesses to the brutality of the soldiers, and scourged the queen in public. Boadicea, urged to revenge by this usage, assembled her countrymen, and, in a masculine harangue, roused them to madness, by describing her own, her daughters', and her country's injuries. London was stormed, and 70,000 strangers were put to the sword. Suetonius Paulinus defeated the Britons, and Boadicea poisoned herself in despair, A.D. 60.

BOCCACCIO, GIOVANNI, a famous Italian author, born at Florence or Paris, 1313. His "Decameron" fixed his reputation, and the name of Boccaccio, according to Mazzuchelli, is equivalent to a thousand encomiums. The death of his friend and instructor, Petrarch, was a severe shock to him, and he died not more than a year after, at Certaldo in Tuscany, Dec. 21st, 1375.

BEOTIA, a state of ancient Greece, lying north of Attica. Thebes, its capital, was equally celebrated for its antiquity, its grandeur, and the exploits and misfortunes of its heroes and kings. The country was known successively as Aonia, Messapia, Hyantis, Ogygia, Cadmeis, and Bœotia. From the general character of the inhabitants, the term Bœotian was used by the Athenians as a synonym for dullness; but unjustly, since Pindar, Hesiod, Plutarch, Democritus, Epaminondas, and the accomplished and beautiful Corinna, were natives of Bœotia. The government was an oligarchy. Bœotia was frequently at war with Attica and Sparta. By the valor of Epaminondas it became the leading power in Greece, but soon after his death, it fell with its sister states under the rule of Philip of Macedon.

BOERHAVE, HERMANN, one of the most famous physicians of the eighteenth century, born at Woorhout, near Leyden, December, 1668, died in 1738. People came to him from all parts of Europe for advice, and a Chinese mandarin wrote to him with the address, "To Boerhave, the celebrated physician of Europe." His property amounted, at his death, to two million florins.

BOETHIUS, ANICIUS MANLIUS TORQUATUS SEVERINUS, a man whose services, rewards, virtues, and unhappy end have made him famous, was born at Rome or Milan, about A.D. 470. Having received an admirable education and improved himself by travel, he was taken into favor by Theodoric, King of the Ostrogoths, and rapidly raised to the highest offices of the empire. His strict justice and uncompromising integrity acquired for him the hatred of the rapacious and unprincipled Goths; the king became prejudiced against him, and had him arrested, imprisoned, and executed, A.D. 526 or 527. His most celebrated work, on "The Consolations of Philosophy," consisting of prose

and verse, was composed by him in prison. Alfred the Great of England translated it for the benefit of his people.

BOGOTA, at the time the Spaniards conquered South America, was one of the most civilized states of the country, and inhabited by the Muisca Indians. The valley of Bogota, famous for its fertility, was filled with Indians who rivaled in civilization the inhabitants of Cuzco. They traced their prosperity to the instructions of Bochica. Gonzalo Ximenes di Quesada effected their conquest.

BOHEMIA, a kingdom now forming a part of the Austrian empire; area 20,013 square miles; population in 1851, 4,409,900. Bohemia is surrounded by mountains and covered with forests. All kinds of grain and fruits are exported. The mines yield silver, copper, tin, garnets, and other precious stones, iron, arsenic, alum, antimony, sulphur, &c. The kingdom derives its name from the Boii, a Celtic nation, who settled there about 600 B.C. About the middle of the sixth century it was inhabited by Slavonians, who were governed by their own dukes. Charlemagne made Bohemia tributary, but it did not long remain so. The first king received his title from the Emperor Henry IV., and in 1310 the house of Luxemburg succeeded to the throne. In 1526, Bohemia reverted to the house of Austria, by whom it has been ever since held. Bohemia produced the first reformers, among whom were John Huss and Jerome of Prague, but at the present day almost all the people are Catholics. The land is divided into estates of vast magnitude, and the peasantry are held in servitude. It is one of the most manufacturing districts of Austria. Bohemian glass has been noted since the thirteenth century. Many parts of the districts adjoining the northern and eastern ranges of mountains form one continued manufactory of linens, and thousands of humble cabins resound with the noise of the jenny or the loom. With the exception of Prague, the ancient capital, there are no large towns.

BOILEAU-DESPREAUX, NICHOLAS, born at Crosne, near Paris, in 1636. The future satirist was dull and sickly in youth, and described by his father as a good-natured boy, who would never speak ill of any one.

After having studied diligently at the colleges of Harcourt and Beauvais, he entered upon the career of the law, which he soon relinquished for the more congenial pursuit of belles-lettres. His satire, "Les Adieux à Paris," first displayed his talents. He published many works, his "Art Poétique" being the most popular. He was opposed by many writers, to confound whom he wrote his unrivaled mock-heroic poem, the "Lutrin." He died of the dropsy in 1711, bequeathing almost all his property to the poor.

BOKHARA, a country in the interior of Asia, the Sogdiana and Bactria of antiquity. It is the south-eastern part of Independent Tartary, or Turkistan. The city of Bokhara has a population of about 150,000, and is the most commercial town of central Asia. Some centuries ago this and the neighboring city of Samarcand were famous as seats of learning, and were sought by students from all the Mohammedan countries of Asia. Balkh, in the ancient Bactria, is one of the most celebrated cities of the eastern world. Anciently it was famed for its splendor, extent, and magnificence. Alexander the Great, in his eastern campaign, married the daughter of a Bactrian chief. This chief, who defended himself bravely against the Macedonians, while his family was placed upon a precipitous rock, was named Oxyartes. The garrison of the rocky fortress, when summoned to surrender, answered Alexander contemptuously that if his men were winged, he might intimidate them, but as it was, their position was impregnable. Alexander offered rewards to those who would attempt to ascend the rock, and three hundred of the most expert that volunteered were selected. In the interstices of the rock, and in the ice upon its face, the climbers stuck iron pegs, and ascended the most precipitous parts in the night-time. Some of the first who ventured, fell headlong, but the summit was gained by a determined band. By order of Alexander, the Macedonians shook before the eyes of the barbarians long strips of linen, intimating that they had found wings. The garrison immediately surrendered, tacitly proving the correctness of Alexander's favorite maxim, that no place was impregnable to the brave, or secure to the timorous.

The Bactrians were a race holding a middle

station between the Persians and Scythians, with much of the polish of the former, and little of the ferocity of the latter. Their descendants still retain many of the characteristics of the Bactrians of former days. Their women were famed for the brilliancy of their dark, shining eyes, the delicate and correct formation of their features, and the richness and transparency of their complexions. Roxana, the daughter of Oxyartes, was not only distinguished above those of her nation in beauty, but, with the single exception of the wife of Darius, was the loveliest of Asiatic women. The conduct of Alexander toward his dazzling captive was honorable; having conceived a warm attachment to her, he married her, pursuant to the wishes of his friend Hephæstion, but contrary to the advice of Craterus. The fears of Oxyartes were banished by Alexander's avowal of his attachment to his child. He came into the Macedonian camp, and was received with every mark of attention and respect. Thus ties of friendship bound the Bactrians and Macedonians together. Alexander, according to Strabo, founded no fewer than eight cities in Sogdiana and Bactria. The city of Anderab retains still a part of Alexander's name. The Alexandria which the Macedonian monarch is said to have founded, was probably either Cabul, or else at no great distance from it. To return to Balk. In 1221 it was taken by Genghis Khan, who put to the sword nearly all its inhabitants.

BOLEYN, ANNE, second wife of Henry VIII. of England, was probably born about 1500. She was the daughter of Sir Thomas Boleyn. Her early years were spent in attendance on Henry's sister, the wife of Louis XII. of France, on whose death she became maid of honor to Queen Catherine. Henry having procured a divorce from the latter, married Anne privately, and when she became a mother publicly acknowledged her as queen. Her child was the famous Elizabeth. The tyrant conceiving a passion for Jane Seymour, caused Anne to be tried for high treason and infidelity. She suffered on the scaffold, May 19th, 1536, Henry considering it an act of great clemency to save her from the stake. She was beautiful, gay, and witty, and in her last moments self-possessed. "She sent her last message to the king," says

Hume, "and acknowledged the obligations which she owed him in uniformly continuing her advancement. From a private gentlewoman, you have made me, first a marchioness, then a queen; and as you can raise me no higher in this world, you are now sending me to be a saint in heaven."

BOLINGBROKE, HENRY ST. JOHN, Viscount, was born at Battersea, in 1672, of an ancient and distinguished family. His brilliant talents, elegant manners, and personal attractions secured him a warm welcome in society; but, unhappily, until his twenty-third year his career was stained with those vices which spring from the impetuous temper of youth. His marriage with a beautiful heiress did not produce the happiness which his parents had looked for, and the young couple separated forever after a short connection. The moment he obtained a seat in the House of Commons, he distinguished himself by industry, activity, eloquence, and strong judgment. In 1704 he was made secretary of war, but when the Whigs came into place, he sent in his resignation. The Whig party being prostrated, Bolingbroke received the department of foreign affairs, and concluded the peace of Utrecht. During the height of party contention between the Whigs and Tories, immediately after the conclusion of peace, a quarrel occurred between Bolingbroke and Harley, then lord high treasurer, and Queen Anne, provoked with the latter, dismissed him four days before her death, and made Bolingbroke prime minister. The scene was speedily reversed by the death of Anne. George I. ascended the throne, the Whigs triumphed, and Bolingbroke, learning that his enemies intended to impeach him, fled to Lorraine, and was made secretary of state by the Pretender, who, however, becoming displeased with him, deprived him of this dignity and conferred it on the Duke of Ormond. His attainder having been partly reversed, he returned to England in 1723, opposed the ministry for eight years, and again went to France. In France, in 1735, he published his "Letters upon History," which, however admirable, were blamed for attacking revealed religion. In 1738, he returned to his country, where he died of a lingering and painful disease in 1751.

BOLIVAR, SIMON, the most prominent

actor in the events which produced the independence of a large portion of South America, was born in the city of Caraccas, July 24th, 1783, of a distinguished and noble Venezuelan family. After acquiring the elements of a liberal education in South America, he visited Spain, and spent some time in traveling in Europe, chiefly in the south of France. Returning for a while to Madrid, he married, and carried his wife to his native land, where he thought to enjoy in peace the comforts of domestic life. The death of his wife put an end to his blissful visions, and he again went to Europe, partly to dissipate his grief. On his return, he traveled through the United States, where his love of liberty settled into an indelible passion, and we find him actively engaged in promoting the early movement in Caraccas, April, 1810, and receiving a colonel's commission from the supreme junta then established. He sided with the patriots of Venezuela, and, after the declaration of independence, July 5th, 1811, served under General Miranda, against a party in Valencia who declared against the principles and measures of the revolutionists.

After some ill success in Venezuela, which is attributable to treachery of others rather than a want of talent on his part, Bolivar escaped to Curaçoa. He could not, however, content himself with being a cold spectator of events in which the lives and fortunes of his countrymen were risked, and accordingly he came to Carthagená in 1812, and entered into the service of the patriots of New Grenada. His expedition against Teneriffe, on the river Magdalena, was successful, he drove the Spaniards before him in his triumphant advance, and entered the city of Ocaña in triumph, thus inspiring general confidence in the patriot cause, and attracting the attention of all to it and to himself. He next expelled the Spanish forces from Cucuta, and conceived the plan of freeing Venezuela from the Spaniards, a task which he accomplished by the 4th of August, 1813. At the assembly of Caraccas, Jan. 2d, 1814, the power which was vested in the hands of Bolivar as commander of the liberating army, was confirmed. If we carefully trace the military career of Bolivar, we shall find him alternately meeting with success, and struggling with reverse; displaying, both in triumph

and defeat, the noble daring of a gallant warrior, the rare talents of a military chieftain, and the unyielding perseverance of a true patriot. At length he had the satisfaction of beholding the arms of the patriots triumphant in every quarter, their banners moving onward in pride and splendor, and the phalanx of opposition becoming daily more and more feeble.

In May, 1826, Bolivar presented to the congress of Upper Peru, which had formed the independent state of Bolivia, the constitution, which, at their request, he had prepared. Meanwhile a rebellion had broken out in Venezuela, headed by Paez, who considered himself aggrieved, and the fair fruits of liberty, won with many a day of bloody toil, appeared in danger of being lost. It was Bolivar alone who could and did quell this insurrection. The Bolivian code, which, among its prominent features, provided that the executive authority should be vested in the hands of the president for life, was adopted as the constitution of Bolivia, Dec. 9th, 1826, and Bolivar, then absent, was declared its president. If the provisions of the Bolivian code had alarmed the friends of liberty, what was their terror when they beheld Bolivar, whom they suspected of ambitious designs, placed for life at the head of the government. The Colombian auxiliary army, then in Peru, rapidly revolutionized the government, and induced the Peruvians to renounce the Bolivian code. Strenuous opposition to Bolivar was made in Colombia by the republicans, who imagined that he was ready to emulate the career of Napoleon, although he had repeatedly expressed a wish to retire from the presidency. However, in 1828, a decree, dated Bogota, Aug. 27th, gave him the supreme power in Colombia. The authority reposed in him gave the republicans no little alarm, but Bolivar did not live long to exercise it. Looking back upon his career, if there appear occasionally a desire to exalt himself above his fellows, we must grant him that rare union of civil and military abilities, that courage in adversity and moderation in prosperity, which were alone capable of achieving the regeneration of his country. He died Dec. 17th, 1830.

BOLIVIA, a republic of South America, comprising 374,480 square miles, and contain-

ing about 1,650,000 inhabitants. It was originally called Upper Peru, and belonged to the Spanish vice-royalty of Buenos Ayres. Its independence of Spain was declared Aug. 6th, 1824, and the following year the name of Bolivia was assumed in honor of General Bolivar. Its mountains contain rich silver mines, but they are now little worked. Like its sister republics Bolivia has been sadly distressed by intestine wars. Chuquisaca is the capital; population 26,000. It was founded by one of Pizarro's officers on the site of an old Peruvian town called Choque Chaka, or 'bridge of gold;' the treasures of the incas having passed through it on their way to Cuzco. A hundred years ago Potosi had a hundred thousand dwellers. Its silver mines were then industriously worked. Now there are hardly 30,000 inhabitants, half of whom are Peruvian Indians.

BOMARSUND, a strong fortress on one of the Aland Isles, in the Baltic. It was bombarded by the French and English in August, 1854, and the Russians surrendered on the 16th. The fortifications were demolished.

BONAPARTE. **CHARLES BUONAPARTE**, a young lawyer of Ajaccio, in Corsica, wedded Letitia Ramolini, one of the most beautiful and accomplished girls of the island. Thirteen children were the offspring of this union, eight of whom survived to maturity: Joseph, Napoleon, Lucien, Louis, Jerome, Eliza, Pauline, and Caroline. The father died early. The mother lived to witness the grandeur of her great son, and to mourn his death in the sea-girt isle which injustice made his prison. She died at Rome, in October, 1832, aged eighty-two. She was a woman of great beauty, great courage, and great mind. In her nineteenth year, Aug. 15th, 1769, upon a couch whose tapestry was embroidered with the heroes and battles of the "Iliad," she gave birth to NAPOLEON, one of the most extraordinary characters recorded in history, distinguished alike for his extraordinary fortunes, his civil talents, and his military genius. After receiving the rudiments of a classical education, he entered the military school at Brienne, where he was distinguished by the gravity of his character, and his sedulous study of the mathematics. Even his sports partook of his graver pursuits. On the occurrence of a day which was commonly con-

sidered a holiday, Bonaparte's instructors confined him and his companions to the school grounds. The young engineer constructed a mine with great ingenuity, which in exploding blew down the walls and enabled the juvenile rebels to escape. When he could enlist no young recruits in his mimic armies, Napoleon would use flints as substitutes for soldiers, and marshal them with great care. A boy who disturbed his array was severely punished by Napoleon. Many years after, when the imperial diadem was on his head, Napoleon was informed that one of his old school-mates desired an interview. He assured the chamberlain that the emperor would recollect him if he mentioned that there was a deep scar on his forehead. When the emperor was informed of this, he said, "I do not forget how he got that scar. I threw a general at his head at Brienne."

At sixteen, he received the commission of second lieutenant in the regiment of Lafere, which he joined at Valence. At twenty he was promoted to a captaincy, and in December, 1793, had obtained the command of the artillery train in the attack on Toulon, then occupied by the English. The originality of his plans won the siege for the French. One of the deputies of the convention wrote to Carnot: "I send you a young man who distinguished himself very much during the siege, and earnestly recommend to you to advance him speedily. If you do not, he will most assuredly advance himself." But with the exception of a brief service the next spring as commandant of the artillery in the army of Italy, he was for some time left inactive. Want pinched him. He dreamed of the orient, and thought of offering his sword to the grand seignior. "How odd it would be," said he, "were a little Corsican officer to become king of Jerusalem." Stranger happenings than that were to be. Once he was on the brink of suicide, when a timely loan from an old comrade gave him the means of life.

In 1795, when some of the sections of Paris rose in insurrection against the national convention, the command of the troops was intrusted to him. His cannon dispersed the mob, the Directory was established, and Napoleon made military governor of the metropolis. He was at that time very thin, although

distinguished for corpulency in the latter part of his life. On one occasion he gained a bloodless victory over a rabble whose exertions were stimulated by a very fat old woman. "There," cried she, "look at the soldiers! they're the wretches that fatten in idleness while we starve." "Look at her and look at me," said Napoleon, "and tell us which is the fattest." This raised a laugh, and the populace dispersed quietly. On this, as on many other occasions, his knowledge of human nature was apparent.

The 6th of March, 1796, Napoleon was married to Josephine Tascher Beauharnais, and just before, through the influence of Barras, their mutual friend, and one of the directory, he was appointed commander-in-chief of the army in Italy. The French lay on the cold slopes of the maritime Alps. Their foes were snug upon the warm plains of Italy. The French soldiers were ragged, hungered, and dispirited. The glowing vigor of their young general gave them new nerve and hope. He led them into Sardinia at once, and defeated the surprised Austrians at Montenotte, the 11th of April. "My patent of nobility," said he afterward to the Emperor of Austria, "dates from the field of Montenotte." He astounded the veteran warriors with whom he coped, by the rapidity of his maneuvers and his defiance of ancient tactics. "War," said he, "is the science of barbarians. He who has the heaviest battalions will conquer." The troops of his foes far outnumbered his own; he attacked them in detached portions, and conquered them by piecemeal. The battles of Millesimo, Mondovi, and Lodi followed in a month, and he entered Milan in triumph. Sardinia had been cowed into peace. It was after the hot contest of Lodi, that Napoleon's veterans dubbed him with the pet name he never lost, "the little corporal." Napoleon has said, "It was not till after the terrible passage of the bridge of Lodi, that the thought shot across my mind that I might become a decisive actor in the political arena. Then arose, for the first time, the spark of great ambition." More soldiers from Austria: more battles. At Castiglione, Roveredo, Bassano, Arcola, and Rivoli, the French were victorious, and the stubborn Wurmser at last yielded Mantua. The Austrians were driven from Italy. In ten months, Napoleon, with

55,000 men, including all recruits, had conquered five grand armies, composed of over 200,000 highly disciplined Austrian troops, and headed by such veterans as Beaulieu, Wurmser, and Alvinzi. At times it had seemed as if the handful of French must be overwhelmed, but the genius of their leader had brought them through. They had taken a hundred thousand prisoners, and killed and wounded thirty-five thousand men. Napoleon crossed the Carnic Alps, threatened Vienna, defeated a fresh army under the gallant Archduke Charles, and forced Austria to the humiliating treaty of Campo Formio, Oct. 17th, 1797. One term of this treaty was the release of Lafayette from the dungeon of Olmutz.

In Paris, the young conqueror of Italy was received with an enthusiasm that excited the greatest terror and jealousy in the government. To be rid of his presence they detailed him upon distant and difficult service. In 1798, he took the command of the army destined against Egypt, and on his passage from Toulon, captured Malta. He landed at Alexandria, and after the capture of that city pushed on toward Cairo. The French formed in squares to receive the furious onsets of the Mamelukes. A corps of scientific men, who had been mounted on donkeys, accompanied the expedition. Whenever a body of Mamelukes approached, the order, "Form square, savans and asses in the centre," was greeted with jocund uproar by the soldiery. At the battle waged in sight of the pyramids, Napoleon said to his men, "Soldiers! from those summits forty centuries gaze upon you!" The gazing centuries saw the rout of the Mamelukes, and the invaders masters of Cairo. Nelson's victory in the Bay of Aboukir cut the expedition off from all supplies and reinforcements, yet in Egypt and Syria Napoleon was everywhere victorious except at Acre; where, for want of besieging artillery, he was repulsed by Sir Sydney Smith. In October, 1799, the misgovernment of France, and the disasters which had befallen the French troops, induced him to return, leaving Kleber in command in Egypt. He was received as a savior by the French nation, and on the 9th of November he deposed the directory, and was proclaimed first consul of the republic.

To England and Austria he made proffers of peace which were rejected. The hosts of

the confederates threatened an invasion of the republic, and English fleets blockaded her coasts. Napoleon led a rapidly gathered army over the crags of the Great St. Bernard, and descended like an avalanche upon the forces of Marshal Melas. The campaign opened at Montebello, where Lannes with eight thousand men defeated eighteen thousand Austrians, though the latter were protected by the deadly fire of strong and commanding batteries. "I could hear the bones crash in my division, like glass in a hail-storm," said Lannes. The terrible victory of Marengo followed, on the 14th of June, 1800: Melas, with his army of 120,000 was now utterly discomfited, by half that number, and Napoleon was once more master of Italy. An armistice was concluded. The conqueror left Massena in command of the triumphant army, and returned to Paris, where he again sought a fair peace with Austria, and again unsuccessfully. Moreau, who commanded the grand army of the Rhine, advanced and won the field of Ilohenlinden, and chased the fleeing Austrians within thirty miles of Vienna. Another armistice was had, and Feb. 9th, 1801, the peace of Luneville was completed, and the continent thus quieted. About this time many attempts were made to assassinate Napoleon. On Christmas eve, as he was on his way to the opera, the famous 'infernal machine,' a cart laden with gunpowder and deadly missiles, was fired. He escaped by an accidental moment of time. Eight persons were killed, and sixty wounded, of whom twenty afterward died. On both sides the way the houses were sadly shattered.

Napoleon employed his leisure of peace in developing the resources of France. He planned and executed vast internal improvements, commenced the compilation of the civil code, and restored the observances of religion. He formed a great coalition against England, which was broken by the death of Paul, the Czar of Russia. The great antagonist nations paused for a breathing spell, and the peace of Amiens was concluded in March, 1802. About this time the Italian or Cisalpine republic, which he had founded in the north of Italy, chose Napoleon their president; a few months after, the people of France elected him consul for life; in May, 1804, he assumed the title of Napoleon I., Emperor of the French, and Dec. 2d was crowned at Paris by the

pope. In March, 1805, he was declared King of Italy, and in May crowned at Milan. He had previously established his military order of the legion of honor and distributed the crosses which were the distinguishing badges. Of all to whom the cross of the legion of honor was tendered, Lafayette alone declined it. Napoleon, either from want of true perception of moral greatness, or because the detestable servility of returning emigrants had taught him to think there was no such thing as honor or independence in man, exclaimed, when they told him that Lafayette refused the decoration, "What, will nothing satisfy that man, but the chief command of the national guard of the empire?" Yes, much less abundantly satisfied him; the quiet possession of the poor remnants of his estate, enjoyed without sacrificing his principles.

England had previously renewed maritime hostilities with France, and in the fall of 1805, a mighty coalition reared itself against the new empire; England, Austria, Russia, and Sweden. Afterward Prussia joined them. Five hundred thousand men menaced Napoleon and France. The emperor broke up the powerful armament he had gathered at Boulogne for the invasion of Great Britain, marched into Germany with his accustomed rapidity, and at Ulm captured 30,000 Austrians. In November, he entered Vienna, and on the 2d of December, gained the battle of Austerlitz, over the Emperors of Russia and Austria, after which he concluded peace with Austria, created the Electors of Bavaria and Wirtemberg kings, and made his brother Joseph King of Naples, and Louis King of Holland.

The next year England, Prussia, and Russia entered into a new coalition. Napoleon invaded Prussia, and on the 14th of October, gained a decisive victory at Jena and Auerstadt, by which the whole Prussian monarchy, and Germany to the Baltic, came under his authority. The man of destiny had now filled Europe with the terror of his name, the bare mention of which shook the crowned heads of the oldest monarchies of the continent with palsied apprehension. In vain the dagger, the mine, and the bowl had been prepared for him. His star had not yet begun to decline from the zenith. Napoleon was almost miraculously preserved from poison. It is well known that he was an inveterate snuff-taker.

When his mind was deeply engaged, his snuff-box was in constant requisition. He once left his apartment for a few moments, and returned to take his box from the mantle-piece. He thought the snuff felt somewhat strangely, and calling to a dog that was lying near him, administered a pinch. The poor animal soon rolled over in the agonies of death; and Napoleon thenceforth kept his snuff in his waistcoat pockets, which he had sheathed with tin.

From the royal palace at Berlin, Napoleon promulgated in retaliation the famous decree by which he proposed to exclude the trade of Britain from all the ports of the continent. In June, 1807, having overrun Poland, he totally defeated the Emperor of Russia at Eylau and Friedland, after which an interview took place between them on a raft in the Niemen, followed by the treaty of Tilsit. In November of that year, he sent an army into Lisbon, thus annihilating the British supremacy in Portugal, and driving the Portuguese court to the Brazils. On the 5th of May, 1808, was concluded the treaty by which Charles IV. ceded all his rights in the crown of Spain. Joseph, brother of the emperor, was proclaimed King of Spain, on the 6th of June. Hence arose the Peninsular war.

On the 27th of September, in the same year, Napoleon had an amicable interview with the Emperor of Russia at Erfurt, and they jointly proposed peace with England, which was rejected. On the 29th of October the emperor departed from Paris and placed himself at the head of the army in Spain, the right wing of which pursued Sir John Moore to Corunna, while he marched to Madrid and seated his brother on the Spanish throne. In the mean time, the Austrians took the field; Napoleon hastened to oppose them, gained successive victories at Eckmühl and Wagram, and in the latter battle a treaty of peace. On the 16th of December, 1809, he divorced Josephine, and on the 2d of April, 1810, married Maria Louisa, Archduchess of Austria. The 20th of March, 1811, was signalized by the birth of his son, who was crowned King of Rome. In the divorce of Josephine, Napoleon said at St. Helena, he stepped upon an abyss covered with flowers.

The amity between Napoleon and Alexander cooled, and at last was wholly ruptured. In

1812, Napoleon assembled a great army in Poland, and invaded Russia, and having at the Borodino and at Moskwa gained bloody victories, he entered Moscow on the 14th of September. That city became untenable, and the French retreated for winter quarters toward Poland, but an early and unusual frost setting in during their march, they lost their horses, were compelled to abandon their artillery, and three-fourths of the army perished or were made prisoners. Napoleon returned to Paris, and Poland and Prussia were occupied by the Russians.

In April, 1813, Napoleon again took the field against the Prussians, and gained the victories of Lutzen, Bautzen, Wurtzen, and Dresden; but the Austrians and Bavarians joined the confederacy against him, and he was attacked at Leipsic by the combined armies of the European nations; being forced to abandon that city with immense loss, and retreat to Metz, thereby abandoning his German conquests. In 1814, the confederates having passed the Rhine, penetrated, after various battles, to Paris, which, being surrendered by Marshals Marmont and Mortier, Napoleon concluded a treaty with the allies, at Fontainebleau, by which he agreed to retire to the island of Elba, with provision for himself and family.

In March, 1815, Napoleon embarked with 600 of his old guard, and made a sudden descent in Provence. On the 10th, he entered Lyons, on the 20th Paris in triumph. His banners flew from steeple to steeple, until they finally waved in the wind from the pinnacles of Notre Dame. He assumed the throne once more, and soon joined the army on the Belgian frontier, where on the 16th of June, he defeated Blucher at Ligny with a loss of 22,000 men. On the 18th, was fought the bloody battle of Waterloo, in which the French army was completely defeated.

When, after the disaster at Waterloo, Napoleon came back in desperation to Paris, and began to scatter dark hints of dissolving the representatives' chamber, repeating at Paris the catastrophe of Moscow, and thereby endeavoring to rouse the people of France to one universal and frantic crusade of resistance, Lafayette was the first to denounce the wild suggestion. He proposed a series of resolutions, announcing that the independence of

the nation was threatened, declaring the chambers a permanent body, and denouncing the instant penalties of high treason against all attempts to dissolve it. The same evening he proposed, in the secret assembly of the council of state, the abdication of Napoleon. The subject was again pressed the following day; but the voluntary act of the emperor anticipated the decision.

On the 8th of July, Louis XVIII. returned to Paris, and on the 15th, Napoleon surrendered himself to the English at Rochefort. He only asked permission to pass the remainder of his days in England, under an assumed name, and in a private character, but he was conveyed to St. Helena, as a prisoner of state. A few officers of his suite accompanied him. In the island he was treated with indignity and meanness until his death, which was the result of an intestine disorder, and took place May 5th, 1821. In his last moments, he was delirious, and his last words, "*Tete d'armee*," proved that he fancied himself at the head of his troops, watching the fluctuating current of a battle. He was buried in a little valley; a simple slab marked the place of his repose; two weeping-willows waved over it, and an iron railing encircled that spot of ground so dear to millions.

Napoleon, in person, was below the middle size; and, in the latter part of his life, quite corpulent. His straight brown hair fell over a broad high forehead; his complexion was clear olive, and his features regular and classical. An air of subdued melancholy was the prevailing characteristic of his countenance in repose; but he had the power of dismissing all expression from his features, when he chose to baffle scrutiny. At such times the curious observer might gaze upon his still gray eye and quiet lip without finding any indication of the thoughts which were passing within.

Though Napoleon was ambitious, his desire was not for mere self-aggrandizement, for he sought the advancement of France. He contended in self-defense and defense of France, against the crowns of Europe, who hated him as the monarch of the people. These wars drenched the sands of Egypt, the snows of Russia, and the plains of Germany, and Italy, and Spain, with the best blood of France and the best of Europe: yet he was

not destitute of the feelings of humanity, and, as he rode over a field heaped with the dead and dying victims of his ambition, his fine eye would fill with tears. But feeling without repentance is of no avail. Yet if Napoleon was lavish of the lives of others, he was no less prodigal of his own, amidst the hottest fire of the enemy. If he laid his grasp upon nations,—

“Their ransom did the general coffers fill.”

He often pardoned, but he never failed to reward. It was thus that he attached his soldiers to him with indissoluble bonds. A thousand proofs may be given of their attachment to their emperor. At Waterloo, one man whose left arm was shattered by a cannonball, wrenched it off with the other, and throwing it up in the air, he exclaimed to his comrades, “Vive l’empereur, jusqu’ à la mort!” When Napoleon took his final farewell of France, all wept, but particularly Savary, and a Polish officer who had been exalted from the ranks by Bonaparte. He clung to his master’s knees, wrote a letter to Lord Keith, entreated permission to accompany him, even in the most menial capacity, which could not be admitted.

Napoleon was a statesman as well as a warrior. What he would have accomplished, had he been left to govern France in peace, may be judged from the great benefits which he wrought while engaged by almost incessant hostilities. The Code Napoleon was an inestimable boon to the jurisprudence of France and Europe; and throughout the empire, magnificent public edifices, fortifications, harbors, docks, canals, roads, bridges, columns, and schools still speak of the energy with which he improved and embellished the land whose throne he occupied, and in the hearts of whose people his memory is still warmly enshrined.

In 1840, Louis Philippe, after obtaining the consent of England, sent a frigate commanded by his son, the Prince de Joinville, to St. Helena, to convey the remains of Napoleon to France. On the 30th of November, they reached Cherbourg, whence they were conveyed with great pomp to Paris, and deposited beneath the dome of the Hospital des Invalides, on the 15th of December, where

they lie beside the bones of Turenne and Vauban.

NAPOLEON CHARLES FRANCIS JOSEPH, son of Napoleon and Maria Louisa, was born at Paris, March 20th, 1811. He received the title of King of Rome. The downfall of his illustrious father changed his condition and prospects. His grandfather, the Emperor of Austria, was appointed his guardian. He received the title of the Duke of Reichstadt. He died at the palace of Schönbrunn, near Vienna, of consumption, July 22d, 1832.

JOSEPH, the elder brother of Napoleon, was born in 1768. He shared the fortune of his eminent brother, and was of great service to him in a diplomatic capacity. In 1806 Napoleon placed him upon the throne of Naples. His brief reign was a succession of benefits to a people who had been long degraded by oppressive despotism. He founded civil and military schools, overthrew feudal privileges, suppressed the convents, opened new roads, set the *lazzaroni* at work, and everywhere animated the abject people with new life and hope. From 1808 to 1813, he wore the crown of Spain, and but for the intervention of the British, and the desolation of war, would have opened a happy path for that unfortunate kingdom. After the fall of Napoleon, Joseph resided some years at Bordentown, N. J. He died in Europe in 1844. In his later years he bore the title of Comte de Survilliers.

LUCIEN was born at Ajaccio in 1775. He was president of the council of five hundred, and aided in raising Napoleon to the consulship. A partial estrangement occurred between the brothers, and Lucien exiled himself to Italy, whence he refused to return and accept a throne. He was a man of high spirit and independence. The pope made him Prince of Canino. When Napoleon was pent up in Elba, a reconciliation was effected between the two brothers, and Lucien was more devoted to the empire in its decline than he had been in its day of prosperity. He wished to share the emperor’s imprisonment at St. Helena, but it was not permitted. He spent his latter years in the Roman states, and died in 1840.

LOUIS was born in 1778. He shared in Napoleon’s Italian campaigns, and accompa-

nied the expedition to Egypt. In 1806 he was placed upon the throne of Holland. The post was reluctantly accepted, but he devoted himself with enthusiasm to the duties it involved. The policy maintained by Napoleon against the commerce of Great Britain, would cripple the traffic of Holland. Louis was placed in an embarrassing and humiliating position between the power of his brother and the interests of his people. He abdicated in 1810. Louis was of a melancholy temperament, studious and retiring. When Napoleon was just entering upon his brilliant career, his musing brother became deeply enamored of a beautiful scion of the ancient nobility. Their union was impeded, and Louis forced to wed the daughter of Josephine, Hortense, who loved and was beloved by Duroc. They separated after a few years of dejection. The eldest of their children shattered by an early death Napoleon's plan that he should inherit the imperial crown; the second died in youthful manhood; the third now sits on the throne of France. Louis, after his abdication, lived gloomily a retired and scholastic life till 1846, in which year he died at Leghorn.

JEROME was born at Ajaccio in 1784. In his youth he served in the French navy, and during a visit to America, in one of his cruises, married Miss Elizabeth Patterson, the daughter of a rich merchant of Baltimore. Napoleon was much annoyed at his idle and dissolute ways. He finally exchanged the sea for land service. In 1807, he obeyed his brother in the repudiation of his American wife, espoused the daughter of the King of Wurtemberg, and was made King of Westphalia. He was the scapegrace of the Bonaparte family, weak, mean. Napoleon said to him, "If the majesty of kings is imprinted on the countenance, you may safely travel incognito." The fall of the empire deprived Jerome of the crown he wore so ill. He lives to see a second empire and another Napoleon on its throne.

MARIE ANN ELISE, the eldest of Napoleon's sisters, was born Jan. 8th, 1777. In May, 1797, she was married to Felix Bacciochi, a Corsican. Napoleon gave her the grand-duchy of Tuscany, with the principalities of Lucca and Piombino, in whose government she displayed much energy and ability. Her sway

ended in 1814, and she died at Trieste, Aug. 9th, 1820.

MARIE PAULINE, the favorite sister of Napoleon, was born at Ajaccio, Oct. 20th, 1782. After becoming the widow of General Leclerc, she married Prince Camille Borghese, with whom she did not live on good terms. She died in 1825. Her whole property amounted to 2,000,000 francs. She was uncommonly beautiful, and Canova represented her as the goddess of beauty, a Venus which almost rivaled the antique.

CAROLINE MARIE ANNONCIADÉ, the youngest of Napoleon's sisters, was born March 26th, 1782. In January, 1800, she was married to Murat. She was a very pretty and a very clever woman. When the rule of her husband was overthrown in 1815, by the reverses of the French and the advance of the Austrian army, and the city of Naples was on the brink of anarchy, she took prompt, wise, and energetic measures for maintaining order. She died ———

BONIFACE, the name of several popes. Boniface I. succeeded Zosimus in 418, and was maintained in the pontifical chair by the Emperor Honorius against his rival Eulalius. He died in 422. Boniface II. succeeded Felix IV. in 530. He was born at Rome, but his father was a Goth. He compelled the bishops in a council to allow him to nominate his successor, and accordingly he selected Vigil; but a second council disavowed the proceedings of the first. Boniface VI. came to the chair 806, and died of the gout a fortnight after. Boniface VII. assumed the chair after having murdered Benedict VI. and John XIV. He was acknowledged sovereign pontiff in 974, and died a few months after. Boniface VIII., after the resignation of Celestine, was elected 1294. He commenced his pontificate by imprisoning his predecessor, and laying Denmark under an interdict. He also excommunicated the Colonnas as heretics, and preached a crusade against them. He excited the princes of Germany to revolt against Albert, and laid France under an interdict. Philip appealed to a general council and sent his army into Italy, and took the pope prisoner. He died at Rome a few months afterward.

BONIFACE, St., first spread Christianity

and civilization among the Germans. His original name was Winifred, and he was born in England in 680. In 732 he was made archbishop and primate of all Germany. He was killed by barbarians at Dockum, in West Friesland, in 755.

BONNER, EDMUND, an English prelate, who received several preferments from Cardinal Wolsey. Henry VIII. made him one of his chaplains, and sent him to Rome to obtain from the pope a divorce from Catharine. There he was so insolent that the pontiff threatened to throw him into a caldron of boiling lead, and thus compelled him to quit Rome. He persecuted the Protestants with great cruelty, and Elizabeth imprisoned him in the Marshalsea, where he died in 1569.

BONEVAL, CLAUDE ALEXANDER, Count de, known also by the name of Achmet Pacha, was born in 1672. He was descended from an illustrious family in France, and married the daughter of the Marshal de Biron. He was disgraced, however, by his incessant pursuit of sensual pleasure. He quitted the French army to serve under Prince Eugene; but having quarreled with the general, he deserted to the service of the Turks, among whom he obtained a military command, and the rank of pacha with three tails. He won a great victory over the imperial army on the banks of the Danube. He died in 1747.

BOOKS. The first books were boards, or the inner bark of trees; and bark is still used by some nations, as are also skins, for which latter parchment was substituted. Papyrus, an Egyptian plant, was adopted in that country. Books whose leaves were vellum, were invented by Attalus, King of Pergamus, about 178 B.C., at which time books were in volumes or rolls. The MSS. found at Herculaneum consist of rolls of papyrus, charred and matted together by the fire, about nine inches long, and one, two, or three inches in diameter, each being a separate treatise. The Pentateuch of Moses, and the history of Job, are the most ancient books in the world; and in profane literature the poems of Homer, though the names of others yet older are preserved. Before the day of printing, books commanded prices only within reach of the wealthy. Jerome

states that he had ruined himself by buying a copy of the works of Origen. King Alfred gave a large estate for a work on cosmography, about A.D. 872. A homily was exchanged for two hundred sheep and five quarters of wheat; and such books were usually sold for double or treble their weight in gold. The book of St. Cuthbert, the earliest ornamented book, is supposed to have been bound about A.D. 650. A Latin Psalter in oak boards was bound in the ninth century. A MS. copy of the Four Gospels, the book on which the Kings of England, from Henry I. to Edward VI., took their coronation oath, was bound in oaken boards nearly an inch thick, A.D. 1100. Velvet was the covering used in the fourth century, and silk soon after. Vellum was introduced early in the fifteenth century, and was stamped and ornamented about 1510. Leather came into use about the same time. Cloth binding began to supersede the common boards about 1830.

BOONE, DANIEL, a native of Virginia, was one of the first to penetrate the savage wilds of Kentucky, on an expedition to explore which, he departed with five companions, May 1st, 1769. Boone, with John Stewart, was captured by the Indians, not long after their arrival in Kentucky, but soon managed to escape. Their companions had returned home, whither they would have followed them, but for the timely arrival of Squire Boone, Daniel's brother, with refreshments. Stewart being soon after slain, the two Boones remained the only white men in the wilderness. In 1773, Boone with his own and five other families, a body of forty men, took up the march of emigration from Virginia to Kentucky; but in consequence of the hostility of the Indians, they returned to the settlements on Clinch River. In 1775, Boone built a fort at Salt Spring, on the southern bank of the Kentucky, on the site of Boonesborough. After sustaining several sieges, he was taken by the savages, Feb. 7th, 1778, while hunting with some of his men. The Indians soon learned to respect and value Boone, who was adopted by one of the chiefs of Chillicothe, but the thoughts of his wife and children induced our adventurer to attempt an escape. After traveling for four days, taking but one meal, he arrived at Boonesborough, which

was a hundred and sixty miles from the place of his captivity. On the 8th of August an attack on the fort was commenced by a body of Indians and Canadian French, which continued till the 20th, when the siege was abandoned. This was the last attempt made upon Boonesborough.

From 1782 till 1798, Boone lived alternately in Kentucky and Virginia. In 1798, having obtained from the Spanish government a grant of land in Upper Louisiana, he removed thither with his children and friends, who were also presented with land. He settled on the Missouri, beyond the limits of other settlements, and employed himself in the wild life of the forest, hunting and trapping, until 1820, when he expired, aged nearly ninety. He had for a long time been sensible of the approach of death, and had a coffin made out of a favorite cherry-tree, which he brought to a high degree of polish by continual rubbing.

BORGIA, CÆSAR, son of Pope Alexander VI., an infamous character. On his father's accession to the papacy in 1492, he was invested with the purple. Being jealous of his brother Francis, he contrived to have him drowned. Having renounced the cardinalship, he was made Duke of Romagna in 1501, and leagued with Louis XII. of France. On the death of his father, he was sent prisoner to Spain, but made his escape, and died fighting under the walls of Bianco, in 1507.

BORNEO, next to Australia, the largest island in the world, is about 850 miles long, and 700 broad. Lon. 109° to 119° E.; lat. 7° N. to 4° 20' S. The insalubrity of the climate has restrained Europeans from exploring it. Earthquakes and volcanoes are frequent in the island. The mountain breezes and the rains moderate the heat, which is excessive. Gold, diamonds, pearl, iron, copper, tin, antimony, and other minerals are found here. The fruits are fine and abundant. The native inhabitants are Malays, Chinese, Bujis or natives of Celebes, and a few descendants of Arabs. The Dutch have permanent settlements on the island, and derive their chief profit from gold, pepper, and diamonds. Borneo was discovered by the Portuguese in 1526.

BORODINO. This battle, one of the most sanguinary in the world, was fought Sept. 7th, 1812, between the French and Russians, commanded on the one side by Napoleon, and on

the other by Kutusoff, 240,000 men being engaged. The retreat of the Russians left Moscow open to Napoleon. This is sometimes called the battle of the Moskwa.

BOSCAWEN, EDWARD, a British admiral, particularly distinguished himself at the taking of Porto Bello and the siege of Carthage. He also signalized himself under Anson, off Cape Finisterre, and at the taking of Madras, Cape Breton, and Louisburg. He died in 1761, having received in succession all the honors of his profession.

BOSSUET, JACQUES BENIGNE, Bishop of Meaux, born at Dijon, 1627, became one of the most celebrated ecclesiastics of the eighteenth century. He was pious, severe in doctrine and practice, eloquent, and learned. He died in 1704.

BOSWELL, JAMES, the friend and biographer of Dr. Johnson, was a native of Scotland, and studied at the universities of Glasgow and Utrecht. He was born at Edinburgh, in 1740, and died in 1795. He was acquainted with many eminent literary men, and his introduction to Johnson he calls the most important event of his life. His life of Johnson is accurate and minute, abounding with literary anecdote and personal detail. It was first published in 1790, and has since been repeatedly re-printed.

BOSWORTH, a small town of Leicestershire, England, in the vicinity of which is Bosworth Field, memorable for the battle fought here, Aug. 22d, 1485, between Richard III. and the Earl of Richmond, afterward Henry VII., in which the latter was victorious, and Richard, after having performed prodigies of valor, and cloven from helm to heel two of Richmond's standard-bearers, thus disproving the tale of his withered arm, was finally slain. The brows of Richmond were encircled on the field of battle with the diadem which was stricken from the casque of Richard. This battle ended the bloody contentions of the rival roses, the red and white badges of York and Lancaster.

BOTHWELL, JAMES HEPBURN, Earl of, remarkable in the history of Scotland for his connection with Queen Mary and his supposed share in the murder of Henry Darnley, her husband. When that unfortunate prince was blown up in the house where he slept, suspicion fell strongly on Bothwell and the

queen. Bothwell was tried, but nothing could be fixed on him, and he was acquitted. After this he seized Mary near Edinburgh, and carried her prisoner to Dunbar Castle, where they were married. During these iniquitous proceedings, Bothwell procured a divorce from his first wife. Mary soon after created him Earl of Orkney. But a confederacy among the lords being formed against him, he retired to the Orkneys, and from thence to Denmark, where he died in 1577, confessing it is said his own guilt, and the queen's innocence of Darnley's murder.

BOUDINOT, ELIAS, was born at Philadelphia, May 2d, 1740. He became eminent at the bar, was chosen member of the continental congress in 1777, and its president in 1782. For six years he was in the house of representatives, and for a few years director of the mint. He made munificent donations to the American Bible Society, of which he was the first president. He died in 1821.

BOUFFLERS, Marshal de, was born in 1644, and died in 1711. His defense of Namur, in 1695, cost the allies 20,000 men. Louis XIV. sent him an order commanding him to surrender, but he concealed it till he had no longer the means of defense.

BOUILLE, FRANÇOIS CLAUDE AMOUR, Marquis de, a French loyalist general, who, among other services, suppressed a dangerous insurrection at Metz, and assisted Louis XVI. in his attempt to escape from France. For his avowal of this transaction, a price was set upon his head, whereupon he took a commission in the Swedish service. He died in 1800, aged sixty-one.

BOURBONS. This family ascended the throne of France in the person of Henry IV., 1589. The crown of Spain was settled on a younger branch, and guaranteed by the peace of Utrecht, 1713, after a long and bloody dispute called the war for the Spanish succession. The reigning family of Naples is a branch of the Bourbons of Spain. The Bourbons were expelled from France in 1791, and were restored in 1814. The elder branch was expelled in 1830, and Louis Philippe, of the Orleans line, reigned till 1848, when he also was deposed.

BOURBON, CHARLES, Duke of, or Constable of Bourbon, son of Gilbert, Count of Montpensier, and Clara of Gonzaga, born in 1489.

At the age of twenty-six, he received the sword of constable from Francis I., and distinguished himself at Marignano, but soon after fell into disgrace. On this, he associated with Charles V., and Henry VIII. of England, against his sovereign. The plot being discovered, he fled into Italy, and was beyond the territories of France, when Francis sent to demand the sword which he wore as constable, and the badge of his order. In the words of his reply, we may trace the deep anguish of his heart: "The king deprived me of my sword at Valenciennes when he gave the command of the vanguard to D'Alençon: the badge of my order I left under my pillow at Chantelles." He became commander-in-chief of the imperial troops in Italy, but was killed in the successful assault on Rome, May 2d, 1527. He fell, it is said, by a shot fired by Benvenuto Cellini. He died excommunicated.

BOURBON, ISLE OF, an island about 400 miles east of Madagascar. Its origin is supposed to be volcanic. Le Piton de Neige, or the Snowy Spike, is a mountain which rises to the height of about 10,000 feet above the level of the sea. The isle of Bourbon, which is 48 miles long, and 36 broad, was discovered by Mascarenhas, a Portuguese, in 1545, and called after his name; but the French, who gained possession of it in 1649, changed its name. After remaining for a time in the hands of the English, it was restored to the French in 1815. After the revolution of 1848, it received the name of Reunion.

BOURRIENNE, L. A. FAUVELT DE, the schoolmate and secretary of Napoleon, and afterward a partisan of the Bourbons, 1769-1824.

BOWDITCH, NATHANIEL, LL.D., born at Salem, Mass., March 26th, 1773, died at Boston, March 16th, 1838. His translation of the "*Mécanique Celeste*" of Laplace, with the elaborate additions that he made, gave him high rank as a writer in the pure mathematics.

BOWDOIN, JAMES, governor of Massachusetts, was born at Boston, in 1727, graduated at Cambridge, 1745, elected member of the general court in 1753, and a member of the council in 1756. In 1778, he was chosen president of the convention which framed the Massachusetts constitution. In 1785, being chosen governor of Massachusetts, he had

Shay's insurrection to quell. He died at Boston, in 1790. Such was his reputation for learning, that he was honored with the degree of LL.D. by the university of Edinburgh, and admitted member of the royal societies of Dublin, London, and other places.

BOWLES, WILLIAM LISLE, a writer of excellent sonnets and other more mediocre poetry, enjoys the distinction of having 'delighted and inspired' the genius of Coleridge, who while yet a youth was a warm admirer of his sonnets. Mr. Bowles was born at King's Sutton in Northamptonshire, Sept. 24th, 1762, was educated at Winchester and Oxford, and was for many years rector of Bremhill in Wiltshire, where he died in his eighty-eighth year. He is chiefly famous for the controversy concerning the poetry of Pope, in which Campbell and Byron were among his antagonists.

His absence of mind was very great, and it is said that when his coachman drove him anywhere he had to practice all kinds of cautions to keep his master to time and place. The poet once walked out in company with an antiquary, as absent of mind as himself. His servant coming to look for him, and learning this, exclaimed in ludicrous distress, "What! those wandered away together? then they'll never be found any more!" His handwriting was one of the worst that ever man wrote; insomuch that frequently he could not read that which he had written the day before; and the printers had tough work in getting his scrawls into type. At the office where his works were printed, there was one compositor who had a sort of knack in making out the blind hieroglyphics; and he was once actually sent for by Mr. Bowles into Wiltshire to copy some manuscript written a year or two before, which the author had himself vainly endeavored to decipher.

BOYDELL, JOHN, patron of the arts and engraver by profession; born at Donington, England, January 19th, 1719; came to London on foot, bound himself an apprentice to an engraver; began to publish 1745-6, and in 1790, had expended in the promotion of the arts in general, and the "Shakespeare Gallery" in particular, £350,000 sterling. He died in London, Dec. 17th, 1804, having nearly reached the age of eighty-six years.

BOYER, JEAN PIERRE, a mulatto, president

of the island of Hayti, was born in Port au Prince, about 1780. After the death of Leclerc, he joined the party of Pétion, and was finally named by him his successor in the presidency. When the revolution broke out in 1820, in the northern part of the island, he was invited to command the insurgents, and upon the union of the northern and southern parts of the island on the death of Christophe, and the revolution in the eastern part, he became master of the whole island.

BOYLE, CHARLES, fourth Earl of Orrery, generally supposed the inventor of the astronomical instrument which bears his title, born 1676, died in 1731. He patronized Rowley, the real inventor of the planetarium, called the orrery.

BOYLE, ROBERT, born at Lismore, in Ireland, 1627, was seventh son of Richard, the great Earl of Cork. He was one of the first members of the learned society formed in 1645, under the name of the Philosophical College, and afterward continued under the name of the Royal Society. He made numerous experiments in various branches of natural philosophy, which led to some important results. But it is chiefly as a pious and benevolent man that he is interesting to us. Having conceived doubts of the authenticity of revealed religion, he devoted himself to a severe course of study, until he was fully convinced of its truth. He endowed public lectures for the defense of Christianity (which are yet delivered), and, at his own expense, printed Irish and Gaelic translations of the Bible. He died in London, in 1691.

BOYNE, BATTLE OF THE, was fought on the 1st of July, 1690, between William III., at the head of a Protestant army, and James II., at the head of a Catholic and French force. The latter were totally defeated. The Duke of Schomberg, William's ablest general, was shot by mistake by his own soldiers, as he was crossing the Boyne. After this battle James re-embarked for France, and William completed the reduction of Ireland, by the capture of Limerick, after a protracted siege. The impetuous imbecility of the unfortunate bigot James II., served only to hasten the ruin which public opinion had so deservedly prepared for himself and his family. It was the Irish who, during the dark fortunes of

this last of the royal Stuarts, clung to him when all else deserted him. They manned his navy, recruited his army, replenished his coffers, and took their stand around his person on their native soil; and when they saw him the first to fly, they still erected his torn standard, and rallied in his cause, paying the penalty of their generous but misapplied devotion to a bigot and a tyrant, by utter ruin and eternal exile. Yet when James, in his flight from the battle, arrived in Dublin, he had the ingratitude and ungraciousness to reflect upon the cowardice of the Irish. He reached the castle late at night, and was met at its gates by the beautiful Duchess of Tyrconnel, "La Belle Jennings" of Grammont's Memoirs. In return for the sympathizing respect which marked her reception, the king is said to have sarcastically complimented her upon the "alertness of her husband's countrymen." The high-spirited beauty replied, "In that, however, your majesty has had the advantage of them all." The king, in fact, was among the first to arrive in the capital with the news of his own defeat.

BOZZARIS, MARCO, one of the gallant defenders of liberty in modern Greece, was born in Albania, in 1780, and is said to have been, at an early period of his life, in the French service. When the Greeks rose to throw off the Ottoman yoke, he ardently espoused the cause of his country, and was chosen stratarch of Western Greece. The Turks having invaded Etolia with a large army, at the head of two hundred and fifty volunteers he made a nocturnal attack on the enemy's camp, and put great numbers of them to the sword; but toward the close of the contest he received a mortal wound. His companions in arms, by a desperate effort, succeeded in bearing him from the field, and he expired at Missolonghi on the following day, August 23d, 1823.

BRABANT. North Brabant, in the kingdom of the Netherlands, contains 403,687 inhabitants, and South Brabant, in Belgium, 711,332. Brabant formed a duchy in the seventh century. For some ages it belonged to the Frankish monarchy, and then was a German fief. In 1005, the last duke dying, the duchy devolved on his brother-in-law, Lambert I., Count of Louvain. From him it came to Philip II., Duke of Burgundy, and afterward to the Emperor Charles V. In the

seventeenth century, the republic of Holland took possession of the northern part, which was thence called Dutch Brabant. The other part, belonging to Austria, was seized upon by France in 1746. The peace of Aix-la-Chapelle restored it, but, after falling again into the hands of the French, it was ceded to France by the treaties of Campo Formio and Luneville, in 1791 and 1801.

BRADDOCK, EDWARD, major-general and commander in the British army, who in 1755 marched against Fort du Quesne on the Ohio, fell into an ambuscade of Indians and French, was defeated and slain. Washington, who had cautioned him in vain, conducted the retreat in a masterly manner.

BRADFORD, WILLIAM, eminent lawyer of Pennsylvania; born in Philadelphia, Sept. 14th, 1755, died August 23d, 1795. Washington appointed him attorney-general of the United States.

BRADFORD, WILLIAM, one of the first printers in English America, born in 1658, died in 1752. In 1725, the *New York Gazette*, the first newspaper published in that city, was commenced by him. He also started the manufacture of paper at Elizabethtown, N. J. He was first established at Philadelphia, where his son Andrew continued the *American Mercury*, the first newspaper of that town, commenced in 1719.

BRADFORD, WILLIAM, grandson of the preceding, was a printer and bookseller in Philadelphia. In 1742, he published the first number of the *Pennsylvania Journal*, which was continued through the century. The day preceding that on which the stamp-act was to go into force, the *Journal* appeared in the blackest mourning, with its head surmounted by a skull and cross-bones. In the upper right-hand corner, was a death's head, entitled "An Emblem of the Effects of the Stamp. O! the Fatal Stamp." In the opposite corner was the quaint announcement, "The Times are Dreadful, Doleful, Dismal, Dolorous, and Dollar-less." On the margin was the cry, "Adieu, adieu to the Liberty of the Press." The first page read thus: "Thursday, October 31, 1765. Numb. 1195. The Pennsylvania Journal, and Weekly Advertiser. Expiring: In Hopes of a Resurrection to Life again." "I am sorry to be obliged to acquaint my readers that as the Stamp Act is

feared to be obligatory upon us after the *first of November* ensuing (The Fatal To-morrow), the publisher of this paper, unable to bear the Burthen, has thought it expedient to stop awhile, in order to deliberate, whether any methods can be found to elude the chains forged for us, and escape the insupportable slavery, which it is hoped, from the last representation now made against that act, may be effected. Meanwhile I must earnestly Request every individual of my subscribers, many of whom have been long behind Hand, that they would immediately discharge their respective Arrears, that I may be able not only to support myself during the Interval, but be better prepared to proceed again with this Paper whenever an opening for that purpose appears, which I hope will be soon. WILLIAM BRADFORD." The sturdy republican fought as major and colonel in the Pennsylvania militia at Trenton and Princeton. His constitution broke and his fortune was shattered. He died Sept. 25th, 1791, aged seventy-two.

BRADFORD, WILLIAM, was born in the north of England in 1588. While a youth he was denounced as a separatist. He fled to Holland, and came over in the Mayflower. While with others he was seeking a spot whereat to land, his wife fell overboard and was drowned. He was made governor upon the death of Carver in 1621, and annually elected so long as he lived, except now and then that "by importuning, he got off," as Winslow says, and another filled the place for the nonce. Gov. Bradford died in May, 1657.

BRADLEY, JAMES, an eminent English astronomer, born 1692; succeeded Dr. John Keil, as Savilian professor of astronomy, at Oxford, in 1721; discovered the aberration of the fixed stars, and mutation of the earth's axis; was appointed astronomer royal, February, 1741-2; died July 13th, 1762.

BRADSTREET, ANNE, author of the first volume of poems written in America, was the daughter of Dudley, and the wife of Bradstreet, both governors of Massachusetts. She was born in England in 1614, and died in 1672. Her poems were printed at Cambridge in 1640, treating of "the four elements, constitutions, ages of man, seasons of the year, the Assyrian, Persian, Grecian, and Roman

monarchies." Cotton Mather said that "her poems, eleven times printed, have afforded a plentiful entertainment unto the ingenious, and a monument for her memory beyond the stateliest marbles."

BRAGANZA, a town of Portugal, made a duchy in 1442. It gives its name to the royal house of Portugal, of whom the first was John IV., Duke of Braganza, who led the Portuguese people in rendering themselves independent of Spain, in 1640. A branch of the house of Braganza is seated on the throne of Brazil.

BRAHE, TYCHO, eminent astronomer, born in Sweden, December 19th, 1546, died at Prague, October 24th, 1601, aged fifty-five.

BRAHMINS, a sect of Indian philosophers and priests, reputed so ancient that Pythagoras is said to have received from them his doctrine of metempsychosis, and it is affirmed that some of the Greek philosophers went to India on purpose to converse with them. They never eat flesh, and profess to abstain from wine and all carnal enjoyments. The modern Brahmins derive their name from Brahma, the first person in the Trinity, or Trimurti, of the Hindoos. Brahma is the creator, Vishnu, the preserver, or redeemer, and Siva, the destroyer. Brahma is represented with four heads and four arms. He is gifted with great power, but is himself created by the Eternal One. Some believe that he dies annually, and rises again. He is considered as the lawgiver and teacher of India.

BRAINERD, DAVID, a devoted missionary among the Indians in New York, New Jersey, and Pennsylvania, was born in Haddam, Conn., in 1718. His labors exhausted his strength, and he died at the house of Rev. Jonathan Edwards, Northampton, Mass., Oct. 10th, 1747.

BRANDENBURG, an ancient mark or marquisate of Germany, and now the metropolitan province of Prussia. The Suevi first, and then the Slavonians, inhabited it. The latter barbarians, in the tenth century, were conquered by Henry I., and converted to Christianity. The mark passed through various hands, till in the fifteenth century it came into those of the ancestors of the present royal family of Prussia. The Elector Frederic William, enlarged it by the annex-

ation of several towns and districts. The old mark, having been ceded to Napoleon, in 1807, formed a part of the kingdom of Westphalia, until 1814, when it was restored to Prussia.

BRANDYWINE, a small river taking its rise in Pennsylvania, which, after a course of forty-five miles, flowing through the state of Delaware, joins the Christiana, two miles below Wilmington. The river is known in history for a battle fought in its vicinity, Sept. 11th, 1777, between the British and Americans, in which the latter sustained a defeat with a loss of 900 in killed and wounded. Howe had 17,000 effective troops, while Washington's force did not exceed 11,000, many of whom were raw militia. Lafayette was wounded in the leg by a musket ball.

BRANT, JOSEPH, a celebrated Mohawk chief, at the head of the Six Nations during our Revolution, was born on the banks of the Ohio in 1742. His Indian name was Thayendanegea, 'a bundle of sticks,' or 'strength.' Sir William Johnson had him well educated at Dr. Wheelock's Indian school in Columbia, Conn. He attached himself to the royal cause, and throughout the war he was engaged in attacks upon the border settlements of New York and Pennsylvania. He was far more humane than the Tory leaders with whom he was associated. After the termination of hostilities, he procured a domain for his tribe in Upper Canada, and devoted himself to the social and religious betterment of his people. He rendered the Book of Common Prayer, and the Gospel of St. Mark, into the Mohawk tongue. He died Nov. 24th, 1807.

BRAXTON, CARTER, a signer of the Declaration of Independence, was born in Newington, Va., Sept. 10th, 1736. After graduating at William and Mary College, he visited England, where he tarried until 1760. In 1765, he was chosen to a seat in the Virginia house of burgesses. In 1775, he was elected to Congress. He was afterward a representative in the legislature of Virginia. He was a graceful speaker, and a man of respectable attainments. Pecuniary embarrassments clouded the last years of his life, and he died Oct. 10th, 1797.

BRAY, THE VICAR OF. Bray, a quiet vil-

lage in Berkshire, England, is famous for its vicar, the Rev. Symond Symonds, who was twice a papist, and twice a protestant, between the years 1533 and 1558, in the reigns of Henry VIII., Edward VI., Mary, and Elizabeth. Being called a turncoat, he said he kept to his principle, that of "living and dying the vicar of Bray."

BRAZIL, the empire of, comprehends the eastern portion of South America. Its extent, from north to south, is about 2,600 miles, and from east to west, nearly 2,400 miles. With a territory of 2,300,000 square miles, possessing extraordinary wealth and fertility, it is inhabited by but seven and a half millions of people. Brazil contains some of the largest rivers in the world; the Amazon, Tocantin, and San Francisco being the most prominent. There is much variety of climate, but generally it is healthy; and the salubrity of the vast elevated plains is unequalled by that of any other region on the face of the globe. The richness of its precious woods, the abundance of its streams, the profusion of its diamonds and gold, and its general healthiness, might in the hands of thrift and enterprise make it the El Dorado of the imagination. In the beds of the rivers are found diamonds, topazes, chrysoberyls, other precious stones, and gold. The trees are of every description, adapted to cabinet-work, ship-building, and dyeing; while coffee, oranges, sugar, tobacco, indigo, and rice are easily raised. Brazil, at the time of its discovery, was inhabited by roving Indians. These Indians are still in some regions in as savage a state as when South America was first discovered. The foreign population consists of Portuguese and Africans. The Indians were first used as slaves, but this order of things has passed away, and their place in servitude is filled by the negroes. Of the 7,600,000 inhabitants, perhaps 2,000,000 are whites. Many of the first men in the country evidently have an admixture of African blood in them.

Brazil was discovered, April 24th, 1500, by Pedro Alvarez de Cabral, who at first named it Santa Cruz, but Emanuel, the Portuguese sovereign, called it Brazil, from the quantity of red wood which it produced. The Portuguese at first undervalued this country, and sent thither only criminals, and the refuse of their population, but the Jews, who had been

DIAMOND WASHING IN BRAZIL.

banished to Brazil in 1548, having successfully introduced the culture of the sugar-cane, Thomas de Souza was sent over by the court of Lisbon, and began to find some good points about the country, although it had not yielded the desired gold. After temporary misfortunes, the colonists prospered, but the Portuguese had to contend against France, Spain, and the United Provinces, whose jealousy was aroused by the accounts they heard of the richness and fertility of the Portuguese possessions. The Dutch met with great success in Brazil, but became the friends of the Portuguese, when the latter shook off the Spanish yoke and gained their independence. They still retained the seven provinces they had conquered, and hence arose the division of the country into the Brazils; but a pecuniary compensation induced them to resign their claims to the Portuguese. The diamond mines were not discovered till 1728. The prosperity of Brazil has not been what it might be made under an enlightened government. The conflicting interests of various bodies of its inhabitants, the unequal pressure

of state burthens, and other causes, tended to weaken and distract it. In 1808, the court of Portugal removed here, fleeing from Napoleon, but in 1821, the king returned to Lisbon. Dom Pedro, his eldest son, then governed Brazil under the title of prince-regent. The Brazilians declared themselves independent of Portugal, Oct. 12th, 1822, and Dom Pedro was crowned emperor. In 1831 he abdicated in favor of his son Pedro II., then a lad of six years, and returned to Portugal. The empire was governed by a regency till the coronation of the youthful monarch in 1841. The government is a hereditary monarchy, limited by an elective legislature. The empire is divided into nineteen provinces, each of which manages its local affairs. Each has a president, appointed by the crown, and its provincial assembly, chosen by the people. Brazil has been the most favored of the South American states in its freedom from anarchy and intestine conflicts. The most cultivated part of the population are the merchants of the maritime ports, the Europeans and Creoles forming the aristocracy of the country. The

inhabitants are Roman Catholics, with the exception of the independent native tribes, in the vast and obscure regions of the interior.

Rio Janeiro, situated on a bay which affords it one of the finest, safest, and most roomy harbors in the world, is the capital of the empire. An amphitheatre of hills and mountains springing up one behind another, and separated by fertile valleys that enjoy a perpetual spring and yield the choicest fruits and flowers, rises round the bay. Rio has a population of over 200,000, and is a mart of great and increasing commerce. It exports more coffee than all other ports in the world. Bahia, or San Salvador, farther north on the coast, was formerly the capital. Of its 160,000 inhabitants the majority are negroes. It too has a capacious harbor and a thriving trade. Pernambuco, a seaport still to the north, of increasing trade, has 50,000 inhabitants.

BREDA, a fortified town in Dutch Brabant, formerly of immense importance. It has sustained several memorable sieges. In 1590, it was taken by Prince Maurice of Nassau, and retaken by the Spaniards, under Spinola, in 1625, after a siege of ten months. The French, during the revolution, gained possession of it, but it was abandoned by them in 1813. Charles II. of England dwelt here during part of his exile.

BREMEN, one of the free cities of Germany, stands upon the Weser, fifty miles from the sea. It was conspicuous in the Hanseatic league, and is now the capital of a little republic, whose territory amounts to 112 square miles, and whose population in 1855 was 88,856. Bremen is a place of great resort for the warehousing and transit of German and foreign goods. It has been a prominent point for the debarkation of German emigrants to America. Bremen first rose into notice in 788.

BRENNUS. Several chieftains of ancient Gaul bore this name, which is said to have been a title of dignity and honor. One, having ravaged Lombardy and Tuscany, marched to Rome, which he surrendered to plunder. The garrison held out in the citadel, which would have been taken at midnight by the foe, but for the noise made by the sacred geese of Juno, that were watchful even while the dogs slept. Brennus was then offered a thousand pounds weight of gold to spare the capi-

tal, and quit the territories of the republic. He threw into the scale which held the weights, his sword and helmet, haughtily exclaiming, "Wo to the vanquished." The treaty was ended by the timely arrival of the exiled Camillus, who refused the payment of even a pound of gold as ransom. "Rome," said he proudly, "is to liberate herself with iron and not with gold." He gave battle to the Gauls, and routed them, about 390 B.C.

BRESCIA, a province of Austrian Italy. Its manufactures are and have long been extensive, and its soil is remarkable for fertility. From the hands of the Venetians, it fell into those of the French, and finally the Austrians. Under the sway of the Venetian republic, the inhabitants were unruly, although particularly favored by government. The city of Brescia has 40,000 inhabitants. In 1512, it was stormed by Gaston de Foix, after a stubborn resistance by the Venetian garrison. Forty-six thousand Brescians, it is said, perished in the indiscriminate slaughter that followed the entry of the French, to whose lawless rapacity, rampant lust, and ferocious cruelty, the gallantry of Bayard formed but a feeble counterpoise. In 1796, as Bonaparte was quitting Brescia, the municipal officers, who accompanied him to the gate of the city, said that the Brescians loved liberty more than the rest of the Italians. "Yes," said the general, sarcastically, "they love to talk of it to their women." This slur nevertheless, Brescia revolted against the Austrians in 1849, and was bombarded and stormed by Haynau.

BRESLAU, capital of the Prussian province of Silesia, is situated at the junction of the Ohlau and Oder; population, 110,000. The architectural beauty of the city has been celebrated. Its commerce is considerable. Here the Prussians were defeated by the Austrians, Nov. 22d, 1757. Breslau was besieged and taken by the French in 1807 and in 1813.

BREST, anciently Brivates Portus, is one of the chief naval stations of France. Its fine harbor was constructed by Cardinal Richelieu, in 1631. It is well fortified, its dock-yards and magazines command admiration, and it is considered impregnable. It contains 48,225 inhabitants. It was attacked in 1694 by a British fleet and army, which were repulsed with a loss of 1,300 men and their commander, Lord Berkeley.

BRE

THE BRITANNIA TUBULAR BRIDGE.

BRETIGNY, PEACE OF, concluded between England and France, May 8th, 1360. England retained Gasconry and Guienne, acquired Saintonge, Agenois, Perigord, Limousin, Bigorre, Angoumois, and Rovergne, and renounced her claims to Maine, Anjou, Touraine, and Normandy. England was to receive three million crowns, and to release King John of France, who had long been a captive in London.

BREWSTER, WILLIAM, born in England in 1550, came over in the Mayflower, and as ruling elder preached at Plymouth till his death in 1644.

BRIDGES were so early and general, and the expedients for their construction so various, that their origin can not be traced. They were first of wood. In China there are ancient bridges of great magnitude, built of stone. Abydos is famous for the bridge of boats that Xerxes built across the Hellespont. Trajan's magnificent stone bridge over the Danube, 4,770 feet in length, was built in A.D. 103. The Devil's Bridge in the Swiss canton of Uri, so called from its frightful situation, was built resting on two high rocks, so that it could scarcely be conceived how it was erected, and

many fabulous stories were invented to account for it. At Schaffhausen an extraordinary bridge was built over the Rhine, which is there four hundred feet wide. There was a pier midway in the river, but it is doubtful whether the bridge rested upon it: a man of the lightest weight felt the bridge totter under him; yet wagons heavily laden passed over without danger. This bridge was destroyed by the French in 1799. The first stone bridge in England, was built at Bow near Stratford, A.D. 1087. The finest suspension bridge in Great Britain is that erected by Mr. Telford (1818-1825) over the Menai straits, which is one hundred feet above the level of spring tides, with five hundred and sixty feet between the points of suspension. This was considered one of the most surprising works of modern times; but it has been thrown in the shade by the Britannia Tubular Bridge, by which the railway from Chester to Holyhead crosses the strait. About a mile south of the suspension bridge is a rock called the Britannia rock, near the centre of the strait, the surface of which is about ten feet above low water level. Without this rock the tubular bridge would not have been feasible, and from it therefore

BRI

the bridge fitly takes its name. On this rock is built a tower two hundred feet above high water (commenced in May, 1846), on which rest two lines of tubes or hollow girders, the ends resting on abutments on each shore, each tube being more than a quarter of a mile in length. The height of the tube within is thirty feet at the Britannia tower, diminishing to twenty-three feet at the abutments. The lifting of the tubes to their places from their position afloat on the water, is regarded as the most gigantic operation ever successfully performed. They were raised by Brahmah hydraulic presses, into which the water was injected by powerful steam-engines. A locomotive first passed through these grand corridors of iron in March, 1850. Robert Stephenson is the engineer of whose skill this bridge is the monument. A similar bridge over the St. Lawrence at Montreal, called the Victoria bridge, two miles in length, is in construction, to be completed in 1860. The greatest and oldest suspension bridge in the world, is said to be in China, near Kingtung; it is formed of chains. Rope suspension bridges, from rocks to rocks, are also of Chinese origin. One of the finest suspension bridges in the world crosses the Niagara River, about two miles and a half below the falls, by a single span of eight hundred and thirty-four feet, at a height of two hundred and thirty feet above the water. Three railways and a carriage road pass the river by this structure. Nature also has thrown wonderful bridges of rock across mountainous chasms. Of these, those of Icononzo, over fissures in the Cordilleras on the road from Bogota to Quito, the stupendous limestone arch over Cedar Creek in Virginia, and one with a span of a hundred and ninety-five feet in Carter county, Kentucky, are remarkable. The famous bridge by which the army of Xerxes crossed the Hellespont, (480 B.C.), was formed by connecting together ships of different kinds, some long vessels of fifty oars, others three-banked galleys, to the number of almost seven hundred. They were moored fast by anchors and cables of great strength. On extended cables between the lines of shipping were laid fast-bound rafters, over these a layer of boughs, and on the latter earth was thrown. On each side was a fence to prevent the horses and beasts of burthen from being terrified by the sea in their passage

from shore to shore. It is said that this wonderful work was completed in one week.

BRIENNE, a town in the French department of the Aube, at the academy of which Napoleon learned the first principles of the military art. Here on the 1st and 2d of February, the allied Russians and Prussians were defeated severely by the French. This was among the last of Napoleon's victories.

BRIGALIER, Abbé, lived during the reign of Louis XII. The superstitions of his time are displayed by some passages in his life. He was almoner to Mademoiselle de Montauban, and spent 30,000 crowns to become an adept in the magic art, without accomplishing his end. Being with the court at Compiègne, a lady who had purchased a piece of red silk, instead of green, begged the abbé to change it to the color she wished. Rather than lose his reputation as a magician, Brigalier bought a piece of green silk and gave it to the lady, who was astonished at his success, and forthwith circulated the tale. By various tricks of legerdemain, he maintained his credit as a sorcerer, so that the Archbishop of Paris gravely commanded him to desist from his unhallowed occupations.

BRINDLEY, JAMES, was born in Derbyshire, 1716, and reared as a clodhopper till his seventeenth year, without the advantages of even the most ordinary education. An apprenticeship to a millwright brought out his inventive faculties, and the untutored rustic became an ingenious mechanic and successful civil engineer. About 1757 he was consulted by the Duke of Bridgewater as to the practicability of constructing a canal from Worsley to Manchester, a distance of twenty-nine miles. Had a man of inferior genius or less dauntless courage undertaken this work, very probably a failure would have ensued, and the development of British inland navigation might have been deferred for some years longer. When the canal was completed as far as Barton, where the Irwell is navigable for large vessels, Brindley proposed to carry it over the river by an aqueduct thirty-nine feet above the water! This project was ridiculed by the practical men of the day. One much respected individual would not discount the Duke of Bridgewater's bill for five hundred pounds, and when the dimensions of the aqueduct were communicated to him, he

exclaimed, "I have often heard of castles in the air, but never before was shown where any of them were to be erected." The canal was completed in 1761, and in less than fifty years, application had been made to parliament for one hundred and sixty-five acts for making canals in Great Britain at an expense of thirteen million pounds. Many of these great channelings were engineered by Brindley. He died in 1772, the victim of intense application to his profession. He is said to have answered a committee of the House of Commons, when asked for what object rivers were created, "To feed navigable canals." Brindley could neither read nor write until late in life, and then but poorly.

BRISOT DE WARVILLE, JEAN PIERRE, a prominent character in the history of the French revolution, whose writings tended greatly to bring monarchical power into disrepute. He was the son of a pastry-cook, and was born in 1754. At the age of thirty, he was imprisoned in the Bastille, for a work which treated of prohibited subjects. After numerous changes of action and residence, which the nature of his works and the fluctuating state of his popularity rendered necessary, having been engaged for some time in England, some time with the Duke of Orleans, and some time in America, he was at last guillotined with his friends, by the faction of Robespierre, in 1793. He was the leader of the Girondists, and editor of the *Moniteur*.

BRITANNICUS. Tiberius Claudius Germanicus was called, after the return of his father, the Emperor Claudius, from Britain, Britannicus. His mother was the infamous Messalina. By the intrigues of Agrippina, the second wife of Claudius, he was poisoned, after having been excluded from the succession, A.D. 55.

BROOKS, JOHN, a revolutionary officer and eminent physician, born in Medford, Mass., 1752. His father was a farmer. After completing his professional studies, he joined with ardor the army, and was among the first to fight for the freedom of America. On the retreat of the British from Lexington, the company which he commanded had no small share in contributing to the annoyances of that humiliating flight. Brooks enjoyed the

confidence and esteem of Washington, and had a colonel's commission when the army was disbanded. He retired to the practice of his profession. The rank of major-general of militia was conferred upon him, and he showed, in the insurrection of 1780, that he had forgotten none of his former vigor and address. He was governor of Massachusetts from 1816 to 1823, and died, highly respected and esteemed, March, 1825.

BROWN, CHARLES BROCKDEN, born in Philadelphia, in 1771, was originally destined for the law, but the delicacy of his constitution and his natural timidity prevented his pursuing a legal career. He was the author of several novels, which possess a fascinating power, although their scenes are generally painful and unnatural. "Arthur Mervyn" and "Edgar Huntley" are perhaps the best. Brown edited several periodicals, and his literary labors greatly impaired his health, and hastened the progress of the consumption of which he died in 1809.

BROWN, JACOB, was born in Pennsylvania in 1775. In 1812 he entered the service of his country as a militia officer. So greatly did he shine in the defense of Ogdensburg and Sackett's Harbor, that in 1814 he was made brigadier, and soon after a major-general in the regular army. He commanded at the battles of Chippewa and Niagara. At the close of the war the only major-generals retained were Jackson and Brown. He died at Washington in 1828.

BROWN, WILLIAM, a native of Ireland, who came to the United States at the age of fourteen, in 1793, and was for a long time engaged at sea in the merchant service. After being captured by the English, he found himself, in 1814, at Buenos Ayres, in the command of a British merchant ship. He joined the republican navy, and gained great fame by his various daring exploits.

BROWNE, MAXIMILIAN ULYSSES, Count, an Irish exile, finally field-marshal of Austria. Between 1745 and 1757 he ran a career of glory. He died of wounds received at the battle of Prague, 1757.

BROWNE, Sir THOMAS, a quaint, learned, and eloquent author, was born at London 1605, educated at Winchester and Oxford, and took his medical degree at Leyden. His

principal works are "Religio Medici," Treatise on Vulgar Errors," and "Urn Burial." He died in 1682.

BRUCE, JAMES, a native of Scotland, born 1730, distinguished himself by his travels in Africa. He died in 1794. His veracity has been often doubted, but his accounts have been confirmed by more recent travelers. He penetrated to the sources of the Abyssinian branch of the Nile.

BRUCE, ROBERT, was the grandson of the competitor of Baliol for the crown of Scotland. It was left for him to accomplish the deliverance of his country, which Wallace had so nobly attempted. In his youth he had acted upon apparently no regular plan; and although he had at times served against Edward, when the Scottish forces were able to make a successful resistance, he soon made submission after their defeat, and thus avoided drawing down upon himself the implacable resentment of Edward. He appeared to have stifled his pretensions to the crown; but immediately after the death of Wallace he determined at once to assert his own rights and his country's independence. Arriving at Dumfries, from England, in February, 1306, he had a quarrel with Comyn of Badenoch, and stabbed him in the church of the Minorites, because he opposed his views. He now claimed the crown; and resentment of the treachery of Edward, and of the death of Wallace, procured him numerous followers. He was accordingly crowned King of Scotland, at Scone, on the 27th of March, the same year. An army sent by Edward soon arrived at Perth; and in a battle fought on the 19th of June, Bruce was defeated. He took refuge at Aberdeen, and afterward went toward Argyle, and was so hard pressed by the English and their adherents, that he retired to the island of Rathlin on the north-west of Ireland, and was supposed to be dead; but early in the next spring, he again displayed his banner in the west of Scotland, and gained many advantages over the English, of which the victory at Loudon Hill was the most remarkable; whilst his brother, Sir Edward, and Sir James Douglas, were equally active and successful. Bruce came north in the end of the same year, and on account of the unfavorable state of his health, which had been injured by unceasing hardships and pri-

uations, he remained some time inactive. On the 22d of May, 1308, he gained the battle of Inverary, over the Earl of Buchan and Sir John Mowbray, which was the commencement of a career of success which established him as King of Scotland. The whole of the fortresses of the kingdom were recovered excepting Stirling, which was beleaguered by his brother Edward, who entered into a treaty with the governor, by which it was agreed it should be surrendered if not relieved before the 24th of June, 1314. This led to the attempt of Edward II. to relieve it by a powerful army, and brought on the battle of Bannockburn. Bruce's army consisted of thirty thousand veterans, distinguished by their valor, the skill of their leaders, and animated by every motive which can promote heroic enterprise. He drew them up with a hill on his right flank, and a morass on his left, to prevent being surrounded by the numerous army of Edward. Having a rivulet in front, he commanded deep pits to be dug along its banks, and sharp stakes to be planted in them, and caused the whole to be carefully covered with turf. The English arrived in the evening, when Bruce was riding in the front of his army. Sir Henry Bohun, who rode up to charge him with his spear, was brought to the ground by his battle-axe. Early next morning the action commenced. Sir Robert Keith, at the head of the men-at-arms, destroyed the English archers. The English horse, under the Earl of Gloucester, rushing on to the charge, fell into the pits Bruce had prepared for them. Sir James Douglas, who commanded the Scottish cavalry, gave them no time to rally, but pushed them off the field. Whilst the infantry continued the fight, discouraged by these unfavorable events, they were thrown into a panic by the appearance of what they supposed another army advancing to surround them. This was a number of wagoners and sumpter boys, whom King Robert had collected and supplied with military standards, which gave them the appearance of an army at a distance. The stratagem was decisive, and an universal rout and immense slaughter ensued. This great and decisive battle secured the independence of Scotland, and fixed Bruce on the throne. He afterward invaded England, and laid waste the northern counties. He also

led an expedition into Ireland, in support of his brother Edward, who had been crowned king of that country, in the course of which he gained several victories. Peace was at last concluded between England and Scotland, at Northampton, in 1328, and on the 7th of June, 1329, Robert died, in the fifty-fifth year of his age, and was buried in the abbey of Dumfermline. His grand-daughter was the wife of Robert II., the first king of the house of Stuart, and from the issue of that marriage the present royal family is descended.

BRUMMELL, GEORGE BRYAN, best known as Beau Brummell, was born in June, 1778, and educated at Eton and Oxford. He became the leader of English fashion; by no means a mere dandy, but the best-dressed gentleman of the day. Neckcloths were his greatest victories. At his beck they were starched. He was fastidious in tying them. "These," solemnly said his valet, bearing forth a pile of crumpled linen, "these are our failures." So arbitrary was the king of fashion's power, that he could snub the Prince of Wales, who aspired to be the first gentleman in Europe. Coolness sprang up in the intimacy of the two, and the prince cut the beau. Brummell had full revenge, when he asked in St. James's street, just as George was stepping off, "Alvanley, pray who is your fat friend?" But the contest was unequal. Beau B. ran through his fortune, and had no nation to furnish the sinews of war. One day he wrote thus to Scrope Davies:

"MY DEAR SCROPE: Lend me two hundred pounds; the banks are shut, and all my money is in the three per cents. It shall be repaid to-morrow morning.

"Yours, GEORGE BRUMMELL."

The answer was prompt.

"MY DEAR GEORGE: 'Tis very unfortunate; but all *my* money is in the three per cents.

"Yours, S. DAVIES."

That night Mr. Brummell ran away to Calais. England and his creditors saw him no more. In France he dragged out a miserable existence, sinking from the admired of fashion to the shabby genteel; thence still lower; till at last he died at Caen in beggary and imbecility March 29th, 1840.

BRUNSWICK, the duchy of, lies in the north-west of Germany, between Hanover and Prussia, comprising 1,524 square miles, and in 1857, 269,915 people. Brunswick, its capital, has 42,000 inhabitants, and was formerly one of the Hanse Towns. The house of Brunswick was founded by Henry the Lion, who married Maud, daughter of Henry II. of England. The younger branch of this family came into possession of Hanover, and has given sovereigns to England since the commencement of the eighteenth century. Charles Frederick William, Duke of Brunswick, fell upon the battle field of Jena, 1806, and the duchy was in the power of Napoleon till 1813. The three elder sons were blind, and yielded their rights in favor of Frederick William, who was born in 1771. He joined the war against France in 1806, and continued, throughout his life, the determined enemy of Napoleon. His Black Brunswickers, so called from their dress and equipments being entirely black, held out upon the continent as long as resistance was of any avail, and finally their duke retired to England. In 1815, he again appeared in arms, and fell at Quatre-bras, commanding Wellington's van-guard, on the 16th of June. His death was atoned for by the bravery of his black hussars.

BRUTUS, LUCIUS JUNIUS, a celebrated Roman. He was the son of Marcus Junius by a daughter of Tarquin the Elder. When his father and brothers were beheaded by Tarquin, Brutus saved himself by feigning idiocy, whence his surname, signifying 'the brute,' was given him. He continued this appearance until Lucretia killed herself in consequence of the violence of Sextus Tarquin. This was the time for Brutus to rouse the Roman people to action, and display the energy of his mind. By his exertions the Tarquins were expelled and the monarchy changed to a republic. The consulship was instituted, and Brutus and Collatinus, the husband of Lucretia, were chosen the first to hold that dignity. When his sons joined in the conspiracy to restore the Tarquins, Brutus, convinced of their guilt, ordered their execution, that this example might confirm the liberty of Rome. The same year he was slain at the head of his troops, fighting against Aruns, the son of Tarquin, who also

fell in the encounter. This took place, B.C. 509. Brutus was mourned by the whole Roman people.

BRUTUS, MARCUS JUNIUS, was lineally descended from the above, whose republican principles he seemed to inherit. In the civil wars he joined Pompey, although the latter was his father's murderer, only because he looked upon him as just and patriotic in his claims. After the battle of Pharsalia, Cæsar not only spared Brutus, but made him one of his friends. He, however, forgot the favor when Cæsar displayed his ambition and tyranny, and conspired to stab Cæsar in the senate-house. Brutus was forced to retire into Greece by the excitement created by Antony. Here he gained many friends, but was soon pursued by Antony, accompanied by the young Octavius. A battle was fought at Philippi. Brutus, who commanded the right wing of the republican army, defeated the enemy; but Cassius, on the left, was overpowered, and Brutus found himself surrounded by the soldiers of Antony. He, however, made his escape, and soon after fell upon his sword, B.C. 42. It is said that, previous to this battle, a spectral figure twice the size of life, appeared to Brutus, and warned him of his fate.

BUCCANEERS. These French and English freebooters of America acquired great notoriety. After the assassination of Henry IV. of France, many Frenchmen settled in St. Christopher, an island of the Antilles. Being driven from this place in 1630, they sought refuge on the western coast of St. Domingo, and the neighboring island of Tortugas. Their wild and solitary life possessed a certain charm which induced many Englishmen to join them, and their numbers at length became considerable. They were hardy and enterprising, and, deprived of the softening influence of female society, nourished a spirit of reckless ferocity. They did not, however, display at first those stern features which afterward characterized them, but were comparatively peaceful and industrious. Those who were settled at St. Domingo, used to hunt the wild cattle of the island, whose hides they sold to the crews that landed on their coast. They were accustomed to *boucaner* (that is, to smoke) the flesh of these animals before large fires, and

thence received the name of boucaneers, or buccaneers. Increasing in strength and spirit, they defied the attempts of the Spaniards to subdue them, and soon made themselves formidable by their predatory excursions.

The Spaniards resolved to extirpate the wild cattle, and thus induce the buccaneers to become farmers for support, or else to join their more lawless comrades on the island of Tortugas. The buccaneers nourished a deep-seated hatred of the Spaniards, and it was their vessels which were most frequently attacked by the pirates. Sailing from the American ports, laden with the most precious productions of the New World, the size and strength of the galleons formed no adequate protection against the numbers and intrepidity of the buccaneers, who attacked them in boats, ill equipped it is true, but manned by crews of iron nerve and unquailing resolution. The spirit of the Spaniards became crushed by the repeated successes of the buccaneers, and before long they did not even attempt to defend themselves. Thus when Laurent, a famous buccaneer, found himself in a small vessel, with a few guns, and two Spanish ships each of sixty guns along-side, the desperation and fury of his resistance so overawed the Spanish officers, that they permitted him to escape, although they had him completely in their power.

The leaders of the buccaneers were chosen for superior daring, but enjoyed but few privileges save that of being foremost in danger. In dividing the spoils, all had an equal share, or, if any exception was made, it was in favor of those who had received very severe wounds in combat. The captain had no larger share than any of his followers, unless he happened to have displayed extraordinary skill and valor. Previous to dividing the booty, each was obliged to swear that he had kept back no part of the prize, and perjury, which was of rare occurrence, was punished by the exile of the offender to a desert island. The share of those who had fallen was appropriated to relieve the necessities of their relations, or as gifts to the church, in case there were no surviving friends or relatives. The buccaneers were scrupulous in observing the outward rites of religion, and offered up prayers for the success of each enterprise

before embarking in it. So formidable were the operations of the buccaneers, that they greatly diminished the trade between Spain and America. The baleful effects of the climate, and the nature of their occupation, gradually diminished their numbers, till they were at length extirpated by the French and English governments. From them originated the French settlements on the western part of St. Domingo, although their piracies were ended in the commencement of the eighteenth century.

Several of their leaders acquired a reputation for daring and enterprise which has preserved their names from oblivion. One of the most noted of these was Montbar, the son of a gentleman of Languedoc, who early imbibed a hatred for the Spaniards. While at school, performing the part of a Frenchman in a drama, in his combat with a fellow-student, who represented a Spaniard, he so far forgot the reality of his situation, in the illusion of the moment, that he would have slain his antagonist but for the intervention of the more cool-headed spectators. At an early age Montbar embarked for America, and was highly delighted when one day a Spanish galleon hove in sight. Long before the vessels met, Montbar had completed his preparations for the combat, and, with an unsheathed sword beneath his arm, was pacing the deck, in all the hot hurry of untried valor. The moment the vessels closed, calling to the boarders, he sprang on the deck of the galleon, and carried all before him by the impetuosity of his attack. While his comrades were busy in estimating and dividing the booty, he was sternly gazing on the stiffened bodies of the first victims of his hatred, like an eagle hovering over the slain. Arrived at St. Domingo, the buccaneers who came on board to trade, complained that the Spaniards, during their absence in the chase, destroyed their settlements. "Make me your leader," cried Montbar, "and I will teach these spoilers that there exists a power greater than theirs. I seek for no emoluments: the joys of battle are enough for me." Struck with his appearance and impetuosity, they chose him their leader, and had no reason to repent having done so, for he unweariedly pursued the Spaniards with invariable success, and succeeded in induc-

ing the Indians to forsake the Spaniards and league against them with the buccaneers.

BUCHANAN, GEORGE, the famous Latin poet and historian of Scotland, born 1506, died 1582.

BUCHANAN, CLAUDIUS, an eminent missionary to the East Indies, born near Glasgow, March 12th, 1766, died Feb. 9th, 1815.

BUENA VISTA, a mountain pass between San Luis and Saltillo in Mexico. Here, Feb. 23d, 1847, the Mexicans attacked the Americans. Santa Anna sent Taylor a summons to surrender at discretion. Old "Rough and Ready" immediately replied, "declining to accede to the request." Santa Anna's force was the flower of the Mexican army, and 20,000 strong. Taylor only had 4,500 men, of whom 4,000 were untried volunteers. The complete success of Taylor struck terror and dismay into the hearts of the Mexican nation. The American loss was 267 killed, 456 wounded, and 23 missing: that of the Mexicans exceeded 1,500.

BUENOS AYRES, formerly a Spanish province, and afterward a part of the Argentine Confederation, is now a republic by itself. The area is roughly estimated at 60,000 square miles; the population probably does not exceed 350,000. The western and northern parts of the country are rough, but large portions are extremely level; in the south, for instance, the pampas (immense plains) are more than 1200 miles long, and 500 broad, filled with wild cattle, and the abode of Indians hardly less wild. The fertility of a large proportion of the soil is surprising, although agriculture is neglected for the rearing of cattle. Among the mineral productions are gold, silver, copper, tin, and lead. Hides, tallow, and beef are exported in great quantities. The only town of much importance is the capital, Buenos Ayres, which was founded in 1535, and contains a population of 120,000. A few of the public buildings may well be called magnificent, but generally architecture is in a low state in Buenos Ayres, chiefly from the scarcity of good building material, chalk and brick forming but a very inferior substitute. In 1826, it was made the seat of government of the United Provinces of La Plata. In 1806, it was captured by the English, who were shortly afterward attacked by surprise, and

suffered great loss. The reinforcements which came over the following year, were received into the city with apparent submission, but then attacked with vigor, and compelled to conclude a truce, after suffering immense loss. The trade of the city is very considerable.

BUFFON, GEORGE LOUIS LE CLERC, Comte de, a famous French naturalist, born at Montbard in Burgundy, in 1707, died at Paris, April 16th, 1788. His "Natural History" continues to be read with pleasure, and at the time of its appearance differed from all previous works, which were merely masses of technical description, with no interesting general views and details.

BULL. A papal bull is an apostolical rescript or edict, of ancient use, and generally written on parchment. The bull is, properly, the seal, deriving its name from *bulia*, and has been made of gold, silver, lead, and wax. On one side are the heads of Peter and Paul; on the other, the name of the pope, and year of his pontificate. The celebrated golden bull of the Emperor Charles IV. was so called because of its golden seal, and was made the fundamental law of the German empire at the diet of Nuremberg, 1356. Papal bulls denouncing Queen Elizabeth and her abettors, and consigning them to hell-fire, accompanied the boastful Spanish armada, 1588.

BULL BAITING, a sport of Spain and Portugal, somewhat equivalent in those countries to the fights of the gladiators among the Romans. It is recorded as being an amusement at Stamford in England so early as 1209. Bull running was a sport at Tutbury in 1374. Among the sports of 'Merrie England' were the "Easter fierce hunts, when foaming boars fought for their heads and lusty bulls and huge bears were baited with dogs;" and near the *Clink*, London, was the Paris, or bear garden, so celebrated in the time of Queen Bess for the exhibition of bear-baiting, then a fashionable amusement. Bull-fights were introduced into Spain about 1260, and abolished there, "except for *pious* and *patriotic* purposes," in 1784. There was a bull-fight at Lisbon, at Campo de Santa Anna, attended by ten thousand spectators, Sunday, June 14th, 1840.

BUNKER HILL. This memorable battle was fought June 17th, 1775. On the eve-

ning of June 16th, Col. Prescott received orders to fortify Bunker Hill, but Gen. Putnam, who had the command of the expedition, finding Breed's Hill more suitable, the requisite fortifications were rapidly thrown up on that height. The British were unconscious of the enterprise until morning, when their ships-of-war, floating batteries, and the guns of Copp's Hill, opened a severe fire on the Americans. At one o'clock, the troops under Howe landed in Charlestown, and were soon after reinforced which swelled their number to about 5,000 men, with six field-pieces. The British troops were well equipped and officered, possessed all the advantages of strict discipline, and were by no means distrustful of the issue of the contest. The American army, on the other hand, having been hastily called together, was composed of men who had few ideas of military combinations, and whose weapons were generally fowling-pieces without bayonets, but who were all animated by one spirit. Their leaders were beloved and respected by them, and were men of tried truth and nerve; Putnam, Stark, Pomeroy, Warren, and Prescott, men whose names yet call a glow into the bosom of every patriot. The provincial troops amounted to perhaps 2,000 men, with two field-pieces. "Don't fire," said Putnam to his men, "till you can see the whites of their eyes." The British approached unmolested till within close gun-shot, when the tremendous fire of the provincials drove them back with great slaughter. In the second attack, Charlestown was set on fire and burned to the ground, adding its raging flames to the other horrors of the battle scene. As the ammunition of the Americans was nearly exhausted, the third attack carried the redoubt, although the provincials resisted the British with the butt-ends of their muskets, and slowly retreated from the hill. The Americans lost 115 killed (among them General Warren), 305 wounded, and 30 were made prisoners. The British lost 1,054 in killed and wounded.

As the Americans retreated across Bunker's Hill, Gen. Putnam used every exertion to rally them. He commanded, begged, cursed and swore like a madman. "Halt! Make a stand here!" he cried; "we can check them yet. In God's name form, and give them one shot more." It is said that for the torrent of

profanity in which the brave old general indulged at this time, he made a confession, after the war, before the church of which he was a member. "It was almost enough to make an angel swear," he said, "to see the cowards refuse to secure a victory so nearly won." But the undisciplined yeomanry were destitute of ammunition; thrice had they repulsed a force superior in strength and skill; and whatever victory the British had gained was more humiliating than defeat. A lofty monument now stands upon the site of the redoubt.

BUNYAN, JOHN, the son of a tinker, born at Elston, in 1628. At an early age he was dissipated, and served as a soldier in the parliamentary army. Reflection and reformation, however, brought out the bright points of his character. He became a member of a society of Anabaptists, and finally their teacher. As a dissenter he was imprisoned in Bedford jail, twelve years, and the occupation of his mind during his long confinement, was the composition of his unrivaled "Pilgrim's Progress," that wonderful religious allegory, bearing the impress of a strong mind and an ardent imagination. Bunyan died in 1688. Robert, his last male descendant in a direct line, died at Lincoln, England, Nov. 27th, 1855, aged eighty.

BURCKHARDT, JOHN LOUIS, famous for his travels in Africa, born at Lausanne in 1784. His country being oppressed by France, he went to London in 1806, and was engaged by the African association to explore Africa from the north. To facilitate his progress in Nubia and other parts of the country, he assumed the character of a Syrian Turk, and so thoroughly acquainted with the manners and religion of the East was he, that he underwent an examination by two learned jurists, and was pronounced by them a learned and true Mussulman. He died at Cairo, October 15th, 1817, and was buried in the Mussulman cemetery with great splendor.

BURGOYNE, JOHN, the natural son of Lord Bingley, a general in the English army, and also an agreeable dramatist. He entered the army at an early age, and, in 1762, had the command of a body of troops sent to Portugal for the defense of that kingdom against the Spaniards. He distinguished himself in the American war by taking Ticonderoga, but

after severe engagements at Stillwater and Saratoga, was forced to surrender, with his whole army, to General Gates, in 1777. Afterward he sat in parliament, and in 1781 he warmly advocated the discontinuance of hostilities.

BURGUNDIANS, a tribe of Germans, a branch of the Vandals, who occupied a part of France, in the fifth century, which has since been called Burgundy. It was long an independent state, but was attached to France in the latter part of the fifteenth century, on the death of Charles the Bold. The independent dukes of Burgundy rendered their name illustrious, and many of them were distinguished for their bravery and other high qualities.

BURIAL. This was the earliest mode of disposing of dead bodies, and the first idea of it is said to have been formed from observing a live bird covering a dead one with leaves. The antiquity of the custom of burning the dead rises as high as the Theban war; it was practiced among the Greeks and Romans, and Homer abounds with descriptions of such obsequies. It was very general about 1225 B.C.; it was revived by Sylla for fear the relics of the dead in graves should be violated by enemies, and was not in disuse till the time of Macrobius. Among the most ancient sepulchres were those circular mounds yet discernible in various countries, and in Britain called *barrows*. Several of these near Stonehenge having been opened, curious remains of Celtic ornaments, such as beads, buckles, and brooches, in amber, wood, and gold, were found. Places of burial were consecrated under Pope Calixtus I. in 210; the first Christian burial-place was instituted in 596; burial in cities, 742; in consecrated places, 750; in churchyards, 758. Woolen shrouds were used in England, 1666. The ancients had not the unwise custom of crowding all their dead in the midst of their towns and cities, within the narrow precincts of a place reputed sacred; much less of amassing them in the bosoms of their fane and temples, as has been the habit in European countries. The mortuaries of the Greeks and Romans were at a distance from the towns; those of the latter generally near the highways, whence came the necessity for inscriptions on the tombs; and the Jews had their sepulchres in gardens, and in fields, and among rocks and

BUR

mountains. The practice of inhuming in churchyards and within religious edifices was introduced by the Romish clergy, who pretended that the dead enjoyed peculiar privileges from interment in consecrated ground. It is now the custom to bury the dead in cemeteries. One of the most celebrated of these is Père la Chaise. It takes its name from a French Jesuit, the confessor of Louis XIV. He died in 1709, and the site of his house and grounds at Paris is now occupied by this beautiful cemetery. The burying places of the Turks are handsome and agreeable, which is owing chiefly to the fine shrubbery and plants carefully placed over the dead. It was a practice of high antiquity to plant herbs and flowers about the graves of departed friends. The Romans strewed roses upon their tombs; the Greeks, amaranth and myrtle. The women in Egypt go weekly to pray and weep at the sepulchres, and throw sweet basil upon them. In Asia Minor and Turkey in Europe, the tombs are also adorned either with palm-leaves, boughs of myrtle, or cypresses planted at the head and foot. Between some of the tombs is put a chest of ornamental stone, filled with earth, in which are planted herbs and aromatic flowers. These are regularly cultivated by women who assemble in groups for that duty. The Athenian heroes were buried in coffins of cedar, because of the aromatic and incorruptible nature of that wood. Coffins of marble and stone were used by the Romans. Alexander is said to have been buried in one of gold. Glass coffins have been found in England, and the earliest record of wooden coffins there is in the burial of King Arthur, who was buried in an entire trunk of oak, hollowed, A.D. 542.

BURKE, EDMUND, a statesman and great political writer, was born at Dublin, January 1st, 1730. He was contemporary with Pitt and Fox. After finishing his education at Trinity College, Dublin, he entered his name at the Middle Temple as a law student, but devoted himself to literature. His political career commenced by his accompanying Hamilton, secretary of the lord-lieutenant of Ireland, to Dublin, and on his return he was made private secretary to the Marquis of Rockingham. On the fall of the Rockingham ministry, he wrote a pamphlet on the subject, and became an active member of the opposi-

tion, being chosen for Bristol, in 1774, without expense. His speeches in the senate eclipsed even the reputation of his writings, and were delivered with a vehemence which it was difficult to resist. He was strenuous for the conciliation of the American colonies. On the return of the Rockingham administration, Mr. Burke for a short time filled the office of paymaster-general, but he resigned the post, upon the succession of Lord Shelburne to the premiership. The leading features of his subsequent political life, in which he held no office, are his impeachment of Warren Hastings; his opposition to the limited regency in 1788; his prediction of the effects of the French revolution, and his separation from Mr. Fox upon those sentiments. This was his last great political act, all his subsequent ones being to establish and defend it. On this subject he published several pamphlets, the merit of which obtained him a pension, and many severe reflections from his opponents, to which he replied in "A Letter to a Noble Lord," replete with sarcastic irony. He died July 8th, 1797. Mr. Burke had a commanding oratory, to enhance which he spared no incidental act of gesticulation and manner. On one occasion, he is said to have drawn forth and brandished a dagger to give a greater effect to his words.

BURNS, ROBERT, the greatest of Scottish bards, was the son of a gardener, and was born near the town of Ayr, January 25th, 1759. He had some instruction and was fond of reading. His poetical talent was first displayed in some amatory verses, and his conversational talents caused him to be sought for by convivial parties, which tended to fix his habits of dissipation. The publication of his poems procured him a sum of money larger than he anticipated, and a high literary reputation. He was enabled to take a farm near Dumfries, and at the same time procured the office of exciseman. He married the early object of his affections, the "bonnie Jean" of whom he has written so tenderly in the most musical of his verses. She survived the poet who had immortalized her name, and died in the year 1834. Burns might have prospered and enjoyed a long life, had he but listened to the advice and remonstrances of his friends, and forsaken those ruinous indulgences that produced or at least hastened his

BIRTH-PLACE OF ROBERT BURNS.

death, which took place July 21st, 1796. Burns was emphatically the poet of truth and of nature. His most beautiful poems were composed in the spirit of truth, and glow with the fire of real feeling and passion. Full of affectionate and sad remembrances, he composed the verses "To Mary in Heaven," commencing;

"My Mary, dear departed shade,
Where is thy blissful place of rest?
Seest thou thy lover lowly laid,
Hear'st thou the groans that rend his breast?"

In this he celebrates their last meeting. The Mary of Burns was a peasant-girl, whose acquirements merely enabled her to read her Bible and psalm-book, and who walked barefooted to their trysting-place, and yet she inspired the most enthusiastic attachment in a man whose intellect cast a glory upon the hills, and woods, and streams of his native land, and a halo round the objects of his love, which will endure as long as the human breast is warmed with the glow of social and patriotic feeling.

BURR, AARON, was born in Newark, N. J., February 5th, 1756. His father was the pious president of Princeton College, and his mother

the daughter of that devout divine, Jonathan Edwards. But death robbed him early of their care, and his life was in deep contrast to such parentage. Brilliant talents he displayed in his youthful collegiate career, and bravery in the ardor with which he threw himself into the patriotic cause. He was a volunteer in Arnold's expedition against Quebec, and fought close by Montgomery when that brave man fell. He reached the rank of lieutenant-colonel. Ill health forced him to leave the army in 1779. He was soon foremost at the bar of New York, and from 1791 to 1797 was a member of the United States Senate. In 1800, he was a candidate for the presidency against Jefferson. The choice devolved upon the House of Representatives. On the thirty-sixth ballot Jefferson was elected president, and Burr vice-president. The murder of Alexander Hamilton by Burr in a duel in 1804, brought great hatred upon the latter. In 1807 Burr was tried for treason, being accused of an attempt to rear an empire in the south-west, but he was acquitted. His public life was at an end, and he lived in comparative obscurity till his death, Sept. 14th, 1836.

BURROWS, WILLIAM, born October 6th,

BUR

1785, a gallant officer in the United States navy, who fell a victim in the moment of glory, Sept. 6th, 1813, commanding the *Enterprise*, which engaged the British brig *Boxer*; he received a mortal wound early in the action, and when the sword of the enemy was presented to him, he exclaimed, "I am satisfied; I die content;" and soon after expired. The action lasted forty-five minutes.

BUSACO, a mountain ridge in Portugal, celebrated for the repulse of the French under Massena, by the English under Lord Wellington, Sept. 27th, 1810.

BUTLER, RICHARD, an officer of the Revolutionary war, colonel of Morgan's rifle corps, shared at Saratoga, and many other places, the renown of that admirable body. After a life of honor, General Butler fell, in the defeat of St. Clair's army, by the Indians, Nov. 4th, 1791.

BUTLER, THOMAS, brother of Richard, and a brave officer, joined the army in 1776, was at Brandywine, served through the war, and was very severely wounded in the war with the Indians, at the battle where his brother fell. His latter years were embittered by disputes with General Wilkinson, which were closed by death, Sept. 7th, 1805, aged fifty-one. He would not yield to the general order which required officers and soldiers to cut the hair close to the head.

BUTLER, SAMUEL, an English poet, the son of a farmer, born in Stresham, Worcestershire, in 1612. His pungent satire of "Hudibras," in which the weak points of the Puritans are happily exposed, brought the author into notice, but did not better his circumstances, and he died poor in 1680.

BYLES, MATHEW, D.D., a clergyman of Boston, born in 1706. He was for some time pastor of the Hollis Street Church, but was removed from his pulpit in consequence of his Tory principles. His political opinions subjected him to a temporary imprisonment on board a guard-ship. He was however released, but a guard put over him in his own house. The guard was removed, and then replaced in consequence of further complaint against him. Finally, the presence of the sentinel was dispensed with. It was on this occasion, that the witty doctor remarked that he had been "guarded, regarded, and disregarded." When two selectmen stuck fast in

the slough opposite his house, he said to them, "Gentlemen, I have several times complained of this nuisance, and am therefore pleased to see you stirring in the matter." Byles corresponded with Pope, Lansdowne, and Watts, and possessed some poetical talent. His essays and poems were collected, and published in a volume. He died in Boston, July 5th, 1788.

BYNG, GEORGE, an English admiral, born in 1663. He became rear-admiral in 1703. In 1706, he relieved Barcelona, besieged by the Duke of Anjou; and in 1708, frustrated the efforts of the French to assist the Pretender by an invasion. In 1718, he defeated the Spanish fleet off Sicily. For these, and other services, he received many offices and honors, and was made Viscount Torrington. He died in 1733.

BYNG, JOHN, an English admiral, son of the preceding, served under his father in many expeditions, and, although esteemed an able seaman and a brave man, was ruined by partisan animosity. Failing in his attempts to relieve Minorca, in 1755, he was tried by a court-martial, and, although recommended to mercy, shot in 1757. After party fury had subsided, and his conduct had been dispassionately examined, his intentions were allowed to have been good, his courage indisputable, and his death the consequence of rancorous misrepresentation from personal dislike. His conduct in his last moments confirmed no part of the evidence against him; it was cool, determined, dignified, and resigned. Immediate posterity honored him as a British admiral; his connections, as a man of honor; and it was obtained from among the secrets of ministerial intrigue, that he was the victim of ministerial cowardice, undeserving of the disgrace of an execution, and obedient to orders which the men in office had not the courage to avow.

BYRON, GEORGE GORDON, Lord, one of the most celebrated English poets of modern days, was born in London, Jan. 22d, 1788. Admiral Byron, the great voyager, was his grandfather. His mother was a Scotch heiress, only daughter of George Gordon, Esq., of Aberdeenshire, and his father was Captain Byron, or, as he was popularly termed, for his reckless profligacy, 'Mad Jack Byron of the Guards.' The parents of the poet lived

unhappily together, and the heartless libertine who transmitted so many failings to his son, squandered the property of the woman he had married for her wealth, and reduced her to comparative poverty. Economy induced Mrs. Byron to take up her residence at Aberdeen in 1790, where her son was placed at school. Her management of young Byron was anything but judicious, and in her fits of passion, she even reproached him with the lameness of one of his feet, a deformity which although trifling was severely felt by the sensitive poet, and even engendered many of his misanthropic views. It was rarely that he alluded to it in a jesting way. In his youth, however, he was acquainted with a child who had a similar defect, and used to say to his nurse, in the Scotch dialect which he had acquired, "See the twa laddies wi' the twa club feet ganging up the high street." His rambles among the Highlands of Scotland had a strong effect upon his imagination, and probably kindled the spark which afterward brightened to a flame. In one of his poems he says:

"Long have I roamed through lands which are
not mine,

Adored the Alps, and loved the Appenine,
Revered Parnassus, and beheld the steep
Jove's Ida and Olympus crown the deep;
But 't was not all long ages' yore, nor all
Their nature held me in their thrilling thrall;
The infant rapture still survived the boy,
And Loch-na-gar with Ida looked o'er Troy,
Mixed Celtic memories with the Phrygian mount,
And Highland linns with Castalie's clear fount.
Forgive me, Homer's universal shade!
Forgive me, Phœbus! that my fancy strayed;
The North and nature taught me to adore
Your scenes sublime, from those beloved before."

To this passage the following note is appended by the author: "When very young, about eight years of age, after an attack of the scarlet fever at Aberdeen, I was removed by medical advice into the Highlands. Here I passed occasionally some summers, and from this period I date my love of mountainous countries. I can never forget the effect, a few years afterward in England, of the only thing I had long seen, even in miniature, of a mountain, in the Malvern Hills. After I returned to Cheltenham, I used to watch them every afternoon at sunset, with a sensation which I can not describe. This was boyish enough; but I was then only thirteen years of age, and it was in the holidays."

In the year 1798, on the death of his grand-uncle, he succeeded to a baronial estate and title, and became a chancery ward under the guardianship of the Earl of Carlisle, against whom he soon conceived a dislike. Placed at Harrow, he had to encounter all the temptations and annoyances inseparable from public education. School-boys are not famous for feeling, and the lameness of Byron was perpetually called to mind by the rudest practical sarcasms. He would often wake and find his lame foot plunged in a pail of water. Through Harrow, he fairly fought his way. "I had," said he, in one of his conversations with Captain Medwin, "a spirit that ill brooked the restraints of school discipline; for I had been encouraged by servants in all my violence of temper, and was used to command. Everything like a task was repugnant to my nature, and I came away a very indifferent classic, and read in nothing that was useful. That subordination which is the soul of all discipline, I submitted to with difficulty; yet I did submit to it; and I have always retained a sense of Drury's kindness, which enabled me to bear it and fagging too. The Duke of Dorset was my fag. I was not a very hard task-master. There were times at which, if I had not considered it as a school, I should have been happy at Harrow. There is one spot I should like to see again: I was particularly delighted with the view from the church-yard, and used to sit for hours on the stile leading into the fields; even then I formed a wish to be buried there." "There were two things that strike me at this moment, that I did at Harrow. I fought Lord Calthorpe for writing atheist under my name; and prevented the school-room from being burnt during a rebellion, by pointing out to the boys the names of their fathers and grandfathers on the walls."

In October, 1805, the young lord entered Cambridge university, where he was little distinguished for application, and showed no great respect for academic honors. He even evinced his contempt for them by keeping a young bear in his room, which he said he was training for a fellowship. In his twentieth year he took up his abode at Newstead Abbey, a fine old building, which he proceeded immediately to repair. His "Hours of

Idleness" now appeared, a collection of poems written during his minority, which was attacked by the *Edinburgh Review* with a degree of malignity and violence that provoked the youthful bard to vindicate his reputation in a satire entitled "English Bards and Scotch Reviewers." This severe and sweeping philippic appeared a few days after he had taken his seat in the House of Lords, and gained the favor of the public in a short time. He soon after went abroad, traveling through Portugal, Spain, and Greece. The scenes through which he passed are finely described in "Childe Harold's Pilgrimage." In the east he swam from Sestos to Abydos, and prided himself greatly on this daring feat. He returned to England in 1811, after an absence of two years.

He hastened to Newstead, but arrived too late to close the eyes of his mother. About this period, the acquaintance between himself and Thomas Moore commenced, an acquaintance which afterward ripened into the warmest friendship. On the 29th of February, 1812, appeared the two first cantos of "Childe Harold," and the success and sale of the work was instantaneous. The hero, a proud but melancholy wanderer, satiated with sensual pleasure, was at once recognized as a delineation of the noble author, notwithstanding his decisive denial. The "Giaour," the "Bride of Abydos," and the "Corsair," poems in all of which the author displayed his unrivaled talents, and accurate knowledge of eastern customs and manners, followed at short intervals. Of one of these, twenty thousand copies were sold in one day. On the 2d of January, 1815, Byron married Miss Milbanke, daughter of Sir Ralph Milbanke. The marriage was unhappy, and after various quarrels, and much distress, the parties separated. Ada, the daughter of unhappy parents, was taken from Byron, who, in 1816, left England forever. He gave in conversation the following melancholy account of his situation immediately before leaving England: "In addition to all my other mortifications, my affairs were irretrievably involved, and almost so as to make me what they wished. I was compelled to part with Newstead, which I never could have ventured to sell in my mother's lifetime. As it is I shall never forgive myself for having done

so; though I am told that the estate would not now bring half so much as I got for it. This does not at all reconcile me to having parted from the old abbey. I did not make up my mind to this step but from the last necessity. I had my wife's portion to repay, and was determined to add £10,000 more of my own to it, which I did. I always hated being in debt, and do not owe a guinea. The moment I put my affairs in train, and in little more than eighteen months after my marriage, I left England, an involuntary exile, intending it should be forever."

After his residence in Italy, where his dramas and many other poems were written, and where he was alternately dissolute and temperate, the revolution in Greece engaged his attention, and he determined to embark his person and fortune in the cause of liberty. He was received in Greece with enthusiasm, and proceeded to Missolonghi, where his reception was most gratifying to his feelings. He immediately formed a brigade of five hundred Suliotes. He was aware of the dissensions existing among the Greeks, but was confident of their ultimate success. He was urged to go to Zante, on account of the unhealthiness of Missolonghi. "I can not quit Greece," he wrote to a friend, "while there is a chance of my being even of (supposed) utility. There is a stake worth millions such as I am, and while I can stand at all, I must stand by the cause. While I say this, I am aware of the difficulties, dissensions, and defects of the Greeks themselves; but allowance must be made for them by all reasonable people."

On the 9th of April, while riding on horseback, he was overtaken by a rain-storm, and the feverish cold he took was the precursor of a fatal malady. He died April 19th, 1824; his last thoughts, as his words indicated, were with his wife and child. His funeral was solemnized in Missolonghi, and his death publicly mourned in Greece. His body was conveyed to England, and interred at Hucknall church, near Newstead Abbey. The exterior of the coffin bore the following inscription: "George Gordon Noel Byron, Lord Byron of Rochdale; born in London, Jan. 22d, 1788. Died at Missolonghi, in Western Greece, April 19th, 1824."

Most of Lord Byron's vices sprang from

his freedom from all control at an age when he most stood in need of friendly advice and friendly restraint, to guard him from those evils which beset young men, and particularly young men of rank, in the outset of their career. Yet his reckless gallantry, and laxity of morals, did not efface fine traits of feeling, benevolence, and a respect for virtue. His attachment to his daughter Ada was sincere and lasting; and he often spoke of his wife with affection and respect. Medwin says that his absent daughter occupied much of his thoughts. "He opened his writing desk, and showed me some hair, which he told me was his child's. During our ride and drive this evening, he declined our usual amusement of pistol-firing, without assigning a cause. He hardly spoke a word during the first half-hour, and it was evident that something weighed heavily on his mind. There was a sacredness in his melancholy that I dared not interrupt. At length he said: "This is Ada's birth-day, and might have been the happiest day of my life; as it is —!" He stopped, seemingly ashamed of having betrayed his feelings. He tried in vain to rally his spirits by turning the conversation; but he created a laugh in which he could not join, and soon relapsed into his former reverie. It lasted till we came within a mile of the Argive gate. There our silence was all at once interrupted by shrieks that seemed to proceed from a cottage by the side of the road. We pulled up our horses, to inquire of a *contadino* standing at the little garden-wicket. He told us that a widow had just lost her only child, and that the sounds proceeded from the wailings of some women over the corpse. Lord Byron was much affected, and his superstition, acted upon by a sadness that seemed to be presentiment, led him to augur some disaster. "I shall not be happy," said he, "till I hear that my daughter is well. I have a great horror of

anniversaries; people only laugh at it, who have never kept a register of them. I always write to my sister on Ada's birthday. I did so last year; and, what was very remarkable, my letter reached her on my wedding-day, and her answer reached me at Ravenna on my birthday. Several extraordinary things have happened to me on my birthday; so they did to Napoleon; and a more wonderful circumstance still occurred to Marie Antoinette." That Lord Byron should have joined to his religious skepticism some superstitious weaknesses, will surprise many; yet it should seem no incompatibility. There is little or no connection between reason and sentiment, and all imaginative persons are liable to this disease: for superstition is the malady of man himself, only as he is an imaginative animal. Byron once consulted a conjurer, more out of sport than curiosity. He was told that two years would be fatal to him, his twenty-seventh and his thirty-seventh. In the first he married, in the second he died.

BYZANTIUM, named from Byzas its founder, was situated on the site of the present city of Constantinople. It was founded by a Greek colony, B.C. 667. Philip of Macedon laid siege to it. One dark night his soldiers had almost gained the town, when a light shone suddenly from the north, and revealed to the inhabitants their danger. The thankful Byzantines built an altar to Diana, and assumed the crescent as the emblem of their city. When the Turks conquered Constantinople, they adopted it as their own device. From the Thracians, Scythians, and Gauls, and under the Roman emperors Severus and Gallienus, Byzantium suffered severely. During the reign of Constantine the Great, it was rebuilt and made the capital of the empire. The Byzantine empire is a name given to the Eastern Roman empire.

BYZ

C.

CABOT, SEBASTIAN, a celebrated navigator, son of John Cabot, was born at Bristol, in 1467. He was the discoverer of Florida. He visited the eastern side of the island of Newfoundland. John Cabot and his son Sebastian discovered, on the 24th of June, 1497, the shores of Newfoundland. The neighboring island received the name of St. John, because it was discovered upon the festival of that saint. After having sailed in the English service, Sebastian went to Spain in 1526, where he was furnished with vessels with which he ascended the river La Plata. He made other voyages also in Spanish vessels. He returned to England, however, and was graced with various dignities, and intrusted with the direction of the Merchants' Company, formed for the purpose of making discoveries. He superintended Willoughby's expedition in 1553, and an act of Edward VI., dated 1549, grants him a pension of £166, a considerable sum if we consider the value of money at that period. He is supposed to have died in 1557.

CADE, JOHN, a native of Ireland, who, having been compelled to fly to France, returned to England in 1450, assumed the popular name of John Mortimer, and raised a formidable force in Kent, at the head of which he placed himself. He promised to lay down his arms, if the grievances of which he complained were redressed; but losing his authority over his followers they committed various outrages which were resented by the well-disposed part of the community. The rebels were defeated, a price was set on Cade's head, and he was killed by one Iden, a gentleman of Sussex, 1451.

CADMUS. This name belongs to several characters of mythology and history. One, a Phœnician, brought a colony of his countrymen to Greece, and introduced letters there, B.C. 1550.

CADOUDAL, GEORGE, a Chouan chief, who with Gen. Pichegru, was concerned in a conspiracy to take the life of Bonaparte when first consul. He was brought over to France in a British government vessel, but was seized

by the police, tried, condemned, and executed June 24th, 1804, aged thirty-five years.

CADWALLADER, JOHN, a distinguished military officer, born in Philadelphia. He commanded the Pennsylvania troops in the winter of 1777, and enjoyed the confidence of General Washington. At the battles of Princeton, Brandywine, Germantown, and Monmouth, he served as a volunteer or acted in his command, and died in 1786.

CÆSAR, CAIUS JULIUS, descended from the illustrious family of Julia, which traced its origin to Æneas and Venus, was born 100 B.C. In his infancy he witnessed the civil wars of Sylla and his maternal uncle, Marius. When Cæsar had arrived at man's estate, Sylla, then at the height of power, could not excuse his crime in being the nephew of Marius, and the son-in-law of Cinna. He was proscribed, and his sentence was revoked only by means of the earnest solicitations of the vestals, and the credit of his family. Sylla is said to have declared, in yielding to their urgency, that they would one day repent having saved the life of a young man in whom he beheld the spirit of more than one Marius. Young Cæsar commenced his military career in Asia. Returning to Rome after the death of Sylla, he gained applause and popularity by his eloquence, an art in which Appollonius of Rhodes was his instructor. While absent from Rome, pursuing his studies, he learned that Mithridates had attacked the provinces of the allies of Rome, and accordingly, leaving Rhodes for the continent, he assembled troops and led them against the king of Pontus.

On his return to Rome, finding Pompey at the head of the senate and the republic, and fearing that his connection with the partisans of Marius might prove disadvantageous to him, he joined the Pompeian party. The office of military tribune, and afterward that of questor, were conferred upon Cæsar. Upon pronouncing the funeral eulogium on his aunt Julia, while enjoying the latter dignity, he produced the images of Marius, which had not seen the light since the dictatorship of

Sylla. When promoted to the dignity of ædile, he caused the statues and trophies of Marius to be replaced. At this period he was accused of aiming at the supreme power, but the people, whose tastes he flattered, vaunted his devotion and courage, and the zeal with which he had discharged his official duties; and the multitude did not forget the magnificent spectacles for which they were indebted to him, and the ample arrangements which he had made for the accommodation of the spectators at the public shows. When the conspiracy of Cataline was discovered, Cæsar had the hardihood to recommend the conspirators to mercy, and sustained his opinion with a warmth which gave rise to a suspicion that he was not altogether a stranger to the plot. So strongly did the tide of indignation set against him, that the knights who composed the guard on that day, waited only for a sign from Cicero to kill him; but the latter, fearing that it would be impossible to substantiate his guilt, saved him from their fury. Cæsar, while engaged in ambitious schemes, mingled in the dissipation of the day, and concealed under the exterior of a man of pleasure the traits of a determined foe to liberty.

On the death of Metellus, Cæsar obtained the office of *pontifex maximus*, although two powerful men were his competitors. He had so plunged himself in debt by his heavy bribery, that on the day of the election, seeing his mother in tears, he embraced her, and said, "To-day you will see me a high-priest or an exile." Shortly after this, Clodius having been accused of attempting to corrupt the fidelity of Cæsar's wife, he divorced her, and said, "The wife of Cæsar must not even be suspected." He was then pretor; afterward the government of Spain fell to his lot. A saying of his at this time proved that he then entertained the most ambitious ideas. At a poor village in the Alps, some of his friends asked if, in that miserable place, power and rank occasioned discussion. "I had rather," said he to them, "be the first even in this place, than the second in Rome." He was by no means idle in his government, but made many conquests, while he did not neglect his private interests, for he extorted money enough to pay his enormous debts,

and enable him to purchase a vast number of creatures.

To obtain the consulate, he reconciled Crassus and Pompey, and made use of both, forming with them the first triumvirate. Although he had a colleague, he governed with absolute authority. Bibulus, who was associated with him, and vainly opposed his wishes, wittily declared that the Romans were not under the consulate of Cæsar and Bibulus, but under the consulate of Julius and Cæsar. Cæsar gained popularity by procuring the distribution of the lands of Campania.

Shortly after the union of Pompey with Julia, the daughter of Cæsar, the latter obtained the government of the Gauls and Illyria for five years, with the command of four legions. He triumphed over the Gauls, the Helvetians, the brave Belgians, and others, carried his arms beyond the Rhine, and raised the Roman eagles in hitherto unconquered Britain. During the ten years of the Gallic war, Cæsar is said to have possessed himself of eight hundred towns, and to have triumphed in arms over three million men. In the midst of his victories, he was mindful of his own interests, and robbed even altars and temples to increase his wealth. He is said to have quoted with approbation this sentence of Euripides, "Violate justice only for the sake of ruling." The soldiers were gained by liberal presents, and it seemed as if the army was the depositary of the immense wealth which Cæsar was accumulating. Thus the troops were the soldiers of Cæsar, and not of the republic. Rome had become venal: everything was for sale, and Cæsar was the purchaser of everything.

Crassus had been slain in a campaign against the Parthians, and Julia, the link that bound Cæsar and Pompey together, as the daughter of one and the wife of the other, was no more. The predominant party in the senate was favorable to Pompey, and the increasing power of the conqueror of Gaul was jealously seen. Although the term of Cæsar's command had not yet expired, the senate sent him a decree, the purport of which was, that if in a limited time Cæsar did not relinquish his command, he should be treated as the enemy of the commonwealth. Three tribunes of Cæsar's party, among them Mark

Antony, having been expelled from the senate for opposing this decree, fled to the camp of Cæsar in the garb of slaves. War was practically declared. The senate commanded the consuls to look to the safety of the republic, and Cæsar ordered his troops to advance to the Rubicon, a small river separating Cisalpine Gaul from Italy. The republic, which both parties invoked, was no more than a name; Cæsar and Pompey were both heads of factions, that sought to elevate themselves above the laws. Learning the decree of the senate, Cæsar marched directly to the Rubicon. There, the risks he was about to incur, and the evils he was about to bring upon his country, held his mind in suspense for a long time; but, after having reflected upon the hate and animosity of his enemies, and upon his own strength, he dashed forward, exclaiming, "The die is cast." His soldiers followed him. Arrived at Rimini, the terror of his arms spread to Rome, where disorder prevailed. Conflicting opinions distracted the city, and all energy seemed sunk in the consideration of the greatness of the danger, and the insufficiency of the means of defense.

Pompey left Rome, with the consuls, principal senators, &c., and from Capua went to Dyrrachium, to which last place he escaped under cover of night, leaving the whole of Italy in the power of Cæsar. The latter, sending his lieutenants to take possession of Sardinia and Sicily, advanced to Rome. The only act of violence which he committed, was the seizure of the public treasure deposited in the temple of Saturn. Pompey's party had idly imagined that the removal of the key was a sufficient safeguard. The tribune Metellus opposed the passage of Cæsar, who threatened him with death, sternly adding, "This is an act easier for me to do than to name." The tribune retired, and Cæsar took out all the treasure, even the most sacred deposits. Having subdued Pompey's lieutenants in Spain, Cæsar was named dictator. He then went to Greece for the purpose of crushing Pompey. Crossing the sea in a mere fishing-boat, he was exposed to great danger, and animated the pilot by the memorable exclamation, "Fear nothing! you carry Cæsar and his fortunes!" The fate of Pompey and of the republic was decided by the battle of Pharsalia, fought 48 B.C., in which

Cæsar was completely victorious. He pursued Pompey to Egypt, but was indignant when the head of his unfortunate rival was brought him by his assassins.

While he was in Alexandria, detained by the charms of Cleopatra, and the differences existing between the members of the family of Ptolemy, he witnessed the breaking out of a sedition which shortly became an open war, and called for the exertion of all his energy. After remaining some months in Egypt, he marched against Pharnaces, king of Pontus, whom he defeated with a celerity well expressed in his own words, "*Veni, vidi, vici*;" "I came, I saw, I conquered." There still remained to be conquered some formidable enemies; Scipio, Labienus, Cato, and Juba, the king of Mauritania, had powerful armies in Africa. After a campaign in which Cæsar displayed all his skill, Africa no longer sheltered a Roman opposed to him, except Cato, who shut himself up in Utica, and preferred death to submission. Cæsar, who admired elevation of soul, envied Cato the glory of his death, and wept for his fate, as he had shed tears at that of Pompey. The conqueror, after having subjected Africa, and ordered the rebuilding of Carthage, returned to Italy, where he was received with the acclamations of the senate and Roman people. Four triumphs were decreed to him. His liberality was felt by the people, for whose amusements he prepared festivals and shows.

The two sons of Pompey mustered a strong force in Spain, but were attacked in the plains of Munda, by Cæsar, and signally defeated. So obstinate was the battle, that Cæsar himself declared that he fought less for victory than life, but from the moment that both were secure, everything was in his power. He re-entered Rome the master of the world. The triumph which he then obtained for having vanquished Romans excited secret murmurs among the people and senators, but no one dared to utter a complaint in public. The senate decreed him extraordinary honors and unlimited authority. He was declared consul for ten years, and perpetual dictator; they gave him the titles of emperor, and father of his country. His person was declared sacred and inviolable. He had the privilege of being present at

spectacles in a golden chair, with a crown of laurel upon his head. The decree of the senate provided that, even after his death, this chair and the crown of gold should be conspicuously placed at all spectacles in honor of his memory. There was now but one thing wanting, the title of king. He is said to have deliberated whether he should take it.

He preserved the republican forms in the midst of an absolute government, and showed himself as able to maintain power, as to gain it. "His clemency," says Montesquieu, "was insulting. It was considered that he did not pardon, but disdained to punish." Having by victory obtained the highest power, he wished to enjoy it as if it had been transmitted to him, and sought too soon to banish the inquietudes which almost invariably trouble a power of recent growth. "I had rather," said he, "die at once, than live always in fear." He sent away his Spanish guard, contrary to the advice of his best friends, and trusting too readily the assertions of his flatterers, who declared, that after having put an end to the civil wars, the republic was more interested than he was, in his safety. His death was caused by this want of caution.

He had formed a plan for conquering the Parthians, and was on the eve of departing for Asia. His partisans, to reconcile the Romans to his assumption of the title of king, circulated a report that the books of the Sibyls declared, that the Parthians could only be subjugated by the Romans when their leader was a king. The rumor gave the enemies of Caesar a pretext for seeking his death. A conspiracy was formed against him, at the head of which were Brutus and Cassius, whom he had made prætors. The assassination was to take place on the ides of March, the day on which Caesar, according to report, was to assume the royal title. The conspiracy was not so secret as to prevent the circulation of some reports with regard to it, but Caesar refused to take any precaution. Moved, however, by the tears and entreaties of his wife Calphurnia, he had made up his mind to remain at home, when Decimus Brutus, by representing to him the importance of presenting himself at the senate-house, changed his resolution. As he was leaving his house, a certain Artemidorus placed in his hand a paper, containing an exposure of

the whole plot. Being unable to read this and other letters from the pressure of the crowd about him, Caesar gave them to his secretaries. He had no sooner entered the senate-house, than he was surrounded by the conspirators. Cimber, under pretext of respect, seized the skirt of his robe, a signal which Casca responded to by stabbing Caesar in the shoulder. The weapon was caught by the intrepid victim, who exclaimed, "Wretch! what art thou doing?" Caesar, though repeatedly wounded, defended himself against his assassins, until Brutus struck him, when, fixing his eyes upon him, he mournfully exclaimed, "And thou, too, Brutus?" Then, folding his head in his mantle, he fell, pierced with thirty-three wounds, at the base of Pompey's statue, March 15th, 44 B.C. He was then fifty-six years old. The body of Caesar, abandoned by all, was carried home by three slaves. When his will was read from the tribune by Antony, the people made the air ring with their cries of grief and anger. The funeral ceremonies were distinguished by uncommon magnificence. The senate, who dared not defend him in his hour of need, placed him among the gods, and ordered that his laws should be immutable.

The results of this assassination were deplorable, for jealousy, ambition, and personal anger armed the greater part of the murderers, and but few among them were animated by a love of liberty. Caesar, with many faults and foibles, possessed many fine traits, and was fitted by nature to command. His erudition was considerable, and his "Commentaries" are models of good writing. He has been pronounced the greatest man that Rome ever beheld. Clement, generous, and magnanimous, he was also insatiably ambitious. He was an orator, statesman, and scholar, as well as a successful general.

CAILLIE, RENE, a native of France, celebrated for his travels in Africa. He won the prize offered by the geographical society of Paris to the man who should first reach Timbuctoo (1827-8); and, besides other rewards, was presented with the cross of the legion of honor.

CALAIS, a seaport of France, in the British Channel, opposite to Dover. It is strongly fortified, and contains about 18,000 inhabit-

ants. In 1346, Edward III. of England, after his great victory of Cressy, laid siege to it, and concerted his measures so well, that his adversaries could not throw succors into the place. Nearly two thousand of the wretched inhabitants, who had been sent out of the place to lessen the consumption of provisions, came to the camp of the besiegers. Edward gave each of them a hearty meal and two shillings, and provided for their future safety. Calais was obliged to surrender to the English, after holding out a year, and remained in their possession until 1558, when it was invested and attacked by the Duke of Guise, and, after a siege of eight days, was obliged to capitulate. During the operations of Francis I. and the Duke of Bourbon against the Emperor Charles V., a congress was held at Calais, under the mediation of Henry VIII., of England, which proved unsuccessful. Calais was the last possession of England, in France, and its loss deeply mortified Queen Mary. "When I am dead," she said, "Calais will be found written on my heart."

CALDERON. DON PEDRO CALDERON DE LA BARCA HENAO Y RIANO, a Spanish poet and dramatist, born at Madrid, 1600, and died 1681. He served in a military capacity, but afterward embraced the clerical profession. He was the author of three hundred plays.

CALHOUN, JOHN CALDWELL, was born at Long Cane, in Abbeville district, S. C., March 18th, 1782, of Irish parentage. He was educated at Yale College and the law school in Litchfield, Conn. In 1811, he entered the lower house of Congress, whence in 1817 Monroe called him to the head of the department of war. In 1825, he was chosen vice-president. From 1831 to 1843 he represented his native state in the federal senate. In the latter year he was appointed secretary of state by Mr. Tyler, and in 1845 returned to the senate, in which he continued till his death, March 31st, 1850. Mr. Calhoun was one of the ablest statesmen and most forcible orators that have mingled in the public counsels of the country.

CALIFORNIA. This state on the shores of the Pacific, is a portion of the territory obtained from Mexico. It has an area of 188,982 square miles, and the population in 1860 was 379,994. It is traversed by two great ranges of mountains, the Sierra Nevada and the Coast range, having between them the splendid valley of the Sacramento and the Joaquin; on the eastern side wide sandy plains, and on the western the narrow slip of coast. Its

most important rivers are the Sacramento and the San Joaquin. California has a dry and a wet season; the first lasting from about the middle of May to September or October; the wet season setting in early in November, and lasting till May. To its dry season it owes its name, which is from the Spanish *caliente fornalla*, 'hot furnace.' In the great interior valley, the soil is of great fertility, and one day the state will be as rich in its agriculture

as in its mines. The country was discovered by the Spaniards in 1542, but they did not colonize it till 1768. Up to the great discovery of gold it was a scantily peopled tract. Sir Francis Drake, who visited it in 1578, received such reports of the existence of gold from the natives that he declared it to be his conviction that there was "no part of this country wherein there is not some special likelihood of gold." Yet little or no search seems to have been made for the precious metal. The shining scales of virgin gold were accidentally discovered in September, 1847, upon the estate of Captain Sutter. It soon became known, and emigration flowed toward the golden country from all Christendom. The scene was unparalleled in history. Towns and cities sprang up as if by magic. The fable of the Argonauts was revived and improved upon. The colonists formed themselves into a sovereign state, and California was received into the Union in September, 1850. Society was for a time very unsettled, but the disorders which bad men introduced culminated and met with a terrible and decisive check in the Vigilance Committee of San Francisco during 1856, and the law-abiding Anglo Saxon character has since been creditably maintained, California contained in 1860, 34,919 Chinese, attracted by the gold mining; they are industrious and despised, and continue their heathen worship.

San Francisco, the largest city of California, is said to have been a Spanish mission settlement in 1776. In 1845 it had only 150 inhabitants. In 1852 it had 34,776, of whom only 5,245 were women. In 1860 it had 56,802. The city has repeatedly suffered from sweeping conflagrations, but it has of late been built of more enduring materials. Sacramento is the capital. It was founded 1849, and in 1852 had more than 10,000 inhabitants.

CALIGULA, CAIUS CESAR AUGUSTUS GERMANICUS, a Roman emperor, was the son of Germanicus and Agrippina, and born A.D. 12. He received its surname from the *caligæ* (half boots) which he wore. His life, with a single exception, presented only a series of acts of horrible cruelty, disgusting absurdity, and daring impiety. The reputation of his father at first disposed the Romans to think favorably of the son, but after a few hollow displays

of clemency and liberality, he showed himself in his true light, and, even while a boy, committed incest. He married and repudiated several wives, the last of whom, Cæsonia, retained a firm hold upon his affections. His murders were numerous, and rendered memorable by the rank of the victims and the relation which they bore to him. It was Caligula who wished that the people of Rome had but one head, that he might sever it at a blow. If the cruelties of the tyrant call forth our indignation, his unmanly follies excite our contempt. His treatment of his horse Incitatus exhibited the ridiculous part of his character. This animal had a gorgeous stable, a house to entertain visitors, and frequently dined at the emperor's table, when he was presented with wine and gilded oats. His master even meditated elevating him to the consulship. Caligula appeared in public in the attributes of various divinities, male as well as female, and claimed homage as a Venus and a Mars. Among his absurdities may be reckoned the bridge of boats built from Baïæ to Puteoli; his expedition against Britain, when the soldiers gathered cockle-shells for spoils, and lastly, his design of decimating the German army for a revolt. To this last act the world owed its deliverance from the monster, who was murdered by Chærea and Cornélius Sabinus, military tribunes, A.D. 41, after a reign of four years.

CALONNE, CHARLES ALEXANDER DE, an eminent French statesman, born at Douai in 1734, succeeded to the management of an empty treasury in 1783, and skillfully met the claims upon it, without adding to the burthens of the people. He advised the abolition of the pecuniary exemptions enjoyed by the nobility, clergy, and magistracy. He was, however, obliged to retire from the vengeance of those bodies. He died in 1802.

CALVERT, GEORGE, Lord Baltimore, founder of Maryland, was of Flemish descent, born at Kipling, in Yorkshire, England, 1582, and educated at Oxford; in 1619, he was made by Charles I. one of the principal secretaries of state; resigned that office, 1624; made Baron of Baltimore, 1625; obtained a patent for Maryland, June 20th, 1632, and died at London the same year.

CALVIN, JOHN, a leader of the Reformation in the sixteenth century, was born at

Noyon, in Picardy, July 15th, 1509, and was destined for the church at an early age, being presented with a benefice in the cathedral of his native place when he was but twelve years old. His progress was rapid, but it was not long before he received the seeds of the new doctrines. In 1533, he was involved in a persecution with his friend Michael Cop, who had defended the reformed doctrines in a public discourse. Obligated to quit France, he repaired to Bâle, in 1534, where he composed his famous "Institutes of Christianity." He was induced to write this by the persecutions of Protestants, which disgraced the reign of Francis I. of France. Although received in different places with marks of respect, Calvin found the warmest welcome and the safest asylum in Geneva. After some agitation, the new doctrine was generally received at Geneva. On the refusal of Calvin and Farel to comply with the decrees of the council of Lausanne, the magistrates compelled them to leave the city in 1538. At Strasburg, Calvin's reception was favorable, but he turned a longing look upon Geneva. He was finally invited to return, and he gained a great ascendancy over the Genevese. The rigor of Calvin was excessive. Thus, a magistrate was deprived of his office, and imprisoned for two months, because "his habits were irregular, and he had leagued with the enemies of Calvin." James Gruet was beheaded, for having written "impious letters and libertine verses," and for having "labored to destroy ecclesiastical regulations." Geneva, in becoming the metropolis of the reformed worship, became the centre of a prodigious book-trade, and the city of all Europe in which the arts and sciences were cultivated with the greatest success.

Calvin died in Geneva, May 27th, 1564, in the fifty-fifth year of his age. His constitution was weak, and throughout life he had suffered much from disease. In 1539 he married a widow, by whom he had one son, who died young. She died in 1549, and he never married again. He was sombre and austere in his manners, of a melancholy disposition. He never knew the sweets of friendship, and his sole joy, if joy it was, was in ruling, and beholding the triumph of his opinions. Calvin never had any other title in the church of Geneva, than that of pastor.

His temper, according to his own confession, was impatient and opposed to all contradiction. Thus the tone of his polemical writings is almost always harsh and insulting. As a theologian, Calvin gained the highest rank among the men of his century, by his profound knowledge, by his tact, and, as he himself boasted, by his art in pressing an argument. As a writer he merits high praise. His mode of worship, bare and stern, appeared, in the eyes of many, to have elevated religion above all sublunary things, by stripping it of every object which had an attraction for the senses.

CALYPSO, a daughter of Atlas, who dwelt upon the island of Ogygia, where Ulysses was shipwrecked. He refused to marry the goddess, although immortality was the promised reward, preferring to revisit Ithaca and again behold his wife. He remained seven years on the island, and grief at his departure destroyed the enamored goddess.

CAMBACERES, JEAN JACQUES REGIS, was Duke of Parma, prince and arch-chancellor of the French empire, dignities which he enjoyed during the ascendancy of Napoleon, of whom he was a colleague in the consulate in 1799. His plan of a civil code, drawn up in 1796, was the basis of the celebrated Code Napoleon. He left France on the downfall of the emperor, and died in Paris, March 8th, 1824, aged seventy-one.

CAMBRAY, a strongly fortified town of the French department of the North, containing 20,000 inhabitants, celebrated in diplomatic history for several important treaties negotiated there. Its manufactures are extensive, one of the principal articles being cambric, which takes its name from this town. The town was taken by Charles V. in 1544; by the Spaniards in 1596; and by Louis XIV. in person, in 1677. In August, 1793, it was unsuccessfully besieged by the Austrians, when the republican general, Decay, replied to the imperial summons to surrender, that "he knew not how to do that, but his soldiers knew how to fight;" and in the campaign of 1815 it was taken by the British, and made the head-quarters of the allied armies.

CAMBRONNE, PIERRE JACQUES ETIENNE, baron, general, commander of the legion of honor, and distinguished for his personal

bravery, was born Dec. 26th, 1770. He commanded the small band which Napoleon led from Elba. At Waterloo, he was severely wounded, and taken prisoner. In that battle he commanded the old guard, and when he heard the British demand for capitulation, he answered nobly, "The guard dies, but does not surrender." He died in 1842.

CAMBYSES, a king of Persia, and son of Cyrus the Great, ascended the throne B.C. 530. He conquered and devastated Egypt. Offended at the superstitions of the Egyptians, he killed their god Apis, whose flesh was eaten by his soldiers, and plundered their temples. On mounting his horse at a subsequent period, his sword gave him a fatal wound in the thigh, the place where he had injured the bull, and the Egyptians looked upon this event as the retributive vengeance of the gods. He was dissolute, and destitute of moral principles. In his fits of intoxication, his brutality was feared even by those who had the greatest claims upon his forbearance. In a fit of drunken rage he gave his wife a kick which killed her. His throne was usurped by one of the Magi, who assumed the name of Smerdis, a brother of the king, who had been secretly murdered on account of a dream which prognosticated to the tyrant future troubles, and warned him to save himself by the death of his brother.

CAMDEN, in South Carolina, was the scene of two contests in the Revolution, in both of which the British were victors. The first was fought between Gen. Gates and Lord Cornwallis, Aug. 16th, 1780; the second between Gen. Greene and Lord Rawdon, April 25th, 1781. The British evacuated and burned Camden, May 13th, 1781. In the first of these battles the brave Baron de Kalb fell, pierced with seven wounds.

CAMILLUS, MARCUS FURIUS, an illustrious Roman, who obtained four triumphs and five times filled the office of dictator, but, being prosecuted on a charge of peculation, went into voluntary banishment. While he was absent, Brennus, at the head of an army of Gauls, took Rome, and besieged the senate in the capitol. Camillus, forgetting his wrongs, hastened to the relief of his country, defeated the barbarians, and was created dictator. He died B.C. 365, of the plague. He was generally honored and respected, although

party and personal prejudices more than once involved him in persecution. In the siege of Falerii, the schoolmaster of the town, who had the children of the senators under his care, led them out of the city under pretext of recreation, carried them to the Roman camp, and surrendered them to the Roman general, telling him that he might now propose to the besieged what terms he chose, since the treasures they valued most were in his hands. Camillus, indignant at this treachery, answered that the Romans warred with men, not with boys; and that, in the conduct of hostilities, integrity, as well as courage, should be prized. He ordered the schoolmaster to be stripped, and, with his hands bound behind his back, to be delivered to the boys to be lashed back to the town. The Falerians, before obstinate in their resistance, struck with this noble act, delivered themselves up to the Romans, convinced that it would be better to have such men for friends than foes.

CAMOËNS, LUIS DE, the most celebrated of Portuguese poets, was born in Lisbon, in 1517. His father was of a noble family, and his mother of the illustrious house of Sá. Camoëns studied at Coimbra, where his instructors valued no literature but that which was written in imitation of the ancients. But the genius of Camoëns was animated by the history of his country and the manners of his age; and his lyric poems belong, like the works of Dante, of Petrarch, Ariosto, and Tasso, to that literature which was renewed by Christianity, and to the spirit of chivalry, rather than to a purely classical style of writing. For this reason, the numerous partisans of the classic school did not applaud the performances of Camoëns in the early part of his career. On the completion of his studies, he returned to Lisbon, where he became warmly attached to Catharine d'Atayde, a lady of the court. Ardent passions are often united to great genius, and the life of Camoëns was alternately consumed by his feelings and his genius.

He was exiled to Santarem on account of the quarrels which his attachment to Catharine brought upon him. There, in his seclusion, he composed detached poems, which distinctly portray the state of his feelings at the time of their composition. The hope-

lessness of his situation led him to embark as a soldier in the Portuguese fleet sent against Morocco. In the midst of battles he composed poems, the glories and the dangers of war kindling his poetic spirit, and his poetic imagination in turn urging him onward to exploits. He lost his right eye by an arrow before Ceuta. On his return to Lisbon, he hoped that his wounds would entitle him to some favor, even if his talents were despised; but, although he had a double claim upon the notice of government, he encountered unexpected obstacles. Justly indignant at this neglect, he embarked for the Indies in 1553, and like Scipio bade farewell to his country, declaring that even his ashes should not repose there.

He landed at Goa, the principal Portuguese establishment in India; here his imagination was excited by the exploits of his countrymen in this part of the world, and, great as were his inducements to complain of them, he thought to consecrate their glory in an epic. But, incensed at the abuses which were committed by the government, he composed so severe a satire upon the subject, that the enraged viceroy of Goa banished him to Macao, where he lived several years, surrounded by the most glorious scenes which the fairy regions of the east can boast. Here he composed his "*Lusiad*." The expedition of Vasco da Gama to the Indies is the subject of this work, which is sustained by the skill of Camoëns in mingling details of Portuguese history with the splendors of poetry, and Christian piety with pagan fable.

Camoëns, on being recalled from his banishment, was shipwrecked at the mouth of the river Mecon, in Cochín China, and saved himself by swimming with one hand, while in the other he held the leaves of his immortal poem, the only treasure that he saved, above the reach of the greedy waves. Camoëns was persecuted by a new viceroy at Goa, and imprisoned for debt, but some of his friends becoming security for him, he embarked for Lisbon in 1569, sixteen years after having quitted Europe. The young king Sebastian took an interest in Camoëns, accepted the dedication of his epic poem, and, on the eve of departing on his unfortunate expedition against the Moors in Africa, felt more than any one else the genius of the

poet, who like himself gloried in dangers when they led the way to fame. But Sebastian was killed in the battle of Alcazar, in 1578; the royal line became extinct, and Portugal lost her independence. The unfortunate Camoëns was reduced by this event to such extremes, that, during the night, a slave, whom he had brought from India, begged in the streets to obtain food for his master. In this wretched state, he still composed lyric poems, and the finest of his detached pieces are those which contain complaints of his misfortunes. How brilliant was that genius which could extort inspiration from the very calamities which finally extinguished it. This hero of Portuguese literature, the only one whose glory belongs alike to his nation and to Europe, died in a hospital in 1579, aged sixty-two years. After his death, a monument was erected to his memory, and thousands, who would have denied succor while he was living, crowded to do homage to his inanimate remains.

CAMPBELL, THOMAS, was born in Glasgow, July 27th, 1777. At the age of twenty-two, "*The Pleasures of Hope*" gained him instant fame as a poet; it went through four editions at Edinburgh in a year. It is a curious fact that the first fourteen lines were the last that were written. Campbell's friend and critic, Dr. Anderson, had always urged the want of a good beginning, and, when the poem was on its way to the printer, again pressed the necessity of starting with a picture complete in itself. Campbell all along admitted the justice of the criticism, but never could please himself with what he did. The last remark of Dr. Anderson's roused the full swing of his genius within him, and he returned the next day to the delighted doctor, with that fine comparison between the beauty of remote objects in a landscape, and those ideal scenes of happiness which imaginative minds promise to themselves with all the certainty of hope fulfilled. Anderson was more than pleased, and the new comparison was made the opening of the new poem.*

"At summer eve, when Heaven's ethereal bow
Spans with bright arch the glittering hills below,
Why to yon mountain turns the musing eye,
Whose sunbright summit mingles with the sky?
Why do those cliffs of shadowy tint appear
More sweet than all the landscape smiling near?"

"Tis distance lends enchantment to the view,
And robes the mountain in its azure hue.
Thus, with delight we linger to survey
The promised joys of life's unmeasured way;
Thus from afar, each dim-discovered scene
More pleasing seems than all the past hath been;
And every form that Fancy can repair
From dark oblivion, glows divinely there."

The poem had put some money in the poet's pocket, and he gratified an early longing in a visit to Germany. At Hamburg, the sight of the many Irish exiles inspired him to that touching lament, "The Exiles of Erin." During this journey, also, he wrote "The Mariners of England." On his road from Munich to Linz, he witnessed from the walls of a convent the bloody field of Hohenlinden, and saw the triumphant French cavalry, under Moreau, enter the nearest town, wiping their bloody swords on their horses' manes. His lyric has enshrined the conflict forever. "John Leyden," says Sir Walter Scott, "introduced me to Tom Campbell. They afterward quarreled. When I repeated 'Hohenlinden' to Leyden, he said, 'Dash it, man, tell the fellow I hate him; but, dash him, he has written the finest verses that have been published these fifty years.' I did mine errand as faithfully as one of Homer's messengers, and had for answer, 'Tell Leyden that I detest him; but I know the value of his critical approbation.'" Scott knew "Hohenlinden" by heart; and when Sir Walter dined at Murray's in 1809, he repeated at the table, as Wilkie tells us, Campbell's poem of "Lochiel." He had it by heart after hearing it once, and once reading it.

Campbell sustained his reputation by "Gertrude of Wyoming" in 1809. His life was passed in literary labor, but his other productions were inferior. He was extremely sensitive to criticism. "I often wonder," said Sir Walter Scott in 1826, "how Tom Campbell, with so much real genius, has not maintained a greater figure in the public eye than he has done of late. The author not only of 'The Pleasures of Hope,' but 'Hohenlinden,' 'Lochiel,' &c., should have been at the very top of the tree. Somehow he wants audacity, fears the public, and what is worse, fears the shadow of his own reputation." * * * "What a pity it is," said Sir Walter to Washington Irving, "that Campbell does not write more and oftener, and give

full sweep to his genius! He has wings that would bear him to the skies, and he does, now and then, spread them grandly, but folds them up again, and resumes his perch, as if he was afraid to launch away. The fact is, Campbell is in a manner a bugbear to himself; the brightness of his early success is a detriment to all his further efforts. He is afraid of the shadow that his own fame casts before him."

In 1827, he was elected lord-rector of his own mother university at Glasgow, by the free and unanimous choice of the students, and was justly proud of his election. "It was a deep snow," writes Allan Cunningham, "when he reached the college-green; the students were drawn up in parties, pelting one another: the poet ran into the ranks, threw several snowballs with unerring aim, then summoning the scholars around him in the hall, delivered a speech replete with philosophy and eloquence. It is needless to say how this was welcomed." When his year had expired, he was unanimously re-elected, the students presenting him at the same time with a handsome silver punch-bowl, described by the poet in his will as one of the great jewels of his property.

Campbell was passionately fond of children. This once led to a ludicrous circumstance. He saw a fine child, about four years old, one day walking with her nurse in the park; and on his return home he could not rest for thinking of his child sweetheart, as he called her, and actually sent an advertisement to the *Morning Chronicle*, making inquiries after his juvenile fascinator, giving his own address, and stating his age to be sixty-two! The incident illustrates the intensity of his affections, as well as the liveliness of his fancy; for, alas! the poet had then no home-object to dwell upon, to concentrate his hopes and his admiration. His wife had long been dead, and his only son was a helpless imbecile. Several hoaxes were played off on the susceptible poet in consequence of this singular advertisement. One letter directed him to the house of an old maid, by whom he was received very cavalierly. He told his story, but "the wretch," as he used to say with a sort of peevish humor, "had never heard either of him or his poetry!" In his last years the poet him-

self sank into a state of comparative mental and bodily feebleness. He died at Boulogne, and was buried in the poet's corner at Westminster Abbey.

Campbell told a story with much humor. At a meeting of authors he once proposed Napoleon's health because he had murdered a publisher, Palm! He liked "Gertrude" the best of his poems, and once said, "I never like to see my name before 'The Pleasures of Hope;' why, I can not tell you, unless it was that, when young, I was always greeted among my friends as Mr. Campbell, author of 'The Pleasures of Hope.' Good morning to you, Mr. Campbell, author of 'The Pleasures of Hope.' When I got married, I was married as the author of 'The Pleasures of Hope;' and when I became a father, my son was the son of the author of 'The Pleasures of Hope.'" The phrase followed him out of life, for the inscription on his coffin was:

"THOMAS CAMPBELL, LL.D.
AUTHOR OF THE 'PLEASURES OF HOPE.'
DIED JUNE 15, 1844.
AGED 67."

CAMPO-FORMIO, a village of Udine in Friuli, a province of Venice, belonging to the Austrians, famous for the treaty signed here Oct. 17th, 1797, by which the Emperor of Austria ceded to the French republic the whole of the Austrian Netherlands, and consented to their remaining in possession of the islands of Corfu, Zante, Cephalonia, and all the islands in the Adriatic, together with the Venetian territories in Albania. He also acknowledged the Cisalpine republic as an independent state; ceded to it the countries in Lombardy which had formerly belonged to Austria, and consented that it should possess Bergamo, Brescia, and other Venetian territories, together with the duchies of Mantua and Modena, the principalities of Carrara and Massa, and the cities of Romagna, Ferrara, and Bologna, belonging to the pope. France yielded up to Austria, Istria, Dalmatia, the city of Venice, with a large portion of the dominions of that republic, and the Venetian islands in the Adriatic, lying to the north-east of the Gulf of Lodrino.

CANADA, a country in North America, belonging to the British, and divided since the year 1791 into Canada East, or Lower Canada, and Canada West, or Upper Canada.

The population of Canada is 2,506,755, and its extent 349,821 square miles. Of late years it has received a large immigration from Great Britain. In Canada East there were 890,261 inhabitants, by the census of 1851, of whom the greater portion were French Canadians, the remainder being English, Scotch, Irish, and Americans. It is divided into thirty-six counties. Seigniories, or grants of the French government, and townships, or grants of the English, are the minor subdivisions. A governor-general, whose residence is at Quebec, is at the head of the British American government. The houses of the Canadians are generally low, and built of stone, with little finish. Education is generally at a low ebb among them, although Quebec and Montreal sustain some highly reputable seminaries. The commerce of the province has gradually increased under the fostering spirit of the British government. The fur trade, of which Montreal is the depot, is considerable, and timber, pot and pearl ashes, grain, &c., are exported in great quantities. Grass, wheat, barley, rye, &c., are the principal productions of the soil. The majestic St. Lawrence is the main river of the Canadas, but there are also others of great importance.

The French Canadians possess the characteristics which distinguish the volatile inhabitants of France. The passionate vivacity, the eagerness in pursuit of pleasure, the levity, and, it must be added, laxity of principle, exhibit the connection between the parent stock and the transplanted race. Their amusements in winter consist of sleighing expeditions, in which the spirited little Canadian horses prove their worth, varied by dancing, and social gayeties. Where the females are distinguished for their temperance, the men are unfortunately addicted to the use of spirituous liquors, and can scarcely be persuaded to abandon them in winter, alleging the severity of the weather, which frequently depresses the mercury in the thermometer to forty degrees below zero, as an excuse.

Canada West is settled for the most part by emigrants and the descendants of emigrants from Great Britain and Ireland. Population (1851), 999,847. It contains forty-two counties, divided into numerous townships.

A large proportion of the emigrants to Canada now settle in this province, induced by the very great fertility of the soil, and the value and abundance of the timber. The forests increase in extent as they spread to the regions of the north. In these wooded districts, vast sheets of water expand in solitary splendor, haunted only by the beasts of prey, or Indians hardly less wild. The established religion of the Canadas is that of the Church of England, but a large portion of the inhabitants are Catholics. The British constitution forms the basis of that of British America.

The French, at a very early period, seemed to be aware of the importance of the discovery of Canada by Cabot, and the cod-fishery began to employ their men as early as the commencement of the sixteenth century. In the early part of that century a Frenchman is said to have made a chart of the entrance of the St. Lawrence. In 1524, Francis I. of France sent four ships, under Verazzani, a Florentine, to prosecute discoveries in this country. In 1535, James Cartier, of St. Maloes, sailed up the St. Lawrence, formed alliances with the natives, took possession of the territory, built a fort, and wintered in the country. Henry IV. appointed the Marquis de la Roche lieutenant-general of Canada and the neighboring countries. In 1608, the city of Quebec was founded, and from that period the establishment of a permanent French colony commenced. In 1629, an English expedition took possession of Quebec, but it was surrendered again to the French by the treaty of St. Germain. This expedition was headed by Sir David Keith. In 1690, a bold attempt was made, but without success, to subject Canada to the English crown. The attempt was renewed in 1711, but equally in vain. Canada continued in the occupation of the French till the breaking out of the war between France and England in 1756. In 1759 the British government formed the project of attempting its conquest, and the English took possession of Quebec after a gallant resistance on the part of the French; in which the English general Wolfe, and Montcalm the French commander, both perished. The latter, on being told that his wound was mortal, nobly exclaimed, "Then I shall not live to see the city surrendered to

the British!" The whole province of Canada was soon after subdued by the English, and was confirmed to Great Britain by the treaty of 1763. In 1775, Canada was invaded by a body of continental troops, led by Montgomery; Montreal was taken, but the gallant general perished in the unsuccessful attempt upon Quebec. During our last war with Great Britain, Upper Canada became the theatre of a sanguinary struggle. During 1837 and 1838 insurrections broke out against the government, and some small battles were fought. From 1791 till 1840, the two provinces had distinct governments. In the latter year they were united. The act of union provides for the appointment of a legislative council by the crown, and an assembly chosen by the people. The royal governor of Canada is governor-general of British North America. Quebec and Toronto, which were the capitals of the separate provinces, were made joint seats of government.

In 1858, Ottawa, formerly called Bytown, a thriving town in Canada West, on the Ottawa River, was designated by the crown as the capital of the united provinces. The population of Ottawa was 14,669 in 1861. It is the centre of a great lumber trade.

Quebec, stands on a promontory, on the north-west side of the St. Lawrence, 400 miles from its mouth, containing about 51,000 inhabitants. It is divided into two parts, the Upper and the Lower Town. The Upper Town is built on a bold precipice of naked rock, rising to the height of 345 feet. Quebec, for an American city, is certainly a peculiar town: a military town, most compactly and permanently built, stone its sole material; environed, as to its important parts, by walls and gates, and defended by numerous heavy cannon; garrisoned by troops, having the arms, the costume, the music, the discipline of Europe, foreign in language, features, and origin, from most of those whom they are sent to defend; founded upon a rock, and its higher parts overlooking a great extent of country; between three and four hundred miles from the ocean, in the midst of a great continent, and yet displaying fleets of foreign merchantmen in its fine capacious bay, and showing all the bustle of a crowded seaport; its streets narrow, populous, and winding up and down almost mountain de-

PEAK OF TENERIFFE.

clivities; situated in the latitude of the finest parts of Europe, exhibiting in its environs the beauty of a European capital, and yet, in winter, smarting with the cold of Siberia; governed by people of different language and habits from the mass of the population, opposed in religion, and yet leaving that population without taxes, and in the full enjoyment of every privilege, civil and religious. Its siege and capture in 1759, by Gen. Wolfe, was fatal both to the English and French commanders. In 1776, General Montgomery and Arnold attempted to take Quebec by storm, but Montgomery fell, and Arnold was compelled to retreat.

Toronto, on the northern shore of Lake Ontario, has an excellent harbor, and is the centre of trade for a broad back country; population in 1861, 44,821. Montreal, on an island in the St. Lawrence, 180 miles above Quebec, and 200 below Lake Ontario, is at the head of ship navigation. The streets are regular, the houses are built of gray stone, and present a singular appearance from being covered with tin. Montreal College is a very flourishing institution. Population 90,323.

CANALS. The first, regular chain of arti-

ficial water intercommunication, of which history has transmitted to us the record, was that between the Nile and the Red Sea. This canal route was examined with great care by the French engineers, and several portions found in 1798 in such a state of preservation as only to demand cleansing. The system of modern canal improvement may be stated to have commenced in Italy, at Viterbo, 1481, when sluices with double doors were invented, and first used on a large scale, near Milan, by Leonardo da Vinci. The canals of the delta of the Rhine commenced, it is true, in the dark ages, but it was not before the end of the fifteenth century, that they were planned and constructed with scientific regularity of design. The most stupendous canal in the world is one in China, which passes over two thousand miles, and to forty-one cities; it was commenced in the tenth century. The Erie canal in New York, three hundred and thirty miles in length, was begun in 1817. The Bridgewater canal, the first great work of the kind in England, was begun by the Duke of Bridgewater, in 1758. Brindley was the architect. [See BRINDLEY.]

CANARIES, a group of seven islands in CAN

the Atlantic, off the coast of Africa, belonging to Spain. Teneriffe is the largest and most important. The Peak rises 11,946 feet above the sea. These are supposed to be the Fortunate Isles of the ancients. In 1330 a French ship, driven among them by stress of weather, made them known to the modern world. They were seized by the Spaniards, who planted the vine, which still flourishes, about 1420. The canary-bird is a native of these isles. It was brought into England in 1500.

CANDIA, the ancient Crete, a large island in the Mediterranean, lying about eighty miles south of the Morea. The climate is mild, and the soil productive, capable, as was proved in ancient times, of supporting 1,200,000 inhabitants, a population which Turkish tyranny and indolence have diminished to 159,000. It was, in mythological accounts, the kingdom of Saturn. After becoming a republic, and a pirate isle, it was conquered by the Romans, and then by the Saracens in 823. In 962, the Greeks regained possession of it. It was sold to the Venetians in 1204, and was fiercely contended for by the troops of the Porte and the republic. Hither the Christian chivalry of Europe rushed to display their valor against the infidels, and the capital was only surrendered after a siege of twenty-five years, Sept. 27th, 1669. Candia continued in the hands of the Turks, until its cession to Mehemet Ali in 1830. In 1840 it was restored to the sultan. The wild goat of Crete is the supposed origin of all the domestic varieties.

CANNÆ, a city on the Adriatic, at the mouth of the Aufidus, where the Romans were defeated by the Carthaginians, under Hannibal, May 21st, 216 B.C. Hannibal had 10,000 horse and 40,000 foot, while the Roman troops, headed by Æmilius Paulus and Terentius Varro, amounted to 87,000 men. The opponents of Hannibal had two to one against him in infantry, while Hannibal had five to one against them in cavalry. The light-horse and slingers began to skirmish, after whom Hasdrubal charged the troops of horse that were led by Æmilius, and broke their ranks. The last blow that ended all resistance was given by the same hand that aimed the first. Hasdrubal, having cut in pieces all the Roman horse that opposed him,

fell back upon the rear, and came up to the Numidians, with whom he joined and made a charge upon Varro. The Romans whom they charged appeared incapable of resistance, and were completely routed. Livy says that 40,000 foot and above 2,700 horse were slain; Polybius accounts the loss much greater. The prisoners taken amounted to 3,000 foot and 300 horse, according to Livy; according to others, to 8,000. Hannibal collected the rings, the badges of the fallen Roman knights, and sent many bushels of them to Carthage, as tokens of his triumph. He lost 4,000 Gauls, 1,500 Spaniards and Africans, and 200 horse. Had he pursued his victory and marched forthwith to Rome, instead of quartering his troops in the seductive Capua, he might probably have ended the war; but he did not trust his own good fortune to such a length. Varro, the consul whose imprudence brought on the defeat, saved himself by flight, while his brave colleague, Æmilius, perished on the field of battle.

CANNING, GEORGE, a brilliant English statesman, born April 11th, 1770. His life was spent on the political arena, and he succeeded Lord Liverpool as premier in February, 1827; but worn by his toils, both in body and mind, he died August 8th, 1827.

CANOVA, ANTONIO, the most celebrated and successful sculptor of the nineteenth century, was born in the Venetian territory, at Possagno, Nov. 1st, 1757, and from his twelfth year devoted himself to the art in which he became so celebrated. When quite young he modeled the figure of a lion in butter with exquisite skill. This was placed upon the table of the seigneur of the place, Falieri, whose attention it attracted. The ingenious artist was sought for, found, and placed with a statuary. At seventeen, his statue of Eurydice was sculptured, and highly praised. In 1779 he went to Rome under the patronage of the Venetian senate. His works are numerous, and his subjects various; the female figures being the most perfect and beautiful. Canova had a method of finishing his statues, by applying to the marble a peculiar preparation, which destroyed the glare and glitter of the stone, and imparted to it the soft and mellow lustre of wax. Modest, moral, and amiable, Canova was free from professional jealousy, and liberally patronized young art-

ists of merit, removing many of the obstacles which oppose the early steps of devotees to the fine arts. He was created Marquis of Ischia, with a large pension, by Pope Pius VII., who was by no means backward in acknowledging his merit. The amiable artist died at Venice, Oct. 13th, 1822, leaving behind him many monuments of his talents, industry, goodness, and liberality. A writer, speaking of the comparative merits of the Medicean and the Canova Venus, says, "I am by no means convinced of the great superiority of the ancient over the modern work. It is certain the general attitude and aspect are copied in the latter, which deprives the artist of a great share of the merit of originality; but if we were to regard the works alone, without any reference to their formation, I am not sure that the palm would not be given to Canova. As a friend of mine, no mean judge, said to me, 'If they were both dug out of the earth now, and nobody knew anything about either, the Canova statue would be preferred.'"

CANUTE, the Great, King of Denmark and England, succeeded his father Sweyn in the former kingdom, about the year 1015. He commenced his reign by an expedition against England, but hearing that the King of Norway had invaded Denmark, he was obliged to make a precipitate return. Having repulsed the invader, he resumed his enterprise, and landing on the southern coast, committed dreadful ravages; but Edmund Ironsides opposed him with such bravery, that Canute agreed to divide the kingdom with him. On the murder of Edmund by Edric in 1017, Canute obtained the whole kingdom in an assembly of the states, and put to death Edric, and several of the English nobility who had basely deserted their sovereign. He likewise levied heavy taxes on the people, and particularly on the inhabitants of London. The King of Sweden having attacked Denmark, he went thither and slew the Swedish monarch in battle. Canute built churches, made a pilgrimage to Rome, cherished the interests of learning, and distinguished himself by his piety. Canute's reproof of his courtiers is well known. These flatterers having assured him he had power over all things, he seated himself upon the sea-shore, and commanded the waves not to approach his feet. The element advanced with its usual rapidity, and Canute, rising,

said to his courtiers in a tone of great solemnity: "He alone can rule the waves, who has said to them, Thus far shall ye go, and no farther." Canute died at Shaftesbury, 1036.

CAPE OF GOOD HOPE. The Cape, nearly at the southern extremity of Africa, long in the hands of the Dutch, was found, on the conquest by the English, in the year 1795, to be 550 English miles in length, and 233 in breadth. This flourishing colony was originally founded by the Dutch. Van Riebeck, surgeon of one of the Dutch company's ships, having touched at the Cape, was struck with the extent of the bay, capable of containing more than one hundred vessels; its situation, half-way between Europe and India; and the nature of the soil, which seemed proper for every kind of cultivation. On his return, he communicated his ideas to the company, who approved of his plan and gave him full powers to carry it into execution. Van Riebeck accordingly embarked with four vessels, and, after arriving at the Cape, purchased from the inhabitants land for an establishment, for which he gave them merchandise, to be selected at their own choice, to the value of 50,000 florins, 1651. The possession of this region was for a long time a source of contest between the Dutch and English. It was taken by the English in 1797, and, after having been surrendered to the Dutch in 1802, was again occupied by the former in 1806, and has since remained in their possession. Cape Town is resorted to by ships bound to the Indian Ocean, for supplies of water and provision. The Hottentots, or Bushmen, are a degraded race, but instead of endeavoring to better their condition, the Europeans have contributed to prolong, and in fact consolidate, their evil habits, furnishing them with spirituous liquors, the agency of which insures their destruction, or reduces them to an abject state which is far worse than death itself. The cruelty practiced on the natives by the Dutch almost exceeds belief. When a party of Dutch wished to settle in any spot, they proceeded to clear it by the death of the natives, with as much coolness as an American squatter would exhibit, in hewing down the forest-trees to open a place for the erection of his log-house, or in picking off with his rifle a few of the wild animals which threatened to be troublesome. The Dutch manner of proceed-

ing was summary. Having selected the hut of some poor wretch as an object of destruction, they first set fire to it. Let us imagine the dismay and horror of a poor family at finding flames breaking forth around, above them, in every direction. Rushing forth, the wretched owners of the miserable dwelling would implore pity from their cruel enemies. The Dutch boors would be too much engaged in loading their pieces and discharging them upon the males, to heed the cries of the females, who, with their children, were generally saved. The indifference with which the boors regarded the death of the Bushmen, is strikingly illustrated in the following anecdote. A boor, presenting himself at the secretary's office at Cape Town, after having traversed a lonely tract, was asked if he had not found the Bushmen troublesome? "Not very," replied he, with great coolness, "I only shot four."

In 1848, the population was 200,546. Cape Town, the capital of the British possessions in this region, was the first settlement of the Dutch.

CAPE VERDE ISLANDS, a group of islands, in the Atlantic, opposite to and 390 miles from Cape Verde, belonging to Portugal. Their number has been variously stated from ten to fourteen. The air is unwholesome, but some portion of the soil is fertile. Rain is unfrequent, and the drought has been so severe that numbers of the inhabitants have perished from the consequent famine. The salt manufactured at Mayo, a small island, is exchanged for flour, and this trade is chiefly carried on by means of American vessels. The inhabitants, who are mostly negroes, numbered 86,738 in 1850. These isles were known to the ancients as the Gorgades, but were not visited by the moderns till 1446.

CAPET. The family name of a royal race, thirty-six members of which have reigned in France, and eighty-two in other European states. The word signifies 'broad-head,' or perhaps 'broad-hat,' and was first given to Hugo, son of Hugo the Great, Duke of France and Count of Paris, by his adherents, in the tenth century. He seized the throne on the death of Louis V., the Indolent, the last of the Carolingian race, A.D. 987. Louis had reigned but one year, and was poisoned by his queen, who loved him not.

CAPO D'ISTRIA, John, Count of, a native of Greece, was born at Corfu, in 1760. He entered the diplomatic service of Russia, was intrusted with several important missions, and assisted to manage the intrigues by which that power fomented the disaffection of the Greeks toward the Turks. In 1827, he was elected president of the Greek republic. In this responsible station, his talents appear to have been of a high order, although the weakness of the state, and the disorders which reigned throughout Greece, embarrassed his abilities. He was assassinated in 1831, his leaning toward Russian policy gaining him enemies.

CAPPADOCIA, a province of Asia, once of great importance as an independent kingdom, at times, although nominally dependent upon Persia, whose satraps governed it. The Pontus Euxinus lay upon the north, Armenia on the east, Cilicia and Syria on the south, and Lycaonia on the west. It was divided into Cappadocia Magna, and Cappadocia Minor, afterward Cappadocia Proper, and Pontus. The kingdom was founded by Pharnaces, 744 B.C. The people are said to have been addicted to every vice that man is capable of committing. They worshiped the sun. Arche-laüs, the last king, bequeathed the country to the Romans, A.D. 17.

CAPRI, the ancient Capræ, a beautiful rocky island in the Gulf of Naples, whose inhabitants are 6,000 in number. Besides being valuable on account of its oil and wine, it is enriched by quails, which come hither in great numbers from Africa, and are caught with ease. The charms of this island induced Tiberius to select it for his retreat when he chose to retire from the active administration of government, and give himself up to the most revolting debauchery, occasionally reminding his subjects of his existence by ordering the execution of Rome's best citizens.

CAPUCHIN FRIARS, a sort of Franciscans, to whom this name was given from their wearing a great *capuchon*, or cowl, an odd kind of cap, or hood, sewn to their habit, and hanging down upon their backs. They were founded by Matthew Baschi, about 1525. Although the rigors of this order have abated, still the brethren are marked for their extreme poverty and privations.

CARABOBO, a province of Venezuela, in

South America. The famous battle of Carabobo, which decided the independence of Venezuela, was fought between Bolivar and La Torre, the Spanish general, June 24th, 1821.

CARACALLA, ANTONINUS BASSIANUS, the eldest son of the Emperor Severus, born A.D. 188, and associated with his father in the government at the age of thirteen years. After his father's death, he assassinated his brother Geta, who shared the throne with him, in 212. Caracalla received the surname of Alemannicus, for basely murdering a tribe of the Germans whom he pretended to assist. He visited Egypt, and displayed every where the greatest cruelty. He was finally assassinated at Edessa, A.D. 217, by Macrinus, the prætorian prefect.

CARACTACUS, king of the Silures, a British tribe of Wales, who, being taken prisoner by the Romans, was led before the Emperor Claudius, A.D. 52. He was unawed by the power and splendor which surrounded him, but was surprised, as he told the emperor, that the possessors of so much wealth and grandeur could envy him his humble cottage. The magnanimity of his bearing, and the candor and moderation of his remarks, so moved the emperor, that he gave orders to have the captive monarch set at liberty. This was the only good action performed by Claudius that is extant.

CARBONARI ('colliers'), the name of a secret political society of Italy which existed for many years, but the origin of which is doubtful. The Carbonari were sworn foes of oppression, "Hatred to tyrants!" being the initiatory oath. The places where they met were called *huts*; the interior the *colliery*, and the exterior the *wood*. Tolerance in religious matters was secured by their principles. In 1820, when Italy was disturbed by plots, 650,000 new members were admitted, in the month of March. In that year the society was suppressed by the Austrian government; though there is reason to think it yet exists.

CARDINALS were originally the parish priests at Rome; title began to be used, 308; college of, founded by Pope Pascal I., 817; did not elect the popes till 1160; wore the red hat, to remind them that they ought to shed their blood, if required, for religion, and were declared princes of the church, 1243; the cardinals set fire to the conclave, and sep-

arated, and a vacancy in the papal chair for two years, 1314; Cardinal Carassa was hanged by order of Pius IV., 1560; as was Cardinal Poli, under Leo X.; the title of eminence first given them by Pope Urban VIII., about 1630. Paul II. gave them the scarlet habit, 1464. The cardinals are now ecclesiastical princes in the Church of Rome. They are the council of the pope, and constitute the conclave or sacred college.

CAREY, WILLIAM, D.D. of the English Baptist mission at Serampore, was born Aug. 17th, 1761. He was the son of a poor man, and commenced business in life as a shoemaker. By industry and application he acquainted himself with Hebrew and various other languages. In 1793, he left England for India. He translated the Scriptures into Bengalee, and into all the principal languages of northern Hindostan, and compiled also a voluminous Bengalee dictionary. He died in 1834.

CARLOS, commonly known as Don Carlos, son of Philip I. of Spain by his first wife, Mary of Portugal, was born at Valladolid, Jan. 8th, 1544. Four days after, his mother died in the midst of preparations for the celebration of the birth of the prince. Carlos was naturally feeble, and had one leg shorter than the other. The excessive indulgence with which he was treated in youth, fostered his strong passions, and rendered him vindictive and obstinate. In 1560, Philip caused the states, assembled at Toledo, solemnly to recognize Don Carlos as heir to the crown. A headlong fall down the staircase of the palace of the Cardinal Ximenes at Alcalá, in 1562, nearly deprived the young prince of life. His skull was fractured, and trepanning was necessary. Of course a royal prince of Spain could not be restored without a miracle, and the credit of Carlos's recovery was divided between the bones of a holy friar and the image of Our Lady of Atocha. These sanctified instrumentalities did not work a radical cure, for the brain of their patient had received a permanent injury.

Writers vary greatly in the portraits which they draw of Don Carlos. According to some, he was born with those qualities which adorn a hero, with a love of glory joined to high courage, a proud disdain of opposition, and a desire of extended power. According

to others, his actions were those of a madman, whom accident and opposition irritate, but address or submission calms. It is certain that after this accident he displayed much eccentricity of conduct, and gave himself to reckless gratification of his passions.

One night, as he was traversing the streets of Madrid, some one accidentally threw a little water on his head. Instantly stopping, Don Carlos ordered his attendants to set fire to the house, and cut the throats of its inmates. They parted, as if to execute his commands, but returning immediately, assured him that it was impossible to obey him, because the holy sacrament was on the point of being administered to a sick person in the offensive dwelling. This reply pacified the prince.

Cardinal Epinosa, president of the council of Castile, and afterward grand-inquisitor, banished a comedian named Cisneros from the place, where he was to have performed that night for the prince's diversion. It was probably by Philip's order. Carlos, meeting the cardinal, seized him roughly by the collar, and, laying his hand on his poniard, exclaimed, "You scurvy priest, do you dare to prevent Cisneros from playing before me? By the life of my father, I will kill you!" The trembling prelate, throwing himself upon his knees, was too happy to escape with his life from the hands of the infuriated prince.

An unfortunate money-lender, one Grimaldo, after having supplied the prince with some money he had asked, added in the usual high-flown style of Castilian politeness, that all that he had was at his disposal. Carlos took him at his word, and instantly demanded a hundred thousand ducats. In vain Grimaldo protested that he had only used a form of speech current in all good society. The best bargain he could make was to be let off with sixty thousand, to be furnished within twenty-four hours.

A shoemaker having made a pair of boots much too tight for the prince, the latter ordered them to be cut to pieces and stewed. "Villain!" exclaimed he, to the terrified tradesman, "thou must eat these or die!" In vain the unfortunate man represented the cruelty of the sentence, and the trivial nature of his offense. He was not permitted to depart until he had eaten up his boots.

Don Alonzo de Cordova, brother of the

Marquis of Las Nevas, having failed to repair instantly to the prince's chamber, at the summons of his bell, the furious prince seized him by the waist, and, but for the cries of the sufferer, which procured the assistance of servants, would have dashed the chamberlain through the window into the moat.

Yet Carlos at other times behaved in a most generous manner, and he obtained the affections of those members of the royal family who approached him most nearly. One of these, romance has closely linked with his unfortunate fate. In 1559, a marriage had been proposed between Don Carlos and Isabella, daughter of Henry II. and Catharine de Medici of France. Philip judged proper to substitute himself for his son. It has been said that Carlos loved Isabella, that their passion was mutual, and that he never forgave his father for having deprived him of his bride.

Carlos may have cherished such a sentiment, no doubt, but that Isabella loved the sallow and sickly boy is hardly probable. She was kind to him, and always befriended him, but it was the kindness of an amiable woman and a relative. She appears to have possessed a complete control over him, so that his conduct in her presence was never extravagant.

Philip served Carlos a second trick of this kind. He was led, in 1565, to hope for a union with the Archduchess Anne, his cousin, and daughter of the Emperor Maximilian, but Philip shortly afterward opposed the match, and, on the death of Don Carlos, married the lady himself. Thus he successively deprived his son of two females, whose attractions might have bound him to domestic life, and softened the wilder and more obdurate portions of his character.

In 1653, Philip, who had no heir but Don Carlos, whom he doubtless judged incapable of governing, sent for his nephews, the Archdukes Rodolphus and Ernest, whom he received in person, for the purpose of securing the succession to them. The following year, Don Carlos, who was discontented, and at variance with his father, projected his escape from Spain under the pretext of going to the relief of Malta, then besieged by the troops of Solymán. He collected fifty thousand ducats, and was on the eve of departing,

when a forged letter of the viceroy of Naples, urging his stay in Spain, induced him to change his resolution. It is unnecessary to dwell upon the various projects of Don Carlos for securing fame and distinction in other countries, all of which were crossed by his stern parent, who regarded him with a jealous eye, and punished several of his confidants and friends.

Philip appeared to repose implicit confidence in the Duke of Alva, Ruy Gomez de Sylva, and Espinosa. Don Carlos had an invincible repugnance to these men, either from jealousy of the confidence they enjoyed, or from considering them as authorized and privileged spies upon his conduct. He could not bear to dwell upon the thought that the Duke of Alva had obtained the government of Flanders, which he had solicited for himself. When Alva came to pay his respects to him previous to his departure for the Netherlands, the prince fiercely said, "You are not to go to Flanders; I will go there myself." Alva endeavored to pacify him, saying that it was too dangerous a mission for the heir to the throne; that he was going to quiet the troubles of the country, and prepare it for the coming of the king, when the prince could accompany his father, if his presence could be spared in Castile. But this explanation only served to irritate Carlos the more; and, drawing his dagger, he turned suddenly on the duke, exclaiming, 'You shall not go; if you do, I will kill you.' A struggle ensued; an awkward one for Alva, as to injure the heir-apparent might be construed into treason. Fortunately, being much the stronger of the two, he grappled with Carlos and held him tight, while the latter exhausted his strength in ineffectual efforts to escape. But no sooner was the prince released than he turned again, with the fury of a madman, on the duke, who again closed with him, when the noise of the fray brought in one of the chamberlains from an adjoining room; and Carlos, extricating himself from the iron grasp of his adversary, withdrew to his own apartment.

"I'll kill you" seems to have been his favorite threat. Louis de Foix, a French engineer, the celebrated architect who built the Escorial, is said to have been commanded by Don Carlos to make him a book heavy

enough to kill a man at one blow. De Thou, the historian who relates this, says, "This prince desired the book, after having read in the annals of Spain that an imprisoned archbishop had made a leather cover to a brick of the size of his breviary, and used it to kill his jailer, whom he struck dead." De Foix told the historian that he made the prince a book, composed of ten tablets of a blue stone, covered with plates of steel, concealed under plates of gilt, and this book, six inches by four, weighed more than fourteen pounds. He said also that Don Carlos, wishing to be alone in his chamber, employed him to make him a machine, with which by means of pulleys he could fasten and unfasten his door without rising from his bed. The prince had always under his pillow two drawn swords, a brace of loaded pistols, and at the bedside, half a dozen arquebusses and an arm-chest.

These precautions and preparations alarmed Philip. Don Carlos was often heard muttering against the conduct of his father. He went about frequently repeating that there was a man with whom he had quarreled, whom he desired to kill. At Christmas time it was the custom of the royal family to take the sacrament together in public; and to prepare himself for this sacred ceremony, Carlos went to confession. He confessed that he was meditating murder, without revealing his intended victim. The confession being revealed to Philip, he exclaimed, "I am the man whose life he seeks! but I will take care to prevent the execution of his designs."

The dark surmise of the father was confirmed. Don Carlos's confessor refused him absolution. Several learned divines were got together to give their opinions on the case. One of the number, wishing to draw from Carlos the name of his enemy, told him that this intelligence might possibly have some influence on their judgment. The prince replied that "his father was the person, and that he wished to have his life!" What more palpable proof of insanity could be put on record! At the same time that he was brooding over this assassination, he was also projecting schemes to fly from the palace and his father. Both designs were of course revealed to the king, who now took prompt measures for his arrest. De Foix was ordered to arrest the action of the pulleys which closed the door of

the prince's chamber. This was done privately, and with so much skill that the prince never perceived it. He slept soundly on the night of the 18th of January, 1568, when the Count of Lerma first entered his apartment, silently removed all separate weapons, and sat down upon the chest which contained the remainder. The king then entered, preceded by Ruy Gomez de Sylva, the Duke of Feria, several other noblemen, and guards, Don Carlos being still buried in sleep. Being awaked, and seeing his father, he exclaimed, "I am lost," and mingled prayers for death with loud cries and menaces. Philip coldly replied that his life was not in danger; ordered him to rise; removed his attendants, seized a casket filled with papers, which was under the bed, charged those whom he intrusted with the care of the prince not to lose sight of him, and to prevent his writing or communicating with any one, and withdrew. Out of that room Don Carlos never again passed. The windows were barred up, the door secured, a guard of twelve halberdiers were constantly stationed in the passages leading to it, and night and day there were noblemen appointed to keep watch over the prisoner himself. All communication with the outer world was cut off. He was as one buried alive.

The guards dressed him in black. They removed the bed itself, leaving only a small trundle-bed in its place. The confinement soon told upon his health; and the unhappy prisoner seems to have hastened his end by his own wild behavior. At one time he would abstain from food for days together; then he would eat enormously. He would also deluge the floor with water; then walk about half-naked with bare feet on the cold pavement. He caused a warning-pan filled with ice and snow to be introduced several times in a night into his bed. But Mr. Prescott tells us that for this last practice he might have pleaded the medical authorities of his time, and that it was only the hydropathic treatment of that day. He caused a large fire to be built, under pretense of cold, and threw himself into it, to perish in the flames. It required the utmost exertions of his guards to save him. He endeavored to choke himself by swallowing a large diamond which he wore about him.

Philip is said to have discovered in the cask-

et which was found concealed under the bed of Don Carlos, communications with the rebels of the Netherlands. The excessive precautions which Philip took to justify his conduct, have disposed posterity to judge favorably of Don Carlos. It is certain that many of the most influential grandees of Spain vainly petitioned for his liberation.

Some historians are of opinion that Carlos was condemned to death by the inquisition, that the sentence was secretly executed, that the prince partook of some poisoned broth, and died a few hours afterward. Some believe that his veins were opened in the bath, others that he was strangled; while Ferreras, and the Spanish historians in general, declare that he died of a malignant fever, occasioned by an improper regimen and by violent fits of passion; that he received the last sacraments with piety, and wished to have the blessing of his father. It is difficult to determine the manner or date of the prince's death, but we incline to refer it to the 24th of July, 1568. The same year Isabella died, aged twenty-three, but her death was natural and had no connection with the fate of Don Carlos. We do not know how much faith to repose in the Spanish historians who defend the memory of Philip as the protector of religion, and represent his son as a languid member of the church, a partisan of the revolted Calvinists of the Netherlands, and, above all, a determined opponent of the inquisition. Whether or not Philip adopted any measures to hasten the death of his son, beyond the close confinement we have mentioned, it is clear that he sternly intended that Don Carlos should not survive him.

CARLSBAD, an aristocratic watering-place in Europe, is in Bohemia. The arrival of distinguished strangers is heralded by trumpeters stationed on a tall tower near the market-place; the tone and length of the blasts depending on the character of the equipage. The popular spirit manifested throughout Europe against despotic governments, induced the congress of Carlsbad, Aug. 1st, 1819; whereat the great continental powers decreed measures to repress the rage for free institutions, and denounced liberal opinions and the liberty of the press.

CARMELITES, or WHITE FRIARS, one of the four mendicant orders, and bound by

austere rules, appeared in 1141. Their rigor was moderated about 1540. They claim their descent in uninterrupted succession from the prophet Elijah, and take their name from Mt. Carmel, on which mountain they have a monastery, built, they say, on the spot where the Tishbite and his pupil Elisha had their abode.

CARNOT, LAZARE NICOLAS MARGUERITE, born in Burgundy, 1753. He was distinguished for his mathematical abilities, and in the revolution commenced his career as captain of a corps of engineers. He voted for the death of the king. Carnot distinguished himself in a military and civil capacity, but was obliged to leave Paris, June 18th, 1799; being soon after recalled, he was made, in April, 1800, minister of war. He was a firm republican, opposed the ambitious views of Napoleon, and equally so the attempts of the royalists. He died at Magdeburg, August 3d, 1823. Carnot was a man of integrity and talents, brave, learned, and patriotic, and honored by all parties.

CAROLINE, wife of George IV. of England, was born in May, 1768. She was the daughter of the Duke of Brunswick, and in 1795 became the bride of the Prince of Wales. Her daughter, the Princess Charlotte, died at an early age, regretted by all. The prince abandoned Caroline, and, in order to procure her ruin, accused her of infidelity. The trial of the unhappy queen reflects disgrace upon the profligate prince. She refused the offers which were made to induce her to quit England with the empty name of queen, and asserted her rights with dignity and firmness. She finally succumbed under the persecution of her enemies, and died Aug. 7th, 1821.

CARRIER, JOHN BAPTIST, born in 1756, originally an obscure attorney, rose to infamous notoriety in the French revolution. Under his direction, the greatest cruelties were perpetrated, and 15,000 individuals perished in little more than a month. He was finally apprehended and condemned to death by the revolutionary tribunal, Dec. 16th, 1794.

CARROLL, CHARLES, of Carrollton, one of the signers of the Declaration of Independence, survived all his associates in that momentous act. He was a native of Annapolis, Md., and was born Sept. 20th, 1737. His parents were of Irish descent and of the Roman Catholic religion, and he was sent to France to be ed-

ucated in that faith. After studying civil law in France, he repaired to England to acquire a knowledge of the common law. He returned to his native land in 1765, a finished scholar, and soon distinguished himself by able political writing and active opposition to the arbitrary aggressions of the British ministry. He was elected to the congress of 1776, and placed his name to the Declaration of Independence. He was possessed of a large estate, and as he advanced to sign the immortal document, a member sportively remarked, "There goes half a million at the dash of a pen." But his wealth vanished from his view, when he looked upon the interests of his country.

He retired from Congress in 1778, and was thereafter a member of the state legislature till 1789, when he entered the first federal congress as senator from his native state. In the senate he remained till 1792. His latter days were spent amid honoring friends and in the tranquil enjoyment of study and literature. Charles Carroll of Carrollton, the last on earth of those who signed the charter of our liberties, died Nov. 14th, 1832, at the ripe age of ninety-four.

CARTER, ELIZABETH, an English literary lady, daughter of a clergyman of Kent, born in 1717. She was acquainted with Latin, Greek, French, German, Italian, Spanish, Portuguese, Hebrew, and Arabic. In 1749, her translation of Epictetus was commenced. She died in 1806, having enjoyed a high literary reputation, and the esteem of all who knew her.

CARTHAGE, the rival of Rome, and long the mistress of Spain, Sicily, and Sardinia, was a colony of the Tyrians, and one of the latest Phœnician settlements on the African coast of the Mediterranean. The precise time of its foundation is unknown; yet most writers agree that it was built by Dido about 869 B.C., or according to others 72 or 93 years before the foundation of Rome. The tradition is that Dido was a Tyrian princess, who fled to Africa to avoid the persecutions of her brother Pygmalion. She outwitted the natives in making purchase of a piece of land whereon to build her citadel. They agreed for a certain sum to give her as much land as she could encompass with a bull's hide (*byrsa*). When the money was paid, the artful princess cut the hide into narrow

thongs, with which she found herself able to inclose a very large space. The citadel which she subsequently erected on this spot, was called, in memory of the transaction, Byrsa.

Carthage flourished for several centuries, attaining the zenith of its glory under Hannibal and Hamilcar. At one time the city contained 700,000 inhabitants. Its power excited the jealousy of the Romans. The latter, proud and strong, determined on the conquest and ruin of their wealthy rivals. The three famous wars between Rome and Carthage are known as the Punic wars. They brought forth all the energies of the hostile parties. The Carthaginians confided in their inexhaustible wealth and the superiority of their navy the Romans in their superior hardihood and energy. The Romans were ultimately victorious, and, above all others of their leaders, Scipio acquired the greatest renown. For his successes and his struggles in Africa, he obtained the name of Africanus. It must not be supposed that the Carthaginians tamely submitted to the Roman arms: on the contrary, even to the last, they defended their city against the invaders, with unequalled bravery. Gold and silver vessels were surrendered by the luxurious Africans to procure the means of carrying on the war; and the women, with patriotic devotion, cut off their fine long hair, and twisted it into bow strings. All their exertions were unavailing. The skill and bravery of the Romans, who fought under the eye and example of Scipio, prevailed, and in the third Punic war, Carthage was totally demolished, B.C. 146. The siege was wondrous for its horrors, for the desperate resistance of the Carthaginians, and the self-devotedness of their women. As the Roman troops drove the Carthaginians before them in every quarter, a few firm heroines, among whom was the wife of Asdrubal, the Carthaginian general, with her children, endeavored to maintain their position in the temple in which they had sought refuge. Finding it impossible to defend this, the wife of Asdrubal determined to set fire to it and perish. She dressed herself accordingly in a splendid garb, and having fired the building, first stabbed her children and then plunged into the flames. The city was thirty-six miles in circumference, and when it was

fired by the Romans, it burned incessantly for seventeen days. Thousands perished in the conflagration, rather than yield, so that out of the great population, only fifty thousand surrendered themselves to Scipio and were saved. Caesar planted a small colony on the ruins of Carthage, and Augustus sent thither three thousand men. Adrian, after the example of his imperial predecessors, rebuilt a portion of it, and gave it the name of Adrianopolis. This new Carthage was conquered from the Romans by the arms of Genseric, A.D. 439, was for more than a century the seat of the Vandal empire in Africa, fell into the hands of the Saracens in 697, and was utterly destroyed.

The riches and commerce of the Carthaginians were immense, and their naval power, at one time, supreme. They bore the character of a faithless and treacherous people, and the proverb *Punica fides* (Carthaginian faith), is well known. Their religion was gloomy and cruel. Human victims were offered to the gods to appease their wrath: these sacrifices were usually their own children, whose mothers, unmoved by their cries and agonies, gave them to the glowing, red-hot Moloch. Captives also were thus immolated. Criminals were executed by crucifixion, to which other aggravated tortures were frequently added. The government was oligarchical, and centered in the city, which ruled all the other territory. The boundaries coincided nearly with those of the present state of Tunis.

CARTHUSIANS, a religious order founded by Bruno of Cologne, who in 1084 retired from the world to Chartreuse in the mountains of Dauphiny. Their austere rules were formed by Basil VII., general of the order. The monks could neither leave their cells nor speak, without express leave; and their clothing was two hair-cloths, two cowls, two pair of hose, and a cloak, all coarse. The general takes the title of prior of the Chartreuse, the principal monastery, from which the order is named, and whose monks in these degenerate days are famous for a generous liqueur they have the secret of compounding. Bruno the founder died in 1101, aged seventy-four.

CARUS, MARCUS AURELIUS, a Roman emperor, was born at Narbonne, about the year

230. He rose to a military command by his virtues, and was elected emperor in 283.

CARVER, JOHN, the first governor of Plymouth colony, died from a sun-stroke, April 3d, 1621. He was of Mr. Robinson's flock, who went from England to Leyden.

CARVER, JONATHAN, was born in Canterbury, Ct., in 1732. He served in the expedition against Canada, and on the conclusion of peace in 1763, attempted to explore the territory acquired by Gt. Britain, beyond the Mississippi. He hoped to reach the Pacific in the latitude of the great lakes, and open a shorter route to the East Indies. Failing of this, yet he explored the borders of Lake Superior, then comparatively unknown. He went to England, but was obliged to deliver up his maps and papers to the plantation office. He died in want at Boston in 1780.

CASAS, BARTHOLOMEW DE LAS, a Spanish prelate, the apostle of the Indians. His life was passed in laboring to improve the natives of the New World, and he received the grateful title of protector of the Indians. He came to Hispaniola in 1502, returned to Spain in 1551, and died at Madrid in 1566, aged 92.

CASHMERE, the most extensive of the alpine valleys of the Himalaya range is 75 miles in length by 40 in breadth, and lies imbedded in high mountains. The costly shawls of Cashmere, which can be woven of no other wool than that of Thibet, were first brought to England in 1666.

CASIMIR, the name of several kings of Poland. Casimir III., called the Great, succeeded Ladislaus in 1333. He united to his warlike qualities, the virtues of a great monarch, and from his devotion to their welfare, was called the peasants' king. He was killed by a fall from his horse, in 1370, aged 61.

CASS, LEWIS, born in Exeter, N. H., Oct. 9, 1782, was educated at Exeter Academy from his tenth year. Removing with his parents to Wilmington, Del., he became a teacher. Seeking his fortune in the West, he crossed the Alleghanies on foot, when 17 years old, and settling in Marietta, O., studied law, was admitted to the bar in 1802, became member of the legislature in 1806, and marshall of the State 1807-11.—Volunteering to repel Indian aggressions, he was elected Col. of the 3d Reg. O. Vols., and entered the service of the U. S. at the begin-

ning of the war of 1812. Reaching Detroit with the advance force, he urged the immediate invasion of Canada, was the author of the proclamation of that event, and the first to land on the enemy's shore, winning the first battle, that of Tarontoe. He rose in the regular army to the rank of Brig. Gen., and was Maj. Gen. of Ohio Vols. He was Gov. of Michigan Territory 1813-31, Sec. of War in Gen. Jackson's Cabinet, 1831-6, Minister to France 1836-42, and U. S. Senator 1845-48. In May, 1848, he received the Democratic nomination for the Presidency, but was defeated by Gen. Taylor. He was re-elected U. S. Senator in 1849, and became Sec. of State in Pres. Buchanan's Cabinet in 1857. His various trusts he discharged with marked ability. His writings, speeches and state papers would fill several volumes. He had great abilities, with remarkable prudence and judgment. It is said that he never even tasted of spirituous liquors. He died June 17, 1866, aged 84 years.

CASSANDER, one of the generals of Alexander the Great. After his death, Cassander murdered Roxana and her son, seized Macedonia for his share of the empire, and founded a new kingdom. He died 298 B. C.

CASSANDRA (ALEXANDRIA). According to the ancients, she received the gift of prophecy from Apollo, who loved her, but as she refused to fulfill the conditions upon which the knowledge was imparted, the offended deity deprived her predictions of the power of commanding belief. Thus, when she foretold the fall of Troy, her words were discredited. Troy was taken, Cassandra dishonored at the altar by Ajax, and then dragged away as the slave and companion of Agamemnon with whom she was slain by Clytemnestra.

CASSINI DE THURY, CÆSAR FRANÇOIS, director of the royal observatory after his father James, was born at Paris, June 17th, 1714. He died Sept. 4th, 1784, and was succeeded by his son, Count John Dominic, with whom ended this family of astronomers, who had been at the head of the royal observatory in Paris since its foundation in 1670.

CASSIUS, LONGINUS CAIUS, was the friend of Brutus, and opposed to the interests of Cæsar, to whom, however, he surrendered after the battle of Pharsalia. When he perceived that Cæsar aimed at supreme power,

he conspired against him. "The lean and hungry Cassius," as Shakspeare calls him, was among the first to strike the master of the world with his dagger. He married the sister of Brutus, and in the distribution of the provinces, obtained Africa as his share. He was defeated with Brutus at Philippi, B.C. 42, and ordered his freedman to run him through the body.

CASTIGLIONE, one of the most brilliant victories of the French arms under Gen. Bonaparte, fought in Italy against the main body of Austrians commanded by Wurmser. The battle lasted from the 2d to the 6th of July, 1796. The Austrian loss in this obstinate conflict was seventy field-pieces, between 12,000 and 15,000 prisoners, and 6,000 killed and wounded.

CASTLEREAGH. **ROBERT STEWART**, Baron Castlereagh, and Marquis of Londonderry, was born in Ireland, June 18th, 1769. He was a prominent statesman of the Tory party, and represented England at the congresses of Vienna in 1814 and 1815. He was a man of fine person, and an industrious minister, but as an orator he signally failed. He mixed his metaphors sadly. Here is one of them which Moore versified:

"The level of obedience slopes
Upward and downward, as the stream
Of hydra faction kicks the beam."

Lord Castlereagh, in a fit of excitement resulting from over-exertion, cut his throat, Aug. 12th, 1822.

CATALINE, **LUCIUS SERGIUS**, a celebrated Roman, descended from a noble family. When he had squandered away his fortune by his debaucheries and extravagance, and had been refused the consulship, he secretly meditated the ruin of his country, and conspired with many high-born Romans as dissolute as himself, to murder the senate, plunder the treasury, and set Rome on fire. This conspiracy was timely discovered by the consul Cicero, whose eloquence at this crisis will never be forgotten. Cataline, after he had declared his intentions in full senate, and attempted to vindicate himself, on seeing five of his accomplices arrested, fled to Gaul, where his friends were raising a powerful army to support him. The remaining conspirators were punished. Petreius, at the head of the consular troops, defeated the

rebels in Etruria, Jan. 5th, B.C. 62, in a hotly contested battle which cost Cataline his life. The crimes of this man were of the blackest dye, murder and licentiousness marking every stage of his career.

CATHARINE of Arragon, youngest daughter of Ferdinand and Isabella, sovereigns of Arragon and Castile, was born in 1488. In 1501 she was married to Arthur, eldest son of Henry VII., and after his death to his brother, afterward Henry VIII. By him she had several children, who died young, with the exception of Mary, afterward Queen of England. Henry repudiated her in 1533, on pretense of religious scruples grounded on her marriage to his brother. She maintained her rights with dignity, and died at Kimbolton Castle, in 1536.

CATHARINE, the only daughter of Lorenzo de Medici, Duke of Urbino, and wife of Henry, Duke of Orleans, afterward Henry II. of France, was born in 1519. She was the mother of three successive kings of France, and one queen of Navarre. In 1559, she became a widow, and her son Francis succeeded to the throne, during whose reign her influence was supplanted by the Guises. On the accession of her second son, Charles IX., in his eleventh year, she acquired the regency, and brought eternal infamy on her name by the horrible treachery to the Huguenots, and the massacre of St. Bartholomew's day. She died in 1589. She was very extravagant, seemingly incapable of setting bounds to her expenditures. When upbraided with her prodigality she would exclaim, "One must live!" Her talents were as commanding as were her vices odious.

CATHARINE I. and **II.** of Russia. [See **ROMANOFF**.]

CATO, **MARCUS PORTIUS**, commonly called the Censor, was born at Tusculum, 232 B.C. He distinguished himself in the army at the age of seventeen, and was remarkable for his temperance and abstinence. In Sicily and Africa, as military tribune and quæstor, he was noted for the fidelity with which he discharged his duties. The censors were two magistrates whose duty was to survey and rate, and correct the manners of the people. Their power was also extended over private families, and they restrained extravagance. The office was established 443 B.C., and abol-

CAT

ished by the emperors. When Cato was made a censor, he opposed Valerius Flaccus, his colleague, in his attempt to repeal the Oppian law, which was once passed for the suppression of luxury. He conducted the war in further Spain with great success, and took no part of the spoils to his own share. On his arrival at Rome he was honored with a triumph. As consul he manifested his dislike to luxury, in whatever shape it was presented. He also distinguished himself by his hatred to Carthage, always concluding his speeches in the senate with the expression, "*Prætereæ censeo Carthaginem esse delendam*" (Besides I think it necessary to destroy Carthage). He died B.C. 147. In his old age he gave himself up to scholastic enjoyments.

CATO, MARCUS PORCIUS, surnamed *Uticensis* from the place of his death (Utica), was the great-grandson of the preceding, and born about 95 B.C. The virtues he displayed in his early childhood seemed to prognosticate his future greatness. At the age of fourteen, he earnestly asked his preceptor for a sword to stab the tyrant Sylla. He served in the army against the insurgent gladiator Spartacus, and though his services entitled him to the office of tribune, he never applied for it till he saw it in danger of being filled unworthily. He was very jealous of the safety and liberty of the republic, and watched carefully over the conduct of Pompey, whose power and influence were great. In the conspiracy of Cataline he supported Cicero, and was instrumental in procuring the capital punishment of the conspirators. When the provinces of Gaul were decreed for five years to Cæsar, Cato observed to the senators that they had introduced a tyrant into the capitol. Being sent to Cyprus against Ptolemy, by the influence of his enemies, who hoped to injure his reputation, his prudence extricated him from every danger. That prince submitted to him, and, after a successful campaign, Cato was received at Rome with the most distinguished honors, which he, however, modestly declined. He strenuously opposed the first triumvirate between Cæsar, Pompey, and Crassus, and foretold to the Roman people all the misfortunes that soon after followed. After repeated applications he was made prætor, but unsuccessfully applied for the office of consul. When Cæsar had passed

the Rubicon, Cato advised the Roman senate to deliver the care of the republic into the hands of Pompey, and when his advice had been complied with, followed him with his son to Dyrrachium, where after some considerable success there, he was intrusted with the care of the ammunition, and the command of fifteen cohorts. After the battle of Pharsalia, Cato took command of the fleet, and when he heard of Pompey's death on the coast of Africa, he traversed the deserts of Libya, to join himself to Scipio. He, however, refused to take the command in Africa, but when he heard of Scipio's defeat, fortified himself in Utica. Cæsar approached the city, but Cato disdained to fly, and strengthening his resolution by reading Plato's treatise on the immortality of the soul, gave himself the fatal wound, Feb. 5th, B.C. 45. Cæsar, on hearing of his fate, exclaimed, "I envy thee thy death, since thou couldst begrudge me the pleasure of saving thy life."

The suicide of Cato was termed the era destructive of the liberties of Rome. The patriot and philosopher considered freedom as that which alone sustains the name and dignity of man, and would not survive the independence of his country. Yet by this rash act of suicide, as Montesquieu has said, Cato carried his patriotism to the highest degree of political frenzy, leaving aside all moral considerations; for Cato dead could be of no use to his country; while had he preserved his life, his counsels might have moderated Cæsar's ambition, and have given a different turn to public affairs.

CAUCASUS, a chain of mountains inhabited by a great number of tribes, and of vast extent, lying between the Black and Caspian seas, and covering 127,140 square miles, being about seven hundred miles long, and, at the widest, a hundred and fifty miles broad. According to the ancients, Prometheus was tied on the top of Caucasus by Jupiter, and continually devoured by vultures. As great perfection of form and an ancient origin were attributed to the inhabitants of this region, the highest rank in ethnological classification has been termed the Caucasian race.

CAULAINCOURT, ARMAND AUGUSTINE LOUIS DE, Duke of Vicenza, an eminent minister of the French empire under Bonaparte, died in 1827 at the age of fifty-four.

CAVAIGNAC, EUGENE, was born in Paris, Dec. 15th, 1802. After a regular course of study at the Polytechnic school, he entered the army, and in 1830 was sent to Africa for refusing to fire upon the inhabitants of Metz, in case of an insurrection. He distinguished himself greatly in 1836 by holding the citadel of Tlemcen with a small body of troops, against repeated assaults by the Arabs under Abd-el-Kader. From this period he was actively and creditably engaged in the Algerine war, and rose so rapidly in the service, that in 1847, he was a general of brigade, succeeding Lamoriciere in the command of the province of Oran, and in February, 1848, was appointed by the provisional government, general of division and governor-general of Algeria. During the few weeks he held this office he showed administrative abilities of a high order. Having been elected a member of the national assembly, he left Algiers and arrived in Paris just after the disturbances of the 15th of May, 1848. He was immediately appointed minister of war and put in command of the troops, which, in anticipation of the impending insurrection, were rapidly concentrating in Paris. By the middle of June 75,000 troops of the line were at hand to support the 190,000 national guards already on the ground. On the 22d of June the disaffected began to throw up barricades, and in twenty-four hours one of the most formidable insurrections ever organized in Paris was in full progress. In this emergency, Cavaignac, who had been appointed dictator, acted with coolness and sagacity. Instead of spreading his troops over the city to prevent the erection of barricades, as advised by some, he concentrated them at points where the insurgents were strongest, and bringing them into action in large masses was enabled to overwhelm all opposition. The contest lasted four days, with immense destruction to life and property, and resulted in the total defeat of the rebels. Cavaignac, true to his republican principles, immediately resigned his dictatorship; but his services being deemed too valuable to be lost to the country, he was appointed president of the council, with power to nominate his ministry. He chose it from among the more reasonable and moderate of the pure republicans, afterward admitting several members of the old dynas-

tic opposition. He resolutely removed from office the Socialists, the "Montagne" and the Red Republicans of every shade or sect. A large military force was retained in Paris, and every preparation made to prevent further insurrections. The national workshops were suppressed, but a provision of 3,000,000 francs was made for the poor.

In the election for president, Cavaignac was the leading candidate against Louis Napoleon. He retired into private life without a murmur, after an administration reflecting great credit upon his integrity and his civil and military ability. For several years afterward he was less in public life, but he was deemed, on account of his staunch republicanism, so formidable an opponent to the autocratic schemes of Louis Napoleon, that after the *coup d'etat* of December, 1851, he was one of the number selected for arrest. He was released on condition of leaving the country, and spent several years in Brussels. Within a year or two before his death he was permitted to return to France. At the elections in 1857, Gen. Cavaignac was one of the few successful republican candidates, being chosen to represent one of the constituencies of Paris in the legislature of the empire. His course was looked forward to with much interest. But on the 28th of October, 1857, while out shooting, he died suddenly from aneurism of the heart.

CAVE, EDWARD, a bookseller at St. John's Gate in London, who in 1731 founded the *Gentleman's Magazine*, the first periodical of the sort in England, was born in 1691, and died in 1754.

CAVENDISH, WILLIAM, the first Duke of Devonshire, was born in 1640. He distinguished himself in the House of Commons against the court, and was a witness in favor of Lord Russell, with whom he offered to exchange clothes to enable him to effect his escape. In 1684 he succeeded to the title of Earl of Devonshire, and about the same time was fined £30,000 and imprisoned for assaulting Col. Culpepper, who had insulted him, and whom he dragged by the nose from the presence chamber. He gave bond for the payment of the fine, which, however, he saved by the arrival of the Prince of Orange. In 1689, he was made a privy counselor, and at the coronation of William he served as

lord high steward. He was rewarded with the title of Duke of Devonshire, and during the king's absence, after the death of the queen, was appointed one of the regency. He died in 1707.

CAXTON, WILLIAM, the first English printer, was born in the county of Kent, in the latter part of the reign of Henry IV., was apprenticed to a worthy London mercer, and dwelt in Holland a score and a half of years, as agent for English merchants. There he became acquainted with the new mystery of printing. Under the patronage of Lady Margaret, sister of Edward IV., and bride of the Duke of Burgundy, Caxton translated a French book, titled "The Recuyell of the Historeys of Troye," and printed it at Ghent in 1471. This was the first book ever printed in the English language. In a note the printer said of the work: It "is not wretton with penne and ynke as other books ben to thende that all men may have them att ones, for all the bookes of this storje named The Recule of the Historys of Troye then empyrnted as ye here see, were begonne in oon day and fynysht in oon day." A few years later he established a printing-office at Westminster, and in 1474 produced "The Game of Chess," the first book printed in Britain. Caxton wrote or translated about sixty different books, all of which passed through his own press, before his death in 1491.

CECIL, WILLIAM, Lord Burleigh, a celebrated English statesman, born in 1521. He was dismissed from the office which he held under Henry VIII., upon the accession of Mary, but was the chief counselor of Elizabeth. After being privy counselor, secretary of state, and master of the court of wards, he was chosen chancellor of Cambridge, and raised to the peerage. He died in 1598. As a minister, Burleigh was noted for wariness, application, sagacity, calmness, and a degree of closeness which sometimes degenerated into hypocrisy.

CECIL, ROBERT, Earl of Salisbury, son of the preceding, on account of his deformity and weak constitution, received the rudiments of his education at home. In 1588 he served in the fleet against the Armada, and in 1591 was knighted, and sworn of the privy council. In 1596 he was appointed secretary of state, to the great disgust of the Earl of Essex. The

year following he was ambassador in France, and in 1599 succeeded his father in the court of wards. He kept up a secret correspondence with James of Scotland, whom he proclaimed on the death of Elizabeth, in consequence of which he became the favorite of that monarch. On the death of Lord Dorset, in 1608, he became lord high treasurer, discharging the duties of the office with fidelity, and dying from excessive exertion in 1612, aged forty-nine.

CECROPS, a native of Sais, in Egypt, came to Attica 1556 B.C., founded the city of Athens, instructed the uncivilized Greeks, introduced the worship of Minerva, and laid the foundation of the future prosperity of Greece. He died after a reign of fifty years.

CELEBES, an island in the East Indian seas, separated from Borneo by the Strait of Macassar, having an area of 70,000 square miles, and containing several separate states. The fruits and flowers of this island are abundant, and numbers of wild animals are found here. The Dutch, who possess a part of the island, obtain here gold, ivory, sandal wood, rice, cotton, camphor, ginger, long pepper, and pearls. The population is estimated at between two and three millions.

CELLINI, BENVENUTO, united the talents and skill of a sculptor, engraver, and goldsmith. He was born in Florence in 1500, and enriched his native city with his works. Wild, fiery, and impetuous, although honest, he was frequently involved in quarrels in which he entirely disregarded the rank and strength of his opponents. At the siege of Rome, in 1527, according to his own account, he killed the Constable of Bourbon. Although he behaved with gallantry during the siege, he was accused of secreting the Roman crown jewels, and imprisoned. Francis I., having procured his release, invited him to the French court, but Florence was not to be forgotten by the sculptor, and thither he returned, and died Feb. 13th, 1570.

CELSUS, AUGUSTUS CORNELIUS, a celebrated physician and medical writer of Rome, who flourished about A.D. 37.

CELTÆ, one of the ancient nations of Gallia, whose country extended from Brittany to the Alps and Rhine. Their government was aristocratical, and their aptitude for warlike pursuits great.

CELTIBERIA, an ancient country in the north-east of Spain, along the Iberus. The Celtiberians were completely subdued by the Romans in the Sertorian war.

CENTAURS, an ancient people of Thessaly, about Mount Pelion. As little was known with regard to their actual history, they formed the favorite theme of writers of fable and traditionary tales, being represented as half horse and half man, and being, according to some, the offspring of an intermixture of the human and brute races, or, according to others, the children of Ixion and the Cloud. They were probably young men who, having learned to break and ride horses, hunted the wild bulls that ravaged the neighborhood of Mount Pelion, during the reign of Ixion. Hence they were called Centaurs. In fables, Hercules, Theseus, and Pirithous are said to have contended against them.

CENTRAL AMERICA, the central portion of the long isthmus that unites North and South America, has an area of about 150,000 square miles. Under the Spanish rule it formed the kingdom of Guatemala. For a short time after the revolt from Spain it was united to the Mexican empire of Iturbide. In 1821 its independence was declared, and after some sanguinary struggles, a federal republic was established. This has since been dissolved, and the country is now divided into the distinct republics of Guatemala, San Salvador, Nicaragua, Costa Rica, and Honduras; under which heads further mention will be found. The country is mountainous, containing numerous volcanic summits, the soil fertile, and the products various. The original inhabitants were the Toltecas Indians from Mexico, whom it was found no easy task by the Spaniards to expel. These people, like the Mexicans, had made considerable advances in the arts, as their buildings of various descriptions proved.

CERRO GORDO, a mountain pass on the road from Vera Cruz to Mexico. It was stormed by Scott's army, April 18th, 1847, and the Mexicans under Santa Anna driven from their strong position. There were 12,000 of the Mexicans, horse and foot, besides powerful batteries of artillery. Three thousand, including five generals, surrendered as prisoners of war; Santa Anna fled by a defile on a baggage mule; the remnant of his army,

leaving over a thousand killed and wounded on the field of battle, scampered off on the road, and were pursued as far as Jalapa. This brilliant victory, which destroyed the Mexican army, cost Scott 63 killed and 368 wounded, out of a total force of 8,500.

CERVANTES SAAVEDRA, MIGUEL DE, was born of a noble family, at Alcala de Henares, in New Castile, in 1547. He early cultivated poetry, and preserved throughout his life a strong inclination for the muses. In 1569, Cervantes, in the flower of his age, went to seek in Italy glory or fortune. He first entered the service of Cardinal Acquaviva, in the capacity of page. The war between the Turks and the Venetians offered him a field more worthy of his birth and courage. He was enrolled beneath the banners of the Duke of Paliano, Mark Antony Colonna, general of the naval force sent to succor the island of Cyprus. This expedition was unfortunate; but, in the following year, the victory of Lepanto established the naval honor of Christendom, and in this engagement, whose glory he shared, the left hand of Cervantes was maimed for life. In 1575 he was taken by a corsair and carried to Algiers, where he suffered the evils of slavery for six years. The tale of "The Captive," inserted in his novel of "Don Quixote," describes vividly the scenes through which he passed. His marriage followed close upon the publication of "Galatea," in 1584. This novel celebrates his mistress Catharine Salazar y Palacios. His pen then became the only support of Cervantes. The gloomy reign of Philip II., and that of his successor Philip III., were unfavorable to the efforts of genius, but while the latter of these monarchs filled the throne, the inimitable novel of "Don Quixote" made its appearance. The first part appeared at Madrid in 1605, and the second in 1615. The other works of Cervantes are forgotten in the contemplation of this. One day, as Philip III. was standing in a balcony of his palace at Madrid, he observed a student reading on the banks of the river Manzanares, who seemed to be repeatedly interrupted in his occupation by the excess of his delight, striking his forehead and showing other tokens of the extraordinary amusement his book afforded him. "Either that fellow is mad," said the king, "or he is reading 'Don Quixote.'" Inquiry proved

Philip right in his conjecture, for the student was reading Cervantes' matchless tale of chivalry.

The history of the knight of La Mancha still excites the interest of people of all countries, of all ranks, and of all ages. Who delights not to recall his principal adventures, the attack on the windmills, the affair of the puppets, the affray with the wine-skins, the vigil of arms, the scene of his studies? This celebrated work was written in prison, Cervantes having become obnoxious to the authorities of La Mancha, who procured his imprisonment by the employment of one of the thousand arts known to the civil functionaries of Spain. He revenged himself by making his hero a townsman of his judges, and in choosing their country for the theatre of his exploits. Cervantes died at Madrid, on the 23d of April, 1616, in his sixty-ninth year. It is a coincidence worth noting, that on the same day, Shakespeare expired. He was interred pursuant to his own directions, in the church of the fraternity of the Trinity in that city. His intimate friends mourned for the virtuous citizen and the man of worth. The wits of his day, who had decried his talents, did not consider his loss an irreparable one, and were far enough from believing that Spain would one day have only the romance of "Don Quixote" to oppose to the master-works of other nations.

CEVENNES, a chain of mountains in the south of France, forming a branch of the Alps; the highest summits are 6,500 feet high. Their fastnesses afforded an asylum to the Huguenots in the religious wars of France.

CEYLON, an island off the Coromandel coast of Hindostan. It is a little less in size than Ireland. The climate is generally healthy, the soil fertile, and the variety of its productions surprising. In the bosom of the earth are found precious metals; the rocks are enriched with valuable gems, and the tropical fruits grow wild here. Ceylon yields the chief supply of cinnamon to the world. Among the ancients the elephants of Ceylon were noted for their size and beauty. They often make predatory incursions in troops, and do great injury to the crops. In the recesses of the forests are also found leopards, jackals, monkeys, hyenas, bears, and rac-

coons: The number of inhabitants exceeds 1,500,000. The Cingalese, who form a portion, are divided into castes like the Hindoos, and profess the religion of Buddha. "Ceylon," says Bishop Heber, "might be one of the happiest, as it is one of the loveliest, spots in the universe, if some of the old Dutch laws were done away; among which, in my judgment, the most obnoxious are the monopoly of cinnamon, and the compulsory labor of the peasants on the high roads, and other species of *corvees*." These restraints have since been removed by the British. The natives of Ceylon claim that their island was the seat of Paradise.

Ceylon was known to the Greeks and Romans. The Arabs called it Serendib. There is a tradition that St. Thomas, the apostle, preached the gospel here, but it is more generally believed that Nestorian missionaries accompanying Persian merchants were the first to introduce Christianity. Churches were founded here about the middle of the sixth century, but none were existing when the Portuguese discovered the island in 1505. Xavier soon after made many Catholic converts. The Portuguese so exasperated the natives, that the Cingalese took part with the Dutch, who succeeded in expelling them in 1656. The Dutch, being regarded in the light of benefactors, were rewarded with lavish grants of territory, but repaid kindness by ingratitude, and bloody wars arose, in which the Europeans were invariably victorious. In 1795, the English took possession of this island, which was formally ceded to them in 1802, and completely subjected in 1815.

CHERONEA, an old city of Bœotia, where were fought two battles of note in ancient history. In the first, Aug. 2d, B.C. 338, Philip of Macedon defeated the United armies of Athens and Thebes, thus mastering the liberties of Greece. In the second, B.C. 86, Archelaus, lieutenant of Mithridates, was defeated by Sylla, and 110,000 Cappadocians slain. Chæronea was the birthplace of Plutarch.

CHAISE, FRANCIS DE LA, a French Jesuit, and confessor to Louis XIV. of France, from 1675, to his death, 1709. It is supposed with every rational probability that Father de la Chaise instigated the revocation of the edict of Nantz. The beautiful cemetery of Pere la

Chaise at Paris occupies the site of his house and grounds.

CHALDEA, an ancient country of Asia, near the junction of the Tigris and Euphrates; it was the southerly part of Babylonia, and was extremely fertile. The Chaldeans were an Asiatic tribe originally, and possessed great astronomical knowledge. It was they who founded the mighty empires of Babylon and Assyria. The knowledge of which they boasted was eventually confined to the priests, who added to their sciences the arts of prophecy, magic, &c.

CHALMERS, THOMAS, D.D., foremost among the divines and preachers of Scotland, was born March 17th, 1780, at Anstruther in Fife. From the country parish of Kilmany the fame of his eloquence and zeal was bruited abroad, and in 1815 he was transferred to Glasgow. Crowds thronged the Tron church, not only on the Sabbath, but on week days. A series of Thursday discourses on astronomy, displaying, amid the glow of blazing eloquence, the sublime poetry and religion of the heavens, were published about the same time as the "Tales of My Landlord." The sermons rivaled even the rapid sale of the magic pages of Scott. In 1827, Dr. Chalmers was appointed to the chair of divinity in the university of Edinburgh. His reputation as a divine was enhanced by the works of his pen. He headed the secession of 1843 from the established church of Scotland, and was one of the founders of the Free Church. His health was undermined by his great labors, and he died in 1847.

CHAMBERS, EPHRAIM, the first person in England who undertook a work in the form now known as a cyclopædia, or encyclopædia. His dictionary published in 1728, in two folio volumes, was the origin of what is now termed Rees' Cyclopædia. He was born about 1680, and died May 15th, 1740.

CHAMPE, JOHN, a native of Loudon county, Va. At the age of twenty-four, in the year 1776, he entered the Revolutionary army with the rank of sergeant-major, in Lee's cavalry. His reputation for resolution and address was such, that he was selected to attend the seizure of Arnold, that the execution of the traitor might save the life of Andre. His orders were given him, he left the American camp as a deserter, arrived at

New York after a perilous journey, and, after being closely examined by Sir Henry Clinton, was admitted to serve under him. He failed in the attempt to accomplish his object, and went to Virginia with the royal troops. Escaping, he rejoined his friends, after many hardships. When Washington took command of the army, during the administration of President Adams, it was his intention to bring Champe into the field at the head of a company, but he learned to his grief that the gallant fellow had died in Kentucky.

CHAMPLAIN, a lake of the United States, lying between New York and Vermont, 130 miles long, and from 1 to 15 miles broad. The river Chamby, or Sorelle, forms the outlet by which its waters are discharged into the St. Lawrence. The lake takes its name from Samuel de Champlain, a French naval officer who founded Quebec and Montreal in Canada, of which he was governor-general, in the seventeenth century. Of its waters, near Plattsburg, a naval engagement was fought the 11th of September, 1814, in which Macdonough, the commander of an American fleet, gained a complete victory over the British. [See PLATTSBURG.]

CHAMPOLLION, J. F., a French archæologist, who did more than any other man of science toward explaining the hieroglyphics of Egypt. His death in 1832, at the age of forty-one, in the midst of his triumphant researches, was regretted as an almost irreparable loss.

CHANNING, WILLIAM ELLERY, an eminent Unitarian divine, was a native of Newport, R. I., April 7th, 1780. He died in 1842.

CHANTREY, Sir FRANCIS, was born at Norton in Derbyshire, April 7th, 1781, and was apprenticed to a wood carver. His own force and talent raised him to good success among modern sculptors. He was knighted by the queen in 1837. He died Nov. 25th, 1841.

CHAPULTEPEC, a castle commanding one of the approaches to the city of Mexico. It was stormed by the American army, Sept. 12th, 1847, and two days after, Scott entered the city in triumph.

CHARLEMAGNE (a compound word signifying Charles the Great), King of France, Emperor of the West, was born in 742, at the chateau of Saltzburg, in Upper Bavaria.

He was the grandson of Charles Martel, and the son of Queen Bertrade and Pepin the Short, on the death of whom, in 768, he was crowned king, sharing France with Carloman, his younger brother; but the conditions of the partition were frequently changed without ever giving mutual satisfaction, and the nobles, who had long sought to weaken the royal authority, would without doubt have profited by the animosity which existed between these two princes, if the death of Carloman, which took place in 771, had not given Charlemagne an opportunity of becoming sole king of France by refusing to share the rule with his nephews. Their mother fled with them to Italy, and found a protector in Desiderius, King of the Lombards. They fell into the hands of Charlemagne, on the taking of Verona, and of their future fate, history says nothing. If Pepin had need of courage, activity, and extreme prudence to found a new dominion, Charlemagne found it necessary to enchain the minds of men by fear and admiration, for the means employed to effect usurpation had enfeebled the sovereign power.

The people of Aquitania were the first who tried to aim at independence. Charlemagne marched against them with a small force, but he relied upon Carloman, his brother, to whom a part of Aquitania belonged, and who in consequence was compelled to unite with him. Carloman found him at the appointed spot, at the head of his troops, but fearing to fall before the power of his brother, Carloman hastily retraced his steps. Abandoned thus unexpectedly, in a manner which could not fail to encourage the rebels, Charlemagne did not hesitate for a moment: without considering the number of his followers, or that of his enemies, he pursued his way, gained a brilliant victory (770), arranged the affairs of Aquitania with a promptitude and foresight which displayed the energy of a great man and the skill of a politician, and disconcerted the tributary princes of France, who thought to profit by the youth of the monarch. When Charlemagne found himself sole master of France, he formed the project of subjugating the Saxons. These people, who were still pagans, occupied a large portion of Germany; like all barbarous nations, they preferred plunder to fixed establish-

ments, and they were divided into many tribes, whom it was difficult to unite in the same interest. Charlemagne began to wage war upon them in 772, and did not complete their subjugation until 804; so obstinately did they resist, for thirty-two years, the conqueror, who, sometimes indulgent to imprudence, and often severe to cruelty, as eager to convert as to conquer them, was in reality master of their country only when he had reduced it to a desert. The two most celebrated chiefs of the Saxons were Witkind and Alboin, who finally embraced Christianity in 783. The cruelties of Charlemagne to the Saxons, resembled despair; and his indulgence to them proved that, pressed by other affairs, he was willing to make any concession which could bring him off with honor.

While he was fighting on the banks of the Weser, Pope Adrian implored his succors against Desiderius, King of the Lombards, who sought to possess himself of Ravenna, and urged the pope to crown the sons of Carloman, in order to display Charlemagne in the light of an usurper of the throne of his nephews, and thus stir up a large portion of France against him. Flying to the scene of action with the rapidity which the danger rendered necessary, Charlemagne seized the person of Desiderius, sent him to end his days in a monastery, and caused himself to be crowned King of Lombardy, in 774. Thus ended that kingdom, which shortly afterward took its ancient name of Italy, but preserved the laws it had received from the Lombards.

Charlemagne passed into Spain in 778, besieged and took Pampeluna, and made himself master of the country of Barcelona; but his troops, on their return, were defeated in the pass of Roncesvalles, by a part of the Saracens, and the mountain Gascons, the unruly tributaries of Charlemagne, who were so intractable, that more than thirty years afterward, strong forces were required to oppose them. At this battle fell the famous Roland, his nephew, whose fate has been celebrated by romance writers and poets. The disaffection of the inhabitants of Aquitania having induced Charlemagne to give them a separate monarch, he chose the youngest of his sons, well known as Louis the Mild,

778. At the same time the continual efforts of the Lombards and Greeks to reconquer Italy, and the want of fidelity in his nobles, made him feel the necessity of rallying them about the throne, and he gave them for a king, Pepin, the second of his sons; the eldest, who bore the name of Charles, remained with him to assist him in his expeditions. He had another son, Pepin, whose mother he had repudiated. This son, having been convicted of taking part in a conspiracy against him, was devoted to the monastic life.

On his return from Spain, Charlemagne found himself obliged to march against the Saxons, and each year renewed the necessity of a warlike expedition. He caused 4,500 of them to be put to death; a ferocious revenge which only served to prolong and invigorate their resistance. Thence he went to Rome to have his two sons, Pepin and Louis, crowned by the pope, thus confirming the people in the belief that the head of religion could alone render the royal power legitimate and sacred. The year 790, the twenty-seventh of his reign, was the first which he passed without taking up arms, and this peace lasted only until the spring of the following year. Charlemagne had formed the project of re-establishing the empire of the west. Irene, who reigned as empress at Constantinople, in order to prevent the dismemberment of the empire, proposed to Charlemagne to unite their children, which would have placed Europe under one government. Her proposal was accepted, but ambition impelled Irene to dethrone her son in order to seize the power herself, and she offered her hand to Charlemagne. This singular union, which ambition alone could suggest and carry into effect, would have presented a new spectacle to the world, had not the empress been hurled from her throne. Charlemagne was crowned emperor of the west, by Pope Leo III., in the year 800; and, although his journey to Rome had no other object, he affected to be much surprised at the honors which were heaped upon him. He was declared Cæsar and Augustus; the ornaments of the ancient Roman emperors were decreed to him; all the consecrated forms were followed; nothing was forgotten but the fact that it was impossible that an empire should subsist, the power of

which was shared by the children of the deceased monarch. Charlemagne, after having made one of his sons a monk, had the misfortune to lose, in 810, Pepin, whom he had created King of Italy; the year following Charles, the eldest, followed his brother to the grave; there only remained, of his legitimate children, Louis, King of Aquitania, whom he associated with him in the empire in 813, his great age and his infirmities making him feel that he was approaching the termination of his career. He died the 28th of January, 814, in the seventy-first year of his age, and the forty-seventh of his reign. By his will, made in 806, confirmed by the French lords assembled at Thionville, and signed by Pope Leo, Charlemagne divided his estates among his three sons. He left his subjects the power of choosing a successor, after the death of the princes, provided he was of the blood royal. He provided that they should not have recourse to the trial by battle, in the case of dispute, but to that of the cross. This judgment consisted, in doubtful circumstances, in conducting to the church two men, who stood upright with their elevated arms crossed, during the celebration of divine service, and the victory was gained by the party whose champion remained motionless the longest.

Charlemagne was buried at Aix-la-Chapelle. His body is said to have been disposed in the following manner. He was seated upon a throne of gold, clad in his imperial habits. He had a crown upon his head, and was girt with his sword. He held a chalice in his hand, the book of the Evangelists upon his knees, his sceptre and gold buckler at his feet. The sepulchre was filled with pieces of gold, perfumed and sealed, and above, a superb triumphal arch was raised, with this epitaph: "Here rests the body of Charles, the great and orthodox emperor, who gloriously enlarged the kingdom of the French, and governed it happily for forty-seven years." Charlemagne was a friend of letters and of learned men. He was marked by his plainness and frugality of costume. He was the tallest and the strongest man of his time. Force he used to conquer, but he instituted wholesome laws to govern.

CHARLES I. and II., of England. [See STUART, HOUSE OF.]

CHARLES GUSTAVUS, son of John Casimir, Count Palatine of the Rhine, ascended the throne of Sweden on the abdication of his cousin Christina in 1654. He obtained over the Poles the famous victory of Warsaw, besides taking a number of important places. The Poles, calling to their assistance Muscovy, England, and Denmark, obliged Sweden to conclude a peace; but the war breaking out again, Charles took Cronenburgh, and laid seige to Copenhagen; his navy having been

defeated, he was obliged to return home, and died in 1660.

CHARLES XI of Sweden, son of the preceding, was born in 1655. On his accession a peace was concluded with Denmark, but in 1674, in the war with that power, he lost several places, which were restored at the peace of Nimeguen. He married the sister of the King of Denmark, and died in 1697. In his reign the arts and sciences began to flourish in Sweden.

CHARLES THE TWELFTH.

CHARLES XII. of Sweden, son and successor of the preceding, was born in 1682. He came to the throne at the age of fifteen, and at his coronation snatched the crown from the hands of the Archbishop of Upsal, and placed it on his own head. He was well educated, and very fond of bodily exercises. The commencement of his reign gave no splendid proof of genius or talent. On the formation of a confederacy against him by Russia, Denmark, and Poland, he seemed to arouse from his slumber. He gave the casting voice in the council for the most vigorous measures, and immediately prepared to carry them into effect. He renounced at once even limited enjoyments, and bent all his energies to support the character he had marked out for himself. Of the confederated powers, he attacked each in turn, beginning with Denmark, which produced a peace with that power. Nov. 30th, 1700, he obtained a brilliant victory over the Russians at Narva;

although his force consisted of only 8,000 men, he attacked them in their intrenchments, slew 30,000 and took 20,000 prisoners. His next enterprise was against Poland, and after several battles he dethroned Augustus, and placed Stanislaus upon the throne. He returned to the invasion of Russia, and obtained some signal advantages over Peter the Great, but at length experienced a terrible defeat at Pultowa, July 8th, 1709. Almost all his troops were either slain or taken prisoners; he himself was wounded in the leg, and carried off on a litter. Charles sought an asylum in Turkey, where he was hospitably received by the grand seignior, who provided for him a residence at Bender. He availed himself of his asylum to persuade the grand seignior to enter into a war with Russia, and employed much money, much time, and many menaces to induce it. His conduct was at length so violent, that he was ordered to leave the Turkish territories. He refused to obey.

The sultan directed that he should be forced away; but Charles, with his retinue, resisted the attack of the janizaries, till superiority of numbers obliged him to take shelter in his house, which he defended with great spirit, and did not yield till the premises were in flames. He then sallied out, sword in hand, but being entangled by his long spurs, he fell and was taken prisoner. After having been confined as a prisoner six months, he finally set out on his return to his own dominions. In 1716, he invaded Norway, but after penetrating to Christiana, was obliged to return to Sweden. He resumed the attack in the winter of 1718, but was killed by a cannon-shot at the siege of Frederickshall, Dec. 11th, aged thirty-six years, having reigned twenty-one. Charles was liberal, active, and firm, but rash, obstinate, and cruel. At the battle of Narva, he had several horses shot under him, and as he was mounting upon a fresh one, he said, "These people find me exercise." When he was besieged at Stralsund, a bomb fell into the house while he was dictating to his secretary, who immediately dropped his pen, and started up in a fright. "What is the matter?" said the king, calmly. "The bomb! the bomb! sire," said the agitated secretary. "Well, sir," resumed Charles, "what has the bomb to do with what I was dictating to you? Go on." When struck by the ball that caused his death, he instinctively grasped his sword-hilt, as if seeking for revenge. Charles was exceedingly temperate, abjuring wine, and living frequently upon the coarsest bread. No woman ever exerted any influence over him. His dress consisted of an old cloak, a blue coat with brass buttons, a plain waistcoat and breeches of leather, high boots with spurs, and long leather gloves. His wild career of war gained him the name of 'the madman of the north.'

CHARLES I, King of Sicily and Naples, born in 1220, was the son of Louis VIII. of France. Having married the daughter of the Count of Provence, he thereby became his successor, and added to his dominions the counties of Anjou and Maine. He was taken prisoner with his brother Louis, in Egypt, in 1248. On his return he defeated Manfred, the usurper of the Sicilian crown, and assumed the title of King of Naples. He

also defeated his rival, Conradin, Duke of Suabia, and took him and the Duke of Austria prisoners. Charles brought infamy on his name, by causing his royal captives to be put to death, at Naples, on a public scaffold. After this he laid Tunis under tribute, and quelled the Ghibellines. In 1276, he gained the title of King of Jerusalem, and meditated an expedition against Constantinople. But his arbitrary conduct occasioned a general insurrection in Sicily, where 8,000 of the French were massacred on Easter Monday, 1282. This massacre is known by the name of the "Sicilian vespers," the bell for evening prayers being the signal of revolt. The Sicilians chose Peter of Arragon for their king. Charles died in 1285.

CHARLES MARTEL, son of Pepin Heristel, and mayor of the palace under Chilperic and Thierry IV., kings of France. He gained many victories, the principal of which was over the Saracen general, Abdahralman, in 732. On the death of Thierry, in 737, no successor was appointed, and Charles conducted the government. He died in 741, and left his dominions between his sons Carloman and Pepin; the latter of whom became the first king of the Carlovingian race, which name was taken from the founder, Charles Martel.

CHARLES IV., Emperor of Germany, was the son of John of Luxemburg, and grandson of the Emperor Henry VII. He ascended the throne in 1347. In his reign the golden bull was given at the diet of Nuremberg, 1356, which established the Germanic constitution. Charles died in 1378. He was a learned man and a great patron of letters.

CHARLES V., Emperor of Germany, and King of Spain (in the latter capacity, Charles I.), was born at Ghent, in 1500. He succeeded to the kingdom of Spain in 1516, and to the empire on the death of Maximilian in 1519. Francis I. of France disputed with him the latter title, and their rivalry occasioned a violent war in 1521. Charles was joined by Henry VIII. of England, and after several important actions, took Francis prisoner at the battle of Pavia. A peace having been concluded in 1529, Charles turned his arms against Africa, where he defeated Barbarossa, entered Tunis, and re-established

Muley Hassan on the throne. Soon after this he renewed hostilities against France, ravaging Champagne and Picardy, till he was at length obliged to retire, and peace was restored in 1538. In 1541 he attempted the conquest of Algiers, but his fleet was dispersed by a storm, and the emperor was obliged to return in disgrace. He again leagued with England against France, but Fortune was not so favorable to him as she had formerly been, and he was glad to enter into a treaty in 1545. The Protestant princes of Germany confederated against him, and obtained liberty of conscience for those of their religion. In 1556, he resigned the crown to his son Philip, and retired into a monastery in Estremadura, where he passed the remainder of his days in religious exercises, mechanical pursuits, and gardening. He died in 1558. He encouraged artists, and once picked up a pencil which Titian had dropped, and presented it to him, saying, that Titian was worthy of being served by an emperor.

CHARLES THE BOLD, Duke of Burgundy, the son of Philip the Good, was born in 1433. There were constant wars between him and Louis XI. of France, who instigated Charles's subjects, the Liegeois, to revolt against him. Charles seized on Guelderland and Zutphen, and afterward invaded Switzerland, but his army was put to rout and his baggage taken by the Swiss. He collected another army, but was again defeated, and slain while besieging Nancy, in 1477. As he was that day putting on his helmet, the golden lion which formed the crest, fell to the ground, and he exclaimed, "*Ecce magnum signum Dei!*" (Behold the great sign of God!)

CHARLES IX., of France, son of Henry II., and Catharine de Medici, was born in 1550, and succeeded to the throne in 1560; his mother conducted the government; but she so abused her trust that the Huguenots revolted, and a civil war ensued, in which the insurgents were unsuccessful. The massacre of St. Bartholomew's ensued. It is said that Charles repented of this horrid crime on his death-bed, in 1574.

CHARLES X. of France and Navarre, ascended the throne which had been filled by his brothers, the unfortunate Louis XVI. and Louis XVIII., in September, 1824. He bore

for some time the title of Count of Artois, and afterward that of Monsieur. He was fond of expensive pleasures, and distinguished for his mild manners. Charles was crowned at Rheims, being anointed with the holy oil, which it was absurdly pretended had been brought from heaven by a dove. He swore to maintain the charter, but he had not been long seated on the throne, before he began to play those fantastic tricks which seem to belong peculiarly to the province of legitimacy. The press, that vast moral engine at which tyrants tremble, became obnoxious to the monarch, and a censorship was established in 1827. The king showed himself rather favorably disposed to the Greeks, which produced him a temporary popularity. The ministry of Prince Polignac, however, caused great indignation, on account of the arbitrary tone of the measures adopted; and the unwarrantable prosecution of the liberal press hastened the revolution of 1830, when the Parisians overcame the royal troops, and the French legislature exiled Charles X., imprisoned the ministers for life, and seated Louis Philippe on the throne. Charles was born Oct. 9th, 1757. He died at Gratz in Hungary, Nov. 6th, 1836.

CHARLES EMMANUEL I., Duke of Savoy, surnamed the Great, was born in 1562. Though of a weak constitution, he was of an enterprising spirit, and, taking advantage of the internal commotions of France in the reign of Henry III., he seized part of Dauphiny and Provence; and on the death of that monarch, he aspired to the crown, but was disappointed. A war broke out, and the French troops took possession of part of Savoy. By the mediation of the pope, however, peace was concluded. The duke made a treacherous attempt to seize Geneva, but his troops were repulsed, and the prisoners that were taken were hung up by the Genevans as robbers. On the death of Francis, Duke of Mantua, in 1613, this restless prince laid claim to the succession, but was obliged to relinquish it. The French persuaded him to turn his arms against Genoa, and he gained some advantages, but the interference of Spain effected a peace. He aspired to the imperial crown, and made an attempt on the duchy of Montserrat, which involved him in a war with France and Spain. He died in 1630, it is supposed of grief for the loss of Pignerol.

CHARLESTON, a city and seaport of South Carolina, had in 1860, 40,578 inhabitants, being about 2,400 less than in 1850. It is the natural commercial emporium of South Carolina, and of much of North Carolina and Georgia also. It stands at the head of a bay on the point between the mouths of Cooper and Ashley rivers, seven miles from the sea. It has long been a wealthy commercial city. Fort Moultrie, on Sullivan's Island, was assaulted June 28, 1776, by sea and land by the British, who were severely defeated. May 12, 1780, Gen. Lincoln with his army of over 5,000 men capitulated to Sir Henry Clinton after a month's siege. The British evacuated the place Apr. 14, 1783. Charleston was a principal center of the secession movement, and the scene of the first rebel hostilities against the United States, by the bombardment of Fort Sumter, April 12, 1861, resulting in its surrender to the rebels the next day. Soon after the harbor was blockaded, and sea and land forces were kept actively employed against the place during the whole of the war. It was not however taken until Sherman's north-

ward march caused its evacuation April 18, 1865, when the Union troops entered it. About a third of it had been destroyed.

CHARLOTTE AUGUSTA, daughter of Queen Caroline and George IV. of England, a beautiful, amiable, and accomplished lady, became, at the age of twenty, the wife of Prince Leopold of Coburg (afterward King of Belgium), May 2d, 1816. Nov. 5th, 1817, the unfortunate princess, in becoming the mother of a child that did not survive her, lost her life. The physician who had attended her, shot himself. The princess was beloved by the English nation, and her death deeply lamented.

CHARON, in mythology, the son of Erebus and Nox. He was the ferryman of hell, being supposed to carry the dead across the waves of Acheron, Cocytus, and the Styx, receiving an obolus in pay. This coin was placed in the mouth of the dead, as, without it, it was thought that the deceased would be condemned to long and restless wanderings on the dreary banks of Acheron. Charon was represented as an old man, of a forbidding aspect, dressed in rags.

THE CHARTER OAK.

CHARTER OAK, a stately tree in a cavity of whose trunk the royal charter of Connecticut was hidden by Capt. Wadsworth, when demanded by Andross, Oct. 31st, 1687. The story is that the debate of the assembly upon obeying Sir Edmund's demand was prolonged until evening; when suddenly the lights were

extinguished, the parchment snatched from the table, and borne off to its hiding-place. This oak was an ancient forest-monarch at the first settlement of Hartford. The cavity in which the charter was put gradually closed, but in time the heart of the tree rotted away, leaving a larger opening. Before dawn, Aug.

CHA

21st, 1856, the revered tree was prostrated by the wind, and only a ragged stump left standing. With a touch of sentiment strange for this prosaic age, the bells of the city were knelled for an hour at twilight.

CHARYBDIS, the rapacious daughter of Neptune and Terra, whom Jupiter changed into a whirlpool. The whirlpool whose origin was thus related in mythology, was on the coast of Sicily, opposite the formidable rock called Scylla on the Italian shore. It was very dangerous to mariners, and proved fatal to part of the fleet of Ulysses. No whirlpool is now found that corresponds to the description of the ancients. The words, *Incidit in Scyllam qui cult vitare Charybdim*, became proverbial, to show that in our eagerness to avoid an evil we often fall into a greater.

CHASE, SAMUEL, a signer of the Declaration of Independence, was born in Somerset county, Maryland, April 17th, 1841. His father was an Episcopal missionary and personally superintended his education. Having acquired eminence and popularity as a lawyer in Annapolis, and by his resistance to the stamp act, he was elected to the continental Congress in 1774, and in 1776 undertook a mission to Canada to excite opposition to the mother country. He was a delegate to Congress, 1774-78 and 1784-85. In 1783, he went to England as agent of the state of Maryland to recover property intrusted to the Bank of England, and while there formed the acquaintance of Pitt, Fox, and Burke. In 1791, he was made chief-justice of the general court of Maryland. Washington appointed him associate justice of the supreme court of the United States, vice John Blair of Virginia, who had resigned. He was impeached by the house of representatives in 1804, for alleged misdemeanors in political trials, but acquitted in his trial before the senate, which, after long attracting public attention, ended March 5th, 1804. He died at the age of seventy, June 19th, 1811. He was a man of integrity, boldness, and decision. While on the bench in Maryland, in 1794, nobody being willing to assist in the arrest of the ringleaders in a riot, "Summon me," cried Judge Chase; "I'll be the *posse comitatus*;" and he was as good as his word.

CHATEAUBRIAND, FRANCOIS AUGUSTE, Vicomte de, was born in Brittany of an an-

cient family, in 1769. During the terrors of the French revolution, he resided chiefly in England, paying, however, a visit to the United States, and roaming into the backwoods. When Bonaparte had restored order he returned to France, and in 1802 gained great fame by his "Genius of Christianity." In 1806 he set out on those oriental journeyings recorded in his "Itinerary from Paris to Jerusalem." Under the Bourbons he took part in public life and honors. These he abandoned when Louis Philippe was crowned, occupying himself thenceforth in literary labors, and dying in 1848.

CHATHAM, WILLIAM PITT, Earl of, was the son of Robert Pitt, Esq., of Boconock, in Cornwall, and born Nov. 15th, 1708. On quitting the university at Oxford he went into the army as cornet, but soon left the military life, and, in 1735, obtained a seat in parliament for Old Sarum. His eloquence was first displayed on the Spanish convention, in 1738, and, in a short time, Sir Robert Walpole found him the most powerful opponent he had ever encountered. The dowager Duchess of Marlborough left Mr. Pitt a legacy of £10,000 for his conduct at this period. In 1746, he was made vice treasurer of Ireland, and the same year paymaster-general of the army. In 1755, he resigned his places; but the year following, he was appointed secretary of state for the southern department. In this post, however, he did not remain long, on account of some difference with the king; but such was his popularity, that his majesty found it necessary to recall him. In 1757, he became prime minister, in which situation he gave a new turn to affairs, and by the vigor of his measures, subverted the power of France in Europe, Asia, and America. In the midst of his glory, George II. died, and Mr. Pitt resigned the helm to Lord Bute; when his lady was created a peeress, and he himself rewarded with a pension. His acceptance of a coronet in 1766, when he returned to the ministry, hurt his popularity, for the people had loved to call him 'the great commoner.' The witty Lord Chesterfield called it a "fall up-stairs," and said, "Everybody is puzzled to account for this step. Such an event was, I believe, never heard or read of, to withdraw, in the fullness of his power and in the utmost gratification of his ambition, from the House of

Commons (which procured him his power, and which could alone insure it to him), and to go into that *hospital of incurables*, the House of Lords, is a measure so unaccountable, that nothing but proof positive could make me believe it; but so it is." Mr. Pitt took the title of Earl of Chatham, and the sinecure office of the privy seal in the new cabinet, which place he resigned two or three years afterward. During the war of our revolution, he opposed the ministers, and their scheme of taxation; and in a speech on the subject of the independence of the colonies, April 7th, 1778, he exerted himself so energetically, as to fall exhausted into the arms of those around him. He died on the 11th of the following month. A public funeral and monument were voted by parliament; an annuity of £4,000 was annexed to the earldom of Chatham, and his debts were discharged.

CHATTERTON, THOMAS, a youth whose precocious talents and sad fate have excited great interest, was born at Bristol, in 1752, of poor parents. In his twelfth year he wrote a poem of some merit, and at the age of sixteen successfully imitated the style of antique English writers, and introduced to the world as works of great antiquity, the fruits of his own mind. The reception he met with in London, led him to form extravagant hopes, which were, however, never realized, for the wretchedness of his situation induced him to commit suicide by poison at the age of eighteen in 1770. The poems which he wrote at fifteen he ascribed to a monk of the fifteenth century, named Thomas Rowley. For precocious talent this marvellous boy is without a peer in English literature.

CHAUCCER, GEOFFREY, the father of English poetry, was born in London, in 1328. He was high in favor with Edward III., and married Philippa, the sister of Lady Catharine Swynford, afterward the wife of John of Gaunt. This prince was Chaucer's steady patron. He filled several responsible offices, and was sent abroad as ambassador. His fortunes varied with those of the party to which he was attached, but he finally lived in pleasant retirement at Woodstock, and completed the "Canterbury Tales." He owned a house in London, in the garden of the convent of Westminster, where the chapel of Henry

VII. now stands. Here he died, Oct. 25th, 1400, and was interred in the neighboring abbey, the first of the illustrious line of poets whose ashes have there been laid to rest.

CHAUNCEY, CHARLES, was the grandson of the erudite and excellent president of Harvard University, where he was educated. He was born Jan. 1st, 1705, and was ordained pastor of the first church in Boston, in 1727. He died in his eighty-third year, Feb. 10th, 1787. His learning, independence, and patriotism were constantly and clearly displayed. The works which he has left behind bear incontrovertible proof of his talents. He was the particular friend of Dr. Cooper of Boston, and an anecdote which regards the two gentlemen, is worthy of preservation. It must be kept in mind that Dr. Chauncey was habitually absent, like many literary men, and that Dr. Cooper was famous for inviting brother clergymen to officiate for him; so much so, that it was currently reported that he used to walk out upon Boston neck every Saturday afternoon, and invite the first gentleman with a black coat whom he saw coming into town, to preach for him. A negro servant of Dr. Chauncey was in want of a coat, but as he had high ideas of his own importance, he wished, if possible, to obtain a new garment, instead of being habited in the dark, discarded vestments of his worthy master. After having, one morning, brought the usual supply of wood into Dr. Chauncey's study, he remained standing, and the doctor, although rather busy, was not long in noticing him.

"Well, Sambo, what do you want?"

"Want a coat, sar. De old one so patched to pieces, I 'fraid to go nowheres."

"Very well, Sambo, go to Mrs. Chauncey, and tell her to give you one of mine."

The doctor resumed his studies, but Sambo retained his position. His master observing him a second time, but forgetting what had just passed between them, again asked, "What do you want, Sambo?"

"O! just a coat, sar. Old coat full of holes."

"Very well; go to Mrs. Chauncey, and she will give you one of mine."

A second time the doctor resumed his book, but finding the black still stationary, he began to recall what had passed, and exclaimed,

CHA

with some asperity, "Well, sir, why don't you go?"

"'Cause I 'fraid, Massa Chauncy."

"Afraid? of what?"

"Why, sar, I 'fraid to wear a black coat, 'cause—no—no—it won't do—I can't tell you, sar."

"I insist upon it."

"Well, then, if I must—sir, 'fraid, 'cause—oh no! massa, you'll be so angry."

"I wish I had my cane here!" exclaimed the doctor.

Sambo, finding, from his impatient glance at the tongs, that there was a possibility of seizing a substitute, cried out, "Oh! sar! nebber mind dé cane, I'll tell you why I 'fraid to wear one of your coats—I 'fraid if I had annoder black coat—that Dr. Cooper will ask me to preach for him!"

The doctor burst into laughter. "Go, go, Sambo, and ask Mrs. Chauncy to buy a coat of whatever color you fancy!"

Sambo hastened off, grinning with delight, to get a scarlet coat, and Dr. Chauncy ran to Dr. Cooper to tell him of the whole affair.

CHEMISTRY was introduced into Europe, about 1150, by the Spanish Moors, who had learned it and distillation from the African Moors, and these from the Egyptians. In Egypt, they had, in very early ages, extracted salts from their bases, separated oils, and prepared vinegar and wine; and embalming was a kind of chemical process. The Chinese also claim an early acquaintance with chemistry. The first chemical students in Europe were the alchemists; but chemistry could not be said to exist as a science till the seventeenth century; during which its study was promoted by the writings of Bacon, and the researches of Hooke, Mayow and Boyle. In the early part of the eighteenth century, Dr. Stephen Hales laid the foundation of pneumatic chemistry, and Boerhaave combined the study of chemistry with medicine. These were succeeded by Black, Bergman, Stahl, &c. In 1772, Priestley published his researches on air, and then commenced a new era. He was ably seconded by Lavoisier, Cavendish, Scheele, Chaptal, &c. The nineteenth century opened with the brilliant discoveries of Davy, continued by Dalton, Faraday, Thomson, &c. Organic chemistry has been very greatly advanced by the labors

of Berzelius, Liebig, Dumas, Laurent, Hofmann, &c., during the last thirty years.

CHERBOURG, a French seaport on the Channel, containing 24,212 inhabitants. In 1418, it was taken by Henry V. of England, and near it took place the famous naval battle of La Hogue, between the French and English, May 19th, 1692. Cherbourg is remarkable for its vast breakwater, and its extensive basin and docks, constructed by the French government.

CHESTERFIELD, PHILIP DORMER STANHOPE, fourth Earl of, born in London, in 1694. After studying in his youth with assiduity, at Cambridge and Leyden, he entered public life in 1715, soon after the accession of George I. He distinguished himself in the lower house of parliament as a brilliant and effective debater, which reputation he sustained in the House of Lords, after the death of his father. Till 1748, when deafness compelled him to retire, he took an active part in public life. He displayed great diplomatic skill in two foreign embassies, and his lord-lieutenancy in Ireland, in 1745, though lasting only a few months, has been always mentioned with high praise. After a sickly and melancholy old age, he died March 24th, 1773. The only writings of this accomplished personage that are at all remembered, are his "Letters" to his natural son, remarkable for their ease of style and their worldly knowledge, but deficient in the loftier points of morality. They were not intended for publication. The character of Lord Chesterfield has been much misrepresented and misunderstood. He was unequalled in his time for the solidity and variety of his attainments, for the brilliancy of his wit, for the graces of his conversation, and for the polish of his style. His embassy to Holland marked his skill, his dexterity, and his address as an able negotiator; and his administration of Ireland indicated his integrity, his vigilance, and his sound policy as a statesman and a politician. In the House of Lords his speeches were more admired and extolled than any others of the day. Horace Walpole had heard his own father, had heard Pitt, Pulteney, Wyndham, and Carteret; yet in 1743, he declared that the finest speech he had ever listened to was one from Chesterfield. Dr. Johnson called him a lord among wits,

and a wit among lords. When Lord Chesterfield arrived in Ireland, all the Catholic places of worship were closed. A Mr. Fitzgerald saying mass in the obscure garret of a condemned house, an immense crowd had assembled, and the floor giving way, the officiating priest, with many of his flock, were buried in the ruins, and the greater number were maimed and wounded. Lord Chesterfield, horror struck at the event, ordered that all the chapels in the capital should be opened. A zealous Protestant thinking to pay his court to the lord lieutenant, came to inform him that one of his coachmen was a Roman Catholic, and went privately to mass. "Does he, indeed?" said his lordship; "then I shall take care that he never drives me there!" The Bishop of Waterford related that the vice-treasurer, Mr. Gardiner, a man of good character and considerable fortune, waited upon Lord Chesterfield one morning, and in a great fright told him that he was assured upon good authority that the people in the province of Connaught were actually rising; upon which the viceroy looked at his watch, and with great composure answered him, "It is nine o'clock and time for them to rise; I believe, therefore, that your news is true." Lord Chesterfield preserved a Catholic population in the most perfect peace and obedience, during the whole of that rebellion which in Episcopal England and Presbyterian Scotland, had nearly restored the Stuarts to the throne they had forfeited by their blind and bigoted attachment to papal institutions.

CHILI, a republic on the western shore of South America, which has an area of 180,000 square miles. The eastern part of Chili is mountainous, and many volcanic summits here elevate themselves from the lofty chain of the Andes. Innumerable small and rapid rivers irrigate the rich soil, and the climate is remarkable for its healthiness. The mineral and vegetable productions are valuable and abundant. Exclusive of the independent Indians, the population has been estimated at 1,200,000. The Roman Catholic is the established religion.

Pedro de Valdivia who was sent thither by Pizarro, overcame the opposition of the aborigines, and founded several cities in the north and south, but the Araucanians defeated the Spaniards, and having taken their

leader prisoner, put him to death. It was many years before the Spaniards were permitted by the Indians and Dutch to enjoy quiet possession of Chili. In 1809, a revolutionary movement took place, and the party which espoused the cause of independence was at first successful; but in 1814 nearly the whole country was subdued by a Spanish army from Peru. Chili remained under the control of the royalists until 1817, when General San Martin, with a body of troops from Buenos Ayres, entered the country, and being joined by the people generally, defeated the royalists in several engagements. The independence of the country was finally achieved at the battle of Maypu, April 5th, 1817. The government has since experienced many changes, but Chili has been perhaps less disturbed than any of its sister republics.

Santiago, the capital of the republic, has 50,000 inhabitants. Valparaiso, the principal port and centre of commerce, has 30,000. The southern part of Chili is inhabited by the Araucanians, a powerful aboriginal nation over whom the republic has only a nominal authority. They maintained their independence through many contests with the Spaniards. They subsist by cultivating the land and raising cattle. A Toqui (hereditary noble) is at the head of government, and he strictly maintained the neutrality of his people during the South American struggle for independence. Among the many interesting customs of this people, we may mention that they amuse themselves with a species of chess and backgammon, both of which they knew previous to the arrival of the Spaniards.

CHILLINGWORTH, WILLIAM, a celebrated English divine and Protestant polemic. He was born at Oxford, 1602, and died in 1644, having been appointed chancellor of Salisbury, in July, 1638.

CHILTERN HUNDREDS, a phrase often encountered in English political history. It is an estate of the crown in Buckinghamshire, the stewardship whereof is a nominal office, conferred on members of parliament when they wish to vacate their seats; for by accepting an office under the crown, a member becomes disqualified, unless he be again returned by his constituents. This custom has existed time immemorial.

CHINESE LADY OF RANK.

CHINA is a vast country of Asia, bounded on the north by Chinese Tartary, from which the famous Chinese wall separates it; on the east by the Eastern Sea; on the south by the Chinese Sea and Further India; and on the west by an extensive and sandy desert, and long ridges of mountains, which divide it from Western Tartary and Thibet.

Inclusive of the tributary countries, and those states which have voluntarily placed themselves under the protection of China, the population is estimated at 353,000,000 inhabitants, which are scattered over a surface of about 5,250,000 square miles. The subjected countries are Manchouria, Mongolia, and Tourfan; the protected ones, Thibet, Bootan, Corea, and Loo-choo. China Proper is divided into eighteen provinces. The Yang-tse-kiang and the Hoang-Ho, or Yellow River, are the two principal rivers of

China. The former is more than 3,000 miles long, the latter about 2,500. The face of the country is greatly diversified; the northern and western parts being the most broken.

A distinguishing feature of the climate is the unusual excess in which heat and cold prevail in some parts of the empire at opposite seasons of the year; as well as the low average of the thermometer in comparison with the latitude. The soil is diligently tilled, rice being the prevalent crop. But the production of most importance to 'outside barbarians,' is tea, which is the universal beverage throughout China, while enough is grown to supply other countries with a hundred million pounds each year.

The commerce is very extensive; the principal articles of export being tea, silk, nan-kins, porcelain, and the valuable vegetable productions of the east. The imperial canal

and the Chinese wall are monuments of Chinese skill and industry. The religion of China is Buddhism, or the religion of Fo. The language of the Chinese is peculiar, its characters being symbols of ideas, instead of sounds. The Chinese are, to a certain degree, well educated, but revengeful, timid, vain, and deceitful. Polygamy is permitted, and the condition of females wretched in the extreme. Poor parents are permitted to drown their female children, and this is done without remorse.

The Chinese is, on the whole, by far the best native government of Asia. It is better, far, than any of the Mohammedan despotisms; it is better than any government that the Hindoos ever possessed, and it is far preferable to the theocracies of the Birmans, Siamese, and other Chinese nations. The absence of a powerful and influential priesthood, and of an hereditary and privileged aristocracy, as well as of petty principalities with delegated and hereditary authority, may be stated as among the leading causes of the prosperity of the Chinese empire.

The government of China is patriarchal; the emperor has the title of "Holy Son of Heaven, sole Governor of the earth, and Great Father of his people." But it is patriarchal on the largest scale of which there is any record, for the family consists of more than three hundred million members. China may be considered as a huge school-house, the master having the birch constantly in his hand, frequently using it, and delegating his authority to thousands of ushers, who are equally liberal in its application. But the rod, although the chief, is not the only instrument of government. There is the *canque*, or wooden ruff, a kind of portable stocks or pillory, very convenient to the executors of the law, but exceedingly inconvenient to the wearer, who can neither sleep nor lie down for it. Then there is imprisonment in cages; furthermore decapitation, not however very frequent; and in extreme cases their crucifixion, or as it is technically called, the death by painful and slow means. The grand panacea, however, after all, is the rod. The general application of this vigorous instrument of administration, is by no means confined to China, but embraces the other countries of the east, from Japan to Bengal, including nearly one-

third the human race. There the rod, under its various appellations of bamboo, cane, cudgel, or birch, is actively at work from morning till night, and afterward from night till morning. The grand patriarch canes his first ministers; the prime minister canes his secretary of state; the secretaries of state admonish the lords of the treasury, by belaboring their backs; these enforce their orders to the first lord of the admiralty by applying what is equal to the cat o' nine tails. Generals cane field-officers, and field-officers the captains and subalterns. Of course the common soldiers of the celestial empire are caned by everybody. The husbands cane their wives, and the wives cane their children. The Chinese and their neighbors may be truly described as well-flogged nations.

Whatever may be the actual antiquity of the Chinese nation, no doubt seems now to exist that they very early knew the art of printing, the composition of gunpowder, and the properties of the magnetic compass, which have been considered by European nations three of the most important discoveries of modern times. To these may be added two very remarkable manufactures, of which they were unquestionably the first inventors, and in which they yet excel, those of silk and porcelain. Their mode of printing differs from ours, but its effect in multiplying and cheapening books is the same, and it was practiced by them as far back as the tenth century. Gunpowder they did not use in fire-arms, but for fireworks, of which they are extremely fond, and with which they have amused themselves from a very remote date.

The empire is very ancient, and is said by the Chinese to have existed forty-one thousand years before the Christian era. We give a list of the dynasties which have sat upon the throne in more modern times.

The Hia dynasty, 2207 to 1767 B.C.

The Shang dynasty, 1767 to 1122 B.C.

The Chow dynasty, 1122 to 256 B.C.

The Tsin dynasty, 256 to 257 B.C.

The Hiang dynasty, 207 B.C. to 220 A.D.

From 220 to 280, China was divided into three kingdoms, the Shohang dynasty, 220 to 263; that of the Goei in the north, 220 to 265, and that of the El in the south, 220 to 280.

GREAT WALL OF CHINA.

The Tsin dynasty, 265 to 420.
 The U-ta dynasties, 420 to 589.
 The Sui dynasty, 589 to 617.
 The Tang dynasty, 617 to 907.
 The Hehu-u-ta dynasty, 907 to 960.
 The Song dynasty, 960 to 1279.
 The Mogul Khans, 1279 to 1368.
 The Ming dynasty 1368 to 1644.
 The Ta-tsing dynasty :
 Shun-tchi, 1644 to 1669.
 Kang-hi, 1669 to 1693.
 Yong-tching, 1693 to 1736.
 Kien-long, 1736 to 1796.
 Kia-king, 1796 to 1821.
 Taou-kwang, 1821 to 1850.
 Sze-hing, or Yih-Chu, 1850.
 With the Chow dynasty, during whose

reign Confucius lived, authentic history may be said to commence.

During the reign of Ching the first emperor of the fourth dynasty, B.C. 256, the great wall was built. Elated with his own exploits, he formed the design of making posterity believe that he was the first emperor that filled the Chinese throne, and for this purpose ordered all the historical books, which contained the fundamental records and laws of the ancient governments, to be burned, and four hundred of the learned to be put to death, for having attempted to save some of the proscribed volumes.

In the thirteenth century the Chinese called in the aid of the Mongols to beat off the eastern Tartars. These fierce allies soon subdued

not only the Tartars, but the people whom they came to defend, and seized the mastery. Kublai Khan (he who 'in Xanadu a stately pleasure dome decreed') was a monarch of eminent talents, and endeared himself to the Chinese by his equity and virtues. In less than a century his successors so degenerated that the Chinese regained the ascendancy. Some of the expelled Mongols found refuge among the Tartars, and from these united strains came the race known as the Manchous, who in 1644 expelled the last Chinese dynasty, and founded a permanent Tartar dominion, which is yet in power.

When China was sundered into two or three states, the northern portion was called by the neighboring nations Cathay, under which name it became known to the Russians and Mongols; whilst the inhabitants of India called the southern part Chin, under which name the Portuguese and other Europeans became acquainted with it. Not till the seventeenth century was it discovered that Cathay was China.

The Chinese are passionately addicted to the use of opium. The government formerly prohibited its importation, and in attempts to enforce this restriction came in collision with the British, whose merchants were largely engaged in the contraband traffic. Hostilities commenced in 1839, and continued till Aug. 29th, 1842. By the treaty of peace, the Chinese were to pay \$21,000,000; the ports of Canton, Amoy, Foo-choo-foo, Ning-po, and Shanghai were thrown open to the British; and the island of Hong-kong was ceded to the British crown; a great inroad being thus made upon the exclusiveness which the Chinese had so rigorously observed.

As to the insurrection that broke out in 1851, conflicting accounts are given. The insurgents gained ground steadily, capturing the important cities of Nanking, Amoy, Shanghai, and besieged Canton; but victory afterward passed to the imperialists, and many of the towns held by the rebels were retaken. The following is one version of the nature of this outbreak. Taou-Kwang, the last emperor, during the latter years of his reign became somewhat liberal in his views, and favored the introduction of European arts. His son and successor, a rash and narrow-minded prince,

quickly forsook this wise policy and adopted reactionary measures. An insurrection broke out in consequence, in the southern province of Quang-si, August, 1850, which quickly became of alarming importance. At first the insurgents proposed only to expel the Tartar dynasty. In March, 1851, a leader arose among them, first by the name of Tien-teh, 'celestial virtue,' but afterward assuming other names. He is said to be a native of Quang-si, of obscure origin, who obtained some education at Canton, and also became acquainted with the principles of Christianity from a native convert, and from the missionary Roberts. He announced himself as the restorer of the worship of the true God, Shang-ti, and had derived many of his dogmas from the Scriptures. He declared himself to be the monarch of all beneath the sky, the true lord of China (and thus of all the world), the brother of Jesus, and the second son of God, and demanded universal submission.

In addition to the dangers thus besetting the peace of China, new disturbances with England broke out in 1857, and a war commenced, but the attention of the British was diverted by the serious crisis in India.

Peking, the capital of the empire, has a population of 2,000,000. The principal streets vary from 140 to 200 feet in width, but the buildings do not correspond, few of the houses being above one story. Nanking was the capital before the time of the Mongols, and had 4,000,000 inhabitants, now dwindled to 300,000. It is one of the principal seats of Chinese learning, and is noted for the porcelain tower attached to one of its pagodas. Canton is a place of much commercial importance, from having formerly been the only port open to American and European vessels. It has a million of inhabitants. The surrounding scenery is charming, and the eastern hills present a most noble prospect. The houses, with the exception of those of the mandarins and wealthy merchants, are low; the streets long, narrow, and well-paved, spanned, here and there, by triumphal arches, and shaded at the sides by continuous ranges of piazzas. But the main charm of the city consists in its beautiful pleasure gardens, which are studded with fish-pools. The exports are tea, India ink, varnish, porcelain, rhubarb, silk, nan-

keen, &c. The climate of Canton is considered healthy, although the heat of summer and the warmth of winter are great.

CHIPPEWA, a town in Upper Canada, on a river of the same name, two miles north-west of Niagara Falls, where the British troops under Gen. Riall were signally defeated by the Americans under Gen. Brown, July 5th, 1814. On the 25th of the same month, a second action ensued, in which the British were successful, though Riall was wounded and captured.

CHIVALRY. The institution and spirit of chivalry, forming a prominent and important feature of history, has been regarded by writers and men of erudition in various points of view, and while some have condemned it as altogether injurious and absurd, others have dignified it with the title of sublime. There have been found men of modern days, and those the fortunate possessors of more than common abilities, who could sigh over the degeneracy of the times, and lament that the age of chivalry is gone. But if the material and least worthy part of it has passed away, its spirit still remains, still invites men to high and honorable deeds, and is indeed imperishable and immortal. The vows of knighthood, the ceremonials of installation, the pomp and ceremony of knightly feats,—these have gone; but the devotion of the patriot, the ardor of the warrior, the warmth of the lover, the fidelity of the friend, the loyalty and truth of the man of honor, do not sleep in the graves of Charlemagne, Roland, and Bayard.

In seeking for the origin of chivalry, we are led back to the feudal ages, and the consideration of the condition of the Germanic tribes, when its peculiar spirit first began to display itself. The tribes were composed not of superiors and inferiors, but of masters and slaves; of men whose birthright was ease and honor, and of others who inherited ceaseless toil. By the noble-born, labor of any kind was considered degrading, and the profession of arms alone worthy of being followed; so that the lords of the soil were a race of independent warriors, whose thirst for fame was a continual excitement. The different feudal sovereigns were nominally subject to a legitimate prince, and were bound to follow his banner into battle, at the head of their vassals, and to respond to his call by bringing,

at a moment's warning, an armed force to his support. Still, when removed from the presence of his sovereign, the feudal lord was a petty despot, whose vassals felt that he possessed absolute power of life and death over them.

Unlimited authority gave rise to various abuses, and it was well that chivalry, with its high tone of honor and morality, sprang up in ages of general darkness, fraud, and oppression. The commencement of chivalry may be ascribed to the beginning of the tenth century. To the feudal system it owed its origin, and with that it died out. From the twelfth to the fourteenth century, it had a great influence in refining the manners of most of the nations of Europe. The knight swore to accomplish the duties of his profession, as the champion of God and the ladies. He devoted himself to speak the truth, to maintain the right, to protect the distressed, to practice courtesy, and in every peril to vindicate his honor and character. Great enterprises contributed to bind numbers of knights together, and led to the formation of various societies and orders; and when these military adventurers were not leagued together in any of the holy wars, a reciprocity of principle and an identity of religion held them in a common chain. Animated by a love of justice, a veneration for the fair sex, a high-minded regard for truth, a thirst for military glory, and a contempt for danger, the knights went forth to brave peril, to rescue the unfortunate, and to crush the oppressor. Numerous individuals set forth with no fixed purpose but that of discovering some wrong and righting it. These wandering champions were called knights errant, and their exploits were sung in camp and court by the minstrels, whose lays immortalized the sons of chivalry. Chivalry degenerated, but not rapidly. After the lapse of many years from its foundation, the number of its ceremonials increased; its pageantry was disgraced by frippery and folly; its vows were unobserved; a devotion to the sex was succeeded by boundless licentiousness; and the wandering spirit of knight-errantry was displaced by an affectation of eccentricity. In the fourteenth century the honors of knighthood were restricted to the nobility, and then arose the various forms and ceremonies, which at length concealed the

original design of chivalry, and brought on a premature decline.

The knightly education of a youth generally commenced with his twelfth year; when he was sent to the court of some noble pattern of chivalry, to learn dancing, riding, the use of his weapon, &c., and where his chief duty was assiduous attention to the ladies in the quality of page. According to his progress in years and accomplishments, he became squire to some knight; and when he fairly merited the distinction, he was himself knighted. This honor was not conferred upon a youth before his twenty-first year, unless high birth, or extraordinary valor and address, seemed to warrant the setting aside of the usual regulation. Sometimes the honor was won by many a field of bloody toil, with many drops of sweat and gore; and not unfrequently one daring achievement, artfully planned, gallantly carried into execution, procured the wished-for spurs and the anticipated accolade. The ceremony of conferring knighthood was often performed on the field of battle where the honor had been earned; often it required and received the most imposing preparations and ceremonies. The young candidate guarded his arms for a night, and this was called the vigil of arms. In the morning he bathed in water, which was the emblem of the truth and purity he swore to preserve sacred. Clad in spotless garments, he knelt before the altar of the nearest church, and, having presented his sword to the officiating priest, received it again with the benediction of the reverend man. After taking the oath of allegiance, he knelt before his sovereign, who gave him the accolade, or blow upon the neck, with the flat of his sword, saluted the young warrior, and said, "In the name of God and St. Michael [or, in the name of the Father, Son, and Holy Ghost], I dub thee a knight. Be loyal, brave, and fortunate."

It was customary for two knights of the same age and congenial tempers to form a friendship, and this brotherhood in arms lasted generally until one of the two was laid in the grave. The courtesy of chivalry softened the asperity of war, gave charms to victory, and assuaged to the vanquished the pain of a defeat. All that ingenuity could plan, and wealth produce, to give splendor to knighthood, was displayed in the age of chivalry.

Magnificent tournaments were held, where even kings entered the lists and contended for the prize of valor before the eyes of thousands of spectators, among whom beautiful ladies appeared the most deeply interested. In fact, knights often contended about the charms of their lady-loves, and wore their favors in their helmets. If the ladies of Rome attended gladiatorial shows in throngs, we can not wonder that the beauties of the age of chivalry looked forward to a tournament with great impatience, and eagerly strove for the honor of filling the post of temporary queen and distributor of the prizes.

Chivalry exerted a powerful influence on poetry, and formed the subject of the poems of the troubadours of the south of France, as well as supplied themes for the poetical controversies of the knights, which were decided at the *Cours d'Amour* (courts of love), first established in Provence. Even after chivalry had died away, its influence was not unfelt by poetry, which retained the tone it had imparted for many centuries. The songs of the troubadours were divided into amatory songs, ducts, pastorals, serenades, ballads, poetical colloquies, &c. In the romances of chivalry we behold paladins and peers, sorcerers, fairies, winged and intelligent horses, invisible or invulnerable men, magicians who are interested in the birth and education of knights, enchanted palaces; in a word, the creation of a new world which leaves our vulgar planet far beneath it. Paladins never without arms, in a country bristling with fortresses, find their delight and honor in punishing injustice and defending weakness. The chivalric romances may be divided into three classes: those of the Round Table; those of Charlemagne; and lastly those of Amadis, which belong to a later century. It will suffice to speak of the former. The romances of the Round Table recount tales of the cup from which Jesus Christ drank with Joseph of Arimathea. This cup had performed such prodigies, that we are not astonished that those valorous knights of the Round Table, Lancelot, Perceval, and Perceforest, are united with the determination to recover it. These *preux chevaliers* are the perpetual heroes of these romances. Lancelot is attached to Guinevere, the wife of King Arthur, and his marvelous exploits excite the admiration of contemporaries. Three centu-

ries after, lords and ladies were still delighted at the recital of "the very elegant, delicious, mellifluous, and very pleasant historie of the very noble and very victorious Perceforest." Amidst many pages of wearisome insipidity, we find some happy descriptions and situations detailed, and graphic portraits of feudal men and manners.

The absurdities of chivalry afforded scope for the satirical and comic powers of Cervantes, and the adventures of the unfortunate Don Quixote are read with an interest which few works of a similar character inspire. Every feature of chivalry is happily burlesqued, and the Knight of La Manena goes through all the ceremonials with a ludicrous gravity which is perfectly irresistible. The pertinacity with which the knights maintained the pre-eminence of the ladies of their affections is finely satirized in the election which Don Quixote makes of a hideous country wench, whose charms he celebrates after the most approved fashion and with unceasing devotion. Few ladies of chivalric romance have attained a degree of reputation comparable to that of the immortal Dulcinea del Toboso. [See KNIGHTHOOD, TOURNA-MENTS.]

CHOLERA. The severe epidemic which, under the name of Cholera, Asiatic Cholera, Malignant Cholera, or Cholera Asphyxia, has within a few years afflicted many parts of the world, is reputed to have originated in August, 1817, at Jessore, the capital of a district in Bengal, lying to the north-east of Calcutta. In the following September, it invaded Calcutta; soon after, many other cities of Hindostan; and in a short time it extended its ravages into various other countries of Asia. It has been estimated that during fourteen years from its commencement at Jessore, it carried off no less than eighteen millions of the inhabitants of Hindostan; and its ravages are said to have been still greater in China. In 1830, it invaded European Russia, and afterward Poland, Hungary, Germany, Austria, and other countries of Europe. In 1831, in October, it broke out at Sunderland in England; in February, 1832, in London; in Paris, near the last of March; at Quebec and Montreal in June; and at New York in July. The mortality was very great, and the

steady march of its ravages from the east to the west, created a general panic. Since then, medical men have become better versed in its causes and its treatment, but it has raged at times with much severity. It was very fatal to the allied French and English army at Varna in 1854.

CHRISTINA, Queen of Sweden, daughter of Gustavus Adolphus, was born in 1626, and died April 19th, 1689. She succeeded to the throne in 1633, and in 1654 resigned it to her cousin Charles Gustavus. She was remarkable for acts and habits foreign to her sex; namely, learning, murder, and apostasy. Her conduct was so flagrant, that she found it difficult to procure an asylum in any state, after having been excluded from her own. She died at Rome.

CHRISTIANS. The name of Christians was first applied to the followers of Jesus at Antioch, about the middle of the first century.

CHRISTOPHE, HENRI, King of Hayti, was born Oct. 6th, 1767. In early life he was a slave and passed from the hands of one master to another, being successively a cook and an overseer. The French were conquered by the exertions of Dessalines and Christophe, the latter of whom was general-in-chief of the army during the short-lived imperial government of the former. In 1806, an insurrection broke out in Hayti, in which Dessalines, the emperor, was killed by the negroes; whom he had provoked by his cruelty and oppression. His successor, Christophe, assumed the humbler title of chief of the government, and in that capacity opened the commerce of his dominion to neutral nations, by a proclamation distinguished for its liberal spirit and enlightened views. In 1811 Christophe changed the republic into a monarchy, and proclaimed himself King of Hayti. A short time before his coronation he created a nobility consisting of princes, dukes, counts, and barons, to give a greater splendor to the ceremony. He created a legion of honor, called the order of St. Henri, and altered the name of his capital from Cape François to Cape Henri. His troops, at this time, amounted to about 10,000 men, all negroes; and his fleet consisted of one frigate, nine sloops of war, and a number of schooners. In October, 1820, Christophe, hearing that his troops had

abandoned him, shot himself through the head, and the opposite party immediately proclaimed a republican government.

CHRYSOSTOM, JOHN, one of the fathers of the church, an eloquent and pious man, born at Antioch, 351; was Bishop of Constantinople; died in exile, 407.

CHURCH, BENJAMIN, a native of Duxbury, Mass., was born in 1639, and distinguished himself by his address and daring in the Indian wars. His services during King Philip's war were great, and he commanded the party that killed the sachem of Mount Hope, in August, 1676. He died in his seventy-eighth year, Jan. 17th, 1718. A descendant, of the same name, was the first traitor in our Revolution. He was a talented physician in Boston. For a while he was the zealous coadjutor of Warren and his fellow-patriots. He was detected in treasonable correspondence with Gov. Gage, and imprisoned. His health failing, he was released in 1776, and lost at sea on his way to the West Indies.

CHURCHILL, CHARLES, an English poet, born 1731, died in 1764. His political satires were received with great applause, and his "Prophecy of Famine," a severe satire upon the Scots, was read with eagerness, and procured notoriety for its author. Though at first a clergyman, the close of his life was marked by gross debaucheries.

CHURUBUSCO, one of the brilliant victories won by the Americans under Scott, in the advance upon the city of Mexico. The battle was fought Aug. 20th, 1847. Santa Anna's strongly posted force numbered 30,000; the assailants were not a fourth as many. The American loss in killed and wounded was 1,000; that of the Mexicans was 10,000, one-fourth of whom were prisoners.

CIBBER, COLLEY, an English actor and dramatist, was born in London in 1671, and died in 1757. His comedy of "The Careless Husband" received the approbation of even the bitter Pope. He was made poet-laureate in 1730.

CICERO, MARCUS TULLIUS, the celebrated orator, born at Arpinum 106 B.C., was the son of a Roman knight. In Sicily he exercised the quaestorship with equity and moderation, and freed the Sicilians from the tyranny and avarice of Verres. He discharged the

offices of edile and prætor, and stood for the consulship, at a time when Cataline was making the most vigorous efforts to oppose him. Cataline, with many dissolute and desperate Romans, had conspired against his country, and planned the murder of Cicero himself. The plot being discovered, chiefly by the efforts of Cicero, he commanded Cataline to leave the city, and the desperate traitor marched forth to meet the 20,000 men that were assembled to support his cause. The rebels were defeated, and the conspirators capitally punished. After this memorable deliverance, Cicero received the thanks of the people, with the title of father of his country and second founder of Rome.

The vehemence with which he attacked Clodius, proved injurious to him; and when his enemy was made tribune, Cicero was banished from Rome, though 20,000 young men were ready to attest his innocence. After an absence of sixteen months, during which he had been favorably received wherever he presented himself, he was recalled, and entered Rome to the universal satisfaction. When he was sent with the power of proconsul to Cilicia, his integrity and prudence made him successful against the enemy, and on his return he was honored with a triumph, which, however, the factions prevented him from enjoying.

During the civil wars between Cæsar and Pompey, he joined the latter, and followed him to Greece. When victory had declared in favor of Cæsar, at the battle of Pharsalia, Cicero went to Brundisium, and was reconciled to the conqueror, who treated him with great humanity. From this time, Cicero retired into the country, and seldom visited Rome. After the assassination of Cæsar, Cicero recommended a general amnesty, and was strongly in favor of having the provinces decreed to Brutus and Cassius; but finding the interest of the republicans decrease, and Antony come into power, he retired to Athens. He soon after returned, but lived in perpetual fear of assassination. The enmity of Antony finally proved fatal to him, when Augustus, Antony, and Lepidus, to destroy all causes of quarrel, and each to dispatch his enemies, produced their lists of proscription. Cicero was among the proscribed. He fled, but was pursued, and put

to death, in his sixty-fourth year, B.C. 43. Cicero was a sincere patriot, and was unquestionably one of the brightest ornaments of the age in which he lived. His eloquence was winning, and his pen had the power of his tongue. His orations and philosophical works are models of style. He possessed a sparkling wit.

CID. Don RODRIGO DIAZ, Count of Bivar, surnamed the Cid (a Moorish word signifying lord), one of the most renowned knights of Spain, was born in 1026. He signalized himself against the Moors, winning the esteem of his countrymen, who bestowed upon him the title of *Campeador* (incomparable). On the accession of Sancho to the throne of Castile, the knight of Bivar accompanied him to the siege of Zamora, whence he brought back the troops and the dead body of the warrior monarch, who fell by treachery. Alfonso, the brother of Sancho, was then placed on the throne, after swearing that he had no participation in the murder of Sancho. The Cid's last exploit was the capture of Saguntum, and he died at Valencia, 1099. He was buried at Castile, and near him lies interred his beloved and faithful charger, Babieca.

CILICIA, an ancient country of Asia Minor, south of Mount Taurus, and between Pamphylia and Syria, the coast of which was inhabited by a piratical race. The Macedonians and Syrians successively held it, and it was reduced by Pompey to the Roman rule.

CIMBRI, an ancient tribe of the Germans, the first of that people with whom the Greeks became acquainted. Their origin is doubtful; they were warlike, and made themselves formidable to the Romans.

CIMON, an Athenian, son of Miltiades, famous for his debaucheries in his youth, and the reformation of his morals when he arrived at years of discretion. He behaved with great courage at the battle of Salamis, and rendered himself popular by his munificence and valor. He defeated the Persian fleet at Cyprus, took two hundred ships, and totally routed their land-army near the river Eurymedon in Pamphylia, on the same day, 470 B.C. Cimon afterward lost his popularity, and was banished by the Athenians, who declared war against the Lacedemonians; but having been recalled from his exile, rec-

onciled Lacedemon and his country. He was afterward appointed to carry on the war against Persia, gave battle to the enemy on the coast of Asia, and totally destroyed their fleet. He died as he was besieging the town of Citium, in Cyprus, B.C. 449, in the fifty-first year of his age.

CINCINNATI, SOCIETY OF THE, founded in 1783, by the officers of the Revolutionary army when about disbanding. Gen. Washington was the first president-general, and continued such till his death. His successors were as follows: 1800, Gen. Alexander Hamilton; 1804, Gen. Charles Cotesworth Pinckney, S. C.; 1826, Gen. Thomas Pinckney; Col. Aaron Ogden, N. J.; 1838, Gen. Morgan Lewis, N. Y.; 1844, Maj. Popham, N. Y.; 1848, Gen. Dearborn, Mass.

CINCINNATUS, LUCIUS QUINTUS, a celebrated Roman. Having been informed, as he ploughed his field, that the senate had chosen him dictator, he left his farm with regret, and repaired to the assistance of his countrymen, whom he found hard pressed by the Volsci and Æqui. He conquered the enemy and returned to Rome in triumph; and, sixteen days after his appointment, laid down his office, and returned to his agricultural employments. In his eightieth year he was again summoned, against Præneste, as dictator, and after a successful campaign, resigned the unlimited power which had been reposed in him. He flourished about 460 years B.C.

CINNA, LUCIUS CORNELIUS, a Roman consul who leagued with Marius to deluge Rome with blood. He was stoned to death, B.C. 84.

CINQUE PORTS. They were originally the five (*cinque*) ports of Hastings, Hythe, Romney, Sandwich, and Dover, which, according to the regulations of William the Conqueror, were bound, at specified notice, to furnish and man a certain number of ships of war. Winchelsea and Rye were afterward added. These towns were, to use the language of the time, compelled to "find the service they owed." They stood to the crown in the same relation that the holders of great estates did, only that they were to do their services on shipboard. If a resident of either of the Cinque Ports served as a soldier, he was released from his naval obli-

gations. The number of galleys these ports were required to furnish, was fifty-two. The lord warden appears to have had a general charge of them and their naval concerns. In time the institution became obsolete, but the wardenship was found a comfortable place for public men who had small means of living, or, with ample means, had yet greater avarice. Lord North filled it; so did William Pitt; and also the Duke of Wellington, it being one of the many offices possessed by him at the time of his death. It was while residing at Walmer Castle, a place held by him in virtue of the wardenship, that he died, and, if medical authority can be believed, in consequence of his residence there, the bleak air from the British Channel and the German Ocean being too rude for the soldier of more than fourscore and three years. The post of warden has become a complete sinecure, almost a scandalous one; and it was said to have been an understood thing among men of all parties in England, that it should be abolished upon the death of the great Wellington; instead of this it was bestowed upon some one of the titled barnacles that cluster to Britannia's ship of state.

CIRCASSIA, a country of Asia, lying between the Black and Caspian Sea, on the northern slope of the Caucasus. The Circassians are Mohammedans. They are a warlike race. The females are celebrated for their beauty, are sold by their parents, and are esteemed the brightest ornaments of an eastern seraglio.

The Russians are nominal masters of Circassia, but for the past twenty years the bold mountaineers have carried on a war of independence with great success under the lead of the chief Schamyl.

CIRCUMNAVIGATORS. The circumnavigation of the earth, at the time it was first achieved, was among the greatest and most daring of human enterprises.

The first was Magellan, or rather by his fleet, as he was himself slain on the voyage, 1519; Groalva, 1537; Alvaradi, 1537; Mendana, 1567; Sir Francis Drake, 1577; Cavendish, 1586; Lemaire, 1615; Quiros, 1625; Tasman, 1642; Cowley, 1683; Dampier, 1689; Cooke, 1708; Clipperton and Sherlock, 1719; Anson, 1740; Byron, 1764; Wallis, 1766;

Cook, 1768, 1772, 1776; his last voyage continued by King, 1779; Portlocke, 1788; Bougainville, 1766; La Peyrouse, 1782; D'Entrecasteux, 1791.

CISALPINE REPUBLIC. This name was given by Bonaparte to a republic which received its constitution in 1797, and which finally included a territory of more than 16,337 square miles, inhabited by three and a half millions of inhabitants. It included, among other districts, Austrian Lombardy, the Mantua and Venetian Provinces, Bergamo, Brescia, Crema, Verona, Rovigo, the duchy of Modena, the principality of Massa and Carrara, Bologna, Ferrara, Messola, and Romagna. It merged into the kingdom of Italy in March, 1805.

CISTERCIANS, an order of monkhood founded by Robert, a Benedictine, Abbot of Citeaux in France, 1092. They became so powerful that they governed almost all Europe in spiritual and temporal concerns. They observed a continual silence, abstained from flesh, lay on straw, wore neither shoes nor shirts, and were most austere.

CITATE. The Russian general Gortschakoff, intending to storm Kalafat, threw up redoubts at Citate, close to the Danube, which were stormed by the Turks under Omar Pacha, Jan. 6th, 1854. The fighting continued on the 7th, 8th, and 9th, when the Russians were compelled to retire to their former position at Krajona, having lost 1,500 killed and 2,000 wounded. The loss of the Turks was 338 killed and 700 wounded.

CIUDAD RODRIGO. This strong fortress of Spain was invested by the French, under Massena, June 11th, 1810, and yielded to them July 10th. It remained in their possession until it was stormed by the British, commanded by Lord Wellington, Jan. 19th, 1812. The loss of the British and Portuguese amounted to about 1,000 killed and wounded; the loss of the garrison was the same, besides 1,700 prisoners.

CLAPPERTON, HUGH, an officer in the English navy, born at Annan, in Scotland, in 1788. Having served with distinction, he joined Oudney and Denham, in their expedition to Africa. After acquiring a vast fund of information in regard to the interior of Africa, he returned to England, but, died in

CLA

the vicinity of Soccatoo, while on a second expedition of discovery, April 13th, 1827. Richard Lander was his servant.

CLARENDON, EDWARD HYDE, Earl of, lord high chancellor of England, was born 1608, and educated at Oxford. He became chancellor of exchequer and member of the privy council under Charles I., and was loaded with honors by Charles II. Having, however, lost the royal favor, he was deprived of his offices, threatened with impeachment, and compelled to fly to France, where he died, at Rouen, in 1674. His daughter Anne was the first wife of the Duke of York, afterward James II. His "History of the Rebellion" (as the royalists termed the civil war), is much esteemed for the descriptions of the author's eminent contemporaries.

CLARK, ABRAHAM, one of the signers of the Declaration of Independence, was born at Elizabethtown, N. J., Feb. 15th, 1726. He was a self-taught, energetic man; in 1776 was elected to a seat in Congress; was ever an active public man; and died in 1794, from a stroke of the sun.

CLARK, ADAM, LL.D., F.S.A., &c., a distinguished Methodist preacher and divine, a man of great talents and extensive learning, particularly in the oriental languages and biblical literature, and author of a well known and learned commentary on the Scriptures, and various other publications. He was born in 1760, in the county of Londonderry, in Ireland, his father being of an English family, and his mother a Scotchwoman. By invitation of John Wesley, he became a pupil in Kingswood school, then recently established, and was sent out by Mr. Wesley, an itinerant preacher, in 1782, at the early age of nineteen. He was greatly admired as a preacher: at first his youth attracted great numbers of hearers; but afterward the extent of his resources, from the gifts of nature and the fruits of study, commanded attention wherever he went; and hardly any man ever drew so large congregations, or of so mixed a character. To his great talents and learning he united the virtues of the humble Christian; was greatly respected by all denominations; and though catholic in his feelings, he was strongly attached to the body of Christians with which he was connected. He died Au-

gust 26th, 1832, at Bayswater, near London, of the cholera.

CLARKE, GEORGE ROGERS, an American officer, who was engaged against the Indians, throughout the Revolutionary war, on the frontiers of Virginia. In 1778, he was appointed to command a force for the protection of Illinois. He built Fort Jefferson on the eastern bank of the Mississippi, and in 1781, received a general's commission. He died in 1818, near Louisville, Kentucky, aged seventy-six. The following anecdote is related of him in an authentic work.

The Indians came in to the treaty of Fort Washington in the most friendly manner, except the Shawnees, conceited and warlike, the first in at a battle, the last at a treaty. Three hundred of their finest warriors set off in all their paint and feathers, and filled the council-house. Their number and demeanor, so unusual at an occasion of this sort, was altogether unexpected and suspicious. The United States stockade mustered seventy men. In the centre of the hall, at a little table, sat the commissary-general, Clarke, the indefatigable scourge of these very wanderers, General Richard Butler, and Mr. Parsons. On the part of the Indians, an old council-sachem and a war-chief took the lead. The latter, a tall, raw-boned fellow, with an impudent and villainous look, made a boisterous and threatening speech, which operated effectually on the passions of the Indians, who set up a prodigious whoop at every pause. He concluded by presenting a black and white wampum, to signify they were prepared for either event, peace or war. Clarke exhibited the same unaltered and careless countenance he had shown during the whole scene, his head leaning on his left hand, and his elbow resting on the table. He raised his little cane, and pushed the sacred wampum off the table, with very little ceremony. Every Indian, at the same time, started from his seat with one of those sudden, simultaneous, and peculiarly savage sounds, which startle and disconcert the stoutest heart, and can neither be described nor forgotten. At this juncture, Clarke arose. The scrutinizing eye cowered at his glance. He stamped his foot on the prostrate and insulted symbol, and ordered

them to leave the hall. They did so apparently involuntarily. They were heard all that night, debating in the bushes near the fort. The raw-boned chief was for war, the old sachem for peace. The latter prevailed, and the next morning they came back and sued for peace.

CLARKE, SAMUEL, a distinguished divine, metaphysician, and scholar, was born at Norwich, England, Oct. 11th, 1675, and died May 17th, 1729. Sir James Mackintosh said of him, that he was "eminent at once as a divine, a mathematician, a metaphysical philosopher, and a philologist; and, as the interpreter of Homer and Cæsar, the scholar of Newton, and the antagonist of Leibnitz, approved himself not unworthy of correspondence with the highest order of human spirits."

CLARKSON, THOMAS, was born at Wisbeach, in Cambridgeshire, March 28th, 1760, and graduated at St. John's, Cambridge, with high honors of scholarship. With untiring benevolence he sought the abolition of the slave-trade, and his life may be said to have passed in labors for its extinction. He had the pleasure of seeing it declared illegal by the British parliament in 1807. Mr. Clarkson was a member of the society of Friends. He died in September, 1846.

CLAUDE, GELEE, commonly called CLAUDE LORRAINE, from the province of his birth, was born in the year 1600. His parents were very poor, and as Claude showed no disposition to learn to read or write, he was placed with a pastry-cook. The cooks of Lorraine were celebrated, and found good employment abroad. Young Claude wandered to Rome with some of them. There he engaged himself to Agostino Tassi, a good landscape painter, as an ordinary domestic. He both prepared his master's meals, and ground his colors for him; but he acquired at the same time the rudiments of the art. From this menial capacity his application brought him to be known as one of the greatest of landscape painters. He died at Rome in 1682. Claude was extremely slow and careful in his execution. He often painted for a week or a fortnight on one part of a picture, without showing any progress. With the human figure or animals he had great difficulty, and in such parts of his pictures generally pro-

cured the aid of his friends. His chief excellence is in aerial perspective, and the management of light generally. His studies are said to have been made from the banks of the Tiber, and the magnificent prospects afforded by the Campagna di Roma. Here he might be seen at early dawn, in the brilliancy of noon-day, and at the set of sun, marking the different effects produced by the rays of the sun upon the surrounding objects, or taking in, with an attentive and practiced eye, the dreamy hues which the vapory haze cast upon the various parts of the landscape as they slowly receded from his sight. All these have been traced upon his canvas with a fidelity and beauty which few have been able to equal and none to excel. But the great charm of his pictures is the exquisite poetry interwoven in them. In his pictures of morning, the rising sun dissipates the dews, and the fields and verdure brighten at the approach of day; his evening skies expand a glowing splendor over the horizon; and vegetation, oppressed by a sultry aridity, sinks under the heat of his noon-day suns. It was his custom to preserve in a book the drawings of the paintings executed by him. Six of these registers, termed by him *Libri di Verità*, were found after his decease. This curious collection was sold by one of his nephews for two hundred scudi, to a Frenchman, who took them to Paris and offered them to the king. The purchase being declined, they were afterward bought by the Duke of Devonshire, and now adorn the magnificent mansion at Chatsworth.

CLAUDIUS I., Emperor of Rome, the son of Drusus, and the successor of the infamous Caligula. He made some conquests in Britain, and built several noble structures in Rome. He was poisoned by his wife Agrippina, who wished to place her son, Nero, on the throne, A.D. 54. He was then sixty-three years of age.

CLAY, HENRY, was born in Virginia, in the neighborhood of a region known as the Slashes (whence his sobriquet of 'the mill boy of the slashes'), the 12th of April, 1777. The straitened circumstances of his father, who was a clergyman, permitted him but the humble education of a district school. At an early age he acted as copyist for the clerk of the court of chancery at Richmond.

CLA

ASHLAND.

When nineteen, he commenced the study of law, and such were his assiduity in study and the brilliancy of his progress, that he was admitted to the bar within one year. In 1799, he removed to Lexington, Kentucky. He became an active politician as well as a popular lawyer. When a convention was called for the revision of the constitution of Kentucky, he incurred much unpopularity by his efforts for the election of delegates in favor of the emancipation of the slaves. His opposition to the alien and sedition laws restored him to favor, and in 1803 he was elected by a large majority to the legislature. Such was the repute he gained, that in 1806 he was chosen United States senator to fill a vacancy caused by the resignation of Gen. Adair. After the expiration of the brief term (March 3d, 1807), he returned to Lexington, was again chosen to the legislature, and served as speaker of the assembly two sessions. In 1809 he was appointed to fill another vacancy in the United States senate, and served from Jan. 4th, 1810, till March 3d, 1811. In 1811 he was elected representative in Congress from Kentucky, and was chosen speaker of the house; the duties of which arduous office he discharged with great ability through that

and the succeeding congress, till in 1814 he was appointed one of the commissioners to negotiate at Ghent a treaty of peace with Great Britain. He returned from Europe in 1815, having proved himself no less skillful as a diplomatist than he was eloquent as an orator and able as a debater. He was re-elected to Congress from 1815 to 1821 (being speaker of the house during that time), and in 1823. He became known as a decided advocate of a protective tariff, and took an active part in the passage of the Missouri compromise. In 1824, he received thirty-seven electoral votes for the presidency. His competitors, Jackson, Adams, and Crawford, each received a larger number of votes, and there being no choice by the electors, their names were balloted upon by the house of representatives, and Mr. Adams was chosen. The friends of Mr. Clay, by his advice, supported Mr. Adams. Upon the accession of the new president, Mr. Clay was made secretary of state. In the heat of partisan animosity the charge was engendered that his appointment was the result of corruption, and the payment in the bargain by which the adherents of Clay voted for Mr. Adams. Time has proved this to be malicious calumny.

In 1831, Clay was elected United States senator from Kentucky, and in 1832 was an unsuccessful competitor with Jackson for the presidency. He was re-elected to the senate in 1836, and served until his resignation in 1842. In 1844, he was nominated by the Whigs for the presidency, but was defeated by Mr. Polk. He returned to the senate in 1849, and was active in supporting the compromise measures of 1850. His health now began to decline, and after a voyage to the West Indies for its restoration, he came back to Washington, where he departed from life, June 29th, 1852, at the age of seventy-five years.

It was the remark of a distinguished senator, that Mr. Clay's eloquence was absolutely intangible to delineation; that the most labored description could not embrace it; and that to be understood, it must be seen and felt. He was an orator by nature. His eagle eye burned with patriotic ardor, or flashed indignation and defiance upon his foes, or was suffused with tears of commiseration or of pity; and it was because *he* felt, that he made *others* feel. A gentleman, after hearing one of his magnificent efforts in the senate, thus described him: "Every muscle of the orator's face was at work. His whole body seemed agitated, as if each part was instinct with a separate life; and his small white hand, with its blue veins apparently distended almost to bursting, moved gracefully, but with all the energy of rapid and vehement gesture. The appearance of the speaker seemed that of a pure intellect, wrought up to its mightiest energies, and brightly shining through the thin and transparent veil of flesh that invested it."

The particulars of the duel between Mr. Clay and Randolph of Roanoke may be interesting to the reader. The eccentric descendant of Pocahontas appeared on the ground in a huge morning gown. This garment had such a vast circumference that the precise whereabouts of the lean senator was a matter of very vague conjecture. The parties exchanged shots, and the ball of Mr. Clay hit the centre of the visible object, but the body of Mr. Randolph was untouched. The latter had fired in the air. Immediately after the exchange of shots, he walked up to Mr. Clay, parted the folds of his gown, pointed to the

hole where the bullet had punctured his coat, and exclaimed in the shrillest tones of his piercing voice, "Mr. Clay, you owe me a coat—you owe me a coat!" To which Mr. Clay replied, with slow and solemn emphasis, pointing directly at Randolph's heart, "Mr. Randolph, I thank God that I am no deeper in your debt!"

CLAYTON, JOHN, an eminent botanist, author of "The Flora Virginica," was born in England, about 1685; came with his father to America, and in 1722, became clerk of the county of Gloucester, Virginia, which office he held fifty-one years, to his death, 1773.

CLAYTON, JOHN MIDDLETON, was born in Sussex county, Delaware, July 24th, 1796. He was a learned lawyer and eloquent advocate, represented Delaware several terms in the federal senate, and was secretary of state in the cabinet of President Taylor. He died at Dover, Del., Nov. 9th, 1856.

CLEMENT. This name has been borne by several popes. Clement XIV. suppressed the order of the Jesuits, and gave many proofs of great liberality in religious matters. He is best known by his real name, Ganganelli. He died in 1775.

CLEOMBROTUS, a king of Sparta, killed in a battle fought with Epaminondas at Leuctra, B.C. 371. There were two others of the name.

CLEOMENES. This name was borne by three kings of Sparta. The first delivered Athens from the tyranny of the Pisistratidæ, but killed himself in a fit of insanity, B.C. 491.

The reign of the second was distinguished for nothing but an uninterrupted tranquillity.

Cleomenes III. was the son and successor of Leonidas, and began to reign B.C. 230. Engaging in a war with the Achæians, he was defeated, and obliged to fly into Egypt, where he destroyed himself in prison, B.C. 219.

CLEOPATRA, Queen of Egypt, and one of the most famous and fascinating female sovereigns of antiquity, was the daughter of Ptolemy Auletes, and the sister and wife of Ptolemy Dionysius, who deprived her of her share in the kingdom, and drove her to seek protection of the Romans. She exerted all the influence of her beauty to win the heart and gain the favor of Cæsar, and she was successful. Ptolemy was defeated and drowned. He left the throne to his sister, who

removed her younger brother by poison. Cleopatra visited Rome during the lifetime of Caesar, but was forced to quit it by the clamors of the populace. After the battle of Philippi, she was summoned by Antony to appear before him to answer to the charge brought against her of having assisted Brutus. When she made her appearance before Antony, the charms of her person and mind ensnared him, and made him forget the attractions of his wife. At the battle of Actium she fled, and her paramour was defeated. He afterward committed suicide, and died in her arms. Cleopatra, to avoid gracing the triumph of Augustus, applied an asp to her breast, and died of the wound, B.C. 30. She was a woman of great talents, but of a most ambitious and extravagant spirit. In a convivial contest with Antony, to see which of them could expend the most money on an entertainment, she snatched one of her pearl ornaments, valued at \$50,000, and dissolving it in a cup of vinegar, swallowed the contents. Few scenes of antiquity can have surpassed the splendor of her appointments, when she floated over the waves of the river Cydnus, to meet Antony. She came to judgment, but she came in the pride of beauty and anticipated triumph. Her galley glowed with gold; odors filled its silken sails, and the loveliest girls of Egypt performed the part of mariners. Beneath an awning on the deck lay the queen, in the slight drapery with which painters and sculptors sometimes invest the goddess of beauty. Silver oars struck the water to the dulcet sound of music, and beneath and about them sported the fair representatives of marine deities.

CLERFAYT, FRANCIS SEBASTIAN CHARLES JOSEPH DE CROIX, Count of, an Austrian general. In 1792, he commanded the Austrian troops against France, and after taking Longwy and Stenay, retired into the Low Countries. Here he lost the famous battle of Jemappes; but his retreat across the Rhine was a masterpiece of skill. Under the command of the prince of Coburg, he gained considerable advantages at Altenhaven, Quivrain, Hausen, and Farmars, and decided the victory of Nerwinden. With General Pichegru he disputed every foot of ground, till the inferiority of his forces obliged him to

abandon the country. In 1795, he took the command of the army of Mayence, forced the French camp, and took a number of prisoners. He was following the victory with ardor, when he received at Manheim an order to desist. On this, he gave in his resignation, and retired to Vienna, where he died in 1798.

CLERKE, EDWARD, an able English naval commander, the companion, friend, and successor of Captain James Cook, died on the coast of Kamschatka, August 22d, 1779, aged thirty-nine.

CLIFFORD, GEORGE, the third Earl of Cumberland, a nobleman distinguished by his naval enterprises in the reign of Elizabeth. He did great damage to the Spanish settlements and trade. He died in 1605.

CLINTON, CHARLES, Col., was born in the county of Longford, Ireland, 1690; came to America, 1729; died Nov. 19th, 1773.

CLINTON, DE WITT, the son of Gen. James Clinton, was born in Orange county, N. Y., in 1769. He studied law, and was elected successively member of the state legislature, of the senate of the union, and mayor of New York. In 1817, he was chosen governor of New York, on which occasion his previous opponents gave him their votes, from a sense of his merit; he was re-elected in 1820. Clinton was one of the prime movers of the great canal scheme, and having satisfied himself that there was no danger of that being defeated, in 1822 he declined again entering the elective lists. Having been deprived of his seat in the board of canal commissioners, by the animosity of his political opponents, a revolution in public feeling took place which enabled his friends in 1824 to elect him governor over Colonel Young, by an overwhelming majority. In 1826, he was again elected, but died Feb. 11th, 1828.

CLINTON, GEORGE, son of Col. Charles Clinton (above), was born in Ulster county, N. Y., July 15th, 1739. In the old French war, and the war of independence, he displayed great gallantry. Having studied law, he was admitted to practice in due time, and was chosen governor of New York, in 1777, and he continued in office eighteen years, and then declined re-election. He was again elected governor in 1801, and three years

DE WITT CLINTON.

after was chosen vice-president of the United States, holding the office till the time of his death in 1812.

CLINTON, Sir HENRY, was a son of George Clinton (governor of New York in 1743), and grandson of the Earl of Lincoln. He served on the continent during the 'seven years' war,' and came to America with Gen. Howe in the spring of 1775, bearing the commission of a major-general. In 1778, he succeeded Sir William Howe in the supreme command, which he retained till 1782. He was appointed governor of Gibraltar, in 1795, and died Dec. 22d, the same year.

CLINTON, JAMES, another son of Col.

Charles Clinton, was born in Ulster county, N. Y., Aug. 9th, 1736. His education was excellent, and he served with distinction in the English and French war of 1756, and in the Revolutionary war as brigadier-general. After the close of the war, he became a senator of the United States. He died Dec. 22d, 1812.

CLIVE, ROBERT, Baron of Plassey, was born in Shropshire, September 29th, 1725. Bold and reckless in his youth, he was sent as a scapegrace to Madras in his eighteenth year. His friends had procured him a clerkship in the company service. Mercantile drudgery he so utterly disrelished that twice

CLI

he tried suicide by snapping a loaded pistol at his head. Each time the pistol hung fire. A friend who entered the room soon afterward fired the weapon out the window. Startled at his preservation, Clive sprang up, crying with an oath, "I must be reserved for something great," and abandoned his design. War endangered the British possessions, and Clive found more congenial employment in the field, where he became eminent for his successes. He assisted in the Tanjore war in 1747, and in 1751 took Arcot by a *coup de main*, and relieved Trichinopoly. He afterward took Fort William in Bengal, defeated Surajah Dowlah, and placed Jaffier Ali Cawn upon the throne. The victory of Plassey, June 23d, 1757, where with little more than 3,000 men he defeated Surajah Dowlah at the head of 70,000, laid the foundation of British power and empire in India. Honors were heaped upon him in consequence of these achievements, and he was made president of Bengal. An attempt to weed out the gross abuses in India won him many foes, and on his final return home in 1767 he was the mark for much obloquy. The verdict passed by parliament, in refusing to vote that he had abused his power, and resolving that "Lord Clive has rendered great and meritorious services to his country," could not heal the wounds in his haughty spirit. He died by his own hand, November 22d, 1774.

CLOVIS, King of the Franks, born 465, succeeded his father Childeric in 481. He embraced Christianity and was publicly baptized. He was the founder of the French monarchy, drove out the Romans, defeated the Goths, subdued several provinces, and fixed the royal residence at Paris. He died in 511. The Salique law was published by Clovis. When he was first told of the sufferings of Christ, he exclaimed, "Oh! had I been there with my valiant Gauls, how I would have avenged him!"

CLYMER, GEORGE, one of the signers of the Declaration of Independence, was born at Philadelphia, in 1739. He became a merchant under the auspices of his uncle and guardian, but he preferred science and literature to business. He was chosen to Congress in 1776, and was several years a talented and patriotic delegate in that body. Mr. Clymer

was one of the projectors of the bank established for the sole purpose of conveying rations to the army. Perceiving the good effects of a national bank, in 1780, when elected a second time to Congress, he strenuously advocated its establishment. In 1784 he filled a seat in the legislature of Pennsylvania, and as a member of the convention, he assisted in framing the present federal constitution. He was also a member of the first federal congress. When, in 1791, the famous bill imposing a duty on spirits distilled within the United States, was passed, Clymer was placed at the head of the Pennsylvania excise, and rendered efficient service in putting down the whiskey insurrection. He was engaged, with others, to negotiate a treaty with the Cherokee Indians in 1796. He was afterward appointed president of the academy of fine arts, and of the Philadelphia bank. He died Jan. 23d, 1813.

CLYTEMNESTRA, daughter of Tyndarus, King of Sparta, by Heda, and twin-sister of Helen. In the absence of her husband Agamemnon, at the siege of Troy, Ægisthus made his court to her, and publicly lived with her. Her infidelity reached the ears of Agamemnon, but he was prevented from carrying his schemes of vengeance into execution, being murdered by the traitress and her paramour on his return home. After this crime, Clytemnestra publicly married Ægisthus, who ascended the throne of Argos. She was killed by her son Orestes.

COBBETT, WILLIAM (1762-1835), a self-taught man, and powerful political writer in England.

COCHIN-CHINA, called also Anam, a country of Farther India, composed of Cambodia, Cochin-China Proper, and Tonquin, is 1,000 miles long, and from 70 to 220 miles broad. The government is a hereditary military despotism. The inhabitants are hardy, but treacherous, and the country is fertile. Little attention is paid to religion, although that of Fo is professed by the lower orders. The commerce of the country is increasing. A portion of the country was conquered and colonized by the Chinese B.C. 214, but the Chinese yoke was afterward thrown off.

CODRUS, the son of Melanthus, and last king of Athens, who, learning that the oracle had assured the Heraclidæ that their good

fortune depended on sparing his life, rushed into the midst of the hostile array in disguise, and was slain, 1070 B.C.

COFFEE. Its use as a beverage is traced to the Persians. Some ascribe it to the prior of a monastery, who, being told by a goatherd that his cattle sometimes browsed upon the tree, and that they would then wake at night and sport upon the hills, became curious to prove its virtues. He accordingly tried it upon his monks, to prevent their sleeping at matins, and found that it checked their slumbers. Coffee came into great repute in Arabia Felix about 1454, passed thence to Egypt and Syria, and thence in 1511 to Constantinople, where coffee houses were opened in 1554. It was first brought into England by Nathaniel Canopus, a Cretan, who made it his common beverage, at Baliol College, Oxford, in 1641. The coffee-tree was conveyed from Mocha to Holland, in 1616; carried to the West Indies in the year 1726; first cultivated at Surinam by the Dutch, 1718; its culture encouraged in the British plantations, 1732. Some affirm this tree to have been originally a native of Arabia Felix, and certain it is that the finest specimens are from the neighborhood of Mocha.

COIN. Homer speaks of brass money as existing 1184 B.C. The invention of coin is ascribed to the Lydians, who cherished commerce; their money was of gold and silver. The most ancient coins known are Macedonian, of the fifth century B.C. Money was coined at Rome in the time of Servius Tullius, about 573 B.C. Rude scraps of copper had previously been used. Brass money only was in use there down to 269 B.C. (when Fabius Pictor coined silver), a token of little intercourse with the East, where both gold and silver had been in use long before. Iron money was used in Sparta, and iron and tin in Britain. Julius Caesar was the first who obtained the express permission of the senate to place his image on the Roman coins. In the more simple days of the Roman people, the likeness of no living personage appeared upon their money: the heads were those of their deities, or of those who had received divine honors.

English coin was of different shapes, as square, oblong, and round, until the middle

ages, when round coin only was used. The names of various pieces now obsolete, are met with in Shakspeare and other old English authors. The angel was a gold coin, so called from bearing the figure of an angel, valued at 6s. 8d. in the reign of Henry VI., and at 10s. in 1562. It is said the coin was so named and stamped, in memory of the tradition that Gregory the Great, shortly before his elevation to the papal chair, chancing one day to pass through the slave-mart at Rome, and seeing a group of beautiful youth set up for sale, he inquired about their origin, and finding they were English, he cried, "*Non Angli, sed Angeli forent, si essent Christiani*;" that is, "They would not be English, but angels, if they were Christians." Edward IV. coined angels with a figure of Michael and the dragon, the original of George and the dragon. The angelot was a gold coin, half the angel in value, struck at Paris when that city was in the hands of the English, in the reign of Henry VI., 1431. It had its name from the figure of an angel supporting the escutcheon of the arms of England and France. "Let it be but twenty nobles," plead the Hostess of Eastcheap when fat Falstaff was wheedling a loan from her. The noble was first struck in the reign of Edward III., and being stamped with a rose, was sometimes called a rose noble. Its value was 6s. 8d. Master Slender, too, complains that swaggering Pistol picked his purse of seven groats in mill-sixpences. The groat (meaning great coin) was so called because up to 1351 it was the largest silver piece. Its value was 4d. Milled sixpences and shillings were first made in the reign of Elizabeth. The guinea was so called from having been at first coined of gold brought from the coast of Guinea, 1673. They were then valued at 30s. The original pieces bore the figure of an elephant. In 1717, their value was fixed at 21s. by act of parliament. None have been coined since 1816. The ancient silver penny was the first silver coin struck in England, and the only one current among the Anglo-Saxons. Until the reign of Edward I., it was stamped with a cross, so deeply indented that it might be easily parted into two for half pence, and into four for farthings (*fourthings*); whence those names.

COKE, Sir EDWARD, was born at Mileham in the county of Norfolk, Feb. 1st, 1552. He

was a diligent student, from three in the morning till nine at night, caring for no knowledge not convertible to cash, and when called to the bar in 1578, brimful of law, and fortified by his hard discipline of study, he rose rapidly in his profession. Before he was thirty years old, the desperate money-seeker had made himself master of manor upon manor, and laid the foundation of the enormous possessions which at length alarmed the crown, lest they should prove too magnificent for a subject. In 1592 he was appointed solicitor-general, and in 1594 attorney-general, triumphing over Bacon, who was an aspirant for that place. His perversions of criminal law, as lawyer for the crown, are notorious; his brutality toward Essex, Raleigh, and the accomplices in the plot of Guy Faux, rendered him infamous. He was a man of haughty manners, severe spirit, and irritable temper. The stand which he made in the name of the people against the encroachments of the crown, was productive of great benefits; but it was a soiled instrument by which they were secured. Upon the death of Elizabeth, James I. knighted him, and continued him in office. In 1606 he was made chief-justice of the court of common pleas, "fatigued, if not satiated with amassing money at the bar." He was stubborn for the rights of his office, and came in direct collision with the pedantic presumption of the king. In 1613 he was made chief-justice of the king's bench; a change which he little liked; for though the rank was higher, the gains were much less, and in consequence of it, his hated rival, Bacon, who had come to be solicitor-general, was promoted to the attorney-generalship. Coke continued to display independence in his new seat, but stopped short of any act that might deprive him of the reversion of the chancellorship, to which his great acquirements and reputation well entitled him. Bacon was active in opposing this, and urged the king to his dismissal from his post as chief-justice, which was effected in 1616. He heard his sentence with dejection and tears. We must not forget this weakness, when we reflect upon his abject submission to royalty during his days of dependence, and as we approach the more stormy times when the spirit of vengeance incited him to grapple with kingly power in the temper of a rebel.

As Coke fell, Bacon rose. While the former was shedding tears for dismissal, the latter was intoxicated with joy for elevation to the chancellorship. Coke was afterward partially restored to royal favor, through influence gained by the marriage of his daughter with Sir John Villiers, eldest brother of the powerful Duke of Buckingham. The marriage was an unhappy one; Sir John was old enough to be his wife's father; and before long she eloped with a paramour, traveling abroad in man's attire, and dying young. But it served the ends of her parent, who was restored to the privy council, though he got no judicial promotion. In his seventieth year he was chosen to parliament. Failing to obtain the office of lord treasurer, he placed himself at the head of the Puritans, who had been returned to the house in great numbers. His hate was gratified by procuring the impeachment of Bacon, for taking bribes as chancellor. He maintained the stand he had taken for the liberties of the people, after the accession of Charles I., till 1628, when his famous Petition of Right was carried; shortly after which he retired from public life. He died in September, 1634, in the eighty-third year of his age and in the full possession of his faculties. For a profound knowledge of the common law he was unrivaled. His celebrated "Institute," which grew out of a commentary upon "Littleton's Treatise on Tenures," has made him the great oracle of English law. Though so devoted to money-getting, as a judge he was above suspicion of corruption. His services for public liberty were great: to him England is greatly indebted for the movement which, beginning on the 30th of January, 1621, ended on that very day eight and twenty years with the decapitation of Charles I.; but it is undeniable that the nation's difficulties would have waited some time longer for solution, had not Coke been inoculated with an opposition to despotism by the sudden application of the royal lancet, whose sharp edge his judicious self-love would never have provoked.

He owed much of his success in early life to his marriages. His first wife, who brought him fortune, bore him ten children and died. His memorandum-book feelingly describes her virtues; yet within four months the disconsolate widower had mated again, his second wife bringing him both wealth and valu-

able connection, and Bacon, her cousin, having been a rival suitor for her hand.

COLBERT, JEAN BAPTISTE, an eminent financial minister of Louis XIV. He was born at Rheims in 1617, and died in 1683, neglected by the monarch whose power his wise policy had so much helped to develop.

COLDEN, CADWALLADER, mathematician and philosopher, born at Dense, in Scotland, Feb. 17th, 1688; came to America, 1708, and settled in New York. From 1760 till his death he was lieutenant-governor of the province. He died Sept. 28th, 1776, the day of the conflagration of New York.

COLE, THOMAS, a distinguished painter, was born in England, during a visit of his parents there, and brought while a child to this country. From humble beginnings he rose to a high rank as a landscape and imaginative artist. He painted his best productions after returning from a visit to Italy, fixed his abode at Catskill amid the magnificent scenery of the Hudson, and died there much lamented in 1847.

COLERIDGE, SAMUEL TAYLOR, was a native of Devonshire, being born on the 20th of October, 1772, at Ottery St. Mary, of which place his father was vicar. He was educated at Christ's Hospital in London, where he had Charles Lamb for a schoolmate. He describes himself as being, from eight to fourteen, "a playless day-dreamer, a *helluo librorum*," and such he was forever. At fourteen he had a stock of erudition that might have puzzled a doctor, and a degree of ignorance of which a schoolboy would have been ashamed. He had no ambition, his father was dead, and he thought of apprenticing himself to a shoemaker near the school. Head-master Bowyer interposed; Coleridge became deputy-Grecian, or head scholar, and obtained a presentation from Christ's Hospital to Jesus' College, Cambridge, where he remained from 1791 to 1793. Then creditors obnoxious to him, and a love of the French revolution obnoxious to the ruling powers at Cambridge, led him to London and to enlist in the light-dragoons. On his arrival at the quarters of the regiment, the general of the district inspected the recruits, and looking hard at Coleridge, with a military air, inquired, "What's your name, sir?" "Comberbach." "What do you come here for,

sir?" as if very doubtful whether he had any business there. "Sir," said Coleridge, "for what most other persons come—to be made a soldier." "Do you think," said the general, "you can run a Frenchman through the body?" "I don't know," replied Coleridge, "as I never tried; but I'll let a Frenchman run me through the body before I'll run away." "That will do," said the general, and Coleridge was turned into the ranks. "Comberbach" made a poor dragoon, sticking in the awkward squad. He was the scribe for his comrades, and they cared for his horse and accoutrements. A Latin sentence that he wrote under his saddle on the stable wall, "*Eheu! quam infortunii miserimum est fuisse felicem*," awoke his captain's curiosity. He was discovered, discharged, and restored to his friends.

He became acquainted with Southey and Lloyd, and the trio occupied themselves at Bristol in planning a scheme for social perfection in the United States, the realization of which was prevented by a very prosaic social imperfection, the want of funds. They tried a better scheme, and married three sisters Fricker of Bristol. Coleridge was at this time an ardent republican and a strong Unitarian. Later in life, both his political faith and his religious were changed. He had become acquainted with Wordsworth, and went to reside at Stowey, in whose vicinity his new acquaintance was then dwelling. There he wrote some of his most beautiful poetry, "Ode on the Departing Year," the first part of "Christabel," the "Ancient Mariner," &c. In 1798, the munificence of the Messrs. Wedgewood enabled him to dwell and study fourteen months in Germany. On his return he went to reside with Southey and Wordsworth in the lake district. He won a precarious subsistence by literature. His habits were desultory, and he was under the thrall of opium, to whose fascinations he had been driven by illness. For the last nineteen years of his life he found an asylum and relief from the drug, with his friend Mr. Gillman, surgeon, at Highgate. There, friends clustered about him, eager listeners to the rich strains of poetry and philosophy that were born upon his lips. He died July 25th, 1834.

COLIGNY, GASPARD DE, admiral of France,

COL

born in 1516. He served with distinction under the gallant Francis I. and Henry II., by both of whom he was honored and rewarded. He was chief of the Calvinists against the Guises, to whom he continued formidable even after repeated defeats. Coligny was the first who fell in the atrocious massacre of St. Bartholomew's day, in 1572. His head was sent by Catharine of Medicis to the pope.

COLLINGWOOD, CUTHBERT, Baron, an English admiral, was born at Newcastle-upon-Tyne, in 1748. In 1761 he entered the naval service, in which he passed through all the regular steps of promotion, till he was made post-captain, 1794. He bore a part with Nelson, in the action off Cape St. Vincent, Feb. 14th, 1797. In 1804 he was made vice-admiral of the blue, and served with Cornwallis in the tedious but important blockade of Brest. At length, after many and various services, Collingwood became second to Nelson in the battle of Trafalgar. On this occasion, his ship, the *Royal Sovereign*, commenced the fight in such a manner as to draw from Nelson the expression, "Look at that noble fellow! observe the style in which he carries his ship into action!" By the loss of Nelson, the command devolved upon Collingwood at a critical period, and how well he secured by his prudence what had been so gloriously won, needs not here be related. He was now advanced to be vice-admiral of the red, confirmed in the command of the Mediterranean fleet, and created a peer of Great Britain, by the title of Baron Collingwood. He died off Minorca, March 7th, 1810; and his body was carried to England, and interred in St. Paul's.

COLLINS, WILLIAM, an interesting English poet, was the son of a hatter of Chichester, where he was born on Christmas day, 1720. After completing his college course, he published his *Oriental Eclogues*, and went to London in 1744. His ill fortunes having driven him to the bottle and nervous imbecility, he died in 1756.

COLLOT D'HERBOIS, JEAN MARIE, an actor who was hissed from the stage, made himself infamous during the French revolution by conducting the massacres at Lyons. He was banished to Cayenne after the fall of Robespierre, where in 1796 he died in horri-

ble yet fitting torment from drinking a bottle of brandy while ill with the yellow fever.

COLMAN, GEORGE, a dramatic writer, was born at Florence, where his father was English envoy, in 1733. He was a fine scholar and good comic dramatist. His death took place in 1794. His son, **GEORGE COLMAN** the younger, born Oct. 21st, 1762, was also the author of many comedies and farces, abounding in witty and ludicrous delineations of character, interspersed with bursts of tenderness and feeling. He died Oct. 26th, 1836.

COLUMBIA, DISTRICT OF. This tract, originally ten miles square, was ceded by Maryland and Virginia, to be occupied as the seat of the federal government. In 1846, the portion on the right bank of the Potomac, including the city of Alexandria, was retroceded to Virginia, so that the territory is now only half the original extent. The population in 1850 was 51,687. The government of the district is vested in Congress, the inhabitants having no voice in federal affairs. Washington, the capital of the United States, is situated on the left bank of the Potomac, and contained in 1850 40,000 inhabitants. Its natural situation is pleasant and healthy, and it is laid out on a plan, which, when completed, will render it one of the handsomest and most commodious cities in the world. The scale of this plan has given Washington the name of the 'city of magnificent distances.' Among the public edifices of the city are the capitol, the president's house, the general post-office, buildings for the executive departments, and the Smithsonian Institute. Washington became the seat of government in 1800. The city was founded by laying the corner-stone of the capitol, Sept. 18th, 1793. Washington was taken by the British under Gen. Ross, and the public buildings destroyed by a general conflagration, Aug. 24th, 1814. Part of the capitol, and the congressional library, were consumed by fire, Dec. 24th, 1851.

COLUMBUS, CHRISTOPHER, was a native of Genoa, born about 1435, of poor parents, who educated him with care. At the age of fourteen he went to sea, having evinced an early attachment to a sailor's life. Against the Mohammedans and Venetians he fought with great bravery and skill. Having conceived the design of a western passage to

CAPITOL AT WASHINGTON.

India, he for a long time sought for patronage without avail; but after struggling eighteen years, was at length aided by Ferdinand and Isabella, and sailed with three small vessels, the *Pinta*, *Nina*, and *Pinzon*, August 3d, 1492. Land was discovered on the 11th of October, which proved to be the island of Guanahani, named by Columbus, *St. Salvador*. Cuba was discovered on the 28th of October. Columbus was the first to announce his own discovery, and was received in Spain with signal favor. He was created a grandee of the realm, and loaded with other honors. Sept. 25th, 1493, he sailed from Cadiz, on his second voyage, with a fleet of seventeen sail. He built a town called *Isabella* on Hispaniola, but encountered many obstacles and difficulties in his new voyage of discovery. Meanwhile, that envy which never fails to pursue true merit stirred up clamors against Columbus, which were stifled, however, by his return to Spain in 1496, with valuable treasures. In 1498 he departed on his third voyage. Arrived in the new world, he found his enemies still exasperated against him, and they scrupled not to represent him to his sovereigns as endeavoring to make himself independent. Their stories were believed. Don Francisco de Bobadilla, was sent out by the court, and invested temporarily with the chief power, being permitted to use his own judgment in quelling the disturbances of the colonies. This person scrupled not to arrest Columbus and put him in irons, from which he would not suffer him-

self to be freed, when he was carried on board the vessel, which was to bear him to Spain. "No," said he, when the attendants offered to remove them; "the truth must be apparent, and my patrons are too noble, too generous, to overlook me. Then, if fortune again smiles upon me, these will serve as affecting memorials of sorrow past: I will not part with them, and I even wish that, when I am no more, they may be suspended over my sepulchre." In irons, he and his two brothers returned to Spain. There the honor and fidelity of Columbus became apparent, and he was nominally reinstated in his dignities. But the disposition of the sovereigns toward him was altered. Though Bobadilla was recalled, Columbus in vain supplicated to be restored to his government; he was put off by vague promises, and the post finally given to Don Nicholas Ovando, a practical as well as accomplished man. Thus, after three momentous voyages, and the acquisition of much fame, he found himself displaced; thwarted in a point in which he conceived his honor concerned, and his hard-earned authority torn from his possession. Columbus now sought only to obtain the fulfillment of the royal promises with regard to the furtherance of his expedition, imagining that the continent he had discovered was Asia, and hoping to find a way to the East Indies by the isthmus of Darien. With four small caravels, the largest being but of seventy tons burthen, he set out on his fourth voyage of discovery. Leaving

Cadiz on the 9th of May, 1502, he reached Martinique June 15th. Having touched at Cuba, he pursued a south-westerly course, until he reached Guanaja, an island on the coast of Honduras, whose inhabitants had attained a pretty high degree of civilization. Their persons were covered with cotton garments, dyed with a variety of bright and pleasing colors. He mentions a curious occurrence as taking place here. He had been presented, among other animals, with a peccary, or American pig, and one of those monkeys with prehensile tails, indigenous to America. The peccary being thrown in the way of the monkey, the latter, by a dexterous use of its tail, confined the jaws of the pig in such a manner as to expose it helplessly to the action of the monkey's claws. "This appeared to me so strange," Columbus writes to his patrons, "that I thought fit to write it down for the information of your majesties."

The admiral, in his endeavors to discover a strait leading to the Pacific Ocean, encountered great hardships and fatigues, which had a baneful influence upon his health, and was finally shipwrecked. Ovando was himself averse to succoring Columbus, after a messenger had acquainted him with the peril of his situation; but the people of Hispaniola were so well disposed toward the admiral, that, for the sake of maintaining his own reputation, he was forced to send him relief. Columbus, arrived at St. Domingo, met with a reception such as to banish, for a brief space, the remembrance of his sufferings; but his bodily weakness could not be disguised. When sufficiently recovered, he set sail for Spain, arriving there on the 7th day of November, 1504.

The services of this distinguished man were indeed important. In his third voyage he had discovered the continent of America; in his last, had received intelligence of the immense wealth of Mexico, which was destined to increase, to an enormous extent, the revenue of Spain. Columbus vainly looked for the reward of his services; he had stipulated that certain dignities and an income should be his, but he found himself in hopeless indigence. His kind patroness, the queen, was no more, and her husband, stern and selfish, disregarded the claims of the enterprising navigator. He evaded the request of Colum-

bus to be restored to the vice-royalty of which he had been deprived, and repeated disappointments, in connexion with his bodily infirmities, hastened the death of the latter, which took place at Valladolid, on the 20th of May, 1506. His remains were afterward removed to the cathedral of Havana in Cuba.

Columbus was a man of great and inventive genius. The operations of his mind were energetic, but irregular; bursting forth, at times, with that irresistible force which characterizes intellects of such an order. His ambition was lofty and noble, inspiring him with high thoughts, and an anxiety to distinguish himself by great achievements. He aimed at dignity and wealth in the same elevated spirit with which he sought renown; they were to rise from the territories he should discover, and be commensurate in importance. The vast gains that he anticipated from his discoveries, he intended to appropriate to princely purposes; to institutions for the relief of the poor of his native city, to the foundation of churches, and above all, to crusades for the recovery of the holy sepulchre. He was tenacious of his rank and privileges, not from a mere vulgar love of titles, but because he prized them as testimonials and trophies of his illustrious deeds. Every question of compromise concerning them he repulsed with disdain. "These things," said he, nobly, "concern my honor." In his testament, he enjoined on his son Diego, and whoever after him should inherit his estates, whatever other titles might be granted by the king, always to sign himself simply "The Admiral," by way of perpetuating in the family the source of its real greatness. He was naturally irritable and impetuous, and keenly sensible to injury and injustice; yet the quickness of his temper was counteracted by the benevolence and generosity of his heart. The magnanimity of his nature shone forth through all the troubles of his stormy career.

COMETS. The first comet that was discovered and described accurately was by Nicephorus. At the birth of the great Mithridates, 135 B.C., two large comets appeared, which were seen for seventy-two days together, whose splendor eclipsed that of the noonday sun, and which occupied forty-five degrees, or a fourth part of the heavens. The

appearance of comets was supposed to be the forerunner of wars, famine, pestilence, the deaths of great men, earthquakes, inundations, and other calamities. The splendid comet of 1456 was believed by Pope Calixtus to be at once the sign and instrument of divine wrath, and the affrighted pontiff ordered public prayers to be raised in every town, and the bells to be tolled at the noon of each day, to warn the people to supplicate the divine mercy. He at the same time communicated both the comet and the Turks, whose arms had lately proved victorious over the Christians. In more modern times certain natural effects have been vulgarly attributed to the influence of comets; such as tempests, hurricanes, volcanic eruptions, cold or hot seasons, floods, the dysentery, the plague, the cholera, and other disorders. Much alarm has also prevailed at times from fear that a comet might jostle the earth into destruction. Tycho Brahe was the first to rationally explain the phenomena of comets, about 1577. Newton discovered that their orbits are ellipses. A most brilliant comet, moving with immense swiftness, appeared in 1769; it passed within two million miles of the earth. Behind its nucleus a vast stream of light, thirty-six millions of miles in length, stretched across the heavens, a prodigious luminous arch. A comet still more brilliant appeared in 1811, and was visible to the naked eye all the autumn. Herschel computed the length of its tail at a hundred millions of miles! Halley was the first to fix the identity of comets, and predict their periodical return. He demonstrated that the comet of 1682 was that which was seen in 1456, 1531, and 1607. The revolution of Halley's comet is accomplished in about seventy-six years; it appeared in 1759 and 1835. The comet of 1680, which terrified the world by its near approach, is supposed to have a period of five hundred and seventy-five years, and to be the same that appeared in 1106, in 531, and in 44 B.C.

COMMODUS ANTONINUS, LUCIUS ÆLIUS AURELIUS, Emperor of Rome, son of Marcus Aurelius, was born A.D. 161. At sixteen years of age he was associated with his father in the government, and in 180 ascended the throne. He surpassed in profligacy and cruelty all his wicked predecessors. He maimed

and disemboweled his subjects for pleasure. From his great strength, he bore a striking resemblance to the statues of Hercules, in the dress of whom he appeared. He debauched his own sisters, and mixed with the vilest and most degraded of the human race. Having exhausted the treasury by his extravagance, he replenished it by imposing enormous taxes on the people. Habited like a slave, he drove his own chariot, and fought as a gladiator, 735 times. He was poisoned by his favorite mistress, Martia, in 192.

COMPASS, MARINER'S. The date of one of the greatest of human discoveries is uncertain, and there are as great discrepancies in the accounts of its origin. Some have supposed it to have been known to the Chinese in the remotest ages. Marcus Paulus, a Venetian, is said to have discovered it A.D. 1260. By others it is claimed it was in use in Europe as early as 1180. Roger Bacon (1294) is said to have known the polarity of the loadstone; it was known in Norway previous to 1266; and it is mentioned in a French poem of 1150. Until the time of Flavio Gioja, a Neapolitan mariner, the needle was laid upon a couple of pieces of straw, or small splinters, in a vessel of water; he suspended it on a point, as we now have it. Columbus noticed the variation of the compass, in 1492; the dip of the needle was discovered in 1576.

COMTE, AUGUSTE, a celebrated French thinker, and the founder of the Positive philosophy, was born in 1797, and died in 1857.

CONCORD, a village of Massachusetts, twenty miles north-west of Boston. At Concord and Lexington the first armed resistance was made to the troops of Great Britain, April 19th, 1775. [See LEXINGTON.]

CONDE, LOUIS DE BOURBON, Prince of, was the son of Charles of Bourbon, Duke of Vendome, and was born in 1530. He signalized himself at the battle of St. Quintin, and became leader of the discontented Huguenots. He was wounded at the battle of Dreux, in 1562, and slain in that of Jarnac, in 1569.

CONDE, LOUIS, Prince of, commonly called the Great, was born at Paris in 1621. At the age of twenty-two he gained the battle of Rocroi against the Spaniards, and captured Thionville and other places. He next entered Germany, where he gained innumerable laurels. Being recalled thence, he was sent into

Catalonia, but failed in his attempt to take Lerida. In 1648, he defeated the Imperialists in Flanders with prodigious slaughter. In the civil war Condé at first adhered to the court, but afterward opposed it without success. He refused to accede to the peace, and entered into the service of the Spaniards in the Low Countries, where his military exploits were uncommonly splendid. At the peace of the Pyrenees, in 1659, he obtained his pardon, and served his country with his wonted activity and success. He contended with the Prince of Orange in the Netherlands, and was wounded in the memorable passage of the Rhine. The conquest of Franche Compté was also chiefly owing to him. After the death of Turenne, he carried on the war against Germany with advantage. He died in 1687 at Fontainebleau.

CONDILLAC, ETIENNE BONNET DE, a French metaphysician, died in 1780, aged sixty-five.

CONDORCET, MARIE JEAN ANTOINE, Marquis de Caritat, an eloquent man, a good mathematician, an earnest political writer among the Girondins, and a victim of the reign of terror. Born in Picardy in 1743, in 1794 he poisoned himself in prison to avoid the guillotine.

CONFEDERATION OF THE RHINE. In 1806, Napoleon, determined that there should not exist, on the continent, any power capable of opposing his designs, contrived to dismember the German empire, and induce the emperor to abandon his title of Emperor of Germany. In pursuance of these views, a new union was formed by several of the German princes, under the name of the Confederation of the Rhine. The Kings of Bavaria and Wirtemberg, the Elector of Baden, the Duke of Berg, the Landgrave of Hesse Darmstadt, and others, published at Ratisbon a declaration, that as the Germanic constitution then existing could afford no guarantee for the public tranquillity, the contracting parties had agreed, that their states should be forever separated from the Germanic body, and united by a particular confederation, under the title of "The Confederate States," of which the Emperor of the French was constituted the head and protector. The treaty of confederation was projected and drawn up at Paris, and ratified at Munich, on the 25th of July, 1806: it contained forty articles relative to

the territories which each of the contracting parties was to possess, and other important particulars. Every continental war, in which either France or any of the confederate states should be engaged, was to be common to all; the contingent to be furnished by each of the members, was determined in the following proportion: France, 200,000 men, Bavaria 30,000, Wirtemberg 12,000, Baden 8,000, Berg 5,000, Darmstadt 4,000, Nassau and the other states 4,000. By this confederation, the Germanic body was completely dissolved, and a very considerable part of its members ranged themselves under the banners of France. Francis II., in consequence of this organization, resigned his title of Emperor of Germany, and took that of Emperor of Austria. Thus was dissolved the German, or as it was styled in diplomatic language, the Holy Roman Empire, 1006 years after Charlemagne received the imperial title and crown from the hands of the pope. [See GERMANY.]

CONFUCIUS, the celebrated Chinese philosopher, lived about 550 B.C.

CONGO, a kingdom of Africa, in Lower Guinea, which is under the sway of the Portuguese. It is rich and fertile. It was discovered in 1484 by Diego Cam, a Portuguese. The native government is despotic.

CONGRESS, CONTINENTAL. The first met in Philadelphia, Sept. 5th, 1774; Oct. 8th, resolve to support Massachusetts. Second congress assembled May 10th, 1775, in Philadelphia; June 7th, style the colonies "The Twelve United Colonies," Georgia not having yet acceded to the Union; June 22d, 1775, appoint eight major-generals; May 5th, 1776, declare the authority of England abolished; July 4th, declare independence; Dec. 12th, 1776, adjourn from Philadelphia to meet at Baltimore; 30th, resolve to send commissioners to Prussia, Austria, Spain, &c.; Sept. 18th, 1777, on the approach of the British army toward Philadelphia, adjourn to meet in Lancaster, whence they again adjourn on the 30th of the same month to meet in Little York; meet again in Philadelphia, July 2d, 1778. Sept. 14th, 1778, appoint Benjamin Franklin minister to France, the first regularly constituted ambassador from the United States, the former foreign agents being styled commissioners; Oct. 4th, 1782, resolve against a separate peace; June 26th, 1783, adjourn to

Princeton, and thence to Annapolis, where they meet November 26th; Nov. 1st, 1784, meet at Trenton, N. J.; Jan. 11th, 1785, at New York, which continued to be the place of meeting till the adoption of the federal constitution. From 1781 to 1788, Congress met annually on the first Monday in November, pursuant to the articles of confederation. April 1st, 1789, Congress first assembled under the federal constitution; Sept. 22d, 1790, pass an act to remove to Washington city in 1800.

CONGREVE, WILLIAM, a celebrated English dramatist and poet, born in 1672, died in 1729. His plays are replete with wit and

glitter, but are blemished by a lack of morality. The dramatist was an intimate friend of the Duchess of Marlborough (daughter of the great duke), and left her the bulk of his fortune, about £10,000. She honored him with a stately funeral, and converted the bequest into a superb diamond necklace, which she wore in his honor. It is said that she had a statue of him in ivory, moved by clockwork, and placed daily at her table; that she had a wax doll made in imitation of him, and that the feet of this doll were regularly blistered and anointed by the doctors, as poor Congreve's feet had been when he suffered from the gout.

CONNECTICUT, one of the New England states, has an area of 4,674 square miles. Population in 1860, 4601,47. The surface is for the most part hilly, but nowhere mountainous. The state is well watered, mostly by small streams, which are sources of important power for manufactures. The Connecticut, which passes through nearly the centre of the state from north to south, is navigable as far as Hartford. The Thames in the east, and the Housatonic in the west, are the other largest streams. The soil is generally productive, but not highly fertile, and in general is more suited for grazing than tillage. Along the river valleys, however, fine rich meadows lie. Connecticut does better in manufacturing than in agriculture. Her clocks, her pistols, her rifles, her axes, her gunpowder, and her rubber goods find a market throughout the world; while along her streams, and

in her busy villages, are myriads of establishments, in which other ingenious wares and fabrics are wrought by industrious and prosperous artisans.

The present constitution was adopted in 1818, till which time the charter granted by Charles II., in 1662, was the basis of the government. All state officers, and the members of both branches of the legislature, are elected annually by the people. The legislature convenes at Hartford and New Haven in alternate Mays. Every white male citizen, who has gained a settlement in the state, attained the age of twenty-one years, resided in the town six months, has a good moral character, and can read the constitution of the state, shall, upon taking the oath prescribed, be an elector.

The judicial power is vested in a supreme court of errors and a superior court. The

former consists of a chief-justice and two associates; the latter has six judges; all chosen by the legislature for terms of eight years. This commonwealth has long been eminent for the attention given to education. The school fund, arising from lands originally held by the state in Ohio, had in March, 1858, a capital of \$2,046,397.32. To the revenue from this source, the towns add largely by taxation. A normal school for the instruction of teachers, and a reform school for juvenile delinquents, are maintained by the state. Yale College at New Haven is among the best and most ancient universities of the country. The American Asylum for the Deaf and Dumb at Hartford, was the first institution of the kind on this continent.

The towns of Windsor, Hartford, and Wethersfield were settled in 1635 and 1636 by emigrants from the Massachusetts colony. It was in the following year that the Pequots were extirpated. The emigrants had at first considered themselves under the jurisdiction of the parent colony at Boston Bay, but on the 14th of January, 1639, the planters convened at Hartford, and decided for a distinct commonwealth. The instrument adopted upon this occasion is the earliest precedent of a written constitution, proceeding from a people, and in their name establishing and defining a government, and is the germ of the free representative plan which now distinguishes our country in the eyes of the world. So wisely did Ludlow, Haynes and Hooker lay the foundations, that the people of Connecticut have found no necessity for any fundamental change in the polity which the fathers ordained. The colony of New Haven had been founded in 1637 by Eaton, Hopkins, Davenport, and others. By the charter granted by Charles II. in 1662, the two colonies of Hartford and New Haven were united. This was the instrument afterward hidden in the Charter Oak from the clutch of Andros. Curiously enough for a document coming from a Stuart, it sanctioned the democracy which the quiet independence of the colonists had framed for themselves a quarter of a century before. The commonwealth suffered under King Philip's war, sustained its due burden in the wars against the French in America, and yet grew, in strength, and wealth, and numbers, till the contest for

independence came. Only one of the thirteen colonies contributed a larger quota of men to the patriot army during that struggle. Her venerable governor during this crisis, the patriotic Trumbull, the original 'Brother Jonathan,' was one of Washington's chief supports. Irving says: "There could be no surer reliance for aid in time of danger than the patriotism of Governor Trumbull; nor were there men more ready to obey a sudden appeal to arms than the yeomanry of Connecticut; however much their hearts might subsequently yearn toward the farms and firesides they had so promptly abandoned. No portion of the Union was more severely tasked, throughout the Revolution, for military service; and Washington avowed, when the great struggle was over, that 'if all the states had done their duty as well as the little state of Connecticut, the war would have been ended long ago.'"

Connecticut is divided into eight counties. The city of Hartford is on the west bank of the Connecticut River, fifty miles from its mouth. It is a handsome town, prosperous in its trade and manufactures, and has a population of 25,000. New Haven, the sister capital, is at the head of a small bay opening upon Long Island Sound, and has 30,000 inhabitants. The many and noble trees that adorn its ways have gained it the name of the Elm City. Other prominent towns of Connecticut are Norwich, New London, Bridgeport, and Middletown.

CONSPIRACIES AND INSURRECTIONS, the most remarkable in ancient or modern history. A conspiracy was formed against the infant republic of Rome, to restore the banished Sextus Tarquin, and the regal government, in which the two sons of Junius Brutus, the first consul, being concerned, were publicly condemned and put to death by their father, 507 B.C. Another by the Tarquin faction against the Roman senators; Publius and Marcus discover it; the other conspirators are put to death, 496 B.C. Of Cataline and his associates, to murder the consuls and senate, and to burn the city of Rome, detected by Cicero, 63 B.C. An insurrection in Spain cost the lives of 30,000 Spaniards, and double that number of Moors, A.D. 1560. At Malta, to destroy the knights, for which 125 slaves suffered death, June 26th, 1749. At Lisbon,

by several of the nobility, who shot the king, 1758. At St. Domingo and the other French West India Islands, where near 16,000 negroes were slain, and 400 whites, and 550 plantations destroyed, 1794. Of Moreau, Pichegru, and Cadoudal against Bonaparte, Feb. 15th, 1804. Of the Prince of Asturias against his father, 1807. Of the inhabitants of Madrid against the French, in which many persons were killed, 1808. In Paris, for which the conspirators, three ex-generals and eleven officers were executed, October 30th, 1812. At Travencore, to massacre the European officers at an entertainment, 1812. At Lisbon to overturn the Portuguese government, May, 1817.

Conspiracies and insurrections in England. Of the barons against Henry III. for canceling Magna Charta, 1258. Of the Duke of Exeter and officers, against the life of Henry IV., discovered by dropping a paper accidentally, 1400. Of Richard, Duke of Gloucester, against his nephews, Edward V. and his brother, whom he caused to be murdered, 1483. Of the Earl of Suffolk and others against Henry VII., 1506. Insurrection of the London apprentices, 1515. Against Queen Elizabeth, by Dr. Story, 1571; by Anthony Babington and others, in behalf of Mary of Scotland, 1586; by Lopez, a Jew, and others, 1593; by Patrick York, an Irish fencing-master, employed by the Spaniards to kill the queen, 1594; of Walpole, a Jesuit, who engaged one Squire to poison the queen's saddle, 1598; all the conspirators were executed. Against James I., by the Marchioness de Verneuil, his mistress, and others, 1604. The Gunpowder plot discovered, Nov. 5th, 1605. Of Sindercomb and others to assassinate Oliver Cromwell; discovered by his associates; Sindercomb was condemned, and poisoned himself the day before he was to have been executed, 1656. An insurrection of the Puritans, 1657. An insurrection of the fifth-monarchy men against Charles II., 1660. A conspiracy of Blood and his associates, who seized the Duke of Ormond, wounded him, and would have hanged him if he had not escaped; they afterward stole the crown, 1670 and 1671. The pretended plot of the French, Spanish, and English Jesuits, countenanced by the pope, to assassinate Charles II., discovered by Dr. Tongue

and the infamous Titus Oates, 1678; another to assassinate him at the Rye-house farm, near Hoddesdon, Hertfordshire, in his way from Newmarket, called the Rye-house plot, 1683. Of Lord Preston, the Bishop of Ely, and others to restore King James, 1691. Of Granvil, a French chevalier and his associates, to assassinate King William in Flanders, 1692. A conspiracy by the Earl of Aylesbury and others, to kill the king near Richmond, as he came from hunting, discovered by Pendergrass, called the Assassination plot, 1696. Of Simon Fraser, Lord Lovat, in favor of the Pretender, against Queen Anne, 1703. Of the Marquis Guiscard, 1710. To assassinate George I. by James Sheppard, an enthusiastic youth, who had been taught to consider the king as an usurper, 1718. Of Laver and others to bring in the Pretender, 1722. Of Col. Despard and his associates to assassinate George III. and overturn the government, 1802. Of Robert Emmet in Dublin, 1803. Of Thistlewood and a gang of desperate politicians, commonly called the Cato Street conspiracy, 1820.

(For SOUTHERN REBELLION, see the Chronology, end of this work.)

CONSTANTINE THE GREAT, son of the Emperor Constantius Chlorus, by Helena, was born at York, about the year 274. On the death of his father, in 306, he was proclaimed emperor by the army. He defeated the Franks, after which he crossed the Rhine, and committed great ravages in Belgium. Constantine married Fausta, the daughter of Maximian, in 306. His father-in-law, taking advantage of his absence from Arles, where he held his court, seized the treasury, and assumed the imperial title, but being taken prisoner by Constantine, strangled himself. A war now broke out between Constantine and Maxentius, the son of Maximian; the former reduced Italy, and defeated Maxentius, who was drowned in the Tiber. At this period the era of Constantine's conversion to Christianity is fixed. As he was riding at the head of his troops, an immense cross of exceeding brightness is said to have appeared above the horizon, bearing the inscription, "In this conquer." Constantine was no longer an infidel. He now entered Rome in triumph, and received from the senate the title of Augustus, in conjunction with Licin-

ius and Maximin, the former of whom married his sister, Constantia. A civil war shortly broke out between Licinius and Maximin, in which the latter was slain. Licinius then formed a conspiracy against Constantine, which being discovered, war ensued between them, in which Constantine was successful, and peace was concluded. A second war broke out in 323, and terminated in the defeat of Licinius, and his resignation of the imperial dignity. Not long afterward he was strangled. Constantine now began to show his regard for the religion he had adopted, by destroying the heathen temples, building numerous churches, and journeying to Jerusalem to visit the Holy Land, where he erected a magnificent church at Bethlehem. With this zeal for religion he blended courage and justice. He conquered the Goths, founded Constantinople, removing the seat of empire thither, and performed many actions that entitle him to the name of Great. But he sullied his character by putting to death his son Crispus. He died in 337.

CONSTANTINOPLE, called by the Turks Stamboul, is situated on the European side of the Bosphorus. Its circuit, including the suburbs, is about thirty-five miles, and the number of inhabitants, by the most moderate computation, 630,000 Greeks, Armenians, Jews, and Turks. It was built upon the ruins of the ancient Byzantium by Constantine the Great. It became afterward the capital of the Greek empire; and, having escaped the destructive rage of the barbarous nations, it was the greatest as well as the most beautiful city in Europe, and the only one, during the Gothic ages, in which there remained any image of the ancient elegance in manners and arts. It derived great advantages from its being the rendezvous of the crusaders; and, being then in the zenith of its glory, the European writers, in that age, speak of it with astonishment. During the third crusade, a revolution happened at Constantinople, which divided the eastern empire for fifty-eight years. Alexius Angelus, surnamed the tyrant, having dethroned Isaac II., placed himself upon the throne of Constantinople, in 1195; and Alexius, the son of Isaac, applied to the French and Venetians, who passed that way to the Holy Wars, to assist him in the recovery of his father's em-

pire. They accordingly, in 1203, reduced Constantinople, after a siege of eight days, and replaced Isaac on the throne. The next year, Alexius Dacus Murzoufle assassinated the emperor, whom the crusaders had re-established, and seized the crown. On hearing this, the French returned, attacked the city, reduced it in three days, deposed Murzoufle, and chose Baldwin, Count of Flanders, emperor.

He had four successors, the last of whom, Baldwin II., was deposed in 1262, by Michael Paleologus. In the mean time Theodore Lascaris, who had been charged by the clergy to take arms against the tyrant Murzoufle, finding Constantinople in the power of the French, retired with his wife and family to Nice, where, in 1204, he was crowned emperor, and formed a small empire out of that of Constantinople. He had but three successors, the last of whom, John Ducas, was deprived of his sight in 1255 by order of Michael Paleologus, his preceptor, who usurped the throne in 1259, and in 1262 made himself master of Constantinople, so that the empire was reunited. It continued till 1453, when Constantinople was taken by Mohammed II., sultan of the Ottoman Turks; since which it has remained the seat of their empire.

Constantinople is at this day one of the finest cities in the world, from its situation and port. It is frequently called the *Porte* by way of eminence. The city has met with many disasters from convulsions, earthquakes, and the plague.

CONSTITUTION, THE ENGLISH, which owes its foundation to the era of the conquest, has been made the model of most of the constitutions enjoyed by republican states. The Bill of Rights, which was the basis of the English constitution, was passed in the time of the revolution, and contained the following provisions: 1. The pretended power of suspending laws, or the execution of laws by regal authority, without the consent of parliament, is illegal. 2. That the pretended power of dispensing with laws, or the execution of laws by regal authority, as it hath been assumed and exercised of late, is illegal. 3. That the commission for erecting the late court of commissioners for ecclesiastical causes, and all other commissions and courts of like nature, are illegal and pernicious.

cious. 4. That levying money for, or to the use of the crown, by pretense of prerogative, without grant of parliament, for longer time, or in all other manner than the same is, and shall be granted, is illegal. 5. That it is the right of the subjects to petition the king, and that all commitments and prosecutions for such petitioning, are illegal. 6. That the raising or keeping a standing army within the kingdom in time of peace, unless it be with consent of parliament, is against law. 7. That the subjects which are Protestants, may have arms for their defense, suitable for their conditions, and as allowed by law. 8. That election of members of parliament ought to be free. 9. That freedom of speech, and debates or proceedings in parliament, ought not to be impeached or questioned in any court or place out of parliament. 10. That excessive bail ought not to be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted. 11. That jurors ought to be duly empaneled and returned; and that jurors which pass upon men in trials for high treason, ought to be freeholders. 12. That all grants and promises of fines and forfeitures of particular persons, before conviction, are illegal and void. 13. And that for the redress of all grievances, and for the amending, strengthening, and preserving of laws, parliaments ought to be held frequently.

The English constitution comprehends the whole body of laws by which the British people are governed, and to which it is presumptively held that every individual has assented.—*Lord Somers*. This assemblage of laws is distinguished from the term government in this respect—that the constitution is the rule by which the sovereign ought to govern at all times, and government is that by which he does govern at any particular time.—*Lord Bolingbroke*. The king of England is not seated on a solitary eminence of power; on the contrary, he sees his equals in the co-existing branches of the legislature, and he recognizes his superior in the law.—*Sheridan*. The beautiful pile of the British constitution is the work of ages; the production of a happy concurrence and succession of circumstances, growing by degrees, and accommodating itself, in accordance with its

growth, to the tempers and manners, the customs and character of the British people.—*Montesquieu*.

CONSTITUTION OF THE UNITED STATES, *as proposed to the convention held at Philadelphia, 17th September, 1787, and since ratified by the several states with amendments*.

We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I. *Section 1*. All legislative powers herein granted shall be vested in a congress of the United States, which shall consist of a senate and house of representatives.

Sec. 2. The house of representatives shall be composed of members chosen every second year by the people of the several states, and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

Representatives and direct taxes shall be apportioned among the several states which may be included within this union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative.

When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

The house of representatives shall choose their speaker and other officers; and shall have the sole power of impeachment.

Sec. 3. The senate of the United States shall be composed of two senators from each state, chosen by the legislature thereof, for six years; and each senator shall have one vote.

Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year; so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies.

No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

The vice-president of the United States shall be president of the senate, but shall have no vote, unless they be equally divided.

The senate shall choose their other officers, and also a president *pro tempore*, in the absence of the vice-president, or when he shall exercise the office of president of the United States.

The senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the president of the United States is tried, the chief justice shall preside: and no person shall be convicted without the concurrence of two-thirds of the members present.

Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust or profit under the United States: but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment and punishment, according to law.

Sec. 4. The times, places and manner of

holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the congress may at any time by law make or alter such regulations, except as to the places of choosing senators.

The congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

Sec. 5. Each house shall be the judge of the elections, returns and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties as each house may provide.

Each house may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.

Each house shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either house on any question shall, at the desire of one-fifth of those present, be entered on the journal.

Neither house, during the session of congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

Sec. 6. The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall in all cases, except treason, felony and breach of the peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to or returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United

States, shall be a member of either house during his continuance in office.

Sec. 7. All bills for raising revenue shall originate in the house of representatives; but the senate may propose or concur with amendments as on other bills.

Every bill which shall have passed the house of representatives and the senate, shall, before it become a law, be presented to the president of the United States; if he approve he shall sign it, but if not he shall return it, with his objections to that house in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If after such reconsideration two-thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered, and if approved by two-thirds of that house, it shall become a law. But in all such cases the votes of both houses shall be determined by yeas and nays; and the names of the persons voting for and against the bill, shall be entered on the journal of each house respectively. If any bill shall not be returned by the president within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the congress by their adjournment prevent its return, in which case it shall not be a law.

Every order, resolution, or vote to which the concurrence of the senate and house of representatives may be necessary (except on a question of adjournment) shall be presented to the president of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the senate and house of representatives, according to the rules and limitations prescribed in the case of a bill.

Sec. 8. The congress shall have power—To lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts and excises shall be uniform throughout the United States;

To borrow money on the credit of the United States;

To regulate commerce with foreign nations,

and among the several states, and with the Indian tribes;

To establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States;

To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures;

To provide for the punishment of counterfeiting the securities and current coin of the United States;

To establish post-offices and post-roads;

To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

To constitute tribunals inferior to the supreme court;

To define and punish piracies and felonies committed on the high seas, and offenses against the law of nations;

To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

To raise and support armies, but no appropriation of money to that use shall be for a longer term than two years;

To provide and maintain a navy;

To make rules for the government and regulation of the land and naval forces;

To provide for calling forth the militia to execute the laws of the union, suppress insurrections and repel invasions;

To provide for organizing, arming, and disciplining, the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by congress;

To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of particular states, and the acceptance of congress, become the seat of the government of the United States, and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings;—and

To make all laws which shall be necessary

and proper for carrying into execution the foregoing powers, and all other powers vested by this constitution in the government of the United States, or in any department or officer thereof.

Sec. 9. The migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the congress prior to the year one thousand eight hundred and eight, but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

No bill of attainder or *ex post facto* law shall be passed.

No capitation, or other direct, tax shall be laid, unless in proportion to the census or enumeration herein before directed to be taken.

No tax or duty shall be laid on articles exported from any state.

No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another: nor shall vessels bound to, or from, one state, be obliged to enter, clear, or pay duties in another.

No money shall be drawn from the treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

No title of nobility shall be granted by the United States: and no person holding any office of profit or trust under them, shall, without the consent of the congress, accept of any present, emolument, office, or title, of any kind whatever, from any king, prince, or foreign state.

Sec. 10. No state shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts, or grant any title of nobility.

No state shall, without the consent of the congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts,

laid by any state on imports or exports, shall be for the use of the treasury of the United States; and all such laws shall be subject to the revision and control of the congress. No state shall, without the consent of congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless, actually invaded, or in such imminent danger as will not admit of delay.

ARTICLE II. *Section 1.* The executive power shall be vested in a president of the United States of America. He shall hold his office during the term of four years, and, together with the vice-president, chosen for the same term, be elected as follows:

Each state shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the congress: but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector. [*The electors shall meet in their respective states, and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same state with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each; which list they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the senate. The president of the senate shall, in the presence of the senate and house of representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the president, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the house of representatives shall immediately choose by ballot one of them for president; and if no person have a majority, then from the five highest on the list the said house shall in like manner choose the president. But in choosing the president, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall*

be necessary to a choice. In every case, after the choice of the president, the person having the greatest number of votes of the electors shall be the vice-president. But if there should remain two or more who have equal votes, the senate shall choose from them by ballot the vice-president.] [See 12th Amendment.

The congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

No person except a natural born citizen, or a citizen of the United States, at the time of the adoption of this constitution, shall be eligible to the office of president; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

In the case of the removal of the president from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the vice-president; and the congress may by law provide for the case of removal, death, resignation, or inability, both of the president and vice-president, declaring what officer shall then act as president; and such officer shall act accordingly, until the disability be removed, or a president shall be elected.

The president shall, at stated times, receive for his services, a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Before he enter on the execution of his office, he shall take the following oath or affirmation:—

“I do solemnly swear [or affirm] that I will faithfully execute the office of president of the United States, and will to the best of my ability, preserve, protect and defend the constitution of the United States.”

Sec. 2. The president shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states, when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject

relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment.

He shall have power, by and with the advice and consent of the senate, to make treaties, provided two-thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the senate, shall appoint ambassadors, other public ministers and consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law: but the congress may by law vest the appointment of such inferior officers, as they think proper, in the president alone, in the courts of law, or in the heads of departments.

The president shall have power to fill up all vacancies that may happen during the recess of the senate, by granting commissions which shall expire at the end of their next session.

Sec. 3. He shall from time to time give to the congress information of the state of the union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them; and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Sec. 4. The president, vice-president and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

ARTICLE III. *Section 1.* The judicial power of the United States, shall be vested in one supreme court, and in such inferior courts as the congress may from time to time ordain and establish. The judges, both of the supreme and inferior court, shall hold their offices during good behavior, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

Sec. 2. The judicial power shall extend to

all cases, in law and equity, arising under this constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;—to all cases affecting ambassadors, other public ministers, and consuls;—to all cases of admiralty and maritime jurisdiction;—to controversies to which the United States shall be a party;—to controversies between two or more states;—*[between a state and citizens of another state]*;—between citizens of different states,—between citizens of the same state claiming lands under grants of different states, and between a state, or the citizens thereof, and foreign states, citizens or subjects.

In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be party, the supreme court shall have original jurisdiction. In all the other cases before mentioned, the supreme court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations as the congress shall make.

The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the congress may by law have directed.

Sec. 3. Treason against the United States, shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

The congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture except during the life of the person attainted.

ARTICLE IV. Section 1. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the congress may by general laws prescribe the manner in which such acts, records and proceedings shall be proved, and the effect thereof.

Sec. 2. The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

No person held to service or labor in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

Sec. 3. New states may be admitted by the congress into this union; but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislature of the states concerned as well as of the congress.

The congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

Sec. 4. The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature can not be convened) against domestic violence.

ARTICLE V. The congress, whenever two-thirds of both houses shall deem it necessary, shall propose amendments to this constitution, or, on the application of the legislatures of two-thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first arti-

cle; and that no state, without its consent, shall be deprived of its equal suffrage in the senate.

ARTICLE VI. All debts contracted and engagements entered into, before the adoption of this constitution, shall be as valid against the United States under this constitution, as under the confederation.

This constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, anything in the constitution or laws of any state to the contrary notwithstanding.

The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation, to support this constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII. The ratification of the conventions of nine states, shall be sufficient for the establishment of this constitution between the states so ratifying the same.

AMENDMENTS. *Article the first.* Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

Article the second. A well-regulated militia, being necessary to the security of a free state, the right of the people to keep and bear arms, shall not be infringed.

Article the third. No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

Article the fourth. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be

searched, and the persons or things to be seized.

Article the fifth. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

Article the sixth. In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

Article the seventh. In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

Article the eighth. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Article the ninth. The enumeration in the constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

Article the tenth. The powers not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.

Article the eleventh. The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state,

or by citizens or subjects of any foreign state.

Article the twelfth. The electors shall meet in their respective states, and vote by ballot, for president and vice-president, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as president, and in distinct ballots the person voted for as vice-president; and they shall make distinct lists of all persons voted for as president, and of all persons voted for as vice-president, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the senate;—The president of the senate shall, in the presence of the senate and house of representatives, open all the certificates, and the votes shall then be counted;—The person having the greatest number of votes for president, shall be the president, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as president, the house of representatives shall choose immediately, by ballot, the president. But in choosing the president, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the house of representatives shall not choose a president whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the vice-president shall act as president, as in the case of the death or other constitutional disability of the president.

The person having the greatest number of votes as vice-president, shall be the vice-president, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the senate shall choose the vice-president: a quorum for the purpose shall consist of two-thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice.

But no person constitutionally ineligible to the office of president shall be eligible to that of vice-president of the United States.

Article the Thirteenth, Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist in the United States, or any place subject to their jurisdiction.

Sec. 2. Congress shall have power to enforce this by appropriate legislation.

CONSULS. These officials were appointed at Rome, 509 B. C. They possessed regal authority for the space of a year. At first they were both patricians, but in the year 588 B. C. the people obtained the privilege of choosing one from their own number, and sometimes both were plebeians. A consular government was set up in France, Nov. 9th, 1799, when Bonaparte, Cambacères, and Lebrun were made consuls. Bonaparte was created first consul for life, May 6th, 1802.

CONTI, ARMAND DE BOURBON first an ecclesiastic, then a soldier, opposed his brother the great Condé. After being successively governor of Guienne, general of the armies in Catalonia, and governor of Languedoc, he died in 1666.

CONTRERAS. In this engagement, fought early in the morning of the 20th of August, 1847, a part of Scott's army commanded by Gen. Persifer F. Smith, stormed Gen. Valencia's intrenched camp. More than a thousand prisoners were captured, and some fifteen hundred Mexicans killed and wounded. The American loss in killed, wounded and missing was about one hundred. The battle of Cherubusco was fought later in the same day.

COOK, JAMES, a famous English navigator, born in Yorkshire, in 1728, early went to sea. He was employed in several important services, and explored the South Sea Islands in 1769. From New Zealand he sailed to New Holland, New Guinea, and Batavia, returning home in 1771. His next voyage to the southern hemisphere was commenced in 1772, in two ships, the *Resolution* and *Adventure*. On this voyage Cook discovered the island of New Georgia, and returning, July 30th, 1775, was well received and rewarded for his services. In July, 1776, he sailed to determine the long agitated question of a northwest passage to the Pacific

Ocean, but the attempt was abandoned as impracticable, and the Resolution and Discovery anchored at the Sandwich Islands, on their return, Nov. 26th, 1778. Their reception was at first favorable, but when Cook went on shore to seize the king of Owhyhee, with the intention of keeping him as a hostage, till one of the English boats stolen by the savages was restored, he was attacked by the natives, one of whom felled him by a club, and then dispatched him with a dagger. This event occurred on the 14th of February, 1779.

COOPER, SIR ASTLEY PASTON, an eminent English surgeon, born in 1768, died in 1841.

COOPER, JAMES FENIMORE, a distinguished American novelist, died at Cooperstown, N. Y., Sept. 14th, 1851. He was born at Burlington, N. J., Sept. 15th, 1789; his father being a judge of some distinction, and a large landholder in Otsego county. After graduating at Yale College, he entered the navy as a midshipman in 1805. In 1810, he left the service, married, soon settled at Cooperstown, and commenced his brilliant career in fiction, publishing the series of tales of early American life which won him such enviable distinction. In 1826, he visited Europe, everywhere meeting with a most cordial reception. During his stay of several years abroad, he wrote several of his best sea stories. Some of his later works, after his return home, embodied political opinions and strictures upon the faults of American life and character, which subjected him for some years to a warm and bitter hostility.

COPERNICUS, NICOLAS, the illustrious astronomer, was born at Thorn in Prussia, Feb. 19th, 1473. Till his time the Ptolemaic theory, which made the earth the centre of the planetary system and of the universe, had been implicitly believed. Contrary teaching was afterward denounced as not only a heresy in science but in religion, and a contempt of Scripture. The astronomical studies of Copernicus convinced him of the earth's annual motion and the sun's immobility as the centre of our solar system. Dreading the prejudices of the world, he long delayed the publication of his theory. A printed copy of the work in which he embodied it was only placed in his hands a few hours before his death, which occurred May 22d, 1543.

COPLEY, JOHN SINGLETON, a self-taught painter, a native of Boston, where he was born in 1738. He went to England in 1776, where he met with great encouragement, and died in London in 1815. The painting of the death of Lord Chatham in the House of Lords, after his immortal speech in favor of America, was one of his best performances. His son, JOHN SINGLETON COPLEY, born in Boston, May 21st, 1772, was raised to the peerage as Lord Lyndhurst upon his appointment as lord chancellor in 1827, and occupied an eminent position among the statesmen of his adopted country.

CORDAY, CHARLOTTE, one of those rare characters in history who by an utter sacrifice of self have gained a world's admiration, was born in 1768. The blood of Corneille, the great dramatist, coursed in her veins. She was educated in a convent, and seems to have formed her naturally enthusiastic mind upon the classic models of antiquity. Her assassination of Marat, one of the atrocious triumphs, is one of the most startling passages in the bloody drama of the French revolution. Not aware that he was but the tool of Danton and Robespierre, to him she ascribed the woes of the republic, and on him she resolved to avenge her ill-fated country. She left home secretly, and proceeded to Paris, where she calmly remained near Marat's dwelling two days, before she attempted to execute her bloody intent. With difficulty she obtained admittance to Marat (who stood in great fear of assassination), on the evening of July 13th, 1793; having previously written him in a note that she was from the seat of rebellion, and would "put it in his power to do France a great service." Marat was in a bath; a soiled handkerchief was bound around his head, increasing his natural hideousness; a coarse covering was thrown across the bath; a board placed transversely supported his papers. Entering into conversation with Charlotte, he penned with ferocious joy the fresh list of victims with which she pretended to supply him; crying, with a malignant smile, "Before a week they shall have perished on the guillotine." "These words," Charlotte said afterward, "sealed his fate." Drawing from beneath the handkerchief that covered her bosom the knife she had hidden there, with desperate determination she plunged it to the hilt in the monster's heart. One loud, dying shriek for

help he gave, and then sank back dead in the bath. She left the closet, and sat down calmly in the next apartment. The household of Marat rushed to the fatal spot; the tumult spread; a crowd gathered, who gazed with wonder upon the murderess, as she stood before them with still disordered garments, flushed cheeks, and her long dark disheveled hair, loosely bound by a broad green ribbon, falling around her; so calm, so serenely lovely, that those who most abhorred the deed she had wrought, gazed upon her with involuntary admiration. She submissively surrendered herself to arrest. Her self-possession, sincerity, and maidenly modesty at the trial, which immediately ensued, were marvelous in the midst of the tumult that agitated Paris. At the very commencement of the prosecution, "All these details of form are needless," she said. "It was I who killed Marat." "I killed one man to save a hundred thousand." "I was a republican before the revolution; I never wanted energy. I mean by energy the feeling of those who are willing to forget their own interest for the sake of their country." She was condemned. A heavy storm broke forth as the car of the doomed, on which she sat clothed in a red smock as a murderess, went from the prison to the guillotine. An immense crowd lined every street through which she passed. Hootings and execrations at first were her portion; but as her pure and serene beauty dawned on the throngs; as the exquisite loveliness of her countenance, and the sculptural beauty of her figure, became more fully revealed,—pity and admiration superseded every other feeling. Her bearing was so gracefully calm and dignified as to rouse sympathy in the hearts of those who detested not only her crime, but the cause for which it had been committed. Many men of every party uncovered their heads and bowed as the cart passed before them, and one young man cried out for the erection of a monument to her memory, that should bear the inscription, "Greater than Brutus."

CORDELIERS, friars of the order of St. Francis; clothed in coarse gray cloth, with a small cowl and cloak of the same stuff, having a girdle of cord or rope, tied with three knots, whence their name, which was first given to them by St. Louis of France, 1227.

CORINTH, a famous city of ancient Greece,

situated on the isthmus of the same name. It was founded B.C. 1520. Corinthus, son of Pelops, gave his name to the city. The inhabitants were once famed for their power, wealth, intelligence, and voluptuousness. They founded Syracuse in Sicily, which they afterward delivered from oppression. Corinth was destroyed, by the Roman consul Mummius, 146 B.C. The consul, who was no judge of the fine arts, assured the soldiers who had charge of the incomparable paintings sent from Corinth to Rome, that if they injured them, he should make them furnish new ones. Julius Caesar attempted to restore the city to its former importance. The government, at first monarchical, was changed 757 B.C., and it became the head of the Achæan league. In 1453 it fell into the hands of the Turks. Corinth is now a small town of 2,000 inhabitants.

CORIOLANUS, the surname of Caius Marcius, given him for his victory over Corioli. After having served his country faithfully, and received many wounds in her service, he was refused the consulship; indignant at the ingratitude of his countrymen, who banished him, he joined the Volsci, a warlike nation hostile to the Romans. Coriolanus terrified the Romans by approaching their capital at the head of a powerful army of Volscians. The offended Roman refused to listen to proposals made in the hope of inducing him to withdraw, and pitched his camp within five miles of the city. His enmity against his country would have been fatal, had not his wife, Volumnia, and his mother, Veturia, aided by the presence of his children, prevailed upon him to withdraw his army. Coriolanus, in yielding to his mother, and raising her from her suppliant posture, pronounced a sentence which was prophetic of his fate: "Oh! my mother, you have saved Rome, but you have destroyed your son." The Volscians, indignant at the treachery of Coriolanus, put him to death, B.C. 488.

CORNEILLE, PIERRE, a French author who flourished in the time of Louis XIV., and was the founder of French tragedy.

CORNELIA, daughter of Scipio Africanus the elder, mother of the Gracchi, a Roman matron who lived about 130 B.C. A lady of Campania having shown her jewels to Cornelia, in paying a visit to the latter requested to see her jewels in return. At that moment

her boys entered the room, and the noble Cornelia, pointing them out to her visitors, exclaimed, "These are my jewels!" At her death the Romans, mindful of her worth, erected a monument to her memory.

CORNWALLIS, CHARLES, Marquis of, born in 1738, entered the English army at an early age, and rose rapidly. He commanded the British army in the South during the Revolution, and was finally captured at Yorktown. In 1786, he was made governor-general of India, where he reduced Tippoo Saib. From 1798 to 1801 he was lord-lieutenant of Ireland, and was of eminent service in restoring quiet to that distracted country. In 1805, he was once more made governor-general of India, but died at Ghazepore, soon after his arrival out, Oct. 5th of that year.

CORREGGIO. ANTONIO ALLEGRI, commonly called Correggio from his birth-place, a small town in Modena, was born in the winter of 1493-4. In 1519, we find him a master of established reputation at Parma. His frescoes in the churches of Parma are his greatest works, but he likewise produced many celebrated paintings in oil. His proverbial grace—apparent, not only in his undulating forms and soft transitions, but in the action and expression of his figures—is a distinctive characteristic of his works; and he is still unrivaled in a certain harmony which results from delicate gradations of light and shade. He died of a fever at Correggio, March 5th, 1534.

CORSICA, an island in the Mediterranean, north of Sardinia. Its area is 3,377 square miles, and the population in 1851 was 226,253. It is mountainous, but the numerous valleys are extremely fertile. The Corsicans know not how to develop the resources of their island. They are in an almost barbarous state, recklessly brave, revengeful, fond of freedom, and indolent. Corsica has been successively occupied by the Carthaginians, the Romans, the Goths, the Saracens, the Franks, the Pope, the Pisanese, the Genoese, the French, and the English, falling into the hands of the last in 1794. The English, however, did not long retain possession of the island, and it was again restored to France. Ajaccio is the chief town and port.

CORTEZ, FERNANDO, the conqueror of Mexico, was born in 1485, in Estremadura. He came to the West Indies in high hopes,

and Velasquez, governor of Cuba, gave him the command of an expedition designed for the reduction of Mexico, which consisted of ten ships, six hundred men, ten small field-pieces, and eighteen horses. With this small armament he accomplished his enterprise, in 1519, and added the empire of Mexico to that of Spain. He took Montezuma prisoner, although received with hospitality, and the unfortunate king was killed by his own subjects in an attack on the Spaniards. The conduct of the conquerors so exasperated the Indians that they compelled Cortez to quit the city with great loss, but he regained it after some hard fighting. On the capture of Guatimozin, son of Montezuma, the city surrendered, and the empire of Mexico was at an end. A commission arrived to deprive Cortez of his command, and he returned to Spain in 1528 to procure redress. He died in obscurity, in 1554.

CORUNNA, a seaport in the north-west of Spain. Sir John Moore's army, amounting to about 15,000, had just accomplished a safe retreat hither when they were attacked by Soult with 20,000 troops, Jan 16th, 1809. The French were repulsed, but the loss of the British was immense. Their illustrious commander was struck by a cannon-ball, which carried away his left shoulder with part of the collar-bone, leaving the arm hanging by the flesh, and died in the arms of victory. In the evening his corpse, wrapped in a cloak, was interred by the officers of his staff, and the remnant of the army hastily embarked.

COSSACKS, the name of several warlike tribes that inhabit the south-western provinces of Russia, and form an effective portion of the Russian cavalry. Their horses are small but hardy, and will travel for a whole campaign from fifty to seventy miles a day. They fight in little bands, and their arms are long lances, bows and arrows, sabres, and pistols or guns. The chief is called a hetman.

COUNCILS OF THE CHURCH. The following are among the most memorable ecclesiastical councils of ancient days. Of the apostles at Jerusalem, A.D. 50. Arles in France, 314; the western bishops met to suppress the Donatists; three fathers of the English church were present. Nice, 325; the first Ecumenical or General Nicene;

Constantine the Great presided; Arius and Eusebius were condemned for heresy; this council composed the Nicene creed. Tyre, 335, when the doctrine of Athanasius was canvassed. Constantinople, 337, when the Arian heresy gained ground. Rome, 342; concerning Athanasius; it lasted eighteen months. Sardis, 347. Rimini, 359; four hundred fathers attended, and Constantine obliged them to sign a new confession of faith. Constantinople, the second general, 381; Pope Damasius presided. Ephesus, the third, 431; Pope Celestine presided. Chalcedon, the fourth, 451; Pope Leo presided, and Marcian and his empress attended. Constantinople, the fifth, 553; and the sixth in 680. Authority of the six general councils re-established by Theodosius, 715. Nice, second Nicene and seventh general, 787. Constantinople, eighth, 869. Clermont in France, 1094; convened by Urban II. to authorize the first crusade; Philip I. of France was excommunicated. The Lateran councils were so called because held in the basilica of the Lateran at Rome. First Lateran, ninth general, 1122; the right of investitures settled by treaty between Pope Calixtus II. and the Emperor Henry V. Second Lateran, tenth general, 1139; Innocent II. presided; the preservation of the temporal ties of ecclesiastics was the principal subject, and occasioned the attendance of one thousand fathers. Third Lateran, eleventh general, 1179; held against schismatics. Fourth Lateran, twelfth general, 1215; four hundred bishops and a thousand abbots attended. Lyons, thirteenth general, under Innocent IV. 1245. Lyons, fourteenth general, under Gregory X., 1274. Vienne, in Dauphiny, fifteenth general, 1311; Clement V. presided, and the kings of France and Aragon attended; the order of knight-templars was suppressed. Pisa, sixteenth general, 1409; Gregory XII. and Benedict XIII. deposed, and Alexander elected. Constance, seventeenth general, 1414; Martin V. elected pope, John XXIII. being deposed. This council condemned Jerome of Prague and John Huss to be burned alive, a sentence executed upon the latter July 6th, 1415, and on the other the 6th of May following, in a suburb of Constance called Paradise! Huss, under a safe-conduct from the Emperor Sigis-

mund, had complied with a summons from the council to defend his opinions before the clergy of all nations, and was treacherously cast into prison. Jerome hastened to Constance to defend him, was himself loaded with chains, and finally shared the fate of his friend. Basle, eighteenth general, 1431. Fifth Lateran, nineteenth general, begun by Julius II., 1512, and continued under Leo X., till 1517, for the suppression of the pragmatic sanction of France against the council of Pisa. Trent, the twentieth and last general council styled œcumenical, 1545; it was held to condemn the doctrines of Luther, Zuinglius, and Calvin; it continued with intervals till 1563.

COURTRAI, anciently Cortoriacum, a town of Belgium, twenty-two miles south-west of Ghent, famous for the battle fought in its vicinity, in 1302, between the Flemings and French. The latter were defeated with great loss, and, from the fact that four thousand gilt spurs were found upon the field, the engagement was called the Battle of the Spurs.

COWLEY, ABRAHAM, an English poet, the son of a grocer, born in 1618, died in 1667. He was an easy writer, and patronized by royalty.

COWPENS, S. C. Here, Jan. 17th, 1781, a British force led by Tarleton was brilliantly defeated by the Americans under Gen. Daniel Morgan. This was an important check to the plans of Cornwallis.

COWPER, WILLIAM, the poet, son of the Rev. Dr. Cowper, was born at Berkhamstead, Herts, Nov. 15th, 1731. His education was acquired at a public school, where girlish timidity and delicacy subjected him to constant agony from the tyranny and roughness of his school-fellows. He studied law, and obtained the place of clerk of the House of Lords; but when the time approached for him to enter upon the duties of his office, his terror at presenting himself before the peerage, not only induced him to relinquish the place, but produced a fit of sickness. About this time his religious fears brought on a temporary derangement. He led the life of a despondent recluse, at Olney, now and then afflicted by a recurrence of his insanity, which in his last years settled into a constant shadow of religious agony and terror. His

death took place April 25th, 1800. Of all his poems the humorous ballad of "John Gilpin," and "The Task," are the best.

CRABBE, GEORGE, a popular British poet, was born Dec. 24th, 1754, at Aldborough in Suffolk. He was intended for a surgeon, and actually opened a shop, to which he confined himself for some time, although barely making his expenses. In 1778 he went to London as a literary adventurer, but was for a long time unsuccessful. When a prison was in near view, and ruin appeared to threaten him, he conceived the idea of writing to Edmund Burke, for assistance and advice. That great man at once became his friend and patron, urged him to persevere, and induced him to study divinity and take orders. Thenceforth his circumstances were comfortable. He married the object of his early affections, devoted himself to literature, and received the applause due to a genius of the highest order, and continued to use his pen till his death in 1832. Crabbe excelled in descriptions of humble life, and his poems are marked by a sombre strength and pathos. Byron called him,

"Nature's sternest painter, but her best."

CRANMER, THOMAS, Archbishop of Canterbury, who aided the progress of the reformation in England, was yet the slave of the king, and never permitted conscience to interfere with the wishes of the crowned tyrant. He joined the partisans of Lady Jane Grey, and was accordingly sent to the Tower on the accession of Mary. Having been accused of blasphemy, perjury, incontinence, and heresy, he was burnt at Oxford, March 21st, 1556. Cranmer was born in 1489. He was at once a divine and a statesman. In his character of divine he was perfectly ready to go as far in the way of change as any Swiss or Scottish reformer. In his character of statesman he was desirous to preserve that organization which had, during many ages, admirably served the purposes of the bishops of Rome, and might be expected now to serve equally well the purposes of the English kings and of their ministers. His temper and his understanding eminently fitted him to act as mediator. Sainly in his professions, unscrupulous in his dealings, zealous for nothing, bold in speculation, a coward

and a time-server in action, a placable enemy and a lukewarm friend, he was in every way qualified to arrange the terms of the coalition between the religious and the worldly enemies of popery. He was more courageous at the stake than he had been in life. The night before martyrdom his enemies seduced him by hope of life to sign a written recantation. When the fire was lit about him, he thrust his right hand, with which he had signed, into the flame before it could reach his body, sometimes saying, "This unworthy hand!" and then, "Lord Jesus, receive my spirit."

CRASSUS, MARCUS LICINIUS, a Roman consul, distinguished for some gallant actions, and active in crushing the gladiatorial revolt which was headed by Spartacus. He was slain by the Parthians, B.C. 53. He was the colleague of Caesar and Pompey in the first triumvirate, B.C. 60.

CRAWFORD, THOMAS, an eminent sculptor, was born in New York, N. Y., March 22d, 1814. From an early age he manifested a remarkable fondness for art, which his father lost no opportunity of encouraging. His tendency being manifestly toward the plastic arts, in 1834, at twenty years of age, he was sent to Italy, where he was so fortunate as to gain admittance into the studio of Thorwaldsen, to whose instruction and friendship he became indebted for much of his subsequent success. The purity of form and severe classicism of this eminent master are reflected in many of his pupil's works. After a few years of study, Crawford established his studio in Rome, and soon received abundant employment. A malignant tumor in his eye caused his death, Oct. 7th, 1857.

CREBILLON, the elder, French tragic poet, died 1762, aged eighty-eight.

CRESSY, or CRECY, a town of France ten miles north of Abbeville, where was fought a famous battle between the French under Philip and the English, in which the latter, led by Edward III. and his son the brave Black Prince, were completely victorious, August 26th, 1346. Over 30,000 French were slain, while the loss of the English was very small. The crest of John, the Bohemian king (who fell fighting for the French), three ostrich feathers, with the motto *Ich dien*, "I serve,"

was adopted by the Black Prince, and has ever since been borne by the heir to the English crown.

CRICHTON, JAMES, a Scotch gentleman, born in 1550, of a good family, who, from his proficiency in the arts and sciences, particularly music and manly exercises, was styled the Admirable. He traveled in France and Italy, and in Mantua, having pleased the duke, was appointed preceptor to his son. During the carnival of 1583, Crichton, while playing upon his guitar, was attacked in the streets by a masked band, against which he defended himself with his accustomed spirit, until he recognized his pupil in the leader. Throwing himself upon his knees, he presented his sword to the young nobleman, who stabbed his preceptor to the heart. The motives which impelled him are unknown.

CRILLON, LOUIS DE BALBE, surnamed the Fearless, a celebrated French commander, born of a noble family, in Provence, in 1541. He was the friend of Henry IV. He distinguished himself at the siege of Calais, and against the Huguenots and the Turks. "Hang thyself, brave Crillon; we have fought at Arques, and thou wast absent," was Henry's laconic announcement of one of his most brilliant victories to his favored friend. In 1592, he successfully defended Villebœuf with an inferior force against Marshal Villars, and when called upon to surrender, gallantly answered, "Crillon is within, and Villars without." The assailants were unsuccessful. One day, hearing a sermon in which the sufferings of Christ were forcibly described, he seized the handle of his sword and cried, "Where wert thou, Crillon?" He died in 1616.

CRÆSUS, the last king of Lydia, famed for his immense wealth. Being defeated by Cyrus, B.C. 548, he was conducted to the stake, but saved his life by repeating, in the hearing of Cyrus, the saying of Solon, that no man could be pronounced happy till his death.

CROMWELL, OLIVER, was born of a good family at Huntingdon, April 25th, 1599, and received a careful education. The excesses in which he indulged on quitting the university, were ended at his marriage with Elizabeth Bouchier, daughter of a baronet of

Essex, at the age of twenty-one. He was chosen to a seat in parliament in 1628, and again in 1640. He was a strong opponent of the measures of the court. In 1642, when hostilities were determined upon, Cromwell raised a troop of horse, and seized the plate of the university at Cambridge to defray the expenses of the war. He soon acquired the rank of colonel, and the superior courage of his troops, procured for them at Marston Moor the name of ironsides. He also distinguished himself at the battle of Newbury, 1643. He had now gained so great an influence, that when the famous self-denying ordinance was passed, by which all members of either house of parliament were excluded from command in the army, Cromwell was particularly excepted. He was constituted lieutenant-general, and by his skill and courage the battle of Naseby was won in 1645, followed by a series of successes which decided the fate of the royalists.

The parliamentary troops had been at first far inferior to the high-spirited cavaliers. But the army which grew up under the rigid discipline of Cromwell, was irresistible. The stubborn courage of the English was, by the system of Cromwell, at once regulated and stimulated. Other leaders have maintained order as strict; other leaders have inspired their followers with a zeal as ardent; but in his camp alone the most rigid discipline was found in company with the fiercest enthusiasm. His troops moved to victory with the precision of machines, while burning with the wildest fanaticism of crusaders. From the time when the army was remodeled to the time when it was disbanded, it never found, either in the British islands or on the continent, an enemy who could stand its onset. In England, Scotland, Ireland, Flanders, the Puritan warriors, often surrounded by difficulties, sometimes contending against three-fold odds, not only never failed to conquer, but never failed to destroy and break in pieces whatever force was opposed to them. They at length came to regard the day of battle as a day of certain triumph, and marched against the most renowned battalions of Europe with disdainful confidence. Turenne was startled by the shout of stern exultation with which his English allies advanced to the

combat, and expressed the delight of a true soldier when he learned that it was ever the fashion of Cromwell's pikemen to rejoice greatly when they beheld the enemy; and the banished cavaliers felt an emotion of national pride when they saw a brigade of their countrymen, outnumbered by foes and abandoned by allies, drive before it in headlong route the finest infantry of Spain, and force a passage into a counterscarp which had just been pronounced impregnable by the ablest of the marshals of France. But that which chiefly distinguished the army of Cromwell from other armies was the austere morality and the fear of God which pervaded all ranks. It is acknowledged by the most zealous royalists that, in that singular camp, no oath was heard, no drunkenness or gambling was seen, and that, during the long dominion of the soldiery, the property of the peaceable citizen and the honor of woman were held sacred. If outrages were committed, they were outrages of a very different kind from those of which a victorious army is generally guilty. No servant girl complained of the rough gallantry of the red-coats; not an ounce of plate was taken from the shops of the goldsmiths; but a Pelagian sermon, or a window on which the Virgin and Child were painted, produced in the Puritan ranks an excitement which it required the utmost exertions of the officers to quell. One of Cromwell's chief difficulties was to restrain his pikemen and dragoons from invading by main force the pulpits of ministers whose discourses, to use the language of that time, were not savory; and too many cathedrals still bear the marks of the hatred with which those stern spirits regarded every vestige of popery.—*Macaulay*.

Charles I. was betrayed by the Scotch, and brought to the scaffold. For this step Cromwell should not alone be held responsible. He acquiesced in what he could not have prevented, had he desired a quieter result. England was declared a commonwealth. Ireland and Scotland raised the standard of the second Charles. Cromwell, in 1649, went to Ireland, which he subdued, and leaving Ireton as deputy, returned to England in 1650. Against the Scots, he gained the battle of Dunbar, Sept. 3d, 1650, and that day twelvemonth, defeated the royal forces at Worcester.

The Rump parliament and the army came in collision. Armed men cleared the house, and the victorious general was declared lord high protector of the commonwealth, Dec. 12th, 1653, by the Barebones parliament. Opposed as he was by both royalists and republicans, he could be safe only by being absolute. The government, in form a republic, was in truth a military despotism, moderated by the wisdom, the sober-mindedness, and the magnanimity of the protector. The laws were violated only when demanded for the safety of his person or government. The cavalier who refrained from disturbance was unmolested. Justice was administered with exactness and purity not before known. Never, since the reformation, had there been so little religious persecution.

Cromwell's foreign policy extorted the ungracious approbation of those who most detested him. England had been of scarcely more weight in European politics than Venice or Saxony. She at once became the most formidable power in the world, dictated terms of peace to Holland, avenged the common injuries of Christendom on the pirates of Barbary, vanquished the Spaniards by sea and land, seized one of the finest West India islands, and acquired on the Flemish coast a fortress which consoled the national pride for the loss of Calais. She was supreme on the ocean. She was the head of the Protestant interest. All the Protestant churches scattered over Roman Catholic kingdoms acknowledged Cromwell as their guardian. The pope himself was forced to preach humanity and moderation to popish princes; for a voice which seldom threatened in vain had declared that, unless favor were shown to the people of God, English guns should be heard in the castle of Saint Angelo.

The protector had thus conquered peace at home and triumph abroad. The death of his favorite daughter smote him sorely; he became depressed in spirits, was seized with a slow fever, and died, Sept. 3d, 1658. This best and greatest ruler that England has ever had was buried with more than regal pomp in Westminster Abbey. In mean revenge, after the restoration, his body was torn from its sanctuary and exposed upon the gallows at Tyburn.

CROMWELL, RICHARD, succeeded his father as protector of England, was soon deposed by the army, and lived a quiet life as a country gentleman.

CROMWELL, THOMAS, Earl of Essex, son of a blacksmith at Putney, in Surrey, was born about the year 1490. Early in life he became clerk to the English factory at Antwerp, which he left to serve in Italy, where he fought beneath the banners of the Constable of Bourbon. Returning home, he was taken into the service of Cardinal Wolsey, who procured him a seat in the House of Commons. When Wolsey fell, Cromwell became a servant of the king, was raised to the office of chancellor of the exchequer, and in 1534 made secretary of state and master of the rolls. About this time he was also elected chancellor of Cambridge. The next year he was appointed visitor-general of the monasteries. In 1536 he was made lord keeper of the privy-seal, and the same year advanced to the peerage by the title of Lord Cromwell; and the papal supremacy being abolished, he was nominated the king's vicar-general in the convocation. In 1537 he was appointed chief-justice itinerant of all the forests beyond Trent, elected knight of the garter, and made dean of Wells. To these honors was added the grant of many manors after the dissolution of the monasteries, and in 1539 he was created Earl of Essex. Soon after, his fortune declined as fast as it had risen. His ruin was hastened by the marriage which he projected between Henry and Anne of Cleves, and he was sent to the Tower, where he was deserted by all his friends except Cranmer, who, however, could not save him from the scaffold, and he suffered death with fortitude, July 28th, 1540.

CRUDEN, ALEXANDER, author of a well-known biblical concordance, was born in Aberdeen, May 31st, 1701. He was exceedingly eccentric, and at times insane. He was found dead in his chamber in the attitude of prayer, Nov. 1st, 1770.

CRUSADES, the name given to the expeditions fitted out by the Christian warriors of Europe, for the recovery of the Holy Land, from the end of the eleventh to the end of the thirteenth century. The crusaders derived their name from the badge of the cross which was wrought upon their mantles and appeared

in various parts of their equipments. The age was one in which the people were peculiarly adapted to the reception of enthusiastic religious impulses. The Christians could not bear to think that the places which they held so dear, and which the history of their religion hallowed, should be desecrated by the presence of infidels, and rendered dangerous to those pilgrims whom reverence called to Palestine. The church called upon the chivalry of Europe, and the knights responded to the summons.

The rise of the crusades is immediately attributable to the enthusiasm of a wandering pilgrim, called Peter the Hermit, who, having experienced the tyrannical exactions imposed on the visitors of the holy sepulchre, represented them to Urban II. in such lively colors, that the prelate selected him as the instrument of a grand design which he had formed to overthrow the Mohammedan power, and Peter, armed with the holy commission, went from province to province, to kindle up that enthusiasm by which he was himself consuming. When the feelings of the people and the potentates appeared ripe for some wild project, Urban held a council in the open fields at Piacenza, and proposed his scheme, which was warmly applauded, but not as warmly embraced. Another council was therefore held at Clermont, graced by the presence of ambassadors from all nations, and the result was as favorable as he could have anticipated. The pope held out to the crusaders the promise of spiritual pardon, and imposed on them only the penance of plunder for their sins. Thus excited, the enthusiasm became general; noblemen sold their estates for outfits; the meanest lords of the manors set forth at their own expense; the poor gentlemen followed them as esquires; and above 80,000 collected under the banners of the cross. Godfrey of Boulogne was at the head of 70,000 foot, and 10,000 horse, splendidly armed, were under the command of many lords, who were joined by Hugh, brother to Philip I. of France, Raymond of Toulouse, Bohemond, King of Sicily, and others of equal and less note. A proposal was made to the pope to put himself at their head, but he refused. This refusal, however, did not damp their ardor.

Confiding in their cause, their numbers, and their equipments, they traversed Germany

and Hungary, took Nice, Antioch, and Edessa, and arrived at Jerusalem. The city was taken by storm, after five weeks' siege, July 15th, 1099. The numerous inhabitants and garrison were put to the sword. Neither arms defended the valiant nor submission the timid; no age or sex was spared; infants on the breast were pierced by the same blow with their mothers who implored for mercy. Even a multitude to the number of ten thousand, who had surrendered themselves prisoners, and were promised quarter, were butchered in cold blood by these ferocious conquerors. The streets of Jerusalem were covered with corpses; and the triumphant warriors, after every enemy was subdued or slaughtered, immediately turned themselves in humiliation toward the holy sepulchre! They threw away their weapons still streaming with blood; they advanced, with bowed heads, and naked feet and hands, to that sacred monument; they sung anthems to their Saviour, who had there purchased their salvation by his death and agony; and their devotion so overcame their fury, that they dissolved in tears, and bore the appearance of every soft and tender sentiment. So inconsistent is human nature with itself! and so easily does superstition ally, both with the most heroic courage and with the fiercest barbarity! Godfrey of Boulogne, not without opposition from the priests, was elected King of Jerusalem, but died in 1100. In 1102, an immense army which departed for the Holy Land, was defeated, and no fewer than 200,000 men lost to Europe by the enterprise. The capture of Baldwin and the loss of Edessa occasioned a new crusade in 1147.

France again gave the impulse to the religious excitement. Pope Eugenius III. induced St. Bernard of Clairvaux to act the part of Peter the Hermit, and the consequence was that Louis the Young, accompanied by his wife, Eleanor of Guienne, departed for the Holy Land, and Conrad III., in whose hands the red cross was placed, led a large army into Asia. Both of them, however, were unsuccessful.

The unfortunate issue of the second crusade was precipitated by the dissensions of the Christians, and the uncommon abilities of Saladin, who, advancing at the head of an army that placed implicit confidence in the courage and skill of their leader, animated by a relig-

ious fury no less absorbing than that which filled the breast of the crusaders, threw himself upon Jerusalem, which, unable to hold out against him, once more echoed to the shouts of Saracen conquerors, as they again erected their crescent on the ramparts of the city. The Christians lost all their possessions but Antioch, Tripoli, Joppa, and Tyre.

The leaders of the third crusade (1189) were Frederick I. of Germany, surnamed Barbarossa, the chivalric Philip Augustus of France, and the lion-hearted Richard I. of England. Barbarossa was ultimately unsuccessful, but the monarchs of France and England took possession of Ptolemais or Acre. Philip Augustus, from motives of jealousy, left the field to Richard, who proved himself a worthy rival of Saladin, and the two commanders performed wonderful feats of arms which were the admiration of both armies. The fourth crusade was conducted by Andrew II. of Hungary, and the fifth by Frederick II. of Germany. The results of these ought to have shown that the Christians could not hope to gain permanent possession of the country. In 1270 St. Louis, King of France, undertook the sixth and last crusade, which, though well conceived, and vigorously carried on, was unsuccessful. In this last crusade no fewer than 150,000 persons perished: add to this the numbers that died in former expeditions, and it will be seen that the east was the tomb of above two millions of Europeans; and several countries were depopulated and impoverished by the crusades. Yet the holy wars were not without good. They created an intimate connection and a constant intercourse between the nations of Europe, which, as it was favorable to commercial enterprise, increased the wealth, improved the arts, and contributed to establish the civilization of the Christian world.

CUBA, subject to Spain, is the largest of the West Indies. Its area is 42,383 square miles, and its population exceeds a million, of whom about one-half are slaves. The island is rich and fertile, producing sugar, coffee, and tobacco abundantly. Havana, the capital of Cuba, is on the northern coast of the island; population, composed of whites, mulattos, and negroes, 150,000. The streets of the city are dirty, but the strongly fortified harbor is one of the finest in the world. The public

edifices of the city, particularly the Catholic churches, are very splendid. The commerce of Havana is extensive and increasing. It was founded in 1511, by Diego Velasquez, and has been twice taken by the English, but was restored to Spain in 1763. The bones of Columbus repose in the cathedral of Havana.

Cuba was discovered by Columbus in 1492.

In 1511 it was conquered by the Spaniards, and as little gain was anticipated from mines, the natives were cruelly exterminated. In 1762 a powerful expedition for the conquest of the island was fitted out by the British, and Havana capitulated in August. The plunder obtained by the British was immense. By the treaty of 1763, Cuba was restored to the Spaniards. An expedition headed by Lopez, to wrest Cuba from Spanish dominion, landed on the island May 17th, 1850, and ended in defeat and disaster. Lopez made a second attempt in August, 1851. His party was taken, fifty of them shot, and he himself garrotted at Havana.

CULLODEN MUIR, a heath in Scotland, where the Duke of Cumberland defeated the young Pretender, after an obstinate resistance, on the 16th of April, 1746. Prince Charles sought safety in flight among the Highland wilds. The duke's troops practiced great cruelties upon the vanquished, as well as upon the defenseless inhabitants near the field of battle. The defeat quenched the hopes of the house of Stuart forever.

CUMBERLAND, WILLIAM AUGUSTUS, Duke of, second son of George II., was born in 1721. He was wounded at the battle of Dettingen, but refused the assistance of a surgeon until the latter had finished dressing the wound of a poor soldier who had been shot at the same time with himself. He commanded the British army at the battles of Fontenoy and Val, which were lost through the cowardice of the Dutch troops. In 1746 he defeated the Pretender at Culloden, but disgraced his character by his cruel treatment of the vanquished. He died in 1765.

CUMBERLAND, RICHARD, an English dramatist and miscellaneous author, son of the Bishop of Clonfert, was born in 1732, and educated at Trinity College, Cambridge. He died in London, May 7th, 1811. His fame rests altogether on his comic dramas. He was extremely sensitive, self-conceited, and

jealous, and Sheridan, considering him as fair game, held him up to ridicule as Sir Fretful Plagiary in "The Critic." He was much annoyed at the success of the "School for Scandal," and it was only for fear of exciting ridicule by refusing to witness it, that he carried two of his children to see the play. Cumberland sat behind them, the picture of jealousy and envy. When they laughed at any witticisms, in common with the audience, Cumberland would gravely extend a finger and thumb, inflict a severe pinch, and say, "What are you laughing at, my dears? I don't see anything to laugh at."

CUNNERSDORF, a village on the Oder, at no great distance from Frankfort, where Frederick the Great with 50,000 men attacked the Russian and Austrian army of 90,000 in their camp, and at first gained considerable advantages; but pursuing them too far, the Austrians and Russians rallied, and retrieved a complete victory. The Prussians lost two hundred guns, and 20,000 men in killed and wounded, Aug. 12th, 1759.

CURIUS DENTATUS, MARCUS ANNIUS, a Roman consul, famous for his fortitude and frugality. He gained several victories, and defeated Pyrrhus, B.C. 272. The Samnite ambassadors found him cooking some vegetables for his dinner in an earthen pot, yet he indignantly refused the vessels of gold with which they attempted to bribe him.

CURRAN, JOHN PHILPOTT, was born of humble parents, near Cork, in 1750. He was called to the bar in 1775. In his boyhood he had been afflicted like Demosthenes, and his nickname at school was "stuttering Jack Curran." This impediment, like Demosthenes, he overcame, and became famous for his forensic and parliamentary oratory. He entered the Irish parliament about 1785. His eloquence shone in his conversation as well, and was rivaled by his wit and sarcasm. Byron said that Curran spoke more poetry than any man had ever written. This admiration the Irishman did not fully reciprocate. He constantly objected to Byron's moody egotism as the great drawback on his poetry. "Any subject," said Curran, "but that eternal one of self. I weary of knowing once a month the state of any man's hopes or fears, rights or wrongs. I would as soon read a register of the weather, the barometer up so

many inches to day, and down so many inches to-morrow. I feel skepticism all over me at the sight of agonies on paper, things that come as regular and notorious as the full of the moon. The truth is, his lordship weeps for the press, and wipes his eyes with the public."

In the Irish parliament, when once mercilessly exposing the corruption of the placemen, Curran spoke of the immaculate virtue of "those saints on the pension list; they toil not, neither do they spin, but they are arrayed like Solomon in his glory." At another time he used this strong figure concerning those whose path to power had lain through treachery to Ireland: "Those foundlings of fortune, overwhelmed in the torrent of corruption at an early period, lay at the bottom like drowned bodies, while soundness or sanity remained in them; but at length becoming buoyant by putrefaction, they rose as they rotted, and floated to the surface of the polluted stream, where they were drifted along, the objects of terror, and contagion, and abomination."

Of his wit many tales are related. Lundy Foot, a celebrated tobacconist, set up a carriage, and asked Curran for a Latin motto. "*Quid rides*," said Curran. Being told that a very stingy and slovenly barrister had started for the continent with a shirt and a guinea, "He'll not change either till he comes back," said Curran. He was cross-examining a witness: "My lord, my lord," cried the fellow to the judge, "I can't answer yon little gentleman, he's putting me in such a doldrum." "A doldrum! Mr. Curran, what does he mean by a doldrum!" exclaimed Lord Avonmore. "Oh, my lord, it's a very common complaint with persons of this sort: it's merely a confusion of the head arising from the corruption of the heart." Once when he was arguing for the defense in a state trial, the judge shook his head in doubt or denial at one of his points. "I see, gentlemen," said Curran to the jury, "I see the motion of his lordship's head. Common observers might imagine it implied a difference of opinion; but they would be mistaken: it is merely accidental. Believe me, gentlemen, if you remain here many days, you will yourselves perceive that when his lordship shakes his head, there is nothing in it."

Curran died in London in 1817.

CURTUS, MARCUS, a noble Roman youth, of whom it is related, that when a pestilential chasm opened in the Roman forum, 362 B.C., and the oracle declared that it could only be closed when the most precious thing in Rome was thrown into it, Curtius, saying that arms and courage were invaluable, assumed his military dress, and mounting an armed horse, sprang into the abyss, which closed over him forever.

CUSHING, THOMAS, a patriotic American, born in 1725. He early obtained a seat in the general court of Massachusetts, and was chosen speaker of the house of representatives. The supposed extent of his influence induced Doctor Johnson, in his pamphlet "*Taxation no Tyranny*," to remark, "One object of the Americans is said to be, to adorn the brows of Mr. Cushing with a diadem." Mr. C. was a member of the two first continental congresses, and of the council of Massachusetts, and was created judge of the court of common pleas, and of probate in the county of Suffolk. Having been honored with the post of lieutenant-governor of his native state, he died in 1788.

CUTLER, TIMOTHY, a talented American divine, some time president of Yale College. He became rector of Christ Church, in Boston, and died in his eighty-second year, Aug. 17th, 1765.

CUVIER, GEORGE LEOPOLD CHRISTIAN FREDERIC DAGOERT, Baron of, a celebrated French naturalist, born at Montbéliard, Aug. 25th, 1769. His researches are well known to the generality of readers. He died at Paris, May 13th, 1832.

CYCLADES, in ancient geography a name given to certain islands in the Ægean Sea, particularly those that surround Delos as with a circle. They were subjected by Miltiades, but revolted during the Persian invasion.

CYPRUS, an island in the Mediterranean, famed among the ancients for its uncommon fertility and the mildness of its climate. It now contains 140,000 wretched inhabitants. Venus was worshiped here, and the ancient Cyprians were much given to love and pleasure. Its original colonists are unknown. The Egyptians took it in 550 B.C., and the Romans, 58 B.C. It was occupied for some

time by the Arabs on the decline of the Roman empire. They were, however, driven from it during the crusades, and the title of King of Cyprus was for some time held by Richard I. of England. In 1480, it fell into the hands of the Venetians, from whom it was wrested, in 1571, by the Turks.

CYRUS. Concerning this monarch there are two distinct and irreconcilable accounts, those of Herodotus and Xenophon. The latter, in his "Cyropedia," has rather given us the picture of what a monarch should be, than of what a monarch was, and the account of Herodotus is generally adhered to in historical narratives. Cyrus, King of Persia, was the son of Cambyses and Maudane, the daughter of Astyages, the last monarch of Media. From a belief that he was fated to dethrone his grandfather, he was exposed as soon as born; but was preserved by a shepherdess, who educated him as her own son. As he was playing with his equals in years, he was elected a king in one of their sports, and he exercised his power with such independent spirit, that he ordered one of his companions to be whipped severely for disobedience. The father of the boy, who was a nobleman, complained to the king of the ill treatment which his son had received from a shepherd's boy. Astyages ordered Cyrus before him, and discovered that he was Maudane's son, from whom he had so much to apprehend. He therefore treated him with suspicious coldness; and Cyrus, unable to bear his tyranny, escaped from his confinement and began to levy troops to dethrone his grandfather. He was assisted and encouraged by the ministers of Astyages, who were displeased with his oppression. Cyrus

marched against and defeated Astyages in a battle fought B.C. 560. From this victory the empire of Media became tributary to the Persians. Cyrus subdued the eastern parts of Asia, and made war against Croesus, King of Lydia, whom he conquered B.C. 548. He invaded the kingdom of Assyria, and took the city of Babylon by turning the course of the Euphrates, and marching his troops through the bed of the river under the walls, while the people were celebrating a grand festival. He afterward led his troops against Tomyris, the queen of the Massagetae, a Scythian nation, but was defeated in a bloody battle, B.C. 529. The victorious queen, who had lost her son in a previous encounter, was so incensed against Cyrus, that she cut off his head, and threw it into a vessel filled with human blood; crying, "Satisfy thyself with the blood for which thou hast thirsted."

CYRUS, the Younger, was the son of Darius Nothus, and brother of Artaxerxes. On the death of his father, he attempted the life of his brother, to obtain the throne, but was pardoned through the intercession of his mother, Parysatis. He then obtained the governorship of Lydia, whence he marched against his brother. The war ended with the death of Cyrus, B.C. 400. Several thousand Greeks accompanied Cyrus in his expedition, and their retreat, led by Xenophon, and by him described, is a memorable chapter of ancient history.

CYTHERA, the ancient name of an island in the Ionian sea, now Cerigo, containing a population of 8,000. Venus was worshipped here, and here was one of her most splendid temples; hence she was called Cytherea.

CYT

D.

DACIER, ANNA LEFEVRE (the wife of Andrew Dacier), was born in France in 1651. She was celebrated for her learning and beauty. She edited and translated several of the ancient classics, and distinguished herself by her defense of Homer in answer to Lamotte. She died in 1720.

DÆDALUS, an artist and machinist of Athens, who lived three generations before the Trojan war. He was the builder of the Cretan labyrinth. Being imprisoned with his son, Icarus, he is said to have invented wings cemented with wax, by which they soared high in the air. Icarus, neglecting the instructions of his father, fell into the sea, which was named from him the Icarian. His father reached Sicily, and founded a town there.

DAGUERRE, L. J. M., an artist of France, eminent for the discovery of the process for taking pictures upon metal plates, through the action of light. He was born in 1789, and died July 10th, 1851.

DAHOMY, a fertile kingdom of western Africa, the people of which are ferocious. The king's sleeping-chamber is paved with the skulls, and ornamented with the jaw-bones, of his vanquished enemies.

DALE, RICHARD, a commodore in the American navy, was born in Virginia in 1756. He served on board the *Bon Homme Richard* under Paul Jones, and was the first to spring to the deck of the *Serapis* in the bloody engagement which resulted in her capture. He died at Philadelphia, Feb. 24th, 1826.

D'ALEMBERT, JEAN LE ROND, a distinguished mathematician and astronomer, born at Paris in 1717, died in 1783. He was the son of Madame de Tencin and the poet Des-touches, who exposed him while an infant. At ten years of age, the principal of the school in which he received his early education, declared that his pupil had learned all that he could teach him. He undertook to write the mathematical part of the "Dictionnaire Encyclopedique," and contributed many admirable articles to it, which, however, involved him in the attacks made upon the work. He refused the brilliant offers of Fred-

eric II. of Prussia, and Catherine of Russia, tempting him to settle in their respective capitals.

DALLAS, ALEXANDER JAMES, a native of Jamaica, an able lawyer, who came to this country, in 1783, and held various responsible offices under our government, being made secretary of the treasury in 1814. In 1815, he assumed the duties of secretary of war, and on him devolved the task of reducing the army. He died Jan. 16th, 1817, aged fifty-seven.

DAMIENS, ROBERT FRANCOIS, a crazy fanatic, who stabbed Louis XV., at Versailles, on the 5th of January, 1757. He had long meditated the deed, and took opium to prepare himself. After the most cruel tortures, he was broken on the wheel, March 28th, 1757.

DAMON AND PYTHIAS, two Syracusans, who were devotedly attached to each other. Dionysius condemned Pythias to death, but allowed him to absent himself in order to arrange his affairs, on condition that Damon should remain as hostage. The appointed time having expired, Damon was led to the scaffold, and the executioner was about to raise his axe, when Pythias arrived, breathless with haste, threw himself into the arms of his friend, and embraced him tenderly. Dionysius, moved by the scene, in common with the people, restored both the friends to the enjoyment of life and liberty, 387 B.C.

DAMPIER, WILLIAM, an English circumnavigator, born in 1652, known for his adventures in both hemispheres.

DANDOLO, HENRY, a doge of Venice, filled that highest office in the gift of the republic in 1192, being then eighty-four years old. Neither his age nor his defective vision prevented him from discharging his duties with honor. Joining the fourth crusade, he was the first to spring on shore with the standard of St. Mark, at the storming of Constantinople. He died at the age of ninety-seven. There were several other doges of this family.

DANTE. The city of Florence ranks next to Athens in its classic associations. There

certainly is no city so modern, yet so linked to the past. Time seems here almost to have spared the footprints of the great men whose fame has defied him. In the rooms of Michael Angelo, his staff leans in the corner, his unfinished sketches lie upon the table. One may press the same stairs which John Milton ascended when he visited Galileo. Among the great names associated with this city, there is one other, before which every man bows who has been touched by the tragedy of life,—Alighieri Durante, better known as Dante, who in Italian literature is the Homer and the Shakspeare. Dante was born in 1265. He was provided by his early widowed mother with the best education which could be obtained in that age. It was a custom in Florence to celebrate the return of spring by May-day festivities; and it was probably upon one of these occasions, at her father's house, that he was inspired with the beauty of Beatrice Portinari. He tells us that she was so beautiful that all the citizens crowded to see her when she walked in the city, and so pure that they bent down their eyes in her presence. She became the wife of another person, and died in 1290, when Dante was in his twenty-fifth year. He was married the year after, but he never forgot her. At the time of the troubles between the Bianchi and Neri, two factions of the Guelphs in Florence, Dante espoused the cause of the former. The latter gained the mastery. He was banished in 1302, and his property confiscated. He went from place to place, restless and unhappy, loathing a state of dependence, yet unable to retrieve his fortune. He died at Ravenna, Sept. 14th, 1321. The fame of his "Divina Commedia" is imperishable, and the Florentines, who had persecuted him during his lifetime, paid him the highest honors at his death. His characters were those of his own period, with whose history the public were acquainted, and whose families and descendants were alive, and frequently in the enjoyment of wealth and power. But the position in which he placed them, threw an interest round their story, stronger than could have been produced by the adventures of any individual, however illustrious, of a more remote date. The terror and pity, and in some cases the vengeance, of the Italians were awakened, when the shadowy

forms of their contemporaries were made to pass in review before them, stripped of those external advantages which while living had rendered them respected, and had cast a veil over their crimes. The cruel husband shrunk from the picture of his murdered wife, herself condemned to perdition, yet prophesying that for him was destined the lowest pit in hell. The son beheld his father plunged in eternal woe, yet continuing to feel a tender interest in his welfare. The treacherous assassin, who still occupied his place among the nobles of the land, trembled at seeing himself represented as in hell, while, according to the bold supposition of the poet, a demon animated his body. The 'mighty mantle' itself was no protection to the wearer: Pope Nicholas III., plunged head foremost in the flames, was represented as waiting there for the arrival of his guilty successors. The effect was indescribable. Some, unable to endure the contempt of their countrymen, condemned themselves to voluntary exile; some, struck with terror and despair, died broken-hearted; and others fell victims to the private vengeance of the poet's friends.

DANTON, GEORGE JACQUES, a foremost actor in the French revolution, was born at Arcis-sur-Aube, October 28th, 1759. After the assassination of Marat and the fall of the Girondins, Danton and Robespierre came in conflict, and the former was guillotined, April 5th, 1794. He combined some of the greatest and most odious qualities. He has been called the colossus of the revolution, "head of gold, bosom of flesh, loins of brass, feet of clay," and characterized as a "gigantic mass of valor, ostentation, fury, affection, and wild revolutionary force and manhood."

DARDANELLES, are the fortifications on the European and Asiatic sides of the Hellespont, which is hence called the 'Strait of the Dardanelles.'

DARIUS. The name of several sovereigns of Persia, of whom the first is the most celebrated. DARIUS I., a noble satrap of Persia, was the son of Hystaspes, and conspired with six other noblemen, to destroy Smerdis, the usurper of the Persian crown. After the death of the usurper, it was agreed among the conspirators that he whose horse first neighed should be appointed king. In consequence of this singular resolution, the

groom of Darius led his master's horse with a mare to the place near which the seven noblemen were to pass. On the morrow before sunrise, when they proceeded all together, the horse of Darius neighed, and he was saluted by his companions king, B.C. 522. He soon showed himself fit to grace the throne. He took Babylon, and conquered Thrace; was defeated by the Scythians, but favored by fortune in his campaign against the Indians. The burning of Sardis, which was a Grecian colony, incensed the Athenians, and a war was kindled between them and the Persians, in which the latter were unsuccessful. Undismayed at the disaster at Marathon and his immense losses, Darius resolved to lead his troops to Greece in person, but died in the midst of his warlike preparations, B.C. 485. **DARIUS II.**, or Darius Nothus, reigned 423-404 B.C. **DARIUS III.**, surnamed Codomanus, the son of Arsanes and Sysigambis, was descended from Darius Nothus. He was no sooner seated on the throne than Alexander of Macedon invaded his kingdom. The Persians were defeated in the battles of the Granicus and Issus; in the last of which, Darius, leaving his wife, children, and mother, fled in disguise on the horse of his armor-bearer, and was saved by the darkness of the night. Being again defeated in the battle of Arbela, Darius in despair fled to Media, where he was killed by Bessus, the perfidious governor of Bactria, and was found by the Macedonians in his chariot, expiring of his wounds, B.C. 331. For this murder Bessus suffered a horrible death. Four trees having been with great exertion bent down to the ground, he was bound upon them, a limb tied to each. The trees being loosed flew back with great violence, rending his body in pieces.

DARKE, WILLIAM, usually called Major Darke, a brave veteran officer, born in Philadelphia county, 1736, served in the war of 1755-63; again in the Revolutionary war, and finally in the Indian war, under Gen. St. Clair, and died November 26th, 1801.

DARLING, GRACE. Off the coast of Northumberland in England, there lies a group of small islets or rocks, some of which can be seen only at low water; they are called the Farne Islands. Their aspect is wild and desolate in no common degree. Composed of

rock, with a slight covering of herbage, and in many places ending in sheer precipices, they are the residence of little else than wild fowl. Between the smaller islets the sea makes with great force, and many a ship in times past has laid her bones upon the pitiless rocks which every ebb tide exposes to view. Upon Longstone, one of the outer cluster known as the Staples, there stands a lighthouse, which at one time was kept by William Darling, a worthy and intelligent man, of quiet manners, with resources of mind and character sufficient to turn to profitable use the many lonely hours which his position necessarily entailed upon him. He had a numerous family of children; among them a daughter Grace, who had reached the age of twenty-two years when the incident occurred which has made her name so famous. She had passed most of her life upon the little island of Longstone, and is described as having been of a retiring and somewhat reserved disposition. In personal appearance, she was about the middle size, of a fair complexion and pleasing countenance, with nothing masculine in her aspect, but gentle and feminine, and, as might be supposed, with a winning expression of benevolence in her face. Her smile was particularly sweet. She had a good understanding, and had been respectably educated.

On Wednesday evening, Sept. 5th, 1838, the steamer *Forfarshire*, of about three hundred tons' burden, under the command of Captain John Humble, sailed from Hull for Dundee in Scotland. She had a valuable cargo of bale goods and sheet iron; and her company, including twenty-two cabin and nineteen steerage passengers, comprised sixty-three persons. On the evening of the next day, when in the neighborhood of the Farne Islands, she encountered a severe storm of wind, attended with a heavy rain and a dense fog. She leaked to such a degree that the fires could not be kept burning, and her engines soon ceased to work. She became wholly unmanageable, and drifting violently, at the mercy of the winds and waves, struck on one of the reefs of Longstone Island, about four o'clock on Friday morning.

As too often happens in such fearful emergencies, the master lost his self-possession, order and discipline ceased, and nothing but

self-preservation was thought of. A portion of the crew, including the first mate, lowered one of the boats and left the ship. With them was a single cabin passenger, who threw himself into the boat by means of a rope. These men were picked up, after some hours, and carried into the port of Shields. The scene on board was fearful: men paralyzed by despair; women wringing their hands and shrieking with anguish; and among them the helpless and bewildered master, whose wife, clinging to him, frantically besought the protection he could no longer give. The vessel struck aft the paddle boxes; and not above three minutes after the passengers (most of whom had been below, and many of them in their berths) had rushed upon the deck, a second shock broke her into two pieces. The after part, with most of the passengers and the captain and his wife, was swept away through a tremendous current, and the thirty-five or forty wretches perished in the waves. The fore part, on which were five of the crew and four passengers, stuck fast to the rock. These few survivors remained in their dreadful situation till daybreak, with a fearful sea running around them, and expecting every moment to be swept into the deep. With what anxious eyes did they wait for the morning light! and yet what could mortal help avail them even then? Craggy and dangerous rocky islets lay between them and the nearest land, and around these rocks a sea was raging in which no boat was likely to live. But, through the providence of God, a deliverance was in store for them; a deliverance wrought by the strong heart of an heroic girl. As soon as day broke on the morning of the 7th, they were descried from the Longstone light, by the Darlings, at nearly a mile's distance. None of the family were at home, except Mr. and Mrs. Darling and Grace. Although the wind had somewhat abated, the sea (never calm among these jagged rocks) was still fiercely raging; and to have braved its perils would have done the highest honor to the stoutest muscles and well-trying nerves of the strongest man. But what shall be said of the errand of mercy having been undertaken and accomplished mainly through a female heart and arm! Mr. Darling was reluctant to expose himself to what seemed certain destruction; but the earnest entreaties of his daugh-

ter determined him to make the attempt. At her solicitation the boat was launched, with the mother's assistance; and father and daughter entered it, each taking an oar. It is worthy of notice that Grace never had occasion to assist in the boat previous to the wreck of the *Forfarshire*, others of the family being always at hand.

It was only by the exertion of great muscular strength, as well as by the utmost coolness and resolution, that the father and daughter rowed the boat up to the rock. And when there, a greater danger arose from the difficulty of so managing it as to prevent its being dashed to pieces upon the sharp ridge which had proved fatal to the steamer. With much difficulty and danger, the father scrambled upon the rock, and the boat was left for a while to the unaided strength and skill of the daughter. However, the nine sufferers were safely rescued. The delight with which the boat was first seen was converted into amazement when they perceived that it was guided and impelled by an old man and a slight young woman. Owing to the violence of the storm, the rescued persons were obliged to remain at the lighthouse of the Darlings from Friday morning till Sunday, during which time Grace was most assiduous in her kind attentions to the sufferers, giving up her bed to one of them, a poor woman who had seen her two children perish in her arms, while on the wreck.

This heroic deed of Grace Darling's shot a thrill of sympathy and admiration through all Great Britain, and indeed through all Christendom. The Humane Society sent her a flattering vote of thanks and a piece of plate, and a considerable sum of money was raised for her from the voluntary contributions of an admiring public. The lonely lighthouse became the centre of attraction to thousands of curious and sympathizing travelers; and Grace was pursued, questioned, and stared at to an extent that became a serious annoyance to her gentle and retiring spirit. But in all this hot blaze of admiration, and in her improved fortunes, she preserved unimpaired the simplicity and modesty of her nature. Her head was not in the least turned by the world-wide fame she had earned, or by the flattering caresses of the wealthy, the fashionable, and the distinguished, which were lavished upon her. The meekness with which she bore her

honors equaled the courage which had won them. She resumed her former way of life, and her accustomed duties, as quietly as if nothing had happened. Several advantageous offers of marriage were made to her, but she declined them all; usually alleging her determination not to leave her parents while they lived.

She was not destined long to enjoy the applause she had earned, or the more substantial tokens of regard which had been bestowed upon her. She began to show symptoms of consumption toward the close of the year 1841; and although all the means of restoration which the most affectionate care and the best medical advice could suggest were resorted to, she gradually declined, and breathed her last, in calm submission to the will of God, Oct. 20th, 1842. Her funeral was very numerously attended, and a monument has been erected to her memory in Bamborough church-yard, where she was buried.

DARNLEY, HENRY STUART, Earl of, the husband of Mary, Queen of Scots, came to an untimely death; his house being blown up in the night, Feb. 10th, 1567. He was the father of James I. of England. [See STUARTS.]

DARWIN, ERASMUS, an English physician and poet, born in 1731, at Elton, was the author of the "Botanic Garden" and other works. He died in 1802.

DAUN, LEOPOLD, Count, marshal of the German empire, and during the seven years' war the most successful opponent of Frederick the Great, died in 1766, aged sixty-one.

DAVENANT, Sir WILLIAM, an English poet of the seventeenth century, the author of "Gondibert," a heroic poem, and a theatrical writer and manager under Charles II. He was born in 1605, and died in 1668. He succeeded Ben Jonson as poet-laureate. Scandal hinted that he was the natural son of Shakspeare.

DAVID, JACQUES LOUIS, a French painter, born at Paris in 1750, died at Brussels in 1825. David, though an uncompromising democrat, voting for the death of Louis XVI, was the favorite painter of Napoleon; he was exiled on the emperor's fall. Among his finest works are "Paris and Helen," the "Rape of the Sabine Women," and "Napoleon crossing the Alps." His best performances in portrait-painting are the numerous

likenesses of his imperial patron. The original sketch for one of these, which indeed was never afterward finished, was taken during the last few hours of unlimited power possessed by Napoleon in Paris. The greater part of the preceding day and night had been spent in arranging the final operations of the campaign which terminated in the battle of Waterloo. When now past midnight, instead of retiring to repose, the emperor sent for David, to whom he had promised to sit, and who was in waiting in an apartment of the Tuileries. "My friend," said Napoleon to the artist, "there are yet some hours till four, when we are finally to review the defenses of the capital; in the mean time, do your utmost, while I read these dispatches." But exhausted nature could hold out no longer; the paper dropped from the nerveless hand, and Napoleon sank to sleep. In this attitude the painter has represented him: the pale and lofty forehead, the care-worn features, the relaxed expression, the very accompaniments, bear an impress inexpressibly tender and melancholy. With the dawn Napoleon awoke, and springing to his feet was about to address David, when a taper just expiring in its socket arrested his eye. Folding his arms on his breast, a usual posture of thought with him, he contemplated its dying struggles, when, with the last gleam, the rays of the morning sun penetrated through the half-closed window-curtains. "Were I superstitious," said Napoleon, a faint smile playing about his beautiful mouth, "the first object on which my sight has rested this day might be deemed ominous; but," pointing to the rising sun, "the augury is doubtful: at least the prayer of the Grecian hero will be recorded: we shall perish in light."

DAVIDSON, LUCRETIA MARIA, displayed great talents for composition at the age of four years. She died of incessant application, August 27th, 1825. She was born at Plattsburg, on Lake Champlain, September 27th, 1808. She was a beautiful girl, and her poetic genius was of a high order.

DAVIDSON, WILLIAM, a native of Lancaster county, Pennsylvania, was born in 1746, and in 1750, removed by his parents to Mecklenburg, N. C. At the opening of the Revolution, he entered the army, in which

he rose to the rank of brigadier-general, and fell defending the passage of the Catawba River at Cowan's Ford, against Lord Cornwallis, Feb. 1st, 1781.

DAVIE, WILLIAM RICHARDSON, a distinguished character in the American Revolution. He reached the rank of general, and was afterward governor of North Carolina, and envoy to France. He was born in England, 1756, and died at Camden, S. C., in 1820. He was a member of the convention that framed the federal constitution.

DAVIES, SAMUEL, a distinguished American divine, president of Nassau Hall (now Princeton College), born in Delaware, Nov. 3d, 1724, died in 1762.

DAVIS, JOHN, an English navigator, who gave his name to the straits at the entrance of Baffin's Bay, which he entered in endeavoring to discover the north-west passage in 1585. He afterward made two more voyages for the same purpose, and five to the East Indies in the Dutch service. He was killed by Japanese pirates on the coast of Malacca in 1605.

DAVOUST, LOUIS NICHOLAS, Duke of Auerstadt and Prince of Eckmühl, marshal and peer of France, born in 1770, died in 1823. He studied with Bonaparte, and served under him in his most brilliant campaigns. He only submitted to Louis XVII. when the hopes of Napoleon were irretrievably destroyed.

DAVY, Sir HUMPHREY, a distinguished English chemist, born in 1779, at Penzance, Cornwall, died at Geneva, May 29th, 1829. His experiments on the nature of explosive gas, to which his attention was directed by the frequent accidents occurring to mines from fire damps, resulted in the invention of the safety-lamp. Other important discoveries were made by this distinguished man.

DAY, JOHN, the first printer who introduced the Greek and Saxon characters into England, died in 1584. STEPHEN DAY was the first printer in New England, about 1638.

DEAD SEA, the ancient *Lacus Asphaltites*, a piece of water in Palestine, 180 miles in circuit, which occupies the space whereon the condemned cities of the vale of Siddim stood. The following account of it is from the pen of a traveler. "After the pilgrims had bathed in the Jordan, we left them and turned

down to the south, in company with three or four other English travelers, and a guard from the governor, to visit the Dead Sea. We rode across plains of barren sand for an hour and a half, when we stood upon the banks of this memorable lake. Without any reference to what others have said, I can testify to the following facts. The water is perfectly clear and transparent. The taste is bitter, and salt far beyond that of the ocean. It acts upon the tongue and mouth like alum, and smarts in the eye like camphor, and produces a burning pricking sensation over the whole body. It stiffened the hair of the head much like pomatum. The water has a much greater specific gravity than the human body, and hence, no efforts cause us to sink below the surface; and standing, perpendicularly, you would not descend lower than the arms. Although there was evidence in the sands thrown upon the beach, that in great storms there were waves, yet there appeared to be some foundation for the reports of its immobility. Notwithstanding there was a considerable breeze, the water lay perfectly lifeless. Historians say that large quantities of bitumen were gathered from the surface of this lake; and is it not quite possible, to say the least, that it formerly existed in such quantities as to spread over the whole face of the sea, and thus effectually prevent the wind from interrupting its death-like quietude? Modern travelers state that there is very little of this substance now to be found, and certainly we saw nothing like it. We saw no fish or living animals in the water, though birds were flying over it in various directions unharmed. We all noticed an unnatural gloom hanging, not merely over the sea, but also over the whole plain below Jericho. This is mentioned also by ancient historians. It had the appearance of the Indian summer of the valley. Like a vast funeral pall let down from heaven, it completely shuts out all prospect, at a short distance down the sea."

DEANE, SILAS, was a native of Groton, Conn. He was a member of the first congress, 1774. In June, 1776, he was sent to France as agent for the colonies, and the ensuing autumn was associated with Franklin and Lee as commissioner. His management was unsatisfactory, and he was recalled at the close of 1777. He was charged with

using his official position for purposes of private gain. Returning to Europe after peace came, he died at Deal, England, in 1789, in great destitution.

DEARBORN, HENRY, was born at Hampton, N. H., 1751. He served with distinction through the Revolution. At the battle of Monmouth, Washington noticing his efficiency, sent to inquire what troops he commanded. "Full-blooded Yankees from New Hampshire," was the answer. From 1801 to 1809, Gen. Dearborn was secretary of war. As the senior major-general he commanded the army in 1812 and 1813. From 1822 to 1824, he was minister to Portugal. He died in 1829.

DECATUR, STEPHEN, an American naval commander, born in Maryland, January 5th, 1779. Soon after his entrance into the navy (1798), he received a first-lieutenancy, and for his gallant conduct in recovering the frigate Philadelphia in the harbor of Tripoli, was promoted to the rank of captain. He successively commanded the Constitution, the Congress, the Chesapeake, and the United States. With the latter he captured the Macedonian, October 25th, 1812. In the war with Algiers in 1815, Decatur terrified the regency into submission in forty-eight hours; was equally successful at Tripoli; and procured the renunciation of tribute, and an agreement on the part of the Barbary powers, to regard captives as prisoners of war, and not slaves. Decatur was killed in a duel by Commodore Barron, March 22d, 1820.

DECIUS, the name of a Roman consul who devoted himself to death in battle to save his country, B.C. 340. Also a Roman emperor of this name, who reigned from A.D. 249 till December, 251. He persecuted the Christians.

DECLARATION OF INDEPENDENCE. At an early period in the contest between the mother country and her colonies, sagacious men saw that complete emancipation of the latter from the royal rule must come. Many of the patriots did not anticipate this, but the progress of events brought about the measure which men like Patrick Henry, Benjamin Franklin, Richard Henry Lee, Thomas Paine, Timothy Dwight, had long foreseen and desired. North Carolina was the first

colony that formally instructed her delegates to sustain such a measure, in April, 1776. Indeed, in Mecklenburg county, a year previous, the lovers of liberty had declared themselves independent of the crown, and framed a republican government. The lead of North Carolina was followed by Massachusetts, Virginia, Rhode Island, Connecticut, New Hampshire, and New Jersey. Maryland positively forbade her delegates to vote for independence. The delegates of the other colonies were left to act as they thought best. Virginia had taken a step in advance of her sisters: she had desired her delegates to *propose* a declaration of independence. Accordingly, on the 7th of June, 1776, Richard Henry Lee moved the resolution, "That these united colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown; and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved." John Adams seconded it. This bold and concise resolve made great inroad upon the doubt and delay and hesitation which had clung about the subject in the minds of many. A committee was selected to draught a declaration; it consisted of Thomas Jefferson of Virginia, John Adams of Massachusetts, Benjamin Franklin of Pennsylvania, Roger Sherman of Connecticut, and Robert R. Livingston of New York. Mr. Lee had been summoned away by the illness of his wife, and hence Mr. Jefferson was put upon the committee in his stead. To Mr. Jefferson was assigned the writing of the document, and his draught, after a few slight emendations by Adams and Franklin, was unanimously adopted by the committee. It met more criticism and alteration in Congress, to which body it was reported on the 1st of July. Mr. Lee's resolution was adopted on the 2d, and the declaration on the 4th.

In the subjoined copy of the Declaration of Independence, those portions in italic are the passages of the original draught which were omitted or changed by Congress, and the substitutions follow within brackets.

"A Declaration by the Representatives of the United States of America, in general Congress assembled.

"When, in the course of human events, it

becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

"We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with *inherent and inalienable* [certain unalienable] rights; that among these are life, liberty, and the pursuit of happiness. That, to secure the serights, governments are instituted among men, deriving their just powers from the consent of the governed; that, whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute a new government, laying its foundations on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate, that governments, long established, should not be changed for light and transient causes; and, accordingly, all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, *begun at a distinguished period*, and pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies; and such is now the necessity which constrains them to *expunge* [alter] their former systems of government. The history of the present king of Great Britain is a history of *unremitting* [repeated] injuries and usurpations; *among which appears no solitary fact to contradict the uniform tenor of the rest*; but all have, [having] in direct object, the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world; *for the truth of which we pledge a faith yet unsullied by falsehood.*

"He has refused his assent to laws the most wholesome and necessary for the public good.

"He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has *neglected utterly* [utterly neglected] to attend to them.

"He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature; a right inestimable to them, and formidable to tyrants only.

"He has called together legislative bodies at places unusual, uncomfortable, and distant from the repository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

"He has dissolved representative houses repeatedly *and continually*, for opposing with manly firmness his invasions on the rights of the people.

"He has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise, the state remaining in the mean time exposed to all the dangers of invasion from without and convulsions within.

"He has endeavored to prevent the population of these states; for that purpose obstructing the laws for the naturalization of foreigners; refusing to pass others to encourage their migration hither; and raising the conditions of new appropriations of lands.

"*He has suffered the administration of justice totally to cease in some of these states,* [He has obstructed the administration of justice by] refusing his assent to laws for establishing judiciary powers.

"He has made *our* judges dependent on his will alone, for the tenure of their offices and the amount and payment of their salaries.

"He has created a multitude of new offices *by a self-assumed power*, and sent hither swarms of officers to harass our people and eat out their substance.

"He has kept among us, in times of peace, standing armies *and ships of war*, without the consent of our legislatures.

"He has affected to render the military independent of, and superior to, the civil power.

"He has combined with others to subject us to a jurisdiction foreign to our constitutions, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

"For quartering large bodies of armed troops among us;

"For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states;

"For cutting off our trade with all parts of the world;

"For imposing taxes on us without our consent;

"For depriving us [in many cases] of the benefits of trial by jury;

"For transporting us beyond seas to be tried for pretended offenses;

"For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these states [colonies];

"For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments;

"For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

"He has abdicated government here, *withdrawing his governors, and* [by] declaring us out of his *allegiance and* protection, and waging war against us.

"He has plundered our seas, ravaged our coasts, burned our towns, and destroyed the lives of our people.

He is at this time transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy [scarcely paralleled in the most barbarous ages, and totally] unworthy the head of a civilized nation.

"He has constrained *others* [our fellow-citizens], taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fill themselves by their hands.

[He has excited domestic insurrections

among us, and] *he* has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions of existence; *he* has excited treasonable insurrections of our fellow-citizens with the allurements of forfeiture and confiscation of our property.

"*He* has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people, who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither. This piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian king of Great Britain. Determined to keep open a market where men should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce. And that this assemblage of horrors might want no fact of distinguished dye, he is now exciting those very people to rise in arms among us, and to purchase that liberty of which *He* has deprived them by murdering the people upon whom *He* obtruded them: thus paying off former crimes committed against the LIBERTIES of one people with crimes which he urges them to commit against the LIVES of another.

"In every stage of these oppressions, we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a people who mean to be free [free people]. Future ages will scarce believe that the hardness of one man adventured, within the short compass of twelve years only, to build a foundation, so broad and undisguised, for tyranny over a people fostered and fixed in principles of freedom.

"Nor have we been wanting in attentions to our British brethren. We have warned them, from time to time, of attempts by their legislature to extend a [an unwarrantable] jurisdiction over these our states [us]. We have reminded them of the circumstances of our emigration and settlement here, *no one of which could warrant so strange a pretension; that these were effected at the expense*

of our own blood and treasure, unassisted by the wealth or strength of Great Britain; that in constituting, indeed, our several forms of government, we had adopted one common king, thereby laying a foundation for perpetual league and amity with them; but that submission to their parliament was no part of our constitution, nor ever in idea, if history may be credited; and We [have] appealed to their native justice and magnanimity, as well as to [and we have conjured them by] the ties of our common kindred, to disavow these usurpations which were likely to [would inevitably] interrupt our connection and correspondence. They too have been deaf to the voice of justice and consanguinity; and when occasions have been given them, by the regular course of their laws, of removing from their councils the disturbers of our harmony, they have, by their free election, re-established them in power. At this very time, too, they are permitting their chief magistrate to send over, not only soldiers of our common blood, but Scotch and foreign mercenaries to invade and destroy us. These facts have given the last stab to agonizing affection, and manly spirit bids us to renounce forever these unfeeling brethren. We must endeavor to forget our former love for them. [We must therefore acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war; in peace, friends.]

"We might have been a free and great people together; but a communication of grandeur and of freedom, it seems, is below their dignity. Be it so, since they will have it. The road to happiness and to glory is open to us too; we will climb it apart from them, and acquiesce in the necessity which denounces our eternal separation."

"We, therefore, the representatives of the United States of America in general congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name, and by the authority, of the good people of these states, *reject and renounce all allegiance and subjection to the kings of Great Britain, and all others who may hereafter claim by, through, or under them; we utterly dissolve all political connection which may heretofore have sub-*

sisted between us and the parliament or people of Great Britain; and finally, we do assert the colonies to be free and independent states; [colonies, solemnly publish and declare that these united colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved;] and that, as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration, [with a firm reliance on the protection of Divine Providence,] we mutually pledge to each other our lives, our fortunes, and our sacred honor."

The Declaration was signed by John Hancock, president of Congress, on the day of its adoption. It was suitably engrossed on parchment, and on the 2d of August the delegates set their names to it. The signers were as follows: New Hampshire, Josiah Bartlett, William Whipple, Matthew Thornton. Massachusetts, John Hancock, John Adams, Samuel Adams, Robert Treat Paine, Elbridge Gerry. Rhode Island, Stephen Hopkins, William Ellery. Connecticut, Roger Sherman, Samuel Huntington, William Williams, Oliver Wolcott. New York, William Floyd, Philip Livingston, Francis Lewis, Lewis Morris. New Jersey, Richard Stockton, John Witherspoon, Francis Hopkinson, John Hart, Abraham Clark. Pennsylvania, Robert Morris, Benjamin Rush, Benjamin Franklin, John Morton, George Clymer, James Smith, George Taylor, James Wilson, George Ross. Delaware, Cæsar Rodney, George Read, Thomas M'Kean. Maryland, Samuel Chase, Thomas Stone, William Paca, Charles Carroll of Carrollton. Virginia, George Wythe, Richard Henry Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, Jr., Francis Lightfoot Lee, Carter Braxton. North Carolina, William Hooper, Joseph Hewes, John Penn. South Carolina, Edward Rutledge, Thomas Hayward, Jr., Thomas Lynch, Jr., Arthur Middleton. Georgia, Button Gwinnett, Lyman Hall, George Walton. Sketches of these patriotic and brave men will be found in their appropriate places.

The declaration thus put forth was made good through an arduous struggle and desperate endurance, and a prosperous people reverently look to the 4th of July, 1776, as the birthday of their freedom and happiness.

DEFOE, DANIEL, the father of the English novel, born at London in 1661, was intended to be a Presbyterian minister, but turned aside to commercial enterprises, in which he was unsuccessful. He became a vigorous political pamphleteer, offended the ruling powers, and reaped a plentiful crop of fines, pillory, and prison. Dear-bought experience led him to abandon politics, and in 1709 there came forth "Robinson Crusoe," that freshest and most fascinating of romances. This was followed by various other fictions, some almost as vivid, till his life closed in 1731. There is a curious instance of the wonderful air of truth with which he could invest his fictions. For a heavy theological book he wrote an elaborate puff, entitled, "A true Relation of the Apparition of one Mrs. Veal, the next day after her Death, to one Mrs. Bargrave, at Canterbury, the Eighth of September, 1705, which Apparition recommends the perusal of Drelincourt's Book of Consolations against the Fears of

Death." The circumstantial account was widely credited, and the ghostly recommendation worked off a large edition of a volume otherwise wholly unsalable.

DEJANIRA, daughter of Æneus, king of Calydon, an Ætolian city, was the wife of Hercules, and the innocent cause of his death. The centaur Nessus, whom Hercules killed for insulting Dejanira, in dying, gave her a tunic dipped in his blood, which he said would restore to her the affections of her husband if he put it on. When she considered herself in danger from his inconstancy, she sent Hercules the garment, which he no sooner put on than a mortal poison penetrated to his vitals, and he died in agony.

DE KALB, Baron, was a native of Alsace. He had served forty-two years in the French service when he came to America with Lafayette in the spring of 1777. Congress at once gave the silver-haired and vigorous veteran a major-general's commission. His experience was of much service to the Americans. In the battle of Camden, Aug. 16th, 1780, while trying to rally his scattered troops, he fell pierced with eleven wounds.

DELAWARE has the bay of the same name and the Atlantic Ocean on the east, Maryland on the south and west, and Pennsylvania on the north. Having a length from north to south of ninety-two miles, and varying in width between ten and thirty-six miles, its area is 2,120 square miles. It is thus the smallest state in the Union with the exception

of Rhode Island, and in point of population it falls behind that state. The population of Delaware in 1860 was 112,216; of whom 19,829 were free colored persons, and 1,798 slaves. The surface is very level, in the south marshy, and in the north slightly undulating. The Brandywine is a fine mill-stream. The commerce of Delaware is inconsiderable. AGRICULTURE.

culture is the chief occupation of the inhabitants, and grain and flour are the principal exports. A canal navigable for steamers and ships crosses the state, connecting the Chesapeake and Delaware Bays. It was completed in 1829 at a cost of \$2,250,000.

Delaware was first settled by the Swedes and Fins, in 1627. The Dutch gained possession of it, but the English in 1664 became the masters of it. It was granted to William Penn, and it formed a part of Pennsylvania till 1776, though from 1701 with a distinct legislative assembly. It was generally styled the Three Lower Counties upon Delaware. The name 'Delaware' was given to the bay and river in honor of Lord De La Ware, who was governor of Virginia in 1611.

The general assembly of Delaware consists of a senate of nine members, and a house of twenty-one representatives. Its sessions and the general elections are biennial. The governor is elected for four years, and is not eligible for a second term. The right of suffrage is granted to every white male citizen of the age of twenty-two or more, who has resided within the state one year, and paid a county tax; and every white male citizen under twenty-two and over twenty-one, who has resided in the state a year, can vote without payment of such tax. The state is divided into three counties, which are subdivided into hundreds. Judicial power is vested in four judges (one of whom is chief-justice, the others associate law judges, residents of separate counties) and a chancellor, all appointed by the governor, and holding office during good behavior. The chief-justice and two associates constitute the superior court. No associate judge can sit within his own county. Such inferior courts as are needed may be established by the general assembly. The whole bench, including the chancellor, form a court of error and appeal, and the powers of a court of chancery are vested in the latter magistrate together with the resident judge of the county. Among religious sects, the Presbyterians and Methodists are the most numerous; there are also many Episcopalians and Baptists, some Roman Catholics, and a few Quakers.

Dover (pop. 4,200) is the capital, but Wilmington is the most important town. Its population in 1860, was 21,508. The broad

and airy streets cross at right angles; the houses are generally brick. The flouring mills of Wilmington are among the largest in the country; gunpowder is extensively made; and the valuable water-power of the Brandywine moves the busy machinery of many other thriving manufactories. New-castle, five miles from Wilmington, and once the capital, has nearly 2,000 inhabitants. Lewiston is a small village, near Cape Henlopen, opposite which a breakwater has been built by the general government at a cost of little less than \$2,250,000.

DELHI, an ancient city of Hindostan, on the river Jumna. It contains many splendid edifices. It was taken by the Mohammedans in 1193. Once it was the great capital of the Mogul empire, and so late as 1700 it had a million inhabitants. It is now in decay. In 1738, when Nadir Shah invaded Hindostan, he conquered Delhi, and dreadful massacres and famine followed. In 1803, the Mahrattas, aided by the French, got possession of the place, but they were afterward expelled by Gen. Lake. In 1857, the Sepoy rebels made Delhi their headquarters. A small force of British besieged it. After standing their ground for months before an overwhelming array of native forces, the Europeans assaulted the city, although containing at least twice their number of enemies, and after a stout resistance, carried it on the 20th of September.

DELOS, the smallest island of the Cyclades. was famed in ancient times for the number and skill of its artists, and for the splendid temple and oracle of Apollo. It was the birth-place of Apollo and his sister Diana, according to fable, being raised as an asylum to their mother, Latona, when she was pursued from place to place by the implacable Juno.

DELPHI, the seat of a famous oracle of Apollo, situated in Phocis, on the southern side of Parnassus. The fount of inspiration was said to be a chasm from which issued an intoxicating vapor. A temple was built over this, and the tripod of the priestess (sometimes called the Pythoness from Pythius, the surname of Apollo) was placed where she could breathe the ascending vapor. She was agitated with extreme fury; she howled and vowed, her eyes sparkled, and she gave every evidence of being possessed by a spirit. The

Pythian games were celebrated in the vicinity of Delphi, which is now the village of Castrì. [*See* *ÆSOP*, *ORACLES*.]

DELUGE, the flood or inundation of waters by which God destroyed mankind and animals in the time of Noah, and in which, as St. Peter says, only eight persons were saved. According to the received chronology, this great event was threatened in the year of the world 1536. It began Dec. 7th, 1656, and continued three hundred and seventy-seven days. The ark rested on Mount Ararat, May 6th, 1657, and Noah left the ark Dec. 18th following. The year corresponds with that of 2348 B.C. Almost all savage nations, even those sunk the deepest in barbarism, have a tradition of an universal deluge. A traveler among the Indians of the north-west coast of America heard of it from one of the savages, and asked him how long ago it occurred? The savage scooped up from the floor of his cabin a handful of sand, and promptly replied, "As many moons ago as there are grains of sand in this heap." The Araucanians in Chili preserve the tradition of a universal deluge from which a few persons were saved upon the top of a mountain having three peaks, called *Thegtheg*, or 'thundering mountain,' which floated upon the waves. The Aztecs supposed that a universal deluge occurred, in which all mankind except one man and one woman were changed into fishes. This lucky pair were saved in the hollow of a tree. Their children were all born mute, were taught speech by a dove, and each learned a different language. In 1524, alarm was spread quite widely in Europe by the prediction that another general deluge was at hand, and arks were everywhere built for refuge against the fluvial calamity; but the appointed time happened to be uncommonly dry and fine.

DEMETRIUS, surnamed *Soter*, son of Seleucus Philopater, the son of Antiochus the Great, King of Syria. His father gave him as a hostage to the Romans. After the death of Seleucus, Antiochus Epiphanes, the deceased monarch's brother, usurped the kingdom of Syria, and was succeeded by his son Antiochus Eupater. This usurpation displeased Demetrius, who was detained at Rome; he therefore procured his liberty on pretense of going to hunt, and fled to Syria, where the troops received him as their lawful sovereign,

B.C. 162. He put to death Eupater and Lysias, and established himself on his throne by cruelty and oppression. Alexander Balas, the son of Antiochus Epiphanes, laid claim to the crown of Syria, and slew Demetrius in battle in the twelfth year of his reign.

DEMETRIUS, a Macedonian, son of Antigonus and Stratonice, surnamed from his successes, *Poliorcetes*, or the 'destroyer of towns.' At the age of twenty-two, he was sent by his father against Ptolemy, who had invaded Syria. He was defeated near Gaza, but soon repaired his loss by a victory over one of the generals of the enemy. He afterward sailed with a fleet of two hundred and fifty ships to Athens, and restored the Athenians to liberty, by freeing them from the power of Cassander and Ptolemy, and expelled the garrison which was stationed there under Demetrius Phalereus. After this successful expedition, he besieged and took Mynychia, and defeated Cassander at Thermopylæ. This uncommon success raised the jealousy of the successors of Alexander; and Seleucus, Cassander, and Lysimachus, united to destroy Antigonus and his son. Their hostile armies met at Ipsus, B.C. 391. Antigonus was killed in the battle; and Demetrius, after a severe loss, retired to Ephesus. His ill success raised him many enemies; the fickle Athenians, who had lately adored him as a god, refused to admit him into their city. He soon after ravaged the territories of Lysimachus, and reconciled himself to Seleucus, to whom he gave his daughter Stratonice in marriage. Athens now labored under tyranny; and Demetrius relieved it and pardoned its inhabitants. The loss of his Asiatic possessions recalled him from Greece, and he established himself on the throne of Macedonia, 294 B.C. Here he was continually at war with the neighboring states; and the superior power of his adversaries obliged him to leave Macedonia, after he had filled the throne seven years. He passed into Asia and attacked some of the provinces of Lysimachus with various success; but famine and pestilence destroyed the greatest part of his army, and he retired to the court of Seleucus for support and assistance. He met with a kind reception, but hostilities between them soon began; and after he had gained some advantages over his son-in-law, Demetrius was totally forsaken by his troops in battle, and be-

came an easy prey to the enemy. Though he was kept in confinement by his son-in-law, yet he lived like a prince, and passed his time in hunting, and in every laborious exercise. His son Antigonus offered Seleucus all his possessions, and even his person, to procure his father's liberty; but all proved unavailing, and Demetrius died in the fifty-fourth year of his age, B.C. 284.

DEMOCRITUS, a philosopher of Abdera, who was born about 494 B.C. He is commonly called the laughing philosopher, because he is said to have been in the habit of amusing himself with the follies of mankind, while Heraclitus (the weeping philosopher) wept at them. He placed the chief good in a tranquil mind.

DEMOSTHENES, an Athenian orator, son of a sword-cutter, born about 381 B.C., famous to have risen to the highest reputation by perseverance in overcoming the apparently insurmountable obstacles which opposed him. He was the determined opponent of Philip of Macedon, continually urging the Athenians to resist him. The orations which he delivered on these occasions were termed *Philippics*, a name since applied to all invective declamation. He was banished from Athens, and suddenly died 319 B.C.

DENHAM, **DIXON**, lieutenant-colonel in the British army, associated with Captain Clapperton and Docteur Oudney, in exploring Central Africa. Soon after being appointed lieutenant-governor of Sierra Leone, he died in 1828, at the age of forty-two.

DENHAM, **SIR JOHN**, author of "Cooper's Hill" and other poems, born in Dublin 1615, died in 1668.

DENMARK (the land or mark of the Dane), also called the *Danske Stat* (the States of Denmark), is in form a slender peninsula, with an area of 21,900 square miles, and a population of 2,605,024 in 1866. Its colonial possessions are the Farøe Islands, Iceland, Greenland, and the West Indian isles of Santa Cruz, St. Thomas, and St. John's. The surface of Denmark presents an almost uniform plain, elevated only a few feet above the level of the sea, but occasionally relieved by small groups of hills, whose wooded summits break the monotony of the landscape, and with the numerous small lakes and inlets from the sea give the country a very pleasing appearance. Den-

mark is an agricultural country, and in general the soil is well suited to tillage. The climate is temperate. Among the vegetable productions are wheat, rye, oats, barley, beans, pease, and potatoes. The commercial exports are principally grain, horses, cattle, beef, pork, butter, and cheese. The herring and other fisheries form an important branch of industry. The Lutheran is the predominant religion, but every other is tolerated. Much attention is paid to education. By law every child between the ages of seven and fourteen must attend some school; and free schools are provided for all whose parents are unable to pay tuition. The press is under rather strict censorship. The government was formerly an absolute hereditary monarchy; in 1848 a constitution somewhat limiting the royal power, was promulgated. Another constitution was granted in 1854. As Duke of Holstein and Lauenburg, the king is a member of the Germanic confederation.

The capital of the kingdom is Copenhagen (*Kjøbenhavn*, 'merchants' haven'), which had a population of 129,695 in 1850. It stands on the east coast of the island of Zealand, and has a good harbor, and an extensive commerce, although formerly but a poor fishing village. It was threatened by Charles XII., who, however, gave up the idea of capturing it. The city has suffered severely from several conflagrations. In April, 1801, it was bombarded by the British under Lord Nelson. The Danish fleet was taken, and a flag of truce alone saved the city from destruction. It was again attacked in 1807 by the English under Admiral Gambier, and Lord Cathcart. After severe firing, which commenced on the 2d of September, a capitulation was settled on the 8th, and the citadel, dock-yards, batteries, vessels, and naval stores were taken possession of by the British. Altona (population 33,000) is the second city in the kingdom. Its suburbs and those of Hamburg are only separated by a field. Though not so active as its neighbor, its commerce is yet important.

The early history of Denmark is obscure and uninteresting, containing merely the adventures of predatory warriors, whose pre-eminence consisted in ferocity and courage. During the eighth and ninth centuries they established their dominion in parts of England, which they scourged by their invasions until

the middle of the eleventh century; a band of them under Rollo planted themselves in Normandy; they colonized the Orkneys, the Hebrides, and Iceland, and pushed their settlements as far south as Spain, Italy, and Sicily.

Canute the Great, who sat on the Danish throne in the early years of the eleventh century, possessed himself of the whole of England, a part of Scotland, and all Norway. To this monarch Denmark was indebted for laws, internal organization, an era of might, and the ordination of Christianity as the religion of the country. His successors were of weaker mettle, till the time of Margaret, the daughter of Waldemar, often called the Semiramis of the north, who in 1397 united in her own person, the crowns of Sweden, Denmark, and Norway. This union, however, did not continue longer than the beginning of the sixteenth century, when Christian II. was obliged to renounce all claims to Sweden. Christian II. was nicknamed the Wicked. The crown was transferred to Frederick, Duke of Schleswig and Holstein; whence these duchies became united with the kingdom. During the wars of the French revolution Denmark remained neutral; but on contesting the right of search as to her mercantile shipping, insisted upon by England, which led her into a defensive alliance with Russia, Prussia, and Sweden, she sacrificed her colonies in the East and West Indies, and suffered severely off Copenhagen in 1801, as we have already mentioned. Her colonies were restored to her by the treaty of peace that followed. In the treaty of Tilsit, in 1807, were secret articles, providing that the Danish navy should be delivered to Napoleon, to aid him in his threatened descent upon England. This occasioned a fresh rupture with England, and a second attack upon Copenhagen. By the treaty of Kiel in 1814, Denmark accepted Pomerania from Sweden in exchange for Norway. Pomerania, the next year, she turned over to Prussia for the duchy of Lauenburg and a large sum of money. In 1845, she sold her African and East Indian colonies to England.

The Duchies of Schleswig and Holstein, peopled mostly by Germans, after long quarreling, revolted from Denmark in 1849, and were compelled to submit by the interposition of Prussia and Austria. A similar diffi-

culty arose in 1864, from an attempt to fuse the Duchies thoroughly with Denmark; and Austria and Prussia now interfered on the other side, and easily forced Denmark to give up the Duchies.

KINGS OF DENMARK.

- 883. Gormo, the old.
- 935. Harald II., surnamed Blue-tooth.
- 985. Suenon, or Sweyn, surnamed the Forked-beard.
- 1014. Canute II., the Great, King of Denmark, England, and Norway.
- 1036. Canute III., his son, the Hardicanute of England.
- 1042. Magnus, surnamed the Good, of Norway.
- 1047. Suenon, or Sweyn II.
- 1073. [Interregnum.]
- 1077. Harald, called the Simple.
- 1080. Canute IV.
- 1086. Olaus IV., the Hungry.
- 1095. Eric III., styled the Good.
- 1103. [Interregnum.]
- 1105. Nicholas I., killed at Sleswick.
- 1135. Eric IV., surnamed Harefoot.
- 1137. Erick V. the Lamb.
- 1147. { Suenon, or Sweyn III., beheaded.
{ Canute V., until 1154.
- 1157. Waldemar, styled the Great.
- 1182. Canute VI., surnamed the Pious.
- 1202. Waldemar II., the Victorious.
- 1241. Eric VI.
- 1250. Abel; assassinated his elder brother Eric; killed in an expedition against the Frisians.
- 1252. Christopher I., poisoned.
- 1259. Eric VII.
- 1286. Eric VIII.
- 1290. Christopher II.
- 1334. [Interregnum.]
- 1340. Waldemar III.
- 1376. Olaus V.
- 1387. Margaret, styled the Semiramis of the North, Queen of Denmark, Norway, and Sweden.
- 1397. Margaret, and Eric IX. (Eric XIII. of Sweden), jointly.
- 1412. Eric IX. reigns alone; obliged to resign both crowns.
- 1438. [Interregnum.]
- 1440. Christopher III., King of Sweden.
- 1448. Christian I., Count of Oldenburg, elected King of Scandinavia, which comprehended Denmark, Sweden, and Norway; succeeded by his son.
- 1481. John, succeeded by his son.
- 1513. Christian II., called the Cruel, and the Nero of the North; among other enormous crimes he caused all the Swedish nobility to be massacred; dethroned for his tyranny in 1523; died in a dungeon, 1559. [In this reign Sweden succeeded in sundering itself from the crown of Denmark.]
- 1523. Frederick, Duke of Holstein, uncle to Christian II.; a liberal ruler.

1534. Christian III., son of Frederick; established the Lutheran faith; esteemed the 'Father of his People.'
1559. Frederick II., son of Christian III.
1588. Christian IV., son of Frederick II.; chosen head of the Protestant league against the emperor.
1648. Frederick III.; changed the government from an elective to an hereditary monarchy, vested in his own family.
1670. Christian V., son of Frederick III.; succeeded by his son.
1699. Frederick IV.; leagued with the Czar Peter and Poland against Charles XII. of Sweden.
1730. Christian VI., his son.
1746. Frederick V., his son.
1766. Christian VII., son of the preceding; married Caroline Matilda, sister of George III., of England. In a spasm of jealousy, 1772, he banished his wife to Zell (where she died), and put to death his ministers Brandt and Struensee.
1784. [Regency.] The Crown-Prince Frederick declared regent in consequence of the insanity of his father.
1808. Frederick VI., previously regent.
1839. Christian VIII., his son.
1848. Frederick VII., his son, born October 6th, 1808; died Nov. 15, 1863.
1863. Christian IX., his son, born April 8, 1816, became King, Nov. 16, 1863.

DANNEWITZ, BATTLE OF. In this conflict a remarkable victory was obtained by Marshal Bernadotte, then Crown-Prince of Sweden, over Marshal Ney, Sept. 6th, 1813. The loss of the French exceeded 16,000.

DENNIE, JOSEPH, born at Boston, in 1768, and educated at Harvard College, possessed brilliant genius, which he evinced in several papers that he edited, the *Portfolio* among others. He wanted industry and discretion, and died in 1812, of disease produced by irregularity and anxiety.

D'EON, the Chevalier. This extraordinary personage, who had been acting in a diplomatic capacity in several countries, and who was for some time the minister of Louis XV. in London, was proved to be a woman, on a trial in an action to recover wagers as to his sex, in 1777. He subsequently wore female attire for many years: yet at his death, in London, 1800, it was manifest, by the dissection of his body, and other undoubted evidence, that he was a male.

DESAIX DE VOYGOUX, LOUIS CHARLES ANTOINE, a French general, was born of a noble family at St. Hilaire de Agat, in Bretagne, in 1768. He served under Pichegru

and Moreau, and commanded, under Bonaparte in Upper Egypt, a division of troops destined to pursue and keep in awe the Mamelukes, whom he attacked and put to flight near the pyramids of Saccara, in Upper Egypt. At the battle of Marengo, the splendid success of which was the result of the opportune arrival of his columns on the field, he was killed, June 14th, 1800. His last words were, "Tell the first consul that my only regret in dying is that I perish before having done enough to live in the recollection of posterity." When Napoleon heard of his death, he cried, "Victory at such a price is dear." At night Bourrienne said to Napoleon, "What a glorious day!" "Yes," was the sad reply, "very glorious, could I this evening but have embraced Desaix upon the field of battle." On the same day that the fatal bullet pierced the heart of Desaix, an assassin in Egypt plunged a dagger into the bosom of Kleber. At St. Helena Napoleon said, "Of all my generals, Desaix and Kleber had the greatest talent. In particular Desaix, as Kleber loved glory only as the means of acquiring wealth and pleasure; Desaix loved glory for itself. To him riches and luxury were of no value. He was a little black man, an inch shorter than myself, always badly dressed, sometimes even ragged, and despising alike comfort and convenience. Wrapped in a cloak, he slept under a gun as contentedly as in a palace. Frank and honest in all his ways, the Arabs called him the just sultan. Nature intended him to figure as a consummate general. Desaix and Kleber were irreparable losses to France."

DESCARTES, RENE, born at La Haye, in Touraine, in 1596, and died at Stockholm in 1650. As a soldier, mathematician, and original philosopher, he greatly distinguished himself.

DESIEZE, RAYMOND, the talented advocate who defended the unfortunate Louis XVI. On the restoration of the Bourbons, he was loaded with honors, 1750-1828.

DESMOULINS, BENOIT CAMILLE, a French revolutionist, who was condemned to death by the revolutionary tribunal in April, 1794, at the age of thirty-three.

DESSAIX, JOSEPH MARIE, Count, a native of Savoy, where he was born in 1764, and distinguished for his military services in the

French army. At the siege of Toulon, he bore a part. He was appointed by Napoleon general of division, and grand officer of the legion of honor. He died in 1825.

DESSALINES, JEAN JACQUES, Emperor of Hayti, was originally a slave. After the French had been expelled from the island in 1803, Dessalines was appointed governor-general, but assumed the title and state of emperor; and having been guilty of many atrocities, he was killed by a soldier, Oct. 17th, 1806.

DETTINGEN, BATTLE OF, between the British, Hanoverian, and Hessian army, 52,000 strong, commanded by George II. and the Earl of Stair, and the French army, 60,000 strong, under Marshal Noailles and the Duc de Grammont, June 16th, 1743. The French were defeated.

DE WITT, JOHN, grand-pensionary of Holland, a famous statesman, was born in 1625. He imbibed from his father a hatred for the house of Orange. Accordingly, in the war between England and Holland, he attempted to abolish the stadtholdership, and succeeded in separating that office from that of captain-general. He was forced, however, to make some concessions, and beheld, with mortification, William of Orange procure the post of commander-in-chief. De Witt resigned his employments when William was chosen stadtholder, to the joy of all, and, being thrown into prison, was murdered by the populace, who broke in upon him, August 20th, 1672. When De Witt was once asked how it happened that he got through so much business and of such varied kind, for he was not only a great statesman and a minister, but also a most eminent mathematician and literary man; his answer was that it was by two rules which he always observed: to do one thing only at a time, and never to put off till to-morrow what he could do to-day. These were his golden rules.

DEXTER, SAMUEL, a distinguished orator, lawyer, and statesman, was born at Boston, Mass., in 1761, and was educated at Harvard College. He studied law, but was soon chosen to the state legislature, and thence transferred to Congress where his ability and patriotism were properly appreciated. Under President Adams he was at first secretary of war, and then of the treasury. Declining

the public offices which were afterward offered him, he employed himself in the lucrative and honorable profession of the law, being intrusted with cases of the utmost importance. He died at Athens, N. Y., in 1816.

DIAMONDS were first polished and cut at Bruges, 1489. Diamond mines were discovered in Brazil, 1728; those at Coulour in the East Indies, 1640; those at Golconda, in 1584. A diamond was sent from Brazil for the court of Portugal, weighing 1680 carats, or fourteen ounces, and was valued at £224,000,000; it is not very brilliant, and its true value is only £400,000. Governor Pitt's weighed 126 carats, and 106 after cutting, and sold for £125,000, to the king of France. That which belonged to Aurung Zebe weighed 793 carats, in a rough state, and when cut 279 carats, worth £779,244. The Grand Duke of Tuscany's weighed 139 carats. The celebrated diamond called the Koh-i-noor, or 'Mountain of Light,' was found in the mines of Golconda in 1550. Precisely three centuries after, it was brought to England. Its original weight was nearly eight hundred carats. Unskillful cutting reduced it to two hundred and seventy-nine. Its value has been estimated at two millions sterling.

DIANA, in mythology the daughter of Jupiter and Latona, and twin sister of Apollo, born at Delos. She was the goddess of hunting, chastity, and marriage, though she remained unmarried. She is supposed to have been the Isis of the Egyptians.

DICKENSON, JOHN, was born in Maryland, Nov. 13th, 1732. He was bred to the law in Philadelphia and at the Temple in London. He was an earnest advocate of the rights of the colonies. He had been a member of the stamp-act congress of 1765, and he represented Pennsylvania in the earlier continental congresses. Opposed to political separation from Great Britain, as too premature, he yet would not vote against his brother patriots, and on the memorable 4th of July he was absent from his seat. Independence once declared, he defended it both by word and sword. He helped to frame the federal constitution, and was its warm friend. He died at Wilmington, Del., Feb. 14th, 1808.

DIDO, the founder of the city of Carthage, also called Elisa, was a daughter of Belus,

monarch of Tyre, and married Sichæus, or Sicharbas, her uncle, a priest of Hercules. Pygmalion, the successor of Belus, murdered the husband of Dido, for the sake of his wealth, and with a number of Tyrians the unhappy queen set sail to found a colony in some distant land. A storm drove them upon the African shore, where Dido built her citadel, 869 B.C., and soon had the satisfaction of finding the colony in a thriving condition. The persecutions of Jarbas, the Mauritanian king, who wished to marry her, proved fatal to her, for having vowed to her husband never to wed a second time, she ascended a funeral pile, and perished in the flames. For this action she was called Dido, or 'valiant woman.' Her connection with Æneas was an invention of Virgil, for they were not even contemporaries.

DIEMEN, ANTHONY VAN, governor-general of the Dutch East India settlements, born in 1593. He went to the Indies as a clerk, but rose with great rapidity. His administration was judicious and successful. He died in 1645. [*See* VAN DIEMEN'S LAND.]

DIGBY, Sir KENELM (son of Sir Everard Digby, who was condemned and executed for his participation in the gunpowder plot), was born at Gothurst, in Buckinghamshire, in 1603. He was educated at Oxford, and was originally a Protestant, but was converted to the Romish religion in 1636. He was one of the gentlemen of the bed-chamber to Charles I., commissioner of the navy, and governor of the Trinity-house. He fought against the Venetians at Scuderoon. He was the author of several philosophical treatises.

DIOCLETIAN, a famous Roman emperor, born of an obscure family of Dalmatia, first a common soldier, then general, and proclaimed emperor, 284 A.D. He made Maximian a comrade, his colleague, and created two subordinate emperors, Galerius and Constantius, with the title of Cæsars. Some of the acts of his reign are meritorious, but he disgraced himself by a persecution of the Christians. After a reign of twenty-one years, he voluntarily and publicly abdicated the throne at Nicomedia, May 1st, A.D. 305, and his colleague shortly after followed his example. He found sufficient pleasure in the cultivation of his little garden, and died in 313.

DIODATI, JOHN, a Protestant divine, professor of theology at Geneva, where he died in 1649.

DIODORUS SICULUS (Diodorus the Sicilian), a Greek historian of the time of Julius Cæsar and Augustus.

DIOGENES (born at Sinope in Pontus, 413 B.C.) was a famous Cynic philosopher, one of that sect that sternly opposed luxury and immorality, discarding all superfluities. Diogenes humorously ridiculed the follies of human nature, and made even the objects of his satire laugh at his practical jests and lessons. He perambulated the streets of Athens in the garb and manner of a sturdy beggar, and slept in a tub. He was rigidly temperate, and despised the forms of polite society. While at Corinth Alexander the Great paid him a visit, but was astonished at the indifferent air of the philosopher. He made an offer of service, but Diogenes replied, "I only want you to stand out of my sunshine." His independence made such an impression on the Macedonian that he cried, "If I were not Alexander, I should wish to be Diogenes." He once carried a lantern about Athens at mid-day, and being asked why he was doing so, answered, "I am looking for a man." Being asked what was the most dangerous animal? he answered, "Among wild ones, the slanderer; among tame, the flatterer." Plato having described man as a two-legged animal without feathers, and received applause for the definition, Diogenes plucked a live fowl, and carrying it to the Academy, exclaimed, "Here is Plato's man!" He died at a great age, 324 B.C. Had this itinerant philosopher lived in these degenerate days, he would have become obnoxious to the police as a vagrant, and found it extremely difficult to avoid the stocks, the work-house, or the treadmill!

DIOMEDES, a king of Bistones, who is fabled to have fed his horses upon human flesh, and to have therefore been killed by Hercules.

DIOMEDES, a Grecian hero, king of Argos, who led his subjects to the siege of Troy. After the war he went to Italy, where he is said to have lived to a good old age.

DION, of Syracuse, was related to Dionysius, and often gave him advice. The tyrant banished him to Greece, where he

raised troops, and entering the harbor of Syracuse with only two ships, reduced it in three days. The tyrant fled, and Dion retained the power in his own hands, but was murdered by a false friend, Calippus of Athens, B.C. 354.

DIONYSIUS I., or the Elder, from the rank of a common soldier raised himself to the throne of Syracuse. He was inimical to the Carthaginians, and fought against them with various success. His tyranny and cruelty rendered him so odious to his subjects, that he lived in constant dread of assassination, and never permitted even his wife and children to enter his presence until their garments had been searched for concealed weapons. He is said to have built a subterraneous cave, called the ear of Dionysius, because it was built in the form of a human ear, concentrated the sound of voices within it, and conveyed them distinctly to his hearing. The artists employed upon the work were killed for fear of their disclosing the secrets of its construction, and the use to which it was applied.

Dionysius was constantly betraying his unhappiness. When one of his flatterers, Damocles, was discoursing on his magnificence, riches, and power, Dionysius said to him, "These things seem to delight you; make a trial of my place, by way of experiment." Damocles was instantly arrayed in the imperial purple, and surrounded by the king's guards, while every knee was bent to do him homage. In the midst of this show, Dionysius ordered a naked sword to be hung from the ceiling by a horse-hair, directly over the royal throne, where Damocles was sitting at a feast. From that moment the courtier-king lost his appetite, his joy vanished, and he begged to be restored to the security of his former condition. Dionysius thus tacitly acknowledged that his happiness was poisoned by a dread of the punishment which was due to his iniquity and cruelty. He died of poison administered at the instigation of his son, B.C. 368. He was very vain, and imagined that he possessed literary talents of a high order, although his poetical effusions were lamentable failures.

DIONYSIUS, the Younger, was the son of Dionysius I. By the advice of Dion, Plato was invited to court, and the philosopher

endeavored to instill into the tyrant's mind some of those precepts which were his own guide through life. The king neglected his advice, and, after suffering for frankness, Plato quitted him in disgust. Driven from the throne he had disgraced, B.C. 357, he again returned to it after an absence of ten years, but lost it a second time, and finally went to Corinth, where to support himself he kept a school, that, as Cicero observes, he might still be a tyrant. We can readily imagine the sufferings of the wretched urchins upon the interior and exterior of whose heads the ex-king labored. His pupils, we are told, were few, nor can we wonder that the pedagogue was so poorly patronized.

DIONYSIUS, one of the judges of the Areopagus at Athens, was converted to Christianity by the apostle Paul, and was the first Bishop of Athens. He was the author of some polemical writings, and suffered martyrdom.

DISCOVERIES, in modern times.

861. *Faroe Islands*—discovered about this time by a Norwegian vessel.

871. *Iceland*—discovered by some Norwegian chiefs who were compelled to leave their native country. According to some accounts, it had been visited before this, by a Scandinavian pirate, Naddodd.

980. *Greenland*—discovered by the Icelanders about this period. The first colony established there was destroyed by a pestilence in the fourteenth century, and by the accumulation of ice which prevented all communication between Iceland and Greenland.

1000. *Winenland*—a part of the continent of America, from Labrador as far south as Rhode Island, is supposed to have been discovered by the Icelanders. It was called *Winenland*, or *Vinland*, from the abundance of a species of vine found there. The Icelandic chronicles are full and minute respecting this discovery.

1330. *Canary Isles*—discovered by a French ship driven among them by stress of weather, having been known to the ancients.

1344. *Madeira*—The discovery of this group is attributed to an Englishman, Robert Macham; it was revisited in 1419 by Juan Gonzales, and Tristan Vaz, Portuguese.

1364. *Guinea*—the coast of, discovered by some seamen of Dieppe, about this period.

1434. *Cape Bojador*—doubled for the first time by the Portuguese.

1439. *Azores*—discovered by Vanderberg; settled by the Portuguese in 1448.

1449. *Cape Verde Islands*—discovered by Antonio de Noli, a Genoese in the service of Portugal.

1484. *Congo*—discovered by the Portuguese, under Diego Cam.

1486. *Cape of Good Hope*—discovered by Bartholomew Diaz. It was originally called 'The Cape of Tempests,' and was also named 'The Lion of the Sea,' and 'The Head of Africa.' The appellation was changed by John II., King of Portugal, who augured favorably of future discoveries from Diaz having reached the extremity of Africa.

1492. *Bahamas*.—These islands were the first points of discovery by Columbus. San Salvador was first seen by this great navigator, on the night between the 11th and 12th of October in this year.

Cuba and Hispaniola or St. Domingo were also discovered by Columbus in his first voyage.

1493. *Jamaica, St. Christopher's, and Dominica*—discovered by Columbus in his second voyage.

1497. *Cape of Good Hope*—doubled by Vasco di Gama, and the passage to India discovered.

1497. *Newfoundland*—discovered by John Cabot, who first called it Prima Vista and Baccalaos. The title of Prima Vista still belongs to one of its capes, and an adjacent island is still called Baccalao. Cabot sailed down the coast and touched upon Florida, thus reaching the continent before Columbus.

1498. *Continent of America*—discovered by Columbus.

Malabar, Coast of—discovered by Vasco di Gama.

Mozambique, Island of—discovered by Vasco di Gama.

1500. *Brazil*—discovered April 24th, by Alvarez de Cabral, a Portuguese, who was driven on its coast by a tempest. He called it the Land of the Holy Cross. It was subsequently called Brazil, on account of its red wood; and was carefully explored by Amerigo Vespucci, from 1500 to 1504.

1501. *Labrador and River St. Lawrence*—discovered by Cortereal, who sailed from Lis-

bon on a voyage of discovery for the Portuguese. The Cabots had entered the St. Lawrence in 1499.

1502. *Gulf of Mexico*.—Some of the shores of this gulf were explored by Columbus on his last voyage.

St. Helena—discovered by Jean de Nova, a Portuguese.

1505. *Ceylon*—discovered by the Portuguese. Ceylon was known to the Romans in the time of Claudius, A.D. 41.

1506. *Madagascar*—discovered by Lorenzo Almeida; revisited by the Portuguese navigator Fernandez Pereira, in 1508. This island was first called St. Lawrence, having been discovered on the day of that saint.

1509. *Sumatra*—reached by Diego Lopez Sigueira, a Portuguese navigator.

1510. *Molucca Isles*—discovered by the Portuguese.

Sunda Isles—discovered by Abreu, a Portuguese.

1512. *Maldives*.—A Portuguese navigator, who was wrecked on these islands, found them in possession of Arabians.

Florida—discovered by Ponce de Leon, a Spanish navigator.

1513. *Borneo and Java*.—The Portuguese became acquainted with these islands.

1513. *South Sea*.—The Pacific Ocean, or South Sea, was discovered this year from the mountains of Darien, by Nunez de Balboa, and subsequently navigated by Magellan. The supposition that the New World was part of India now ceased.

1513. *Peru*—discovered by Perez de la Rúa.

1516. *Rio de la Plata*—entered by Diaz de Solis.

1517. *China*—Fernand Perez d'Andrada reached China by sea.

1518. *Mexico*—discovered by the Spaniards; conquered by Cortes, in 1521.

1519. *Magellan, Straits of*—passed by Magellan with a fleet of discovery fitted out by Charles V. The first voyage round the world was undertaken by this navigator; and his vessel performed the enterprise, although he perished by the way.

1520. *Terra del Fuego*—discovered by Magellan.

1520. *Ladrone Islands*—discovered by Magellan.

1521. *Philippines*.—This archipelago dis-

covered by Magellan, who lost his life here in a skirmish.

1524. *New France*.—The first voyage of discovery made by the French under the patronage of Francis I.; one of whose ships, after reaching Florida, coasted along as far as 50° N. lat., and gave to this part the name of New France.

1524. *North America*—traveled over from Florida to Newfoundland by Verazzani, a Florentine, in the service of France.

1527. *New Guinea*—discovered by Saavedra, a Spaniard, sent from Mexico, by Cortez.

1530. *Guinea*—the first voyage to, made by an English ship for elephants' teeth.

1535. *Canada*—visited by Jacques Cartier, of St. Malo; a settlement having previously been made in 1523, by Verazzani, who took possession in the name of Francis I. of France.

1535. *California*—discovered by Cortez.

1537. *Chili*—discovered by Diego de Almagro, one of the conquerors of Peru.

1542. *Japan*—discovered by the Portuguese, Antonio de Meta and Antonio de Peyxoto, who were cast by a tempest on its coasts.

1552. *Spitzbergen*—observed by the English, but mistaken for part of Greenland. Visited by Barentz, a Dutch navigator, in search of a north-east passage, in 1595.

1553. *White Sea*.—This sea, which had not been visited since the time of Alfred, was now supposed to be discovered by Chancellor, an English navigator.

1575. *Solomon's Isles*—discovered by Mendana, a Spaniard, sent by the governor of Peru.

1576. *Frobisher's Strait*—discovered by the English navigator whose name it bears.

Greenland—further explored by Frobisher, who also penetrated further between this country and Labrador.

1577. *New Albion*—discovered by Drake, who was the second to attempt a voyage round the world, which he performed in three years. He gave the name of New Albion to the north-west coast of America.

1580. *Siberia*—first made known to Europe by Yermak Timophéievitch, a Cossack chief.

1585. *Davis's Strait*—discovered by the English navigator whose name it bears, in his voyage for the discovery of a north-west passage.

1594. *Falkland Islands*—discovered by the English navigator, Hawkins.

1595. *Marquesas*—discovered by Mendana, a Spaniard, on his voyage from Peru to found a colony in the Solomon Isles.

Solitary Island—discovered by Mendana on the same voyage.

1606. *Australia*—by the Dutch.

Archipelago del Espiritu Santo—discovered by Quiros, a Spaniard, sent from Peru. These islands are the Cyclades of Bougainville, and the New Hebrides of Cook.

Otaheite—supposed to be discovered by Quiros, who named it Sagittaria.

1607–10. *Hudson's Bay*—discovered by the celebrated English navigator, Hudson, on his third voyage. Venturing to pass the winter in this bay on his fourth voyage, he was, with four others, thrown by his sailors into a boat, and left to perish. It is probable that Sebastian Cabot entered and partially explored this bay in 1512.

1607. *Chesapeake Bay*—discovered by John Smith.

1615. *Straits of Le Maire*—discovered, with the island of Staten on the east, by Le Maire, a merchant of Amsterdam, and Schouten, a merchant of Horn.

1616. *Cape Horn*—doubled by Le Maire and Schouten, Dutch navigators, who called it after the town of which Schouten was a native. These enterprising men performed a voyage round the world in about two years.

1616. *Baffin's Bay*—discovered by William Baffin, an Englishman. The nature and extent of this discovery were much doubted, till the expeditions of Ross and Parry proved that Baffin was substantially accurate in his statement.

1636. *Arctic Ocean*.—In this year the Russians discovered that this ocean washed and bounded the north of Asia. The first Russian ship sailed down the Lena into this sea.

1642. *New Zealand*—with the southern part of Van Diemen's Land, discovered by Tasman, a Dutch navigator.

1686. *Easter Island*—discovered by Roggewein, a Dutch navigator.

1690. *Kamschatka*—discovered by a Cossack chief, Morosko. This country was taken possession of by the Russians in 1697. It was not known to be a peninsula until visited by Behring in 1728.

1699. *Japan*—visited by Kampfer, a German.

1699. *New Britain*.—This island, and the straits which separate it from New Guinea, discovered by Dampier. This enterprising seaman made a voyage round the world at the period of this discovery.

1728. *Behring's Strait*—explored and designated by a Danish navigator in the service of Russia, whose name it bears. Behring thus established that the continents of Asia and America are not united, but are distant from each other about thirty-nine miles.

1741. *Aleutian Isles*—on the coast of North America, discovered by Behring.

1765. *Duke of York's Island*—discovered by Byron.

Isles of Danger—discovered by Byron.

1767. *Otaheite*—discovered by Wallis.

1768. *Cook's Strait*—discovered by Capt. Cook on his first voyage round the world, which occupied from 1768 to 1771.

1770. *New South Wales*—discovered by Captain Cook.

1772. *Island of Desolation*—the first land south of India, discovered by Kerguelen, and called by his name. Subsequently called the Island of Desolation by Captain Cook.

1774. *New Caledonia*—discovered by Cook in his second voyage, 1772–1775.

1778. *Icy Cape*—discovered by Captain Cook.

1778. *Sandwich Islands*—discovered by Cook in his third voyage, which commenced in 1776. He lost his life at Owhyhee in 1779.

1797. *Bass's Straits*.—Mr. Bass, surgeon of H. B. M. S. *Reliance*, penetrated as far as Western Port, in a small open boat, from Port Jackson, and was of opinion that a strait existed between New South Wales and Van Dieman's Land. In 1799, Lieut. Flinders circumnavigated Van Dieman's Land, and named the strait after Mr. Bass.

1804–6. *Missouri River*—explored to its sources by Captains Lewis and Clarke, and the origin and source of the *Columbia* ascertained.

1819. *New South Shetland*—discovered by Capt. Smith, of the brig *William*, bound to Valparaiso.

1821. *Asia*—the northern limits of, determined by Baron Wrangel. [See AFRICA and ARCTIC DISCOVERIES.]

DJEZZAR, ACHMET, Pacha of Acre, originally a slave; aided by the English, he checked

the career of Napoleon, in Syria. He died in 1804. Djeddar signifies 'butcher,' and the pacha won the name by his cruelties.

DODD, WILLIAM, an English clergyman, born in 1729; he was popular as a preacher, and as an author, and was appointed one of the king's chaplains, which place he lost by being convicted of offering a bribe to obtain preferment. The Magdalen hospital in London was erected under his supervision. His extravagant excesses led him into continual embarrassments. In 1777, he was convicted of forging a bond for £4,200 in the name of his patron, Lord Chesterfield. High influence was exerted and great interest made to save him, but when the case came before the council, the minister of the day said to George III., "If your majesty pardon Dr. Dodd, you will have murdered the Perreaus." These were two unfortunat wine-merchants who had been executed for forgery less than a year before. The doctor was accordingly hanged at Tyburn, June 27th. Forgery is no longer a capital crime in England.

DODDRIDGE, PHILIP, D.D., a distinguished divine among the English dissenters, was born in London, June 26th, 1702. His pious parents early instructed him in religious knowledge. The chimney in the room where the family were wont to sit, was ornamented with quaint Dutch tiles, and from these the good mother taught her boy the history of the Old and New Testaments before he could read. Under such training he early entered the ministry, and at twenty preached his first sermon. He settled at Northampton, where as pastor, an instructor of students in theology, and the author of many pious works, he led an arduous and faithful life till 1751, when ill health sent him to Portugal. He survived his arrival at Lisbon but five days, dying the 26th of October, 1751. Dr. Johnson pronounced an epigram by Dr. Doddridge one of the finest in the English language. The subject is his family motto, "Dum vivimus vivamus."

"Live while you live, the *epicure* would say,
And seize the pleasures of the present day.
Live while you live, the sacred *preacher* cries,
And give to God each moment as it flies.
Lord, in my views let both united be;
I live in pleasure when I live to thee."

DODDINGTON, GEORGE BUBB (Lord Mel-

combe Regis), was the son of a gentleman of fortune, and was born in 1691. He enjoyed many posts of honor and emolument under different parties, and he did not scruple to avow openly his political tergiversations. He was advanced to the peerage in 1761, and died in the following year. Bubb Dodington was eccentric, generous, convivial, and magnificent in private life. Many anecdotes are related of him. For the amusement of the young Prince of Wales he used to suffer himself to be rolled up in blankets, and trundled down the stairs. Before he took the name of Dodington, he was one day lamenting to Lord Chesterfield the shortness of his patronymic, Bubb. "You can easily remedy it," said his lordship; "call yourself Sillybub, and that will do very well." He winced under the whimsical satire which an opponent issued, with the title of "A Grub upon Bubb." When his fortune increased, he built himself a splendid villa, which if cost constituted elegance would have been a model. But Bubb had no taste, and his villa was a failure. The second story appeared much too heavy for the first; for, while the latter was ornamented in the lightest style, the suite of rooms above was adorned with marble fire-places, marble slabs, and massy wainscoting. The proprietor, in showing this to a friend one day, said, "They tell me, sir, that this is out of place, and ought to be down-stairs." "Make yourself perfectly easy," was the consolatory answer; "it will soon be there!"

DODSLEY, ROBERT, was born at Mansfield, Notts, in 1703. He was at first a stocking weaver, then a footman, and his first volume was a collection entitled "The Muse in Livery." He acquired a very handsome fortune by his efforts as author and bookseller, and retired to Durham, where he died in 1764. His "Economy of Human Life" is an excellent little moral treatise. As a public-spirited publisher, he was of good service to literature and literary men.

DOLCE, CARLO, an eminent Florentine painter, 1616-1686.

DOMENICHINO is the name by which DOMINICO ZAMPIERE is best known. He was born at Bologna in 1581. He studied painting in the school of the Carracci, and is accounted the ablest of all their scholars. At

Rome, he earned a high reputation. He received only fifty scudi (about fifty dollars) for his "Communion of St. Jerome," considered the best altar-piece in Rome, with the exception of Raphael's "Transfiguration." In 1630, he removed to Naples, was much persecuted by his rivals there and in Rome, and died April 15th, 1641, not without suspicion of having been poisoned.

DOMINIC DE GUZMAN, St., was born in Spain in 1170, and died at Bologna in 1221. He was the founder of the order of Dominicans, whose power and influence were at one time almost universal. They were called in France Jacobins, and in England Black Friars. The inquisition was at first in their hands.

DOMITIAN, TITUS FLAVIUS SABINUS, son of Vespasian, and brother of Titus, whom, according to some accounts, he destroyed by poison, was born, A.D. 51, and ascended the throne, A.D. 81. The beginning of his reign promised tranquillity to the people, but their hopes were soon swamped in his cruelty and debauchery. He perished by the hands of an assassin, the 18th of September, A.D. 96, in the forty-fifth year of his age, and the fifteenth of his reign. He was the last of the twelve Cæsars.

DONIZETTI, GAETANO, a popular operatic composer, born at Bergamo, in 1798, died there insane, April 8th, 1848. He wrote sixty-three operas, of which the most famous are, "Anna Bolena," "Lucrezia Borgia," "Lucia di Lammermoor," "La Fille du Regiment," "La Favorita," "Linda di Chamouni," and "Don Pasquale."

DONNE, JOHN, an English poet and divine of some celebrity, was the son of a merchant, and was born in London in 1573. His education was obtained at Oxford and Cambridge. Originally a Catholic, in his nineteenth year he abjured the Romish religion, and was made secretary to the Lord Chancellor Ellesmere, whose favor he lost for a time by a clandestine marriage with his niece. The juvenile pair appear to have foreseen all the consequences of their union, for the doctor indorsed a paper in the following manner, "John Donne, Anne Donne, undone." His prospects, however, brightened; he took orders, became one of King James's chaplains, and died in March, 1631.

DON

DORIA, ANDREA, a Genoese commander, born in 1468. After having been employed by several princes, he received a command in Corsica, which island he completely reduced. He gained wealth and honor in his attacks upon the Barbary states. On the breaking out of the revolution in Genoa, he went into the service of France, and next into that of the pope; but on the capture of Rome he returned to Francis I., who made him the general of his galleys, and admiral of the Levant. The French having become masters of Genoa, in 1528, Doria succeeded in delivering the republic from a foreign yoke, received the office of doge for life, and was rewarded with the title of father of his country. He next carried arms through the Mediterranean in the service of Charles V., and died in 1560, full of years and honors.

DORIS was a small district of ancient Greece, the seat of the Dorians, the most powerful of the Hellenic tribes. About B.C. 1104, the Dorians migrated to the Peloponnesus. They sent out many colonies. They invented the Doric order of architecture, the most ancient of the five. The lyric poets of Greece in general wrote in the Doric dialect.

DORSET, THOMAS SACKVILLE, Lord Buckhurst and Earl of Dorset, was the son of Sir Richard Sackville, and was born at Witham, in Sussex, in 1527. He was educated at Oxford, whence he removed to Cambridge, and next to the Inner Temple. On leaving the Temple, he went abroad; and after his return, was made Lord Buckhurst. In 1587 he was sent on an embassy to the United Provinces. After this he was made knight of the garter, and chosen chancellor of Oxford. On the death of Burleigh he was appointed lord treasurer; and in the next reign created Earl of Dorset. He died in 1608. **EDWARD** (1590-1652), his grandson, bearing the same titles, was a partisan of Charles I., and regent during the king's absence in Scotland.

CHARLES SACKVILLE, sixth Earl of Dorset and Middlesex, was born in 1637. In his youth he was one of the most notorious libertines of the wild time which followed the Restoration. He was the lover of Nell Gwynn before she became a royal mistress: she called him her Charles the First. Yet, in the midst of follies and vices, his courageous

spirit, his fine understanding, and his natural goodness of heart, had been conspicuous, and with all his errors he was a general favorite. In 1665, he volunteered on board the fleet under the Duke of York in the war against the Dutch, and there, the night before an engagement, wrote that song, unequalled in its kind, "To all you ladies now at land." The judgment of the world became still more favorable to Dorset when he had been sobered by time and marriage. His graceful manners, his brilliant conversation, his soft heart, his open hand, were universally praised. No day passed, it was said, in which some distressed family had not reason to bless his name. And yet, with all his good nature, such was the keenness of his wit, that scoffers whose sarcasm all the town feared stood in craven fear of the sarcasm of Dorset. All political parties esteemed and caressed him; but politics were not much to his taste. He took just so much part in parliamentary and diplomatic business as sufficed to show that he wanted nothing but inclination to rival the leading statesmen of the age, and turned away to pursuits which pleased him better. He was the best judge of painting, of sculpture, of architecture, of acting, that the court could show. More than one clever play which had failed on the first representation was supported by his single authority against the whole clamor of the pit, and came forth successful from the second trial. He was a munificent patron of the letters. Dryden was saved from ruin by his almost princely generosity; he was the first to call attention to Butler's "Hudibras;" and by him Montague and Prior were introduced into public life. The few songs and satires he occasionally composed show that, with more industry, he might have been a rival where he was content to be a benefactor. He died at Bath, January 19th, 1706.

DORT, a commercial town in the south of Holland. The resolutions of the synod of Dort, held here by the Protestants in 1618 and 1619, form the present code of the Dutch Reformed Church. This synod was attended by deputies from the reformed churches throughout Europe. Its object was to settle the difficulties between the doctrines of Luther, Calvin, and Arminius. The tenets of the latter were condemned.

DOUGLAS, STEPHEN ARNOLD, was born in Brandon, Vt., April 23, 1813. His father, a physician, died leaving his wife and son in indigent circumstances. Young Douglas attended school only one third of the year, working on the farm or in a cabinet shop the remainder. In 1820 he removed to Illinois, taught school for a support and studied law. Admitted to the bar in 1834, though imperfectly trained, yet he displayed such abilities, that the next year he was elected State Attorney. From that period till his death, June 3, 1861, he was in public life, as Secretary of State, Judge of Supreme Court of Illinois, Representative to Congress, and three successive times U. S. Senator. He was for a long time at the head of the Committee on Territories. Though not the originator he was the mover and advocate of the famous "Kansas and Nebraska Bill," and of the repeal of the "Missouri Compromise." He was the advocate, if not the originator, of the "Squatter Sovereignty" doctrine, giving to the settlers of a territory the power to determine its status in regard to slavery. He was a Democratic candidate for the Presidency in 1860. At the commencement of the rebellion he took a decided stand in support of the Union, and his last letters and dying words evinced his patriotism and his hostility to the foes of the republic. He was a man of extraordinary talent, energy and determination. He possessed that genial, electric nature which drew around him a host of political and personal friends. The West gave him the *soubriquet* of "Little Giant."

DOW, GERARD, one of the most celebrated of the Dutch *genre* painters, was born at Leyden in 1613. In 1628, he was placed with Rembrandt, whose pupil he continued three years. His works are remarkable for high finish and for lightness of handling. He died at L. in 1680.

DOW, LORENZO, an eccentric Methodist preacher, was born in Coventry, Conn., Oct. 16th, 1777. Traveling extensively over the United States, England and Ireland, he is supposed to have preached to more persons than any other man of his time. He died Feb. 2d, 1834.

DRACO, archon and lawgiver of Athens, flourished about 600 B. C. He was very popular, and fell a victim to the favor of his

countrymen, for, being in the theatre at Egina, the people gave him the customary token of approbation by throwing their caps and garments upon him, and such was the number of these that he was smothered under their weight. He was buried under the theatre. His code (623 B. C.), on account of its severity, was said to be written in letters of blood. Idleness was punished as heavily as murder. The smallest transgression, he said, deserved death, and he could not find any punishment more rigorous for atrocious crimes.

DRAKE, SIR FRANCIS, the first Englishman to circumnavigate the globe in a single voyage, was born in 1546, near Tavistock in Devonshire. He took to the sea while a lad, and early became a skillful mariner. In 1565 and 1566, he undertook a trading voyage to the West Indies, during which he was much despoiled by Spanish cruisers. An expedition with Sir John Hawkins to the Spanish main, was also destroyed by the Spaniards, and in 1572, Drake with three small vessels sailed to seek reprisals. He captured a large treasure on the isthmus of Panama. During this adventure he climbed a "goodlie and great high tree," from which he saw the broad Pacific, whose waters none of Europe but the Spaniards yet had sailed, and whose shores were supposed to be garners of almost exhaustless treasures. The bold mariner, while he gazed, "besought God to give him health and life once to sail an English ship in those seas." With a squadron of five little vessels he sailed from England, Nov. 13th, 1577, and entered the Pacific through the dangerous straits of Magellan the following May. In the severe storms that were encountered, his consorts either forsook him or perished. Captures of Spanish galleons soon filled the Golden Hind with treasure, and the enraged sufferers collected a large force at the south to catch him on his way home. He tried to find a passage round the north of America, but the severity of the high latitudes which he reached, turned him back. He crossed the Pacific, doubled the Cape of Good Hope, and dropped anchor in Plymouth harbor Nov. 3d, 1580, having been not quite three years away, and in that time circumnavigated the world, in the very teeth of that old Egyptian monk Cosmos, who had no patience with the unscriptural and impious doctrine of the earth's sphericity, argu-

ing stoutly that it is a plain surrounded by an immense wall, at whose north side is a great mountain, behind which the sun is hidden every night. England rang with the renown of Drake's exploits and treasures. Queen Elizabeth knighted him, and Spain prayed for the privilege of hanging him as a pirate. In the war which soon occurs between the two countries, Drake does great service, attacking and burning the Spanish fleet in Cadiz harbor. So the armada can not sail till next year, and when it does put forth to be shattered by the winds and waves, Vice-Admiral Drake is active in completing its destruction. In 1595, with his old comrade Sir John Hawkins, Drake sails on an expedition against the Spanish West Indies, falls a victim to the climate, and dies off Portobello, January 28th, 1596.

DRAYTON, WILLIAM HENRY, a native of South Carolina, was born in 1742. In 1775, he was chosen president by the provincial congress, and the next year chief-justice of the colony. In 1777, he was made president of South Carolina, and the next year was chosen member of congress. His death took place in September, 1779.

DRESDEN, the capital of Saxony, on the Elbe, contains 105,000 inhabitants. Here, on the 28th of August, 1813, Napoleon defeated the allies and forced them to retire to the Bohemian frontier. In this battle Moreau received his mortal wound, while conversing with the Russian emperor. On the 6th of November, Marshal St. Cyr was blockaded in Dresden, and after an ineffectual negotiation with Schwartzberg, surrendered his whole force, amounting to 30,000 men.

DRESS. Excess in dress was restrained by a law in England in the reign of Edward IV., 1465, and again in the time of Elizabeth, 1574. That brave gallant, Sir Walter Raleigh, we are told, wore a white satin-pinked vest, close-sleeved to the wrist, and over the body a brown doublet finely flowered, and embroidered with pearls. In the feather of his hat a large ruby and pearl drop at the bottom of the sprig in place of a button. His breeches, with his stockings and ribbon garters, fringed at the end, all white; and buff shoes, which on great court days were so gorgeously covered with precious stones, as to have exceeded the value of £6,600; and he had a suit of armor of solid silver, with sword and belt

blazing with diamonds, rubies, and pearls. Sir Walter's garb was outdone by the coat glittering with diamonds that Prince Esterhazy sported at Paris in 1815. Accounts of magnificent attire come to us from remote antiquity. The costume of the Grecian and Roman women was comely and graceful. Ovid sings that the women of Cos, whose country was famous for the silkworm, wore white garments of cotton and silk, so clear and thin, and so beautiful and delicate in texture, that their bodies could be seen through the vesture.

The Romans went for many ages without any regular covering for the head, and hence the heads of all the ancient statues are bare. But at one period the cap was a symbol of liberty, and when the Roman bestowed it upon a slave he had his freedom. Sometimes the cap has been a mark of infamy. In Italy Jews were distinguished by a yellow cap, and in France those who had been bankrupts were forever after obliged to wear a green cap. History first mentions the general use of caps and hats, in place of the hoods and chaperons before worn, at the triumphal entry of Charles VII. into Rouen, in 1449. The monarch wore a hat lined with red velvet, and surmounted with a rich plume. Hats were first manufactured in England in 1510, by Spaniards; before which time both men and women wore close-knit woolen caps. Breeches were a badge of servitude among the Greeks. The garment was worn by the Dacians, Parthians, and other northern nations, and is said to have been worn in Italy in the time of Augustus Cæsar. Shirts were not generally worn in the west of Europe till the eighth century. Woolen shirts were commonly worn in England until about 1253, when linen began to be used. Shoes were made of leather, linen, rush, or wood, among the Jews. The Jewish women wore moons as ornaments in their shoes (Isaiah iii. 18). Pythagoras would have his disciples wear shoes made of the bark of trees; that they might not wear those from skins, as they refrained from the use of aught that had had life. Sandals were worn by Grecian women of rank. The Romans wore an ivory crescent on their shoes, and those of Caligula were enriched with precious stones. The Egyptians made theirs from the bark of the papyrus. Our English ancestors had an odd way of adorning their feet. They wore

the beaks or points of their shoes so long that they were cumbersome in walking and must be tied up to the knees. Fine gentlemen fastened theirs with chains of silver, or silver gilt, and others with laces. This fashion was prohibited in 1467, on forfeiture of twenty shillings and on pain of being cursed by the clergy. Shoes as at present worn were introduced about 1633, and shoe-buckles in 1668. Boots are said to have been the invention of the Carians, and were made of iron, brass, or leather. Leathern boots are mentioned by Homer.

DRUIDS. Among the ancient Germans, Gauls, and Britons, the Druids were priests or ministers of religion. They were also the instructors of the young, and the only learned men of the nations to which they belonged, and also acted as judges. They did not make use of writing, but their scholars were obliged to get by heart all their lessons from hearing them repeated. This was a very tedious way of getting forward, and we are not at all surprised that it took twenty years of a man's life to acquire a very limited stock of learning.

In general, little was known about very ancient tribes and nations, until the Romans invaded their countries, and conquered them. So it is from the Romans that we have derived our knowledge of the habits, character, and religion of the Druids. It is very scanty, for the precautions of these singular men were too successful in preventing their secrets from being divulged. The Druids of Britain were very celebrated. There has been much dispute about the derivation of the word 'druid,' but it is most probable that it comes from an old British word, *deru*, meaning 'oak,' because the Druids held the oak-tree almost sacred; it was their favorite tree, and their groves contained no other. Little is known concerning them before the age of Julius Cæsar, who invaded Britain after having subdued Gaul, about 54 B.C. Cæsar says that they were divided into several classes; the priests, the soothsayers, the poets, and the judges, and instructors of youth.

The priests, those Druids who were called so by way of distinction, had the charge of the religious ceremonies. They worshiped their gods, and offered sacrifices to them upon altars. Their temples or places of worship, were very singular. They were gener-

ally circles of vast standing pillars, over which they sometimes laid huge stones making a circle in the air. In the middle stood the altar-stone. Of this kind was the celebrated Stonehenge, near Salisbury, in England. In the island of Anglesey, near the northern extremity of Wales, there are druidical pillars yet remaining. This island is supposed to have been the residence of the chief Druid of Britain. The religion of the Druids, when stripped of its mysteries and unmeaning practices, adapted for the gratification of the ignorant, seems to have been a belief in one supreme being. They had a doctrine of the immortality of the soul, and it was among the strongest incitements to virtue and courage. As teachers of morality, they sustained their precepts by their own example. Their austerity and contemplative habits inspired the populace with reverence and awe. A Druid's robe was pure white, indicating holiness and truth. Like the priests of other rude nations, they were compelled to clothe religion with ceremonies and customs calculated to stir the wonder and fear of their votaries.

The poets, or bards, according to some, did not properly belong to the class of Druids, because they did not mix religion with their songs. They inspired the people to warlike actions, sang the praises of patriotism and bravery, and preserved the oral chronicles of the nation.

The Druids studied astronomy, and made great proficiency in the science. We all know what terror and astonishment an eclipse, or any singular appearance in the sky, creates among an ignorant people who do not know the causes of these things, or the means of finding out beforehand at what time they will happen. Among such people, persons who can foretell any occurrence, are looked upon as inspired with a knowledge more than human. By such arts, the Druids extended and strengthened their influence over the people. The Roman soothsayers, or fortune-tellers, pretended to foretell events by the appearance of the entrails of beasts that were sacrificed on their altars. In the same way, but with much greater cruelty, the druidical soothsayers examined the bleeding bodies of human victims, who had been immolated in sacrifice.

STONEHENGE.

When the Roman general, Suetonius, determined to put an end not only to the ceremonies of the Druids, but to the priests themselves, they took refuge in the island of Anglesey. Here they were determined to make a bold resistance. Having some hopes of gaining a victory over the Romans, they kindled large fires, in which they intended to consume the Roman prisoners, should they take any. Suetonius landed near Parthamel. The Druids, in great numbers, encircled the army of their countrymen, urging them to be brave and praying for the vengeance of heaven upon the invaders. The scene was rendered more terrific to the Romans by the appearance of the British women, who were dressed in black, and ran yelling to and fro, with disheveled hair, brandishing torches. However, the Romans were brave men, and they conquered. They cut down the sacred groves of oak; they demolished the temples of the Druids, and cruelly threw them into their own fires.

The Druids, who were the judges in all

cases which required a recourse to law, settled these matters by their opinion, from which there was no appeal except to the Arch-Druid. As the Druids were thought to receive knowledge and instruction directly from the gods, they had the power of making, altering, and executing laws. Any person, who desired to possess the great power of the order, could become a Druid only by a long course of very strict study, and a life of privation which not many had patience to go through.

The schools of the Druids in Britain were very famous, before the invasion of the Romans. Even youth from Gaul came thither. Scholars took an oath not to betray the secrets and learning which they were taught. Students always resided with their teachers and school-fellows, and were forbidden to converse with any others. Academies were numerous, one being attached to almost every temple of note. Instruction was conveyed in verse. The whole circle of the sciences with which the Druids were

acquainted was taught in twenty thousand verses, which pupils were twenty years in committing to memory. Besides an acquaintance with geometry, astrology, astronomy, geography, natural philosophy, and politics, they professed a knowledge of the arts of magic, and whosoever refused obedience was declared accursed.

The Druidesses, or female priests, were divided into classes. The first class was composed of those who never married, and who pretended to have the power of foretelling events, and performing miracles. These were held in great regard. Then there was a second class of married women, who spent the greater part of their lives in the performances of religious ceremonies, among the Druids. The third class consisted of those who did the meanest work about the temples.

The Druids measured time, not by the days but the nights, guided by the changes of the moon. They had so great a veneration for the oak, that they never performed any ceremony without being adorned with garlands woven of its leaves. Those who professed a knowledge of medicine would never betray the secrets by which they cured the sick. They were, without doubt, only acquainted with the healing powers of a few herbs. They placed great faith in the virtues of the mistletoe, probably from its growing on the oak. They called it by a name meaning 'all-heal.' The efficacy of this plant they thought depended on certain ceremonies to be observed in gathering it. Among the annual festivals of the Gauls and Britons, was that in which the Arch-Druid cut the mistletoe from the oak. This ceremony was conducted with great pomp. When they found an oak which had the rare plant upon it, they made preparations for a banquet beneath. Two milk-white bulls were tied to it by the horns, and then the Arch-Druid, dressed in a snowy robe, ascended the oak, and detached the mistletoe with a golden knife. Sacrifice and feasting followed. A vestige of this reverence for the mistletoe has survived in England to the present day—the custom of using among the evergreen decorations for Christmas a mistletoe, under which, in presumed imitation of the Druids, it is customary to kiss the maids. On every May-day a festival, in honor of the

sun, was held. The sun was called Bel, Belenus, and some other names.

DRUIDS.

The existence of a law forbidding the instructions of the Druids to be written, shows that they were acquainted with the art of writing. We are told that in writing they made use of the characters of the Greek alphabet, with which they were acquainted before the invasion of the Romans. The Gauls and Britons never went upon any warlike expedition without first praying to some god for assistance. When a victory was gained, a certain portion of the spoils was set apart for that god who had, as the people thought, enabled them to be successful. The priests were, of course, to direct to what use these spoils should be put, and a large share of them were, without doubt, reserved for themselves. The Druids too often possessed themselves of the offerings made in the temples of the gods. Besides the money there received for giving instruction in the sciences, for curing diseases, and for giving judgment in law-suits, the priests of each temple claimed every year certain dues from all the families in their district. They hit upon a very cunning method to secure the payment of these taxes. Every family upon the last evening of October was obliged by law to put out all its fires, and to pay its yearly dues at the temple. On the first of November, those who had paid punctually received sacred fire from the altar to kindle theirs at home. Delinquents were not allowed to take any fire, and if any one lent it

to them, or even conversed with them, that person was punished in the same manner, and not allowed to enjoy the protection of justice or the pleasures of society. The sacred fire in the temple was never allowed to go out. It is surprising that this sacred flame, like that in the temple of Vesta, should be preserved by Christian priests for ages after the disappearance of the Druids. No earlier than 1220, Loundres, Archbishop of Dublin, extinguished the ancient flame, which was kept in a small cell near the church of Kildare. So firmly rooted was the superstition that the fire was relit in a few years, and actually kept burning until the suppression of monasteries.

The Druids were greatly restricted in their privileges when Britain was a province in the hands of the Romans, and they resented with great warmth the order which the Roman emperors issued, that no more human victims should be slain at the altars. After the loss they experienced in the isle of Anglesey, they made no figure in Britain. The few who were determined still to persevere in the rites of their order, fled to Scotland, Ireland, and the smaller British islands, in which they kept up their authority some time. Even after the Druids ceased to exist, the superstitions they had spread gave trouble to those who wished to make the people believe in the gospel. In the reign of Canute the Great, during the eleventh century, it was found necessary to provide by law against these wretched superstitions. "We strictly forbid all our subjects," says the king, "to worship the gods of the Gentiles; that is to say, the sun, moon, fires, rivers, fountains, hills, or trees or woods of any kind."

DRUSES, a warlike people of Syria, 30,000 in number, inhabiting the mountains of Libanus and Anti-Libanus. Their origin is traced to about the commencement of the twelfth century. They are a religious sect, neither Christians nor Mohammedans. They reached the summit of their power under Fakardin, who, being taken prisoner by the Turks, was strangled in 1631. Thenceforth they were the vassals of the Turks.

DRYDEN, JOHN, one of the great masters of English verse, was born at Oldwinckle, Northamptonshire, in August, 1631. His father, Erastus Driden, was a strict Puritan,

of an ancient family. John fledged his muse in heroic stanzas lamenting the death of Cromwell. The restoration came, and he welcomed the returning monarch as easily as he had mourned the departed protector. Theatricals revived, and Dryden wrote many successful dramas, all stained with licentiousness, a fault of the age that he helped on rather than strove to check. In 1665, he wedded Lady Elizabeth Howard, daughter of the Earl of Berkshire, adding thereby neither to his wealth nor his joy. When Mrs. Dryden wished she were a book, that she might enjoy more of his company, he answered, "Be an almanac then, my dear, that I may change you once a year." The envious attacks of his detractors he silenced by those trenchant satires, "Absalom and Achitophel" and "Mac Flecknoe." He began to have doubts of the Protestant faith, and shortly after the accession of James II., the laureate was received into the Romish communion. His sincerity has been suspected; unjustly, we think: he adhered to his new belief when it was no longer popular or profitable. He continued busy in toil with his pen, till death came, May-day, 1700. With great pomp he was interred in Westminster Abbey. The vigorous and idiomatic prose of Dryden rivals the excellence of his verse.

The house in which Dryden died still stands in London, a respectable, old-fashioned dwelling. Some years ago it was tenanted by a comely dame—a Wife of Bath—who dealt in contraband laces, gloves, &c. Lord Holland often called to see the interior, but the cautious mistress, sure that his portly and comfortable presence was that of a custom-house officer or other functionary of government, kept the door in her hand, and steadily rejected the solicitations of the literary peer and pilgrim.

DUBOIS, WILLIAM, Cardinal, the son of an apothecary, was born at a small town in Limousin, in 1656. He became prime minister to the Duke of Orleans, regent of France, by the basest of means, flattering the vices of his master. He died August 10th, 1723.

DUDLEY, EDMUND, an English statesman under Henry VII., born in 1462. On the accession of Henry VIII., he was sent to the Tower with his associate, Sir Richard Empson, tried, and beheaded in 1510.

DUD

DUDLEY, JOHN, Duke of Northumberland, son of the preceding, was born in 1502, and restored in blood in 1511. He became the favorite of Henry VIII., and he married his son, Lord Guilford, to Lady Jane Grey, when he found that Edward VI. was dying. Lady Jane Grey was prevailed upon to accept the fatal crown, but Mary's adherents proved too powerful for her party, and the Duke of Northumberland died upon the scaffold, August 22d, 1553.

DUDLEY, ROBERT, Earl of Leicester, son of the preceding, was born in 1532. He was condemned with his father, but pardoned, and afterward restored to blood by Queen Mary. In the reign of Elizabeth, he was made master of the horse, knight of the garter, and a member of the privy council. In 1560 his wife died, not without suspicion of violence, it being generally believed that Dudley aspired to the hand of his sovereign. The story of the unhappy countess is beautifully told in the ballad of "Cumnor Hall," which gave Scott the hint for his splendid romance of "Kenilworth." The following are the concluding verses :

"The death-bell thrice was heard to ring,
An aerial voice was heard to call,
And thrice the raven flapped his wing
Around the towers of Cumnor Hall.

"The mastiff howled at village door,
The oaks were shattered on the green;
Woe was that hour—for never more
That hapless countess e'er was seen.

"And in that manor now no more
Is cheerful feast and sprightly ball,
For ever since that dreary hour
Have spirits haunted Cumnor Hall.

"The village maids, with fearful glance,
Avoid the ancient moss-grown wall;
Nor ever lead the merry dance
Among the groves of Cumnor Hall.

"Full many a traveler oft hath sighed,
And pensive wept the countess' fall,
As wandering onward they've espied
The haunted towers of Cumnor Hall!"

Elizabeth proposed Dudley to Mary, Queen of Scots, as a husband, but that unfortunate princess indignantly rejected him. In 1564, he was created Earl of Leicester; soon after which, he was elected chancellor at Oxford. About 1572, he privately married Lady Douglas Howard, but he never acknowledged her,

and even forced her to marry another. In 1575, the earl entertained the queen magnificently at his castle of Kenilworth in Warwickshire, but offended her very much by marrying the Countess of Essex. In 1585, he was appointed governor of the Protestant Low Countries, but returned the same year by the queen's command. In 1588, he was appointed to the chief command of the forces at Tilbury. He died Sept. 4th of the same year.

DUMOURIEZ, CHARLES FRANCOIS, was born of a noble family at Cambrai, in 1739. Becoming general in the French army, he gained the battle of Jemappes, over the Austrians, Nov. 6th, 1792. He soon after appeared before Brussels, which opened its gates. On the 15th of March, 1793, in a general engagement with the Austrians at Nerwinden, he was totally defeated. He had a scheme for raising the Duc de Chartres (Louis Philippe) to the throne of France. The convention dispatched four commissioners empowered to arrest him. These he caused to be delivered up to the Austrians, and he himself fled to the allies for protection. He received a pension from the British government, and died at Turville Park, England, March 14th, 1823.

DUNBAR, BATTLE OF, between the Scottish and English armies, in which John Baliol was defeated by the Earl of Warrenne, and Scotland subdued by Edward I.; fought April 27th, 1296. Battle between the Scots, and the English under Cromwell, who gained a signal victory, Sept. 3d, 1650.

DUNCAN, ADAM, Viscount, a brave British naval officer, was born in Scotland in 1731. He entered the navy at an early age, and in 1761 was appointed post-captain, in which station he shared in the honors of the reduction of Havanna. In 1779, he commanded the Monarch in Rodney's victory over the Spaniards. In 1794, being made vice-admiral of the white, he took the command of the North Sea fleet. After watching the Dutch fleet in the Texel for two years, a mutiny in the fleet compelled him to return to England, and enabled the enemy to put to sea. This news restored Duncan's men to a sense of their duty; they engaged the enemy on the 11th of October, 1799, off Camperdown, and completely defeated them, taking

DUN

the Dutch admiral, De Winter, and eight ships. For this achievement Duncan was made a viscount. He died suddenly, August 4th, 1804.

DUNDAS, HENRY, Viscount Melville, son of Lord Arniston, was born in 1740. He was a steady follower of William Pitt, and upon that minister's retirement in 1801, Dundas resigned his places, and was created Viscount Melville. When Mr. Pitt came into power again in 1804, he was made first lord of the admiralty, but was impeached in 1805, for crimes and misdemeanors in his former situation as treasurer of the navy. He was, however, acquitted, and died in Scotland, May 27th, 1811.

DUNKIRK, a city in French Flanders, with 27,000 inhabitants, about twenty-seven miles from Calais. It was taken from the Spaniards by Marshal Turenne, 4th of June, and transferred to the English on the 17th, in 1758. In 1662, it was sold by Charles II. to Louis XIV., for £500,000. In 1666, an engagement which lasted four days took place between the English and French fleets off Dunkirk. At the peace of Utrecht, William III., exacted from the French a promise to demolish the defenses and fill up the harbor, which was but partially complied with. Since the peace of 1783, Dunkirk has, however, been the unmolested resort of armed ships of war, and smuggling vessels at all times. In 1793, the Duke of York was defeated by Hoche near Dunkirk.

DUNSINANE, BATTLE OF, fought in 1057, between Macbeth, Thane of Glamis, and Seward, Earl of Northumberland. Edward the Confessor had sent Seward on behalf of Malcolm, whose father, Duncan, the usurper had murdered. Macbeth was defeated and slain. Shakspeare has immortalized this conflict.

DÜRER, ALBRECHT, the 'evangelist of art,' was born at Nuremberg, May 20th, 1471, the third of eighteen children. Though brought up to be a goldsmith, as were his father and maternal grandfather, he early adopted painting as his profession. He distinguished himself both as a painter and as an engraver on copper and wood. Feb. 2d, 1494, he married Agnes Frey, the pretty daughter of a Nuremberg musician, receiving with her a dowry of two hundred florins; for which, says an old

writer, he had afterward at least two thousand unhappy days. She is said to have been imperious, avaricious, and fretful, constantly urging him to work, to make provision for her after his death. He was the most distinguished artist of his time north of the Alps, and in 1515 an interesting exchange of drawings took place between him and Raphael. One of the latter's is preserved in Vienna, with this inscription by Dürer on the back: "1515, Raphael of Urbino, who has been so highly esteemed by the pope, drew these naked figures, and sent them to Albrecht Dürer in Nuremberg, to show him his hand." Albrecht was a sculptor as well, and unquestionably a man of remarkable attainments. Even Melancthon said painting was the least of his accomplishments. He died at Nuremberg, April 6th, 1528.

DUROC, MICHAEL, a friend and favorite officer of Napoleon, Duke of Friuli, grand-marshal of the palace, senator, general of division, grand cordon of the legion of honor, and other orders, was born in 1772. Under Napoleon, in Italy, in Egypt, and in Germany, he distinguished himself, being the greater part of the time aide-de-camp to the emperor. He was killed in entering the village of Merkersdorf, after the battle of Bautzen, May 23d, 1813. Napoleon was cut to the heart by the loss of his dear friend. Marshal Duroc was one of those men who seem too pure and perfect for this world, and whose excellence helps to reconcile us to human nature. The splendor of his position had not power to dazzle or corrupt him. He remained simple, natural, and independent, a warm and generous friend, a just and honorable man. I pronounce this eulogy without fear of contradiction.—*Caulaincourt*.

DUVAL, CLAUDE, a noted highwayman in England, during the reign of Charles II., was a Frenchman by birth. Many romantic tales were told of him; that he was the page of the Duke of Richmond, took to the road, became captain of a formidable gang, and had the honor to be named first in the royal proclamation against notorious offenders; how, at the head of his troop, he stopped a lady's coach, in which there was a booty of four hundred pounds; how he took only one hundred, and suffered the fair owner to ransom the rest by dancing a coranto

with him on the heath; how his vivacious gallantry stoic away the hearts of all women; how his dexterity at sword and pistol made him a terror to all men; how, at length, in the year 1670, he was seized when overcome by wine; how dames of high rank visited him in prison, and with tears interceded for his life; how the king would have granted a pardon but for the interference of Judge Morton, the terror of highwaymen, who threatened to resign his office unless the law was carried into full effect; and how, after the execution, the corpse lay in state with all the pomp of scutcheons, wax-lights, black hangings, and mutes, till the same cruel judge who had intercepted the mercy of the crown sent officers to disturb the obsequies.—*Macaulay*.

DWIGHT, TIMOTHY, an eminent divine,

born at Northampton, in Massachusetts, in 1752. His mother was a daughter of Jonathan Edwards. Timothy was graduated at Yale College, in which institution he was tutor at nineteen. He served in the army as chaplain, and about the close of the Revolutionary war was elected a member of the state legislature. Mr. Dwight then kept a school in Greenfield, Connecticut, where he was ordained minister in 1783. In 1794, he published the poems of "Greenfield Hill" and the "Conquest of Canaan," both of which were republished in England. In 1795, he succeeded the reverend Doctor Styles as president of Yale College, filling also the office of professor of theology. He died January 11th, 1817. His "System of Theology" is a learned and valuable work.

E.

EARTHQUAKES. The following are among the most memorable that have occurred.

- 372 B.C. Ellice and Bula in the Peloponnesus swallowed up.
- 144 B.C. Isle of Hiera rose from the Ægean Sea during an earthquake.
- 17 A.D. Awful one in Asia, which overturned twelve cities.
- 79. One, together with an eruption of Vesuvius, destroying Herculaneum and Pompeii.
- 114. Antioch destroyed.
- 558. At Constantinople; its edifices destroyed, and thousands perished.
- 742. Awful one in Syria, Palestine, and Asia; more than five hundred towns destroyed, and the loss of life defied all calculation.
- 1137. Catania in Sicily overturned, and 15,000 persons buried in the ruins.
- 1302. Ischia ravaged by a volcanic eruption, preceded by violent earthquakes.
- 1456. At Naples; 40,000 inhabitants perished.
- 1531. February, at Lisbon; 1,500 houses, and 30,000 people buried in the ruins; several neighboring towns engulfed with their inhabitants.
- 1596. In Japan; several cities laid in ruins, and thousands perished.
- 1638. Awful one at Calabria.
- 1662. In China; 800,000 persons buried in Pekin alone.
- 1692. Jamaica ravaged by an earthquake, and many of the inhabitants swallowed up by rents in the ground; three-quarters of the houses of Port Royal, with the

ground they occupied, sank with their tenants under water.

- 1693. Shocks of earthquake in Sicily, which obliterated Catania, overturned fifty-four cities and three hundred hamlets, and destroyed more than 100,000 persons.
- 1699. Earthquakes in Java, when no less than two hundred and eight severe shocks were counted; the fish killed in the rivers by the mud which filled them, and great numbers of wild animals destroyed.
- 1731. Again in China; 100,000 lives lost at Pekin.
- 1736. One in Hungary which turned a mountain round.
- 1737. Earthquake in Kamtschatka, which caused an inundation of the sea, formed new hills, lakes, and bays.
- 1746. Earthquake in Peru; two hundred shocks experienced in the first twenty-four hours; Lima and Callao destroyed; several new bays formed; nineteen ships sunk and four carried a great distance up the country by the rise of the sea; several volcanoes burst forth in the vicinity, and poured forth torrents of water, which overflowed extensive tracts.
- 1750. Concepcion (or Fenco) in Chili destroyed by an earthquake, and overwhelmed by the sea.
- 1754. At Grand Cairo; half of the houses and 40,000 persons swallowed up. In April, 1755, another earthquake completed the destruction.

EARTHQUAKE AT LISBON.

1755. Earthquake destroyed Lisbon, Nov. 1st, and 60,000 persons perished in six minutes. The sea first retired, and then rolled in, rising fifty feet above its usual level: the largest mountains in Portugal rocked and split asunder, and sent forth flames and clouds of dust. The shock was felt nearly all over Europe, in the north part of Africa, in the Atlantic, and even in the West Indies; a vast wave swept over the coast of Spain, in some places, sixty feet in height, and near Morocco the earth opened, swallowed up about 10,000 persons with their herds, and then closed over them. This awful shock is said to have extended five thousand miles. The cities of Coimbra, Oporto, and Braga suffered dreadfully, and St. Ubes was wholly overturned. In Spain, a large part of Malaga was laid in ruins. More than half the isle of Madeira became waste, and two thousand houses in the island of Meteline, in the Archipelago, were overthrown.
1759. The volcano of Jorullo in Mexico rose during an earthquake from the plain of Malpais, forming a hill 1,600 feet high.
1766. Violent shocks agitate Venezuela, occurring hourly for above a year.
1772. Eruption of the volcano Papandayang in Java; a tract of country fifteen miles long by six broad was engulfed, forty villages swallowed up or overwhelmed, and the cone of the volcano was reduced in height 4,000 feet.
1774. During the eruption of the volcano on the side of which the city of Guatemala was built, the ground gaped open and swallowed the whole city with its 8,000 inhabitants.
1783. Earthquake in Calabria destroyed all the towns and villages, twenty miles round Oppido, and 40,000 persons were swallowed up or overwhelmed; the shocks continued for four years.
1783. Eruption of the volcano Asamayama in Nippon, preceded by an earthquake, during which the earth yawned and swallowed many towns.
1797. Between the 4th and 20th of February, the whole country from Santa Fe to Panama was destroyed, including the cities of Cuzco and Quito, 40,000 of whose dwellers were in one second hurled into eternity.

1811. Earthquake in South Carolina, and in the valley of the Mississippi; the latter was convulsed to such a degree between the mouths of the Ohio and the St. Francis as to create lakes and islands, and deep chasms were formed in the ground, from which vast volumes of water, sand, and coal were thrown up to the height of sixty or seventy feet.
1812. The city of Caraccas destroyed by an earthquake, and 10,000 persons buried under its ruins.
1819. An earthquake in Cutch destroyed many towns and villages; deepened the eastern arm of the Indus from one to eighteen feet; submerged some tracts and elevated others.
1822. Aleppo destroyed by an earthquake.
1822. Chili ravaged by an earthquake, the shock of which was felt for a distance of 1,200 miles; the coast in the neighborhood of Valparaiso for a distance of one hundred miles was raised above its former level from two to four, and even six or eight feet: the whole tract thus raised had an area of about 100,000 square miles.
1827. Earthquake commits great ravages around Bogota.
1831. The island of Sciacca rose from the sea near the southern coast of Sicily; the depth of the sea at this spot was six hundred feet, and the island was one hundred feet above the surface: circuit 3,240 feet: in the winter of 1831, the island was swept away by the waves, leaving only a shoal.
1837. In many cities of southern Syria, Jan. 22d, by which hundreds of houses were thrown down, and thousands of the inhabitants perished.
1839. At Martinique, Jan. 11th, by which nearly half of Port Royal was destroyed, and the whole island damaged.
1840. At Fernate, Feb. 14th; the island laid waste, almost every house destroyed, and thousands of the inhabitants lost their lives.
1842. At Cape Haytien, St. Domingo, May 7th, which destroyed nearly two-thirds of the town, and almost 5,000 lives.
1857. Shocks felt quite heavily at St. Louis and at Buffalo in October. Dec. 16th, a severe earthquake shook the kingdom of Naples, sending 9,350 persons into eternity, and seriously injuring 1,359; at Montemurro, a place of 7,000 inhabitants, 5,000 were crushed to death by the falling houses, and 500 severely hurt.
- EASTERN EMPIRE.** The Roman empire was divided A.D. 364. The following were the rulers of the Eastern empire, and the principal incidents in its history, down to its conquest by the Turks. [See **ROME.**]
364. Valens.
379. Theodosius the Great. Maximus the tyrant, defeated and put to death, 388. Theodosius defeats Eugenius, 392.
395. Arcadius, the son of Theodosius.
408. Theodosius II. He institutes public schools and endeavors to restore learning, 425.
450. Marcian, a Thracian of obscure family.
457. Leo I., the Thracian.
468. Ardaburius.
474. Leo the Younger, died the same year.
474. Zeno, called the Isaurian.
491. Anastasius, an Illyrian of mean birth. Constantinople besieged by Vitalianus, whose fleet is burned with a brazen speculum by Proclus, 514.
518. Justin I., originally a private soldier.
527. Justinian, founder of the Digest. Turkish empire begins in Asia, 545.
565. Justin II., nephew of Justinian.
578. Tiberius II., renowned for his virtues.
582. Maurice, the Cappadocian, murdered with all his children by his successor.
602. Phocas, a centurion, raised to the throne by a revolt of the soldiery. His crimes and cruelties led to his assassination. Power of the popes begins, through the concessions of Phocas, 606.
610. Heraclius. The Persians besiege Constantinople, 626.
641. Constantine III., reigned a few months; poisoned by his step-mother Martina.
641. Constans II., assassinated in a bath.
668. Constantine IV. Pogonatus. In this year, the Arabs besieged Constantinople. In 673 it is besieged by the Saracens, and their fleet destroyed by the Greek fire, a composition invented by one Callinicus, an ingenious engineer of Heliopolis in Syria. It burned the briskest in water, and diffused itself on all sides, according to the impression given to it. Nothing but oil, or a mixture of vinegar, urine, and sand, could quench it. It was blown out of long tubes of copper, and shot out of cross-bows and other spring instruments. The invention was kept a secret for many years by the court of Constantinople, and is now lost.
685. Justinian II., son of the last emperor, an abhorrent character, dethroned and mutilated by his successor.
695. Leontius, dethroned and mutilated by his successor.
698. Tiberius III. Aspimar.
705. Justinian II. restored; Leontius and Tiberius degraded in the Hippodrome, and put to death. Justinian slain, 711.
711. Philipppus Bardanes, assassinated.
713. Anastasius II.; fled on the election of Theodosius in 716; afterward delivered up to Leo. III., and put to death.
716. Theodosius III. Second siege of Constantinople by the Arabs.
718. Leo III., the Isaurian. The great iconoclastic controversy commences, 726. The alternate prohibition and restoration of images involve the peace of several reigns.
741. Constantine V. Copronymus, son of Leo.

775. Leo IV., his son.
 780. Constantine VI. and his mother Irene. 790, Constantine reigns alone, by the desire of the people, who hate Irene. 792, she again reigns conjointly with her son, and afterward alone. For her cruelties and murders she is deposed and exiled.
 802. Nicephorus I., surnamed Logothetes, slain.
 811. Staurachius, reigns a few days only.
 811. Michael I. Defeated in battle, he abdicates and retires to a monastery.
 813. Leo V., the Armenian; killed in the temple at Constantinople on Christmas by conspirators for his successor.
 820. Michael II., the Stammerer.
 829. Theophilus, son of Michael.
 842. Michael III., surnamed Porphyrogenetes, and the Sot, son of the preceding; murdered by his successor.
 867. Basilus I., the Macedonian.
 886. Leo VI., styled the Philosopher.
 911. Alexander, and Constantine VII., brother and son of Leo, the latter only six years old; the former dying in 912, Zoë, mother of Constantine, assumes the regency.
 919. Romanus Lecapenus usurps the imperial power.
 920. Constantine VIII., his son.
 928. Stephen and Christopher. Five emperors now reign: of these, Christopher dies in 931; Romanus is exiled by his sons Constantine and Stephen, who are themselves banished the next year.
 945. Constantine VII. now reigns alone; poisoned by his daughter-in-law, Theophania.
 959. Romanus II., son of the preceding, whose death he had contrived. The monster banishes Helena his mother.
 963. Nicephorus II. Phocas; weds Theophania, his predecessor's consort, who has him assassinated.
 969. John I. Zimisces, the celebrated general. He takes Basilus II. and Constantine IX., sons of Romanus II., as colleagues. John dies, supposed by poison, and
 975. Basilus II. and Constantine IX. reign. The former dies in 1025, the latter in 1028.
 1028. Romanus III. Argyropulus. Zoë, his consort, poisons him and
 1034. Michael IV., her paramour, a Paphlagonian money-lender, ascends the throne. On his death Zoë gives the crown to
 1041. Michael V., surnamed Calaphates, her adopted son. Him she dethrones, has his eyes put out, and marries
 1042. Constantine X. Monomachus, who reigns jointly with her. Zoë dies in 1050.
 1054. Theodora, widow of Constantine.
 1056. Michael VI. Stratiotes, or Strato; deposed.
 1057. Isaac I. Comnenus, chosen emperor by the soldiery; abdicates.
 1059. Constantine XI., surnamed Ducas.
 1067. Eudocia, consort of the preceding, and Romanus IV., surnamed Diogenes, whom she marries, reign to the prejudice of Michael, Constantine's son.
 1071. Michael VII. Parapinaces recovers his throne, and reigns jointly with Constantine XII.
 1078. Nicephorus III.; dethroned by
 1081. Alexius I. Comnenus; defeated by Robert Guiscard at Dyrrachium, and by the Turks in Asia Minor. In conjunction with the crusaders, he regains Nicæa, in 1097, but afterward quarrels with them.
 1188. John Comnenus, his son, surnamed Kalos; died of a wound from a poisoned arrow.
 1143. Manuel Comnenus, son of John.
 1180. Alexius II. Comnenus, son of Manuel, under the regency of Maria his mother. By her misconduct he is compelled to admit Andronicus Comnenus as his colleague. This miserable strangles him and seizes the throne.
 1183. Andronicus I. Comnenus. He is put to death by
 1185. Isaac II. Angelus Comnenus, who is deposed, imprisoned, and deprived of his eyes by his brother,
 1195. Alexius III. Angelus, called the Tyrant. He is besieged in Constantinople by the French and Venetians, who take the city and reinstate Isaac. In Thrace, whither he flees for safety, Alexis falls into the hands of Theodore Lascaris, who puts his eyes out, and imprisons him in a monastery, where he dies.
 1203. Isaac II. again, associated with his son Alexius IV. Father and son are murdered by Mourzoufle. The French and Venetians take Constantinople by storm. Mourzoufle is put to death, after his eyes have been torn from his head.

LATIN EMPERORS.

1204. Baldwin I., Earl of Flanders, on the capture of Constantinople is elected emperor; made a prisoner by the King of Bulgaria, and never heard of afterward.
 1206. Henry I., his brother.
 1217. Peter de Courtenay, Henry's brother-in-law.
 1221. Robert de Courtenay, his son.
 1228. Baldwin II., his brother, a minor, and John de Brienne of Jerusalem, regent and associate emperor.
 1261. [Constantinople recovered, and the empire of the Franks or Latins ends.]

GREEK EMPIRE AT NICE.

1204. Theodore Lascaris.
 1222. John Ducas, Vataces.
 1255. Theodore Lascaris II., his son.
 1259. John Lascaris, and
 1260. Michael VIII. Palæologus.

AT CONSTANTINOPLE AGAIN.

1261. Michael VIII. puts out the eyes of John, and reigns alone.
 1282. Andronicus II. Palæologus, son of Michael; deposed by his grandson,
 1332. Andronicus the Younger.
 1341. John Palæologus, under the guardianship

of John Cantaczenus; the latter proclaimed emperor at Adrianople.

1347. John Cantaczenus.

1355. John Palaeologus, restored.

1391. Manuel Palaeologus, his son.

1425. John Palaeologus II., his son.

1448. Constantine XIII. Palaeologus, his son, the last emperor. Mahomet II., the Ottoman sultan, laid siege to Constantinople by sea and land. After it had held out fifty-eight days, the Turks carried it by assault, May 29th, 1453. The unfortunate Constantine threw himself among the victors, and was cut to pieces.

EATON, WILLIAM, was born at Woodstock, Conn., Feb. 23d, 1764. After serving in the army at an early age, he prepared himself for entrance into Dartmouth College. In 1792 he received a captain's commission in the army, and in 1797 was appointed consul for Tunis. He engaged in the war with Tripoli, in 1804, hoping to reinstate Hamet Bashaw on the throne which had been usurped by his brother. With a force of 500 men of different nations, Eaton crossed the desert from Alexandria to Derne, overcoming serious obstacles. Derne was taken, the Tripolitan army repulsed, but, in the midst of triumph, Eaton learned that peace had been concluded between the United States and Tripoli. On his return to the United States, he was received with great favor. Aaron Burr in vain endeavored to obtain his aid in his conspiracy, and on his trial Eaton testified against him. In 1811 he fell a victim to habits of intemperance.

EBRO, a river in Spain, the scene of a signal defeat of the Spaniards by the French, near Tudela, Nov. 23d, 1808; and also the scene of several important movements of the allied British and Spanish armies during the Peninsular war, between 1809 and 1814.

ECKMÜHL; a Bavarian village on the Lahr, where Napoleon severely defeated the Austrians, commanded by the Archduke Charles, April 22d, 1809. For his skill and intrepidity in this battle Marshal Davoust had his title of Prince of Eckmühl.

ECLIPSES. The first eclipse recorded, happened March 19th, 721 B.C., at 8' 40'' P.M., according to Ptolemy; it was lunar, and was accurately observed at Babylon. The following were extraordinary eclipses.

Of the sun.—That observed at Sardis (predicted by Thales), 585 B.C. At Athens, 424 B.C. A general one at the death of Christ,

A.D. 33. At Rome, caused a total darkness at noon-day, A.D. 291. At Constantinople, 968. In France, June 29th, 1033, dark at noon-day. In England, March 21st, 1140, occasioned a total darkness. Another June 23d, 1191, entire darkness, and the stars very visible at ten in the morning. In the same year, the true sun, and the appearance of another, so that astronomers alone could distinguish the difference by their glasses. Another, total, 1331. A total eclipse of the sun in England, when the darkness was so great, that the stars faintly appeared, and the birds went to roost in the morning about ten, April 22d, 1715. Great eclipse in the United States, 1806; another, 1811; another, 1831; another in 1834. The 19th of May, 1780, was a remarkable day throughout New England. It was known as the *Dark day*. Candles were lit; the birds were hushed, and the fowls retired to roost.

Eclipses of the moon. Total, observed by the Chaldeans at Babylon, 721 B.C. At Syracuse, 413 B.C. In Asia Minor, 219 B.C. At Rome, predicted by Q. Sulpitius Gallus, 168 B.C. Another, which terrified the Roman troops, and quelled their revolt, A.D. 14.

ECUADOR, a South American republic, has an area of 325,000 square miles, and a population of about 665,000. It is divided into the three departments of Equator or Quito, Guayaquil, and Assuay. The department of the Equator, lying between two parallel ranges of the loftiest Andes, forms the finest table plain in all America. Almost ten thousand feet is it raised above the level of the sea. In soil and climate, its felicity nearly approaches that of the fabled golden age. The clime is perpetual spring, at once benign and equal, and even during the four months of rain the mornings and evenings are clear. Vegetation never droops; the country is called the evergreen Quito; the trees and meadows are clad with perpetual verdure. Above this smiling valley, resting as it were on its verdant hills, rise the loftiest volcanic cones of the Andes, crowned with everlasting ice; Chimborazo, Pichincha, and their gigantic fellows. In this valley are found many monuments of the sway of the Incas, for though their main seat of empire was at Cuzco, Quito was one of their most valued provinces. The productions

are various, but the most valuable are those of the temperate climates, grains, fruits, and rich pasturage. The city of Quito is the capital both of the department and of the republic. It has four streets, broad, handsome, and well paved, and three spacious squares, in which the principal dwellings are situated; but the other streets, straggling up the side of Pichincha, are crooked and irregular. The churches and convents are built with great magnificence and some taste. There are a university and two colleges, and Quito is considered comparatively a South American Athens. The inhabitants are gay, hospitable, and courteous. They are fond of the sweet bits of this life, and confectionery and viands are among the chief products of their city. Silver and gold are worked rather extensively. The population of Quito is decreasing, and is now but about 40,000.

The department of Guayaquil is also very fertile. The city of Guayaquil, founded by Pizarro in 1533, on the bay of the same name, has a population of 25,000, and with its excellent harbor is a flourishing commercial town. Guayaquil has its plagues, like old Egypt. The air swarms with musquitoes, and flies that are still more tormenting; the ground teems with snakes, centipedes, and other reptiles of dangerous bite. There is a chameleon whose scratch is believed to be mortal; a belief which seems quite chimerical, but which greatly worries the citizens. The ants can not be subdued: sometimes, when a tart is cut up, they are seen running in all directions, leaving the interior a void. Then the shores are crowded with caymans and alligators. Earthquakes are common, as indeed in brighter Quito. And lastly, the marshy nature of the site is pestilent with malignant fevers. As a set-off to all this, we should mention that the women of Guayaquil are famous for their beauty, and their engaging gayety and propriety of conduct.

Ecuador was discovered by Pizarro in 1526, and came into the hands of the Spaniards at the downfall of the Peruvian empire. It constituted the audiencia of Quito, dependent upon the vice-royalty of New Grenada, until in 1812 the inhabitants revolted from the Spanish yoke. The fierce contest ended in 1823. The republic of Colombia was then

formed. In 1831, it fell to pieces, and Ecuador, Venezuela, and New Grenada, the states composing it, have since been independent republics. The Roman Catholic is the established religion. The people of Ecuador are composed of the descendants of Spaniards, and aborigines, the latter being about three-quarters of the whole number.

EDGAR, the Peaceable, a Saxon king of England, son of Edred, and brother of Edwy, his immediate successor. He ascended the throne at the age of sixteen in 959. He governed with vigor and success, and secured the proper administration of justice by giving it his personal attention. He died in 974.

EDGE HILL, BATTLE OF, between the royalists and the army of parliament, Oct. 23d, 1642, was the first engagement of importance in the civil war. Charles I. was present. Prince Rupert commanded the royalists, and the Earl of Essex the parliamentarians. The Earl of Lindsay, one of the king's generals, who headed the foot, was mortally wounded, and taken prisoner. The royal army lost 5,000 dead on the field, with vast numbers of wounded and prisoners; but owing to the great loss on the other side also, the action gave no decisive advantage to either party, and neither could fairly claim a victory.

EDGEWORTH, MARIA, a pleasing authoress, born in England, Jan. 1st, 1767, died at Edgeworth's-town, Ireland, in May, 1849.

EDMUND II., surnamed Ironsides, King of England, succeeded Ethelred his father, in 1016, and reigned seven months. He was defeated by Canute, who became sole monarch of England on his death, which is supposed to have been caused by poison.

EDRED, son of Edward the Elder, succeeded to the throne of England on the murder of his brother, Edmund I., in 947. He quelled the Danes and Northumbrians, and compelled Malcolm to do homage for the crown of Scotland. Yet he was priest-ridden, and a slave to Dunstan, Abbot of Glastonbury. He died after a reign of eight years.

EDWARD, the Elder, King of England, succeeded his father, Alfred the Great, in 901. He was successful against the Danes and Welsh, and died in 925.

EDWARD, the Martyr, King of England,

son of Edgar, whom he succeeded in 974, at the age of fifteen. He was stabbed at Corfe Castle, March 18th, 979, while hunting, by a servant of Elfrida, his step-mother, who wished to raise her own son, Ethelred, to the throne.

EDWARD I., II., III., IV., and V., of England. [*See* PLANTAGENET.]

EDWARD VI., of England. [*See* TUDOR.]

EDWARDS, JONATHAN, an American divine, and distinguished metaphysician, was born in East Windsor, Conn., Oct. 5th, 1703, and was educated at Yale College. In 1758 he was chosen president of the college at Princeton, New Jersey, where he died March 22d, 1758. He had previously preached at New York and Northampton, and filled the office of missionary among the Indians at Stockbridge, Massachusetts. His "Treatise on Religious Affections," and his works "on Free Will" and "Original Sin," have gained him a permanent reputation.

EGBERT, the last king of the Saxon heptarchy, and the first monarch of united England, was the eighteenth king of the West Saxons. He was harassed by repeated invasions of the Danes, and died in 838.

EGEDE, HANS, a celebrated missionary, born in Denmark in 1686, and died in 1758, having devoted himself to the sacred task of spreading the light of revealed religion among the Greenlanders. The dictates of duty frequently led him to peril his life, but the consciousness of rectitude, and the triumphs of success, sweetened his toil, and shed joy upon his earthly pilgrimage.

EGYPT was the most celebrated kingdom of Africa, and one of the oldest nations of the world. The Egyptians were early proficient in the sciences and the liberal arts, and to them men came from all civilized countries for the purpose of acquiring information. Some of the most celebrated of the Greeks acquired a great portion of their learning in Egypt. Ancient Egypt was divided into Upper Egypt, or Thebais, Middle Egypt, or Heptanomis, and Lower Egypt, the most valuable portion of which was the Delta. The most accurate general description of Egypt that we have, has been given by Volney, in a single sentence. "To describe Egypt in two words, let the reader imagine, on one side, a narrow sea and rocks; on the other, immense

plains of sand; and in the middle, a river flowing through a valley of a hundred and fifty leagues in length, and from three to seven wide, which, at the distance of eighty leagues from the sea, separates into two arms, the branches of which wander over a country where they meet with no obstacles, and which is almost without declivity."

The ancient Egyptians paid great attention to agriculture, and availed themselves of their arts to redeem vast tracts of land from the waters, rendering them fertile, and adapting them to tillage. In former times the region which eventually received the name of Lower Egypt and the Delta, was covered with water, and consequently Egypt was but a limited tract of land. The ancient Egyptians, notwithstanding their character for wisdom and learning, were grossly idolatrous, worshiping animals, and regarding oxen, cats, crocodiles, sheep, &c., as sacred. The advantage taken of this superstitious character by Cambyse is well known. Placing in front of his army the animals worshiped by the Egyptians, he advanced against them boldly, well aware that they would not strike a blow for fear of injuring the creatures they adored.

The ancient government of Egypt was the subject of eulogy among all nations, and legislators from various countries came to Egypt to examine its institutions, in order thence to gather hints for the improvement of their own. The accounts which writers of antiquity give of the early history of Egypt are so contradictory and improbable that it is needless to allude to them in pages which deal with matters of fact. Menes, the first king of Egypt, is said to have conferred great benefits upon his subjects. He redeemed a vast extent of land from the waters, was the spiritual instructor of the Egyptians, introduced splendor, and founded solemn and magnificent feasts. After many years of uninterrupted prosperity, Egypt fell under the sway of some rude adventurers who founded the dynasty of the Hycsos or shepherd kings, which commenced about 2048 years B.C., and lasted until the year 1825 B.C., when the shepherd kings were expelled.

Jacob settled in the land of Goshen, 1706 B.C. The children of Israel were held in bondage from the death of Joseph, 1635 B.C., to 1491 B.C. Their departure happened, ac-

COLOSSI NEAR THEBES.

cording to some writers, during the reign of Amenophis II., the Pharaoh who pursued them into the Red Sea, and was overwhelmed by its returning waters. It must be remembered that Pharaoh was a title borne by all the kings of Egypt in common. In 1445, Lower Egypt was conquered by the Canaanites, who fled before Joshua, when he dispossessed them of their own country. Upper Egypt was divided at this time into a great number of kingdoms, which were united about 1157. About 1350, Remeses or Sesostris, king of Egypt, made rapid and extensive conquests. The Ethiopians conquered Egypt, and retained possession of it for forty years. The Assyrians also conquered it, but the whole of it was regained by Psammetichus, about 660 B.C. After a prosperous reign he was succeeded by Pharaoh Necho, his son, 616 B.C. This monarch was conquered by the famous Nebuchadnezzar, king of Babylon. • Egypt was made tributary to Persia by Cambyses, the son of Cyrus, 525 B.C. The Egyptians revolted, but were again subjugated. Another revolt was successful, and for a short time the Egyptians enjoyed their independence, but 350 B.C., Artaxerxes Ochus restored the Persian dominion. Alexander the Great, 331 B.C., com-

pelled the Egyptians to submit to his arms. On the death of this great conqueror, Ptolemy, one of his generals, took possession of the kingdom, 323 B.C., and founded the dynasty of the Ptolemies, which lasted until the death of Cleopatra, when Egypt became a Roman province, in the year B.C. 30, and the second of the reign of Augustus. In the year 640, Egypt was conquered by Amron, general of Omar, caliph of the Saracens. The library of Alexandria, which had been collected with care, and contained manuscripts of immense value, was consumed by the order of Omar. The Fatimites gave place to the Mamelukes in 1250. These last were foreign soldiers, employed by the Fatimite princes, and they held the kingdom until conquered by Selim I., Sultan of the Turks, in 1517, and made his nominal vassals.

In 1798, the French having resolved to attack the British possessions in India, it was determined to seize upon Egypt, so that, by carrying on the commerce of the East through the Red Sea, the new French colony should become the grand mart where all Europe might be supplied with Indian articles, cheaper than they could be rendered by the British, while, as a military post, it could, at

all times, transport auxiliaries to the coast of Coromandel. On the 20th of May, 1798, Bonaparte put to sea on board the *L'Orient* of 120 guns, bearing the flag of Admiral Brueys, who was to take command of the fleet then assembling from the different ports of France, which was to consist of an armament containing 40,000 soldiers and 10,000 sailors. On the evening of the 1st of July, Bonaparte made arrangements for landing at Marabout. They were at a distance of about three leagues from the shore; the wind was northerly, and blew with violence, and the debarkation perilous and difficult; the sea was covered with boats. Early in the next morning, the general-in-chief landed at the head of the foremost troops, who formed with the greatest promptitude in the desert, about three leagues from Alexandria. After some slight skirmishes, he advanced and invested Alexandria, where he established himself on the 5th, by a capitulation of the city and fortress. Having garrisoned Alexandria, which was left in the command of Kleber, the army marched to Gizeh, Rosetta and other places having been garrisoned by the French. Near the pyramids Bonaparte found that Murad Bey had assembled all his forces to oppose the further progress of the French. The Mamelukes, amounting to 10,000, fought with desperate but unavailing courage. Part of them were put to the sword or drowned in the Nile, while the remnant, under the conduct of Murad Bey, retreated to Upper Egypt. The battle of the Pyramids was a hard-fought conflict. Bonaparte entered Cairo in triumph. The French troops were formed into three divisions, one of which, under General Dessaix, was sent to pursue the fugitive Mamelukes; the second was left at Cairo; and the third followed Ibrahim Bey, who had fled, and so precipitately, that he could not be overtaken. Returning to Cairo, Bonaparte employed himself in arranging the details of the government of Lower Egypt, sending garrisons, establishing lazarettos, &c.

Soon after the battle of the Nile, an insurrection broke out in Cairo which Bonaparte hastened to quell. When the French gained their victory at Aboukir, and took the fort from the enemy, their power in Egypt appeared to be firmly established. Soon after

this, the losses of the French in Italy, and the dangers which appeared to threaten France, induced Bonaparte to return home, a privilege granted him in the commencement, and the chief command was committed to Kleber in a general order dated Aug. 22d, 1799. One day, Massena having asked what sort of a man Kleber, of whom such various accounts had been given, in reality was, Napoleon replied: "Picture to yourself a man of lofty stature, of an imposing figure, the finest military man you ever saw; talented, well instructed, and capable of forming a correct judgment of any thing at a glance; a man who, like you, has commenced his career in a good school, the infantry, and who is a good maneuverer, although educated in Austria; but indolent, excessively proud, and sarcastic. He is a man, who, in time of war, by trifling and joking, and heaping ridicule on all with whom he deals, suffers himself to go to the very edge of the ditch; when, generally, his self-love comes to the rescue, his talent rallies, and he sometimes does very fine things, as you have been told."

The condition of the French troops becoming every moment more critical, after various conferences with Sir Sidney Smith, it was agreed that after a truce of three months, the French should evacuate Egypt, and accordingly the treaty was signed at El Arish, Jan. 24th, 1800. Kleber wrote a letter to the French directory, stating the miserable condition of the French army, and urging the ratification of the treaty of El Arish. This letter, however, fell into the hands of Admiral Keith, and having been transmitted to the British government, they refused to allow the French any means of saving themselves, except by surrendering as prisoners of war. Sir Sidney Smith hastened to inform the French of the views of his government. A few days after, the lieutenant of the *Tiger* (an English vessel) sent General Kleber a letter, written by Admiral Keith, under date of Minorca, Jan. 8th, notifying to him the only conditions on which the British government would recognize the capitulation.

General Kleber, shortly before this, enslaved by a secret spirit of jealousy, which perhaps he dared not confess to himself, had been following blindly a fatal path in which his fame was threatened. A better day arose when

the honor of his nation was menaced, and the French troops were perfidiously commanded to lay down their arms. The discontented Kleber, Kleber the humorist, instantly became another man. The patriotic Frenchman, the able and heroic leader, once more appeared. The order of the day was conveyed by the letter of Admiral Keith, and Kleber contented himself with adding these words: "Soldiers! the only reply to insolence like this is victory! Prepare to fight." Never were soldiers better prepared. Indignation ran through every rank. The Turks should pay dearly for the bad faith of their allies. Kleber declared that he should regard the least advance on the part of the Turks as a hostile movement. Disregarding this warning, Youssef Pacha, the grand vizier, repaired to El Hancka with his whole army. His vanguard was within two leagues of Cairo. Firmans circulated in the provinces, and even in Cairo itself, excited the people to insurrection. Civil and religious influences increased the danger of the French. Time pressed; the troops summoned by Kleber appeared in small detachments; but still they were animated by one spirit. Ten thousand men did not hesitate to attack an army which the Turks and English themselves have estimated at from forty to sixty thousand. At the ancient Heliopolis, Kleber prepared for combat. With a trifling loss on their part, the French routed the enemy, whose killed and wounded numbered 6,000. The French were again in firm possession of a reconquered country, and Murad Bey became their ally.

Writers who think to honor Kleber, by representing him as the enemy of Bonaparte, affect to say, that he conceived the resolution of keeping Egypt, "out of hatred to the man who had usurped the sovereignty in France." To obscure the glory of him whom they accuse, they darken the character of the man they would eulogize. They say also, with very little truth, that "the talents of Kleber had excited the jealousy of Bonaparte." But what points of comparison could be established between them? What victories had Kleber gained to rank them with the two campaigns of Italy, or the single one of Egypt? Kleber had never commanded in chief. Often had the chief command been offered him, and as often had he refused; a singular trait of that pride which disdains to command, and yet

will not bend to obedience. Employed in a secondary rank by preference, he revenged himself for this voluntary inferiority by epigrams upon the officer above him, whether Beurnonville, Jourdon, or Moreau himself. In Egypt his powers of sarcasm were employed in vain against a man who feared them not. If, at a later period, he denounced Bonaparte to the directory, he had before, in a frank and bold letter, denounced, if we may use the expression, the directory to General Bonaparte; and this was the political confidence of a clear-sighted man, who, beholding in that general the future fortunate leader of a party, predicted the fate which awaited him. On his part, Napoleon, appreciating Kleber, made use of him without fear, and pardoned his faults in consideration of his good qualities. He feared not to debase himself in making advances. Some reproaches addressed to Kleber on the subject of his administration in Egypt having wounded his feelings to such a degree that he was about to leave the army, Bonaparte wrote, "On the soil of Egypt, the clouds pass away in six hours: were they on my side, they should dissipate in three." This was the conduct of Bonaparte toward the man whose rivalry he was accused of fearing.

Kleber made many wise regulations to strengthen his administration. Meanwhile Europe had heard the news of the battle of Heliopolis and its results. The violation of national rights had yielded to the British government but unsavory and bloody fruits, and they could not but regard with regret the destruction of a fine Ottoman army 40,000 strong. General Kleber, having gained, by chance, minute information of the views of the English, was taking a course which gave general satisfaction, when the dagger of a Mussulman assassin deprived the army of a leader, and France of the possession of Egypt. The fatal news circulated with rapidity; grief and indignation were general, and at the end of some hours the criminal was seized. It was proved that the murderer, Suliman El Alepi, who was sent from Gazah to Cairo, was only a fanatic subaltern, who, intoxicated with temporal and spiritual promises, and maddened by the incendiary firmans of the Turkish government, pretended to punish, in the person of Kleber, the enemy of the prophet, and the conqueror of the grand vizier.

After the revolt of Cairo in 1798, the sheikhs having come to implore the pardon of Bonaparte, the latter treated with peculiar respect an old man of the party, the Sheikh Sada. He raised him, kissed, and embraced him. When they had retired, he said to Kleber, "Do you know that old fellow whom I honored so?" "No," answered Kleber. "He is the ringleader of the insurrection." "The deuce! I would have shot him." When, in 1800, Kleber, having retaken Cairo with an armed force, exacted as a punishment an extraordinary contribution of 4,000,000 francs, this same sheikh refused to pay the sum which was assessed upon him. In the first movement of anger, Kleber gave orders to have him bastinadoed, but, soon after, recollecting the conduct of Bonaparte, recalled them too late. When Bonaparte heard of Kleber's death, his first words were, "This comes of the bastinado administered to the Sheikh Sada." And in reality the assassin had been concealed in the mosque forty days. Similar fanatics had been previously sent to stab Bonaparte, but the sheikhs had prevented them.

The command of the French army devolved on General Menon. In 1801 the English, determined to drive the French from Egypt, fitted out an expedition, of which the army was commanded by Sir Ralph Abercrombie, and the fleet by Lord Keith. On the 23d of February, 1801, the fleet weighed anchor, and on March 1st was anchored in Aboukir Bay. On the 8th they landed, and on the 18th gained possession of the fort. On the 21st, General Menon attacked the English, but was completely defeated by them after a well contested engagement. During the charge of cavalry, Sir Ralph Abercrombie was mortally wounded; after having dispatched his aides-de-camp he was alone, and some French dragoons attacked him, threw him from his horse, and attempted to cut him down. The gallant general, however, sprang up and wrested the sword from his antagonist, who was bayoneted by a soldier of the forty-second. He died on the 28th, on board Lord Keith's ship. General Hutchinson succeeded to the command and resolved to reduce Lower Egypt. By the 19th of April, Fort Sulien and Rosetta were captured, and the British proceeded to Rhamanich, where the French made a stand, but were vanquished, and retreated toward Cairo.

On the 11th of May the army continued its march, and, on the 15th, intelligence being received that Belliard was in full march from Cairo, Hutchinson resolved to anticipate the attack. On the 16th, the Turks commenced the onset. The French took post in a wood of date-trees near Elmenayer, but were compelled to retreat. The British were now joined by great numbers of Arabs. The camp was placed at Gizeh, and dispositions were made for invading Cairo; but the French garrison offered to capitulate. A convention was accordingly concluded on the 28th of June, with certain stipulations, but Menon not acceding to the surrender of Alexandria, Hutchinson invested that city, with the co-operation of Lord Keith and Coote, which enabled him to surround it, and Menon capitulated. Four weeks after the evacuation of Egypt by the French, the preliminaries of a treaty of peace were signed at London. The Egyptians were much attached to the French, and regretted them extremely, for both Bonaparte and Kleber did all in their power, during their brief term of possession, to ameliorate the condition of the country.

The Mamelukes and the Turkish pacha could not agree; scenes of blood and treachery occurred, till at last Mehemet Ali, the pacha, got most of the beys and their principal officers into the citadel of Cairo, under pretense of an entertainment, and massacred the whole of them, March, 1811. Thus ended the Mameluke power, which had ruled Egypt more than four centuries. The sway of Mehemet Ali was more rational, orderly, and humane than Egypt yet had had, and he did much for civilization. Though nominally subject to the Porte, he made wide conquests and rendered himself virtually independent. The sultan watched his growing power with increasing jealousy, and in 1832 sent a powerful army against him. The Turks were unsuccessful, and Ibrahim Pacha, Mehemet's son and victorious general, was on the march for Constantinople, when the European powers interfered, and forced a peace. In 1840 the sultan thinking himself strong enough, resumed hostilities. Again the Egyptians annihilated his armies, and again the powers of Europe came to his rescue. By a treaty signed July 15th, 1841, Mehemet Ali was stripped of all his conquests in Asia, but the

government of Egypt was insured to him as a tributary to Turkey, and made hereditary in his descendants. Ibrahim Pacha died Sept. 1st, 1848, and his father little less than a year after. Abbas Pacha, a nephew of Ibrahim, was made viceroy, and upon his decease in 1854, Said Pacha was appointed.

Egypt is called by the Arabs *Masr*, by the Turks *El Kabit*, and by the Copts *Khemi*. Its Hebrew name was *Miz* or *Mizraim*. It comprises 200,000 square miles, which are peopled by about 2,000,000 of inhabitants. It is divided into three parts, Upper Egypt (*Said*), Middle Egypt (*Vostani*), and Lower Egypt (*Buhari*) including the Delta. The only valuable portion of the land is that which is watered by the Nile and its branches. The cultivated part of Upper Egypt is a narrow strip inclosed by ridges of mountains. The Nile annually overflows its banks, leaving a fertilizing mud or slime. The inundation commences about the middle of June, and increases until the latter part of August. The productions of the country are maize, rice, wheat, barley, sugar-cane, indigo, cotton, flax, dates, &c. The inhabitants are Copts, descendants of the original race, Arabs, Turks, and Jews.

The fertility of the land, the variety of the fruits, and the thousand natural advantages which it possesses, might, by judicious management, make Egypt one of the most-wealthy and flourishing countries in the world. A liberal government and enterprising public officers would soon restore it to the rank which it once held. As a commercial country, it possesses inestimable facilities. Bees are now carefully reared, honey forming an important article of trade. The verdure of Upper Egypt generally withers at the end of four or five months, and commences earlier than in Lower Egypt. In consequence of this, the Lower Egyptians collect the bees of several villages, in large boats; each hive having a mark by which the owner can recognize it. The men having charge of them then commence the gradual ascent of the Nile, stopping whenever they come to a region of herbage and flowers. At break of day the bees issue from their cells in thousands, and busily collect the sweets of the flowers which are spread in luxuriant profusion around them, returning to their hives laden with honey,

and issuing forth again in quest of more, several times in the course of the day. Thus for three or four months, they travel in a land of flowers, and are brought back to the place whence they started, with the delicious product of the sweet orange-flowers which perfume the Said, the roses of Faïoum, and the jessamines of Arabia. The sugar-cane is an Egyptian production, and one of great value; olive and fig-trees, producing the most delicious fruit, are also found in abundance. The palm is one of the most useful of the Egyptian trees. The fruit is agreeable, and the bark, as well as the leaves and rind of the fruit, yields materials for cordage and the sails of the boats. The Mameluke javelins were made of the ribs of the palm branches.

The condition of the poor people of Egypt is deplorable. The tyranny of their rulers wrests from them the fruit of their hard labors, and leaves them but a miserable sustenance which they can hardly be supposed to enjoy. Rice and corn they can not eat, for all that they raise must be carried to their masters, who leave them for food *dourra*, or Indian millet, of which they form a very unpalatable and coarse kind of bread without any leaven. With the addition of water and raw onions, this is their food throughout the year. They know no luxury beyond a meal of the above articles improved by a little honey, cheese, sour milk, and dates. A shirt of coarse linen dyed blue, and a black cloak, a cloth bonnet, with a long red woollen handkerchief rolled around it, form their costume.

Cairo (Kahira), the capital, has about 250,000 inhabitants. It was built A.D. 970, and under Saladin and his successors, became one of the most commercial cities of the world, standing as it did midway between Europe and the Indies. The discovery of the path around the Cape of Good Hope, ended its prosperity. Alexandria is now the commercial city of Egypt. [See ALEXANDRIA.] Damietta, a town some six miles from the Mediterranean, is near the site of the ancient Thamiatis. It has 28,000 inhabitants. Rosetta, formerly an important port, has lost its traffic. To the traveler Egypt is replete with wonder and interest. He lingers among the gigantic remains of ancient art and splendor, with a feeling of veneration; recalling, as he dwells upon the spot, the busy scenes of the past,

the actors of which sleep beneath the dust of centuries, their perishable remains contrasting with the vast monuments of their enterprise and wealth, which, not the less surely because at a later period, will yet be crumbled into atoms by the stern hand of time. Then, too, the presence of these antique relics raises visions of the troubled times of Israel, when the yoke of the Pharaoh pressed heavily upon her children, till they were rescued from the land of bondage by the power of the Omnipotent, who rolled back the strong tides of the sea to let them pass. The contemplation of these early scenes awakens in the well-trained mind a thought of Him, of whom we know that whatever be the chance or change of time, though kingdoms may pass away, and cities be crumbled into dust, "His word endureth for ever." [For an account of the pyramids, see WONDERS OF THE WORLD.]

ELBA (the ancient *Ilea*), a small mountainous island in the Mediterranean, near the coast of Tuscany, to which it now belongs. It has an area of ninety-seven square miles, a population of 20,000, and contains iron, silver, loadstone, and marble. The climate is mild. This island was allotted to Napoleon in 1814, on his abdication of the crown of France. He quitted it February 26th, 1815.

ELDON, JOHN SCOTT, Earl of, born at Newcastle in 1751. He was a distinguished common-law judge, and sat on the woolsack from 1801 till 1827. He was bigotedly opposed to law reform, and is said to have shed tears on the abolition of the punishment of death for stealing five shillings from a dwelling-house. He died January 13th, 1838.

EL DORADO. When the zeal for travels, conquests, and discoveries in America, first began to develope itself among the Spaniards and other nations of Europe, those who thirsted for adventure and aggrandizement were not content with the actual wonders of the New World, but they taxed their imaginations for the creation of realms in which the splendors of fairy-land were surpassed. Various circumstances contributed to add authority and influence to these fables. The tale that is oftentimes repeated generally comes to be regarded as true, particularly when the narrators are skillful and have weighty reasons for disguising the truth.

These were not wanting with regard to the fable of El Dorado, or 'the golden region.' It was currently believed that somewhere in Guiana, there existed a kingdom, the wealth of which surpassed that of any known region on the face of the globe. Along the whole coast of the Spanish Main, it was believed that, in the interior of the country, there existed a land whose importance and riches it was impossible to exaggerate. These rumors are said to have had reference to the kingdom of Bogota and Tunja, now New Grenada. What was rather singular with regard to El Dorado, was, that the nearer adventurers approached to it, the farther off it appeared to be. The Peruvians had accounts of its existence in the *Nuevo Reyno*; the adventurers of that country believed that it existed in Peru. In fact it appeared like the blessed isle of Indian song, which fled the footsteps of pursuers.

Imagination, however, soon supplied the proper data. Tired of profitless wanderings, the gold-hunters fixed upon a certain region (in Guiana), as the locality of the kingdom of El Dorado. Nor was it a very difficult matter to make maps of the country, to crowd it with lakes and rivers, to refine its inhabitants, to perfect its arts, and to heighten its splendor. The story ran thus. After the fall of the Incas, a younger brother of Atabalipa, collecting what treasures he could lay hands upon, fled to an inland country, and founded a magnificent empire. This potentate was indifferently styled the Great Paytiti, the Great Moxo, the Enim or Great Paru. From interested motives, men of intelligence and reputation scrupled not to confirm the tales of this empire, and lend the sanction of their names to the most absurd and puerile fictions. Thus Sir Walter Raleigh, aware of the important results of colonizing Guiana, lured adventurers onward by displaying before them the most enticing pictures of the gilded monarch and his realm. He even did not hesitate to attempt to pass upon Queen Elizabeth, as facts, the monstrous fables which his heated mind was alone capable of receiving.

One unblushing impostor asserted that he had himself been in Manoa, the capital of the imaginary kingdom, and that in the street of silversmiths, no fewer than three thousand

workmen were employed. This traveler was very minute in his details, and produced a map which he had projected, and which was marked with the situation of a hill of gold, one of silver, and one of salt. The gorgeous palace of the emperor was held on high by magnificent and symmetrical pillars of porphyry and alabaster, and encircled by galleries which were formed of ebony and cedar, curiously wrought. About the period of Raleigh's first expedition, it was believed at Paraguay that the court of the Great Moxo had been actually discovered and visited. At this time the description of the interior varied a little from that which we have just given. A vast lake of exquisite transparency and softness reflected the palace, which was built upon an island in its centre. The material of the edifice was snow-white marble of a peculiar brilliancy. Two towers guarded the entrance, standing on each side of a superb column, which shot up to the height of twenty-five feet, and bore upon its capital an immense silver moon, while two living lions were attached by massy chains of solid gold to its pedestal. These animals, like the dragons of a fairy tale, defended the entrance to a place which outshone the realms of fairyland. We know not whether an acquaintance with magic was necessary to quiet the vigilance of these wild guards, or whether they were well-bred creatures, disposed to make allowances for the curiosity of visitors, and permit them an easy entrance into the palace of El Dorado. Be that as it may, having passed those guards, you entered a quadrangle, where you could not fail to be delighted with the freshness and shade of the green trees, and the fragrant coolness and musical murmur of a silver fountain, which gushed and gleamed through four golden pipes. A small copper gate, the bolt of which shot into a massy rock, hid the interior of the palace. This passed, the splendor of the internal arrangements dazzled and delighted. A vast altar, formed of solid silver, supported an immense golden sun, before which four lamps were kept perpetually burning.

The lord of this magnificence was called *El Dorado*, literally 'the gilded,' from the savage splendor of his costume, his naked body being daily anointed with costly gum,

and then heaped with gold dust, until he presented the appearance of a golden statue. "But," Oviedo sagely remarks, "as this kind of garment would be uneasy to him while he slept, the prince washes himself every evening, and he is gilded anew in the morning, which proves that the empire of El Dorado is infinitely rich in mines." This fable had its origin in the peculiar rites introduced by the worship of Bochica, as the high priest of this sect was accustomed, every morning, to anoint his hands and face with grease, and then heap them with gold dust. Another custom, spoken of by Humboldt, may have given rise to the romance. This eminent traveler says that in the wilder parts of Guiana, where painting the body is used instead of the practice of tattooing, the Indians smear their bodies with the fat of turtles, and then cover them with pieces of mica of a metallic lustre, brilliantly white as silver, and red as copper, so that they appear robed in a garment covered with gold and silver embroidery, when seen from a little distance.

Although productive of much mischief, the expeditions undertaken in the hope of discovering El Dorado did considerable service to the cause of science; and thus, by the agency of fiction, many important truths were brought to light. Of the different expeditions fitted out in search of El Dorado, the last, incredible as it may seem, was set on foot as lately as the year 1775. From this we may judge how firm was the belief in the existence of this fairy land. The earliest enterprises of this nature attempted to reach the realm of the Great Moxo somewhere in the direction of the eastern back of the Andes of New Grenada. The captains Anasco and Anipudia were dispatched by Sebastian de Belalcazar, in 1535, to discover the valley of Dorado, in consequence of the flaming descriptions which an Indian of Tacunga had given of the riches and splendor of the Zaque, or the king of Cundinamarca. Diaz de Pineda (in 1536) gave rise to the idea that there were, to the eastward of the Nevados of Tunguragua, Cayambe, and Popayan, immense plains where the precious metals were found in abundance, and where gold, in particular, was so plentiful, that the inhabitants converted massy plates of it into armor.

In 1539, Gonzalo Pizarro, inflamed by the

account of these treasures, set forth in search of them, and by chance made discovery of the American cinnamon trees. Francisco de Orellana set forth to reach the river of Amazons by the Napo. Expeditions were fitted out simultaneously from Venezuela, New Grenada, Quito, Peru, Brazil, and the Rio de la Plata, having for their sole object the conquest of Dorado. The incursions to the south of Guaviare, the Rio Fragua, and the Cagueta, were declared to have procured proof not only of the existence of the city of El Dorado, but of the immense riches of the Manos, the Omaguas, and the Guaypos. We discover proofs of accurate knowledge and careful research in the narratives of the voyages of Orellana, George von Specier, Hernan Perez de Quesada, and Philip von Hutten, undertaken in 1536, 1542, and 1545, although there is no lack of exaggeration and fable likewise. Those who sought the town of the Gilded Monarch directed their steps to two points situated on the north-east and south-west of the Rio Negro; viz. to Parima, the early abode of the Manos, who dwelt upon the banks of the Jurubesh. There exists now very little doubt that the whole of the country lying between the Amazon and Orinoco, was comprehended under the general name of the provinces of the gilded king.

The first voyage of Sir Walter Raleigh was undertaken in 1595. That enterprising and romantic man, who was then in high favor with Queen Elizabeth, was tired of the dull realities of the old world, and thirsted for adventure. He embraced the idea of El Dorado with ardor, as holding out something worthy of his attention. It is true that he had no definite ideas about the situation of the fabled kingdom, but he rushed into the adventure with the enthusiasm and ardor which distinguished him. He was, of course, disappointed, and probably found the affair, gilded king, lake, city, palace, lions, gold mountains, and all, what we, in these commonplace and degenerate days, should term a bubble or a hoax. Sir Walter Raleigh was a courtier, well versed in the ways of the world, and he cared not to endure the mortification, on his return, of ridicule or pity for the failure of the expedition. He was determined to sacrifice truth to what he considered expediency. Besides, he had formed the pro-

ject of colonizing Guiana, which he saw would produce the happiest results, and he thought that, by holding out the golden prize of El Dorado, he should induce many to patronize his scheme.

We shall briefly trace the course of Sir Walter Raleigh, when, after having collected from Antonio de Berrio, whom he took prisoner in his incursion on the island of Trinidad in 1595, and others, the sum of the knowledge possessed at that time upon the subject of Guiana and the adjacent countries, he set forth upon his celebrated expedition. He then entertained no doubts of the existence of the two great lakes, and the kingdom of the famous Inca, which was supposed to have been founded near the sources of the river Essequibo. Passing the river Guavapo, and the plains of Chaymas, Raleigh stopped at Morequito, where he was informed by an old man that there was no doubt that foreign nations had entered Guiana. The cataracts of Carony, a river which was supposed to be the shortest way to Macureguari and Manoa, towns situated on the banks of Lakes Cassipa and Rupunuwini, or Dorado, terminated this expedition.

We must be permitted to doubt almost every assertion made by Raleigh with regard to the results of this voyage. He was determined that his cause should lose nothing from excessive modesty, and consequently the style in which he speaks of Manoa is highly inflated. He heard of inland seas which he compares to the Caspian, and of "the imperial and golden city of Manoa." He styles the ruler of the magnificent country, "the emperor Inga of Guyana," and says that he had erected palaces of the most dazzling magnificence, said to surpass by far the superb palaces of his Peruvian ancestors. Raleigh, in his endeavors to influence the queen, neglected neither the arts of flattery nor the embellishments of fiction. He says that to the barbarous nations he encountered, he showed the picture of the queen, at which they exhibited "transports of joy." He asserts that he was informed that at the time of the conquest of Peru, there were prophecies "in their chiefest temples," which foretold the loss of the empire and the restoration of the Ingas (Incas) by Englishmen. He tells her majesty that the Inca would probably pay

yearly to England the sum of three hundred thousand pounds sterling, if she would place in his towns garrisons of three or four thousand English, under pretense of defending him against all enemies. "It seemeth to me," he adds, "that this empire of Guiana is reserved for the English nation." From 1595 to 1617, Raleigh made four successive voyages to the lower Orinoco. These attempts, which, however they were represented in England, were well understood in South America to have been fruitless, damped the ardor of adventurers who had formed projects for entering and conquering El Dorado. From this time there appeared none of those great combinations and important expeditions which at first owed their origin to warm chimerical ideas; but, at the same time, the golden hopes which had been awakened did not entirely disappear, and solitary enterprises were occasionally undertaken, under the sanction of various provincial governors.

In 1637 and 1638, Acana and Fritz, two monks, severally undertook journeys to the lands of the Manoaas, which were thought to be rife with gold, and by the magnificent accounts which they put in circulation, contrived to inflame anew the imaginations of adventurers. Very recently it was believed that the plains of Macas, to the east of the Cordilleras, contained the ruins of Logrono, a town situated in a gold region of prodigious value. In 1740, an idea was current that by going up the river Essequibo, Dorado might be reached from Dutch Guiana. The imagination of Don Manuel Centurion, governor of San Thome del Angostura, having been warmed by the current fables of the splendid lake of Manoa, the very existence of which was apocryphal, he determined to set on foot some serious investigations. He used all his powers to awaken in the minds of the colonists an ardor equal to his own. An Ipurucoto Indian, by name Arimuicaipi, descended the Rio Carony, and, for reasons of his own, by the most barefaced impositions, induced the Spaniards to believe that the tales of El Dorado hardly did justice to the splendor of the country of the Great Moxo. He declared that the whitish light in the clouds of Magellan, in the southern sky, was the reflection of the silvery rocks around which the waves of Lake Pa-

rima swept. "This was describing in a very poetical manner," says Humboldt, "the splendor of the micaceous and talcky slates of his country."

A well-meaning Indian chief, popularly termed Captain Jurado, endeavored to check the progress of the delusion, and tried to undeceive Centurion. The adventurers embarked upon the Caura and Rio Paragua, but not only were disappointed in their expectations, but encountered the most dreadful sufferings, which occasioned the death of several hundred persons. Notwithstanding the disadvantageous effects of these expeditions, they brought to light many important geographical facts. Between 1775 and 1780, Nicholas Rodriguez and Antonio Santos, two men noted for their enterprise, were employed by the Spanish governors, and reached the Uraricuera and Rio Branco, after encountering many perils; but, of course, did not attain their objects.

The frequent occurrence of mica in Guiana contributed to confirm the opinions of those who believed it to be a region rich with gold, and thus, as in many other cases, want of scientific knowledge led to the most absurd ideas, and the most deplorable results. The peak of Mount Calitami at sunset gleams as if it were incrustated with precious metal, or ornamented with a coronet of diamonds. The islets of mica-slate in the Lake Amucu are fabled by the natives to increase the silver beams of the clouds in the southern sky by their powerful reflection. Raleigh says that every mountain and every stone in the forests of Orinoco had all the sparkling brilliancy of the precious metals. Those travelers who gave the most glowing descriptions of the riches of Guiana and El Dorado, were those who, on other subjects, made no scruple of violating truth for the sake of enhancing the effects of their narrations. Diego de Ordaz, the famous *conquistador* of Mexico, in 1531, undertook a voyage of discovery along the banks of the Orinoco. This gentleman boastingly declared that he had taken sulphur out of the peak of Popocatepetl, and was allowed by the emperor, Charles V., to carry a flaming volcano in his coat of arms. He obtained a commission to rule over all the country which he could subdue by his arms between Brazil and the coast of Venezuela,

and began his voyage by the mouth of the river Maranon. Here the natives displayed to his admiring eyes "emeralds as big as a man's fist." These were doubtless no other than pieces of compact feldspar, a mineral found in great profusion at the mouth of the river Topayas. The Indians informed Ordaz that in traveling to the westward he would find a mountain of emerald, but a shipwreck destroyed the hopes of the party.

The Spanish adventurers firmly believed in the existence of mountains composed, principally if not wholly, of gold, silver, emeralds, &c. Sometimes, natural appearances, easily explained, gave rise to these illusions, but frequently there was no foundation whatever for the belief. Acunha says that north of the junction of the Curuputuba and Amazon, the immense mountain of Paraguaxo, when the rays of the sun fell upon it, displayed the most beautiful colors, emitting from time to time tremendous bellowings. The Indians, who were accustomed to fasten upon their skins gold spangles and powder, informed the Spaniards that they obtained it by tearing up the grass and earth in a certain plain, and washing it. But it is possible that what was imagined to be gold, was no other than mica, which the natives of Rio Caura are said still to use by way of ornamenting their bodies, and heightening the effect of their painting.

In tracing the progress of the famous delusion of El Dorado, we can not fail to be surprised at the credulity of some adventurers, and the audacity of others. The expedition of Sir Walter Raleigh was without doubt the most important undertaken, and the influence which it exerted was beneficial in deterring men from making those combined efforts which could not have failed in terminating ruinously. We can not doubt that Raleigh was himself grossly deceived, nor that he endeavored to practice upon others the imposition from which he had himself suffered. It is poor excuse to say that he misrepresented things for a good end. The following is briefly his own description of Guiana. "The empire of Guiana is directly east from Peru toward the sea, and lieth under the equinoctial line, and it hath more abundance of gold than any part of Peru, and as many or more great cities than ever Peru had when it flourished most. It is governed by the

same laws, and the emperor and people observe the same religion, and the same form and policies in government, as was used in Peru, not differing in any part; and as I have been assured by such of the Spaniards as have seen Manoa, the imperial city of Guiana, which the Spaniards call El Dorado, that for the greatness, the riches, and for the excellent seat, it far exceedeth any of the world, at least of so much of the world as is known to the Spanish nation. It is founded upon a lake of salt water of two hundred leagues long, like unto *Mare Caspium* (the Caspian Sea); and if we compare it to that of Peru, and but read the report of Francisco Lopez, and others, it will seem more than credible." Raleigh repeats the wonderful stories told of Manoa by Martinez, a Spaniard who informed him that he had spent seven months in the empire, and who first gave it the name of El Dorado. Martinez gave by no means a flattering character to the inhabitants of Guiana, who, he said, were a set of inveterate drunkards. According to him, at times of solemn festival, the higher officers of the empire caroused with the king. All who pledged him were stripped, and having their bodies anointed with a costly balsam, the servants of the emperor blew gold dust upon them, making use for this purpose of certain hollow canes or reeds. Then glittering from head to foot, they sat down by twenties and hundreds, and drank sometimes for six or seven days. Martinez says that he named the empire El Dorado on account of the quantity of gold which he found in the temples, and throughout the city; plates, armor, and shields being formed of the precious metal.

Raleigh speaks of a race whose heads did not appear above their shoulders, and adds, "Though it may be thought a mere fable, yet for mine own part I am resolved it is true." "They are called Ewaipanoma. They are reported to have eyes in their shoulders, and their mouths in the middle of their breasts, and that a long train of hair groweth backward between their shoulders." These people, however, were not pretended to be the inhabitants of the empire of the gilded king.

Though we can not fail to regret the waste of labor and life which the fable of El Dorado caused, yet it must be confessed that it led to many scientific discoveries. But while

many facts were brought forward, they were so mixed up with fables, defying almost all attempts to separate the evil from the good, that we can not be much surprised at the erroneous ideas which prevailed up to a very late period. The penetration and knowledge of the nineteenth century have dissipated the golden clouds which overhung the haunted region of Guiana, and the great Moxo, by common consent, is for ever banished to the dreamed realms of fiction.

ELEUSIS was anciently, next to Athens, the principal city of Attica. It was here that the festivals of Ceres, the goddess of nature, termed the Eleusinian Mysteries, were secretly celebrated once a year, in her temple, which was surrounded by high walls. The manner of their celebration is unknown. They were esteemed the holiest and most venerable of the religious ceremonies of Greece, and were abolished by Theodosius the Great, A.D., 389.

ELGIN, THOMAS BRUCE, Earl of Elgin and Kincardine, was British ambassador to Turkey. He is celebrated by the collection of marbles bearing his name, consisting chiefly of the frieze and pediment of the Parthenon. They were purchased of him by the government for £36,000, and placed in the British Museum, 1816. He died in 1840.

ELIO, FRANCISCO XAVIER, a Spaniard who opposed Napoleon in Spain, and the revolutionists in South America. On the restoration of Ferdinand VII., of Spain, he declared himself in favor of absolute monarchy, and committed many atrocities in putting down liberal principles. The revival of the constitution of Cadiz put an end to his career. He was tried for exciting a movement in favor of absolute monarchy, and put to death, Sept. 3d, 1822.

ELIOT, JOUN, a native of England, was born in 1604, and was educated at Cambridge. He came to America in 1631, and acted as minister of the church in Roxbury, Massachusetts. He mastered the Indian language, and published an Indian Bible and grammar, and was indefatigable in preaching the gospel to the savages. The great apostle and friend of the Indians died May 20th, 1690. His works were voluminous.

ELIOT, GEORGE AUGUSTUS, Lord Heathfield, was born at Stubbs, in Scotland, in

1718, and educated at Leyden, after which he entered into the Prussian service. Having returned to Scotland, he joined, in 1733, the corps of engineers, and afterward became adjutant to a corps of horse-grenadiers, in which capacity he distinguished himself at Dettingen, where he was wounded. In this regiment he rose to the rank of lieutenant-colonel; and, in 1757, was appointed to the command of a regiment of light-horse, which he had himself raised. On his return from Germany, he was sent to Havana, and, at the peace, the king conferred on his regiment the title of "royal." In 1775, he was appointed commander-in-chief in Ireland, and was soon after made governor of Gibraltar, which fortress he bravely defended against the great siege of the combined forces of France and Spain. He died at Aix-la-Chapelle, July 6th, 1790. He never indulged in the pleasures of the table, his food consisting of vegetables and water. Ever vigilant and active, he never slept more than four hours at a time.

ELIZABETH, Queen. [See TUDOR.]

ELIZABETH PETROWNA, Empress of Russia. [See ROMANOFF.]

ELLENBOROUGH, EDWARD LAW, Baron, was born in 1748, at Great Salkeld, in Cumberland. His father was Bishop of Carlisle. He was educated at Cambridge, and early admitted to the bar. He was counsel for Warren Hastings in 1785, assisted by Plomer and Dallas, and his client was acquitted. His fortune was now fixed. In 1801 he was made attorney general, and the following year succeeded Lord Kenyon, as lord-chief-justice of the king's bench, and was created baron. He died Dec. 13th, 1818. His son has been a prominent statesman, was governor-general of India from 1842 to 1844, and raised to the rank and title of Earl of Ellenborough.

ELLERY, WILLIAM, one of the signers of the Declaration of Independence, was born at Newport, R. I., Dec. 22d, 1727, and educated at Harvard College. He became a successful lawyer in Newport, won the esteem of his fellow-citizens, and was elected to congress in 1776. He served in that body until 1785, when he was appointed commissioner of loans and chief-justice of the superior court of Rhode Island. He was appointed

by Washington the first collector of customs for Newport, held the office thirty years, and died February 15th, 1820, aged ninety-two.

ELLIOT, STEPHEN, an American botanist, and man of letters, was born at Beaufort, S. C., in 1771, and educated at Yale College. He early devoted his attention to natural history. As a member of the state legislature, he was distinguished for patriotism, learning, and ability. He was president of the state bank, member of several literary and scientific societies, and editor of the *Southern Review*, and he received the degree of LL.D. from Yale College. He died in the early part of 1830.

ELLIOTT, EBENEZER, the 'Corn Law Rhym-er,' was born of humble parentage near Sheffield, England, March 25th, 1781. His youth was passed in toil, but in manhood he acquired a competency in the iron trade. The laws taxing breadstuffs he indignantly assailed, and his "Corn Law Rhymes" did good service in raising the tempest which swept them away. He was more, however, than a political song-writer, and the milder outpourings of his muse occupy a high place in the popular poetry of England. He died December 1st, 1849.

ELLSWORTH, OLIVER, was born at Windsor, Connecticut, April 29th, 1745. He was the son of a farmer, and devoted his early years alternately to literature and agriculture. He was educated at Yale and Princeton, the former of which Colleges he entered at the age of seventeen, and was admitted to the bar, after the usual preparatory study, in 1771, in the county of Hartford, Connecticut, and was appointed state attorney. An ardent friend of freedom, he served in the revolutionary army, was a member of the general assembly of Connecticut, and a delegate to the congress of the United States. He was made member of the council and judge of the superior court of his native state, assisted in framing the federal convention, was chosen senator in the first congress, and held his seat throughout Washington's administration. He was appointed chief-justice of the United States on the resignation of Mr. Jay, and was one of the envoys sent to France in 1799, to procure the adjustment of the differences which threatened a very serious ter-

mination. Having returned to his native state, he died Nov. 26th, 1807.

ELLWOOD, THOMAS, an eminent member of the society of Friends; he joined the society at twenty-one, and became as a preacher and writer, one of their most efficient members, to his death, 1713, in his seventy-fourth year. He was the pupil and friend of Milton, and one of those who read to the poet when blind.

EMANUEL, the Great, King of Portugal, ascended the throne in 1495. During his reign the discoveries and exploits of Portuguese navigators and commanders opened the wealth of America and the East Indies to Portugal. Everything seemed to flourish, and the period merited the title which was given it, the golden age of Portugal. Emanuel died Dec. 13th, 1521. He acquired one renown by his expulsion of the Moors, and another by his patronage of men of letters.

EMMET, ROBERT, the son of a physician at Cork, was born in 1782. Ireland was in a fevered state, and young Emmet became a leading spirit among those who dreamed of Erin's freedom and independence. The rising he planned was abortive. He was convicted of treason, and executed September 20th, 1803.

EMMET, THOMAS ADDIS, brother of Robert, born in Cork, Ireland, 1765. He was designed for the medical profession, but the death of his elder brother, a member of the bar, induced him to turn his attention to the study of the law. He pursued it with success and commenced practice in Dublin. In 1795, Emmet joined the association of United Irishmen, and was arrested March 12th, 1798. He was imprisoned for a long time in Fort George, in the county of Nairn, Scotland, but with his wife, who had shared his confinement, having been finally liberated, he came to New York in November, 1804. Emmet here successfully practiced law, and in 1812 was appointed attorney-general of the state of New York. He died in the sixty-third year of his age, Nov. 14th, 1827, during the trial of an important case. In private life he was beloved, and in public esteemed and respected.

ENGHIEN, BATTLE OF. Fought by the British under William III., and the French under Marshal Luxembourg, who were victorious, Aug. 3d, 1692. William had put him-

self at the head of the confederated army in the Netherlands, and leagued himself with the Protestant powers upon the continent against the ambition of Louis XIV.; and in the end he triumphed. Enghien is a small town in the Flemish province of Hainault. A victory gained here by the great Condé, first gave the ducal title to a prince of the house of Bourbon-Condé.

ENGHIEN, LOUIS ANTOINE HENRI DE BOURBON, Duke of, born at Chantilly, Aug. 2d, 1772, was the son of Louis Henry Joseph Condé, Duke of Bourbon, a descendant of the great Condé. He served in various campaigns, and particularly distinguished himself under his grandfather. In 1804 he went to Ettenheim, incog, and married the Princess Charlotte de Rohan Rochefort. At this time the life of Bonaparte was threatened, and the English, in particular, hinted at his probable assassination. The Duc d'Enghien, having fallen under suspicion, was arrested at Ettenheim, in the neutral territory of Baden, brought to Vincennes at midnight, tried with much informality by a military court, condemned to death, and shot by torchlight the next morning, March 20th, 1804; the whole affair having been conducted, to say the least, with ungenerous haste. No other action of Napoleon's has excited so much discussion as this. Some writers have laid the whole blame of the transaction upon the emperor, and others endeavor to free him altogether from the charge. An actual conspiracy, supported by English money, had been discovered at Paris, that of Georges. The same spirit which had sent Georges from London to France, was to be found in the cabinet of all the British embassies in Germany. Peculiar circumstances induced M. Réal, then chief of the police, to send a trusty agent to find out whether the Duc d'Enghien was always at Ettenheim, and what were his relations and his habits. An officer of the gendarmery was intrusted with this mission, and this was the foundation of all the evil. On his way to Strasburg, this officer heard it mentioned as a notorious fact, that the Duc d'Enghien was in the habit of attending the theatre in that city. The spy sent to Ettenheim reached it with prejudices which the least indications would increase. He learned that there were emigrants in the

neighborhood of the Duc d'Enghien, that he invariably gave them the warmest reception when they visited him, and that the duke was frequently absent for days at a time. It appeared afterward that from time to time, a passion for hunting kept the duke for several successive days in the mountains of the Black Forest. This was not all. The imperfect pronunciation of the Germans led the officer to suppose that an obscure person in the suite of the duke, a M. de Thumery, was no other than General Dumouriez. The union of these particulars alarmed the officer, who, with more zeal than truth, created fearful phantoms out of innocent appearances. The judgment of the first consul was obscured by the rapidity with which his imagination moved, causing him to take for incontestable facts, stories which had but vague conjecture for their foundation. Thus he soon arrived at his conclusions. "In sixty hours one can come from Strasburg to Paris. It requires but five days to go and return. The unknown personage [afterward proved to be Pichegru], who was received with so much respect by Georges, is the Duc d'Enghien. The duke is the prime mover of the conspiracy, the soul of it, at least one of the first accomplices." These were the ideas which presented themselves to the first consul, and it must be confessed that the supposed presence of Dumouriez at Ettenheim was a circumstance of weight. The fact, if it had been true, and Bonaparte believed it to be so, would have added to the suspicions of which the Duc d'Enghien was the subject.

But here it may be objected that these suspicions were without foundation, and that the first consul ought to have known it, because the *charge de affaires* at Carlsruhe wrote that the duke was leading the most quiet and retired life at Ettenheim. It will be conceded that his objection has little force; for might not the Duc d'Enghien be concerned in the conspiracies against Bonaparte, have an understanding with the emigrants in his neighborhood, entertain Dumouriez in his train, either under his own or another name, and yet find no occasion to change the external and regular order of his life?

There was another cause which acted upon the determination of the first consul. The conspiracy against the first consul was ma-

tured in England, but its branches spread in every direction. In England, conspirators were pensioned; in Austria, battalions were raised. On one side, were plots; on the other, conspiracies: danger was everywhere, and perils were daily augmenting. How could the first consul imagine that the Duc d'Enghien, a prince of the house of France, an officer of the English army, was ignorant of the preparations which were on foot? In the eyes of Bonaparte the cabinets of London and Vienna acted in concert. How could he persuade himself that a Bourbon, placed at Ettenheim, should refuse to participate in the association? Sir Walter Scott himself believed that the duke was established at Ettenheim for the purpose of putting himself at the head of the royalists in that quarter, or of presenting himself, if affairs required it, to those of Paris. The discussion between Austria and France had come almost to menaces. On the 9th of March Bonaparte addressed to the Emperor of Germany a summons to explain himself. On the 10th was given the fatal order relative to the Duc d'Enghien. Who can say that these two ideas were strangers to each other? That the greatness of the perils which surrounded Bonaparte did not contribute to the violence of the means which he employed to oppose them, and make his enemies tremble? Who would venture to assert that Austria, always so intimately connected with England, had no knowledge, not assuredly of the plots of assassination, but of the various hostile plans employed against the first consul, and did not hold herself in readiness to yield to the current of events? In the midst of these circumstances, the reports of the agent sent to Ettenheim were submitted to the first consul. Instantly a fearful resolution was taken, and the order given for the seizure of the duke.

How was this resolution taken? Was it the result of a sudden movement on the part of Bonaparte, or was it determined by the deliberations of a council? The orders for the minister of war were dictated at ten in the evening, by the first consul, on issuing from a cabinet conference at which were present the two consuls, Talleyrand, the chief-justice, and Fouché, who was then only a senator. Had they been assembled by special convocation, or by chance! This is of little conse-

quence. But what passed at this conference? It is here the interpretations of jealousy and hate begin. Is it true, as some memoirs have asserted, that the minister of foreign affairs, after a report upon the general state of Europe, concluded by counseling the violation of a neutral territory? Is it true, as some have asserted, that Fouché, in order to create embarrassment, and make himself necessary in that post which he had formerly occupied, warmly advocated a measure which he would soon be the first to denounce? Is it true that the opposition of Cambaceres to the seizure of the duke upon a neutral territory, drew down upon him the famous apostrophe of Bonaparte, "You have become very avaricious of the blood of the Bourbons?"

Bonaparte might have said: "The Bourbons have sworn to destroy me, they have devoted my heart to the steel of their satellites, they have willed my assassination. Well: let them tremble in turn! I can also assassinate. I have only to stretch forth my hand to seize one of them. I *will* seize him, I *will* destroy him, and they shall feel that they can no longer attempt my life with impunity." Perhaps, "in the very whirlwind of his passion," an infernal spirit, in order to strengthen him, may have whispered cool reflections: "The divorce between France and the eldest branch of the Bourbons seems definitive. The state of inaction to which the princes of this branch have been condemned has destroyed all sympathy between them and heroic France. The name of Condé, on the contrary, recalls more vividly the glory of arms. It recalls even the last wars. The grandfather and the grandson have fought among the brave against the brave. There is here a possibility of reconciliation, a germ of sympathy. It is this branch which I must destroy, even to the last shoot. It will be a crime, a great crime, but a state crime, a political crime. It will spread consternation in France even among my most devoted friends; it will stupify all Europe; but only for a moment; for to-morrow, other occurrences will concentrate the attention of all Europe; to-morrow it will be apprised of the new crimes of England, and the death of the Duc d'Enghien will be lost in the various events which fortune seems to prepare expressly for the purposes of concealment and oblivion."

On the 15th of March the Duc d'Enghien was seized at Ettenheim and brought to Strasburg. From Strasburg he was, on the 18th, transferred to Paris, where he arrived the 20th, and thence was sent to the castle of Vincennes. The governor of Paris appointed a council of war, which assembled in the night. The prince was condemned to death, and the sentence was immediately executed. In a proceeding dictated by policy, legal formalities are rarely observed. They were not in the present case. The prisoner of St. Helena continually justified himself by saying that the prince was tried "by a competent tribunal." The competence of the tribunal is a very doubtful matter; but could it be settled according to the wishes of Napoleon, there would still remain in this affair the infraction of the laws which protect the accused. The duke had no defender. Napoleon, it is true, has said, "If guilty, the commission did right in condemning him to death. If innocent, it should have acquitted him, for no order can justify the conscience of a judge." What a lesson for magistrates, for commissions or counsels of war, which should be tempted to make the scales of justice move in accordance with the interests or the passions of governments.

ENGLAND is thus described by her greatest poet:

"This other Eden; demi-paradise;
This fortress built by Nature for herself,
Against infection and the hand of war;
This happy breed of men, this little world;
This precious stone set in the silver sea,
Which serves it in the office of a wall,
Or as a moat defensive to a house,
Against the envy of less happier lands;
This blessed plot, this earth, this realm, this England;
This land of such dear souls, this dear dear land,
Dear for her reputation throughout the world."

England, which with Wales is no larger than the state of Georgia, stretches by an illusion to the dimensions of an empire. The innumerable details, the crowded succession of towns, cities, cathedrals, castles, and great and decorated estates, the number and power of the trades and guilds, the military strength and splendor, the multitudes of rich and of remarkable people, the servants and equipages,—all these, catching the eye, and never allowing it to pause, hide all boundaries by

the impression of magnificence and endless wealth. To see England well needs a hundred years: it is stuffed full with towns, towers, churches, villas, palaces, hospitals, and charity houses. In the history of art, it is a long way from a cromlech to York Minster; yet all the intermediate steps may still be traced in this all-preserving island. The climate is warmer by many degrees than that to which it is entitled by latitude. Neither hot nor cold, Charles II. said "it invited men abroad more days in the year and more hours in the day than another country." The frequent rain keeps the many rivers full, and brings agricultural productions up to the highest point. England has plenty of water, of stone, of potter's clay, of coal, of salt, and of iron. The land naturally abounds with game; immense heaths and downs are paved with quails, grouse, and woodcock, and the shores are animated by water-fowl. The rivers and the surrounding sea spawn with fish. There is the drawback of the darkness of the sky: the London fog sometimes justifies the epigram on the climate, "In a fine day, looking up a chimney; in a foul day, looking down one." England is anchored at the side of Europe, and right in the heart of the modern world. The sea, which according to Virgil divided the poor Britons utterly from the world, proves to be the ring of marriage with all nations. As America, Europe, and Asia lie, these Britons have precisely the best commercial position in the world.—*Emerson.*

Britain is a miniature of Europe. She has her mountains, Snowdon in Wales, Helvellyn and Skiddaw in Cumberland, the Highlands in Scotland. She has her lakes, the smiling meres of England, the crystal lochs that mirror Ben Nevis and Ben Lomond and their brethren. She has the picturesque dales and caves of Derbyshire, the fair plains of Warwickshire, and Surrey, and Bucks, and indeed throughout the realm. In Westmoreland and Cumberland, she has a pocket Switzerland. Her mines in Cornwall, and Staffordshire, and Northumberland, and so on, furnish all the great ores, iron, coal, lead, tin, copper. Her quarries are not exhausted by far. Her soil yields bounteous harvests. Her manufactures bring all nations in her debt. Her commerce exceeds that of any other people,

and she is the grand mart for the globe. The keels of her merchantmen furrow all the seas, and the smoke of her steamers darkens almost every maritime sky; steamers and merchantmen plying between her and her colonial possessions that invest the world.

England, Scotland, and Wales form the United Kingdom of Great Britain. The surface of the whole island is about 89,644 square miles: of which England contains 50,922, Scotland 31,324, and Wales 7,398. The population in 1861 was 23,570,245: of which England and Wales had 20,061,725, and Scotland 3,061,329, [See SCOTLAND, WALES.] England is divided into forty-one counties: Northumberland, Cumberland, Durham, Yorkshire, Westmoreland, Lancashire, Cheshire, Shropshire or Salop, Herefordshire, Monmouthshire, Nottinghamshire, Derbyshire, Staffordshire, Leicestershire, Rutlandshire, Northamptonshire, Warwickshire, Worcestershire, Gloucestershire, Oxfordshire, Buckinghamshire, Bedfordshire, Lincolnshire, Huntingdonshire, Cambridgeshire, Norfolk, Suffolk, Essex, Hertfordshire, Middlesex, Surry, Kent, Sussex, Berkshire, Wiltshire, Hampshire or Hants, Dorsetshire, Somersetshire, Devonshire, and Cornwall. There are several islands which pertain to England, those of Man, Jersey, Guernsey, and the smaller ones adjacent.

London has separate mention in pages beyond. The second city in England is Manchester in Lancashire; population in 1861, 338,346. It is surrounded by some of the best coal strata in England, a circumstance to which it owes in no small degree its prosperity. It has also reaped ample reward from the system of canals, which here had their origin with Brindley and his patron, the Duke of Bridgewater. [See BRINDLEY, CANALS.] In the time of Henry VIII. and Edward VI., the town was busy with manufactures. The enormities of Alva in the Netherlands, and afterward the revocation of the edict of Nantes, brought many enterprising and skillful foreigners hither. At first the woolen was the only branch of trade, but since the middle of the last century, the cotton has nearly superseded it. The series of brilliant inventions and discoveries applied, improved, or originated in or about Manchester, comprising the steam-engine, the spinning-jenny, the mule,

&c., have greatly helped the development of industrial power. At Manchester was one of the principal altars of the Druids, and as its name betokens, it was a station of the Romans. Liverpool, on the river Mersey in Lancashire, next to London, is the greatest port of Great Britain; population in 1861, 443,874. It was but a small fishing village, until in 1172, its favorable situation and its convenient harbor caused Henry II. to make it the place of rendezvous and embarkation of his troops for the conquest of Ireland. In 1700 it had only 5,000 inhabitants. Soon it began to send hardwares, cutlery, and woollens to the coast of Africa; there these were bartered for negroes, which were borne to the West Indies and exchanged for sugar and rum, laden with which the ships came back; and thus Liverpool grew to its wealth and the grandeur of commerce. It is the great emporium of American trade. The first great railway in England was that connecting Liverpool with Manchester. At its opening, July 30th, 1829, Mr. Huskisson was knocked down by one of the engines, which went over his thigh and mortally injured him. Bristol (between the shires of Gloucester and Somerset, and a county in itself) had a population of 154,093 in 1861. Sebastian Cabot was a native of the town, and its merchants entered with spirit into American explorations and colonizing. From the twelfth to the eighteenth century, Bristol ranked next to London, as the most populous, commercial, and flourishing town in the kingdom; but of late it has declined, and been exceeded in these respects by Liverpool, Manchester, Leeds, Birmingham, and Glasgow. Bath, the chief town of Somersetshire, lies about one hundred and seven miles west of London, and is situated on the river Avon, in a narrow valley. Its hilly environs are pleasant, and open on the north-west into beautiful and wide meadowlands. The population, in 1851, was 54,240. Its hot springs were highly esteemed by the Romans, who built extensive baths here. It was the most fashionable watering-place of England in the last century. Bathing, however, is far from being a practice of the inhabitants. One of the greatest manufacturing towns in the kingdom is Birmingham in Warwickshire; population in 1861, 295,955. It was early the seat of mechanical industry,

and when the Stuarts and their adherents came back with a fondness for metal ornaments, acquired during their long residence in France, Birmingham took the lead in making the glittering trinkets which the exotic taste demanded. Burke called it the toy-shop of Europe, but its chief wares are now of a more useful order. Plated ware, hardware, fire-arms, buttons, japanned ware, glass, steel pens, nails, pins, &c., are largely made. Leeds, in the West Riding of Yorkshire (population in 1861, 207,153), is the centre and mart of a great woolen and linen district, in which it is rivaled by the neighboring town of Bradford, population, 106,218. Sheffield, also in the West Riding (population in 1861, 185,157), is known the world over for its cutlery. Here also the process of silver-plating, and the composition called Britannia metal, were invented, and they are still a great branch of industry. Hull, or Kingston-upon-Hull, in the East Riding of Yorkshire, is a seaport of 99,000 inhabitants, once largely interested in whaling, and now engaged in extensive commerce with the Baltic. Newcastle-upon-Tyne, the chief town of Northumberland, is the seat of extensive chemical, glass, iron, and lead manufactures, but its chief business is the shipment of coals, the produce of the surrounding collieries. Southampton, in Hampshire (population 36,000), is now the largest packet port in the kingdom. It was founded by the Anglo-Saxons. It was anciently a place of great trade, largely exporting wool and tin, but it declined very much when the export of wool was prohibited. During the last century its prosperity began to revive, and it is still in the ascendant.

The government of England is a limited or constitutional monarchy, the sovereign power residing in three estates, king, lords, and commons. These three estates constitute the parliament, and their concurrence is necessary for enacting, annulling, or altering any law. The house of lords consists of the temporal peers of England, the elective peers of Scotland and Ireland, the bishops of England, and four Irish prelates who sit by rotation of sessions. This house is the supreme court of appeal for Great Britain and Ireland. The house of commons now consists of 656 members: 469 from England, 29 from Wales, 53 from Scotland, and 105 from Ireland. The

administration is intrusted by the sovereign to certain great officers of state, usually from twelve to fourteen, who form the cabinet. The first lord of the treasury is generally considered the prime minister. The superior courts for the administration of justice are the high court of chancery, the court of exchequer, the court of queen's (or king's) bench (the highest common-law and criminal court in the kingdom), and the court of common pleas. Assizes are held by the judges in every county of England and Wales, for which purpose the country is divided into eight circuits. The judges of these superior courts are appointed by the crown for life, and are removable only upon an address from parliament to the crown. England and Wales are divided ecclesiastically into the archiepiscopal provinces of Canterbury and York, containing twenty-five bishoprics or dioceses. Episcopacy is the established religion, but there are large numbers of dissenting and independent sects.

The Romans called the island Britannia, because the inhabitants adorned their bodies with *brit*, 'paint.' It was little known until the invasion of Julius Cæsar, who conducted his army into this country, on the pretext of punishing the Britons for the aid which they had given to the Gauls, in 55 B.C. The inhabitants were then ferocious and warlike, clad in skins, and armed with clubs, and even the iron-breasted Roman legions quailed at first before the horrid front which the infuriated natives presented to their invaders. The Romans kept possession of Britain about five hundred years, during which many improvements were introduced, and the manners of the people became assimilated to those of their conquerors. This, however, was not effected without much bloodshed. The Romans having, in the fifth century, quitted Britain, to defend their other territories, invaded by the Goths and Vandals, the Britons were attacked by the Picts and Scots, and sought the assistance of the Saxons and Angles. These defeated the Scots, but finally made themselves masters also of the kingdom, and gave it the name of Anglia, or England. It is in those times of conflict between the natives and their too powerful allies that the romances place the reign of the renowned King Arthur. The ancient Britons were driven into Wales. England was divided, by the Saxons, into seven

distinct kingdoms, called the Saxon Heptarchy, some of which were established in the fifth, and others in the sixth century. These kingdoms were for the most part subject to one king alone, those which were stronger than the others giving the law to them in their several turns, till in the end they were all united in the monarchy of the West Saxons under Egbert. In the following list of these kingdoms with their kings, a star is affixed to the names of those monarchs who obtained this ascendancy over the heptarchy.

KENT contained only the present county of Kent; its kings were:

- 455. *Hengist.
- 488. Eske.
- 512. Oeta.
- 542. Hermenric.
- 560. *Ethelbert, first Christian king.
- 616. Eadbald.
- 640. Ereombert.
- 664. Egbert.
- 673. Lothaire.
- 685. Edrick, slain in 687. The kingdom was now subject for a time to various leaders.
- 694. Wihtried.
- 725. Eadbert,
- 748. Ethelbert II., } sons of Wihtried, succeeding
- 760. Alric, } each other.
- 794. Edbert, or Ethelbert Pryn; deposed.
- 796. Cuthred.
- 805. Baldred, who in 823 lost his life and kingdom to Egbert, King of Wessex.

SOUTH SAXONY contained the counties of Sussex and Surrey.

- 490. *Ella, a warlike prince.
- 514. Cissa, his son, whose peaceful reign exceeded seventy years. Then the South Saxons fell into an almost total dependence on Wessex, and we scarcely know the names of the princes who were possessed of this titular sovereignty.
- 648. Edilwald, Edilwach, or Adelwach.
- 688. Authun and Berthun, brothers who reigned jointly. Both were vanquished by Ina, King of Wessex, and the kingdom was finally conquered in 725.

WESSEX, or WEST SAXONY, contained the counties of Devon, Dorset, Somerset, Wilts, Hants, Berks, and a part of Cornwall.

- 519. *Cerdic.
- 534. *Kenric, or Cynric.
- 559. *Ceawlin.
- 591. Ceolric.
- 597. Ceolwulf.
- 611. Cynegils, and his son Cwichelm.
- 643. Cenwal, or Cenwald.
- 672. Sexburga, his queen, sister to Penda, King of Mercia; of great qualities; probably deposed.

- 674. Escwine and Centwine.
- 676. Centwine alone.
- 685. Ceadwal, who went in lowly state to Rome, to expiate his deeds of blood, and died there.
- 688. Ina, a brave and wise ruler, who also journeyed to Rome, where he passed his time in obscurity, leaving behind him an excellent code of laws.
- 728. Ethelheard, or Ethelard.
- 770. Cuthred, his brother.
- 754. Sigebyrht, or Sigebrt. He treacherously murdered his friend, Duke Cumbran, governor of Hampshshire, who had given him an asylum once when expelled from his throne. For this infamous deed he was forsaken by the world, and wandered about in the wilds and forests, where he was at length discovered by one of Cumbran's servants, who slew him.
- 755. Cynewulf, murdered by Sigebyrht's brother.
- 784. Bertric, or Beorhtic; poisoned by drinking a cup his queen had prepared for another.
- 800. *Egbert, afterward sole monarch of England.

EAST SAXONY contained the counties of Essex and Middlesex and the southern part of Herts.

- 527. Erchenwin.
- 587. Sleda.
- 598. Sebert, first Christian king.
- 614. { Sexred
- { Seward
- { Sigebrt
- 623. Sigebrt the Little.
- 655. Sigebrt the Good.
- 661. Swithelm.
- 663. Sighere and Sebbi.
- 694. Sigherd and Suenfrid.
- 700. Offa; left his queen and kingdom, and became a monk at Rome.
- 709. Suebricht, or Selred.
- 746. Suithred.
- 792. Sigeric; died in a pilgrimage to Rome.
- 799. Sigere; Egbert seized the kingdom in 823.

NORTHUMBERIA consisted of the sometimes separate but commonly united states of Bernicia and Deira; the former including the county of Northumberland, and the south-eastern counties of Scotland as far as the Forth; the latter contained Yorkshire, Durham, Lancashire, Westmoreland, and Cumberland. Its kings were—

- 547. Ella, or Ida.
- 560. Adda.
- 567. Clappea,
- 572. Theodwald.
- 573. Fridulph.
- 580. Theodric.
- 588. Athelric.
- 593. Athelfrid.
- 617. *Edwin, the greatest prince of the heptarchy in that age.

- 633. Osric.
- 634. * Oswald.
- 644. * Oswy.
- 653. Ethelward.
- 670. Egfrid.
- 685. Alkfrid.
- 705. Osred I.
- 716. Cenred.
- 718. Osrick.
- 729. Ceolwulf.
- 738. Egbert.
- 757. Oswulph.
- 759. Edilwald.
- 765. Alured.
- 774. Ethelred.
- 778. Alswald I.
- 789. Osred II.
- 790. Ethelred restored.
- 796. Osbald.
- 797. Ardulph.
- 807. Alfwald II.
- 810. Andred. The Northumbrians submitted to Egbert of Wessex in 829.

EAST ANGLIA contained the counties of Suffolk, Norfolk, Cambridge, and part of Bedfordshire: its kings were—

- 575. Uffa.
- 582. Titillus.
- 599. * Redwald, the greatest prince of the East Angles.
- 624. Erpenwald.
- 636. Sigebert.
- 632. Egric.
- 635. Annas.
- 654. Ethelhere.
- 655. Ethelwald.
- 664. Aldwulf.
- 713. Selred, or Ethelred.
- 746. Alpwulf.
- 749. Beorn and Ethelbert.
- 758. Beorn, alone.
- 761. Ethelred.
- 790. Ethelbert, treacherously slain in Mercia 792, when Offa of Mercia overran the country, which was finally subdued by Egbert.

MERCIA contained the counties of Huntingdon, Rutland, Lincoln, Northampton, Leicester, Derby, Nottingham, Oxford, Chester, Salop, Gloucester, Worcester, Stafford, Warwick, Buckingham, Hereford, and parts of Bedford and Herts.

- 586. Crida.
- 597. Wibba.
- 615. Cheorlas.
- 626. Penda.
- 655. Peada.
- 656. * Wulfhere.
- 675. * Ethelred.
- 704. * Kenred.
- 709. * Ceolred.
- 716. * Ethelbald.
- 755. Beorned.
- 755. * Offa.

- 794. * Egfrýd.
- 795. * Cenulf.
- 819. Kenelm.
- 819. Ceolwulf.
- 821. Burnwulf.
- 823. Ludecan.
- 825. Wiglafe.
- 838. Berthulf.
- 852. Burhred. This kingdom like the others, finally merged into that of England.

England, from 783, suffered many invasions and ravages from the Danes, who several times made themselves masters of it. They were finally expelled (1041), and the Saxon government restored in the person of Edward the Confessor. During this time flourished Canute, Harold, and Hardicanute. During this time, too, the country was blessed under the rule of the wise Alfred, an account of whose reign will be found in our sketch of him. The following were the monarchs of England to the time of the conquest.

- 827. Egbert, first sole monarch; succeeded by his son.
- 837. Ethelwolf; he first granted tithes to the clergy; succeeded by his son.
- 857. Ethelbald, succeeded by his next brother.
- 860. Ethelbert, succeeded by his next brother.
- 866. Ethelred, succeeded by his brother.
- 872. Alfred, the Great, succeeded by his son.
- 901. Edward, the Elder; in whose reign England was more firmly consolidated into one kingdom.
- 924. Athelstan, eldest son of Edward; he caused the Bible to be translated into the Saxon, and presented a copy to every church throughout the kingdom; he also encouraged commerce by a decree that every merchant who had taken three voyages should be entitled to the rank of a thane.
- 940. Edmund I., fifth son of Edward the Elder; bled to death from a wound received in an affray, and was succeeded by his next brother.
- 947. Edred; Dunstan, the ambitious Abbot of Glastonbury, is virtually king.
- 955. Edwy, eldest son of Edmund. He married the beautiful Elgiva, his kinswoman. Dunstan united the priesthood against the marriage, and Edwy was forced to divorce Elgiva. She was cruelly murdered, and Edwy died of grief.
- 959. Edgar, the Peaceable, his brother.
- 974. Edward, the Martyr; stabbed by order of his step-mother, Elfrida, while drinking a cup of wine at the gate of Corfe Castle.
- 979. Ethelred II., son of Elfrida, dethroned by the Danes.
- 1013. Sweyne, succeeded by his son.
- 1014. Canute the Great; while he was absent in Denmark, Ethelred returned.
- 1015. Ethelred, restored; succeeded by his son.
- 1016. Edmund Ironside. The English and Danish armies met at Alney, and a single

combat ensued between the rival monarchs, in sight of their troops. Canute, being wounded, proposed a division of the kingdom. To this Edmund acceded, and the southern half fell to his share; but he being killed at Oxford shortly after, Canute was left in peaceable possession of all the land.

- 1016. Canute; married Emma, widow of Ethelred.
- 1036. Harold, surnamed Harefoot, the natural son of Canute and a cruel prince.
- 1039. Hardicanute, son of Canute and Emma; died of gluttony and drunkenness at a marriage feast.
- 1041. Edward, the Confessor, son of Ethelred; he had been bred in Normandy, and named William his successor; although Edgar was the rightful heir.
- 1066. Harold II., son of Earl Godwin; reigned nine months; killed at Hastings.

Thus in 1066, the Normans, under William the Conqueror, obtained possession of the kingdom, having defeated the English under Harold, in the battle of Hastings. By this circumstance, the whole moral and political constitution of England underwent an important change. Severe forest laws were decreed, making it forfeiture of property to disable a wild beast, and loss of eyes for a stag, buck, or boar: one might better slay a man than a deer. Justices of peace were appointed. Norman French was made the legal language of the realm. A survey of all the kingdom except Northumberland and Durham, was made, to determine the right in the tenure of estates, and furnish a basis for levying taxes. The book in which it was embodied was called the Dome's-day Book. The Norman principle of lordship and vassalage was introduced and enforced, and it was not until after some generations, that the barons themselves, feeling the chain of passive submission too galling, gave the first impulse to that spirit which burst the fetters of feudalism. To the time of John, the history of England is little else than an account of the acts of the kings, done with a direct view to acquire and sustain this unnatural authority. The first William did almost nothing else. His son William Rufus perished while hunting in the New Forests, a vast tract which his father had depopulated for that amusement.

Henry I., the youngest son of the Conqueror, seized the throne. By the military ardor of Robert, Duke of Normandy, the crown at the death of their father had been

given up to the second brother, in consideration of money advanced on his expedition to Palestine. On Robert's attempt to recover it now, he was taken and confined for the remainder of his life, eight and twenty years, in Cardiff Castle. Henry, to strengthen himself, married Matilda, a descendant of the ancient Saxon line, and removed a few of the unpalatable restrictions which his father had imposed. During this reign the Templars established themselves in England; the first English park was laid out at Woodstock; rents were made payable in money, having been previously payable in corn, cattle, &c.; the coinage was corrected, a standard fixed for the regulation of weights and measures, and the length of the English yard taken from the measurement of the king's arm. Woolen stuffs were introduced from the Netherlands, and a colony of Flemish weavers settled at Worstead in Norfolk. It is from this town that worsted fabrics have derived their name. After the death of Henry in 1135, the crown was in dispute between his daughter Maud or Matilda, who had wedded the German emperor, and his nephew Stephen, Earl of Blois. Stephen died in 1154, and Henry II., the son of Maud, came to the throne. He was the first of the Plantagenet line. He waged a war with the Scots, in which William their king was taken prisoner, and only re-obtained his crown by doing homage for it as a vassal. This reign was also distinguished by two great acquisitions of territory; Ireland by arbitrary conquest, and Guienne and Poitou by marriage. It was also marked by a contest between the king and the ecclesiastics. The power of the church of Rome had so increased as to overshadow the crown; Thomas a Becket, Archbishop of Canterbury, evincing its arrogance and determination to dictate in matters temporal as well as spiritual. To check these usurpations the celebrated statutes of Clarendon were enacted by a parliament held at that place, in 1164. Becket fulminated anathemas and excommunications at those who sided with the king, and yielded not a whit in his assumptions, till at last the harassed monarch, one day in Normandy, wished aloud that the insolent prelate was dead. Four rash knights hasted across the channel to Canterbury, and slew the arch-

bishop upon the very steps of the altar. The murdered man was canonized, and the monarch did hard penance at his shrine. It was in this reign that England was first divided into circuits for the administration of justice; the English laws were digested; charters were granted to many towns; and the windows of private dwellings were made of glass.

Richard I., the second son of Henry, succeeded his father in 1189. He can scarcely be called an English king, since during his ten years' reign he spent only eight months in England, being engaged in war upon the continent or in the crusades. The land suffered sadly from lawlessness and misrule. At the battle of Gisors in France, 1198, Richard gave to his soldiers as the watchword of the day, *Dieu et mon droit*. In remembrance of the signal victory that his arms obtained, he made *Dieu et mon droit* the motto of the royal arms of England, and it has ever since been retained. His death without issue admitted his weak and wicked brother John to the throne. King John, after many feeble attempts at continued despotism, was compelled, by the exasperated barons, to sign what was afterward called the *Magna Charta* ('great charter'), which renounced some of the most odious prerogatives of royalty, and extended a moderate share of liberty to the barons of the realm. John, however, involved the nation, with himself, in odious submissions to the pope, the influence of which it cost England and her succeeding kings many struggles to counteract. By the treachery of John, Normandy was lost to the English crown, the pope was constituted the virtual lord of his dominions, and Lewis, prince of France, was actually encouraged to assume the title. In this time, a standing army was first levied, and an annual election for the lord mayor and sheriffs of the city of London instituted.

In 1216, Henry III. became king. He was but a boy, and for many years a regency held sway. When he did assume power he showed the hereditary taint. Many times did he swear to observe *Magna Charta*, and as often did he violate it. This reign was occupied in such disputes with his barons, and extortions from the Jews. Yet civil liberty increased. The commons were first

summoned to a parliament; gold began to be coined; coal began to be used for fuel; and the art of distillation was introduced from the Moors. The first elephant seen in the land was one of enormous size, presented to Henry by the French king in 1238. Henry's son, Edward I., grasped the sceptre with a firmer hand. He added to *Magna Charta* the important clause securing the people from the imposition of any tax without the consent of parliament; and ever since this reign there has been a regular succession of parliaments. Wales was subdued and added to England. The dependency of Scotland was confirmed by the violent imposition of Baliol upon the throne, his subsequent confinement, and the decided overthrow of the Scotch forces that opposed the English. All, however, was recovered in the succeeding reign by the gallantry of Robert Bruce, and the field of Bannockburn. Edward II. was more like his grandfather than like his father. The barons rose in arms, and were abetted by the queen. Edward was murdered in Berkeley Castle. During this reign the Jews exacted two shillings a week for the loan of twenty: nowadays the Gentiles no longer suffer them to have monopoly in such usury. The long reign of Edward III., from 1327 to 1377, outdid the martial renown of his grandsire. By his successes against France at Cressy and Poitiers, and that against Scotland at Durham, he obtained for England much glory at much expense, and two royal captives, but little solid advantage, while the campaign in Spain occasioned the death of the Black Prince in 1376, and the next year that of his father. In this reign, and in one private individual, we find the early dawn of the reformation. Wickliffe, under the protection of John of Gaunt, the king's brother, began those denunciations of the papal abuses, which, in the end, overthrew that corrupt and foreign dominion in England. Two weavers from Brabant settled at York in 1331, where they manufactured woollens, which, said King Edward, "may prove of great benefit to us and our subjects." In this reign the lords and commons for the first time sat in separate chambers in parliament. Law pleadings had heretofore been had in French; they were now authorized in English. The order of the Garter was founded by Edward III.

The opening of the next reign saw the popular outbreak headed by Wat Tyler. The malcontents were met and soothed with much discretion by the young monarch, but his wisdom soon forsook him. It was during the absence of Richard in quelling a disturbance in Ireland, that the people, vexed with continual exaction, and offended at the injustice of the king to his cousin, the Duke of Lancaster, invited the latter from banishment, to control the operations of the king and his advisers. He landed, usurped the crown, murdered the king, quelled the insurrections consequent, and captured the heir to the Scottish throne. Henry IV. founded the order of the Bath. He persecuted the adherents to the doctrines of Wickliffe, and there is the stain upon his reign that in its time England first witnessed the death of a martyr for religious belief. His son, the fifth Henry, continued these persecutions, and there were more burnings at the stake. From the time of Henry V. may be dated the custom of lighting the streets of London at night, since it was his command that every citizen should hang a lantern on his door during the winter nights. His youthful excesses had taught him that crime and mischief lurk under the cover of darkness. From the same period also, may be dated the beginnings of the English navy; and one ship built at Bayonne expressly for the king, was thought quite a marvel of size and strength because it measured a hundred and eighty-six feet in length. Linen for shirts and under clothing was at this time esteemed great luxury, and a flock bed with a chaff bolster was a refinement of comfort known only to the opulent. Henry's great feat was the conquest of France, through the victories of Harfleur and Agincourt. He married Catherine of France, was chosen regent of the kingdom, and adopted as the heir of Charles VI. In the midst of his brilliant career, death snatched him away, 1422.

His infant son was crowned at Paris. The Maid of Orleans aroused the French, and her burning at the stake was soon avenged upon the English by the loss of every possession in France but the fortress of Calais. The reign of the sixth Henry continued as unfortunately as it had commenced. The wars of the roses drenched England with blood, till

after many ups and downs the York faction triumphed; Henry, now an old man, was imprisoned in the Tower; and Edward IV. ascended the throne in 1461. In this reign the right of voting at elections for knights of the shire was limited to freeholders having estates of the annual value of forty shillings. Seats in the commons were not, however, much sought by the middle classes of the fifteenth century. The functions of the commons consisted chiefly in the imposition of taxes, and even the peers evinced little interest or assiduity in the discharge of their parliamentary duties. Both houses enjoyed entire liberty of speech. In 1450, the first lord mayor's show took place in London. The same year saw the insurrection in Kent headed by Jack Cade, who, under the assumed name of Mortimer, asserted a fictitious claim to the throne. The stout Earl of Warwick, who had raised Edward to the throne, was sent to negotiate his marriage with a French princess; in his absence the fickle fellow wedded Lady Elizabeth Grey; Warwick took great offense, rebelled, deposed Edward, released Henry, and set him up again in the business of royalty. But on the field of Barnet, 1471, the great earl was slain; Edward resumed the crown, and soon after poor old Henry was murdered in the Tower. In this same year William Caxton, in the shadow of Westminster Abbey, set up the first printing-press in England. Richard III., who followed his brother Edward IV., and his young nephew Edward V., of the house of York, was himself defeated and succeeded by Henry VII., of the other line, who by marrying the daughter of Edward IV. united the two houses, and thus ended the contentions of York and Lancaster, in the year 1485.

Henry's reign was disturbed by the insurrections in support of Lambert Simnel and Perkin Warbeck, pretenders to the throne. It was the great era of maritime discovery, and the English monarch, not to be behind-hand, magnanimously authorized the Cabots to undertake an expedition at their own expense, with the privilege of raising his banner as his vassals and deputies on whatever soil they might find. They discovered Newfoundland, and a portion of North America, and this was the basis of the English claim to the new continent. Shillings were

first coined in this reign, and the court of the star chamber, afterward so odious, was established. Gardening was introduced in England generally, from the Netherlands. Henry VII. died in 1509. Henry VIII., though perhaps the greatest tyrant that ever filled the English throne, made a new era in the history of the country, in its total emancipation from papal authority. The power of which he had deprived the pope, he seized for himself, however, and was, at least, as vigorous in its exercise. The next reign ratified and enlarged his acts in favor of the protestant religion; and although the bigot Mary for a time rebound the chains, and rekindled the fires of persecution, the reformation was too firmly established to be overthrown, and her successor, Elizabeth, settled it upon a foundation which will endure as long as the conviction of its necessity exists.

The marital experiments of bluff and cruel King Hal we shall mention under our sketch of the house of Tudor. England was steadily advancing. The whole Bible was now rendered into English, and the first authorized edition printed; the book of common prayer for the new Anglican church was arranged by Cranmer; Wales began to be represented in parliament; ship-building was improved, and the navy extended; the first geographical map of England was drawn; cherries, hops, apricots, pippins, and various other fruits and vegetables, were introduced into the land; leaden pipes were substituted for the clumsy wooden conduits in which water had previously been conveyed; cotton thread came into use. Pins were introduced from France by Queen Catharine Howard. Heretofore, ribbons, loopholes, laces with tags, hooks and eyes, and skewers of brass, silver, and gold, had been used alike by men and women. The pins were a costly luxury at first, and the term 'pin-money,' as applied to a husband's allowance to his wife, had its origin thereby. A pound sterling was first called a sovereign in this reign. Provisions were so cheap that beef and mutton were had for a half-penny a pound. Money however, was a twelfth cheaper than in our time. Henry VIII. was the first English monarch to whom the title of King of Ireland was confirmed. Henry VIII., in league with the pope and the Emperor Charles V., made

some conquests in France, and his generals defeated and slew James IV. of Scotland, at Flodden Field; and, in his successor's reign, an expedition into that country was executed at the desire of the late king, on a fruitless expedition to induce the Scots to marry their Princess Mary to Edward VI.

The boy-king Edward did much in his short time to promote the reformation, and the realm had a respite from the noxious smoke of fires of persecution. A law was enacted that permitted clergymen to marry. But a little before his death the young monarch founded Christ Hospital in London, the school to which so many great scholars and authors have been indebted for their education. Grapes were brought over from France and cultivated; crowns, half-crowns, and six-pences were introduced into the currency; the sweating sickness, a dreadful plague which had prevailed from time to time, became totally extinct. The book of common prayer and the church service were established. Trade with Russia was initiated. The ten days' reign of Lady Jane Grey over, Mary, whom history has cursed with the epithet of bloody, became queen in 1553. Lady Jane, and her husband, father, and friends, were beheaded; papacy was restored, and fatal faggots flamed again. Smoke from human immolations upon the altar of bigotry went up continually. Calais, which had been taken by Edward III. in 1347, after a year's siege, which had been held by the English two hundred and ten years, and which was deeply prized as the last relic of the broad possessions and conquests of the Plantagenets, was by treachery yielded to the French. Its loss sorely smote the pride of the queen. "When I'm dead," she said, "Calais will be found written on my heart." She died toward the close of the same year. Coaches came into use in her time, before which ladies had been borne in litters, or had ridden on pillions behind their mounted squires. Flax and hemp were first cultivated; the use of starch was discovered; and the manufacture of drinking glasses began to be encouraged.

The reign of Elizabeth, from 1558 to 1603, was one of great renown. She restored the Anglican church, making herself, like her father, the head of the spiritual as well as

temporal power. All clergymen and all officers under the crown were compelled to take an oath acknowledging this supremacy. All persons were forbidden to attend upon any ministrations but those of the established church, and thus, sad to say, persecution did not end although protestantism had been restored. Elizabeth intrigued with Scotland, but fought with Spain. The defense of the kingdom against the celebrated Armada, in 1588, would of itself stamp her reign with glory. The attack on Cadiz by the Earl of Essex was eminently successful, and the other enterprises of her admirals were very considerable. She also supported the protestants of Germany against Austria, and the Dutch against the Spaniards. During the Elizabethan era, English literature, which had dawned under Chaucer in the days of Edward III., came to the meridian, and Shakspeare, Spenser, Bacon, Raleigh, Sidney, added more to the glories of England, than all the eminent wisdom and policy of the queen and her statesmen, or the prowess of her commanders. The naval power was much advanced; Drake circumnavigated the globe, coming home with great affluence of Spanish treasure, and what was better, an esculent root that he planted in Lancashire, the potato; a colony was planted in North America, and gallantly christened Virginia in honor of the maiden queen. Tobacco was brought from the West, and was soon very fashionable, after the stomachs of the courtiers were used to it. Tea was brought from the East by the Dutch. Pocket watches from Nuremberg began to be carried. Silk stockings were worn by Elizabeth; before, cloth hose had been the wear. Commerce widened; the East India company was organized; the whale and cod fisheries were entered upon. Paper-making from linen rags was begun at Dartford by Sir John Spielman, a German; Birmingham and Sheffield became the centre of hardware manufactures, and Manchester of woolen and stocking weaving. Theatrical representations ran a race awhile with the older and coarser amusement of bull-baiting, and then became the popular pastime.

On Elizabeth's death, the English and Scottish crowns became united in the person of James I., a vain and pedantic prince, son of the unfortunate queen whom Elizabeth had

long held a captive, and at last murdered. A similar crime, the tedious bondage and final murder of Raleigh, blots the reign of James. The Gunpowder plot we describe elsewhere. The Stuarts had all the Tudors' love of despotism, but not their strength of will. In this weakness civil liberty found its chance for growth. With James commenced those struggles between the crown and the commons, that brought his son to the scaffold, and worked out the expulsion of his race from the land. Parliament withheld supplies when grievances became too heavy; and in the king's want of money the rank of baronet originated. There was a rebellion in Ireland, and each baronet upon his creation was required to pay into the exchequer as much as would maintain "thirty soldiers three years at eightpence a day." Sir Nicholas Bacon, the father of the great Lord Bacon, was the first of the baronets. The discovery of the blood's circulation was made by Harvey in this time. The broad silk manufacture was introduced; copper half-pence and farthings were first coined; Napier calculated logarithms; brick came into use for building. The English Bible as we now have it, was translated by divines appointed by the king. The settlement of Virginia was firmly established, and the Puritans fled away to the wilderness of New England.

Charles I. succeeded to an empty treasury. After endeavoring to fill it by illegal taxes, he compromised with the people. Parliament granted an ample subsidy, and the king ratified, in the most solemn manner, the celebrated Petition of Right, the second great charter of the liberties of England. By this compact Charles bound himself never again to raise money without the consent of the houses, never again to imprison any person except in due course of law, and never again to subject his people to the jurisdiction of courts martial. Had he observed these stipulations, the impending calamity might have been averted. But no sooner was the supply collected than the promise by which it had been got was broken. The king resolved to do without a parliament, and from 1629 to 1640 none was convoked. In olden times of war, the English monarchs had called on the maritime counties to furnish ships for the defense of the coast. In the room of ships, money had sometimes

been accepted. This ancient impost it was now determined to revive, in a time of profound peace, and to exact it not only from the coast but from the inland shires. The whole nation was alarmed and incensed. John Hampden, a gentleman of Buckinghamshire, disputed the illegal levy; the case was argued before the judges of exchequer, and an obsequious decision sustained the crown. The civil grievances were rivaled by the ecclesiastical rigors of Archbishop Laud. An insane attempt to foist the Anglican liturgy upon the Presbyterians of Scotland roused them to open rebellion. In this dilemma a parliament was convened, but soon dissolved. In the fall of the same year, assembled the celebrated body since known as the Long Parliament. Many important reforms were enacted; Strafford and Laud were impeached; the king promised to show respect for the laws and good faith toward his subjects. His faithlessness was incurable. Only a few days after he sent his attorney-general to impeach Pym, Hollis, Hampden, and other leaders of the opposition, of high treason at the bar of the House of Lords; and with armed men he entered the other chamber to seize their persons. The attempt failed, for the threatened members had just left the house. At this unprecedented usurpation, the friends of the king were speechless; his opponents were furious. He fled to the north, and in August, 1642, the sword was drawn.

At first the royalists were successful. But Fairfax defeated Prince Rupert on Marston Moor in 1644, and Cromwell annihilated the cavaliers at Naseby in 1645. The king fled into Scotland, whence he was delivered into the hands of parliament for £400,000. A dark thought grew into a darker decision, and on the 30th of January, 1649, Charles Stuart was beheaded in front of the palace of Whitehall.

The era of the Commonwealth succeeded. Cromwell subdued Ireland and Scotland, and defeated a royalist army at Worcester; the young Charles escaped to the continent; the Long Parliament was dissolved by Cromwell with his soldiery, and the great general became lord high protector. Of his rule we have spoken in our sketch of his life. England maintained a high rank in the scale of nations, and Cromwell showed himself as well qualified

to govern as to gain. The usurpation was perhaps a harsh medicine to the constitution, but its operation was short, and its effects very salutary. Charles II. was restored in 1660. He came in upon a tremendous billow of loyalty, but the lazy, good-natured monarch was nothing but a Stuart, and the temper of the nation gradually cooled toward him. Nonconformists were rigorously dealt with. For a while he maintained a war with the Dutch. De Ruyter sailed up the Thames, and burned the vessels that lay at Chatham; the roar of foreign guns was heard for the first and last time by the citizens of London; a treaty was shortly concluded, very different from those which Cromwell had been in the habit of signing. While this ignominious war was raging, London suffered two great disasters, such as never, in so short a time, befell another city. A pestilence, surpassing in horror any that during three centuries had visited the island, swept away, in six months, more than a hundred thousand human beings; and scarcely had the dead cart ceased to go its rounds, when a fire, such as had not been known in Europe since the conflagration of Rome under Nero, laid in ruins the whole city from the Tower to the Temple, and from the river to the purlieu of Smithfield.—*Macaulay*. England sunk from the rank that Cromwell had given her, and Charles became a pensioner upon the bounty of Louis XIV. The strictness of the Puritans had been followed by a natural reaction, and a flood of debauchery and ribald life. Yet to this reign we date that famous writ of right, known as the *habeas corpus* act, by which no person can be detained in duance except in cases where the detention can be justified by law.

The Duke of Monmouth, one of the many natural sons of Charles, strove unsuccessfully in the west of England, to wrest the crown from James II. John Ketch, his executioner, who had butchered many brave and noble victims, has furnished our language a name for the headsman and hangman. The infamous Jeffreys went the circuit of what were called the bloody assizes; the jails were crowded with men, and women too, accused of participation in the rebellion; some were pitilessly scourged, hundreds were hanged, and almost a thousand were sent as slaves beyond the seas. The ermined murderer re-

turned to court from the west, leaving death, and wailing, and terror behind, to receive the encomiums of his master. The people of England by this time understood the rights of the subject, as well as the duties of the monarch, and when James II. attempted to rule absolutely, and to overthrow the religion of the country, a bloodless revolution forced him to abdicate the throne, and set upon it his daughter Mary, and her husband, William of Orange, an avowed Protestant. The liberties of the people took deeper root by his confirmation of their bill of rights. In this reign an expedition, headed by the king, was sent out to reduce Ireland, and a war waged with France, not generally successful, but there appeared some brilliant sparks of enterprise, and one or two fair incidents of good fortune. During this reign the Bank of England was incorporated. It was in the reign of Anne that the age of English chivalry seemed to revive, and the military mania of the two rival nations to be renewed. The valor and skill of Marlborough triumphed over the most splendid arrays of military might under Louis XIV. Germany was saved, Gibraltar taken, and Dunkirk demolished, by a course of victories as brilliant as any which the pen of the historian records. It was also in this memorable reign that the legislative union of Scotland with England took place. The era of Anne is styled an Augustan age of English literature. Addison, Steele, Pope, Bolingbroke, Gay, Swift, Prior, and other great wits and authors, lived and wrote. The queen died in 1714.

The succession of the house of Hanover now took place. The short reign of George I. was principally noted for its domestic and foreign inquietude. The year after his accession a rebellion arose in Scotland, headed by the Pretender, as the son of James II. was called. It was promptly put down, and severely punished. A destructive speculation known as the South Sea bubble ran to a great pitch and then burst, entailing great financial disaster, and ruining thousands of families. The reign of George II. was distinguished by the battle of Dettingen, where the king fought in person; the military contests with France; the naval triumphs over that kingdom and Spain; the conquest of French America, and the splendid successes of Clive in the East Indies.

It was in 1745 that the Stuarts made their last attempt for the crown. The Chevalier Charles Edward, son of the Pretender, landed in Scotland with a few adherents; the Highlanders rallied to his standard; his forces were triumphant at Preston Pans; he gained Edinburgh, reduced Carlisle, and advanced into England. The English Jacobites were not so ready as the Scotch; the chevalier turned back, pursued by the Duke of Cumberland, and on the bloody plain of Culloden the hopes of his house were forever extinguished. In the time of George II. the change from old to new style in the calendar was made. [See TIME.]

In the early years of the next reign, England waged another great and successful war with France and Spain. But the most important feature of the reign of George III. was the loss of America, produced by the odious tyranny of England. After a struggle of eight years, in which she saw her vast armies and fleets defeated by the bravery of a nation of patriots, Great Britain was compelled to relinquish her colonies, and acknowledge their independence. The peace of Europe was broken by the different powers siding with the combatants, and thus England was at once involved in war by sea and land with America, France, Spain, and Holland, while the dissensions of party at home increased to an alarming height. The war was concluded by a treaty with those powers in 1783. The war of the French revolution forms a second period of this reign. The first direct interference on the part of the British was in two unsuccessful expeditions to the continent under the Duke of York and Sir S. Hood, and in the capture of some French West India islands, and of Pondicherry in India. In the latter country very great advantages were acquired over the natives; Tippoo Sultan was entirely defeated and killed, and Seringapatam captured.

France, having disposed of her continental enemies, began to act on the offensive, and undertook an invasion of Ireland, seven ships of the line having, with that intent, anchored in Bantry Bay. The war in the mean time had divided the sentiments of the English people, and strong dissatisfaction was manifested by the revolutionary party. The ministers were firm in their measures, and the king's life was put in danger on his going to parliament.

Two attempts at negotiation failed, and the internal difficulties were increased by the stoppage of the bank, the mutiny of the fleet at Spithead and the Nore, and the menace of rebellion in Ireland. The first evil was palliated, but the two last were not suppressed without much bloodshed. The intentions of the French were, however, defeated; 1,800 men who had landed in Ireland, surrendered, and the English fleet recovered its reputation by a victory over the Spaniards, and by the celebrated battle of the Nile, in 1798. These events having raised the spirits of the continental powers, Germany, Russia, and Turkey joined England against France, while Ireland was pacified by a show of much promise which was to be effected by an union. The Austrians were annihilated at Marengo; the English, at the request of the sultan, agreed to evacuate Egypt; and they made an unsuccessful attempt upon the Boulogne flotilla with which the French threatened an invasion of Britain. Such was the state of things, when, in 1802, the combatants found it convenient to conclude peace.

The war recommenced in 1803, by the loss on the English side of Hanover, and the seizure of the British in France, which was retaliated by the seizure of French vessels and seamen. To oppose the increasing power of Napoleon, Mr. Pitt was once more made premier. In the mean time the most advantageous treaties had been concluded with the native states of India, and the French defeated by the dying Nelson in the great and decisive naval engagement of Trafalgar, in 1805. This was the last trophy of those great preparations which Mr. Pitt had made, to support his system by the overthrow of that of the French, an object which in the sequel, they certainly accomplished. Pitt died in 1806, and Mr. Fox, his great political opponent and successor, in the same year. During this period, the successes in other parts had been partial; but, at home, a triumph over injustice and inhumanity was obtained in the abolition of the slave-trade. The new ministry, persisting in pressing the Catholic claims, received his majesty's intimation to resign. It was at this juncture, in 1808, that Britain made herself a party to reinstate the imbecile Bourbon of Spain.

The campaign was commenced by Sir Arthur Wellesley (afterward the Duke of Wellington), with the repulse of Junot at Vimiera; but the defeat and death of Sir John Moore, at Corunna, followed. Though the English under Sir Arthur Wellesley were still in force in Portugal, and had obtained some advantages, as at Talavera, they had to contend equally with the weakness of the Spaniards and the power of the French. They therefore entrenched themselves behind their lines at Torres Vedras.

Two expeditions of different fortune took place at this time; one to the south of Italy, and the other to the island of Walcheren. Several valuable captures in other parts were made. At this period (1810), the insanity of the king incapacitated him from governing, and his son, the dissipated Prince of Wales, was appointed regent. The war in Spain was carried on with determination, but with partial success. The reorganization of the Spanish and Portuguese armies, and the reviving spirit of the cortes, changed the aspect of affairs. Meanwhile, Russia, Prussia, and Sweden had entered into alliance with England, who supplied them with vast subsidies to support their armies against France. Holland, also, by the assistance of England, had risen on its masters, and Napoleon, pressed by the allies, and having suffered immense losses in Russia, was obliged to give way, and armies entered France on two sides. Lord Wellington, proceeding through Spain, passed the Pyrenees through almost unremitted conflict, invested Bayonne, occupied Bourdeaux, defeated Soult before Toulouse, and there received the news of the capture of Paris, and the cessation of hostilities. Meanwhile England had been also engaged in a war with America, which was prosecuted on the plea of her assumed right to search our vessels for deserters. The treaty of peace was signed at Ghent in 1814.

The next year Great Britain was again called into active co-operation with the other confederates, to depose Napoleon, who had returned in triumph from Elba, and resumed the throne of France without opposition. After the victory at Waterloo, the allies entered Paris, and reinstated Louis XVIII., on the throne, while Napoleon surrendered him-

self to an English ship, and was sent to St. Helena, where he was detained until his death, in 1820.

George III., died in 1820, in the eighty-second year of his age, and the sixtieth of his reign, which is the longest and most memorable in the annals of England. For the last ten years the profligate George IV., had ruled as prince regent. The trial of his ill-used queen, her death, the alarming riots that accompanied her funeral, the scarcity and distress in Ireland, and the removal of civil disabilities from the Catholics, marked his ten years' reign. He died in 1830, and was succeeded by his brother William, who as Duke of Clarence had served for a long time in the navy.

The year 1832 is famous for the passage of the bill for parliamentary reform, which was carried by the commons against the will of a majority of the peers. Two years after, slavery was abolished throughout the British dominions; by this act 770,280 slaves became freemen, on the 1st of August, 1834, and £20,000,000 were granted by parliament for compensation to the masters.

William was succeeded by his niece Victoria, in 1837. By virtue of the Salique law, which excludes women from sovereignty, Hanover was now severed from England, and the Duke of Cumberland, a younger son of George III., became its monarch. During Victoria's reign England has waged several wars in the East; with the Chinese, with the Afghans, and with the Sikhs, [*See CHINA, AFGHANISTAN, INDIA.*] The great contest between Russia, and the allied powers of England, France, and Turkey, is also described in another page. [*See RUSSO-TURKISH WAR.*]

The following have been the rulers of England since the conquest.

1066. William the Conqueror; died at Rouen, Sept. 9th, 1087.

1087. William Rufus; killed by an arrow, Aug. 2d, 1100.

1100. Henry I., youngest son of the Conqueror; died of a surfeit, Dec. 1st, 1135.

1135. Stephen, Earl of Blois, nephew of Henry I. The Empress Maud, daughter of Henry, contended with him for the crown. Stephen died Oct. 25th, 1154.

THE PLANTAGENETS.

1154. Henry II., son of the Empress Maud by her second husband, Geoffrey Plantagenet, Earl of Anjou; died July 6th, 1189.

1189. Richard I.; died Apr. 6th, 1199.

1199. John, brother of Richard; died Oct. 18th, 1216.

1216. Henry III.; died Nov. 16th, 1272.

1272. Edward I.; died July 7th, 1307.

1307. Edward II.; murdered at Berkley Castle, Sept. 21st, 1327.

1327. Edward III.; died June 21st, 1377.

1377. Richard II., son of Edward the Black Prince, and grandson of Edward III.; dethroned Sept. 28th, 1399; murdered at Pomfret Castle, Feb. 10th, 1400.

BRANCH OF LANCASTER.

1399. Henry IV., son of John of Gaunt, Duke of Lancaster, and grandson of Edward III.; died March 20th, 1413.

1413. Henry V.; died Aug. 31st, 1422.

1422. Henry VI.; deposed March 4th, 1461; murdered in the Tower, June 20th, 1471.

BRANCH OF YORK.

1461. Edward IV., a descendant from two sons of Edward III., Lionel, Duke of Clarence, and Edmund, Duke of York; died April 9th, 1483.

1483. Edward V.; deposed June 22d, 1483, and murdered in the Tower.

1483. Richard III., brother of Edward IV.; slain at Bosworth, Aug. 22d, 1485.

HOUSE OF TUDOR.

1485. Henry VII., Earl of Richmond, a descendant by his mother's side from John of Gaunt; married Elizabeth, the heiress of York; died Apr. 22d, 1509.

1509. Henry VIII.; died Jan. 28th, 1547.

1547. Edward VI., son of Henry VIII., by Jane Seymour; died July 6th, 1553.

1553. Mary, daughter of Henry VIII., by Catherine of Arragon; died Nov. 17th, 1558.

1558. Elizabeth, daughter of Henry VIII., by Anna Boleyn; died Mar. 24th, 1603.

HOUSE OF STUART.

1603. James I., of England, and VI., of Scotland, great-grandson of Margaret, daughter of Henry VIII., who married James IV., of Scotland; died Mar. 27th, 1625.

1625. Charles I.; beheaded at Whitehall, Jan. 30th, 1649.

THE COMMONWEALTH.

1649. Oliver Cromwell, made protector Dec. 12th, 1653; died Sept. 3d, 1658.

1658. Richard Cromwell, made protector Sept. 4th, 1658; resigned April 22d, 1659.

THE STUARTS RESTORED.

1660. Charles II., son of Charles I.; died Feb. 6th, 1685.

1685. James II., brother of Charles II.; abdicated by flight, Dec. 12th, 1688; died in exile, Aug. 6th, 1701.

1689. William (Prince of Orange, the son of Mary, daughter of Charles I.) and Mary (daughter of James II.) Mary died Dec. 28th, 1694; and William, of a fall from his horse, Mar. 8th, 1702.

1702. Anne, second daughter of James II.; died Aug. 1st, 1714.

HOUSE OF HANOVER.

1714. George I., Elector of Hanover and Duke of Brunswick Lunenburg, son of Sophia, who was daughter of Elizabeth, the daughter of James I.; died June 11th, 1727.

1727. George II.; died Oct. 25th, 1760.

1760. George III., grandson of George II.; died Jan. 29th, 1820.

1820. George IV.; died June 26th, 1830.

1830. William IV., brother of George IV.; died June 20th, 1837.

1837. Victoria, only child of Edward, Duke of Kent, the fourth son of George III.

EPAMINONDAS, a famous Theban, descended from the ancient kings of Bœotia, but born and reared in poverty. He was celebrated for his private virtues and military accomplishments. His love of truth was so great that he was never known to give utterance to a falsehood. He formed an inviolable friendship with Pelopidas, whose life he saved in battle. By his advice Pelopidas delivered Thebes from the power of Lacedæmon. This was the signal of war. Epaminondas was placed at the head of the Theban armies, and defeated the Spartans in the celebrated battle of Leuctra, 371 B.C. Epaminondas entered the territories of Lacedæmon with 50,000 men. Here he gained many friends and partisans, but, at his return from Thebes, he was seized as a traitor for violating the laws of his country. While he was making the Theban army victorious on every side, he neglected the law which forbade any citizen to retain in his hands the supreme power for more than one month, and all his eminent services seemed unable to redeem him from death. He paid implicit obedience to the laws of his country, and only begged of his judges that it might be inscribed on his tomb, that he had suffered death for saving his country from ruin. This animated reproach was felt; he was pardoned, and invested again with sovereign power. He was successful in a war with Thessaly, and again engaged against the Lacedæmonians. The hostile armies met near Mantinea 363 B.C., and while Epaminondas was fighting bravely in the thickest of the enemy, he received a fatal wound in the breast, and expired with joy on hearing that the Bœotians had obtained the victory. On hearing his friends regret that

he had left no children, he said, "I leave behind me two immortal daughters, the victories of Leuctra and Mantinea."

EPEE, CHARLES MICHAEL DE L', was born at Versailles in 1712. None of the teachers who had been successful with deaf and dumb pupils, had published accounts of their methods, so that De l'Epee was not indebted to them for the mode of instruction which he first employed upon two sisters. His zeal in the cause of those who were destitute of speech and hearing led him into pecuniary embarrassment. One incident in his life is peculiarly interesting. He met, one day, in the streets of Paris a deaf and dumb youth in the garb of a beggar, whom he was convinced was the heir of the rich family of the Count of Solar. A law-suit followed, which was at first successful, but when the friends of Solar were dead, his property was again wrested from him, and he was compelled to enlist in the army as a cuirassier. The Abbe De l'Epee died in 1789.

EPICTETUS, a Stoic philosopher, born at Hieropolis, in Phrygia, A.D. 90. He was the slave of Epaphroditus, a freedman of Nero. His master once struck him a severe blow upon the leg. "You will break it," was the calm reply of the Stoic. The brute repeated the blow and broke it. "Did I not tell you so?" was the quiet exclamation of the philosopher. He was afterward freed, and made governor of Cappadocia, A.D. 134.

EPICURUS was born at Gargettus, near Athens, 342 B.C. In the thirty-sixth year of his age he opened his school in an Athenian garden, a spot pleasantly typical of his doctrine. The Platonists had their academic grove; the Aristotelians walked along the Lyceum; the Cynics growled in the Cynosarges; the Stoics occupied the Porch; and the Epicureans had their Garden. There, in the tranquil garden, in the society of his friends, he passed a peaceful life of speculation and enjoyment. The friendship that existed among them is well known. In a time of general scarcity and famine, they contributed to each other's support, showing that the Pythagorean notion of community of goods was unnecessary amongst friends who could confide in each other. At the entrance of the garden they placed this inscription: "The hospitable keeper of this mansion, where you will find

pleasure the highest good, will present you liberally with barley cakes and water fresh from the spring. The gardens will not provoke your appetite by artificial dainties, but satisfy it with natural supplies. Will you not be well entertained?" He taught his scholars that the *summum bonum* consisted in happiness; and that happiness did not spring from sensual enjoyments, but from a practice of the virtues. He commended wisdom, was temperate, moderate, gentle, firm, and fearless of death. He died 270 B.C., and had many followers.

EPIRUS, a province on the borders of Greece, the most southerly portion of the modern Albania. This country was inhabited by the Chaones and the Molossians. The best known of the kings of Epirus is Pyrrhus, who reigned about 280 B.C., and distinguished himself greatly by his wars with the Romans, in favor of the Tarentines. Upon the death of Deodamia, the last of this race, about the year 240 B.C., the Epirots formed themselves into a republic, which was reduced 167 B.C. by Paulus Æmilius, the Roman general, all the towns destroyed, and the inhabitants enslaved in one day. Upon the taking of Constantinople, in 1204, Michael Angelus seized this country, and his posterity held it till it was taken by the Turks under Amurath II., in 1432. In 1447, Castriot (Scanderbeg) revolted from the Turks, but the country was finally reduced by Mohammed II., in 1466.

ERASMUS, DESIDERIUS, a man celebrated for his learning, was born at Rotterdam in 1467. At the age of seventeen he assumed the monastic habit, but subsequently obtained a dispensation from his vows. He traveled through many countries, but was received with the greatest kindness by Henry VIII. of England, and was for a short time professor of Greek at Oxford. Erasmus died in 1536. Besides his theological works, and his editions of the classics, he published an "Encomium on Folly," which has been often reprinted. His letters are of historical value. His writings contributed largely to bring about the Reformation, though he himself had not the faith and courage to be a reformer.

ERATOSTHENES, one of the greatest mathematicians of antiquity; the first who measured a degree of the meridian, and the

first who accurately determined the inclination of the earth's axis to the plane of the ecliptic. He flourished at Alexandria, and died B.C. 195, aged eighty.

ERFURT, in Thuringia, belonging to Prussia, contains at present 25,000 inhabitants. It was founded in the fifth century. It maintained a kind of independence until the seventeenth century, when the Elector of Mentz gained possession of it. In 1814 it was granted to Prussia by the congress of Vienna. Erfurt was famous for the meeting between Napoleon and the Emperor Alexander with many other kings and princes, September 27th, 1808. Napoleon's object was the pacification of all Europe. He was now at the summit of power and glory, and he stood upon the very pinnacle of grandeur, with a feeling of intense enjoyment. "Come to Erfurt," he wrote exultingly to Talma, "and you shall play to a whole pit full of kings."

ERIE, LAKE, one of the great fresh seas that under the United States from the British dominions in America, is 270 miles in length by from 25 to 50 in breadth. On its waters, Sept. 10th, 1813, a severe action was fought between the British squadron and an inferior force under Commodore Perry. "We have met the enemy and they are ours," was Perry's announcement of the victory to Gen. Harrison.

ERSKINE, THOMAS, Lord Erskine, a celebrated lawyer, was the son of David Henry Erskine, tenth Earl of Buchan, and was born in the year 1750. It was not until after he served some years in the army and navy that he embraced the legal profession, at the age of twenty-six. In 1778, he was admitted to the bar, and his success was both speedy and triumphant. During twenty-five years he enjoyed an extensive practice. He was appointed attorney-general to the Prince of Wales, and, in 1802, keeper of his seals for the duchy of Cornwall. He was lord-chancellor during the short ministry of Fox and Grenville in 1806. He died in 1823. His popularity may be inferred from the fact that his pamphlet, entitled "A View of the Causes and Consequences of the War with France," went through forty-eight editions. Though celebrated as a forensic orator, he failed in the House of Commons.

ESCURIAL, a magnificent palace, situated

on the ascent to the chain of mountains bounding Old Castile, twenty-two miles from Madrid. It was erected by Philip II., in commemoration of the victory of St. Quentin, gained over the French in 1557. The battle was fought on the day of the festival of St. Lawrence, and the palace was dedicated to this saint, whose instrument of martyrdom, a gridiron, is immortalized in the disposition of the buildings composing the Escorial. It is said to have cost \$50,000,000, and contains many noble works of art. Through all its apartments would be a journey of one hundred and twenty miles.

ESQUIMAUX, dwarfish tribes of North America, occupying the northern coasts of America. They live by hunting and fishing, and are alike destitute of laws and religion. They formerly put to death widows and orphans, and those who, from age or misfortune, were incapable of gaining a subsistence.

ESSEX, ROBERT DEVEREUX, Earl of, born in 1567, was educated at Cambridge, and introduced at court at an early age. He soon won the regard of Queen Elizabeth, and on his return from a campaign in the Low Countries, he was made master of horse. The last of his two expeditions against Cadiz failed from a misunderstanding between him and Raleigh. Returning, Essex was made earl-marshal of England, and master-general of the ordnance. Essex was impetuous and indiscreet. At the zenith of royal favor, he took no care of his actions. At the council-board, he contradicted the queen, who gave him a smart box on the ear; when he rose in extreme wrath, clapped his hand upon his sword, and swore that he would not have taken such an affront even from Henry VIII. In Ireland, he made a composition with the rebels, and quitted his government, without leave for either proceeding. On his return to London he was taken, tried, and beheaded, February 25th, 1601. While in prison he is said to have intrusted to the Countess of Nottingham a ring which he had received from the queen, when high in favor, with the promise to pardon any offense on its presentation. Contrary to her pledge, the countess retained the ring. She confessed her guilt upon her death-bed, and Elizabeth is said to

have exclaimed, "God may forgive you, but I never will!"

The son of Essex, after having served Charles I., became a general of the parliamentary party, but did not enjoy a high degree of favor, and died suddenly in 1646.

ESSLING, a small village about seven miles from Vienna. Here a dreadful conflict was fought May 21st and 22d, 1809, between the armies of France and Austria, commanded by Napoleon and the Archduke Charles. Napoleon was defeated with the loss of 30,000 men; but the loss of the Austrians, also most severe, exceeded 20,000. Marshal Massena was created Duke of Essling by Bonaparte.

ESTAING, CHARLES HENRY, Count d', a French admiral, and lieutenant-general of the French armies, was the descendant of a noble family, and commenced his career in the West Indies. He was sent with a fleet to aid the Americans during the Revolution. He was guillotined in 1793.

ETRURIA, the country of the Etruscans, now Tuscany. The Etruscans at a very early age had received the arts from Greece, and produced some most beautiful specimens. They gave to the Romans their early religious usages and architecture, and finally became the victims of Roman ambition.

In 1801 the name of Etruria was restored, and the country was made a kingdom, and remained so until amalgamated with the French empire, by a senatorial decree of May 30th, 1808. The next year Eliza, the sister of Napoleon, received this territory, with the title of Grand Duchess of Tuscany. In 1814 its ancient rulers regained it.

EUCLID, the great mathematician, flourished at Alexandria about 300 B.C.

EUGENE, FRANCIS, of Savoy, commonly called Prince Eugene, fifth son of Eugene Maurice, Duke of Savoy-Carignan, was born at Paris in 1663. His mother was Olympia Mancini, niece to Cardinal Mazarin. He was educated for the church, but after the death of his father, and the exile of his mother, he and his brother Philip went to Vienna, where they met with a gracious reception. In the war which broke out with Turkey, Prince Philip fell in battle, and left his command to Eugene, who signalized himself at the siege of Vienna in 1683, as he did afterward at

Buda. He next served against the French in Italy; and in 1697 commanded the army in Hungary, where he gained a splendid victory at Zeuta, in which the Turks lost above 30,000 men, with their commander the grand vizier. On the breaking out of the war occasioned by the disputes about the Spanish succession, Eugene commanded the imperialists in Italy, where he was opposed to Villeroy, whom he made prisoner. After this he acted in conjunction with Marlborough. In 1712 the prince came to England to prevail upon the court to continue the war, but could not succeed. Compelled to act on the defensive, he exerted himself to the utmost; and, in 1714, settled preliminary articles with Marshal Villars at Rastadt, which ended soon after in a general peace.

In 1716 the war with the Turks was renewed, and the prince again took the field in Hungary, where he attacked the enemy in their camp, and obtained a complete victory, which was followed by the capture of Temeswar and Belgrade. From this time to 1733 Eugene remained at Vienna, employed in the cabinet; but in that year he assumed the command in Italy, where he experienced various success in the contest with the combined powers of France, Spain, and Sardinia. He was found dead in his bed, April 10th, 1736.

EULER, LEONARD, a mathematician of Basle, born in 1707. He was educated at the university of his native place. In his nineteenth year he gained a prize from the academy of Paris for the best treatise on the masting of vessels. He took the department of mathematics in the academy of St. Petersburg, and published a vast number of treatises. In the French academy of sciences he gained ten prizes. In 1741 he became professor in the Berlin academy, but returned to St. Petersburg, where he died in 1783, in the office of director of the mathematical department. Throughout his life, he received honors from all quarters. He was cheerful and amiable in private life, although the last seventeen years of his existence were passed in total blindness.

EUPATORIA, a seaport on the west coast of the Crimea. After the allied English, French, and Turkish armies landed here, Sept. 14th, 1854, a detachment of Turks

occupied the place. It was attacked Feb. 17th, 1855, by a large force of Russians under Liprandi, who were repulsed.

EURIPIDES, a celebrated tragic poet, in great favor with Archelaus of Macedonia, was born at Salamis on the day that the army of Xerxes was routed by the Athenians. He wrote seventy-five tragedies, only nineteen of which are extant. Euripides was called Misogynes for his hatred of women, and particularly of his own wife. In the seventy-fifth year of his age, B.C. 405, he was torn to pieces by dogs.

EUROPE, the least extensive, but the most improved of the great divisions of the globe, is situated between 36° and 71° N. latitude. It contains about 3,900,000 square miles, with a population of 265,000,000, and is bounded by the sea in all directions except the east, where it joins Asia.

The following is a list of the states of Europe, classified according to their forms of government. *Republics*: Andorra (among the Pyrenees), Ionian Islands, San Marino, Switzerland, and the free cities of Bremen, Frankfort, Hamburg, and Lubeck. *Limited Sovereignties*: the duchies of Brunswick, Nassau, Saxe Altenburg, Saxe Coburg and Gotha, Saxe Meiningen Hildburghausen, and Saxe Weimar Eisenach; the grand-duchies of Baden, Hesse Darmstadt, Mecklenburg Schwerin, Mecklenburg Strelitz, and Oldenburg; the kingdoms of Bavaria, Belgium, Denmark, Great Britain, Greece, Hanover, Holland (with the duchy of Luxemburg), Portugal, Prussia, Sardinia, Saxony, Spain, Sweden and Norway, and Wurtemberg; the empire of France; the electorate of Hesse Cassel; and the principalities of Lichtenstein, Lippe Detmold, Schaumburg Lippe, Reuss, Schwarzburg Rudolstadt, Schwarzburg Sondershausen, and Waldeck. *Absolute Sovereignties*: the duchies of Anhalt Bernburg, Anhalt Dessau Cöthen, Modena and Massa, and Parma; the empires of Austria, Russia, and Turkey; the popedom of the States of the Church; the landgraviate of Hesse Homburg; the principalities of Monaco and Montenegro; the kingdom of the Two Sicilies; and the grand-duchy of Tuscany.

EUSEBIUS. There were several bishops of this name in the same epoch, who are often confounded. The first is the most

famous. Eusebius Pamphylus, Bishop of Cæsarea, flourished A. D. 270-340. Eusebius, Bishop of Nicomedia, an Arian, died 341. Eusebius, Bishop of Emessa, a theological writer, flourished 340-60. Eusebius, Bishop of Vercelli, an Athanasian theological writer, flourished 354-70.

EUTAW SPRINGS, S. C., BATTLE OF, one of the most severely contested battles of the Revolution, fought Sept. 8th, 1781. Both sides claimed the victory: it belonged to neither, but the advantage was with the Americans. Gen. Greene's forces numbered 2,300, a third of whom were militia; out of which 152 were killed, 424 wounded, and 40 missing. The loss of the British was 693, of whom 85 were killed on the field. Greene took 500 prisoners. This was virtually the close of the campaign in South Carolina.

EUTROPIUS, FLAVIUS, a Latin author who flourished about A. D. 360.

EVELYN, JOHN (1620-1706,) an English gentleman of easy fortune, who wrote several scientific works in a popular style. He was one of the first in England to treat gardening and planting scientifically.

EVERETT, EDWARD, the orator, scholar and diplomatist, was born in Dedham, Mass., April 11, 1794. He was graduated at Harvard College at the age of 17, with the highest honors of his class, gave the Phi Beta Kappa poem at 18, succeeded the gifted Buckminster in Brattle Street Church at 19. Elected to a Greek Professorship in Harvard College, with permission to visit Europe, he spent four years in study in Germany and in travel. In 1824 he gained great celebrity as an orator and thinker by his Phi Beta Kappa oration. His occasional orations and addresses from that time till his death, pronounced at Plymouth, Concord, Charlestown, Lexington, and other places, linked with revolutionary traditions and glory—eulogies on Washington, Jefferson, the elder and younger Adams, and anniversary and philanthropic discourses secured for him the preëminent position among the accomplished orators of America. In 1825-35 he was a Member of Congress—then four years Governor of Massachusetts. In 1841 he became Minister to England, and in the negotiation of the Northeastern Boundary question, the McLeod and Creole affairs he displayed great

ability and statesmanship. He became President of Harvard Coll. in 1849, Secretary of State under President Fillmore in 1852, U. S. Senator in 1853, (but resigned on account of ill health,) and candidate for the Vice Presidency in 1860 with John Bell of Tenn.

Emerging from private life at the opening of the rebellion he gave himself with patriotic ardor to the defense of his country. He was chosen to give the oration at the consecration of the cemetery at Gettysburg. His death was followed by an official order by President Lincoln, setting forth "the learning, eloquence, unsurpassed and disinterested labors of patriotism in a time of political disorder" of the deceased, and ordering appropriate honors to be rendered to his memory wherever the national name and authority are recognized.

His published works are "Life of Washington," and three volumes of Orations and Addresses.

EWING, JOHN, a celebrated American divine and mathematician, was born in Cecil Co., Md., June 22d, 1732, and was graduated at Princeton Coll. in 1755. He became, in 1759, pastor of the First Presbyterian congregation in Philadelphia, and instructed the philosophical classes in the College there. He was provost of the University of Philadelphia from 1775 till his death, Sept. 8, 1802.

EXMOUTH, Lord. EDWARD PELLEW was born at Dover, April 19th, 1757. Entering the navy, he was raised step by step till he reached the rank of admiral. In 1816 he bombarded Algiers, and rescued more than 1000 Christians who had been groaning in Algerine captivity. For this noble exploit he was raised to the peerage. On his coat of arms was emblazoned a figure new to heraldry, a Christian slave holding aloft the cross and dropping his broken fetter. He died January 23d, 1832.

EYCK, JOHN and HUBERT VAN, artists who flourished at Ghent and Bruges in the beginning of the fifteenth century, are said to have discovered the method of mixing paints in oil or varnish.

EYLAU, a small town in Prussia, where Napoleon won a great victory over the Russians on the 7th and 8th of Feb., 1807. The French lost 15,000 men, the Russians in slain alone, 20,000.

F.

FABIUS MAXIMUS, a celebrated Roman who, from a dull and unpromising childhood, sprang into a maturity of valor and heroism, and was gradually raised by his merit to the highest offices in the state. In his first consulship he gained a victory over Liguria, and the fatal battle of Thrasymene occasioned his election to the dictatorship. In this important office he began to oppose Hannibal, not by fighting him in the open field like his predecessors, but by continually harassing his army by countermarches and ambuscades, for which he received the surname of *Cunctator*, or 'delayer.' When he had laid down his office of dictator, his successors, for a while, followed his plan; but the rashness of Varro, and his contempt for the operations of Fabius, occasioned the fatal battle of Cannæ; and, on that occasion, the Carthaginian general observed that Fabius was the Hannibal of Rome. When he had made an agreement with Hannibal, for the ransom of the captives, which was totally disapproved by the Roman senate, he sold all his estates to pay the money, rather than forfeit his word. The bold proposal of young Scipio to carry the war from Italy into Africa, was regarded as chimerical by Fabius, and rejected by him as too hazardous an experiment. He did not live to see the success of the Roman arms under Scipio, and the conquest of Carthage by measures which he treated with contempt, and heard proposed with indignation. He died in his one hundredth year, 202 B.C., after he had been five times consul.

FABRICIUS, **CARUS**, surnamed **Luscinus**, a truly heroic and virtuous Roman, incorruptible at a time when wealth was almost omnipotent, and preserving a fearless bearing in the presence of the mightiest. He lived at a time of danger to the commonwealth, when Pyrrhus, King of Epirus, had come to Italy, less for the purpose of affording aid to the Tarentines, than of acquiring a military reputation by conquering the masters of the world. When he was sent on an embassy to Pyrrhus for the purpose of redeeming some prisoners, that king attempted to cor-

rupt his fidelity by a bribe, which was indignantly refused. The king on the next day ordered a curtain to be suddenly drawn, displaying to view an elephant of enormous size, a creature hitherto unknown in Italy. The brave Fabricius calmly said, "Your beast of to-day moves me no more than your gold of yesterday." He died 275 B.C.

FAHRENHEIT, **GABRIEL DANIEL**, inventor of the thermometer which bears his name, about 1726, was a physician and philosopher of Dantzic.

FAIRFAX, **LORD THOMAS**, was born at Denton, in Yorkshire, in 1611. He entered into military service under Lord Vere, in Holland, and on the breaking out of the civil wars took part against the king. Afterward, however, the jealousy of Cromwell disgusted him with the Puritans, although he continued in the employ of the government. He assisted in the Restoration, was reconciled to Charles II., and died in 1671.

FAIRIES. Almost all nations have, in ignorant times, possessed a strong belief in the supernatural, which has been continued to the present day, among the unenlightened. Wild and terrific scenes were peopled by the imagination with fierce and fearful beings, while flowery dells, sequestered glades, green and smiling forests, and pleasant water-falls were selected as the haunts of a gentler and more graceful race of beings than belong to humanity. Pastoral nations delighted to picture forms of miniature elegance, whose habitations were delicate and fragrant flowers. The fairy queen Titania hung like a bee or butterfly within a harebell, or led the gay dance by moonlight over roses, without bending the most fragile floweret or leaf beneath her footstep. The beings called fairies were at first termed elves, the word 'elf' originating with the Saxons, who from remote antiquity believed in them.

The Laplanders, Icelanders, and inhabitants of Finland believed in the existence of fairies. Many affirmed that they had had intercourse with them, and had been invited to their subterranean retreats, where they were hospitably entertained. The little men

and women handed round wine and tobacco, with which the mortal visitors were supplied in abundance, and afterward sent them on their way, with good advice, and an honorable escort. Up to this time, these people boast of indulging in the magical ceremonies and dances of the fairies.

The word fairy is thought, by most writers, to be derived from the Persian, and the character of the English fairies and the Persian *Peris* is similar. The *Peris* of the orientals are represented as females of exquisite beauty and great gentleness, who are not permitted to reside in heaven. They are not of earth, howbeit. They live in the colors of the rainbow, among the gorgeously tinted clouds, and are nourished by the fragrance of sweet flowers. The Dives of the Persians were spirits of the male sex, with habits and dispositions directly contrary to those of the *Peris*. They were malevolent, cruel, and fierce, and hideous in their appearance. Huge spiral horns sprang from their heads; their eyes were large and staring, their claws sharp and their fangs terrific. Covered with shaggy hair, and having long rough tails, it seemed as if they possessed every deformity. The Dives warred with mankind, and pursued the *Peris* with unrelenting hatred. Their lives, however, were limited, and they were not incapable of feeling personal violence. The fancies of the inhabitants of the East teem with supernatural beings. The *Genii*, spirits of vast size, were said to have been imprisoned by Solomon, who shut them up in caskets upon which he placed his seal. Some were thrown into rivers. A fisherman once drew one up from the bottom of a stream in his net, and the vessel being opened, a dense smoke arose from the interior. The smoke gradually assumed the vast figure of a *Genius*. The whole story is related in the "Arabian Nights' Entertainments."

Fairies of a certain class, such as the warlike elves or fays, were believed to exist by all European nations. During times of military enthusiasm, the fancy of warriors saw processions of fairies, well armed and mounted, bearing gorgeous banners; their weapons glittering in the moonlight, or gleaming like lightning on the darkness of the night. A Bohemian legend says that a

certain knight, traveling with a friend, met one of these nocturnal processions, and, disregarding the caution of his companion, spurred his horse forward to attack them. Horse and rider were found dead upon the spot in the morning. The Swedes asserted that there was a certain class of supernatural beings, pretty much the same as the Brownies of Scotland, who assisted the miners, labored in the shafts, and were far more ingenious than mortal workmen.

The fairies of England were generally of a harmless disposition. Oberon and Titania, the fairy king and queen, were pleasant little people, with a spice of humanity in their dispositions. Robin Goodfellow was a mischievous little creature, but not very spiteful. He was represented like a rustic, "in a suit of leather, close to his body, his hands and face russet color, with a flail." The Scottish fairies were certainly guilty of great deviations from the path of honesty. One of their greatest sins was that of stealing fine children from their cradles, and leaving in the place of a healthy infant a rickety and deformed being. The elves often stole away wives from their husbands, and these women were only to be regained by confronting the fairy procession on a certain night, within a year and a day after the loss, which time was allowed the bereaved mortals for restitution. The electrical circles which are sometimes found upon the turf were believed to be fairy rings, within which it was thought dangerous to sleep, or to be found after sunset. The Scotch fairies were of diminutive stature, of a doubtful nature, capricious and very resentful. The Scotch were afraid to speak of them disrespectfully, and even called malicious spirits, "gude people."

These fairies lived in green hills, on which they danced by moonlight. The interior of their habitations is described as presenting a most beautiful appearance, brilliant with glittering gold and gems, and containing every thing which a splendid fancy could contrive. But as "all is not gold that glitters," these fine appearances are said to be a show, put on to conceal a mean or repulsive reality.

These little beings are admirable riders, and the best judges of horses in the world. They go about in large companies by night,

when their presence is disclosed by the shrill, bell-like ringing of their bridles. When the little men find their steeds jaded, they do not scruple to continue their pleasure at the expense of mortals. They steal horses, and ride them almost to death. The animals are found in the morning in their stalls panting and flecked with foam, with their manes and tails matted and twisted. The shrewd reader will guess that the fairies often had to bear blame which belonged to careless grooms.

A sailor on the Isle of Man, who was riding to visit his sister, was invited by a party of jolly fairies who were hunting, to join them in their excursion. Not being aware of the nature of the little men, who made a gay appearance, as they swept by in green dresses, riding to the music of a mellow horn, Jack followed on, delighted, and only learned his danger when he arrived at his sister's house. These diminutive huntsmen used to seize upon the horses which English residents brought over to the Isle of Man, and ride them without ceremony. A gentleman of the island attributed the loss of half a dozen capital hunters, to the little men in green. Sometimes they were more honest, and paid good money for horses to which they took a fancy. A man who had a fine horse to sell, was once riding his steed among the mountains, when a dapper little gentleman stepped up, and examined it. He made the animal show his paces, and, after some haggling about the price, bought him. All this was well enough; but when the seller dismounted, the purchaser, having fixed himself in the saddle, sank through the earth with his bargain. The man who beheld all this, was somewhat startled, but as there was no mistake about the hard red gold which he had received from the fairy horseman, he put it in his pocket, and marched off.

The Brownies were singular beings, meagre, shaggy, and wild in their appearance. The Brownie, in the day-time, lurked in remote recesses of the old houses which he delighted to haunt, and in the night sedulously employed himself in discharging any laborious task which he thought might be acceptable to the family to whose service he had devoted himself. But, unlike a servant, he did not labor in the hope of wages: on the contrary, an offer of recompense, particu-

larly of food, drove this delicate gentleman away forever. He was fond of stretching himself at length before the fire, like a dog, and this appeared to give him the highest satisfaction. An amusing anecdote is told concerning this habit. A Brownie who had attached himself to a certain house, used to hover round the kitchen, uneasy if the servants sat up late, which prevented him from occupying his place upon the hearth. Sometimes the impatient Brownie appeared at the door, and admonished the servants in the following terms: "Gang a' to your beds, sirs, and dinna put out the wee grieshoch;" thus anglicized, "Go to your beds, all of you, and don't put out the few embers." The Brownie left the hearth at the first crow of the cock.

In this liking for a nap by the fire, the Brownie resembled Milton's lubber fiend, but the latter toiled for hire:

"How the drudging goblin sweat,
To earn his cream-bowl duly set,
When in one night, ere glimpse of morn,
His shadowy flail hath threshed the corn,
That ten day-laborers could not end;
Then lies him down the lubber fiend,
And, stretched out all the chimney's length,
Basks at the fire his hairy strength;
And cropful out of door he flings,
Ere the first cock his matin rings."

L'Allegro.

The last Brownie known in Ettrick Forest resided in Bodsbeck, a wild and solitary spot, where he exercised his functions undisturbed, till the scrupulous devotion of an old lady induced her to hire him away, as it was termed, by placing in his haunt a porringer of milk and a piece of money. This hint to depart he did not require to be repeated: all the night he was heard to howl and cry, "Farewell to bonny Bodsbeck," which before the dawn he had abandoned forever.

The inhabitants of Germany believe that there exists a race called the *Stille Volke*; 'the silent people.' To every family of eminence a family of the *Stille Volke* is attached, containing just as many members as the mortal family. When the lady of the mortal family becomes a mother, the queen of the *Stille Volke* enjoys the same blessing, and the silent people endeavor to ward off any injury which threatens those whom they protect.

It would be impossible to enumerate all the different sprites with which superstition has

filled the woods, waters, hills, and valleys of Europe. A few of the most agreeable elves have been touched upon. It is not worth while to present the dark features of a gloomy superstition. The Kelpies and the Wild Huntsmen have found no place in this sketch.

The legends of the Irish are generally gay, exhibiting the character of that poor but pleasant people. The Irish fairies are spruce little gentlemen and merry little ladies, who trip it away with blithe hearts and light footsteps upon their favorite and beautiful places of resort. Poor people delight to describe wealth and splendor which they do not possess, and, accordingly, in the tales of the Irish, the palaces of the "good people" are full of gold and brilliance.

FALCONER, WILLIAM, was born at Edinburgh in 1730, and brought up to the sea. An occurrence in his own life forms the groundwork of his fine poem, "The Shipwreck." He was lost at sea in 1769.

FALIERI, MARINO, Doge of Venice, in the fourteenth century, having, previously to his elevation, gained brilliant victories for the republic. Michael Steno, a young patrician, who conceived himself injured, revenged himself by some offensive lines directed against the honor of the doge's wife. For this he was only punished by a temporary confinement, and the doge, burning for deeper revenge, formed a plan for punishing the aristocracy and annihilating the power of the senate. This, however, was discovered, and Falieri put to death in 1355. Lord Byron and Casimir Delavigne have made this story the subject of powerful dramas.

FALKIRK, a town of Stirlingshire in Scotland, where the army of Scots commanded by Cumyn and Sir William Wallace, was defeated by Edward I. of England, July 22d, 1298. Between 20,000 and 40,000 of the Scotch were slain. A battle was fought at Falkirk, Jan. 18th, 1746, between the army of George II. and the adherents of Prince Charles Stuart, in which the latter were successful.

FALKLAND, LUCIUS CAREY, Viscount, was born in 1610. His juvenile irregularities were terminated by an early marriage with a young lady to whom he was sincerely attached. In parliament he distinguished himself by an independent course, although he

ultimately espoused the royal cause, and perished at the battle of Newbury, at the age of thirty-four. His private character endeared him to all. He was fond of study, and once observed, "I pity unlearned gentlemen on a rainy day." Lord Falkland was a high-minded patriot. Lord Clarendon eulogized him, as "a person of such prodigious parts of learning and knowledge, of that inimitable sweetness and delight in conversation, of so flowing and obliging a humanity and goodness to mankind, and of that primitive simplicity and integrity of life, that if there were no other brand upon this odious and accursed civil war than that single loss, it must be most infamous and execrable to all posterity."

FALKLAND ISLANDS, a group comprising two large and numerous small islands, mountainous and boggy, in the South Atlantic Ocean, east of the Straits of Magellan. The harbor of Port Louis is a convenient place of refit and refreshment for vessels rounding Cape Horn. They were discovered in 1592, and belong to Great Britain.

FAMINE in Egypt, which lasted seven years, 1708 B.C. At Rome, when many persons threw themselves into the Tiber, 436 B.C. In Britain, so that the inhabitants ate the barks of trees, 272 A.D. One in Scotland, where thousands were starved, 306. In England and Wales, where 40,000 were starved, 310. All over Britain, 325. At Constantinople, 446. In Italy, where parents ate their children, 450. In Scotland, 576. All over England, Wales, and Scotland, 739. Another in Wales, 747. In Wales and Scotland, 792. Again in Scotland, 803. Again in Scotland, when thousands were starved, 823. A severe one in Wales, 836. In Scotland, which lasted four years, 954. Famines in England, 864, 974, 976, 1005. Awful one throughout Europe, 1016. In Scotland, which lasted two years, 1047. In England, 1050, 1087. In England and France, leading to a pestilential fever, from 1193 to 1195. In England, 1251, 1315, 1335. During that of 1315, the people fed on horses, cats, and dogs. In England and France, called the dear summer, 1353. In England, 1438, so great that bread was made of fern root. In 1565 two millions were expended on the importation of corn. One in 1748. Another in 1795,

and in 1801. In the diocese of Dronheim, in Norway, in consequence of the intercepting of supplies by Sweden, 5,000 persons perished, 1813.

Scarcity of food was severely felt by the Irish poor, in 1814, 1816, 1822, and 1831. The failure of the potato crop in Ireland, in 1846 and the three following years, caused great want and suffering.

FANCOURT, SAMUEL, a dissenting minister of Salisbury, the first who opened a circulating library in London; he came to that city about 1740, and set up his library; died in poverty, 1768, aged ninety.

FARINELLO, an eminent Italian opera singer, died about 1780. In the time of Philip V. and Ferdinand VI. he was virtually premier in Spain.

FARQUHAR, GEORGE, an actor and soldier, but chiefly remarkable for the ability of his dramatic works, born in Londonderry, Ireland, in 1678, died in 1707. Poor Farquhar early married a woman who deceived him by pretending to be possessed of a fortune, and he sank a victim to over exertion. A letter written shortly before his death to Wilkes the actor, possesses a touching brevity of expression: "Dear Bob, I have not anything to leave thee to perpetuate my memory but two helpless girls. Look upon them sometimes, and think of him that was to the last moment of his life thine—GEORGE FARQUHAR."

FAUST, JOHN, a goldsmith of Mentz, to whom the invention of the art of printing has been attributed. He died in 1466.

FAUST, Doctor JOHN, a dealer in the black art, who lived in the fifteenth century. He was a student of Wittemberg, but abandoned theology for magic. This personage is often confounded with the preceding. He figures in many old romances and tales, English and German. The following is a sketch of one of these, "The History of the Damnable Life and Deserved Death of Doctor John Faustus." This romance is a translation from the German. It is filled "up to the blue" with magic and supernatural horrors, and acquires new interest from the fact it embodies the same old German tradition upon which Goethe founded his wild drama of Faust. Faustus is first introduced as a student of the university of Wittemberg, where

he is made doctor of divinity, but soon after gives himself up entirely to the study of the black art. He makes a compact with the devil, by which the latter is to serve him in all his desires for the space of twenty-four years, at the expiration of which he is to deliver himself up, body and soul, to the destroyer. This compact is written with his own blood, and straightway Mephistophiles becomes his familiar spirit. Generally speaking, this spirit is obedient to the wishes of Faustus, but when the doctor puts an improper question, or tries to do a good action, Mephistophiles dragoons him into propriety by a rabble rout of imps, or frightens him with a cock and a bull story about the other world, giving him a foretaste of the pleasant pastime of being "tossed upon pitchforks from one devil to another." On one occasion, in particular, a great procession of evil spirits came to torment him, in which procession Lucifer appears "in a manner of a man all hairy, but of a brown color like a squirrel, curled, and his tail turning upward on his back as the squirrels use. I think he could crack nuts too like a squirrel."

Then a minute action is given of Faustus's journey to Tartarus, and through the air, and among the planets, and afterward through the most famous kingdoms of the earth, whereby it appears that he, and not Columbus, was the discoverer of America. Of course the magic doctor was deeply read in all mysteries, and he certainly discourses wisely upon comets, and falling stars, and other marvels. One chapter relates "how Faustus was asked a question concerning thunder." His answer is certainly very luminous for a doctor in divinity and the black art. "It hath commonly been seen heretofore," says he, "that before a thunder-clap fell a shower of rain, or a gale of wind: for commonly after wind falleth rain, and after rain a thunder-clap, such thickness comes to pass when the four winds meet together in the heavens, the airy clouds are by force beaten against the fixed crystal firmament, but when the airy clouds meet with the firmament, they are congealed, and so strike, and rush against the firmament, as great pieces of ice when they meet on the waters; then each other sounded in our ears; and that we call thunder." Afterward

comes a series of the doctor's merry conceits, showing how he practiced necromancy; how he transported three young dukes through the air from Wittenberg to Munich; and how one of them fell from the magic cloak on which they sailed through the air, and was left behind at Munich, being "stricken into an exceeding dumps." We are also told how he pawned his leg to a Jew; how he ate a load of hay, and how he cheated a horse-jockey, and conjured the wheels from a clown's wagon, with many other wonders of a similar nature. And finally, we are informed that, at the end of the appointed time, the evil one came for him between twelve and one o'clock at night, and after dashing his brains out against the wall, left his body in the yard, "most monstrously torn and fearful to behold."

FAWKES, Guy, the principal agent in the gunpowder plot, in the reign of James I., who, being discovered, and having betrayed his accomplices to the number of eighty, was executed in 1606. [See GUNPOWDER PLOT.]

FENELON, FRANÇOIS DE SALIGNAC DE LA MORTE, the venerable Archbishop of Cambray, was born in 1651. He preached at the age of fifteen with success, and was appointed Archbishop of Cambray in 1694. He had great success in converting the Huguenots, but it was by means of mild persuasion and not of infuriate threats. He superintended the education of the Dukes of Burgundy, Anjou, and Berri, the grandsons of Louis XIV. Fenelon died in 1715. His literary productions are numerous, but his most celebrated work is "*Les Aventures de Télémaque*," which inculcates a pure system of morality in a pleasing and interesting manner.

FERDINAND V., surnamed the Catholic, son of John II. of Arragon, was born in 1453. He married Isabella, Queen of Castile, and thus arose the united kingdom of Spain. In ten years he conquered the Moors of Grenada, and expelled them from Spain in 1492. He acquired Naples and Navarre, and during his reign America was discovered by Columbus. He died in 1516 of the dropsy. His policy was despotic, and his character was stained by the introduction of the Inquisition.

FERGUSON, JAMES, a self-taught experimental philosopher, mechanist, and astronomer, was born in Keith in 1710. While a shepherd, he watched the stars by night, and at an early age constructed a celestial globe. For some years he supported himself in Edinburgh by his talents as a miniature painter. In 1763 he was chosen member of the Royal Society. He died in 1776.

FERRARA, a duchy in upper Italy, for a long time ruled by the house of Este, now forming part of the States of the Church.

FESCH, JOSEPH, Cardinal, the maternal uncle of Napoleon Bonaparte, and Archbishop of Lyons, was born at Ajaccio, in 1763, and died in 1839.

FEUDAL or FEODAL LAWS, the tenure of land, by suit and service, to the lord or owner of it, introduced into England by the Saxons about 600. The slavery of this tenure was increased under William I., 1068, who, dividing the kingdom into baronies, gave them to certain persons, and required these persons to furnish the king with money and a stated number of soldiers. The feudal system was discountenanced in France by Louis XI. about 1470; was limited in England by Henry VII., in 1495; but abolished by statute, 12th Charles II., 1663. Clanship was introduced into Scotland by Malcolm II. in 1008, and finally broken up by statute in 1746.

FEZZAN, anciently Phazania, is a country of Africa, south of Tripoli. No exact estimate of the population has been made. It perhaps amounts to rather more than 26,000. Fezzan is the largest oasis in the great desert. It is now a Turkish pachalic.

FICHTE, JOHANN GOTTLIEB, an eminent German thinker, was born in Upper Lusatia, May 19th, 1762, and died Jan. 21st, 1814.

FIELDING, HENRY, one of the earliest and greatest English novelists, was born at Sharpham Park, Somersetshire, April 22d, 1707. He was a great-grandson of the Earl of Denbigh. The Earls of Denbigh derived their origin from the house of Hapsburgh, which supplied emperors to Germany and kings to Spain. Gibbon used this fact to point his eulogy upon the novelist, who had won for himself a more durable glory than that of noble birth: "The successors of Charles V. may disdain their brethren of

England; but the romance of 'Tom Jones,' that exquisite picture of human manners, will outlive the palace of the Escurial and the imperial eagle of the house of Austria." Henry's father served under Marlborough and rose to the rank of lieutenant-general; his mother was a daughter of Mr. Justice Gould. The general had a large family and was a bad economist; Henry was educated at Eton and Leyden, where he studied diligently; and then at twenty-one he was thrown upon his own resources. He came to London, and, as he said, must "become a hackney writer or a hackney coachman." He lived precariously by writing poor pieces for the stage. In 1736 he married Miss Cradock, who had beauty and £1500, and inherited from his mother an estate in Dorsetshire worth £200 a year. In Dorsetshire he lived dashingly and in three years was penniless. Then dramatic writing again, political pamphleteering, an attempt to subsist as a barrister, and failures as a journalist; till in 1742 he published "Joseph Andrews," which he wrote in ridicule of Richardson's "Pamela." The revels and good fellowship of which he was so fond brought gout upon him, and he suffered severely from that and poverty. His wife, who was his model for his heroines, died, and he was whelmed in grief. Her maid was almost broken-hearted at the loss of so good a mistress. The bond of sympathy became a stronger one, and Fielding made the maid his wife. Poverty forced him to accept, in December, 1748, what was then considered the degrading office of Bow-street magistrate, the duties of which he honorably discharged. "Tom Jones," that master-piece among English novels, was published in February, 1749, and "Amelia" in 1751. His constitution was shattered; dropsy, jaundice, and asthma had seized him; and his physicians warned him to seek a warmer clime. He sailed for Lisbon, and died there October 8th, 1754, in the forty-eighth year of his age.

The dissipation and errors of Fielding's life are not to be palliated, but through them all shines a noble and kindly nature. "Tom Jones" has been pronounced the best novel in the language. This, and Fielding's other tales, though touched by the grossness of the time, display inimitable wit, wisdom, humor,

and are wonderful for their truth to life and yet the raciest originality.

FIFTH MONARCHY MEN. These were fanatical enthusiasts who arose in the time of Oliver Cromwell, and believed the day was at hand when Jesus should descend from heaven, and erect the fifth universal monarchy. Cromwell dispersed them in 1653.

FINGAL, an ancient chieftain of Morven, a province of Caledonia, born in 282. He was the determined enemy of the Romans, and is celebrated by Ossian, who represents him as his father.

FISHER, Joun, Bishop of Rochester, was born in 1459. He was eminent for his learning and virtues, a firm adherent to the church of Rome, and, like Sir Thomas More, would not sanction Henry's divorce of Queen Catherine. The king threw him into the Tower. While in prison the pope made him a cardinal, which drew from the king the brutal remark, "Well, let the pope send him a hat when he will: mother of God! he shall wear it on his shoulders then, for I will leave him never a head to set it on." After a twelvemonth of confinement, Fisher was executed, June 22d, 1535.

FITCH, JOHN, was born in East Windsor, Conn., in 1743. In 1785 he conceived the project of propelling a vessel by the force of condensed vapor. By unwearied exertion he succeeded in raising the means to build a rude steamboat in 1787. It was tried at Philadelphia, and sailed eight miles an hour. Poor and obscure, he had not the money to perfect his invention as he wished. There is reason to believe that Fulton had access to his plans at a later date. In a letter to Mr. Rittenhouse in 1792, Fitch said, "This, sir, will be the mode of crossing the Atlantic in time, whether I shall bring it to perfection or not." People thought him crazy. His life had been rife with perplexities and disappointments; he sought solace in strong drink, and finally plunged into the Alleghany River near Pittsburg in 1798.

FLANDERS, formerly a province of the Austrian Netherlands, now forming the Belgic provinces of East and West Flanders. East Flanders contains 781,000 inhabitants; West Flanders 627,000. Both parts are extremely fertile, and the Flemings are extensively employed in manufactures. The

Franks seized upon Flanders about 412, and in 864 it was granted to Baldwin I., with the title of Count of Flanders, the sovereignty being reserved to France. The country, by the marriage of Philip, Duke of Burgundy, with Margaret, daughter of Lewis de Malatin, Earl of Flanders, in 1369, came to the house of Burgundy; and it passed to the house of Austria by the marriage of Mary, daughter and heiress of Charles the Bold, to Maximilian, Emperor of Germany. Still the sovereignty was in France till 1525, when Charles V., taking Francis I. prisoner at Pavia, released it from that servitude. In 1556, Charles resigned these territories to his son Philip, King of Spain. Flanders shook off the Spanish yoke in 1572. In 1725, by the treaty of Vienna, it was annexed to the German empire. The whole of this country was conquered by the French in 1794; but only part of it now remains in their possession, forming the French department of Nord. [*See* BELGIUM.]

FLEETWOOD, CHARLES, a parliamentary general in the civil wars, the son of Sir William Fleetwood, knight, cup-bearer to James I. and Charles I., and comptroller of Woodstock park. In 1644, the subject of this article was made colonel of horse and governor of Bristol. He was afterward raised to the rank of lieutenant-general, and had a share in the defeat of Charles II. at Worcester. On the death of Ireton, Fleetwood married his widow, and being now related to Cromwell, was appointed deputy of Ireland, in which place he was succeeded by Cromwell's younger son, Henry. Fleetwood joined in deposing Richard, and after the restoration he became one of the council of state, and commander-in-chief of the forces, but afterward retired to private life at Stoke Newington, where he died soon after.

FLETCHER, ANDREW, commonly called Fletcher of Saltoun, was born in 1653. He was distinguished by learning and eloquence, by courage, disinterestedness, and public spirit, but of an irritable and impracticable temper. Like many of his most illustrious contemporaries (Milton, for example, Harrington, Marvel, and Sidney), Fletcher, from the misgovernment of several successive

princes, conceived a strong aversion to hereditary monarchy; yet he was no democrat. He was the head of an ancient Norman house, and was proud of his descent. He was a fine speaker and a fine writer, and proud of his intellectual superiority. Both in his character of gentleman and in his character of scholar, he looked down with disdain on the common people, and was so little disposed to intrust them with political power that he thought them unfit even to enjoy personal freedom. It is a curious circumstance that this man, the most honest, fearless, and uncompromising republican of his time, should have been the author of a plan for reducing a large part of the working classes of Scotland to slavery. He bore, in truth, a lively resemblance to those Roman senators who, while they hated the name of king, guarded the privileges of their order with inflexible pride against the encroachments of the multitude, and governed their bondmen and bondwomen by means of the stocks and the scourge.—*Macaulay*.

He opposed the arbitrary measures of the Duke of York in Scotland; his estate was confiscated, and he fled to the Continent. He came to England with the Duke of Monmouth in the rebellion of 1685, and was appointed to command the cavalry of the expedition. Fletcher was ill mounted; and, indeed, there were few chargers in the camp which had not been taken from the plough. Ordered upon a sudden and important service, he thought that the exigency of the case warranted him in borrowing, without asking permission, a fine horse belonging to Dare, the mayor of Lynn, who had joined the revolt. Dare resented this liberty, and assailed Fletcher with gross abuse. Fletcher kept his temper better than any who knew him expected. At last Dare, presuming on the patience with which his insolence was endured, ventured to shake a switch at the high-born and high-spirited Scot. Fletcher's blood boiled. He drew a pistol and shot Dare dead. Such sudden and violent revenge would not have been thought strange in Scotland, where the law had always been weak; where he who did not right himself by the strong hand was not likely to be righted at all; and where, consequently, human life was held almost as cheap as in the worst governed provinces of Italy. But

the people of the southern part of the island were not accustomed to see deadly weapons used and blood spilled on account of a rude word or a gesture, except in duel between gentlemen with equal arms. There was a general cry for vengeance on the foreigner who had murdered an Englishman. Monmouth could not resist the clamor. Fletcher, who, when his first burst of rage had spent itself, was overwhelmed with remorse and sorrow, escaped to the Continent, and repaired to Hungary, where he fought bravely against the common enemy of Christendom. To Monmouth's cause this was a serious loss, but the event was fortunate for Fletcher, since he was saved from the dangerous fate to which the insurrection came. He returned to England with William of Orange, became prominent in the political affairs of Scotland, and died in 1716. In one of Fletcher's pamphlets, occurs the memorable saying, "I knew a very wise man that believed that if a man were permitted to make all the ballads, he need not care who should make the laws of a nation."

FLETCHER, JOHN, son to the Bishop of London, a famous dramatic writer, born in 1576, died of the plague in 1625. [*See BEAUMONT AND FLETCHER.*]

FLEURUS or **FLERUS**; a town of Belgium, in the province of Hainault, on the Sambre, six miles north-east of Charleroi. Four battles have been fought here. In 1622 the troops of Spain and Germany were matched against each other. In 1690 the French defeated the allies here with great loss. June 17th, 1794, the French under Jourdan gained a complete victory over the Austrians and allies, and it was on this occasion that aerostation was found to be of practical use. Coutel, the chief of the aerostatic corps, ascended with a general and adjutant, in a balloon of great size, hovered over the enemy, and reconnoitered their works. The information thus gained was conveyed to the French by means of signal flags. During the process of inflation, the fire of a battery was opened upon the assistants, and as the balloon ascended for the first time, a cannon-ball passed between its neck and the gondola. Soon, however, the daring aeronauts attained a safe elevation, and could see beneath them the then harmless cannon fruitlessly dis-

charging their shot into the upper air. The fourth battle, called the battle of Ligny, was fought June 16th, 1815, between the Prussians and French, and was desperately contested. [*See LIGNY.*]

FLEURY, ANDRE HERCULE DE, Cardinal, preceptor to Louis XV., became prime minister on the disgrace and fall of his rival, the Duke of Bourbon. His administration was conducted with great skill and address; commerce and industry flourished under him, and he had the fortune to conciliate the differences between the courts of London and Madrid. He died in extreme age in 1743.

FLODDEN FIELD, BATTLE OF. James IV. of Scotland took part with Louis XII. of France against Henry VIII. of England, and this battle between the English and Scotch, Sept. 9th, 1513, was the result. James, most of his nobles, and 10,000 of his army, were slain, while the English, whom the Earl of Surrey commanded, sustained only insignificant loss.

FLORIAN, a French dramatic writer, novelist, and fabulist, married a niece of Voltaire. He was a member of the French academy, and died Sept. 13th, 1794.

FLORIDA, one of these United States, has an area of 59,268 square miles, and in 1860 had 140,425 inhabitants, of whom 61,745 were slaves, and 932 free colored persons. It consists of a narrow strip between Georgia and Alabama, and the Gulf of Mexico, with a vast peninsula which sunders that gulf from the Atlantic. The southern part of this peninsula is low and flat, being mostly covered with swamps called everglades. In the north the surface of the country is in some parts slightly undulating, and the surface west of the neck of the peninsula is somewhat more uneven. Among the everglades are numerous tracts of pine land, prairies, and hummocks, and these with some marshes mark the northern part. The soil is generally sand, except in the hummocks, where it is clay mixed with sand: these are scattered throughout the country, varying in extent from a few acres to a thousand, and forming altogether but an inconsiderable portion of the peninsula; they are covered with a growth of oak, dog-wood, magnolia, and pine, and afford excellent arable land.

FLO

The prairies, or savannahs, are often miles in extent, fine natural pastures for great herds of cattle. The barrens are overgrown with forests of pine, with little underwood. The swamps are either formed by the inundation of the rivers, which, overflowing their high wooded banks, flood the low lands in the rear, or by the drainage of the surrounding region: the latter or pine-barren swamps are overgrown with cypress, and the river swamps are covered with a heavy growth of timber. The substratum of the eastern part of the peninsula is clay mixed with sand, but that of the western is a rotten limestone, undermined in many places by subterraneous streams, forming cavities called sinks. Connected with the same rock formation is the bursting forth of numerous springs so copiously as to form at once full-grown rivers. Indeed, they rather seem to be eruptions of subterraneous streams, suddenly emerging from dark labyrinths underneath, through which they have long crept. The central district of Florida is the finest tract. Here are many pine barrens, but among them are gentle eminences of fertility, supporting a vigorous growth of oaks and hickories, while numerous streams flow through the country or expand into beautiful lakes. Travelers have described the water in these rivers and lakes as so pellucid that the boat seems floating in the air. The warmth and humidity of the climate compensate for the poverty of the soil, and give it a vegetation of great variety and luxuriance. Majestic forests abound with game, and give

a peculiar and picturesque appearance. Intermixed with the dark glossy leaves of the oaks appear flowers of the most vivid and varied colors. Groves of magnolias cover immense tracts, bending beneath the weight of their snowy blossoms, and fill the air with perfume. The exportation of timber is a great source of the wealth of Florida. Cotton, sugar, and tobacco are the other staple exports. Tropical fruits flourish and flavor excellently. The long coast line of Florida is so dotted with keys and banks that there are few available harbors. The mild winters make it much resorted to by those afflicted with pulmonary disorders.

Florida was discovered in 1512, by Juan Ponce de Leon, in his famous search after the fabulous fountain of youth, which was to restore health and beauty to the aged, on Palm Sunday (*Pascua Florida*), and hence the name. The French and Spaniards long made it the theatre of contest, but at length the Spaniards were established in the town and fort of St. Augustine. In 1763 Florida was ceded to Great Britain, in exchange for the island of Cuba. In 1781 the Spaniards conquered West Florida, and by the peace of 1783, Great Britain relinquished both provinces to Spain. Spain reluctantly ceded it to the United States in 1820, and in 1845 it was admitted as a state. The most important event in its recent history is the war against the Seminoles from 1835 to 1842. The greater portion of the tribe have been removed beyond the Mississippi.

The general assembly, consisting of two houses, meets biennially on the fourth Monday of November. The governor is chosen by the people for four years, and is ineligible for the succeeding term. The right of suffrage belongs to every free white male citizen aged twenty-one or more, who has resided in the state for two years, and the county six months. Florida seceded from the Union, Jan. 10, 1861. Her important island positions, however, at Key West, Fort Jefferson on the Tortugas, and Fort Pickens on Santa Rosa Island, opposite Pensacola, which together command the Gulf of Mexico, were fortunately retained to the Union. The state suffered comparatively little by the war.

Tallahassee is the capital. Pensacola has one of the safest and most roomy harbors on the gulf: the government has a navy-yard here. St. Augustine is the oldest town in the United States, having been settled by the Spaniards almost fifty years before the English reared their huts at Jamestown in Virginia. South of Florida, a chain of small rocky islands, called Keys from the Spanish *cayo*, extend to the westward. South of the bank upon which the Keys rise, and separated from them by a navigable channel, is a long narrow coral ledge, known as the Florida Reef. The most important of the Keys is Key West, a corruption of *Cayo Hueso*, 'Bone Key.' Long the haunt of wreckers, smugglers, and pirates, its reputation of late years has improved. It is six miles long by two in breadth, with a large and well sheltered harbor. Sponges are gathered, turtles and their eggs collected on the neighboring keys, and salt made by evaporation. Wrecking is the most important business, for the neighboring reefs are rife with disaster.

FLOYD, WILLIAM, the first delegate from New York that signed the Declaration of Independence, was born on Long Island, Dec. 17th, 1734. He was a lawyer. An opulent landed proprietor, he was one who like Charles Carroll set his all at stake, and his property was laid waste by the British troops. Having commanded the militia of Long Island during the war, and served as representative in the first federal congress, he removed to a farm on the Mohawk River in 1803, where he died Aug. 4th, 1821, at the age of eighty-seven.

FOLARD, Chevalier CHARLES DE, a celebrated tactician, born at Avignon in 1669. He was aid-de-camp under the Duke de Vendome in 1702, was wounded in the battle of Cassano, and made prisoner at Blenheim. He next served against the Turks, and then entered into the service of Charles XII., during the latter part of his career. He died at Avignon, in 1752.

FONTAINE, JEAN DE LA, one of the most distinguished literary men in the reign of Louis XIV., born in 1621. Fontaine was educated at Rheims, and went to Paris, where he lived in habits of intimacy with the wits of the age. He died at Paris, in 1695, aged seventy-four. The most simple of men in private life, his writings exhibit great shrewdness and knowledge of mankind. His early works are tainted with licentiousness. He is best known by his "Fables."

FONTAINEBLEAU, a town of France, thirteen leagues south-east of Paris, where is a splendid palace. It is famous, in diplomatic history, as the place where several treaties have been concluded. It was here that Napoleon signed his first abdication, April 5th, 1814, and bade an affectionate farewell to his devoted troops.

FONTENELLE, BERNARD LE BOVIER DE, a distinguished French savant, author of "Plurality of Words," born 1657, and lived to January, 1757, nearly one hundred years. His mother was a sister of the celebrated Cornille.

FONTENOY, a village of Belgium, where the French, headed by Count Saxe, defeated the English, Hanoverians, Dutch, and Austrians, under the command of the Duke of Cumberland, April 30th (May 11th), 1745. The battle was fought with great obstinacy, and the carnage on both sides was considerable. Count Saxe, who was at the time ill of the disorder of which he afterward died, was borne about in a litter, encouraging his soldiers.

FOOTE, SAMUEL, a comic dramatist and actor, born at Truro, Cornwall, in 1721, died at Dover, in October, 1777. He was a great mimic and a man of wit. A gentleman, who was the fortunate possessor of some fine Constantia wine, after praising its good qualities, invited Foote to taste. A very small bottle was produced, together with a very

small glass, which the niggardly host half filled. The wag swallowed this immediately. "Well, Foote," said his entertainer, "what do you think of that? It is forty-seven years old." "What do I think?" replied Foote; "why, sir, I think it's very little for its age."

FORD, JOHN, one of the finest of the old English dramatists, was born in 1586, and died in 1639.

FOSTER, JOHN, an original and vigorous essayist, was born in 1770, and died in 1843. He was a Baptist clergyman in England.

FOUCHE, JOSEPH, the famous minister of police under Bonaparte, was born at Nantes in 1763. At the beginning of the revolution he distinguished himself by violent harangues, and was sent to the national convention in 1792, where he attached himself to Marat and voted for the death of Louis XVI. During the reign of terror, Fouché was active in spoliation and atrocity. When Robespierre fell, Fouché shared in his odium, and withdrew from the scene for a couple of years. Under the directory he came forth, and was successively ambassador to Milan, to Holland, and minister of police. This latter post was the one for which Fouché was fitted both by nature and his career. He carried espionage to an almost fabulous perfection. At the creation of the empire Napoleon made him Duke of Otranto. After the battle of Waterloo he advised the abdication of Napoleon, and at the same time made his own peace with the Bourbons. His services were retained some time by Louis XVIII., but he soon went as ambassador to Dresden. The general law of 1816 against all regicides deprived him of this last post, and after traveling awhile in Germany, he settled at Trieste. He died in 1820, leaving a fortune estimated at \$2,500,000.

FOUQUIER-TINVILLE, ANTHONY QUENTIN, an attorney, born in 1747, rendered his name infamous during the French revolution. He obtained from Robespierre the post of public accuser, but was put to death as one of the revolutionary tribunal, May 7th, 1795.

FOURIER, CHARLES, the distinguished social philosopher, was born at Besancon in 1772; died in Paris, 1837.

FOX, CHARLES JAMES, second son of Henry

Fox, the first Lord Holland, was born Jan. 14th, 1748. His mother was Lady Caroline Lennox, daughter of the Duke of Richmond, who was a grandson of Charles II., and so very proud of his sinister origin that neither he nor his duchess could consent that their daughter should wed Lord Holland, whose father Sir Stephen had been a singing-boy in a cathedral, while she was a great-granddaughter of Louise de Querouaille, the 'Popish mistress.' They commanded her to wed elsewhere, and an evening was set for the gentleman's formal introduction as hersuitor. Lady Caroline, that afternoon, completed her toilet by shaving her eye-brows! The ducal parents were very wroth, but it was plain she could not be presented to a new lover in that plight. Before morning she had eloped with Lord Holland. The match was happy. Lord Holland was a queer one. Thus, one day, Master Charles James very earnestly insisted upon smashing his watch just for the fun of it. "Well, if you must, I suppose you must," said papa; and the watch was smashed. The father is said to have lured the son to play, and at a later day paid up his gaming debts with £140,000. Play was a blemish of the age, and did not spare Fox: yet while in office, we are told, he never touched a card; and when at last his political friends wiped out the score against him, he abandoned the wretched habit altogether.

He received his education at Eton, where he distinguished himself by his classical exercises. From that seminary he removed to Hertford College, Oxford, after which he went on his travels. In 1768 he was returned to parliament for Midhurst. In 1770 he was appointed a commissioner of the admiralty, which place he resigned in 1772, and soon after obtained a place at the treasury board. Some differences arising between him and Lord North, he was dismissed in 1774, and from that time Fox assumed the character of a whig.

Almost the whole of his political life was spent in opposition. In vehemence and power of argument he resembled Demosthenes; but there the resemblance ended. He possessed a strain of ridicule and wit, which nature denied to the Athenian; and it was the more powerful, as it always ap-

peared to be blended with argument, and to result from it. To the perfect composition which so eminently distinguished the speeches of Demosthenes, he had no pretense. He was heedless of method; having the complete command of good words, he never sought for better; if those which occurred expressed his meaning clearly and forcibly, he paid little attention to their arrangement or harmony. The moment of his grandeur was when, after he had stated the argument of his adversary, with much greater strength than his adversary had done, and with much greater than any of his hearers thought possible, he seized it with the strength of a giant, and tore and trampled on it to destruction. If, at this moment, he had possessed the power of the Athenian over the passions or the imaginations of his hearers, he might have disposed of the house at his pleasure; but this was denied to him; and, on this account, his speeches fell very short of the effect which otherwise they must have produced.

In 1780 he was elected for Westminster, which, with a slight interruption, he continued to represent to his death. When the Rockingham party came into power, Mr. Fox was appointed secretary of state for foreign affairs. On the dissolution of this administration, by the death of the chief, a coalition was formed between Mr. Fox and Lord North, who, with their respective adherents, came again into office in 1783. The introduction of the India bill occasioned their final dismissal the same year. In 1788 Mr. Fox traveled, but while in Italy he was recalled in consequence of the king's insanity. On this great occasion, he maintained that the Prince of Wales had a right to assume the regency, which was opposed by Mr. Pitt and the parliament. The next remarkable event in the public life of Mr. Fox was the part he took with regard to the French revolution. That change he hailed as a blessing, while Burke denounced it as a curse; and this difference of sentiment produced a schism between them which was never repaired. On the death of Mr. Pitt, in 1806, Mr. Fox came again into office, as secretary of state; but he died of dropsy, Sept. 13th, 1806. His remains were interred in Westminster Abbey.

FOX, GEORGE, the founder of the society of Friends or Quakers, was the son of a weaver at Drayton in Leicestershire, and born in 1624. The shoemaker to whom he was indentured, traded also in wool and cattle, and George spent many of his hours in tending flocks, an employment which fostered his bent for musing and solitude. His communings finally wrought him to that religious enthusiasm in which he fancied himself receiving messages from on high. An impressive passage in his "Journal" has been paraphrased in Tennyson's "Two Voices." "One morning, as I was sitting by the fire, a great cloud came over me, and a temptation beset me, and I sate still. And it was said, All things come by nature; and the Elements and Stars came over me, so that I was in a moment quite clouded with it; but inasmuch as I sate still, and said nothing, the people of the house perceived nothing. And as I sate still under it, and let it alone, a living hope arose in me which cried, There is a living God who made all things. And immediately the cloud and temptation vanished away, and the life rose over it all, and my heart was glad, and I praised the living God." Conceiving himself divinely commissioned to convert his countrymen from their sins, he began about 1647 to travel through the country, and harangue at the market-places upon the vices of the age. He had formed the opinions that a learned education is unnecessary to a minister; that the existence of a separate clerical profession is unwarranted by the Bible; that the Creator of the world is not a dweller in temples made with hands; and that "the light of Christ within" is a rule of duty superior to the Scriptures. He believed that he was divinely commanded to abstain from taking off his hat to any one in homage; to use the words 'thee' and 'thou' in addressing all persons; to bid nobody good-morrow or good-night; and never to bend his knee to any one in authority, or take an oath, even on the most solemn occasion. He sometimes entered churches during service, and was moved to interrupt the clergymen by vociferous contradiction. By such breaches of order, and such rude speech as "Come down, thou deceiver," he naturally gave great offense, which sometimes led to long imprisonment, and sometimes to severe handling by the populace.

His sect became numerous. At Derby Fox admonished the justice and those with him to tremble at the word of the Lord: the justice called him a quaker (whence the name arose), and threw him into a dungeon for a year. Fox visited Ireland, the American colonies, and many parts of Europe, and died in London in 1690, worn down by the toils and hardships his zeal had brought upon him.

FOX, JOHN, a pious Protestant, was born at Boston, England, in 1517. His renunciation of popery lost him his fellowship at Oxford, and for a time he was much straitened for the wherewithal of life. After the accession of Elizabeth his fortune was easier. He died in 1587. He is best known for his "Book of Martyrs."

FRANCE has an area of 203,736 square miles; population in 1861, 37,472,132. The Pyrenees separate it from Spain, the Alps from Italy, the Jura mountains from Switzerland, the Rhine from the duchy of Baden, but the rest of the frontier is conventional, and has often varied with the fortunes of war. France has ever been considered one of the most agricultural countries of the continent; yet the husbandry is often rude, and the implements used ancient and clumsy. The great division of property arising from the law of equal distribution among all the children at the demise of the parents, lessens the size of the farms. The northern part is the best tilled. The ordinary grains are grown, and in the southerly portions, maize, the vine, the mulberry, and the olive flourish. Beet-root is extensively grown for the manufacture of sugar. The basins of the Rhone, the Garonne, and the Upper Loire are the most distinguished for their mulberry plantations and the produce of silk. The vintage is among the chief harvests of France; the average yearly produce of the vineyards is 924,000,000 gallons, of which about one-seventh is distilled into brandy.

France was anciently divided into thirty-three provinces of very unequal extent: Artois, Picardy, Champagne, Lorraine, Alsace, Franche Comte, Burgundy, Orleans, Isle of France, Perche, Normandy, Brittany, Maine, Anjou, Touraine, Berri, Nivernois, Bourbon, Lyonnais, Auvergne, Marche, Poitou, Aunis, Saintonge, Angoumois, Limousin, Guienne,

Gascony, Bearn, Foix, Rousillon, Languedoc, Dauphiny, and Provence. But since the revolution it has been divided into eighty-six departments. The departments formed from the six northern provinces are the department of the North, Pas-de-Calais, Somme, Lower Seine, Eure, Calvados, Manche, Orne, Seine, Seine-et-Oise, Seine-et-Marne, Oise, Aisne, Aube, Upper Marne, Marne, and Ardennes. The departments formed from the six provinces of the east are Meurthe, Moselle, Meuse, Vosges, Lower Rhine, Upper Rhine, Doubs, Upper Saône, Jura, Côte-d'or, Yonne, Saône-et-Loire, Ain, Rhone, Loire, Iserè, Drôme, Upper Alps. The departments formed from the seven provinces of the south are the Mouths of the Rhone, Lower Alps, Var, Upper Garonne, Tarn, Aude, Hérault, Gard, Lozère, Upper Loire, Ardèche, Eastern Pyrenées, Ariège, Lower Pyrenées, Gironde, Dordogne, Lot-et-Garonne, Lot, Aveyron, Tarn-et-Garonne, Landes, Gers, Upper Pyrenées, Corsica. The departments formed from the six provinces of the west are Charente, Lower Charente, Vienne, Deux-Sevres, Vendée, Maine-et-Loire, Ille-et-Vilaine, Côtes-du-Nord, Finistère, Morbihan, Lower Loire, Sarthe, Mayenne. The departments formed from the eight central provinces are Loiret, Eure-et-Loir, Loir-et-Cher, Indre-et-Loire, Cher, Indre, Nièvre, Allier, Creuse, Upper Vienne, Corrèze, Puy-de-Dôme, Cantal, and Vauluse. These departments are each administered by a prefect. They are subdivided into arrondissements, and these again into cantons and communes.

Paris, the metropolis of France, is the subject of a separate article. Lyons, at the confluence of the Saone and Rhone, capital of the department of Rhone, is the second city in the empire; population over 318,803. It was founded by the Romans, B.C. 42. In a single night, A.D. 59, the town was laid in ashes by fires from lightning. It was rebuilt by the aid of Nero, to whom the citizens adhered in his downfall. In 1793, the people of Lyons rose against the tyranny of the Jacobins. An army was sent by the convention to put them down, and the city sustained a siege for two months. After its surrender thousands of the inhabitants were massacred by the terrorists under Collot d'Herbois, and all the principal edifices were demolished. In

the spring of 1814, several severe actions took place in the neighborhood, between the French and Austrians. On the return of Napoleon from Elba, in March, 1815, he was received here with acclamation. Lyons is a place of much traffic, and its manufactures are the most important in France. Its silks, for texture, hue, and beauty, are not equaled in the world. In their manufacture half the population are directly or indirectly concerned. Marseilles, on the Mediterranean, is the third city of the empire, and capital of the department of Bouches-du-Rhone; population, 260,910 in 1861. A Grecian settlement was made here as early as B.C. 600. Cicero styled it the Athens of Gaul. Having embraced the cause of Pompey, it was taken by Cæsar, B.C. 49, after a long siege. During the thirteenth century it freed itself from feudal subjection and became a municipal republic. It came under the permanent dominion of the French crown in 1482. The prosperity of Marseilles is due to its extensive commerce. Its safe harbor, in which fly the flags of all nations, is formed by a small inlet of the sea, running into the heart of the city, which is built around it. Bordeaux, an important port, the capital of the former province of Guienne, and of the present department of Gironde, sits on the left bank of the Garonne, and contains 162,750 inhabitants. It is a city of great antiquity, and distinguished for its gloomy splendor. It has some magnificent churches. Its academy of sciences has a library of 128,000 volumes. The Romans called this place *Burdigala*. In the fifth century it was in the blighting hands of the Goths, and later it was pillaged and burned by the Normans. When Louis VII. married Eleanor, daughter of the last Duke of Guienne, it fell into the hands of the French. When that princess was repudiated, it, with all the south-east of France, came into the hands of the Duke of Normandy, afterward Henry II. of England, her second husband. It was restored to France under Charles VII. in 1451. During the revolution it was devastated by the terrorists, as being the seat of the Girondists. Bonaparte's continental system bore heavily upon the trade of the inhabitants of Bordeaux, and accordingly they willingly declared themselves in favor of the Bourbons, March 12th, 1814. Wine, brandy,

and fruits are the great articles of export from Bordeaux. The finest clarets are from this part of France. Havre (population 74,336), at the mouth of the Seine, is an important port. One of the most interesting towns in France is Rouen, a little higher on the Seine; population 102,649. Its ancient name was *Rotomagus*. It was the capital of the duchy of Normandy. It was besieged by the English under Henry V. in 1418, and resolutely defended by Alain Blanchard, with 4,000 men. Famine, after five months, compelled the garrison to surrender, and Henry soiled his fame by the execution of the brave Blanchard. For thirty years the English held the town, and here in 1431 they burnt Joan of Arc. The tall, narrow houses of old Rouen are often highly picturesque, and curious for their rich carvings and quaint Gothic ornaments. The noble cruciform cathedral, whose spire springs 433 feet toward the sky, and the still purer Gothic church of St. Ouen, are objects of note in this ancient town. Rouen ranks next to Lyons among the manufacturing towns of France, and is a great seat of the cotton manufacture.

The cathedral of Strasburg is yet more beautiful than that of Rouen. It was founded in 1015, and not completed till 1439. The spire, the loftiest in the world, rises 466 feet above the pavement; at the outset a similar spire was intended to rise over the south portal. The airy grace of the architecture, the beauty of the sculptured ornaments, and the richness of the many-hued windows, place this ancient pile among the foremost grandeurs of Gothic art. Strasburg (population 82,014) is on the left bank of the arrowy Rhine, and the chief town of fruitful Alsace. German is the language of the common people in this part of France, though French is generally understood. By the fortifications and citadel of Louis XIV., Strasburg was made one of the strongest places in Europe. At Rheims is another ancient cathedral of great beauty. Before its altar the kings of France have been crowned for centuries, and at its font Clovis, the founder of the monarchy, was baptized from paganism into the Christian church. Rheims has some 44,000 inhabitants, and extensive woolen manufactures; yet it is a dull old town, and its wide streets are grass-grown for the lack of bustle. Caen

CATHEDRAL OF NOTRE DAME AT STRASBURG.

was anciently the capital of lower Normandy, and the favorite residence of William the Conqueror, who was buried in the *Abbaye-aux-Hommes*, which he built. Caen was taken and plundered by Edward III. of England, who met with a desperate resistance. "The town was then," says Froissart, "large, strong, and full of drapery and all other sorts of merchandise, rich citizens, noble dames and damsels, and fine churches." Caen is still a fine town, the centre of considerable trade and manufactures, and the dwelling-place of 40,000 people. Grenoble, capital of the department of Isere, and of the ancient Dauphiny, was the first city to open its gates

to Napoleon, when he returned from Elba. The garrison had taken up arms to resist the little band of imperialists, when Napoleon, advancing and uncovering his breast, said to them, "If there be one among you, who would slay his general and emperor, he can do it. Behold, I am defenseless." He was answered by animating shouts of "*Vive l'Empereur*." The population of Grenoble is 27,000. The town is largely engaged in the manufacture of kid-gloves. [See BAYONNE, BREST, NANTES, PARIS, TOULON, TOULOUSE.]

The territory of France is admirably defended by nature against invasion, except toward the north-east. The Atlantic coast

has few harbors of any depth, and those are hard of access or strongly defended. The Pyrenees would be impassable in the face of an aroused nation; the wall of the Alps, the Jura, and the Vosges, on the eastern frontier, equally so. But on the Bavarian, Prussian, and Belgian frontiers, there are no natural defenses. In this quarter, therefore, military science has done its utmost to command all the great approaches, and in no other country are there so many strongly fortified towns in a same extent of territory. Here are the fortresses of Dunkirk, Lisle, Douay, Cambrai, Valenciennes, Conde, Maubeuge, Avesnes, Rocroy, Givet, Charlemont, Mezieres, Sedan, Thionville, Metz, Bitche, and Weisemburg. Along the Rhenish frontier (the proper defense of which is not the Rhine, however, but the Vosges) are the strongholds of Haguenau, Strasburg, Schelestadt, and Neuf Brisach. Befort, Besancon, and the Fort-de-l'Ecluse command the entrance from Switzerland. Toward the Alps and Sardinia are Grenoble and Briancon. The Pyrenean passes are warded by Perpignan, Bellegarde, Mont Louis, St. Jean-Pied-de-Port, and Bayonne. Many of the towns in the interior are fortified, but Paris, with its continuous wall and detached forts, is the most important. The great naval stations and dock-yards are at Brest, Toulon, Rochefort, Cherbourg and L'Orient.

The principal stock of the French race is the Celtic, admixed with the Romans, Visigoths, and Franks. The Catholic is the predominant religion of the country: both Catholic and Protestant clergymen are supported by the state. Education is carefully fostered by the government. The scheme of public instruction embraces a wide range of institutions and acquirements. Besides the ordinary academies and elementary schools, and the great universities and institutes, there are military schools, such as the Polytechnic and that of St. Cyr; naval schools, as at Brest, and the marine schools of surgery at Rochefort and Toulon; normal schools in almost every department, for the training of teachers; the Conservatoire of Arts and Trades, the Conservatoire of Music and Oratory, the Imperial School of the Fine Arts, all at Paris; schools of roads and bridges, schools of mines, schools of agriculture, schools of arts, and

trades, and manufactures, schools of design, &c. Thus, throughout the whole empire, industrial education is provided; sometimes of a theoretical character, and sometimes exceedingly practical, as in the schools of weaving at Lyons and Nismes, of ship-building at La Rochelle, or lace-making at Dieppe. As a consequence, the French hold high rank among ingenious and enlightened nations. The inventions of French chemists and their improvement of chemical science have done much in producing with economy and expedition the many chemical agents employed in the various branches of manufactures, particularly dyeing. The cloths and other woollens fabricated are of the best quality. The cotton manufacture is still more important, and the calicoes are widely approved. French silks surpass all others for pure brilliancy of color and exquisite taste in patterns. In jewelry, marquetry, ornamental bronze, and furniture, the French are almost unrivalled; in chronometers and instruments for scientific purposes they are wholly so. Finest porcelain is made at Sevres, Paris, and Limoges. During the wars at the beginning of the present century, English cruisers cut France off from supplies of sugar; the saccharine properties of the beet were tested; and sugar from beet-root is now a great branch of manufacture. The leading exports from France are wine, brandy, liqueurs, salt, linen, hempen cloth, woollens, silks, cottons, hats, jewelry and household furniture.

France was called by the Romans Transalpine Gaul, or Gaul beyond the Alps, to distinguish it from Cisalpine Gaul, on the Italian side of the Alps. Like other countries, it soon became a desirable object to the ambitious Romans, and, after a brave resistance, was annexed to their empire by the invincible arms of Julius Cesar, about 48 B.C. Gaul continued in the possession of the Romans until the downfall of that empire, in the fifth century. On the last day of the year 406, the Rhine was crossed by a host of barbarians who never repassed that frontier stream. Some twenty years before, when Maximus, chosen emperor by the legions in Britain, had crossed the channel into Gaul to dethrone his rival, Gratian, a considerable band of native Britons had followed his eagles. They retained possession of Armorica, which he bestowed upon them, and thence came its name

of Bretagne, or Brittany. Armorica maintained its independence against the present invasion of Vandals, Alans, Suevians, and Burgundians, but the rest of Gaul became their prey. The Suevians, Alans, and Vandals passed the Pyrenees into Spain; the Burgundians settled, with the sanction of the Roman government, in the east of Gaul; and the Visigoths, who had long been ravaging both the Roman empires, were induced to accept the cession of the country south and west of the Loire. About 420, under the leadership of Pharamond, the Franks, an ancient people of Germany, settled in Flanders, and began to get a foothold in the land to which they afterward gave their name. With Pharamond originated the Salic law by which the sovereignty is rendered hereditary only in the male line. The Franks and Burgundians, after establishing their power, and reducing the Gauls to a state of slavery, parceled out the lands among their principal leaders; and succeeding kings found it necessary to confirm their privileges, allowing them to exercise sovereign authority in their respective governments, until they at length assumed an independence, only acknowledging the king as their head. This gave rise to those numerous principalities that formerly existed in France, and to the several parliaments; for every province became, in its policy and government, an epitome of the kingdom.

The first Christian monarch of the Franks was Clovis (son of the chivalrous Childeric), who is regarded as the true founder of the monarchy. He expelled the remnant of the Romans, weakened the Visigoths, and gained brilliant victory over the Germans. He is celebrated by the vow which he made to embrace the Christian religion at the solicitation of his wife Clotilda, and was baptized at Rheims. The Franks finally conquered the Burgundians and Visigoths, and became masters of all Gaul. The first race of French kings, prior to Charlemagne, found a cruel enemy in the Saracens, who then overran Europe, and retaliated the barbarities of the Goths and Vandals upon their posterity. In the year 800, Charlemagne, King of France, the glory of these dark ages, became master of Germany, Spain, and part of Italy, and was crowned King of the Romans by the pope. He divided his empire by will among

his sons, which proved fatal to his family and their posterity. Soon after this the Normans ravaged the kingdom of France, and, about the year 905, obliged the French to yield up Normandy and Bretagne to Rollo, their leader, who married the king's daughter, and was persuaded to profess himself a Christian. This laid the foundation of the Norman power in France, which afterward gave a king to England, in the person of William, Duke of Normandy, who subdued Harold, the last Saxon king, in the year 1066.

In the reign of Philip I., who came to the throne in 1060, the crusades were commenced. In 1108, Philip was succeeded by his son Louis the Fat, or Louis VI., who engaged in a war with Henry I. of England. Letters of franchise were granted to many cities and towns by Louis VI., and the authority of the crown over the great feudatories much increased. Louis VII., surnamed the Young, carried on his father's policy for strengthening the regal power. He marched into Champagne in the year 1137, and having surprised the city of Vetry, met with no resistance, except in the parochial church, which he caused to be set on fire; a thousand and three hundred persons perished in the flames. At this time the English kings, as Dukes of Normandy and Anjou, were vassals of the French crown. Henry II. married Eleanor of Guienne, the repudiated wife of Louis, and thus his power in France was greater than that of the monarch to whom he owed allegiance: he held Normandy, Anjou, Maine, Touraine, Poitou, Limousin, Angoumois, Saintonge, Berri, Marche, part of Auvergne, Guienne, and Gascony.

Philip Augustus, Louis's son and successor in 1180, and Richard I. of England, undertook a joint expedition to the holy land, in 1191; but the former returning to Europe in disgust, the latter was obliged to relinquish the enterprise, and on his way home was imprisoned in Austria. During his captivity, and in the reign of his shiftless brother John, Philip gained Normandy, Anjou, Touraine, and Berri. Philip consolidated the regal power by substituting constitutional forms for individual caprice. His reign was marked by blood-stained crusades against the Albigenses in the south of France.

Philip II. was succeeded by his son, Louis

the Lion, in 1223. He was poisoned after a short reign of three years, during which he conquered Poitou, and was succeeded in 1226 by his son, Louis IX., commonly styled St. Louis, who engaged in a new crusade against the infidels in Egypt and Palestine, in which himself and his nobility were taken prisoners. Having been afterward ransomed, he led an army against the infidels of Africa, where he died in 1270, before Tunis. His son and successor, Philip III., kept the field against the Moors, and saved the remains of the French army; and this procured him the surname of the Hardy. In the reign of Philip IV., surnamed the Fair, who succeeded in 1285, the supreme tribunals, called parliaments, were instituted. The reign of St. Louis, one of the most equitable and virtuous of princes, and the reigns of his direct descendants, some of them as remarkable for opposite qualities, were marked by the consolidation of the power of the law as distinguished from that of the sword. This beneficial change, however, was accompanied under the successors of Louis with the most revolting acts of injustice in the name of law. Many nobles were despoiled of their fiefs, the order of the Templars was extirpated in the blood of its members, the Jews and Lombards were grievously oppressed, and trade was ruined by an abased coinage. Persecution assumed a more systematic form by the establishment of the inquisition at Toulouse, to root out the poor Albigenses. In this period the greater part of Languedoc was added to the domains of the crown, which were considerably augmented elsewhere.

The direct branch of Capetian kings ended with Charles IV., who left only a daughter; and the states having solemnly decreed that all females were incapable of succeeding to the crown, Philip de Valois, the next male heir, was raised to the throne in 1328. He was the grandson of Philip the Hardy by his third son, Charles of Valois. The mother of Edward III. of England was a daughter of Philip the Fair. Edward having claimed the French crown, hostilities commenced, and the English gained the battle of Crecy in 1346, and Poitiers in 1356; but about the end of the fourteenth century, the French recovered all the provinces which the English had conquered in France.

During the reign of Charles VI., who became insane shortly after coming of age, France fell into dissension. Two great factions contended for the mastery, the one headed by the king's uncle, the Duke of Burgundy, the other by the king's brother, the Duke of Orleans; while the citizens and peasants rebelled against the exactions of the nobles, and demanded an increase of their privileges. Henry V. of England took advantage of these disorders, and invaded France in 1415. He made himself master of Harfleur, and gained the famous battle of Agincourt, in which the French lost an incredible number of men. In 1420 the succession to the French throne was secured to the King of England by treaty; in consequence of which the infant Henry VI. was crowned King of France at Paris. But by degrees Charles VII. recovered possession of the kingdom, in which he was greatly assisted by the enthusiast, Joan of Arc, who raised the siege of Orleans, and defeated the English; but being taken prisoner, this gallant girl was barbarously burned for alleged sorcery.

Louis XI., a crafty and intriguing prince, did for France what Henry VII. did for England in breaking down the feudal power. By craft or by force, he rendered the regal power absolute, and enlarged and consolidated his empire. He robbed the nobles of their choicest privileges, and gradually united all the great fiefs with the crown. Upon the overthrow and death of Charles the Bold, he seized Burgundy. Pope Paul II. gave him the title of Most Christian King, which became an appellation of the monarchs of France; pretty name for such a cruel ruler, whose tyranny forced his subjects into a union against him, known as "the league of the public good." His son Charles VIII. was the last prince of the first line of Valois. The Duke of Orleans ascended the throne in 1498, under the title of Louis XII. He was so humane, generous, and indulgent to his subjects, that he obtained the appellation of father of his people. Francis I., one of the most distinguished of the kings of France, succeeded him. He ascended the throne in 1515, at the age of twenty-one, and died in 1547. His reign was passed in contests with the Emperor Charles V. He conquered the Milanese in 1525, but was taken prisoner at the siege of Pavia. In 1535 he

possessed himself of Savoy, but was afterward defeated. During his reign, notwithstanding the wars, arts, commerce, and literature began to flourish in France. In the time of Henry II., Calais was conquered, the last relic of the English possessions in France.

On the accession of Francis II., commenced those civil commotions which harassed France during thirty years. The king was instigated to attempt the extirpation of the Protestants, who, by way of reproach, were denominated Huguenots. The minority and reign of Charles IX. exhibited a series of treacheries, commotions, and assassinations; France became a field of war and bloodshed. The massacre of St. Bartholomew's disgraced the age. Henry III. was a weak and debauched prince; and in him ended the line of Valois. On his death, the crown devolved on the house of Bourbon, in the person of Henry IV., King of Navarre, who was descended from Robert of France, Count of Clermont, the fifth and last son of Saint Louis. Henry was the son of Antony of Bourbon, Duke of Vendome, and Jeanne d'Albret, heiress of Navarre. He was justly styled the Great, being one of the best and most amiable of the French princes; but he perished by the hand of an assassin in 1610.

Under the minority and in the reign of Louis XIII., France returned to disorder and wretchedness, and Cardinal Richelieu, the prime minister, rendered the power of the crown absolute. The reign of Louis XIV. was long and brilliant. The great Condé compelled the Emperor Ferdinand III. and Christiana, Queen of Sweden, to conclude the peace of Westphalia. But the unbounded ambition of Louis rendered him odious or formidable to every prince in Europe. The united forces of England, Holland, and Austria obliged him to conclude the peace of Ryswick in 1697, and that of Utrecht in 1713. He reigned from 1643 to 1715. William III. of England was the great enemy of Louis XIV. In 1702, he organized a new confederacy of the powers of Europe against him, but died before hostilities commenced. The Duke of Marlborough, who led the allied forces, gained, in 1704, the battle of Blenheim, which was followed by other victories. But, in 1713, this bloody and useless contest was terminated by the peace of Utrecht,

though Louis succeeded in placing his grandson on the throne of Spain.

At the age of five years, his great-grandson ascended the throne, under the title of Louis XV. In conjunction with Germany, Russia, and Sweden, France, in this reign, twice contended against Prussia and Great Britain. These wars were concluded in 1748 and in 1763. Louis XVI. assumed the crown of France in 1774, under most unfortunate auspices. He found a court abandoned to the utmost extravagance, and the country loaded with an enormous debt. The king convoked an assembly of the notables, consisting of princes, deputies chosen from among the nobility, dignified clergy, the parliaments, and the *pays d'état*.

It was proposed to establish a land tax, without any exception in favor of the nobility or clergy. This proposal being followed by a general refusal, the assembly of the notables was dissolved, and the minister thought he could make a more advantageous bargain with the parliaments. But as the latter remonstrated, and advanced the opinion that the right of imposing new taxes belonged only to the states general, the king convoked them in 1789. Necker's indiscreet measure, by which it was stipulated that the numbers of the *tiers état* (third estate) should be, at least, equal to that of the other two orders conjointly, threw the preponderance into the scale of the former, who could not fail to find many adherents in the superior classes. As soon as the deputies of the third order had formed themselves into a national assembly, the other orders were led away by their impulsive force, and the equilibrium was entirely destroyed.

The storm of popular fury gathered and broke rapidly. On the 4th of July, 1789, the Bastille was destroyed. On the 4th of August the privileges of the nobility were suppressed. On the 5th of October, 1789, the king, queen, and royal family were forced from Versailles by the mob, and brought captive to the capital. However, the monarch disconcerted the schemes of his adversaries by a free acceptance of the new constitution, which abolished the feudal system and the titles of nobility. The situation of Louis and his family became so unsupportable under

the harsh restraints which were imposed, that they contrived to escape from their implacable enemies; but the unfortunate monarch, being recognized at St. Menchoult by Drouet, the post-master, was stopped at Varennes, constrained to return to Paris with his family, and to become a mere prisoner.

While the king was preparing to surrender his throne and life, the Jacobins caused a decree to be enacted, suppressing the chasseurs and grenadiers, of whom they were afraid, as well as the staff of the national guard. All the measures which they pursued till the 10th of August, 1792, had, for their sole aim, the overthrow of the monarchy. On that day, the Marseillaise, who had been invited to Paris to form the advanced guard in the attack on the palace of the Tuileries, in conjunction with the national guards, fired on the devoted Swiss who composed the royal body-guard, and almost annihilated them. The king and his family sought refuge in the assembly; it was decreed that they should be imprisoned in the Temple, and they were conducted thither.

The national convention was opened on the 21st of September, and in the first sitting abolished royalty and proclaimed the republic. The king was tried and condemned, and on the 21st of January, 1793, perished on the scaffold. Against the French republic, Austria and Prussia had already declared war, and, on the king's death, their example was followed by Great Britain and Holland, and speedily after by Spain and Russia. While France was pressed on all sides by the different powers of Europe, this unfortunate country was a prey to all kinds of internal disorders, and to the most unbounded licentiousness.

Robespierre and Danton obtained a decree by which all the *sans-culottes* were to be armed with pikes and muskets at the expense of the rich, who were themselves to be disarmed as suspected persons. Marat, one of the principal agents in the revolution, was assassinated by Charlotte Corday. Toward the close of June, 1793, the new constitution was adopted, and great disturbances broke out at Lyons, Marseilles, and in La Vendée. Soon after the surrender of Valenciennes to the English, the committee of public safety was established, to desolate France by the

most horrid butcheries and persecutions. They apprehended all suspected persons, and tried them by revolutionary committees, the powers of which were so unlimited that they could readily seize on four-fifths of the population of France.

One of their early victims was the unhappy Marie Antoinette, the widow of the murdered Louis. Her death was followed by the destruction of the Girondists. The infamous Duke of Orleans was brought up to Paris from Marseilles, and, being tried and condemned, braved the insults of the multitude on the way to execution. Brittany and a great part of Normandy being filled with the royalists, who had acquired the denomination of *Chouans*, Carrier, one of the most atrocious monsters of the revolution, was sent to Nantes, where he spared neither age nor sex, but put to death the aged, the infirm, and even infants. The atrocities committed by the satellites of the convention in the city of Lyons, exceeded all that can be conceived; at the end of five months, nearly 6,000 persons had perished.

In Paris the executions were now multiplied to such a degree, that eighty persons were frequently conveyed in the same vehicle to the place where they suffered. To cite the names of all the illustrious victims who fell, would far exceed our limits, and, at the same time, present too horrid a picture of human depravity. At length, Robespierre, Couthon, and St. Just were brought to condign punishment. A form of government was afterward settled by the convention; and a council of ancients, a council of five hundred, and five rulers, called a directory, were appointed: but the other powers of Europe being still in league against France, and the new government being unfortunate in the field, the executive power was, in 1799, vested in three consuls, of whom the first was the victorious Napoleon Bonaparte.

The consulate restored the energy of the government. Bonaparte, having, in 1800, gained the victory of Marengo, forced Austria to conclude the treaty of Luneville in February, 1801; and concluded the treaty of Amiens with England in October of that year; thus restoring peace to all Europe. The British government refusing to surrender Malta, according to the treaty of Amiens,

after some angry discussions the English ambassador left Paris in April, 1803, and war was recommenced. In 1804, the first consul, Napoleon Bonaparte, was crowned Emperor of France by the pope; and, in 1805, King of Italy, at Milan. He afterward assumed the title of Mediator of Switzerland, and Protector of the Confederation of the Rhine. He made one of his brothers King of Holland, another King of Naples, a third King of Spain, and a fourth King of Westphalia.

These manifestations of ambition excited, in succession, the jealousies and fears of all Europe. Austria and Russia commenced hostilities in 1805, but were overthrown at Austerlitz; Prussia in 1806, but she was crushed at Jena; Russia again in the same year, but she was defeated at Friedland; Spain, in 1807; Austria, again, in 1808, but she was overthrown at Wagram; Russia, again, in 1812; and finally, Russia, Prussia, Sweden, Austria, England, &c., invaded France in 1814, when Napoleon abdicated, retired to the island of Elba, and the Bourbons were restored. After a year's absence, Napoleon returned to Paris, but having been defeated in the memorable battle of Waterloo, again abdicated the throne, and was conveyed as a state prisoner to the island of St. Helena, where he died in 1821. The Bourbons were reinstated on the throne in the person of Louis XVIII., brother of Louis XVI., and France relinquished the states and provinces acquired during the revolutionary wars. Louis XVIII. died on the 16th of December, 1824; his brother, Charles X., ascended the throne, and was crowned with splendor at Rheims, after taking the solemn oath to govern according to the charter. But the misfortunes of the Bourbons had not taught them wisdom. In 1830, the tyranny of the ancient regime seemed to have reappeared, and fetters were placed upon the press. On Tuesday morning, July 27th, the liberal journals of Paris were seized, and a revolution immediately broke out. In three days the glorious struggle was terminated in favor of the people. The paving-stones and tiles of the houses became weapons more formidable than sabres or muskets. The royal cavalry, as they rushed upon the barricades, were assailed in front and from above; the

young scholars of the Polytechnic school, having been dismissed without their swords, seized what arms they could find, and ranged themselves on the side of the people; some commanded the populace, others served the guns with spirit and success. Aug. 2d, the king abdicated, and was permitted to leave France. The Duke of Orleans was chosen king, a new ministry appointed, and, after a fair trial, the old ministry was imprisoned for life.

Louis Philippe, though put upon the throne by the will of the people, forgot the lesson that experience should have taught him. The tranquillity of France was again ruffled by discontent. At length, in February, 1848, the suppression of a great reform banquet which was to be holden at Paris, caused a violent tumult. Barricades were thrown up in the streets of Paris, the Tuileries were ransacked, the prisons opened, and wild excesses indulged in by the furious populace. Louis Philippe abdicated in favor of his little grandson, and fled across the channel. A republic was at once proclaimed, and a provisional government formed. This gave place on the 6th of May to an executive commission, chosen by the national assembly. Lamartine, Arago, Garnier-Pages, Marie, Ledru Rollin, Dupont de l'Eure, were the leading members of this commission. Liberty, equality, fraternity, were the watchwords of the new republic. The penalty of death for political offenses was abolished. Universal suffrage was proclaimed. All slaves upon French territory were set free. The perpetual banishment of the late monarch and his family was decreed. National workshops were established, wherein all laborers out of work were employed at the public expense.

A spirit of anarchy was abroad, and the new government was assailed by many riots. A fearful struggle broke out on the 23d of June. Paris was declared to be in a state of siege, and the government invested General Cavaignac with dictatorial power. After a bloody contest of four days he brought the insurgents to submission. Sixteen thousand persons had been killed or wounded, and half as many were taken prisoners. A constitution was promulgated, under which, on the 11th of December, 1848, Louis Napoleon

was elected president; Cavaignac was the candidate of the republicans.

The constitution was overthrown by the *coup d'état* of Dec. 2d, 1851. The legislative assembly was dissolved, and the resisting members arrested. Paris was declared to be in a state of siege, and occupied by thousands of troops. Thiers, Changarnier, Cavaignac, Bedeau, and Lamoriciere were thrown into prison. Hundreds were banished to the pestilential marshes of Cayenne. Louis Napoleon was declared elected president for ten years. This was only preliminary to further usurpation. Dec. 2d, 1852, the empire was restored, and the nephew of his uncle reigned as Napoleon III.

We subjoin a list of the dynasties of France.

THE CARLOVINGIANS.

- 752. Pepin the Short.
- 768. Charlemagne, emperor of the West.
- 814. Louis the Debonair, emperor.
- 840. Charles the Bald, emperor in 875.
- 877. Louis the Stammerer, his son.
- 879. Louis III. and Carloman II.
- 882. Carloman II.
- 884. Charles the Fat; usurper, in prejudice to Charles the Simple.
- 887. Eudes, or Hugh, Count of Paris.
- 893. Charles III., the Simple.
- 922. Robert, brother of Eudes; Charles killed him in battle.
- 923. Rodolf, Duke of Burgundy.
- 936. Louis IV., son of Charles III.
- 954. Lothaire, his son.
- 986. Louis V., the Indolent, son of Lothaire; poisoned by his queen, and thus ended the line of Charlemagne.

THE CAPETS.

- 987. Hugh Capet, son of Hugh the Great, Count of Paris, seized the crown, in prejudice of Charles of Lorraine, the uncle of Louis IV.
- 996. Robert II., his son, born 970.
- 1031. Henry I., his son, born 1005.
- 1060. Philip I., his son, born 1053.
- 1108. Louis VI., the Fat, his son, born 1078.
- 1137. Louis VII., the Young, his son, born 1120.
- 1180. Philip Augustus, his son, born 1165.
- 1223. Louis VIII., Cœur de Lion, his son, born 1187.
- 1226. Louis IX., St. Louis, his son, born 1215.
- 1270. Philip III., the Hardy, his son, born 1245.
- 1285. Philip IV., the Fair, his son, born 1268.
- 1314. Louis X., the Headstrong, his son, born 1289.
- 1316. John I., a posthumous son of Louis X.; lived only a few days.
- 1316. Philip V., the Long (on account of his stature), son of Philip the Fair, born 1294. He was preferred to the daughter and heiress of Louis X., thus confirming the Salic law.

- 1322. Charles IV., the Handsome, third son of Philip the Fair, born 1295.

BRANCH OF VALOIS.

- 1328. Philip VI., born 1293, grandson of Philip the Hardy by his third son, Charles of Valois.
- 1350. John II., the Good, his son, born 1319.
- 1364. Charles V., the Wise, his son, born 1337; the first prince who bore the title of dauphin.
- 1380. Charles VI., his son, born 1368.
- 1422. Charles VII., the Victorious, his son, born 1403.
- 1461. Louis XI., his son, born 1423.
- 1483. Charles VIII., the Affable, his son, born 1470.

BRANCH OF VALOIS ORLEANS.

- 1498. Louis XII., the Father of the People, born 1462, descended from a younger son of Charles V.

BRANCH OF VALOIS ANGOULEME.

- 1515. Francis I., the Father of Letters, born 1494.
- 1547. Henry II., his son, born 1519.
- 1559. Francis II., eldest son of Henry II., born 1544.
- 1560. Charles IX., second son of Henry II., born 1550.
- 1574. Henry III., third son of Henry II., born 1551.

HOUSE OF BOURBON.

- 1589. Henry IV., the Great, born 1553, descended from Robert, Count of Clermont, younger son of St. Louis, and brother of Philip III.
- 1610. Louis XIII., his son, born 1601.
- 1643. Louis XIV., his son, the Great, born 1638.
- 1715. Louis XV., his great-grandson, born 1710.
- 1774. Louis XVI., his grandson, born 1754.
- Louis XVII., his son. [Numbered with the kings though he never reigned. He died in prison, June 8th, 1795, aged ten years and two months.]

REPUBLIC.

- 1793. Till 1804, under various forms, France was a republic.

THE EMPIRE.

- 1804. Napoleon I., born Aug. 15th, 1769.

THE BOURBONS RESTORED.

- 1814. Louis XVIII. (Count of Provence), brother of Louis XVI., born Nov. 17th, 1755.
- 1824. Charles X. (Count of Artois), his brother, born Oct. 9th, 1757; deposed.

HOUSE OF ORLEANS.

- 1830. Louis Philippe, son of the notorious Duke of Orleans, born Oct. 6th, 1773; deposed.

NEW REPUBLIC.

- 1848. Louis Napoleon Charles Bonaparte, born April 20th, 1808, chosen president.

THE EMPIRE REVIVED.

1852. Napoleon III. [By assuming this title Louis Napoleon recognized the son of Napoleon I., as the second emperor of the name. His father abdicated in his favor, but he never reigned.]

FRANCIA, GASPARD RODRIGUEZ DE, commonly called Dr. Francia, and known as the dictator of Paraguay, was born at Assomcion in that province, 1757. When the South American provinces threw off the yoke of Spain, Francia was zealous in establishing the independence of Paraguay, and soon attained the sole dictatorship, which he held from 1815 till his death in 1840. He adopted the principle of non-intercourse, and during his rule Paraguay was another Japan. Although he is accused of cruelty, it should be remembered that he preserved order in Paraguay, during a period in which the neighboring state of Buenos Ayres changed its government, amid convulsions of riot and blood, nearly forty times!

FRANCIS I. of France, surnamed by his subjects the father of letters, was born at Cognac in 1494; his father was Charles, Count of Angouleme. He succeeded Louis XII., in 1515. Louis had laid claim to the duchy of Milan. Francis renewed the demand. He passed the Alps, penetrated as far as Milan, and found the imperialists and Swiss camped near Marignano. The contest was kept up for two whole days. Francis and the Chevalier Bayard performed prodigies of valor, and the Marshal of Trivulzio, who had been in eighteen actions, called this a combat of giants. The Swiss were beaten with a loss of 15,000 men; Sforza ceded Milan, and retired to France, where he died. The Swiss agreed to a perpetual treaty of peace, and long remained the faithful allies of France. Leo X., equally reconciled, came to a conference in which the pragmatic sanction was abolished, to make way for the concordat by which the king enjoyed the power of conferring benefices.

The death of the emperor, Maximilian I., presented the imperial throne to the view of Francis I. and Charles of Spain. The former never pardoned his rival for having obtained it, and hence arose interminable wars. The first care of Francis I. was to attach to himself Henry VIII. of England; and they had an interview near Calais on the Field of

the Cloth of Gold; but Charles V. ruined his rival's scheme by gaining the favor of the all-powerful Cardinal Wolsey. The campaign which followed presented a scene of alternate success and defeat on both sides. The Milanese were won by the intrigues of Leo X. and Charles V.; and France had at once for adversaries the new pope, Adrian VI., the emperor, England, the Venetians, and the Genoese, and, to crown her misfortunes, the Constable of Bourbon, whom discontent drove to the arms of Charles V., and whom imperial favor raised to the rank of commander-in-chief.

Francis fought in different places with various success. The imperialists and the English were repulsed by La Tremouille, the Duke of Guise, and the Duke of Vendome; but Bonnivet was beaten, and the brave Bayard killed, in Italy. Yet these misfortunes did not destroy the hopes of Francis: he passed the mountains and re-entered the territory of the Milanese. Following the advice of Bonnivet, he besieged Pavia, although the oldest officers warned him against doing so. The allies arrived in time to succor it, and, on February 24th, 1525, was fought the battle of Pavia, in which Francis, after having had two horses killed under him, and smarting with wounds, was taken prisoner. Bonnivet killed himself in despair.

The king wrote to his mother, Louisa of Savoy, who was regent in his absence, this memorable line, "Madame, we have lost all but honor." Transferred to Spain, he was imprisoned at Madrid, where, disheartened and sick, he signed the treaty by which he ceded Burgundy, Flanders, and Artois, and gave up his two sons as hostages. Issuing from his prison, his spirits revived with the free air and open scenery, and springing upon a spirited horse, he exclaimed with animation, "I am yet a king." His progress through Spain hardly resembled that of a prisoner. Throughout his journey, entertainments were given him by the Spanish noblemen, who were glad of an opportunity to display their wealth and consequence. One night, on arriving at a noble manor, he was obliged to take his seat at a splendid festival; it concluded with a ball, in which the courteous monarch did not refuse to take a part. He asked two beautiful

girls, daughters of a proud old nobleman, to dance with him. But they only consented to perform that part of the figure in which the lady averts her face from her partner; in short, so blindly patriotic were these pretty Spaniards, that they turned upon their heels, to the no small confusion of the King of France. Their old father, however, not only disapproved of their conduct, but punished it in a summary manner, for, seizing both by the hair, he dragged them out of the ball-room with more rapidity than grace. So much for refusing a king's invitation.

Francis witnessed a whimsical instance of Spanish pride in his reception by a certain old gentleman named Don Diego d'Alvar, who, feigning a painful indisposition, kept his seat, while the French monarch remained standing in his presence. Don Diego had a menagerie, an expensive part of the establishment of a Spanish grandee in those times. During the festival given to Francis, an African lion escaped from his cage. Consternation spread among the guests, each of whom thought himself the devoted victim of the infuriated animal, when the major-domo of the castle, seizing in one hand a flaming brand, and grasping his sword in the other, advanced to meet the lion. The animal, frightened by the flames, recoiled, and the major-domo followed him up to his cage, in which he enclosed him with as much coolness as if he had been operating upon a greedy hound taken in the act of thieving from the larder. This act of courage was more admired by Francis than anything else which occurred at the castle of Don Diego.

Francis returned to France. His cause becoming that of all the princes who dreaded the increase of the power of Charles V., a league was formed between the pope, the princes of Italy, Henry VIII. of England, and Francis I. The indignant emperor sent Laney into the States of the Church, where he made himself master of many places. The Constable of Bourbon, even after the conquest of Milan, wanting money, advanced upon Rome, and promised his troops the pillage of this city. He was killed in the assault. The furious soldiers, at the end of two hours' fighting, entered Rome, killed all they met, sacked the houses, profaned the churches, and delivered themselves up to ex-

cesses of all kinds, which continued for two months.

The flame of war rekindled. Marshal Lautrec regained the greater part of Milan; sacked Pavia, in revenge for the capture of the king; then forced the imperialists to conclude a treaty with the pope, who was besieged in the castle of St. Angelo; and went thence to Naples, where he perished of the plague with the rest of his army. In 1529, a treaty of peace was concluded at Cambray, called the Peace of Ladies (*Paix des Dames*), on account of the plenipotentiaries, the Duchess of Angoulême, for Francis I., her son, and Margaret of Austria, governess of the Low Countries, for Charles V., her nephew. The king engaged to pay the emperor 2,000,000 crowns, to cede the sovereignty of Flanders and Artois, and to marry Eleonora, the sister of the emperor, whose attentions had solaced his captivity.

Finding peace established, he employed himself in repressing a multitude of disorders to which the wars had given rise, in making wise regulations, in reforming legal abuses, and preserving the tranquillity of the church by persecuting the reformers that menaced it. He founded colleges, protected literature, which he himself cultivated, encouraged the arts, founded the royal library and printing establishment, honored learned men, and labored to deserve the title of restorer of the sciences. Commerce, trade and industry were fostered under his rule.

But he again cast his eyes upon Milan, and in 1535 entered Italy, and made himself master of Savoy. Charles, in turn, made an irruption into Provence, but was repulsed with loss. The Flemings, who had entered Picardy, met with the same fate. The alliance concluded between Francis I. and Solymán, the sultan of the Turks, rendered Charles more prudent, and he concluded a truce for ten years. This was soon broken by his ill faith, and the murder of two French ambassadors. War was waged with various success, for two years, in Italy, France, Spain, and the Netherlands, till Charles and Francis concluded peace at Cressy in 1544.

In March, 1547, Francis, who possessed so many good qualities, died, the victim of his illicit intrigues. Notwithstanding his numerous wars, he kept the finances of France in a

flourishing condition. He wedded in 1514, Claude, daughter of Louis XII. and the Duchess of Brittany. She died in 1524, and in 1530 he married Eleanor of Austria, sister of Charles V., and widow of Emmanuel the Fortunate of Portugal. She died in 1557.

FRANCIS, Sir PHILIP, a famous politician, was born in Ireland, in 1740. He was educated at St. Paul's school; after which he obtained a place in the office of the secretary of state. In 1760, he went in the suit of the English ambassador to Lisbon. In 1763, he was a clerk in the war office, and, in 1773, he went out to India, as a member of the council of Bengal, and fought a duel with Warren Hastings, who was wounded. On his return to England, he was elected to parliament for Yarmouth in the Isle of Wight. He supported the proceedings against Warren Hastings, whom he opposed on every occasion. When the whigs came into office, he was made knight of the bath. He died Dec. 22d, 1818. The authorship of the letters of Junius is most generally ascribed to him. [*See JUNIUS.*]

FRANCIS, St. There are five saints of this name in the Romish calendar. St. Francis of Assise, 1182-1226; St. Francis of Calabria, 1416-1507; St. Francis of Borgia, died 1572; St. Francis of Sales, 1567-1622; St. Francis Xavier, 1506-1552. [*See XAVIER.*] The mendicant order of friars called Franciscans, and also Grey Friars, was founded by St. Francis of Assise, 1209-1220. Their rules were chastity, poverty, obedience, and very austere regimen; but they became rich, voluptuous, and lazy. They appeared in England in 1224, and at the breaking up of monasteries by Henry VIII., they had fifty-five abbeys or other houses.

FRANKFORT, on the MAIN, is one of the four free cities, and the seat of the German diet. A territory of 91 square miles is attached to the city, and the government is republican; total population in 1855, 74,784. Frankfort was made a free city in 1154. It is a place of large traffic, banking, and manufactures. The aggregate capital of its bankers is said to be \$100,000,000. In the sixteenth century its annual fairs were attended by forty thousand strangers. Though no longer so famous, they are still animated and attractive.

FRANKLIN, BENJAMIN, was born in Boston, Jan. 17th, 1706. He was the youngest of seventeen children, and was intended for his father's business, which was that of a soap-boiler and tallow-chandler, but being disgusted with this employment, he was apprenticed to his brother, who was a printer. This occupation was more congenial to his taste, and he used to devote his nights to the perusal of such books as his scanty means enabled him to buy. By restricting himself to a vegetable diet, he obtained more money for intellectual purposes, and at sixteen had read Locke on the Understanding, Xenophon's Memorabilia, and the Port Royal Logic, in addition to many other works. Having incurred the displeasure of his father and brother, he ran away, sailed in a sloop to New York, walked thence to Philadelphia, and entered that city with a dollar in his pocket, and a loaf of bread under his arm. Here he obtained employment as a printer, and Sir William Keith, the governor, observing his diligence, persuaded him to go to England, to purchase materials for a press, on his own account, promising him letters of introduction and credit. This was in 1725. He found he was the bearer of no letters that related to himself, and he was accordingly obliged to work at his trade in London. He returned to Philadelphia, where, in a short time, he entered into business with one Meredith, and about 1728 began a newspaper, in which he inserted many of his moral essays. He published "Poor Richard's Almanac" for a quarter-century and more. It is well known for its pithy sayings: "Drive thy business, let not that drive thee;" "God gives all things to industry; then plow deep while sluggards sleep, and you will have corn to sell and keep;" "Three removes are as bad as a fire;" "Keep thy shop, and thy shop will keep thee;" "If you would have your business done, go; if not, send;" as poor Richard says. The frugal maxims of poor Dick, Franklin himself strictly observed, and he grew to prosperity and good repute in his adopted city. At the age of twenty-seven, he began the study of the modern and classical languages. He founded the University of Pennsylvania and the American Philosophical Society, and invented the Franklin stove, which still holds its place, even among the

FRANKLIN'S GRAVE AT PHILADELPHIA.

variety of modern inventions of a similar kind. In 1746, he made his experiments on electricity and applied his discoveries to the invention of the lightning-rod.

In 1751, he was appointed deputy post-master-general for the colonies. After the defeat of Braddock, a bill for organizing a provincial militia having passed the assembly, Franklin was chosen its commander. In 1757, he was sent to England with a petition to the king and council against the proprietaries, who refused to bear their share in the public expenses. While thus employed, he published several works, which gained him a high reputation, and the agency of Massachusetts, Maryland, and Georgia. In 1762, Franklin was chosen fellow of the royal society, and made doctor of laws at Oxford, and the same year returned to America.

In 1764 he was again deputed to England as agent of his province, and in 1766 was ex-

amined before the house of commons on the subject of the stamp-act. His answers were clear and decisive. His conduct in England was worthy of his previous character. Finding him warmly attached to the colonies, invective and coarse satire were leveled against him, but his integrity and matchless wit formed an invulnerable defense. He was next offered "any reward, unlimited recompense, honors and recompense beyond his expectations," if he would forsake his country, but he stood firm as a rock.

He returned to America in 1775, and was immediately chosen a member of congress, and performed the most arduous duties in the service of his country. He was sent as commissioner to France in 1776, and concluded a treaty, February 6th, 1778, in which year he was appointed minister plenipotentiary to the court of Versailles, and one of the commissioners for negotiating peace with Great Brit-

FRA

ain. Although he solicited leave, he was not permitted to return till 1785. He was made president of Pennsylvania, and as a delegate to the convention of 1787, approved the federal constitution. He died April 17th, 1790.

How generally he was beloved, both at home and abroad, the various honors which he received, show. Incorruptible, talented, and virtuous, he merited the eulogium of Lord Chatham, who characterized him as "one whom all Europe held in high estimation for his knowledge and wisdom; who was an honor, not to the English nation only, but to human nature." His wit and humor rendered his society acceptable to every class. On one occasion, he was dining with the English ambassador and a French functionary at Paris. The former rose, and gave the following sentiment: "England! the bright sun whose rays illuminate the world!" The French gentleman, struggling between patriotism and politeness, proposed, "France! the moon whose mild beams dispel the shades of night." Doctor Franklin, rising in turn, said, "General George Washington! the Joshua who commanded the sun and moon to stand still, and they obeyed him!" Franklin's wit and humor are happily displayed in an epitaph which he once wrote.

LIES HERE, FOOD FOR WORMS;

YET THE WORK ITSELF SHALL NOT BE LOST,

FOR IT WILL (AS HE BELIEVED) APPEAR ONCE MORE
IN A NEW

AND MORE BEAUTIFUL EDITION,

CORRECTED AND AMENDED

BY

THE AUTHOR.

FRANKLIN, Sir JOHN, was born at Spilsby, Lincolnshire, in 1786. His early love for the sea led him into the navy as a midshipman at the age of fourteen. In 1803 he accompanied Capt. Flanders in a voyage of discovery to the South Seas, and was wrecked on the coast of New Holland. He was at Copenhagen, Trafalgar, and New Orleans. His first Arctic voyage was in 1814, as second to Capt. Buchan. He was also in the expedition of Ross and Parry. Afterward, with

Mr. Richardson, he made two arduous journeys by land in the polar regions, and for his services was knighted. From 1830 to 1843 he was governor of Van Diemen's Land. On the 19th of May, 1845, he sailed once more for the frozen seas of the north. After a time the anxiety of Christendom was awakened in behalf of Sir John and his comrades. Expedition after expedition, both from England and America, was dispatched for their rescue. The generous toil was in vain. The sad fate of the long missing party was at last ascertained, but not from a survivor's lips. [See NORTH-WEST PASSAGE.]

FREDEGONDE, the wife of Chilperic of France, a ruthless woman who persuaded her husband to oppress his subjects. She is said to have murdered Sigebert, Meroveus, the son of Chilperic, Andoveus, his brother, and Pretextatus, Bishop of Rouen. Afterward, retiring to Paris, she continued her persecutions of Brunchaut, and Childebert her son, took the field, and vanquished him with the slaughter of 30,000 of his army. She then wasted Champagne, and retook Paris. She died in 597, after having caused Chilperic to be assassinated.

FREDERICK I., surnamed Barbarossa, succeeded to the imperial crown, on the death of his uncle, Conrad III., in 1152. His first business was to insure the tranquillity of Germany, after which he marched into Italy, and assumed its sovereignty. He afterward renewed the war, took Milan a second time, and destroyed it, but he was excommunicated by the pope. He engaged in the crusades against the Turks, defeated Saladin in two combats, and took several cities from the infidels. He was drowned July 10th, 1190; in the midst of his successes.

FREDERICK II., King of Prussia, commonly called the Great, was the son of Frederick William I., and was born January 21st, 1712. His education was strict, but when he grew up, he showed so strong an inclination to literature and music, as to incur the displeasure of his father, who considered reading as beneath the dignity of a monarch and a man. So harsh was the conduct of his parent, that in 1730 he attempted to escape from Prussia, but was taken with his traveling companion, Lieutenant Catt, who was put to death by order of the king. The prince

FRE

himself was punished by confinement. The death of his father raised him to the throne, May 31st, 1740, and, by taking advantage of the defenseless state of Maria Theresa, he added Silesia to his dominions. In 1744, he again took up arms against Austria; and the treaty of Dresden, in 1745, left him in possession of an extended territory. In 1755, he entered into an alliance with England, which produced the seven years' war; in which Frederick exhibited all the powers of his character as a skillful general. In 1757, he had to contend with Russia, Austria, Saxony, Sweden, and France; notwithstanding which, and though his enemies made themselves masters of his capital, he extricated himself from his difficulties, and by the battle of Torgau repaired all his losses. In 1763, peace was restored. Frederick afterward led a philosophic life, with the exception of his wicked share in dismembering Poland in 1773. He died August 17th, 1786.

FRENEAU, PHILIP, a poet of the American Revolution, died at Freehold, N. J., Dec. 18th, 1832, aged about eighty. He was for some time a captive in the Scorpion prison-ship at New York.

FRIDAY, the sixth day in the week, was so called from Friga, a Scandinavian goddess commonly supposed to be the same with Venus. She was the wife of Thor, and the goddess of peace, fertility, and riches. Friga, Thor, and Odin composed the court or supreme council of the gods. The Mohammedans consider Friday holy, because on that day the Hegira occurred. *Per contra*, throughout Christendom from time immemorial, Friday has been dreaded as a day of ill omen. From the earliest days of Christianity the Friday before Easter has been kept as a solemn fast, in remembrance of the crucifixion of Christ, Friday, April 3d, A.D. 33. By the Saxon Christians this fast was called Long Friday, because of the great length of the offices observed and fastings enjoined. The name Good Friday is peculiar to the Episcopal church. The evil repute of this day of the week may have arisen from the fact that it was darkened by our Saviour's death. A superstitious fear of it has been especially prevalent among seamen. It would seem that Americans, whether mariners or landmen, have little cause to dread this day.

On Friday, August 21st, 1492, Christopher Columbus sailed on his great voyage of discovery. On Friday, October 12th, 1492, he first discovered land. On Friday, January 4th, 1493, he sailed on his return to Spain, and had he not reached home in safety, the happy result that led to the settlement of this vast continent, would not have been known. On Friday, March 15th, 1493, he arrived at Palos in safety. On Friday, November 22d, 1493, he arrived at Hispaniola, on his second voyage to America. On Friday, June 13th, 1494, he, though unknown to himself, discovered the continent of America. On Friday, March 5th, 1496, Henry VII. of England gave to John Cabot his commission, which led to the discovery of North America; this is the first American state paper in England. On Friday, September 7th, 1565, Melendez founded St. Augustine, the oldest town in the United States by more than forty years. On Friday, November 10th, 1620, the Mayflower, with the Pilgrims, made the harbor of Provincetown, and on that day they signed that august compact, the forerunner of our present glorious constitution. On Friday, December 22d, 1620, the Pilgrims made their final landing at Plymouth rock. On Friday, February 22d, 1732, George Washington, the father of American freedom, was born. On Friday, June 16th, Bunker Hill was seized and fortified. On Friday, October 7th, 1777, the surrender of Saratoga was made, which had such power and influence in inducing France to declare for our cause. On Friday, October 19th, 1781, the surrender at Yorktown, the crowning glory of the American arms, occurred. On Friday, July 7th, 1776, the motion in Congress was made by John Adams, seconded by Richard Henry Lee, that the united colonies were, and of right ought to be, free and independent. Thus, by numerous examples, we see that, however it may be with foreign nations, Americans need never dread to begin on Friday any undertaking, however momentous it may be.

FRIEDLAND, a town of Bohemia, memorable for the battle fought there on the 14th of June, 1807, between the French and the allied Russians and Prussians, which resulted in the total defeat of the latter, with immense loss. Napoleon commanded the French in

FULTON'S FIRST STEAMBOAT.

person. The treaty of Tilsit was a result of his victory.

FRIENDLY ISLANDS, a group of islands in the South Pacific Ocean, 150 in number. They are very fertile, but contain but few springs of good water. They were discovered by Tasman in 1642, and visited in 1773 by Captain Cook, who thought the inhabitants amicable and inoffensive, and christened the isles accordingly. It was afterward learned that they intended to kill him and seize his vessels. The people are industrious, and many have been converted to Christianity by missionaries.

FRISIANS, an old tribe of Germans, inhabiting Friesland. Prussia took possession of East Friesland in 1744, and it was annexed to Hanover in 1815.

FRITH, JOHN, an early martyr to the reformation in England, was burned about 1533; Frith's work on the Eucharist is supposed to have been the first English treatise on the side of the reformed doctrines.

FROBISHER, Sir MARTIN, the first Englishman who tried to find a north-west passage to the Pacific, in 1576. He entered the strait since known by his name. He was knighted for his services against the Armada.

He died in 1594 from a wound got in an attack on Brest.

FROISSART, JOHN, the celebrated French chronicler, died in 1402, aged sixty-nine.

FRY, ELIZABETH, who has been called 'the female Howard,' was born in 1780, at Earlham, Norfolk. Her maiden name was Gurney, and she was a member of the society of Friends. Her life was devoted to labors of love in behalf of the poor, the afflicted, and the suffering. In her endeavors for the reformation of criminals she visited all the principal jails in Great Britain, France, Holland, Denmark, and Prussia. The unwearying benevolence of this excellent woman made serious inroads on her health, and she died at Ramsgate, October 11th, 1844.

FUENTES D'ONORE, BATTLE OF, in Portugal, May 5th, 1811, between the French under Massena, who desired to relieve Almeida, and a greatly inferior force commanded by Lord Wellington. The fight lasted until evening, and victory rested with neither army.

FULLER, THOMAS, an eminent English divine and writer, born 1608 died 1661, aged fifty-three. He was the author of various works in practical divinity and history, but his quaint melange, "The Worthies of Eng-

land," is now best known. His memory was wonderful: it is said that he could repeat five hundred unconnected words after twice hearing them, and recite all the signs in the principal thoroughfare of London after once passing through it and back again. He was chaplain to Charles II.

FULTON, ROBERT, the celebrated American engineer, was born in Pennsylvania in 1765. At an early age he exhibited a fondness for the mechanical arts, and a talent for drawing. In his twenty-second year, he went to England, and subsequently to France, distinguishing himself in both countries by mechanical inventions. He returned to America in 1806. Mr. Livingston, the American ambassador to

France, furnished him with funds to carry out his plans. Fulton had built a steamboat upon the Seine in 1803, which was partly successful. In 1807, the first attempt at steam navigation in America was made upon the Hudson. The maximum speed was only five miles an hour. In 1809 Mr. Fulton took a patent for his invention, and in 1811 a second patent for subsequent improvements. He died February 24th, 1815.

FUSELI, HENRY, was born at Zurich, Feb. 7th, 1741, and bred to the church. He came to England in 1763, and by the advice of Sir Joshua Reynolds adopted painting as a profession, wherein he attained a flattering eminence. He died April 16th, 1825.

G.

GADSDEN, CHRISTOPHER, lieutenant-governor of South Carolina, was born in 1724. He was an early and ardent friend of liberty, and discharged the duties of member of the provincial congress with ability and applause. After the capture of Charleston by the British in 1780, Mr. Gadsden and other firm patriots were arrested, in flagrant violation of the terms of capitulation, and incarcerated for months in dungeons at St. Augustine. He died Aug. 28th, 1805.

GAELS, a family of the Celts, who passed over from Gaul to Britain and the neighboring islands. Traces of them are still found in the remote districts of Ireland and Scotland.

GAGE, THOMAS, the last royal governor of Massachusetts. He was lieutenant under Braddock, witnessed his defeat, and bore his body from the field of battle. In 1760 he was appointed governor of Montreal, and a few years afterward succeeded to the chief command of the British forces in America. He was the successor of Hutchinson in the office of governor of Massachusetts. Gage was naturally a benevolent and amiable man, but his sense of duty forced him to the execution of the odious measures of his masters in England. He went home in the autumn of 1775, and died in April, 1787.

GAINES, EDMUND PENDLETON, major-general in the American army, born in Virginia,

1777, entered the army in 1799, served with distinction in the war of 1812, and died in 1849.

GALATIA, originally part of Phrygia and Cappadocia, obtained its name from the settlement of a large body of Gauls in that section of Asia Minor, about B.C. 239. It became a Roman province, B.C. 25. St. Paul appears to have visited Galatia twice, about A.D. 50 and 55 (Acts xvi. 6; xviii. 23).

GALBA, SERGIUS, or SERVIUS SULPICIUS, succeeded Nero on the imperial throne. He had risen gradually through various state offices, although continually exposed to the jealousy of Nero, who ordered him to be assassinated; and having escaped the toils which were laid for him, he was saluted emperor, A.D. 68. His avarice induced him to profit by the sale of offices, and his appointment of Piso Licinianus, instead of Otho, to fill the office of colleague in the government, exasperated the prætorians, who put him to death, A.D. 69, in the seventy-second year of his age, after a reign of three months.

GALENUS, CLAUDIUS, commonly called GALEN, a celebrated Greek physician, who lived in the second century of the Christian era. He was an oracle in medical science for centuries.

GALILEO, or GALILEI, was born at Pisa, July 15th, 1564. He was a professor of math-

GAL

ematics at Pisa, and afterward at Padua. He constructed for himself a telescope in 1609, with which he discovered mountains and cavities in the moon, the round disc of the planets, the four satellites of Jupiter, and spots on the sun. For teaching the Copernican theory, he was accused of heresy, examined by the inquisition, and put to the torture. Worn out by age, he succumbed to his persecutors, and abjured his objectionable doctrines, in 1633. In his later years he became blind. He died at Florence, January 8th, 1642.

GALL, FRANCIS JOSEPH, the founder of the science of phrenology, was born in the duchy of Baden, March 9th, 1758 and died in Paris in 1828.

GALLATIN, ALBERT, born in Geneva, 1761, came to America in 1779, was for a while tutor at Cambridge, and finally removed to Pennsylvania. He represented that state as representative and senator in Congress from 1793 to 1801. President Jefferson appointed him secretary of the treasury in 1802, and he administered that department with eminent ability till 1813, when he was sent abroad to negotiate peace with Great Britain. He was afterward minister to France, Great Britain, and the Netherlands. He died in 1849.

GALLAUDET, REV. THOMAS H., the pioneer of deaf-mute instruction in America, died at Hartford, Sept. 10th, 1851, aged sixty-four. He visited Europe in 1815, acquired the art from Abbe Sicard, and returned in August of the next year, with Laurent Clerc, one of Sicard's most intelligent deaf-mute pupils. He was the first principal of the American Asylum at Hartford, resigned in 1830, and became chaplain at the Retreat for the Insane in that city.

GALVANI, LUIGI, a physician and physiologist, famous for his discovery of galvanism, was born at Bologna in 1737, and died in 1798.

GAMA, VASCO DE, the celebrated Portuguese navigator, who in 1497 discovered the way to the East Indies around the Cape of Good Hope. He lived in the reign of Emanuel the Fortunate. He was appointed viceroy of the Portuguese Indies, and died in December, 1524, at Goa.

GANSEVOORT, PETER, was born in Albany, N. Y., July 16th, 1749. He accompanied Montgomery to Canada, in 1775, and was raised to the rank of colonel the ensuing year.

August 2d, 1777, he was besieged with his command in Fort Stanwix (where the town of Rome now stands), by Colonel St. Leger, with a body of British Tories and Indians, who, after a most gallant defense, were repelled and forced to retreat, August 22d. Gen. Gansevoort died July 2d, 1812.

GARDEN, ALEXANDER, an eminent botanist, born in Scotland, 1730; removed to Charleston, S. C., 1752, where he practiced medicine; died in London, 1791, aged sixty-one.

GARDENING. Introduced into England from the Netherlands, whence most vegetables were imported till 1500; muskmelons, the pale gooseberry, salads, garden roots, cabbages, &c., were brought from Flanders, and hops from Artois, 1520; rye and wheat from Tartary and Siberia, where they are yet indigenous; barley and oats unknown, but certainly not indigenous in England; rice from Ethiopia; buckwheat, Asia; borage, Syria; cresses, Crete; cauliflower, Cyprus; asparagus, Asia; chervil, Italy; fennel, Canary Islands; anise and parsley, Egypt; garlic, the East; shalots, Siberia; horse-radish, China; kidney beans, East Indies; gourds, Astracan; lentils, France; potatoes, Brazil; tobacco, America; cabbage, lettuce, &c., Holland. Jasmine came from the East Indies; the elder tree from Persia; the tulip from Cappadocia; the daffodil from Italy; the lily from Syria; the tube rose from Java and Ceylon; the carnation and pink from Italy, &c.; ranunculus from the Alps; apples from Syria; apricots from Epirus; artichokes from Holland; celery from Flanders; cherries from Pontus; currants from Zante; damask and musk roses from Damascus, as well as plums; gilliflowers, carnations, the Provence rose, &c., from Toulouse, in France; oranges and lemons from Spain; beans from Greece, and peas from Spain.

GARDINER, STEPHEN, Bishop of Winchester, was a strenuous opponent of the reformation in England. He lost his place under Henry VIII., but regained it under the bigoted Mary, whom he instigated to persecute the Protestants with fire and sword. 1483-1555.

GARRICK, DAVID, one of the most celebrated and talented of English actors, and the friend of Dr. Johnson. He was born at Lichfield, 1716, and died Jan. 20th, 1779, having amassed a bountiful fortune by the profession he had elevated and adorned.

GARTER, ORDER OF THE. This famous order of knighthood was instituted by Edward III. of England. King Edward, being of a military genius, and engaged in a war for recovering France, made it his business to draw the best soldiers of Europe into his interest. With this view he projected a restoration of King Arthur's round table, and proclaimed a solemn tilting, to invite foreigners of quality and courage to the exercise. The place for the solemnity was fixed at Windsor. He published his royal letters of protection for the safe coming and returning of such foreign knights as intended to venture their reputation at the jousts and tournaments, which were to be held on the 19th of January, 1344. He provided a great supper to begin the solemnity, and then ordering this feast to be annually kept at Whitsuntide, he for that purpose erected a particular building in the castle, wherein he placed a round table, of two hundred feet diameter, in imitation of King Arthur's at Winchester, and thereat entertained the knights at his own expense of a hundred pounds a week.

The said king issuing out his garter for the signal of a battle that was crowned with success (supposed to be Cressy), he instituted an order of knights, April 23d, 1349-50, giving the garter pre-eminence among its ensigns, whence the select number whom he incorporated into a fraternity were styled *Equites Aureæ Periscelidis*, 'the knights of the golden garter.' The Black Prince was the first of the original twenty-five knights.

The habits and ensigns of this order consist of the garter, surcoat, mantle, hood, george, collar, cap, and feathers; the four first were assigned by the founder, and the rest by Henry VIII.

The garter, appointed to be worn by the knights on the left leg between the knee and calf, was instituted by the founder, as a tie of association, honor, and military virtue, to bind the knights strictly to himself and each other in friendship, and as an ensign of unity and combination, to promote the honor of God, and the interest of their prince and sovereign. He also caused to be wrought in gold letters this motto, *Honi soit qui mal y pense* (Evil to him who evil thinks); declaring thereby the equity of his inten-

tion, retorting shame and defiance upon him who thought ill of the just enterprise in which he had engaged for the support of his right to the French crown. The garter is of blue velvet bordered with gold (having the letters of the motto of the same), and is buckled on at the time of the election.

The knight's pantaloons are of pearl-colored silk. On the outside of the right knee is fixed a knot of open silver lace and ribbons intermixed, in the form of a large rose; and, a little below the knee, is placed the garter. His shoes, which are of white shammy, with red heels, have each a knot on the exterior side. His doublet is cloth of silver, adorned before and behind, and down the sleeves, with several guards or rows of silver lace, each having a row of small buttons set down the middle. The cuffs are open, and adorned with the before-mentioned lace and ribbons set in small loops. At the bottom of the upper seam of each cuff is fixed a knot of silver ribbons that fall over his gloves, which are of kid, laced at the top with silver, and adorned at the opening with a knot, like that on the cuff. His surcoat is of crimson velvet, lined with white taffeta. His cap is of black velvet adorned with a diamond band, and a plume of white feathers, with a heron sprig in the middle. The mantle is of sky-colored velvet, adorned on the left shoulder with St. George's cross encircled with the garter, wreathed on the edges with blue and gold. The hood is of crimson velvet and lined with white taffeta. The collar, which weighs thirty ounces troy, of gold, was introduced by Henry VIII., and contains twenty-six garters enameled, and as many knots, alluding to the sovereign of the order, to which is pendent the figure of St. George and the dragon, which is a gold medal, and may be enriched with jewels at the pleasure of the owner. The officers of the order are the prelate of the garter, the chancellor of the garter, the register of the garter, and black rod, the last officer being instituted by the founder. The knights are installed in St. George's Chapel, at Windsor.

GASCOIGNE, Sir WILLIAM, an eminent English lawyer and judge, born 1350, died 1413.

GASSENDI, PIERRE, an eminent French

astronomer and philosopher, one of the great restorers of inductive philosophy, died 1655, aged sixty-three.

GAS, introduced in London, for lighting Pall Mall, in 1809; first into the United States, at Baltimore, 1821.

GASTON DE FOIX, Duke of Nemours, the nephew of Louis XII. of France, was born in 1488. He ran a brilliant career in arms, and fell in the battle of Ravenna, April 11th, 1512.

GATES, HORATIO, was an Englishman by birth, and the godson of Horace Walpole; scandal said the filial relationship was closer and less sanctified. In Braddock's disastrous campaign, he commanded one of the independent companies from New York, and was severely wounded. Afterward he reached the rank of major in the regular army, but neither his pay nor promotion equaled his desires; and after several years of solicitation and waiting for something better, he sold his commission, a disappointed man, crossed the Atlantic in 1772, purchased an estate in Virginia, espoused the popular side, and renewed his old campaigning acquaintance with George Washington. When Washington was put at the head of the continental army, at his express request Gates was made adjutant-general, with the rank of brigadier. His experience was of much service in organizing the raw forces at Cambridge. In May, 1776, he was made major-general, and in June the command of the army engaged in the invasion of Canada was conferred upon him. Questions of rank and precedence arose between him and Schuyler, the commander of the northern department. Through the intrigues of Gates with Congress, Schuyler was removed in August, 1777, and Gates made his successor. Schuyler was then busy in opposing the progress of Burgoyne's expedition; the glory of the victory that ensued was due in good part to his previous operations, though his supplanter had the fame. The Conway cabal raised up Gates as a rival to Washington, but their schemes, although very annoying and embarrassing, were finally abortive. When Gates was named to the command in the South, General Lee predicted, "His northern laurels will be exchanged for southern willows." This was verified in the disaster of Camden. His con-

duct was investigated, and he was acquitted of blame. Meantime hostilities had ended. Gen. Gates removed to the city of New York, and died April 10th, 1806, aged seventy-eight. A few years before, he had manumitted his slaves, but many preferred to remain in the family. Vanity was the general's besetting sin, often obscuring his judgment and better traits.

GAY, JOHN, the author of the "Beggars' Opera," "Black-Eyed Susan," and "The Hare with Many Friends," died Dec. 4th, 1732, aged forty-four. Over his grave in Westminster Abbey is a tablet with a long recital of his praises, set up by his friends, the Duke and Duchess of Queensberry; but few read more than the irreverent epitaph which Gay himself composed:

"Life's a jest, and all things show it:
I thought so once: now I know it."

Gay and Swift were fast friends, and the letter of Pope, announcing Gay's death, was thus indorsed by Swift: "On my dear friend Mr. Gay's death. Received, December 15th, but not read till the 20th, by an impulse foreboding some misfortune."

GENGHIS KHAN, the famous Mongol emperor, was born A.D. 1163. He founded in 1206 that vast empire, the grandeur of which was the theme of admiration throughout the world. The leading men of the small domain left him by his father having rebelled against him, he marched upon them with an army of 30,000 men, and completely frustrated their designs. Tartary and China and all inland Asia fell before the power of the conqueror, whose dominions extended to the banks of the Dnieper. He died Aug. 24th, 1227, leaving to his children an empire twelve hundred leagues in length. The conquests of the great khan were stained with the most atrocious cruelties; his march was like the progress of a fiery storm, bursting over several countries at once, and involving them in ruin. According to the most moderate calculation, no fewer than 2,000,000 men fell beneath the murdering sword, without reckoning the numbers that affliction and the horrors of slavery consigned to the grave.

[See MONGOLS.]

GENLIS, STEPHANIE, Countess de, was born near Autun, in 1746. Soon after her birth she narrowly escaped suffocation, for a

gentleman who called to see her mother, was about to sit down upon the chair on which the infant was laid, had actually divided the flaps of his coat for that purpose, and was only prevented by the united screams of the nurse and mother. The literary talent of Mademoiselle de St. Aubin early developed itself, and induced the Count de Genlis to offer her his hand without ever having seen her. She was governess to the children of the notorious Duke of Orleans, to whose number she added an illegitimate daughter, afterward the wife of Lord Edward Fitzgerald. Madame de Genlis died, after a wandering life, in 1830, just after one of her pupils had become King of the French.

GENOA is now a duchy of Sardinia. The city of Genoa, on the Mediterranean coast, has a population of 100,000. The harbor is capacious and secure. The city is built on a declivity, and the streets are narrow, dirty, and steep. The duchy contains 1,257 square miles, and 545,000 inhabitants. Genoa is a town of great antiquity. It was seized by the Langobards, after the fall of the western Roman empire, and came next into the hands of the Franks. It was erected into a republic after the fall of the Carolingian dynasty. Quarrels with the Pisans and Venetians occupied the Genoese for many years. In the thirteenth century the Genoese founded many and wealthy colonies in the Levant and the Euxine. The French assumed the sovereignty of Genoa, but did not long retain it. Internal dissensions not unfrequently enabled foreign powers to seize upon the state. In 1528 tranquillity was restored to Genoa, an aristocratical form of government established, and a doge placed at the head of the state. Some time after this the city was convulsed by furious contentions between the old and new nobility, the two factions into which the aristocracy was divided. By degrees Genoa lost her foreign possessions, the last of which, Corsica, revolted in 1730. During the invasion of Italy in 1797, Genoa observed a strict neutrality, but the dissensions of the Genoese did not escape the vigilant eye of Napoleon. He established a form of government on the French representative system, and gave it the title of the Ligurian republic. In 1805 it was annexed to the French empire. In 1815 the congress of Vienna annexed

Genoa to the territories of Sardinia. The city was seized by revolutionists, and a republic proclaimed in April, 1850, but General Marmora quelled the rising before the month was out.

GEORGE I., II., III., IV., of England. [See HANOVER, HOUSE OF.]

GEORGIA has an area of 58,000 square miles; population in 1860, 1,057,286, of whom 591,588 were whites, 462,198 slaves, and 3,500 free negroes. Along the coast is a level strip, interspersed with many swamps. West of this tract are a series of plains forming the sand-hill belt or pine barrens, thickly grown with forests of the long-leaved pine; varied with fine savannahs, verdant and well-watered, and ornamented with clumps of evergreens and other trees and shrubs. The lower sides of these savannahs are often joined by a great cane swamp, dotted with coppices and hummocks variously wooded. The northern half of the state is a hilly region, blessed with a strong and productive soil and mild climate; "fertile and delightful, continually replenished by innumerable rivulets, either coursing about the fragrant hills, or springing from the rocky precipices in many cascades, invigorating by their purity and coolness the hot and sultry air." Into this section the Blue Ridge enters from North Carolina, and, suddenly changing its general course, runs nearly east and west into Alabama. The largest rivers of Georgia are the Savannah, which divides it from South Carolina, the Altamaha, and the Chattahoochee. Along the Florida border, between the headwaters of the Suwanee and the St. Mary's, there is an extensive series of swamps, the Okefinokee, covered with a thick growth of bay-trees, vines, and underwood, presenting in the wet season the appearance of wide lakes, with islands of rich high land. The Creeks had a tradition that somewhere in this wilderness dwelt a race whose women were incomparably beautiful; they called them the daughters of the sun. Some of the Creek hunters, when lost among the labyrinth of bogs, had been relieved by these charming maids; but all search for the blissful island was in vain.

On the low islands that line the Georgia coast is grown the long-staple cotton, thence called Sea-island cotton, whose value exceeds that

of any other in the market. Rice is the other great agricultural staple. Tar, pitch, turpentine, and lumber, yielded by the broad forests of pine, are prominent exports. The mineral resources are imperfectly known: iron ores are abundant, and much gold has been found.

Georgia was colonized in 1732 by a private company, and the colony named in honor of George II. In 1733 Gen. Oglethorpe founded the town of Savannah. The colony was intended as an asylum to relieve the distresses of the poor in England, and to secure the frontiers of South Carolina from the Indians and Spaniards. Several bodies of Germans and Highlanders were brought over soon afterward. The lands were held on a military tenure. In 1752 it became a royal government, and in 1755 a provincial legislature was established. It joined its sister colonies in the Revolution, but from 1778 till the close of the war was occupied by a British force. Its territory originally included the present states of Alabama and Mississippi. The Creeks and Cherokees, whose home was here, have been removed beyond the Mississippi.

Georgia seceded, Jan. 19, 1861, and was throughout one of the most important bases of the rebellion, as the main rebel railroad systems centered at Atlanta, and her financial and agricultural resources were a principal source of supplies. She also suffered severely, especially during that long course of tremendous operations which included Chicamunga, Chattanooga, the advance on Atlanta, the fall of that place and Sherman's great march from Atlanta to the sea. During

this same period, several destructive forays were made into the state by Union cavalry.

Milledgeville, the capital of the state, is pleasantly situated at the head of steamboat navigation on the Oconee, in the centre of a rich cotton district; population in 1850, 2,216. Savannah is finely placed for a commercial town, accessible to large ships from the sea, and communicating with the interior by the noble river on which it stands. It is built on a plain about fifty feet above the water, from which it is a fine sight, with its spacious and regular streets, many public squares, handsome buildings, and frequent groves of trees. The former unhealthiness has been done away by judicious drainage. Savannah is one of the most flourishing cities in the South, and the great commercial depot of Georgia; population in 1860, 22,292. It suffered a severe blow in 1820 by a conflagration whose loss was set down at \$4,000,000. It was taken by the British in 1778, and held until 1782. The great interior emporium of Georgia is Augusta, at the head of steam navigation on the Savannah, well laid out and built, and the market of an extensive and populous country; population 12,493, in 1860. Macon, on the Ocmulgee, consisted in 1822 of a single cabin; in 1853 it had 7,000 inhabitants, and its trade is rapidly growing. Columbus stands upon a plain about sixty feet above the Chattahoochee, just below the falls; population 7,000 in 1853. The banks of the river are here very beautiful, and a spacious and regular town stands where in 1828 the solitude of the primeval forest lay. Athens, on the Oconee, is

the seat of Franklin College, originally incorporated as the University of Georgia. Atlanta, the junction of three great railways, has grown rapidly of late.

GEORGIA, a rich country of Asia, south of the Caucasus, between the Black Sea and the Caspian, now belonging to Russia. The beauty and grace of its women have long been famous. The Caucasian country is the seat of a great variety of tribes, differing in speech, habits, and many physical characteristics. The Georgians are the purest specimens of the Caucasian type, which the old ethnologists made the highest class of the human race. The Assetes have a marked affinity in habits and customs with the ancient Germans. Here are the Yezidis, who worship the evil spirit, Armenians, Tartars, &c. In the same village, Armenians, Georgians, and Tartars dwell together, yet rarely intermix; each people preserving its own rites, traditions, customs, and dress. All the races who have passed through this country have left memorials. Here are the dwellings of the Troglodytes, entire cities cut out of the rock; the colossal ruins of aqueducts and canals that date to the times of the great monarchies of Babylon, Assyria, and Persia; with Greek and Roman edifices, and castles of the middle ages. It is very remarkable that the prophet Elijah is a particular object of adoration among almost all the Caucasian tribes, whether Mohammedan or heathen. There are caverns consecrated to him, where the inhabitants assemble on certain days to offer sacrifices. If one is struck dead by lightning, they say that he was killed by the prophet Elijah, and his relatives rejoice.

GERMANICUS CÆSAR, a son of Claudius Drusus Nero, and Antonia, the virtuous niece of Augustus. He was adopted by his uncle Tiberius, and raised to the highest offices of state. At the time of the death of Augustus, he was employed in a war with Germany, but Tiberius, jealous of the hero, recalled him, although he permitted him to celebrate a triumph for his victories. He then sent him to the east with sovereign authority, but saw his successes with a jealous eye. Germanicus died near Antioch, A.D. 19, in the thirty-fourth year of his age, not without suspicion of poison.

GERMANTOWN, a town of Pennsylvania, seven miles north-west of Philadelphia, mem-

orable for a battle fought here on the 4th of October, 1777, between the Americans, under Washington, and the British, to the disadvantage of the former. Victory was once within the grasp of the Americans, when, in the bewildering fog that enveloped the field, the cry that the British were gathering in their rear, threw them into disastrous panic. The loss of the enemy was 71 killed, 415 wounded, and 14 missing; that of the Americans, 150 killed, 521 wounded, and 400 made prisoners.

GERMANY is bounded west by the Netherlands, Belgium, and France; south by Switzerland and the Austrian territories in Italy; east by the kingdoms of Hungary, Galicia, Poland, and Prussia; and north by the Baltic. Its area is estimated at 284,000 square miles. The following are the states which form the Germanic confederation: Austria, Prussia, Bavaria, Saxony, Hanover, Wurtemberg, Baden, Hesse Cassel, Hesse Darmstadt, Lauenburg, Luxemburg, Brunswick, Mecklenburg Schwerin, Nassau, Saxe Weimar, Saxe Coburg and Gotha, Saxe Meiningen Hildburghausen, Saxe Altenburg, Mecklenburg Strelitz, Oldenburg, Anhalt Dessau, Anhalt Bernburg, Anhalt Köthen, Schwarzburg Sondershausen, Schwarzburg Rudolstadt, Liechtenstein, Waldeck, Reuss, Schauenburg Lippe, Lippe Detmold, Hesse Homburg, Lübeck, Frankfurt, Bremen, and Hamburg.

Germany, like Gaul, was anciently occupied by numerous tribes, some of which only were subjugated by the Romans, after a very fierce and prolonged resistance. It was afterward conquered by Charlemagne, who fixed his imperial residence in Germany. The posterity of Charlemagne inherited this country until 911. Otho the Illustrious, Duke of Saxony, having declined the royal dignity on account of his great age, Conrad I., first duke of Franconia, was unanimously elected to fill the vacant throne in 912. Thence, until 1806, the empire of Germany was an elective monarchy. Frederick Barbarossa ascended the throne in 1152, and during his splendid reign was formed the famous league of the Hanseatic towns for the protection of commerce. Frederick II. was crowned at Aix-la-Chapelle in 1212. He did much for the encouragement of arts and literature.

The princes of the empire, assembled in diet at Frankfort, elected Rodolph of Haps-

burg to the imperial throne in 1272. He swayed the imperial sceptre with ability for about eighteen years, and died, after a short illness, in the seventy-third year of his age. Albert I. of Austria was invested with the diadem at Aix-la-Chapelle, in 1298. Under his harsh administration, the Swiss revolted, and the foundation of the Helvetic republic was laid.

Henry VII. of Luxemburg was elected in 1308, and now commenced the celebrated division of Guelphs and Ghibellines in the contests between the emperors and popes. On his death, Louis of Bavaria was recognized as lawful possessor of the throne in 1330. Charles IV., King of Bohemia, received the imperial diadem in 1347. His reign was prosperous, and under his sway a spirit of opposition to the corrupt clergy began to manifest itself. At the diet of Nuremberg, 1356, he proclaimed the famous Golden Bull, which became the fundamental law of the empire. This regulated the rights, privileges, and duties of the electors; the manner of the election and coronation of an emperor; the coinage, customs, and other matters of commerce; the rights and obligations of the free imperial cities, &c.

Sigismund ascended the throne in 1411. He concurred with the pope in convoking the famous council of Constance, by which the reformer Huss was condemned; the war of the Hussites followed. Albert II. died in a short time, and, in 1440, the electors placed upon the imperial throne Frederick III., Duke of Austria. During his long reign, science and learning made great advance, and many universities were founded throughout Germany. His son Maximilian was elected king of the Romans, and invested with the supreme dignity in 1493. He was an active and enterprising prince. He ended many abuses which had desolated the empire, particularly private feuds. He improved the courts, introduced a system of police, and established a post in 1516. He organized the army anew and better. During his reign the Reformation began. [See REFORMATION.] At the death of Maximilian, Francis I. of France, Henry VIII. of England, and Charles of Spain sought the imperial crown. The latter was preferred. [See CHARLES V.] Ferdinand, the brother of Charles, succeeded him at his abdication.

Then came Maximilian II., the son of Ferdinand, who had already received the crown of Bohemia, and had been elected king of the Romans. On the demise of this illustrious prince, his eldest son, who had been elected king of the Romans, and acknowledged as his successor to the crown of Hungary and Bohemia, succeeded to the empire by the name of Rodolph II., in 1576. The emperor ceded Bohemia to his brother Matthias, who succeeded him in 1612. On the demise of Matthias, Ferdinand was declared emperor in 1619, but, on account of his fanaticism, the Protestants renounced allegiance to him, and the 'thirty years' war' was waged with sanguinary animosity by both parties. Ferdinand was at first triumphant, and Germany began to tremble with the apprehension of slavish subjection; Gustavus Adolphus of Sweden, rushing with impetuosity into the empire, defeated the imperialists, but was slain on the plain of Lutzen.

On the death of Ferdinand II., his son, Ferdinand III., ascended the imperial throne in 1637, at a critical period, and succeeded in tranquilizing Germany, although the flames of war yet rolled unabated. France, Sweden, Denmark, England, and some of the German states were confederated against Spain and the house of Austria. At length a treaty was concluded, in 1648, since known as the peace of Westphalia. By this treaty, the religious and political liberties of the Germans were firmly secured against misrule. On the death of Ferdinand, Leopold I. of Hungary and Bohemia was declared duly elected to the imperial throne in 1658. Scarcely were the troubles in the north composed, when a war with Turkey broke out, while Louis XIV. of France took this opportunity of marching against the German monarch. But notwithstanding his perplexities and embarrassments, Leopold found means to render the crown of Hungary hereditary in his family, an object which had long been desired. The Archduke Joseph was chosen sovereign of Hungary, elected king of the Romans, and ascended the imperial throne in 1705. He governed with stern inflexibility, and continued the Spanish war. The Archduke Charles was elevated to the imperial throne, by the name of Charles VI., in 1711. Anne of England having expressed her pacific intentions, he had to sus-

tain the whole weight of a war with France and Spain, unless he accepted the terms of Louis. At length, however, negotiations were commenced, and the treaty of Utrecht re-established the general peace. Charles died in the twenty-ninth year of his age. He was the author of the 'pragmatic sanction,' which secured all the possessions of the house of Austria to his daughter the Archduchess Maria Theresa, and which was guaranteed by the states of the empire, and by all the great powers of Europe.

The death of Charles, in 1740, was followed by very serious commotions, but the pragmatic sanction was preserved, and the treaty of Fussen and Aix-la-Chapelle terminated the war of the Austrian succession in favor of Maria Theresa. Two years after the conclusion of 'the seven years' war' by the treaty of Hubertsburg, the Emperor Francis, husband of Maria Theresa, died in the twenty-first year of his reign. He was succeeded by his son Joseph II. Joseph joined with Russia and Prussia in the base dismemberment of Poland, but this did not prevent hostilities from being commenced between Austria and Prussia, on account of the succession to the electorate of Bavaria. Maria Theresa, Empress of Germany, Queen of Hungary and Bohemia, and Archduchess of Austria, died in 1780. Joseph II. promulgated a decree in favor of the liberty of the press, which had been hitherto much circumscribed in the Austrian dominions. In 1783 he published an edict for the total abolition of villanage and slavery in Bohemia, Moravia, and Silesia; and similar measures were taken soon after for the relief of the peasants of Austrian Poland. He also abolished the use of torture in his hereditary dominions. He was succeeded by his brother, Leopold II., Grand-duke of Tuscany, in 1790.

The French revolution now attracting the attention of all the European powers, a conference was held at Pilnitz between the emperor, the King of Prussia, and the Elector of Saxony; but, instead of advising an immediate attack upon France, Leopold acted with his accustomed moderation, and merely wished to oppose an effectual security against the hurricane which threatened Europe. He was afterward persuaded to commence hos-

tilities, but his designs were soon terminated by his death, in the second year of his reign.

Francis II. succeeded his father in 1792. At the instigation of the King of Prussia, he resolved to use his utmost endeavors for the restoration of the monarchy in France; but the attempts of the allies were so unfortunate in the first campaign, that they commenced the second with altered views, and a feeling of insecurity in consequence of previous losses. The second campaign proved more successful, but that of 1794 was disastrous to the allies. The fourth campaign again raised the hopes of the Austrians. In 1796, from altered views of expediency, the French turned their arms upon the Austrian possessions in Italy, where the victories of Bonaparte soon spread the terror of his name.

At length the court of Vienna, finding that all expectations of effectual opposition to the French were totally unfounded, concluded in 1797 the treaty of Campo-Formio, by which the emperor ceded to France the whole of the Netherlands, and all his former territory in Italy, but received in return the city of Venice, Istria, Dalmatia, and the Venetian islands in the Adriatic. However, the war was renewed with great vigor on both sides, and, in 1799, the Austrians compelled the French to evacuate nearly the whole of Italy. The brilliant successes of the Archduke Charles in Germany, also, reanimated the court of Vienna, and contributed to break off the conferences at Rastadt. In the mean time, Bonaparte having returned from Egypt, and been chosen first consul of the French republic, the war with Austria was destined to take a new turn. That general, at the head of an army of reserve, marched toward Italy, with inconceivable labor crossed the Alps, and advanced to Milan. After reducing Pavia, and defeating the Austrians in the battle of Montebello, the French marched to the plain of Marengo. Both the French and imperialists exhibited extraordinary skill and resolution. At length the first consul, availing himself of an error which had been committed, compelled his enemies to retreat. In Germany the French had opened the campaign with similar success; and General Moreau, after defeating the imperialists in several engagements, formed a junction with

the army of Italy, and obliged the Austrians to conclude an armistice.

Soon after, preliminaries of peace were signed at Paris; but as Bonaparte refused to negotiate with England, the emperor would not ratify them. Hostilities were therefore re-commenced, and the Austrians were defeated by Moreau in the decisive battle of Hohenlinden. This was followed in 1801 by the treaty of Luneville, by which the emperor ceded to France the Belgic provinces and the whole of the country on the left side of the Rhine. In 1805, the court of Vienna entered into an alliance with Russia, against France. Preparation was made for war. Without waiting for the arrival of the Russian troops, the Austrians marched toward the banks of the Danube, where hostilities commenced, and the French, under Bonaparte, after a severe contest, succeeded in defeating the imperialists with great loss. The Austrians retreated, and Bonaparte advanced to Munich. From this time, partial engagements took place, in which the Austrians, though they fought with bravery, were uniformly defeated. The whole Austrian army in Suabia now concentrated itself in and near Ulm; and everything seemed to indicate the approach of a general and decisive battle. However, to the astonishment and concern of all Europe, Gen. Mack, who was in Ulm with 33,000 men, without striking a blow agreed to the terms of capitulation offered by Bonaparte, evacuated that important fortress, and surrendered himself and his troops prisoners of war. Bonaparte was everywhere victorious, and the decisive battle of Austerlitz compelled an armistice, speedily followed by the treaty of Presburg.

In 1806, sixteen German princes renounced their connection with the German empire, and signed at Paris the Confederation of the Rhine, by which they acknowledged Napoleon as their protector. This was followed, on the 6th of August, by the renunciation of the title of Emperor of Germany, by Francis, who assumed that of Emperor of Austria, and publicly absolved all the German provinces and states from their reciprocal duties toward the German empire. In 1809, Francis, smarting under sacrifices already made, and dreading farther encroachments, resolved to try again the chance of war, at a time when a large

proportion of the military force of France was employed in completing the subjugation of Spain. War was declared, in proclamations from the Archduke Charles and the Emperor Francis, and these were followed by a manifesto, stating the provocations and causes of alarm which had been given by France to Austria.

The Austrians were defeated in two battles, one at Abensburg by Napoleon in person, and the other at Eckmühl; and after these defeats, Vienna surrendered to the French emperor. But in the battle of Aspern, which followed soon after, Napoleon experienced the severest check which his career had yet received. After the decisive battle of Wagram, an armistice was concluded. This was followed by a peace between Austria and France, by which Francis ceded to Napoleon all those parts of his territory which bordered on the Adriatic. Other cessions were also made. By a secret article in this treaty, the Emperor Francis agreed to give his daughter, the Archduchess Maria Louisa, in marriage to Napoleon. After the disastrous consequences of the Russian campaign, Austria declared war against France, a declaration which was followed by a treaty of amity and defensive alliance between the courts of Vienna and Petersburg. Russia and Prussia had previously formed treaties with Great Britain. Sweden had also joined the allies, and the accession of Bavaria to the common cause proved the general concurrence of Germany to throw off the yoke of Napoleon. The battle of Leipzig decided the fate of Germany.

After Napoleon abdicated the throne of France in 1814, the allied powers concluded a treaty at Paris by which the German states were to be independent, and united by a federal league. As the Austrian or Catholic Netherlands were unable to secure their independence, Belgium was annexed to the Netherlands, forming a single state, under the sovereignty of the house of Orange. After the battle of Waterloo, in 1815, a congress of the allied powers was held at Vienna, at which the future tranquillity of Germany was provided for by a solemn act of confederation, signed by its sovereigns and free cities, including the Emperor of Austria and the King of Prussia, for those of their possessions formerly appertaining to the German empire,

the King of Denmark for Holstein, and the King of the Netherlands for Luxemburg.

In 1848 a closer union of the German people was proposed. The Prussian king, egged on by the violent excitement then prevalent, urged the German princes and people to abandon their local names and independence, and unite under one guiding hand. This guide he offered himself to be, and he formally 'fused and dissolved the name of Prussia in that of Germany.' A national constitutional assembly was convoked at Frankfort. Austria and Prussia struggled for the ascendancy in the proposed empire, and the result was naught.

EMPERORS OF GERMANY.

CARLOVINGIANS.

- 800. Charlemagne.
- 814. Louis the Debonair, King of France.
- 840. Lothaire, his son; died in a monastery at Treves.
- 855. Louis II., his son.
- 875. Charles the Bald, King of France.
- 877. [Interregnum.]
- 880. Charles the Fat, of France; crowned King of Italy; deposed.
- 887. Arnulf, or Arnoul, his nephew; crowned emperor at Rome in 896.
- 899. Louis III., called IV., his infant son, the last of the Carolingian line in Germany.

THE SAXON DYNASTY.

- 911. Conrad I., Duke of Franconia.
- 918. Henry I., the Fowler, son of Otho, Duke of Saxony.
- 936. Otho I., the Great, his son; crowned by Pope John XII. in 962.
- 973. Otho II., the Bloody; massacred his chief nobility; wounded by a poisoned arrow.
- 983. Otho III., the Red, his son, not of age; poisoned.
- 1002. Henry II., the Saint, Duke of Bavaria.
- 1024. Conrad II., the Salique.
- 1039. Henry III., the Black, his son.
- 1050. Henry IV., his son; excommunicated by Pope Pascal II.; deposed by his son.
- 1106. Henry V.; married Maud, or Matilda, daughter of Henry I. of England.
- 1125. Lothaire II., the Saxon.
- 1138. [Interregnum.]
- 1138. Conrad III., Duke of Franconia.
- 1152. Frederick Barbarossa.
- 1190. Henry VI., the Sharp, his son; he detained Richard I. of England in captivity.
- 1198. Philip, brother to Henry; assassinated.
- 1208. Otho IV., the Superb; excommunicated and deposed.
- 1112. Frederick II., King of Sicily, son of Henry VI.; deposed, and Henry, Landgrave of Thuringia, elected. Frederick died

in 1250, naming his son Conrad his successor, but the pope gave the imperial title to William, Earl of Holland.

- 1250. Conrad IV., son of Frederick.
- 1250. William, Earl of Holland; died in December, 1255. The electors could not agree upon a successor.
- 1256. [Interregnum.]

HOUSES OF HAPSBURG, LUXEMBURG, AND BAVARIA.

- 1273. Rodolph of Hapsburg.
- 1291. [Interregnum.]
- 1292. Adolphus, Count of Nassau, to the exclusion of Albert, Rodolph's son; deposed, and slain at the battle of Spire.
- 1298. Albert, Duke of Austria, son of Rodolph; assassinated by his nephew.
- 1308. Henry VII. of Luxemburg.
- 1313. [Interregnum.]
- 1314. Louis IV., of Bavaria, and Frederick III., of Austria, son of Albert, rival emperors. Frederick died in 1330.
- 1347. Charles IV., of Luxemburg.
- 1378. Wenceslaus, King of Bohemia, his son.
- 1400. Frederick, Duke of Brunswick; murdered as soon as elected.
- 1400. Rupert, Count Palatine of the Rhine.
- 1410. Jossus, Marquess of Moravia; chosen by one party of the electors; died 1411.
- 1410. Sigismund, King of Hungary; elected by another party; King of Bohemia in 1419.

HOUSE OF AUSTRIA.

- 1438. Albert II., the Great, Duke of Austria, and King of Hungary and Bohemia.
- 1439. [Interregnum.]
- 1440. Frederick IV., the Pacific.
- 1493. Maximilian, his son.
- 1519. Charles V. (I. of Spain), his grandson; son of Joan of Castile and Philip of Austria; abdicated.
- 1558. Ferdinand I., King of Hungary, brother of Charles.
- 1564. Maximilian II., his son, King of Bohemia and Hungary.
- 1576. Rodolph II., his son.
- 1612. Matthias, brother of Rodolph.
- 1619. Ferdinand II., cousin of Rodolph, son of the Archduke Charles, King of Hungary.
- 1637. Ferdinand III., son of Ferdinand II.
- 1658. Leopold I., his son.
- 1705. Joseph I., his son.
- 1711. Charles VI., brother of Joseph; succeeded by his daughter.
- 1740. Maria Theresa, Queen of Hungary and Bohemia, whose right to the empire was sustained by England.
- 1742. Charles VII., Elector of Bavaria, whose claim was supported by France. The crown contested in a general war. Charles died in January, 1745.
- 1745. Francis I., of Lorraine, Grand-Duke of Tuscany, consort of Maria Theresa.
- 1765. Joseph II., their son.
- 1790. Leopold II., his brother.
- 1792. Francis II., his son. In 1804 this prince took the title of Emperor of Austria only.

GERRY, ELBRIDGE, one of the signers of the Declaration of Independence, and afterward vice-president of the United States, was born at Marblehead, Mass., July 17th, 1744. He was graduated at Harvard College, 1762, and afterward, by his success in commercial pursuits, acquired considerable property. From his warm patriotism, he was elected a member of the Massachusetts general court, and to the continental congress in 1775. He held the front rank in that body on naval and commercial matters, and rendered important aid as an able financier. In 1797 he accompanied Gen. Pinckney and Mr. Marshall on a special mission to France, and upon his return was elected governor of Massachusetts for several successive years. In 1809 and 1810 he was again raised to the executive. In 1812 he was elected vice-president, over Jared Ingersoll of Pennsylvania, and died in office at Washington, November, 1814.

During his last year of office as governor of Massachusetts, his party friends perpetrated a glaring iniquity in forming senatorial districts, which gave an expressive word to the political vocabulary of the country. The object was to get a majority of the legislature out of a minority of the votes of the people. As an instance, in the old, rich, populous county of Essex, it was necessary to cut a rim in a zigzag course almost completely around the county somewhat in the shape of a horse-shoe. An ingenious wag drew a map of the county with this rim of democratic towns painted in different colors, resembling some monster animal with many short legs and claws—a sort of sea-serpent, ending with a horrible head and open jaws at Cape Ann, and a tail at Marblehead. The party trick was called the *gerrymander*, and similar unfairness since in various states, has kept the word in use.

GHENT. A city of Belgium [see BELGIUM], where a treaty of peace between Great Britain and the United States was signed, Dec. 24th, 1814.

GIBBON, EDWARD, an eminent English historian, born at Putney, in 1737. He resided much abroad, chiefly at Lausanne, but was engaged at home in political life for some time. He conceived the idea of his great work, the "Decline and Fall of the Roman

Empire," at Rome, in 1764, as he sat amidst the ruins of the Capitol, "while the bare-footed friars were singing vespers in the temple of Jupiter;" and he has eloquently recorded the mixed emotions with which, one moonlight night of June, 1787, in a summer-house in his garden at Lausanne, he wrote the last sentences of the task which had so long been his occupation and pleasure. He died in England, on the 16th of January, 1794.

GIBRALTAR, a fortified rock in Andalusia, at the entrance of the Mediterranean, rising about 1,600 feet above the sea. This rock, under its ancient name of Calpe, and Mt. Abyla (now Centa) opposite on the African coast, were called by the ancients the Pillars of Hercules. In the early part of the eighth century an army of Saracens from Africa, commanded by Tarif, or Tarek, landed near here. They erected a castle, and called the rock Gibel-Tarif, 'the mountain of Tarif.' At the downfall of the Moors the rock fell into the hands of the Spaniards, by whom it was fortified till it was thought impregnable. But, on the 24th of July, 1704, it was taken after a dreadful cannonade, by an English and Dutch fleet commanded by Sir George Rooke and the Prince of Hesse Darmstadt. Since then it has been possessed by the British, although many attempts have been made to regain it. It was besieged by the Spaniards and French, Oct. 11th, 1704; by the Spaniards in 1720 and 1727. But the most memorable siege was that by the Spaniards and French from July, 1779, to February, 1783. The British garrison numbered only 7,000. The assailants had an army of 40,000 men, a thousand pieces of artillery, and a mighty fleet of three-deckers, frigates, floating batteries, gunboats, &c. For weeks, six thousand shells a day were thrown into the town. Yet this great armament was beaten off, and wholly overthrown by the brave garrison, who were commanded by Gen. Elliot.

GIBSON, GEORGE, a native of Lancaster, Penn., settled early in life at Pittsburg, joined the Revolutionary army as a colonel, and served to the end of 1778. In the war with the Indian tribes, Colonel Gibson again commanded a regiment, and shared the fatal dan-

gers of St. Clair's defeat, in which he received a mortal wound, at Fort Jefferson, Dec. 11th, 1794.

GIBSON, JOHN, uncle of the above, born at Lancaster, Penn., May 23d, 1740, served under Gen. Forbes when that officer took Fort du Quesne; entered the Revolutionary army as a colonel early in the war, and continued through it; died at Braddock's Field, near Pittsburg, April 10th, 1822.

GIFFORD, WILLIAM, born in April, 1756, and early left an orphan, was apprenticed to a shoemaker. Industry and perseverance raised him to a prominent rank in English literature as a satirical poet, a translator, and a critic. He was editor of the *Quarterly Review* from its start in 1808 till within two years of his death, which took place Dec. 31st, 1826.

GILBERT, Sir HUMPHREY, half-brother to Sir Walter Raleigh, and one of the earliest English adventurers who attempted to form a colony in America, born in 1539; in 1576, published "A Treatise to prove a Passage by the North-west to the East Indies." In 1578 he obtained a patent to make a settlement in North America, and in that year made a voyage to Newfoundland, returned to Europe, and in 1583, on his homeward-bound voyage, in a barque of only ten tons, from another trip to America, was lost with all his crew.

GILPIN, BERNARD, the 'apostle of the north,' was born in Westmoreland in 1517, and educated in Catholicism. His inquiries turned him to the reformed faith. He became rector of Houghton in Durham, a parish containing no less than fourteen villages, shrouded in ignorance and superstition. He was arrested by order of Bishop Bonner, but the death of bloody Mary saved him from the stake, and he returned to his zealous work of good. His labors were not confined to his own parish. Every year he visited diverse neglected districts in Northumberland, Yorkshire, Cheshire, Westmoreland, and Cumberland; and that his own flock might not suffer, he was at the expense of a constant assistant. In all his journeys he did not fail to visit the gaols and places of confinement; and by his labors and affectionate manner of behavior, he is said to have reformed many abandoned persons in those abodes of human misery. He had set times and places of

preaching, in the different parts of the country, which were as regularly attended as the assizes. If there was a church in the place, he made use of it; if not, of barns or any other large buildings. He had an enthusiastic warmth in his addresses, which turned many to a sense of religion, who had never thought of anything serious before. Danger and fatigue were in his estimation abundantly compensated by advantage accruing to his uninstructed fellow-creatures. This good man is said to have amassed, by unwearied application, a vast stock of knowledge; to have been ignorant of no part of learning in esteem at that time; to have been more than usually skilled in the classic languages, history, and poetry: but everything he made subservient to the nobility and benefit of his Christian ministry. He established and sustained excellent schools; generous bounty was dispensed by his hand; and his door was ever open to the poor or the stranger. Lord Burleigh's offer of a bishopric he refused: his ambition worked itself out in good deeds. "Meanwhile age began to grow upon him. After his lean body was quite worn out with diversity of pains-taking, at the last even, feeling beforehand the approach of death, he commanded the poor to be called together, unto whom he made a speech, and took his leave of them. Afterwards he did the like to others. He used many exhortations to his schollers, to his servants, and divers others, and fell asleep in great peace in the sixty-sixth year of his age, in the year of our Lord 1583."

GLAUBER, JOHN RODOLPH, a German chemist, and dabler in alchemy; he discovered the sulphate of soda, now known as Glauber's salt; flourished 1640-1660.

GLENCOE, MASSACRE OF. In August, 1691, a proclamation was issued by William III. of England, offering indemnity to such insurgents as should take the oath of allegiance to the king and queen on or before the last day of the year; and the chiefs of such clans as had been in arms for James II. soon embraced the offer. But Macdonald of Glencoe was prevented by accident, not design, from tendering his submission within the limited time. He did not reach Inverary till the new year had come in. The sheriff, however, yielding to the importunities and

even tears of the aged chieftain, administered to him the oath of allegiance then, and sent an explanation of the circumstances to the privy council at Edinburgh. But Stair and Breadalbane were the enemies of Macdonald; they persuaded William that the Macdonalds were great obstacles to the pacification of the Highlands; and the royal command was obtained "for the good and saftie of the Countrie, that thes miscriants be cut off root and branch." Capt. Campbell, of Argyll's regiment, repaired to Glencoe with a hundred and twenty men. He was the uncle of young Macdonald's wife, and he and his troops were received by the unsuspecting Highlanders with the utmost hospitality. The orders were "to fall upon the rebels the Macdonalds of Glencoe, and put all to the sword under seventy:" yet for several days this dread intent was concealed, and butchers' and victims dwelt in peace with one another. The mask dropped on the night of Feb. 13th, 1691. Macdonald was shot dead at his bedside. His aged wife was stripped naked by the soldiers, who tore the rings from her fingers with their teeth. Neither age nor sex was spared. Thirty-eight persons were massacred, and several who fled among the mountains perished by starvation and exposure. The hamlet was laid in ashes.

GLENDOWER, OWEN, a celebrated Welsh chieftain, born in 1354. He was the determined foe of Henry IV., and for a long time kept up a marauding warfare which was highly annoying to the English. He died, unsubdued, Feb. 24th, 1416.

GLISSON, FRANCIS, president of the college of Physicians, London, died in 1677, aged eighty. He was one of the founders of the Royal Society, and was eulogized by Boerhaave and Haller.

GLUCK, CHRISTOPHER, the Chevalier, an eminent German musical composer, died at Vienna, 1787, aged seventy-one.

GOBELIN, GILES, famous as a dyer of scarlet in the reign of Francis I. of France, and the founder of the works where the beautiful Gobelin tapestry has been produced.

GODFREY of BOUILLOX, Marquis of Anvers and Duke of Brabant, was the son of Eustace II., Count of Boulogne, and was born about the middle of the eleventh century. He served with distinction under Henry IV.,

Emperor of Germany, but acquired an imperishable fame in the first crusade. At Nice, Elessa, and Antioch, he particularly distinguished himself, and in July, 1099, he took Jerusalem, after a siege of five weeks. On taking possession of the city, he threw off his armor, clothed himself in a mantle, and, with bare head and naked feet, went to the Church of the Sepulchre. On the foundation of the Latin kingdom of Jerusalem, in the same year, Godfrey's virtues were declared to be pre-eminent; the princes conducted him to the church which covered the tomb of Christ, and offered him a crown. But he refused to wear a diadem of gold where his Saviour wore a crown of thorns; and modestly claimed only the honor of being the defender of the Holy Sepulchre. He enjoyed it but a short time, for he died July 18th, 1100, just one year after the taking of Jerusalem.

GODFREY, THOMAS, inventor of the quadrant commonly called Hadley's, by whom he was cheated out of the credit of the invention; born in Philadelphia, where he died in December, 1749.

GODMAN, JOHN D., an eminent American naturalist, was born at Annapolis, Md., and at an early age was apprenticed to a printer. Disliking his business, he shipped as a sailor on board the Chesapeake flotilla, in the war of 1813. Having afterward studied medicine, he settled in New York, and was offered the professorship of anatomy in Rutgers Medical College. The state of his health, however, rendered traveling necessary, and he went to Vera Cruz, but without experiencing the relief which he hoped. He died in Philadelphia, April 17th, 1830, in the thirty-second year of his age. His "Natural History of American Quadrupeds," and his "Rambles of a Naturalist" were deservedly popular.

GODOLPHIN, SIDNEY, Earl of, and lord high treasurer of England, was born in Cornwall, and educated at Oxford. He was employed in the reigns of Charles II. and James II., although he had voted for the exclusion of the latter in 1680. He was placed at the head of the treasury on the accession of Queen Anne, but was obliged to retire from office in 1710. He died in 1712.

GODWIN, WILLIAM, the author of "Caleb Williams," was born in 1756, and died in

1836. He was a voluminous writer, a warm republican in politics, and an eccentric and remarkable man.

GOETHE, JOHN WOLFGANG VON, born Aug. 28th, 1749, at Frankfort on the Maine. He displayed an early fondness for literature and the arts, which increased with his years. His studies embraced the whole circle of the sciences. In 1771 he took the degree of doctor of laws. About the year 1776, on the invitation of the grand-duke, he went to Weimar, where he passed the rest of his life, loaded by his patron with honors, ennobled, made a privy counselor, and for many years prime minister. Owing in part to the liberal patronage of the grand-duke, the little court of Weimar was a distinguished focus of German literature; and in the early years of the present century, this place reckoned among its residents more than twenty writers of note, at the head of whom were Goethe, Schiller, Wieland, Herder, and for a time Kotzebue.

The following particulars of the life of this celebrated man were written not long before his death. "It would be difficult to find a man who had arrived at the age of eighty-one with fewer infirmities than Goethe. The prodigious activity of his mind seems not to have worn out his body, although the latter, it is said, was put to the proof by his juvenile irregularities. His elevated form, the striking regularity of his features, his imposing and noble bearing, the athletic proportions of his body, seem to have suffered no injury from age; he holds himself as upright as a young man of eighteen; no apparent infirmity accompanies his years, and the wrinkles of his face hardly indicate a man of sixty. There is in his behavior and countenance something cold and reserved, which adds to the emotion which is felt in beholding him. He rarely determines, in the interviews which he grants to strangers, to display the resources of his genius; and visitors are sorry to observe that these hours of audience are only moments of repose for his spirit, perhaps of annoyance. It is said that this reserve always disappears in favor of strangers who arrive at Weimar preceded by a literary reputation. Goethe has felt obliged to impose this reserve upon himself to avoid the unhappy consequences of frankness which

once distinguished him, and it is said that English travelers have not a little contributed to it by the indiscretion they have shown in publishing in their journals incorrect fragments of their conversation with him.

"The life which Goethe leads at present bears the impress of that vigor of mind and body, which he has succeeded in preserving. With a freshness and activity of mind that eighty years of a laborious life have not impaired, he knows how to profit by every moment of the day. By six o'clock in the morning he is at work, and he permits no interruption until the hour of noon. During these long mornings he writes letters, composes, reviews his complete works, and arranges his correspondence with Schiller, of which the first volume has been published some months. At noon strangers are admitted. After dinner, he assembles at his house, about four or five o'clock, the limited number of the elect who have the happiness to live in habits of intimacy with him. The evenings of Goethe are consecrated to reading; he reads with a prodigious rapidity, which would be but a defect, were it not accompanied by an astonishing memory and an extraordinary faculty of analysis. He is but seldom seen at the theatre, and the theatre of Weimar feels this abandonment but too sensibly. Goethe was formerly the manager, perhaps we may call him the creator of it: it was he who, aided by Schiller, formed all the actors who, for more than a quarter of a century, shone in the first rank upon the German stage, and made the little theatre of Weimar the true school of the dramatic art in Germany."

Goethe died at Weimar, March 22d, 1832, aged eighty-two. He was an eminent author and a romantic poet, held in great repute by his countrymen and admirers, and styled the patriarch of German literature; according to a writer in the *Foreign Quarterly Review*, "the first man of his nation and time;" and according to Prince Puckler Muskau, "the third in the great triumvirate with Homer and Shakspeare." Among the most celebrated of the productions of Goethe are the "Sorrows of Werther," "Faust," and "Wilhelm Meister's Apprenticeship." He maintained for many years a tranquil empire over the literature of his country, which was implicitly

acquiesced in by the candidates for literary fame; yet many of his voluminous works have been much complained of, as characterized by unintelligible mysticism, and as of irreligious and immoral tendency.

GOFFE, WILLIAM, one of the judges of Charles I., and a general under Cromwell. When the Stuarts were restored, he, with Whalley, another of the regicides, came to New England, and found concealment at New Haven, Hadley, and elsewhere. Sept. 1st, 1675, Hadley was attacked by Indians. The savages were repelled by an aged man, who suddenly appeared and headed the inhabitants, and disappeared as suddenly after the victory. This man, regarded as an angel at the time, was afterward discovered to be Goffe, who for many years was secreted there. He is supposed to have died in 1680.

GOLDSMITH, OLIVER, an eminent poet and miscellaneous writer, born in Ireland, Nov. 10th, 1728. His father was a poor curate. He studied at Dublin, Edinburgh, and Leyden, and took a doctor's degree at Padua, a maternal uncle defraying part of the expenses. Having made the tour of Europe on foot, supporting himself by flute-playing, he reached London, after a long absence, with but a few pence in his pocket. Here he sustained himself by his pen, and compiled many works, besides composing those which have rendered his name immortal. His poem of "The Traveller" gained him an enviable poetical reputation. His fame was established on a firm basis by "The Deserted Village." Improvident, like many men of genius, he was about to marry his landlady to cancel a debt he owed her, when the sale of the manuscript of his novel "The Vicar of Wakefield," which met the approbation of Dr. Johnson, afforded him a temporary relief. An adventure of his own formed the groundwork of his highly successful comedy, "She Stoops to Conquer." He put up at the house of a gentleman, mistaking it for an inn, and amused the inmates by calling out lustily for whatever he wanted, ordering the servants, slapping his host upon the back, and asking to see the bill of fare; his mortification, on discovering his mistake, can easily be imagined. He died April 4th, 1774. He was eccentric even to absurdity, and in society showed the simplicity of La Fontaine.

Garrick, in some extemporaneous verses, spoke of him as

"Noll,
Who wrote like an angel, but talked—like poor Poll."

The debts he left amounted to £2,000. "Was ever poet so trusted before?" said Dr. Johnson. "No man," said the doctor also, "was wiser when he had a pen in his hand, or more foolish when he had not."

GONZALVO, HERNANDEZ Y AGUILAR, of Cordova, commonly called the 'great captain,' was born in 1443. This celebrated Spaniard served under Ferdinand and Isabella in the conquest of Grenada, where he took several strong places from the Moors. Ferdinand gave him command of the forces which he sent into the kingdom of Naples to succor Frederick and Alphonso. After having gained his purpose, he returned to Spain, and then, serving against the Turks, wrested Zante and Cephalonia from them. He was afterward, in consequence of his various victories, appointed viceroy of Naples, with unlimited powers. He died in 1515.

GOOKIN, DANIEL, major-general of Massachusetts from 1681 to 1687, the year of his death. He was an Englishman, but came to Virginia in 1621, and in 1644 removed to New England that he might enjoy freedom of worship. He was the author of "Historical Collections of the Indians in New England," and a zealous coadjutor of the Rev. John Eliot.

GORDIUS, a king of Phrygia, who fastened the pole of his chariot with so ingenious a knot that the oracle promised the empire of Persia to the man who should loose it. Alexander the Great cut it with his sword.

GORE, CHRISTOPHER, a governor of Massachusetts, born in Boston in 1758, was the son of a mechanic. His education was completed at Harvard University; he studied law and practiced it with success. He was the first United States district attorney for Massachusetts, and was one of the commissioners to settle the claims on England for the spoiliations committed by her upon the property of the Americans. In 1809 he was chosen governor of Massachusetts, but remained in office only one year. In 1814 he was chosen United States senator. He died in retirement, March 1st, 1827.

GORE, JOHN, the friend and companion of Capt. Cook, born in Virginia, 1735, entered the British navy early in life, and made his first voyage round the world with Commodore Byron. In 1768, he was appointed second lieutenant of the *Endeavor*, under Captain Cook, and again circumnavigated the earth. In 1776, he was appointed first lieutenant of the *Resolution*, and, by the successive deaths of Captains Cook and Clerke, returned to Europe, October, 1780, commander of the squadron. He ended his days as one of the captains of Greenwich Hospital, Aug. 10th, 1790, aged fifty-five.

GOTHS, an ancient barbarous tribe, whose origin is very uncertain. They were said to come from Scandinavia. For a long time they resided in Germany, whence they finally forced their way and made themselves formidable to the Romans. Under Alaric, they took and plundered Rome. The Goths of the east were called Ostrogoths, and those of the west Visigoths.

GRACCHUS, TIBERIUS SEMPRONIUS and **CAIUS**, the sons of the celebrated Cornelia, lost their lives in attempting to reform the republic. With a winning eloquence, affected moderation, and uncommon popularity, Tiberius began to revive the agrarian law, which had already caused dissensions among the Romans. His proposition passed into a law, but he was killed in the midst of a tumult, for happening to raise his hand to his head, his enemies declared that he signified a desire for a crown, and he was slain in the outbreak of popular fury which ensued. His brother Caius supported the cause of the people with more vehemence and less moderation than Tiberius, and his success animated his resentment against the nobles. With the privileges of a tribune, he treated the patricians with contempt, and this behavior hastened his ruin. He fled with a large number of his adherents, but the consul Opinius attacked and defeated them, and slew their leader, B.C. 121, about thirteen years after the unfortunate end of Tiberius.

GRAHAM, SYLVESTER, the untiring advocate of a vegetarian system of dietetics in America, died at Northampton, Mass., Sept. 11th, 1851, aged fifty-five. He was a native of Suffield, Conn.

GRATTAN, HENRY, was born about 1750

in Dublin. He was elected into the Irish parliament in 1775, and by his powerful remonstrances obtained for his country a participation in the commerce of Britain, for which he was rewarded by a vote of £50,000. In 1790 he was returned for the city of Dublin, and from that time was the active leader of the opposition till the union with England, which measure he resisted with all his eloquence. When it was effected, he accepted a seat in the House of Commons for Malton. In the French wars he supported government; but his principal exertions were called forth in advocating the claims of the Catholics, to which cause he fell a martyr, by leaving Ireland in an exhausted state, to carry the petition with which he was intrusted to England. He died, soon after his arrival, May 14th, 1820; and his remains were interred in Westminster Abbey. No government ever dismayed him; the world could not bribe him. He only thought of Ireland; lived for no other object; dedicated to her his beautiful fancy, his elegant wit, his manly courage, and all the splendor of his astonishing eloquence. He was so born, and so gifted, that all the attainments of human genius were within his reach; but he thought the noblest occupation of man was to make other men happy and free; and in that straight line he went on for fifty years, without one side look, without one yielding thought, without one motive in his heart which he might not have laid open to the view of God and man.

GRAY, THOMAS, an English poet, born in London in 1716. After completing the course of education at Eton and Cambridge, he made the tour of Europe with his friend Horace Walpole, returning in 1741. The remainder of his life was passed in literary retirement. He was forever laying gigantic literary plans, which he wanted the perseverance to execute. He wrote little, and published only after mature deliberation. His "Ode on a Distant Prospect of Eton College," "Hymn to Adversity," "The Bard," and "Elegy in a Country Church-yard," are inimitable. This distinguished poet died of a gout in the stomach, July 30th, 1771.

GREECE. Ancient Greece contained about 22,121 square miles. It was bounded on the west by the Ionian Sea, south by the Mediterranean, east by the Ægean, and north by

Illyria and Macedonia. This country has been esteemed superior to every other part of the earth, on account of the salubrity of the air, the temperature of the climate, the fertility of the soil, and, above all, the fame, learning, and arts of its inhabitants. It is severed by the Gulf of Corinth. The northern part contained Thessaly, Epirus, Acarnania, Ætolia, Locris, Doris, Phocis, Boeotia, Megaris, and Attica. The southern part, called the Peloponnesus, contained Laconia, Messenia, Arcadia, Elis, Argolis, Achaia, Sicyonia, and Corinth. Sketches of these distinct states are given elsewhere.

The history of Greece is darkened, in its primitive ages, by the mists of fable. The inhabitants believed that they were the original dwellers in the country, and sprang from the earth whereon they dwelt; and they heard with contempt the probable conjectures which traced their origin to the inhabitants of Asia and the colonies of Egypt. In the first periods of their history, the Greeks were governed by monarchs; and there were as many kings as there were cities. The monarchical power gradually decreased; the love of liberty established the republican governments; till no part of Greece remained in the hands of an absolute sovereign. The expedition of the Argonauts first rendered the Greeks respectable among their neighbors; in the succeeding age, the wars of Thebes and Troy gave opportunity to their heroes to display their valor in the field of battle. The simplicity of the ancient Greeks rendered them virtuous; and the establishment of the Olympic games in particular, where the only reward of the conqueror was a laurel crown, contributed to their aggrandizement, making them ambitious of fame, and not the slaves of riches.

The austerity of their laws, and the education of their youth, particularly in Lacedæmon, rendered them brave and active, insensible to bodily pain, fearless and intrepid in the hour of danger. The celebrated battles of Marathon, Thermopylæ, Salamis, Plataea, and Mycale sufficiently show what superiority a well trained though small army possesses over millions of undisciplined barbarians. After many signal victories over the Persians, the Greeks became elated with their success, and when they found no one able

to dispute their power abroad, they turned their arms against each other, and leagued with foreign states to destroy the most flourishing of their cities. The Messenian and Peloponnesian wars are examples of the dreadful calamities which arise from civil discord and long prosperity; and the ease with which the gold and sword of Philip of Macedon corrupted and enslaved Greece, fatally proved that when a nation becomes indolent and luxurious at home, it ceases to be respectable in the eyes of neighboring states. The annals of Greece, however, abound with singular proof of heroism and resolution. While the Greeks rendered themselves so illustrious by their military exploits, the arts and sciences were assisted by conquest, and received fresh lustre from the liberal patronage bestowed on them.

From the dominion of Macedon, Greece passed under the yoke of Rome. From the fifteenth century until a recent period, Greece was subject to the Turkish government. Although degraded, changed from what she was, there was yet something in modern Greece to remind the world of former days of glory. Ere the storm of the revolution broke forth, the bard could sing:

“On Suli’s rock, and Parga’s shore,
Exists the remnant of a line
Such as the Doric mothers bore,
And there, perhaps, some seed is sown,
That Heracleidan blood might own.”

The Greek revolution broke out at a village of Achaia, March 23d, 1821. At length England took the part of the Greeks, and a Russian, French, and British squadron, under Admiral Sir Edward Codrington, destroyed the Turkish-Egyptian armada of 110 ships, in the bay of Navarino, Oct. 20th, 1827. In 1828, the war between Russia and Turkey broke out, and the interference of foreign power produced the pacification of Greece in 1829. The Turks were compelled to yield their grasp. A monarchy was finally established and Otho of Bavaria was called to the throne in 1833. After a troubled, inefficient and unprosperous reign, Otho absconded from Athens, Oct. 13, 1862; six days afterwards a revolution broke out to secure a change of dynasty; a provisional government was formed which continued until June, 1863, when the youngest son of the King of Den-

mark accepted the throne, and became king by the title of George I.

Modern Greece has an area of 19,250 square miles; population in 1861, 1,330,933.

GREENE, Col. CHRISTOPHER, a relation of Gen. Nathaniel Greene, and a native of Warwick, Rhode Island, was born 1737, and in May, 1775, entered the service as a lieutenant. He was with Montgomery at Quebec, where he became a prisoner. Soon after his exchange in 1777, he was placed in command of Fort Mercer, at Red Bank, N. J., which he gallantly defended against the British. He fell May 22d, 1781, in an action with some Tories near New York.

GREENE, NATHANIEL, was born of Quaker parentage at Warwick, R. I., May 22d, 1742. He early evinced an attachment to learning and a fondness for a martial life. He took up arms for his country's defense when he heard of the affair at Lexington; the Quakers disowned him. He was among the first brigadier-generals commissioned by Congress, rose to the rank of major-general, and was in the battles of Trenton, Princeton, Brandywine, Germantown, and Monmouth. In December, 1780, he took the command of the army in the South, where he continued till the close of the war. In 1785 he went to Georgia to look after an estate which he had purchased there, and died from a sun-stroke near Savannah, June 19th, 1786. He was one of the ablest of Washington's generals, and one of his most attached and faithful friends.

GREENLAND, an extensive country of North America, belonging to Denmark. The natives belong to the Esquimaux family, and are rude in their manners, and confined in their ideas. They are of diminutive size, clothed in skins, and subsisting by hunting and fishing. Their religious notions are rude and primitive. There are several settlements upon the coast of Greenland, many of them being made by the Moravian missionaries. Greenland was discovered at the end of the tenth century, and soon colonized from Iceland. It is said that in 1406 there were almost two hundred villages, but the colony was suddenly lost to the world: vast flocks of ice blockaded the coast, and shut out all supplies. Davis rediscovered Greenland in 1586. The Northmen called this country Greenland because its verdure was so much

more luxurious than that of Iceland. A wonderful change has taken place in this land. The reindeer and the hare have both disappeared; fields once fertile are now occupied by enormous glaciers; the shores, too, are beset with immense fields of ice, which forbid the approach of the inquiring mariner; and of the once flourishing Scandinavian settlements, nothing remains but vague intimations. History forgot them nearly five hundred years ago and recorded nothing of their fate.

GREENOUGH, HORATIO, a sculptor of eminence, was born in Boston in 1805, passed much time in the pursuit of his art in Italy, and died in Boston, Dec. 18th, 1852.

GREENVILLE, Sir BEVIL, grandson of Admiral Greenville, was born 1596, and slain in the battle of Lansdown, near Bath, 1643, fighting for King Charles.

GREENVILLE, Sir RICHARD, commander of the first English colony sent to North America, was born in 1540. Greenville shared with Howard, Drake, Raleigh, Hawkins, Frobisher, the renown of defeating the Spanish Armada. In 1591 he was made vice-admiral of a squadron sent out to the West Indies. In this expedition he fell in with a superior force, and in the action his ship was taken and himself mortally wounded.

GREGORY. Sixteen popes have born this name. GREGORY I., surnamed the Great, succeeded Pelagius II., in 590, and introduced many of the present ceremonies of the Romish church. He was of a noble family and induced to take monastic vows by a disgust of worldly affairs. He died in 604. GREGORY VII. is better known by his original name of Hildebrand. [See HILDEBRAND.] GREGORY XIII., the greatest civilian and canonist of his time, to whom we owe the reformation of the calendar, born 1502, reigned from 1572 to 1585. [See TIME.]

GRENVILLE, GEORGE, born in 1722, entered parliament in 1750, and took a prominent part in the public affairs of Great Britain. During his ministry the stamp act was brought forward. He died Nov. 13th, 1770. He married the daughter of Sir William Wyndham. Richard, his brother, Earl Temple (1711-1779), was also a leading statesman, though neither so honest nor capable. George's third son, William Wyndham,

GRE

afterward Lord Grenville, was a distinguished and powerful statesman, and was the nominal head of the 'all-the-talents' ministry, which came in upon Mr. Pitt's death, and was soon shattered by the death of Mr. Fox.

The secret of the authorship of "Junius" was said to have been intrusted to Lord Grenville, and the rumor was that it would be disclosed after his death; the office of making the disclosure, some have supposed, was confided to his nephew, Lord Nugent. He died at his seat, Dropmore, in Buckinghamshire, on the 12th of January, 1834, aged seventy-four.

GREY, Lady JANE, an unfortunate and most amiable lady, the daughter of Henry Grey, Marquis of Dorset, by Lady Frances Brandon, daughter of the Duke of Suffolk, was of royal descent on both sides. She was born in 1537, at Bradgate Hall, her father's seat in Leicestershire, and early in life gave proofs of uncommon genius. She worked admirably with her needle; wrote an elegant hand; played well on several instruments; and was well versed in Greek and Latin, besides being conversant with French and Italian. Roger Ascham, "the schoolmaster of princes," has given a beautiful and affecting narrative of his interview with her at Bradgate Hall, where he found her reading Plato's *Phædon* in Greek, while the family were amusing themselves in the park.

In 1551, her father was created Duke of Suffolk; and at this time Lady Jane Grey was much at court, where the ambitious Duke of Northumberland projected a marriage between her and his son, Lord Guilford Dudley, which took place at the end of May, 1553. Soon after this Edward VI. died, having been prevailed upon, in his last illness, to settle the crown upon the Lady Jane, who, against her will, was proclaimed with great pomp. The splendor of royalty, however, endured but a short time. The nation was dissatisfied, and the nobility incensed at the presumption of Northumberland, so that Mary was not long in obtaining the victory, and with an indignant spirit she determined on revenge. Lady Jane and her husband, after having been confined in the Tower some months, were arraigned and condemned to death, Nov. 3d, 1553. The sentence was not carried into execution until the 12th of February in the fol-

lowing year, when Lord Guilford first suffered, and his wife immediately afterward, on the same scaffold. She died with the firmness and meekness of a martyr; and such no doubt she was, since her Protestant principles were more offensive to the queen than the part she had been compelled to act. On the evening previous to her death she sent a letter written in Greek to her sister; and even after seeing the headless body of her husband carried to the chapel, she wrote three sentences, in Greek, Latin, and English, in a table book, which she presented to the lieutenant of the Tower.

GRIDLEY, JEREMIAH, a distinguished lawyer, who was born in 1705, and flourished in Massachusetts before the revolution. Although a warm opponent of the British ministry, he accepted the office of attorney-general of the province of Massachusetts Bay, and defended the writs of assistance, but was completely refuted by James Otis, who had studied law in his office. He died in Boston, Sept. 7th, 1767.

GRIMSTON, Sir HARBOTTLE. An English lawyer of much repute, lived (notwithstanding his name) almost ninety years, dying in 1683.

GRISWOLD, ROGER, a governor of Connecticut, was the son of Gov. Matthew Griswold, and born at Lyme in that state in 1762. He was educated at Yale College, and chosen member of Congress in 1794. In 1807 he accepted the office of judge of the supreme court of Connecticut, and, after serving as lieutenant-governor, in 1811 was chosen governor. He died at Norwich, Oct. 12th, 1812.

GROTIUS, or DE GROOT, Hugo, a famous scholar and statesman, born at Delft, April 10th, 1583. So precocious were his powers, that he had a European reputation at fifteen. Grotius, having espoused the cause of a religious sect called the Remonstrants, was condemned to imprisonment for life in the fortress of Louvenstein, but having concealed himself in a chest in which his wife had sent him some books, he was carried out of the castle unsuspected. After wandering about in several countries, having been banished forever from his own, he went to Stockholm in 1634, and was appointed counselor of state, and ambassador to the French court. Although personally obnoxious to Cardinal Richelieu, he held this office for ten years, and then returned to

Sweden, passing through his native country, where his reception was most flattering. He solicited his dismissal from the Queen of Sweden; after leaving her court, he was taken sick at Rostock, in Pomerania, and died there, August 28th, 1645. He was a profound and elegant scholar, and a powerful writer upon international law.

GROUCHY, EMANUEL, Count, a marshal of France, born at Paris in 1766, and known as a brave and successful soldier in the wars of Napoleon, is memorable for his singular conduct at Waterloo. With thirty-five thousand men and eighty pieces of artillery under his orders, he remained immovable either by the prayers or the threats of the other generals, in a position which could only be justified by the strict letter of his instructions. It is not certain that he intended to betray the cause of Napoleon, but his culpable indecision contributed decidedly to the result of the conflict. He was restored to his military rank on the accession of Louis Philippe, and died in 1847.

GUATEMALA, the largest and most northern of the five republics of Central America, has a territory of 59,000 square miles and a population of 1,100,000. The resources of this fertile country wait for the magic touch of enterprise and industry. Many of the aboriginal tribes are yet in the perfect independence of barbarian life. Guatemala la Nueva, the seat of government, was founded in 1775, and contains 40,000 inhabitants. It is situated on the river Vacas, twenty-six miles from the Pacific.

GUELPHS, one of the two great factions which divided Europe in the middle ages, during the contest between the papal and imperial power. The Guelphs sustained the pope, the Ghibellines the emperor. Guelph is the family name of the dynasty now upon the British throne.

GUESCLIN, BERTRAND DU, constable of France, and one of her most renowned generals, born in 1314, at the castle of Motte Broom, near Rennes. At the age of seventeen years, he won a prize in a tournament. After the battle of Poitiers, and the losses of Charles, Du Guesclin came forward and redeemed the honor of his country, wresting from the hands of the English almost all their possessions. He died, in the midst of triumph, before Chateau-neuf-de-Raudon, July 13th, 1380. He

had nothing pleasing or noble in his person, and owed his honors wholly to his own exertions.

GUIANA, a country of South America, formerly of vast extent. At present, what was formerly Spanish Guiana belongs to Venezuela, and Portuguese Guiana to Brazil. The remaining portions are divided between the English, Dutch, and French. Parts of Guiana are yet wild and imperfectly known, and in its interior the El Dorado of the Spaniards was formerly believed to exist.

French Guiana, or Cayenne, is an alluvial, swampy region, covered with forests whose trees are as prodigious in size as they are various in species. Here thrive fine aromatics unknown to other regions of the west. The Cayenne is the most pungent and delicate of peppers. But a serious obstacle to settlement is presented by the pestilential vapors steaming from the woods and marshes. The French colonized Cayenne in 1625. After having fallen into the hands of the English and the Dutch, it revolted to its original possessors in 1677. In a settlement on a great scale attempted in 1763, there perished 13,000 persons: so that during the revolution, deportation to Cayenne was considered almost as fatal as sentence of death. Within the last few years, many Frenchmen have been banished to this poisonous spot as a penalty for their opposition to the despotism of Louis Napoleon.

Surinam, or Dutch Guiana, is the most important of the Dutch possessions in this western world. The colonies of Demerara, Berbice, and Essequibo formerly belonged to Holland, but were conquered by the English, and since 1814 have constituted British Guiana. The industry of the new owners, with the fertility of the soil, has rendered this one of the most productive regions on the continent.

GUIDO RENI, commonly called GUIDO, was born at Bologna in 1575. His father was a musician, and he was intended for the same calling. But at an early age he evinced a decided taste for painting, and he became one of the most distinguished pupils of the Caracci. Guido resided some twenty years in Rome, and came away abruptly, during the pontificate of Urban VIII., in consequence of an offensive reprimand from Cardinal Spinola. He had been commissioned to paint one of the

altar-pieces of St. Peter's, and had received four hundred scudi in advance; but after a few years not having even commenced the picture, the cardinal rather harshly reminded him of the money advanced for which he had done nothing. Guide at once restored the four hundred scudi, and in a few days left Rome: all attempts to induce his return were vain. He lived in great splendor at Bologna, where he died Aug. 18th, 1642, and was interred with great pomp in the church of San Domenico. Notwithstanding the princely income that he received for many years, his habits of gaming and profuse liberality embarrassed his circumstances, and he died in debt. It was during the latter unhappy period of his career, that he sold his time for so much an hour to certain dealers, one of whom tasked the painter so rigidly as to stand by him, watch in hand, while he worked.

GUILFORD, BATTLE OF. A battle was fought between the British under Cornwallis and the Americans under Greene, March 13th, 1781, near Guilford Court House, N. C. The combat lasted two hours. The American force was twice that of the British, and was very advantageously posted. No battle in the course of the war reflected more honor on the courage of the royal troops. The panic and flight of the North Carolina militia turned the scale against Gen. Greene; the British gained a nominal victory, the Americans retreating in good order. The loss on the side of Cornwallis was more than 600 killed and wounded; that of Greene's army was over 400, and many of the militia were reported missing, having forsaken the field for their firesides.

GUILLOTIN, JOSEPH IGNATIUS, an eminent physician, born in 1738, was the inventor (about 1785) of the instrument of death called by his name. His humane design was to render capital punishment less painful by decapitation, and he was greatly annoyed that the guillotine should be named after him. He was imprisoned during the revolutionary troubles, and ran some hazard of suffering the fatal stroke of his own invention. But he escaped, and lived till 1814, greatly respected. An engine called the *maiden*, somewhat similar to the guillotine, was in use in Halifax, Yorkshire, in the time of Elizabeth. It was introduced into Scotland by the regent Morton,

for the decapitation of his political opponents, and he himself lost his head under it in 1581.

GUISE, a town and dukedom of France, in Picardy, besieged by the Spaniards in 1528. The Dukes of Guise were very important personages in all the affairs of France, from the reign of Francis I. to that of Henry IV. This family was a branch of the house of Lorraine, promoted by Francis I. in 1528 from Counts of Guise to Dukes. The first thus raised was Claude, the son of René II. One of his daughters wedded James V. of Scotland, and was the mother of Queen Mary. He had eight sons, among whom were Francis, Duke of Guise, Claudius, Duke of Aunale, and René, Marquis of Elbœuf. Francis gallantly defended Metz against Charles V. and took Calais from the English. He was virtually monarch of France. He was the head of the League, and the great opponent of Conde and the Huguenots. He was assassinated in 1563. He was the father of Henry, Duke of Guise, and Charles, Duke of Maine, &c. Henry placing himself at the head of the holy league, was slain in the states of Blois, by the order of King Henry III., in 1588. The Duke of Maine took up arms against Henry IV., till at last, in 1594, he was forced to submit to that victorious prince.

GULF STREAM. One of the most remarkable of all known oceanic phenomena is the mighty current which ceaselessly flows from west to east, across the bosom of the North Atlantic. The fountain-head of this ocean-river, as it may well be termed, is in the Gulf of Mexico. Thence it flows north-easterly along the shores of the United States, until it reaches the banks of Newfoundland; then stretches across the Atlantic to the British islands, where it divides into two parts, one flowing northward to the Arctic Sea, the other southward to the Azores. In the whole world, there is not another so majestic flow of water as this ocean-river. Its current is more rapid than the Amazon or the Mississippi. In the severest droughts it never fails; in the greatest floods it never overflows. Though its banks and bed consist of cold water, yet the river itself is warm; and so great is the want of affinity between these waters, so reluctant are they to mingle with each other, that their line of junction is often distinctly visible to

the eye: one-half of a ship may frequently be perceived floating in the cold ocean water, the other half in this warm current, known to mariners and geographers as the Gulf Stream.

Long before the discovery of America, the Gulf Stream, by carrying nuts, bamboos, and artificially carved pieces of wood to the shores of Europe, indicated the existence of a western continent. Columbus himself was told by a settler in the Azores, that even strange boats had been seen, constructed so that they could not sink, and managed by broad-faced men of foreign appearance. Were these Esquimaux Indians? Wallace, in his "Account of the Islands of Orkney," tells us that in 1682 an Esquimaux was seen in his canoe off the south side of the island of Edda by many persons, who could not succeed in reaching him; and another was seen, in 1684, off the island of Westram. Moreover, he says, "Be the seas never so boisterous, these boats, being made of fish-skins, are so contrived that they can never sink, but are like sea-gulls swimming on the top of the water." Two more of these current-drifted canoes were subsequently found on the shores of the Orkneys; one was sent to Edinburgh, the other hung up in the church of Burra.

As if determined to make its course and existence known to the most unobservant, the Gulf Stream carried the main-mast of the English ship *Tilbury*, that was destroyed by fire off the coast of St. Domingo, during the seven years' war, to the coast of Scotland. But, again, it carried to Scotland a number of casks of palm-oil, that were recognized, by their marks and brands, to be part of the cargo of a ship that had been wrecked near Cape Lopez in Africa. How could this last remarkable drift come to pass? Simply thus: the Gulf Stream, which we have compared to a river, is in reality a part of a great system of oceanic circulation. The branch that turns off from the British islands, southward to the Azores, joins the great equatorial current which, flowing to the westward from the coast of Africa, enters the Caribbean Sea, and emerges from the Straits of Florida as the Gulf Stream. The casks of palm-oil, then, had twice traversed the Atlantic—first from east to west in the equatorial current, and secondly from west to east in the Gulf Stream—before they found a resting-place on the coast of Scotland.

If we were to place little pieces of cork, chaff, or other light bodies, in a basin of water, and give the water a circular motion, the light substances would crowd together in the centre, where there is the least motion. So it is in the great basin of the Atlantic, where the Sargasso Sea forms the centre of the whirl caused by the circular motion of the equatorial current and the Gulf Stream. This sea, situated about midway in the Atlantic, in the triangular space between the Azores, Canaries, and Cape de Verd Islands, covering a space equal in extent to the valley of the Mississippi, is so thickly matted over with a peculiar weed (*Fucus natans*) that the speed of vessels passing through it is often greatly retarded. To the eye, at a short distance, it seems substantial enough to walk upon, and countless hosts of small crustacea dwell on this curious carpet of the ocean. Columbus sailed through it, on his first voyage of discovery, in spite of the terrors of his less adventurous companions, who believed that it marked the limits of navigation; and its position has not altered since that time. This Sargasso, or Sea of Lentils, as the Spaniards first termed it, has a historical interest. In the celebrated bull of Pope Alexander VI. in 1493, when he divided the world between the Spaniards and the Portuguese, he decreed that the Sargasso Sea was to be their mutual boundary to all eternity!

The Gulf Stream preserves its identity in physical characteristics throughout the many thousand miles of its continuous flow; the only change undergone is that of degree. As its waters gradually commingle with those of the clashing sea, their deep blue tint declines, their high temperature diminishes, the speed with which they press forward abates. The maximum of velocity, where the stream quits the narrow channel of Benini, which compresses its egress from the gulf, is about four miles an hour; off Cape Hatteras, where it has gained a breadth of seventy-five miles, the velocity is reduced to three miles. On the parallel of the Newfoundland banks, it is farther reduced to one and a half miles an hour, and this gradual abatement of force is continued across the Atlantic. The highest temperature observed is eighty-five degrees.

The waters of the Gulf Stream do not, in any part of their course, touch the bottom of

the sea. They are everywhere defended from so comparatively good a conductor of heat by a cushion of cold water, one of the best of non-conductors; the genial warmth is carried thousands of miles to fulfill its destined purposes. On a winter-day, the temperature of the stream, as far north as Cape Hatteras, is from twenty to thirty degrees higher than the water of the surrounding ocean. Even after flowing three thousand miles, it preserves in winter the heat of summer. With this temperature it crosses the fortieth degree of north latitude, and there overflowing its liquid banks, spreads itself out, for thousands of square leagues, over the cold waters around, covering the ocean with a mantle of warmth. Moving now more slowly, but dispensing its genial influence more freely, it at last meets the British islands. By these it is divided, one part going into the polar basin of Spitzbergen, the other entering the Bay of Biscay; but each with a warmth considerably above the ocean temperature.

Modern ingenuity has suggested a method of warming buildings by means of hot water. The north-western parts of Europe are warmed in similar manner by the Gulf Stream. The torrid zone is the furnace; the Caribbean Sea and Gulf of Mexico, the boilers; the Gulf Stream, the conducting-pipe; from the banks of Newfoundland to the shores of Europe is the great hot-air chamber, spread out so as to present a large surface. Here the heat, conveyed into this warm-air chamber of mid-ocean, is taken up by the prevailing west winds, and dispensed over Britain and other countries, where it is so much required. Such, in short, is the influence of the Gulf Stream upon the climate, that Ireland is clothed in robes of evergreen grass; while in the same latitude, on the American side of the Atlantic, is the frost-bound coast of Labrador. In 1831 the harbor of St. John's, Newfoundland, was closed with ice so late in the season as June; yet the port of Liverpool, two degrees farther north, has never been closed by frost in the severest winter. The Laplander cultivates barley in a latitude which in every other part of the world is doomed to perpetual sterility. The benefit thus conferred by the Gulf Stream is a remarkable accident. It obviously depends on the Gulf of Mexico continuing to be a gulf, which, however, it might

easily cease to be. A subsidence of the Isthmus of Panama to the extent of a couple of hundred feet (and such subsidences have taken place in geological times all over the world), would allow the equatorial current of the Atlantic to pass through into the Pacific, instead of being reflected back to European coasts. Britain would become a Labrador, and cease to be the seat of a numerous and powerful people.

While the Gulf Stream is covering Europe's shores with verdure, ripening the harvests of England and the vintage of France, its influence is equally beneficial at its fountain-head in the western world. The Caribbean Sea and the Gulf of Mexico are encompassed on one side by the chain of West India Islands, and on the other by the Cordilleras of the Andes, contracting with the Isthmus of Darien, and again expanding over the plains of Central America and Mexico. On the extreme summits of this range are the regions of eternal snow; next in descent is the *tierra templada*, or temperate region; and lower still is what the Spaniards truly and emphatically have termed *tierra caliente*, the burning land. Descending still lower is the level of the sea, where, were it not for this wonderful system of aqueous circulation, the peculiar features of the surrounding country assure us we should find the hottest and most pestilential climate in the world. But as the waters become heated, they are carried off by the Gulf Stream, and replaced by cooler currents entering the Caribbean Sea. The surface-water flowing out is four degrees warmer than the surface-water entering to supply its place.

As in a hot-water apparatus for warming a building, the water cooled in the hot-air chamber flows back to the boiler; so one part of the waters of the Gulf Stream, after giving out their heat, flow toward the equatorial current, the other to the polar basin of Spitzbergen. The secrets of the Arctic regions are hidden by impenetrable ice; but we know that a return-current, bearing immense icebergs, comes down from the dreary north, through Davis's Strait, and meets the Gulf Stream at the banks of Newfoundland. Scoresby counted at one time six hundred icebergs starting off on their southward journey by this current, which, pressing on the waters of the Stream, curves its channel into

a 'bend,' in shape resembling a horse-shoe, and some hundreds of miles in area. This bend is the great receptacle or harbor of the icebergs which drift down from the north, and are here melted by the warm waters of the Gulf Stream. Who dare say that, in the course of ages, the banks of Newfoundland have not been formed by the earth, stones, and gravel carried down to that spot by these very icebergs? Such is the distinctness kept up between the warm and cold water, that, though this northern current forms a large bend or indentation in the Gulf Stream, it does not commingle with it; the former here divides into two parts, one actually under-running the Gulf Stream, the other flowing south-westerly between it and the coast of America.

Though the Gulf Stream was noticed by Sir Humphrey Gilbert in the sixteenth century, we are indebted to Dr. Franklin for the first chart of its course. Being in London in 1770, his attention was called to a memorial which the board of customs at Boston had sent to the lords of the treasury, stating that the Falmouth packets were generally a fortnight longer on their voyage to Boston than common trading-vessels were from London to Rhode Island. They therefore begged that the Falmouth packets should be sent to Providence instead of to Boston. This appeared very strange to Franklin, as the traders were deeply laden and badly manned vessels, to say nothing of the extra distance between London and Falmouth. He consulted a Nantucket whaling-captain named Folger, who happened to be in London at the time. Folger immediately explained the mystery by stating that the Rhode Island trading-captains were acquainted with the course of the Gulf Stream, while those of the English packet-service were not. The latter kept in it, and were set back from sixty to seventy miles per day, while the former merely ran across it. At the request of Franklin, the Nantucket whaler traced the course of the Stream, and the doctor had it engraved, and sent copies to the Falmouth captains, who treated the communication with contempt. This course of the Stream, as laid down by Folger, has been retained in our charts almost to the present day. Who taught this unscientific Nantucket

whaler so accurately the course of this mighty current, then so little known? It was the whales, the gigantic prey he followed in the ocean. The right whale (*Balaena mysticelus*), as seamen term it, never enters the warm water of the Gulf Stream, which, as well as the warm waters of the torrid zone, is as a wall of fire to these creatures. But they delight to congregate, seeking for food, along the edges of the Stream; and thus Folger, through the experience of many voyages, was enabled so correctly to denote its course.

The Gulf Stream of the Atlantic has its counterpart in the Pacific. The latter flows out of the Straits of Malacca, just as the Atlantic current flows out of the Straits of Florida. The coast of China is its United States; the Philippines its Bermudas; the Japanese islands its Newfoundland. The climates of the Asiatic coast correspond with those of America along the Atlantic; and those of Columbia, Washington, and Vancouver are duplicates of those of Western Europe and the British islands; the climate of California resembles that of Spain; and the sandy plains and rainless regions of Lower California remind us of Africa. The course of this Stream has not yet been traced out, but it sets southwardly along the coast of California and Mexico, as the Gulf Stream does along the west coast of Africa to the Cape Verd Islands. This current, too, has its Sargasso Sea; to the west, from California, of the southwardly set, lies the pool in which the drift-wood and sea-weed of the North Pacific are gathered. Inshore of, but counter to, the China stream, along the eastern shores of Asia, is found a current of cold water, resembling that between the Gulf Stream and the American coast. Like its counterpart, it is the nursery of valuable fisheries.

GUNPOWDER PLOT, a conspiracy formed in the beginning of the reign of James I. of England, for the re-establishment of popery. The Roman Catholics had expected great favor and indulgence from James, both because he was a descendant of Mary, a rigid Catholic, and because he had shown some favor to that religion in his youth; but they soon discovered their mistake, and were at once surprised and enraged to find James,

on all occasions, express his resolution of strictly executing the laws enacted against them, and of persevering in the policy of his predecessor. This declaration determined certain desperate men among them to destroy the king and parliament at a blow. They stored, in the vaults under the parliament-house, thirty-six barrels of gunpowder, purchased in Holland, and covered them with coals and fagots. The meaning of a warning but ambiguous letter, received by Lord Montague, was first penetrated by the king. The care of searching the vaults devolved upon the Earl of Suffolk, the lord chamberlain, who purposely delayed the search until the day before the meeting of parliament, Nov. 5th, 1605. He remarked the great piles of fagots which lay in the vault under the house of peers, and seized a man preparing for the terrible enterprise, dressed in a cloak and boots, with a dark lantern in his hand. This was one Guy Fawkes, who had just disposed every part of the train for taking fire the next morning; the matches and other combustibles being found in his pockets. The whole of the design was now discovered; but the atrocity of his guilt, and the despair of pardon, inspiring him with resolution, he told the officers of justice with an undaunted air that had he blown them and himself up together, he had been happy. Before the council he displayed the same intrepid firmness, mixed even with scorn and disdain, refusing to discover his associates, and showing no concern but for the failure of his enterprise. But his bold spirit was at length subdued; after confinement in the Tower for two or three days, on being shown the rack, his courage failed him, and he made a full discovery of his accomplices, to the number of eighty. Catesby and Percy were killed; Sir Everard Digby, Rockwood, Winter, Garnet, a Jesuit, and others, were executed, as was also Guy Fawkes.

GUNTER, EDMUND, an eminent English mathematician, author of the scale and chain which bear his name, died in 1626, aged forty-five.

GUSTAVUS I. of Sweden, commonly called GUSTAVUS VASA, was imprisoned when Christian II. of Denmark sought to enslave his country. Having escaped from prison in 1519, he arrived at Lubeck after meeting

with various difficulties. The father of Gustavus perished in the wholesale slaughter of Swedish nobles by Christian in 1520. Proscribed by the tyrant, he fled into Dalecarlia, where he roused the miners to revenge the wrongs of their country. The young hero found the peasants prepared to receive him with open arms, and to swear to revenge the massacre at Stockholm with the last drop of their blood. The brave Dalecarlians flocked to the standard of Gustavus, who was from this moment irresistible. After the expulsion of the Danes, Gustavus was proclaimed King of Sweden and of the two Gothlands in 1523, and he soon succeeded in establishing the doctrines of Luther in his dominions. In 1531, Christian made preparations for recovering the throne, but his vast armament was defeated with great slaughter. In 1542, Gustavus prevailed on the states to render the crown hereditary in his own family. This valiant, wise, and virtuous hero, the true deliverer of his country, died in 1560, at the age of seventy.

GUSTAVUS ADOLPHUS, King of Sweden, succeeded his father, Charles IX., in 1611, at the age of eighteen. Russia, Poland, and Denmark were then enemies of Sweden. Gustavus, having placed the Chancellor Oxenstiern at the head of the administration of civil affairs, took charge himself of the martial operations, and in 1613 prosecuted the war against Denmark with such vigor and success, that, through the mediation of Great Britain and Holland, an advantageous peace was procured, by which the Danish monarch renounced all pretensions to the throne. He was equally successful with the Russians, who ceded to him the fine province of Livonia and part of the province of Novogorod. His hostilities, however, with his cousin Sigismund of Poland, were of longer duration, and were productive of those glorious events which procured him a conspicuous rank among the most distinguished warriors of his time. The King of Poland could not forget the Swedish crown, of which he had been deprived by the impolitic conduct of his father and himself, and formed a plot for seizing on Gustavus, who, however, avoided the snare.

The Swedish monarch, having prepared a numerous fleet, laid siege to Riga in 1621.

Gustavus proved victorious, but allowed the besieged to capitulate on honorable terms. During a series of years he was engaged in constant warfare, which afforded him opportunities of training the Swedes, and forming those intrepid commanders and formidable battalions which long kept Europe in alarm. At length, in 1629, Gustavus gloriously terminated the war with Poland, and obtained large cessions of territory. He did not, however, long enjoy the fruits of his victories in peace.

The war between the Catholics and Protestants, which laid Germany waste in this century, had already commenced. Gustavus Adolphus was looked to as the champion of the reformed faith. This, with the resentment he felt against the emperor for aiding Poland, and his ambition to curb the power of the house of Austria, determined him to march into Germany in 1630. He reduced Frankfort on the Oder, and various other places, and compelled the Elector of Brandenburg to unite his troops with the Swedish battalions. He then invaded Saxony. In 1631, Tilly awaited Gustavus at Leipzig with an army of 40,000 men. The Swedish monarch led his troops to the attack, and after an obstinate conflict obtained a decisive victory. He then penetrated into Bavaria, and levied contributions on the opulent districts of Germany. The battle of Lutzen ensued in 1632, on the fate of which contest that of Europe appeared to depend. The Swedish infantry performed prodigies of valor, broke the line of the imperialists, and seized their cannon. Victory had already declared for the Swedes, when Gustavus was found stretched among the slain. His death plunged Sweden into the greatest affliction, but his triumphant bands for a time supported her military reputation.

GUSTAVUS III. of Sweden, the eldest son of Adolphus Frederick, Duke of Holstein-Gottorp, was born in 1746, and succeeded to the throne on his father's death, Feb. 12th, 1771. The country, which was convulsed throughout, was tranquillized by the prudent measures of Gustavus, who was wise, firm, and accomplished, although fond of pleasure

and ambitions. He determined to take part against the French revolutionists, and thereby gave very general dissatisfaction. A conspiracy was formed against him; the most prominent members were the Counts Horn, Ribbing, and Ankarström, and he was shot by the latter at a masquerade at Stockholm, March 15th, 1792.

GUSTAVUS IV., his son, deposed and banished in 1809, died in Switzerland, after wandering through Europe under various names and the most straitened circumstances.

GWINNETT, BUTTON, a signer of the Declaration of Independence, was born in England in 1732, and came to Charleston, S. C., in 1770. Soon afterward he purchased a large tract of land in Georgia, which he made his permanent residence. He took an active share in the affairs of the Revolution, and was in Congress in 1776. Subsequently he assisted in framing a state constitution for Georgia, and was chosen the first governor under it. He died May 27th, 1777, from a wound received in a duel with Gen. McIntosh.

GYPSIES. These mysterious vagabonds are the most widely diffused yet distinct race on the earth, not excepting even the Jews. They first made their appearance in Europe about 1517, in Bohemia, whence they are sometimes called Bohemians. Their origin has been a matter of much doubt. The common belief was (as some of the earliest hordes in Europe stated, and as the name 'gypsy' implied) that they came from Egypt, being driven forth by the Turks. Their supposed skill in the black art gave them a universal reception in that early age of credulity and superstition. Notwithstanding the persecution and proscription they have so generally met, they are yet found in all parts of Europe, as well as in Asia and Africa, and some even are leading the same wandering life in our own country. Through all their intercourse with other nations, they, like the Jews, have preserved their manners, customs, usage, and appearance unchanged. They have a tongue of their own, which has been traced to an Indian origin. They call themselves Roumani.

H.

HAHNEMANN, SAMUEL, was born of poor parents at Meissen in Saxony, 1755, and received his diploma as doctor in physic at Heidelberg in 1781. His researches led him to propound a new theory of medical science, now known as homœopathy, in support of which he published numerous treatises. He died at Paris in 1843.

HALE, Sir MATTHEW, one of the most upright judges that ever sat upon the English bench, born in 1609, died in 1676. Richard Baxter said, "I believe he would have lost all he had in the world, rather than do an unjust act."

HALE, NATHAN, the martyr-spy of the American Revolution, was born in Coventry, Conn., June 6th, 1755. He graduated with honor at Yale College in 1775, and was teaching school at New London, when news of the blood spilt at Lexington thrilled through the land. "Let us march immediately," said he, "and never lay down our arms until we obtain our independence." He enrolled at once as a volunteer, and sought the scene of action. After the disastrous battle of Long Island, it was an anxious question with Gen. Washington, what would be the next move of the victorious British against the scanty and ill-appointed patriot army? He directed Colonel Knowlton to select some competent person, who should seek the royal camp and penetrate the veil in which Howe had shrouded his designs. Col. Knowlton applied to various officers, with ill success: men who did not fear the hazard could not bear the ignominy of the task of a spy. Young Hale undertook it, assigning these reasons against the remonstrances of his comrades: "I think I owe to my country the accomplishment of an object so important, and so much desired by the commander of her armies; and I know no other mode of obtaining the information than by assuming a disguise and passing into the enemy's camp. I am sensible of the consequences of discovery and capture in such a situation. But for a year I have been attached to the army and have not rendered any material service, while receiving a compensation for which I

make no return. Yet I am not influenced by the expectation of promotion or pecuniary reward. I wish to be useful, and every kind of service necessary for the public good becomes honorable by being necessary. If the exigencies of my country demand a peculiar service, its claims to the performance of that service are imperious." In the plain costume of a schoolmaster, he crossed the sound from the Connecticut shore, gained the perilous knowledge he sought, reached in safe return the point where he had landed on the Long Island shore, and there was captured. The telltale notes and draughts in which he had put his observations, revealed his errand; he was borne to New York, and sentenced to be hanged the next morning at daybreak. The provost marshal treated the doomed man with an awful cruelty, refusing him the solace of a Bible and the use of writing materials; the intercession of a young lieutenant procured the latter. The calm message home which Hale penned for his mother, was torn in pieces by the wretch, "that the rebels should never know they had a man who could die with such firmness." Injuries and taunts could not shake the firm spirit of the young hero; his dying words were, "I only regret that I have but one life to live for my country!" He was executed September 22d, 1776. The place of his burial is unknown. He was betrothed to a young lady in Connecticut, who survived him many years, dying in 1845. She had wedded and borne children, but her last thoughts on earth were busy with her maiden memories; she murmured, just before death, "*Write to Nathan!*"

HALIDON HILL, BATTLE OF. Fought near Berwick, between the English and Scots, July 19th, 1333. The latter were sorely defeated, 13,000 being slain, while the southron loss was small. After this victory Edward III. placed Edward Baliol on the Scottish throne.

HALIFAX. GEORGE SAVILLE, Marquis of Halifax, a celebrated English statesman, was born in Yorkshire in 1630. He was created a peer for his loyalty at the restora-

tion, and in 1682 was raised to the dignity of a marquis, soon after which he was made lord privy seal. At the beginning of the reign of James II., he was appointed president of the council, but on refusing his consent to the repeal of the test acts, he was dismissed. In the convention parliament, he sat as speaker of the House of Lords, and concurred in all the measures of the Revolution; but afterward he joined the opposition. He died in 1695.

HALL, LYMAN, one of the signers of the Declaration of Independence, was born in Connecticut, in 1731, graduated at Yale, studied medicine, and went to South Carolina in 1752. He was a practicing physician in Georgia on the breaking out of the Revolution. He at once was ready to devote his property and person to the service of his country, and in 1775 he was chosen a delegate to the general congress, then assembled in Philadelphia. He was at the North until after the evacuation of Savannah in 1782, when he returned and found all his property confiscated to the crown. In 1783, he was chosen governor of the state of Georgia, and died in retirement in Burke county in 1790.

HALL, ROBERT, one of the most eloquent of modern preachers, born near Leicester in 1764, was the son of a Baptist clergyman. He learned to read from inscriptions on gravestones, and at an early age was a prodigy of learning. While yet a boy he found his favorite reading in Edwards on the Will and Butler's Analogy. He spent some time at King's college, Aberdeen, where he had for fellow-student and warm friend, Sir James Mackintosh. From their partiality for Greek literature, the twain were dubbed "Plato and Herodotus." The eloquent orations and evangelical discourses wherewith he administered to the Baptist church at Cambridge won him the foremost rank among British preachers. He suffered acute pains from a disease of the spine, and in 1804 he began to be afflicted by occasional insanity, which at last rendered it necessary that his connection with the flock at Cambridge should be severed. He recovered completely, and spent twenty years in useful and brilliant ministry at Leicester, removing in 1826 to Bristol, where he labored till within a fortnight of

his death, which came the 21st of February, 1831.

HALLE, a Prussian city, in the province of Saxony, on the right bank of the Saale, containing 30,000 inhabitants. Its university ranks deservedly very high. It was the scene of an obstinate conflict, Oct. 17th, 1806, three days after the battle of Jena.

HALLEY, EDMUND, an eminent astronomer, born in London, Nov. 8th, 1656, died Jan. 14th, 1742.

HAMBURG, a free city of Germany, situated on the Elbe, about eighty miles from its mouth, containing 229,941 inhabitants. It was founded in the reign of Charlemagne, and was originally a fort called Hammenburg. In 1618, it was admitted into the number of imperial towns, subject to the counts of Holstein. In 1768, however, the subjection was annulled, and Hamburg was confirmed into an independent city. In 1807 it was taken possession of by a large French garrison, and Bonaparte seized a part of its public funds. In 1810, it was incorporated into the French empire; and in 1813, an unsuccessful effort was made to shake off the French yoke. A contribution of \$9,000,000 was then levied upon it, and the most positive orders were given to defend it, at whatever sacrifice, against the allies. This led to incalculable distress, to the destruction of the houses on the ramparts, to the seizure of considerable merchandise, and, finally, of the bank funds, by Davoust. At last, the city was evacuated, in May, 1814, and a part of the bank funds were restored by the Bourbons. Thrift and energy insured a return of prosperity. Hamburg was smitten by a mighty conflagration in May, 1842, which left twenty thousand people houseless. The territory of Hamburg is about 150 square miles, and the total population 217,000, the most of whom are Lutherans.

HAMILTON, ALEXANDER, was born in the island of Nevis, W. I., in 1757. At the age of sixteen, he entered Columbia College, New York, in which institution he greatly distinguished himself. At the age of seventeen he published political essays in favor of the colonial cause, so powerful and brilliant that they were at first attributed to Mr. Jay, then in the prime of life. At nineteen, eager to

HAMILTON'S MONUMENT IN TRINITY CHURCH-YARD, NEW YORK.

peril his life for liberty, Hamilton entered the army; he soon rose to the rank of captain of artillery, and Washington appointed him his aid-de-camp, ranking as lieutenant-colonel, when he was but twenty years of age. At the siege of Yorktown, he was in the hottest of the fire, and headed an assault which carried one of the outworks. After the war he commenced the study of the law in New York, and was speedily admitted to practice. In 1783 he was chosen member of Congress, and distinguished himself by his ability, unwearied industry, and patriotism. He was a member of the convention which met at Philadelphia for the purpose of framing the federal constitution. The essays which, with Jay and Madison, he published under the title of "The Federalist," contributed very essentially to render the constitution popular. As secretary of the treasury, to which office he was appointed in 1789, he gained the reputation of one of the greatest financiers of the age. In 1795 he retired into private life, but in 1798, as inspector-general, he organized the army intended to repel the threat-

ened invasion of the French, and in 1799, on the death of Washington, he succeeded to the chief command. June 11th, 1804, in consequence of a dispute between Colonel Burr and General Hamilton, the parties met at Hoboken, and Hamilton was killed at the first shot, standing on the fatal spot where his eldest son had recently been slain in a similar rencontre. Hamilton married Elizabeth, daughter of Gen. Schuyler. She died in 1854, at the advanced age of ninety-six.

HAMILTON, Sir WILLIAM, a distinguished metaphysician, professor in the University of Edinburgh, died in 1857.

HAMPDEN, JOHN, was born at London in 1594. He belonged to one of the worshipful and ancient country families of England, as did most of the parliamentary leaders in the great contest with the crown. He sat in the earlier parliaments of Charles I., but took no prominent part till he so manfully stood forth against the unauthorized tax for ship money in 1636. The king unsuccessfully sought his impeachment. When resort to arms became necessary, Hampden raised a

regiment from his tenantry, and brought to the field the same courage and capacity he had shown in discussion. He was killed in an engagement with Prince Rupert, June 8th, 1643.

HANAU, a province of Hesse-Cassel, the capital of which, Hanau, on the Kinzig, contains about 16,000 inhabitants. In 1792, Hanau was attacked, but not occupied, by the French. October 30th, 1813, an Austrian and Bavarian corps opposed here the great army of the French, in their retreat from Leipsic: a sanguinary conflict took place, in which the former were forced to retire.

HANCOCK, JOHN, was born at Quincy, in Massachusetts. Having lost his parents early, he was sent to Harvard College, where he graduated in 1754, by his uncle, a rich and benevolent merchant of Boston, to whose wealth and business he succeeded in 1764. After the battle of Lexington, when pardon was offered to the rebels in case of submission to the royal authority, Hancock and Adams were the only Americans excepted by Gage from the offer of mercy. After having been president of the provincial congress of Massachusetts, Hancock was sent to the general congress at Philadelphia in 1775, and filled the presidential chair of that body until 1779, when sickness compelled him to relinquish it. He was annually chosen governor of Massachusetts from 1780 till 1785. In 1787 he was re-elected, and filled the post until his death, Oct. 8th, 1793, at the age of fifty-six years. As the president of Congress, he was the first to sign the Declaration of Independence.

HANDEL, GEORGE FREDERIC, a native of Saxony, born February 24th, 1684. He produced his earliest operas at Hamburg. In 1710, he visited England, and his fame and fortune were there established. In 1741, he brought out his master-piece, the oratorio of "The Messiah." Toward the latter part of his life he was afflicted with total blindness. He died April 13th, 1759, leaving a fortune of £20,000. His appetites were coarse, his person ungainly, and his temper violent, although an external roughness was compensated by a humane and generous heart.

The following anecdote strikingly illustrates his manners and his peculiar humor. Dr. Greene, a personal friend, as well as a

warm admirer of Handel, brought to the great German an anthem of his own composition, requesting the favor of his opinion and remarks upon it. Handel readily received the production, promised to examine it immediately, and invited the doctor to breakfast with him the next day. Dr. Greene accordingly waited on the illustrious musician. Handel received him with cordiality, gave him an elegant breakfast, treated him with every politeness, but constantly continued to evade his visitor's questions respecting his opinion of the anthem. Greene, at length, too impatient to wait any longer for the great composer's decision on the merits of his piece, exclaimed vehemently, "My dearest friend, keep me no longer in suspense—tell me, I pray you—tell me what do you think of my anthem?" Handel, who had found it scientifically written, but very deficient in melody, answered, "Oh, it is ver fine, my dear doctor, ver fine indeed; only it do vant air, and so I flung it out of de window."

The publisher of one of Handel's operas cleared £1,500 by it; this caused the composer to say, "My dear sir, as it is only right that we should be upon an equal footing, *you* shall compose the next opera, and *I* will sell it."

HANNIBAL, son of Hamilcar Barcas, born B.C. 247, was a celebrated Carthaginian general. He was educated in his father's camp, and inured from his early years to the labors of the field, having passed into Spain when nine years old. Before leaving Carthage Hamilcar swore him to eternal enmity to the Romans. After his father's death, he had the command of the cavalry in Spain, and some time after, upon the death of Hasdrubal, he was invested with the command of all the armies of Carthage, though not yet in the twenty-fifth year of his age. In three years of continual success, he subdued all the nations of Spain which opposed the Carthaginian power, and took Saguntum after a siege of eight months. This city was in alliance with Rome, and its fall was the cause of the second Punic war, which Hannibal prepared to support with all the courage and prudence of a finished general. The army with which he entered Italy amounted, by the largest computation, to 100,000 foot and 20,000 horse. With this overwhelming force he

HAN

THE HANCOCK HOUSE IN BOSTON.

passed the Alps, conquered his opponents, crossed the Apennines, invaded Etruria, defeated Flaminius at the lake Thrasymentum, and Caius Terentius and L. Æmilius in the fatal battle of Cannæ. Had Hannibal, immediately after this battle, marched his army to the gates of Rome, it must have yielded amidst the general consternation; but his delay continued so long that the Romans recovered their hopes, and when he finally approached the walls, he was informed that the piece of ground on which his army then stood, was being sold at a high price in the Roman forum. He then, after some time, retired to Capua, the luxuries of which enervated his troops, and unfitted them for action; this gave rise to the saying that "Capua was a Cannæ to Hannibal." Marcellus, who succeeded the cautious Fabius in the field, first taught the Romans that Hannibal was not invincible. Scipio having passed over into Africa, the Carthaginians now recalled Hannibal to combat the adventurous Romans. After sixteen years of flattering triumph, the Carthaginian general left Italy, met Scipio at

Zama, was defeated, and fled to Acrumetum. The Carthaginians procured peace on favorable terms, and Hannibal fled to Syria, but he was pursued from place to place by the animosity of the Romans, and at length killed himself at the court of Prusias, King of Bithynia, B.C. 183, aged sixty-four years.

HANNO, a Carthaginian general of high reputation, who was conquered by Scipio in Spain. He is not to be confounded with the great navigator, who lived three or four centuries earlier.

HANOVER, in the north of Germany, was erected into a kingdom in 1814. It contains 14,800 square miles, and 1,819,777 inhabitants. The Hartz mountains contain silver, iron, copper, lead, &c. When Napoleon had obtained dominion over almost the whole continent in 1811, Hanover became an integral part of the kingdom of Westphalia, which had been formed of provinces ceded by Prussia and others to France, and of which Jerome Bonaparte, brother of Napoleon, was the sovereign. Hanover, its capital, suffered severely during its occupation by the French

from 1803 to 1813; but was relieved from their presence by the arrival of Bernadotte, with an allied force, on the 6th of November of the latter year. The city of Hanover, capital of the kingdom, has 40,000 inhabitants. Gottingen, a city on the Leine, contains 10,000 inhabitants, and is famous for its university, founded by George II. in 1734.

HANOVER, HOUSE OF. Elizabeth, daughter of James I. of England, married with Frederick, the Elector-Palatine of Bohemia. Their daughter Sophia became the wife of Ernest Augustus, Duke of Brunswick Lunenburg, and first Elector of Hanover. In 1701 the English parliament limited the succession of the crown, after William III. and Queen Anne, if the latter had no issue, to the Princess Sophia of Hanover, and the heirs of her body, being Protestants. Accordingly, upon the death of Anne, Sophia's son George Lewis, Elector of Hanover and Duke of Brunswick Lunenburg, became also King of Great Britain as **GEORGE I.** He was born May 28th, 1660, and had married his cousin Sophia, heiress of Brunswick Zell. He was proclaimed King of England, Aug. 1st, 1714, and landed at Greenwich in the following month. At the commencement of his reign, the Whigs had the ascendancy, both in and out of parliament. In 1715 a revolution broke out in Scotland in favor of the Pretender, but was quelled without much trouble, although there were many who were decidedly opposed to the existing government. In 1715 the bill for septennial parliaments was brought into the house of lords by the Duke of Devonshire, and passed both houses. In 1718 a quadruple alliance of England, Holland, France, and Germany, was formed against Spain, and the Spanish were defeated by Sir George Byng on the coast of Sicily. In 1720 was started the celebrated South Sea scheme, which involved thousands of families in ruin. In 1721 Bishop Atterbury was seized and conveyed to the Tower, and afterward banished on suspicion of treason; the Duke of Norfolk, the Earl of Orrery, and others were imprisoned for participation in the plot. In 1725 the treaty of Hanover was signed to counteract the first treaty of Vienna. In 1727 the king visited his electoral dominions at Hanover, but being seized with a paralytic disorder on the road from Hanover to Hol-

land, he was conveyed to Osnaburgh, June 11th, 1727, where he died, in the thirteenth year of his reign. The disaffection toward the Elector of Hanover, on his arrival in England, was very great, and the populace gave no equivocal signs of it. One time a noisy mob surrounded a carriage which contained some German ladies of the court, and assailed their ears with epithets of abuse more fluent than elegant. One of the foreigners, putting her head out of the carriage-window, said, in her broken English, "My good peoples, we ish come for all your goods." "Yes," replied a surly fellow in the crowd, "and for all our chattels too."

George Augustus, the first George's son, came to the throne as **GEORGE II.** He was born Oct. 30th, 1683, and was created Prince of Wales, Oct. 4th, 1714. In 1704 he married Wilhelmina Caroline Dorothea, of Brandenburg-Anspach, and in 1727 succeeded his father. In 1729 the peace of Seville was concluded with Spain, but the war with that country was renewed in 1739. In 1742 Sir Robert Walpole resigned, after having been minister for nearly twenty years, and in the same year, the king, espousing the cause of Maria Theresa, marched against the French, whom he defeated in the battle of Dettingen, but without gaining much advantage. In 1745 Charles Edward, the young Pretender, landed in Scotland, but was finally defeated at Culloden. The peace of Aix-la-Chapelle was concluded in 1748. In 1754 the encroachments of the French in America brought on that war which resulted happily for Great Britain, and some of the successes of which in America are attributable to the bravery of the provincial troops. In the midst of general prosperity, George II. died at Kensington, Oct. 25th, 1760, in the seventy-seventh year of his age and thirty-third of his reign. He possessed no shining qualities, and despised learning.

Quarrels between the monarch and the heir apparent marked this dynasty. Thus George II. while Prince of Wales had not been on the best of terms with his father. Similar disagreement sundered him in turn from his son Frederick. The houses in London to which George Augustus, and afterward Frederick, retired when in disfavor at St. James's, were familiarly known as 'pouting

houses.' Frederick died before his father, and the grandson, GEORGE III., was heir to the crown. His long and eventful reign we have mentioned in our sketch of England. His mother was the Princess Augusta of Saxe Gotha, who gave him birth June 4th, 1738. He succeeded his grandfather, George II., Oct. 25th, 1760; married Charlotte Sophia, Princess of Mecklenburg-Strelitz, Sept. 8th, 1761; and both were crowned Sept. 22d in the same year. He was deranged in mind from October, 1788, to March, 1789. On the 24th of April, 1789, he went in procession to St. Paul's, to offer thanks for his recovery. The malady returned in 1801, and afflicted him till 1804; he relapsed in 1810, and died in Windsor Castle, Jan. 29th, 1820, in the eighty-second year of his age, and the sixtieth of his reign. Queen Charlotte died in 1818. George III. was a virtuous man, a good husband and father. Before his time the English court had the licentiousness of France with the coarseness of Germany. Under the influence of George and his excellent consort, decency was restored. But his virtue was not shared by all his numerous offspring; the Duke of York and the Duke of Cumberland were notoriously profligate; they were outdone in vice and shame by their eldest brother, GEORGE IV.

He was born Aug. 12th, 1762. Well educated and talented, he abused the gifts bestowed upon him, and in his youth plunged into the guiltiest excesses. Loaded with debt, he at length adopted a system of retrenchment, sold his splendid racing-stud, and reduced his whole establishment. With the assistance of parliament, he extricated himself from his difficulties. The indignation excited by a nefarious transaction of his, which was exposed by the Jockey Club, compelled him to abandon the turf. The fat young debauchee became enamored with Mrs. Fitzherbert, a brilliant and lovely widow of twenty-five. His heart, he declared, was now seriously affected; the fair widow divided his affection with the bottle; and his wooing was as assiduous as was her avoidance of him. She remained obdurate to all entreaty, till one day several gentlemen of the prince's household arrived at her house in the utmost consternation, informing her that the life of the prince was in imminent danger; that he

had stabbed himself, and that only *her* immediate presence could save him. There probably never was a man more ridiculous when playing the part of a lover than this Prince of Wales. To have himself bled, in order that he might look pale and interesting in the eyes of the Cynthia of the minute, was with him no unusual trick. On this occasion, however, it was positively declared that he had stabbed himself, and the emissaries besought the young widow to hasten and heal the wound. She proceeded to Carlton House, under the very proper guardianship of the Duchess of Devonshire. She found the prince pale and covered with blood. "The sight," we are told, "so overpowered her faculties that she was deprived almost of all consciousness. The prince told her that nothing could induce him to live, unless she promised to become his wife, and permitted him to put a ring round her finger." She repented, however, of her betrothal, fled beyond the sea, and remained a year on the continent, endeavoring to avoid the perilous suit. Couriers with ardent dispatches followed her with such speed and in such numbers that the suspicious French government at last began to clap them in prison. George once wrote her a love-letter of seven and thirty pages, in which he assured her that his father would connive at the union. She returned to England, and was privately married to the prince. But she was wife and yet no wife. Public attention was turned to the match; parliament began to inquire into the matter; and Mr. Fox was authorized by the princely liar to deny that he was married. The pressure of his ill-gotten debts induced him, in 1795, to marry Caroline Amelia Augusta, daughter of the Duke of Brunswick. Her sufferings and persecution excited the world's indignation against her heartless husband. One daughter, the Princess Charlotte, was the only offspring of this unhappy and unhallowed union. This lovely and virtuous girl wedded Prince Leopold, afterward King of the Belgians; the hope of the nation was turned to lamentation by her death in childbed, Nov. 5th, 1817, at the early age of twenty-one. Her injured mother died in 1821, shortly after her husband ascended the throne.

George IV. had been regent during the long insanity of his father. His reign as king

was not long. He died July 26th, 1830. On his death-bed he received a touching note from Maria Fitzherbert, long separated from him, as from a wife offering her services to her husband. She died in March, 1837. George was succeeded by his brother William, Duke of Clarence, who had spent much of his life in the naval service. The sailor king had his errors, but what with comparison to his brother, and his own bluff good nature, he was very popular. His queen was Adelaide, sister of the Duke of Saxe-Meinengen, who survived him some twenty years. William IV. died June 20th, 1837. The kingdom of Hanover was subject to the Salique law, by which a woman can not hold the sceptre. Victoria, a girl of eighteen, the daughter of the Duke of Kent, was the heir to the British crown. The throne of Hanover therefore fell to the Duke of Cumberland, her uncle, and Victoria became Queen of Great Britain and Ireland. She was married Feb. 10th, 1840, to her cousin, Prince Albert, of Saxe-Coburg. The crown is not likely to lack an heir in the direct line; Victoria and Albert are blessed with nine children: Victoria Adelaide Mary Louisa, Princess Royal, born Nov. 21st, 1840; married to Prince Frederick William of Prussia, January, 1858. Albert Edward, Prince of Wales, born Nov. 9th, 1841. Alice Maud Mary, born April 25th, 1843. Alfred Ernest, born Aug. 6th, 1844. Helena Augusta Victoria, born May 25th, 1846. Louisa Carolina Alberta, born March 18th, 1848. Arthur Patrick Albert, born May 1st, 1850. Leopold George Duncan Albert, born April 7th, 1853. Beatrice Mary Victoria Feodore, born April 17th, 1857.

There were thirteen children born from the marriage of George III. with Queen Charlotte; and yet, of this numerous family there are singularly few legitimate descendants in the present generation. The sons were seven: George, Prince of Wales, afterward George IV.; Frederick, Duke of York; William, Duke of Clarence, afterward William IV.; Edward, Duke of Kent; Ernest, Duke of Cumberland, afterward King of Hanover; Augustus, Duke of Sussex, and Adolphus, the Duke of Cambridge. Of the six daughters, the names in the order of birth stand thus: the Princess Royal, Charlotte Augusta,

who was married to the King of Wurtemberg; the Princess Augusta, who died unmarried; the Princess Elizabeth, who was married to the Prince of Hesse Homburg; the Princess Mary, who was married to her cousin, the Duke of Gloucester; and the Princesses Sophia and Amelia, both of whom died unmarried. The last of these children on earth was Mary, Duchess of Gloucester, who expired April 30th, 1857, at the age of eighty-one. Queen Victoria, daughter of the Duke of Kent; the King of Hanover, son of the Duke of Cumberland; and the three children of the late Duke of Cambridge,—these are the only lawful grand-children of the third George that survive; and the Princess Charlotte, daughter of George IV., is the only one who has passed away.

HANSEATIC LEAGUE. In the middle of the thirteenth century, the sea and land were infested with pirates and robbers. The German trade being exposed to accidents by land and sea, Hamburg and Lubeck, in the year 1241, entered into a confederacy in which they agreed to defend each other from all attacks and from every act of violence. This league was soon after joined by Brunswick; it was named by way of eminence, the *Hanse*, meaning a league for mutual defense. Many other towns joined in a short time. In 1260 a meeting of the members was held at Lubeck, and continued there every three years. In the fourteenth century, this league attained everywhere a high political importance, and enjoyed extensive and uncommon privileges, till at last it became the mistress of lands and seas and crowns. So it continued for a length of time, till the traveling becoming more secure, and the circumstances that gave it rise being changed, the Hanseatic League began to fall. The last diet was held at Lubeck in 1630. The largest number of the Hanse towns was eighty-five.

HARDICANUTE, son of Canute and Emma, and the opponent of Harold, filled the thrones of England and Denmark for a short time. He made himself odious by the imposition of taxes, and died of repletion at the nuptials of a Danish lord in 1041.

HARLEY, ROBERT, Earl of Oxford and Mortimer, a distinguished statesman in the time of Queen Anne, was born in 1661. He was impeached in 1715, on suspicion of favor-

ing the restoration of the exiled Stuarts, and was confined in the Tower a couple of years. He was finally set free, and died May 21st, 1724. He was a great patron of literature, and by him the Harleian Library, now in the British Museum, was brought together.

HAROLD I., of England, was the son of Canute, by Alfwen, daughter of the Earl of Southampton. He was proclaimed King of England on the death of Canute in 1035, and was supported by the Danes, in opposition to Earl Godwin of Kent, who favored Hardicanute. He died in 1039.

HAROLD II., son of Earl Godwin, usurped the English throne against Edgar, after the death of Edward the Confessor, 1066. He was defeated and slain in the fatal battle of Hastings, Oct. 14th, 1066.

HAROUN AL RASCHID was one of the most celebrated of the Saracenic caliphs; the territories which he governed extended from Egypt to Khorassan. He was no less distinguished for his taste, and the encouragement he afforded to literature and the arts, than for his power. He was the second son of the Caliph Mahadi, and succeeded his elder brother, Hadi, A.D. 786. He differed in so many respects from the despots of the east, that he obtained the name of *al Raschid*, 'the just.' The caliph was fond of personally ascertaining the condition of his people, when, rid of the dazzling attributes of rank, he feared no concealment on their part. Many instances of the wisdom and justice of his decisions have come down to us. A merchant, having lost a purse containing a large sum of money, caused the loss to be proclaimed, with an accurate description of the purse and the value of its contents, offering a large reward to the person who should find and restore it. After some days had elapsed, a poor laborer presented himself before a magistrate with the purse, and claimed of the merchant (who was summoned) the reward which belonged to him. The merchant, rejoiced at finding his money, thought to avoid payment of the reward by declaring that the purse contained, in addition to the money, an emerald of great value, which the finder must be compelled to restore. The poor laborer was overwhelmed by this assertion, and the magistrate appeared at a loss, but the caliph, who was present in disguise, advanced and decided the case:

"Since," said he, "the merchant declares that the purse which he lost contained a sum of money and an emerald, and since the finder of this purse swears, and the seal upon the purse proves, that he has taken no precious gem, this can not be the purse which the merchant has lost. Let, then, its present holder endeavor to discover the real owner, and, failing to do so, appropriate the prize; and let the merchant make diligent search for the money and the emerald which he has lost; the present property being, as he has proved, none of his."

Haroun was an ardent lover of learning, and caused it to be disseminated throughout his realms. He was a warm admirer of the ancient classics, and translations of the *Iliad* and *Odyssey*, with other works of antiquity, made his people acquainted with the beauties of Greek and Roman literature. He invaded the Greek empire no fewer than eight times, conquering in 802 the Emperor Nicephorus, who had refused to pay him the customary tribute. The Greek monarch was compelled to pay a heavier tribute to the caliph, and promise not to rebuild the frontier towns which had been ruined and plundered. The caliph's destruction of the family of the Barmecides displays the stern resolution of a despot. He had experienced the care of Yahia, the head of the Barmecide family, who had superintended his education; the eldest of Yahia's sons was a general who had served his country well; the second was Giafar, the caliph's prime vizier, and the two other sons were in responsible and dignified stations. The Barmecides were in favor with all classes, and Giafar stood high in the graces of the caliph. Indeed, so warmly attached was the latter to the vizier, that, for the sake of enjoying his company with that of his beloved sister Abassa, he united them in marriage, but placed capricious restrictions upon their intimacy. On the disobedience of the pair, all the violent passions of the caliph were aroused. He publicly sacrificed Giafar to his resentment, and impoverished the whole family. Haroun, at the height of splendor and fame, sent an embassy to the Emperor Charlemagne, bearing, among other presents, a water-clock, an elephant, and the keys of the holy sepulchre at Jerusalem. The caliph was seized with a mortal illness while preparing

to depart upon a military expedition, and died at Tous, in Khorassan, A.D. 809, in the forty-seventh year of his age, and the twenty-third of his reign. No other of the Saracenic caliphs ever attained the height of power and popularity which Haroun al Raschid gained, and although some of his acts are inexcusable, yet considering the examples furnished by his age, and the preceding, we can not withhold from him a large share of praise. Haroun is one of those characters which are equally the delight of history and romance, and while the graver acts of his reign employ the pen of the rigid annalist, his varied adventures are themes for the gay eloquence of such works as the "Arabian Nights' Entertainments."

HARPER, ROBERT GOODLOE, was born near Fredericksburg, Va., of poor parents. He served a short time in a troop of light horse, but he soon withdrew from the service for the purpose of completing his education. He entered Princeton College, and while distinguishing himself in the upper classes, he was employed in the instruction of the lower. After leaving college he went to Charleston, S. C., where he studied law, but soon retired to an interior district to practice. Some essays in a newspaper gave a favorable idea of his talents and principles; he was elected to the legislature, and soon after to Congress. In 1801 he resumed the practice of law in Baltimore, having married the daughter of Charles Carroll of Carrollton. He defended Judge Chase on his impeachment. He was afterward senator in Congress, but his professional duties compelled him to resign. He died suddenly on the 15th of January, 1825, aged sixty.

HARRIS, JOHN, the first compiler of a dictionary of arts and sciences in England, died a beggar, 1719, aged forty-nine.

HARRISON, BENJAMIN, a signer of the Declaration of Independence, born in Berkeley, Virginia. He was educated at William and Mary College, and began his public career in the Virginia assembly in 1764. From 1774 to 1777 he was a delegate to Congress, chairman of the board of war, speaker of the house of burgesses, and governor of Virginia from 1782 to 1784; he was extremely popular and useful. He died in April, 1791.

HARRISON, WILLIAM HENRY, the youngest

son of Benjamin Harrison (above), was born on the 9th of February, 1773, at Berkeley in Charles City county, Virginia, about twenty-five miles below Richmond. His father was a descendant of the great General Harrison who held a commission under Cromwell. His mother was Elizabeth Bassett, a niece of the wife of General Washington. At the time of Benjamin Harrison's death, in 1791, his estate having become embarrassed in the public service, William Henry was at Hampden Sidney College, qualifying himself for the study of medicine, but when the news of the Indian outrages on the frontiers reached Virginia, he determined to enter the army. This resolution, which was opposed by his guardian, the celebrated financier Robert Morris, was warmly approved by the illustrious Washington, who gave him the commission of ensign in the first regiment of artillery, then stationed at Fort Washington on the Ohio, near the spot where Cincinnati now stands. Just after he arrived at the post, the news of Gen. St. Clair's defeat by the Indians on the Wabash reached it, and though he was urged to relinquish his new profession, on the grounds of the extreme hardships and deprivations of the service, and his youth and apparently slender constitution, he promptly and decidedly rejected the advice. Soon after, he was intrusted with the command of the escort of a train of pack-horses, destined to furnish supplies to Fort Hamilton on the Miami, twenty or thirty miles north of Fort Washington. This service required especial prudence and sagacity, and was performed by him, though a mere youth, in such a manner as to obtain the warm commendation of Gen. St. Clair.

Judge Burnet, in his "Transactions of the Historical Society of Ohio," speaks thus of this circumstance: "Soon after the battle and defeat of St. Clair, which was on the 4th of November, 1791, General Harrison, then a subaltern, was sent in command of a small detachment from Fort Washington to Forts Hamilton and Jefferson. It was in the midst of one of the severest winters ever known in this country. Subalterns, as you know, were not permitted to march on horseback. Of course this youthful hero, not then twenty years of age, marched on foot, through the snow, at the head of his detachment, with

HAR

his knapsack on his back; and although the woods were swarming with Indians, who had been released from the necessity of watching the army, he marched to the place of his destination in safety, after as severe an exposure to frost, fatigue, and danger as was endured at any time during the war."

From this time forward, the best years of his life were devoted to his country. In 1792 he was made a lieutenant, and in 1793 Gen. Wayne appointed him one of his aids, which he continued to be during the war. On the 20th of August, 1794, in marching down the Maumee, Gen. Wayne with 900 men was attacked by Indians to the number of 2,000, and put them to flight. In his official account he mentions that his "faithful and gallant aid, Lieutenant Harrison, rendered most essential service, by communicating orders in every direction, and by his conduct and bravery exciting the troops to press for victory." In August, 1795, peace was concluded at Greenville. Soon after, Harrison was promoted to the rank of captain, and placed in command of Fort Washington.

When Gen. Wayne died in 1797, Capt. Harrison resigned his commission, and was made secretary of the North-western Territory, and *ex officio* lieutenant-governor, Gen. St. Clair being governor. This office he filled with so much approbation, that he was chosen by the inhabitants their first delegate to Congress. His popularity was increased by his wish that the public lands should be sold in small quantities to actual settlers, instead of permitting speculators to purchase them in large ones, which object he accomplished, as well as a reform in the method of locating military land-warrants. The North-west Territory being divided into two, Ohio and Indiana, he was made governor of the latter in 1799, in which office his power was very extended, including that of superintendent of Indian affairs, and commissioner for treating with the Indians. The territory included the present states of Indiana, Illinois, Michigan, and Wisconsin; the seat of government was at Vincennes, a village on the Wabash. Harrison's conduct as governor was held in high estimation, and Adams, Jefferson, and Madison successively appointed him for a period of thirteen years.

In 1806, through the intrigues of two

celebrated chiefs of the Shawnee tribe, Tecumseh and his brother the Prophet, the Indians began again to be troublesome. Their hostile demonstrations gradually increased. Gov. Harrison endeavored, unsuccessfully, to conciliate them. The brothers, incited by British emissaries, were untiring in their endeavors for a league of all the tribes against the whites, till they had about them a thousand warriors. These committed atrocious depredations along the frontier, till even the governor's house was scarcely considered safe from their attacks. In September, 1809, a council convened at Fort Wayne, at which Gov. Harrison negotiated with the Miamies, Delawares, Pottawatomies, and Kickapoos, a large purchase of land. Tecumseh was much dissatisfied with this treaty when he heard of it, and he threatened the lives of some of the chiefs by whom it had been concluded. Hearing this, Harrison invited him to come to Vincennes, stipulating that he should not bring with him more than thirty warriors. But, alleging suspicion of treachery from the Americans, he came with more than four hundred, armed. He also refused to hold the conference at the appointed place, which was under the portico of the governor's house, insisting that it should be in a neighboring grove. The council was held August 12th, 1810. Tecumseh complained of injustice that Indians had received. To an explanation from Harrison, he fiercely shouted, "It is false!" His warriors sprang to their feet and brandished their clubs and tomahawks. They eyed the governor with ferocious gaze. His military escort numbered but twelve men, and they were cut off from him by the threatening Indians. They advanced, and would have fired upon the maddened savages, had not Harrison restrained them. The moment was perilous, but the cool bravery of the governor was equal to it. In a calm, firm voice, he said to Tecumseh, "You are a bad man: I will have no further talk with you. You must now take your departure from these settlements, and hasten immediately to your camp." Tecumseh was cowed by the governor's dauntless bearing, and the next day he apologized for his insolence. No satisfactory result came of the council; and Tecumseh withdrew to Tippecanoe, the residence of

the Prophet, and the brothers continued their machinations. A blow against the ruthless marauders became unavoidable, and the forbearance of the American government was at last exhausted. The next year Gov. Harrison received orders to march against the Prophet's town. Hastily assembling a force of 900 men, he advanced, and on the 9th of November, 1811, the famous battle of Tippecanoe was fought. In this fierce contest, the cool courage of Harrison was gallantly conspicuous; victory crowned the bravery of himself and his men. Notwithstanding this decisive blow, Tecumseh and the Prophet continued busy in mischief, and when war broke out with England in 1812, their activity was redoubled. Gov. Harrison received a brigadier-general's commission in the army of the United States, and President Madison invested him with the command of the north-western army, nominally consisting of ten thousand men, but undisciplined, destitute, and scattered over a wide region. The trust was as trying as it was important. The marked points of the campaign of 1813 under his direction, were the glorious defense of Fort Meigs, and the important and decisive victory won in the battle of the Thames, the 5th of October, in which Tecumseh fell, and by which the north-western frontier was relieved from danger. Harrison had received the promotion of major-general. The jealousy of Gen. Armstrong, the secretary of war, ousted him from active service, and led him to tender his resignation early in 1814.

From 1816 to 1819 he was a representative in Congress from Ohio. He was earnest for the recognition of the South American republics. He assiduously and successfully labored for the relief of the veterans who had served in the war of the Revolution, as well as those who had been wounded or otherwise disabled in the late war with Great Britain. In 1825 he took his seat as United States senator from Ohio. He supported the administration of John Quincy Adams, and in 1828 that president appointed him minister to the South American republic of Colombia. His mission was cut short by the accession of Gen. Jackson, one of whose first acts was his recall. After his return he led a quiet life upon his little farm at North Bend, on the Ohio River a few miles below Cincinnati. He had

given his life to his country's service, not to the accumulation of fortune, and his means were small. He took the office of clerk to the court of Hamilton county, and this modest station he held till 1840, when the people called him to the highest office in their gift.

The joy with which his elevation to the executive was hailed soon changed to a nation's mourning. The cares of office, and the devotion with which he entered into its onerous duties, wore heavily upon him; a severe cold was followed by an attack of bilious pleurisy that baffled medical skill, and his useful and honorable life closed April 4th, 1841, just one month from the day of his inauguration. Party distinctions were merged in sorrow for his untimely decease, and throughout the land funeral honors were paid to his memory. Minute guns were fired, bells were tolled, and resolutions expressive of the most profound regret were adopted in almost every town and village throughout the Union. It being the first instance of the death of a chief magistrate while occupying the presidential chair, the impression made was doubly strong. The funeral ceremonies at Washington were very impressive. Mr. Tyler, who as vice-president succeeded to the office of chief magistrate, issued a recommendation to the people of the Union to observe the 14th of May as a day of fasting and humiliation, in consequence of the affliction the nation had sustained. It was almost unanimously observed, and very few clergymen in the country failed to improve the opportunity to impress upon the minds of their hearers the weight of our national sins, and the solemn lesson given them of the vanity of all earthly distinctions and honors. Ohio could not relinquish her claim to the remains of one who, from the age of nineteen, had been devoted to her best interests. A committee of her most respectable inhabitants went on to Washington, and were permitted to convey them to North Bend, where, on the mound under which they are deposited, a modest tomb denotes to the eye of the traveler sailing upon the Ohio, the spot where rests the patriot, hero, and Christian.

In person General Harrison was tall and slender. Although his constitution was not the most robust, habitual activity and tem-

perance secured him a bodily vigor seldom surpassed. He was of generous disposition, and easy and unostentatious in manners. At the age of twenty-one, while stationed as a captain at Fort Washington (where the queenly city of Cincinnati now stands), he married Anna, the daughter of John Cleves Symmes, the founder of the Miami settlements. Four sons and a daughter died before him; Mrs. Harrison, a son, and three daughters survived.

HART, JOHN, a signer of the Declaration of Independence, was born at Hopewell, N. J., about 1715. He tilled the earth, and his mind was strong, though little cultivated by letters. He was a member of the congress of 1774, and soon after signing the Declaration of Independence retired from that body. When New Jersey became the theatre of war, he suffered much loss at the hands of the loyalists. He died in 1780, and was buried at Rahway, N. J.

HARTLEY, DAVID, an eminent English metaphysician, died in 1757, aged fifty-three.

HARVEY, WILLIAM, M. D., the discoverer of the circulation of the blood, born at Folkestone in 1578, died in London, June 3d, 1657.

HASTINGS, a borough, market town, and cinque-port in Sussex, memorable for the battle fought in its vicinity, Oct. 14th, 1066, which gave the English crown to William the Conqueror.

HASTINGS, WARREN, was born Dec. 6th, 1732, near Daylesford, in Worcestershire, and was sent to India, as a writer in the company's service, in 1750. He diligently applied himself to the duties of his station, and in his leisure studied the oriental languages. After fourteen years' residence in Bengal he returned to England; but in 1769 he went out again, as second in council at Madras, where he remained about two years, and then removed to the presidency at Calcutta. He held the post of governor-general till 1785. For his bold and unscrupulous measures against Hyder Ali, and in the various dangerous exigencies of his administration, grave charges of injustice, cruelty, and oppression were brought against him in parliament, supported by such men as Fox, Burke, and Sheridan. He returned to England in 1786, and an impeachment followed.

The trial began on the 13th of February,

1788; in the words of Macaulay, the high court of parliament was to sit according to forms handed down from the days of the Plantagenets, on an Englishman accused of exercising tyranny over the lord of the holy city of Benares, and the ladies of the princely house of Oude. The place was worthy of such a trial. It was the great hall of William Rufus; the hall which had resounded with acclamations at the inauguration of thirty kings; the hall which had witnessed the just sentence of Bacon, and the just absolution of Somers; the hall where the eloquence of Strafford had for a moment awed and melted a victorious party, inflamed with just resentment; the hall where Charles had confronted the high court of justice, with the placid courage that has half redeemed his fame. Neither military nor civil pomp was wanting. The avenues were lined with grenadiers. The streets were kept clear by cavalry. The peers, robed in gold and ermine, were marshaled by garter king-at-arms. The judges, in their vestments of state, attended to give advice on points of law. Near a hundred and seventy lords, three-fourths of the upper house, walked in solemn order from their usual place of assembling to the tribunal. The junior baron present led the way, George Eliot, Lord Heathfield, recently ennobled for his memorable defense of Gibraltar against the fleets and armies of France and Spain. The long procession was closed by the Duke of Norfolk, earl marshal of the realm, by the great dignitaries, and by the brothers and sons of the king.

The gray old walls were hung with scarlet. The long galleries were crowded by an audience such as has rarely excited the fears or the emulation of an orator. There were gathered together from all parts of a great, free, enlightened, and prosperous empire, grace and female loveliness, wit and learning, the representatives of every science and of every art. There were seated round the queen the fair-haired young daughters of the house of Brunswick. There the ambassadors of great kings and commonwealths gazed with admiration on a spectacle which no other country in the world could present. There Siddons, in the prime of her majestic beauty, looked with emotion on a scene surpassing all the imitations of the stage. There Gib-

bon, the historian of the Roman empire, thought of the days when Cicero pleaded the cause of Sicily against Verres, and when, before a senate that still retained some show of freedom, Tacitus thundered against the oppressor of Africa. The spectacle had allured Reynolds from that easel which has preserved the thoughtful foreheads of so many writers and statesmen, and the sweet smiles of so many noble matrons. There appeared the voluptuous charms of Mrs. Fitzherbert, to whom the heir of the throne had in secret plighted his faith. There were the members of that brilliant society which quoted, criticised, and exchanged repartees, under the rich peacock hangings of Mrs. Montague. And there the ladies, whose lips, more persuasive than those of Fox himself, had carried the Westminster election against palace and treasury, shone round Georgiana, Duchess of Devonshire.

The serjeants made proclamation. Hastings advanced to the bar, and bent his knee. The culprit was indeed not unworthy of that great presence. He had ruled an extensive and populous country, had made laws and treaties, had sent forth armies, had set up and pulled down princes. And in his high place he had so borne himself, that all had feared him, that most had loved him, and that hatred itself could deny him no title to glory, except virtue. He looked like a great man, and not like a bad man. A person small and emaciated; yet deriving dignity from a carriage which, while it indicated deference to the court, indicated also habitual self-possession and self-respect; a high and intellectual forehead; a brow pensive, but not gloomy; a mouth of inflexible decision; a face pale and worn, but serene,—such was the aspect with which the great proconsul presented himself to his judges. His counsel accompanied him; men all of whom were afterward raised by their talents and learning to the highest posts in their profession—the bold and strong-minded Law, afterward chief-justice of the king's bench; the more humane and eloquent Dallas, afterward chief-justice of the common pleas; and Plomer, who, nearly twenty years later, successfully conducted in the same high court the defense of Lord Melville, and subsequently became vice-chancellor and master of the rolls.

But neither the culprit nor his advocates attracted so much notice as his accusers. In the midst of the blaze of red drapery, a space had been fitted up with green benches and tables for the Commons. The managers, with Burke at their head, appeared in full dress. The collectors of gossip did not fail to remark that even Fox, generally so regardless of his appearance, had paid to the illustrious tribunal the compliment of wearing a bag and sword. Pitt had refused to be one of the conductors of the impeachment; and his commanding, copious, and sonorous eloquence was wanting to that great muster of various talents. Age and blindness had unfitted Lord North for the duties of a public prosecutor; and his friends were left without his excellent sense, his tact, and his urbanity. But in spite of the absence of these two distinguished members of the lower house, the box in which the managers stood contained an array of speakers such as perhaps had not appeared together since the great age of Athenian eloquence. There were Fox and Sheridan, the English Demosthenes and the English Hyperides. There was Burke, ignorant, indeed, or negligent, of the art of adapting his reasonings and his style to the capacity and taste of his hearers, but in amplitude of comprehension and richness of imagination superior to every other orator, ancient or modern. There, with eyes reverently fixed on Burke, appeared the finest gentleman of the age, his form developed by every manly exercise, his face beaming with intelligence and spirit—the ingenious, the chivalrous, the high-souled Windham.

The charges and the answers of Hastings were first read. The ceremony occupied two whole days, and was rendered less tedious than it would otherwise have been, by the silver voice and just emphasis of Cowper, the clerk of the court, a near relation to the amiable poet. On the third day, Burke rose. Four sittings were occupied by his opening speech, which was intended to be a general introduction to all the charges. With an exuberance of thought and a splendor of diction which more than satisfied the highly raised expectation of the audience, he described the character and institutions of the natives of India, recounted the circumstances in which the Asiatic empire of Britain had

originated, and set forth the constitution of the company and of the English presidencies. Having thus attempted to communicate to his hearers an idea of eastern society as vivid as that which existed in his own mind, he proceeded to arraign the administration of Hastings, as systematically conducted in defiance of morality and public law. The energy and pathos of the great orator extorted expressions of unwonted admiration from the stern and hostile chancellor [Lord Thurlow], and, for a moment, seemed to pierce the resolute heart of the defendant. The ladies in the galleries, unaccustomed to such displays of eloquence, excited by the solemnity of the occasion, and perhaps not unwilling to display their taste and sensibility, were in a state of uncontrollable emotion. Handkerchiefs were pulled out; smelling-bottles were handed round; hysterical cries and sobs were heard; and Mrs. Sheridan was carried out in a fit. At length the orator concluded. Raising his voice, till the old arches of Irish oak resounded, "Therefore," said he, "hath it with all confidence been ordered by the Commons of Great Britain, that I impeach Warren Hastings of high crimes and misdemeanors. I impeach him in the name of the Commons' house of parliament, whose trust he has betrayed. I impeach him in the name of the English nation, whose ancient honors he has sullied. I impeach him in the name of the people of India, whose rights he has trodden under foot, and whose country he has turned into a desert. Lastly, in the name of human nature itself, in the name of both sexes, in the name of every age, in the name of every rank, I impeach the common oppressor of all."

The trial thus strikingly commenced was for a time the great event of interest for the English public. With the brilliant speech of Sheridan in June, the excitement culminated; he occupied two whole days, and the hall was crowded to suffocation, some paying even fifty guineas for a place to hear him. The spectacle had now lost the charm of novelty; the great displays of rhetoric were over; there remained only dry details of evidence, and bickerings between the managers of the impeachment and the counsel for the defense. More stirring occurrences diverted attention from Indian affairs, and at times

the impeachment was almost forgotten. A well constituted tribunal, sitting regularly six days in the week, would have finished the trial in less than three months. But it was impracticable for the house of lords to give more than a few days to the impeachment, during each session of parliament; the trial was not terminated till the spring of 1795. Hastings was then acquitted. But he was a ruined man; the legal expenses of his defense had been enormous, the other outlays perhaps still larger. He was partially reimbursed by an annuity which his friends in the East India Company settled upon him, and by other reward that they bestowed upon him. The last twenty-four years of his life were chiefly spent in retirement at Daylesford, the manor of his ancestors, which, from boyhood, it had been his desire to recover. He died Aug. 22d, 1818.

HAUSER, CASPAR, a personage whose history is enveloped in mystery, died at Anspach, Bavaria, of wounds inflicted by an unknown assassin, Dec. 17th, 1833. On the 26th of May, 1828, a youth, apparently about sixteen or seventeen years of age, was found at one of the gates of Nuremberg; he was unable to give any account of himself, nor could it be discovered who brought him there, whence he came, or who he was. He was four feet and nine inches in height; was very pale; had a short delicate beard on his chin and upper lip; his limbs were slender; his feet bore no marks of having been confined in shoes; he scarcely knew how to use his fingers or hands; and his attempts to walk resembled the first efforts of a child. He understood nothing that was said to him, and only replied in a few words of unintelligible gibberish; his countenance was expressive of gross stupidity. He held in his hand a letter addressed to the captain of one of the cavalry companies of Nuremberg, dated "Bavarian frontiers; place nameless." Its purport was that the bearer had been left with the writer, who was a poor laborer, in October, 1812, and who, not knowing his parents, had brought him up in his house, without allowing him to stir out of it. A note accompanying the letter contained these words: "His father was one of the light cavalry; send him, when he is seventeen years old, to Nuremberg, for his father was stationed there. He was born

April 30th, 1812. I am a poor girl, and can not support him; his father is dead." A pen being put into his hands, he wrote in plain letters *Caspar Hauser*. He appeared to be hungry and thirsty, but manifested great aversion to eating or drinking anything that was offered to him except bread and water. He fell into the hands of persons who treated him kindly, and taught him the use of language; and he manifested the most amiable and grateful disposition. But he could give no account of himself, except that, as far back as he could remember, he had always inhabited a small cell, continually seated on the ground, with his feet naked, and having no covering except a shirt and trousers, and he had never seen the sky. When he awoke from sleep he was accustomed to find near him some bread and a pitcher of water; but he never saw the face of the person who brought them; and it was at Nuremberg that he first learnt there were other living creatures besides himself and the man with whom he had always been. Previous to his death Hauser resided at Anspach, where he had a little employment in the registrar-office, and Lord Stanhope had also provided for his support. Some time before his assassination, an ineffectual attempt had been made upon his life, by the same assassin, it is supposed, that finally inflicted the fatal blow with a dagger.

HAVELOCK, Sir HENRY, was born at Bishopwearmouth in 1795, and educated at the Charter House. About 1813, in consequence of adverse fortune, Ingress Park, his father's property in Kent, was sold to government; Havelock was entered at the Middle Temple, and attended the lectures of Chitty, the eminent special pleader, where his most intimate associate was Sir Thomas Talfourd, the author of "Ion." An elder brother had distinguished himself in the Peninsular war and at Waterloo, and Henry, yielding to the military propensities of his family, endeavored to obtain a commission. A month after Waterloo, he was appointed second lieutenant in the rifle brigade.

Havelock served for eight years in England, Scotland, and Ireland, and embarked for India in 1823. Next year the first Burmese war broke out; he was present at the actions of Napadce, Patanagoh, and Paglian. At the close of the war he was associated with Cap-

tain Lumsden and Dr. Knox on a mission to the court of Ava, and had an audience of the "Golden Foot," when the treaty of Yandaboo was signed. In 1827 he published the "History of the Ava Campaigns." In 1838 he was promoted to a captaincy, after having served twenty-three years as a subaltern. An army was now collected for the invasion of Afghanistan, and Havelock accompanied it on the staff of Sir Willoughby Cotton. He went through the first Afghan campaign, was present at the storming of Ghuznee and the occupation of Cabul, and then returned to India with Sir Willoughby Cotton. Having obtained leave to visit the presidency, he prepared a "Memoir of the Afghan Campaign," which was soon after printed in London. He returned to the Punjab in charge of a detachment, and was placed on the staff of Gen. Elphinstone, as Persian interpreter.

When the Eastern Ghilzies, having risen, blockaded Cabul, Havelock was sent to join Sir Robert Sale, then marching back to India, and was present at the forcing of the Khoord Cabul pass, at the action of Tezeen, and all the other engagements of that force till it reached Jellalabad. In the final attack on Mahomed Akbar, in April, 1842, which obliged that chief to raise the siege, Havelock commanded the right column, and defeated him before the other columns could come up. For this he was promoted to a brevet majority, and was made companion of the bath. He was then nominated Persian interpreter to General Pollock, and was present at the action of Mamoo Keil, and the second engagement at Tezeen. He proceeded with Sir John McCaskill's force into the Kohistan, and had an important share in the brilliant affair at Istaliff. Next year he was promoted to a regimental majority, and nominated Persian interpreter to the commander-in-chief, Sir Hugh Gough. At the close of 1843 he accompanied the army to Gwalior, and was engaged in the battle of Maharajore. In 1844 he was promoted to the rank of lieutenant-colonel by brevet. In 1845 he proceeded with the army to meet the invasion of the Sikhs, and was actively engaged in the battles of Moodkee, Ferozeshah, and Soobraon. On the conclusion of the Sutlej campaign he was appointed deputy adjutant-general of the queen's troops at Bombay. The second Sikh war now broke out, and his elder

brother, Col. William Havelock, was killed at Kaninuggur. His own regiment having been ordered into the field, he quitted his staff employment at Bombay, in order to join it, and had proceeded as far as Indore when his further progress was countermanded, and he returned to his post.

Twenty-five years of incessant and laborious service now began to tell on his constitution, and his medical adviser in 1849 sent him to Europe for two years, for the restoration of his health. He returned to Bombay in 1851, and was soon after made brevet-colonel, and appointed, through the kindness of Lord Hardinge, by whose side he had fought in the three battles of the Sutlej, quartermaster-general, and then adjutant-general, of the queen's troops in India. On the dispatch of the expedition to Persia, he was appointed to the second division, and commanded the troops at Mohammerah, the glory of which action was, however, reserved for the naval force. On the conclusion of peace he returned to Bombay, and embarked in the *Erin* for Calcutta, in which vessel he was wrecked, in 1857, off the coast of Ceylon. Five days after, he obtained a passage in the *Fire Queen*, and on reaching Calcutta, was immediately sent up to Allahabad as brigadier-general, to command the movable column, to act against the insurgent sepoys.

He first attacked the mutineers at Futty-pore, on the 12th of July; on the 15th, at Asung, and at Pandoo Nuddee; on the 16th at Cawnpore, he had a horse shot under him, and the enemy lost twenty-three guns. Advancing from Cawnpore on the 29th, he captured Oonao, Busserut Gunge, and nineteen guns. This position he was obliged to give up, but he retook it on the 5th of August, inflicting great slaughter. On the 12th of August he again defeated the mutineers, and on the 16th attacked them at Bithoor. Eventually receiving reinforcements under Sir James Outram, he entered Lucknow on the 25th of September, and held his ground there until the garrison was finally relieved by Sir Colin Campbell on the 17th of November. The severe toils of the campaign had told upon the gallant general's health; he died on the 24th of November, 1857. Havelock was as conspicuous for his piety as for his bravery.

HAWKE, Lord EDWARD, a gallant English

admiral, the son of a barrister, was born in 1713, and entered the naval service as a midshipman at the age of twelve. In 1744 he distinguished himself in the action of Toulon. November 20th, 1759, he gained a great victory over the French fleet commanded by Conflans in Quiberon Bay, though it was a lee shore, and the sea ran high in the midst of a storm. The projected invasion of England was thus defeated. He was raised to the peerage in 1776, a few years after he had been appointed first lord of the admiralty. He died Oct. 14th, 1781.

HAYDN, FRANCIS JOSEPH, an eminent composer, the author of the great oratorio of the "Creation," was born near Vienna, in March, 1732. He visited England, but spent most of his life at Vienna, near which place he died, May 31st, 1809.

HAYNE, ISAAC, a native of South Carolina, distinguished himself by his services during the Revolution. After the capture of Charleston, he took an oath of allegiance to Great Britain, with the express stipulation that he should not bear arms against his country. When, in violation of British promises, he was summoned to join the British standard, he refused, and was in consequence condemned by a court of inquiry, and hanged, on the 4th of August, 1781.

HAYTI is one of the largest of the West Indian islands, lying between Jamaica and Porto Rico, having an area of 29,000 square miles. It is sometimes called St. Domingo and sometimes Hispaniola. In the centre rises a lofty mountain range, its sides covered with vegetation, and noble woods, and leaping streams that fertilize the plains below. The principal productions of the island are coffee, the sugar-cane (for making rum), cotton, cattle, and some tobacco. Here Columbus founded his first colony, under the name of Hispaniola. After the rapacity of the Spaniards had drained the gold-mines, and their cruelty had extirpated the natives, St. Domingo was neglected for the richer lands of Peru and Mexico. In the time of Louis XIV. the French gained the western third of the island, which in their hands attained a prosperity and opulence surpassing not only the Spanish part, but the whole Spanish West Indies.

When in 1791 the French revolution declared all men free and equal, the slaves of St.

Domingo carried the doctrine out for themselves: they drove out their former taskmasters with dreadful slaughter. Toussaint l'Ouverture established a republic in 1801. After he had been treacherously borne off to France, the negroes rallied under Dessalines, who set up a military despotism and called himself James I. Dessalines restored the name of Hayti, by which the natives called the island when Columbus discovered it. After his murder in 1806, French Hispaniola was divided into two states: the northern coast was formed into a negro republic under Christophe, who in 1811 took the title of Emperor Henry I.; the plains about Port au Prince became a mulatto republic under Petion. Continual war subsisted between these two states. Boyer in 1813 succeeded Petion as president: Christophe committed suicide in 1820, and Boyer subjected not only his empire, but Spanish Hispaniola also. Boyer was deposed in 1844, and a struggle for power ensued, which terminated in March, 1847, by the election of Gen. Faustin Soulouque as president. He declared himself, in Aug. 1849, emperor. Gen. Fabre Geffrard proclaimed a republic at Gonaives, Dec. 22, 1808, and Faustin was forced to abdicate. Geffrard has since been president. The capital is Port-au-Prince. The eastern part of the island made itself an independent republic (of San Domingo) under Gen. Santana, Feb. 27, 1844, who, however, being gained over by Spain, proclaimed, March 16, 1861, that San Domingo was re-united to Spain. Hostilities followed, but in 1865, the Spanish forces were obliged to evacuate the island and it was left still free.

HAZLITT, WILLIAM, an able critic on poetry, the drama, and the fine arts, was the son of a Unitarian minister in Shropshire. He died in London, Sept. 18th, 1830, at the age of fifty-two.

HEATH, WILLIAM, born at Roxbury, Massachusetts, in 1737, and died in his native place, Jan. 24th, 1814, aged seventy-seven. Amongst the first to take up arms in favor of his insulted country, he was appointed by the provincial congress of Massachusetts, in 1775, a brigadier-general, and was by the continental congress, in 1776, raised to the rank of major-general. He commanded on the Hudson in 1779. He was the last sur-

vivor of the major-generals of the Revolution.

HEBER, REGINALD, was the son of a clergyman in Cheshire. At Brazenose, Oxford, he ranked high for his scholastic attainments and poetical abilities. He relinquished tempting prospects at home to accept the arduous bishopric of Calcutta, in 1823. His earnest labors were cut short by an apoplectic stroke, April 1st, 1826, in the forty-third year of his age.

HECTOR, the brave son of Priam, King of Troy, killed by Achilles.

HECUBA, daughter of Dymas, King of Thrace, and second wife of Priam. She survived the fall of Troy but a short time, and was stoned to death by the Greeks, who were exasperated at her bitter reproaches.

HEGEL, GEORGE WILLIAM FREDERICK, an eminent German metaphysician, born at Stuttgart 1770, died at Berlin, Nov. 14th, 1831.

HEGIRA, the flight of Mohammed from Mecca to Medina, from which era the Mohammedans begin their computation of time. They fix it on the 16th of July, A.D. 622.

HELEN, the beautiful daughter of Leda, wife of Tyndarus, as it is fabled, by Jupiter, who introduced himself to her notice in the form of a swan. She married Menelaus, whom she forsook for Paris, son of Priam, who bore her to Troy, and thus kindled the flame of war between the Greeks and Trojans. She was received by Menelaus after the fall of Troy, but on his death was murdered by Polyxo of Argos, the widow of one of the warriors killed before Troy.

HELOGABALUS. MARCUS AURELIUS ANTONINUS, a Roman emperor, son of Varius Marcellus, was called Heliogabalus, from having been a priest of the sun in Phoenicia. At the age of fourteen he was invested with the purple on the death of Macrinus, but his cruelty and licentiousness were such that his subjects rose against him, and his head was severed from his body, March 10th, A.D. 222, in the eighteenth year of his age. He burdened his subjects with the most oppressive taxes; his halls were covered with carpets of gold and silver tissue; his mats were made with the down of hares and the soft feathers found under the wings of partridges. He often invited the lowest of the people to share

his banquets, and made them sit down on large bellows full of wind, which, by suddenly emptying themselves, threw the guests on the ground, and left them a prey to wild beasts. He tied some of his favorites to a large wheel, and was particularly delighted to see them whirled round like Ixion, alternately suspended in the air and plunged beneath the water.

HELLE, in fable, a daughter of Athamas and Nephece, who, to escape from the persecution of her step-mother Ino, trusted herself to the back of a golden ram, from which she fell and was drowned in that part of the sea called the Hellespont, now the Dardanelles.

HEMANS. FELICIA DOROTHEA BROWNE was born at Liverpool, September 25th, 1793. Her union with Capt. Hemans in 1812 proved an unhappy one, and they separated in 1818. Her poems are marked by beautiful purity of sentiment and gentle pathos. The graceful poetess died at Dublin, May 16th, 1835.

HENGIST, the first Saxon king of Kent, about the end of the fifth century. He was invited to the aid of the Britons against the Scots and Picts, and received from the hands of Vortigern the whole of Kent, for which he gave his daughter in marriage. However, he leagued with the enemies of Britain, and committed great ravages beyond the limits of his territory. He died in the year 488.

HENRY I. of France. Constance his mother endeavored to set his younger brother, Robert, upon the throne; but, with the assistance of Robert II., Duke of Normandy, Henry defeated the queen's army, and obliged his brother to content himself with the dukedom of Burgundy. In his time Pope Leo IX. held a council at Rheims in France, and the Normans headed by Robert Guiscard, took Naples and Sicily from the Saracens. He died Aug. 4th, 1060.

HENRY IV. of France, called the Great, born in 1553, was son of Anthony of Bourbon, Duke of Vendome, and Jeanne d'Albret, Queen of Navarre. After the massacre of St. Bartholomew, he signalized himself against the leaguers, and on the death of Henry III. succeeded to the throne, taking the title of King of France and Navarre. His enemies endeavored in vain to make the old Cardinal de Bourbon king under the title of Charles X. Henry was victorious at Arques, Ivry,

and elsewhere. Although, to make sure of his crown, he embraced Catholicism, he secured the Huguenots by the edict of Nantes. With the aid of his able minister, the Duke of Sully, he did much to raise the country from the plight into which misrule and contention had plunged it. The Duke de Biron's execution, in 1602, was the only example of severity in his reign; and France had enjoyed peace for sixteen years, when the fanatic Ravaillac, with a knife, stabbed the king in his coach at Paris, May 14th, 1610, when on the eve of marching to fight on the side of the Protestant princes of Germany. Henry was an able and popular prince. Amours were the great blemishes upon his character, and he set a pernicious example that his subjects were but too ready to follow. His first wife was Margaret de Valois, sister of Charles IX.; after her divorce he wedded Marie de Medicis, who was regent after his death.

HENRY I., Emperor of Germany, son of Otho, Duke of Saxony, succeeded Conrad, his brother-in-law, in 919. He reduced Arnold, Duke of Bavaria, and vanquished the Hungarians, Bohemians, Slavonians, and Danes. He took the kingdom of Lorraine from Charles the Simple, defeated the Hungarians a second time, and killed 8,000 of their number. He died of an apoplexy in 936.

HENRY III. of Franconia, surnamed the Black, succeeded Conrad II. in 1039. He defeated the Bohemians (that denied him tribute) in his second campaign, and restored Peter to the throne of Hungary, whence his subjects had driven him in 1043; reduced the petty princes of Italy, and made war on the Hungarians. He died at Bothfeld in Saxony, in 1056.

HENRY I. of England, the youngest son of William the Conqueror, was born in 1068. Upon the death of his brother William Rufus in 1100, he hastened to Winchester, secured the royal treasure, and usurped the crown. He removed the odious restrictions of the curfew; his marriage with Matilda, daughter of Malcolm, King of Scotland, and also a descendant of the ancient Saxon line, still further ingratiated him with the common people. Robert, the eldest son of the Conqueror, having returned from Palestine to his duchy of Normandy, difficulties arose between the brothers; Henry invaded Robert's domain, and in the battle of Tinchebray (1106) the

latter was defeated and captured. Henry reigned over Normandy, and Robert, for the remaining eight and twenty years of his life, lay imprisoned in Cardiff Castle. Queen Matilda died May 1st, 1119; she had borne the king one daughter, Maud, or Matilda, who had wedded Henry V. of Germany, and one son, Prince William. In 1120 Henry passed over to Normandy with his son, that the barons of the duchy might pay their homage to the young prince. On the voyage home, the crew of Prince William's vessel were in liquor; she struck upon the rocks near Barfleur; only one of the many lives on board was spared, that of a butcher of Rouen. Prince William, his newly married bride, his bastard brother Richard, his fair cousin Lucia, and the throng of gay nobles composing his retinue,—all were drowned. King Henry, some say, never smiled again. In 1129 he married Adelais, daughter of Godfrey, Earl of Louvaine; she survived him. Henry died Dec. 1st, 1135, of a surfeit of lampreys, a fish of which he was inordinately fond. This king's scholarship so far surpassed the ordinary attainments of his time that he was surnamed Beauclore.

HENRY II., III., IV., V., VI., Kings of England. [See PLANTAGENET.]

HENRY VII., VIII., Kings of England. [See TUDOR.]

HENRY, MATTHEW, the celebrated commentator on the Scriptures, was born in 1662 in Flintshire, whither his parents had retired after his father, Rev. Philip Henry, was ejected from his parish for nonconforming. Matthew became a dissenting minister at Chester, where he continued with great usefulness for twenty-five years. In 1712 he removed to Hackney, near London. Of several theological works put forth by this excellent divine, the largest and best known is his Commentary on the Bible, which he did not live to complete. He died of apoplexy in June, 1714.

HENRY, PATRICK, son of John Henry, was born in the colony of Virginia, May 29th, 1736. Passionately addicted to field sports, and averse to toil of any kind, even the elements of education were mastered by him with distaste, although he had a strong mind and a retentive memory. At the age of eighteen he married Miss Skelton, and settled on

a farm; but agricultural as well as mercantile pursuits, in which he had previously embarked, possessed no charm for him, and he was unsuccessful. As a final effort, he resolved to attempt the law, and was licensed to practice after *six weeks'* preparatory study. For several years his practice was limited and the wants of his family extreme. The first argument that he made was in 1763, in opposition to the clergy's tobacco stipend. His eloquence electrified his hearers, gained his cause, and put him at once in the front rank of his profession. In 1765 he was elected member of the house of burgesses, and introduced his celebrated resolutions on the stamp act. In the midst of the debate on this occasion, he exclaimed, "Cæsar had his Brutus, Charles the First his Cromwell, and George the Third"—"Treason!" cried the speaker—"Treason, treason!" echoed from every part of the house. Henry faltered not for an instant, but, taking a loftier attitude, and fixing on the speaker an eye of fire, he added—"may profit by their example. If this be treason, make the most of it." Henry served his country in various posts, was sent to the congress at Philadelphia in 1774, took the field, and was elected governor of the commonwealth of Virginia. In 1791 he retired from public life, and died June 6th, 1799. His eloquence was manly and convincing, and his voice powerful and musical.

The following was his language in 1775:

"It is vain, sir, to extenuate the matter. Gentlemen may cry, *peace, peace*—but there is *no* peace. The war is actually begun.

"The next gale that sweeps from the north will bring to our ears the clash of resounding arms! Our brethren are already in the field! Why stand we here idle? What is it that gentlemen wish? What would they have? Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God!—I know not what course others may take, but as for me, give me *liberty* or give me *death*!"

He took his seat. No murmur of applause was heard. The effect was too deep. After the trance of a moment, several members started from their seats. The cry, "To arms," seemed to quiver on every lip, and gleam from every eye! Richard Henry Lee arose and supported Mr. Henry with his usual

spirit and elegance. But his melody was lost amidst the agitations of that ocean which the master spirit of the storm had lifted up on high. That supernatural voice still sounded in their ears and shivered along their arteries. They heard, in every pause, the cry of liberty or death. They became impatient of speech; their souls were on fire for action.

HERCULANEUM, an ancient city not far from Naples, which was buried by an eruption of Vesuvius, in the reign of Titus, Aug. 24th, A.D. 79. It has been excavated, and presents a most curious and interesting spectacle. The same eruption destroyed Pompeii.

HERCULES, a fabulous Grecian hero, the son of Jupiter and Alcmena, the wife of Amphitryon, king of Thebes. In vain did the jealous Juno send two serpents to kill the young hero in his cradle: he strangled them both, and thus displayed to all the divinity of his origin. He had to combat for a long time the enmity of Juno, who exacted of him twelve labors, independently of other signal actions which he performed. 1. He killed the Nemean lion, to deliver the kingdom of Mycene, and wore his skin in the remainder of his exploits. 2. He slew the Lernean hydra, whose heads multiplied sevenfold on being severed. 3. He brought to Eurystheus upon his shoulders, the Erymanthean boar, an animal of a prodigious size. 4. He subdued the golden-horned and brazen-hoofed stag of Diana. 5. He destroyed with his arrows the foul Stymphalian birds of extraordinary size and voracity. 6. He cleansed the Augæan stables. 7. He tamed the furious bull of Crete. 8. He gave Diomedes to be devoured by his own horses, which had been fed on human flesh. 9. He vanquished the Amazons, whose queen, Hippolyta, he gave in marriage to his friend Theseus. 10. He brought the oxen of Geryon, king of Spain, to Greece. This was only effected by killing this monarch, formidable for his triple head. 11. He obtained the golden apples of the garden of the Hesperides, by killing the dragon with a hundred heads that guarded them. 12. He dragged away Cerberus, the three-headed dog that watched the gate of hell, into which he descended twice, once with his friend Theseus, and afterward to seek the queen Alceste, who devoted herself to death for her husband Admetus.

The centaur Nessus having insulted Dejanira, the wife of Hercules, the hero killed him with an arrow, the barb of which was poisoned with the blood of the Lernean hydra. The dying centaur persuaded Dejanira to give a tunic dipped in his blood to her husband, in token of reconciliation. Hercules had no sooner clothed himself in this garment than he perceived that he was poisoned by it. He accordingly, with the help of Philoctetes, built a funeral pile on Mount Œta, and expired in the flames. But Jupiter received him in the ranks of the gods, and gave him in marriage Hebe, the beautiful goddess of youth. Hercules is generally represented as a robust man, leaning on his club. On his shoulders he wears the skin of the Nemean lion, and in his hands he holds the Hesperian fruit.

Abyla, a mountain of Africa, and Calpe (now Gibraltar) directly opposite, were formerly called the Pillars of Hercules, from a tradition that this Samson of the Greeks forced them asunder to form a junction between the waters of the Atlantic and Mediterranean. In this tale we perceive the reminiscence of a great convulsion of nature that separated Europe and Africa.

HERO AND LEANDER. Their amour is famous. Their fidelity was so great, and their love so ardent, that Leander frequently, in the night, eluded the vigilance of his family, and swam the Hellespont from Abydos to Sestos, while Hero, a beautiful priestess of Venus, held a burning torch as a beacon to guide his course. After many stolen trysts, thus obtained, Leander was drowned one stormy night; and Hero, in despair, threw herself from her tower, and perished in the sea, 627 B.C. The Hellespont is now called the strait of the Dardanelles. [See *ABYDOS*.]

HERMANN, the deliverer of Germany from the Roman yoke, was born 18 B.C. He was educated at Rome, and honored by Augustus with the knighthood, and the rights of citizenship. But from attachment to the land of his birth, he instigated the Germans to revolt. After various fortunes he was assassinated in the thirty-seventh year of his age.

HEROD, surnamed the Great, was born at Ascalon, Judea, B.C. 71. He reigned in Judea as a vassal of the Romans, and ren-

dered himself odious by his tyranny. As he knew that the day of his death would become a day of mirth and festivity, he ordered the most illustrious of his subjects to be confined and murdered the very instant he expired, that every eye in the kingdom might seem to shed tears at the death of Herod. This order was never executed. He died a dreadful death in the seventieth year of his age, after a reign of forty years, which was rendered memorable by the birth of Christ.

HERODOTUS, 'the Father of History,' born at Halicarnassus in Caria, B.C. 484, flourished B.C. 440; time of his death unknown. His history includes a period of 234 years, from B.C. 713 to 479.

HERRINGS, BATTLE OF THE. This battle was fought in 1429, when the English were besieging Orleans. The Duc de Bourbon, trying to cut off a convoy from the English camp, was severely beaten. The convoy being laden with herrings, the battle thence had its ludicrous name.

HERSCHEL, Sir **WILLIAM**, born in Hanover, November 15th, 1738, came to England in 1757, and was at first a humble musician. Love of science led him to the study of mathematics and astronomy. Too poor to purchase a telescope, he constructed one with his own hands, grinding and polishing the specula himself. He completed in 1774 a five feet Newtonian reflector with which he could see the satellites of Jupiter and the belt of Saturn. He discovered the planet Uranus in 1781. He died August 25th, 1822.

HESSE-CASSEL, an electorate, and a member of the Germanic confederacy, containing 736,392 inhabitants in 1855. The sovereigns of Hesse-Cassel formerly filled their coffers by hiring out their subjects as mercenaries in foreign wars. Several thousand Hessians were employed by the British in the American Revolution. The grand duchy of **HESSE DARMSTADT** has 854,314 inhabitants, and the little landgraviate of **HESSE HOEBURG**, 25,000.

HEWES, JOSEPH, a signer of the Declaration of Independence, was born at Kingston, N. J., in 1730. He was educated at Princeton, became a merchant, and at the age of thirty settled in North Carolina. After sitting several years in the colonial assembly, he was

elected to Congress in 1774. He was compelled by sickness to leave his seat in 1779, and died Nov. 10th of that year.

HEYWARD, THOMAS, JR., a signer of the Declaration of Independence, was a native of St. Luke's, S. C., born in 1746. Having studied law at the Temple in London, he practiced his profession in his native state, and soon entered upon political life. He was elected to Congress in 1775, and left that body in 1778 to fill a judicial station at home. He commanded a battalion of militia during the siege of Charleston, was made prisoner upon the surrender, and sent with others to St. Augustine. He retired from public life in 1778, and died in March, 1809.

HIERO I., a king of Syracuse after his brother Gelon, rendered himself odious by his tyranny in the beginning of his reign. He made war against Theron, the tyrant of Agrigentum, and took Himera. He obtained three different crowns at the Olympic games, two in horse-races, and one in a chariot-race. The first Olympic ode of Pindar is inscribed to him, and mention is made of his horse Phrenicus, by which he was the winner of the Olympic crown. The ancient races were somewhat different from the modern; at the former, honor alone was the reward of the winner, and no one lost either his character or his money. In the latter part of his reign, the conversation of Simonides, Epicharmus, Pindar, &c., softened the roughness of Hiero's manners and the severity of his government, and tended to render him the patron of learning, genius, and merit. He died after a reign of eighteen years, B.C. 467, leaving the crown to his brother Thrasylbus, who disgraced it by his tyranny.

HIERO II., a descendant of Gelon, reigned about two hundred years after the preceding. He was appointed to carry on the war against the Carthaginians. He joined his enemies in besieging Messina, which had surrendered to the Romans; but he was beaten by Appius Claudius, the Roman consul, and obliged to retire to Syracuse, where he was soon blocked up. Seeing all hopes of victory lost, he made peace with the Romans and proved so faithful to his engagements, during the fifty-nine years of his reign, that the Romans never had a more firm or attached ally. He died in the ninety-fourth year of his age, about 225

HIEROGLYPHICS.

B.C. He was universally regretted, and all the Sicilians showed by their lamentations that they had lost a common father and a friend. He liberally patronized the learned, and employed the talents of Archimedes for the good of his country.

HIEROGLYPHICS, or 'sacred engraving,' was the name given first to the sculptures and inscriptions on the monuments of Egypt; it is now often used to denote simply picture writing, which is seen in its rudest state upon the buffalo skins of our North American Indians, &c. A new charm was given to similar sculptures, and indeed to the study of antiquity in general, by Champollion's discovery of the key to these so long inexplicable mysteries. This indefatigable scholar, after many years of toil, at last succeeded in deciphering every inscription presented to

him! He discovered that these hieroglyphics were usually employed as mere alphabetic letters; that when thus read, they yield regular compositions in the Coptic or old Egyptian language.

The hieroglyphic writing is eminently monumental. It is, from the nature of the signs which it employs, a species of painting, and it presents a various and picturesque aspect which distinguishes it essentially from every other method of writing. The hieroglyphic characters do in fact exhibit images of almost every material object in creation: celestial bodies, human figures in various positions, human limbs taken separately, wild and domestic quadrupeds, limbs of animals, birds, fishes, reptiles, insects, vegetables, plants, flowers, and fruits, buildings, furniture, coverings for feet and legs, head-

dressess, weapons, ornaments and sceptres, tools and instruments of various sorts, vases, cups, and the like, geometrical figures, and fantastic forms. The figures are arranged in columns, vertical or horizontal, and grouped together, as circumstances required, so as to leave no spaces unnecessarily vacant. We can not go into a detailed account of the various methods of Egyptian writing, but give a familiar specimen of the phonetic and alphabetic, an illustration of which is presented on the preceding page. To write the word 'Boston' (see cut, A), for 'b' the Egyptians would look for some familiar object, the name of which began with 'b,' say a censer, which is called in Egyptian *berbe*, and the engraving would be the more appropriate to use, from the church-going character of the inhabitants of Boston; in looking round for an object whose name begins with 'o,' the literary character of the city would suggest the reed, an instrument of writing anciently, and now so used in the East; this, in Egyptian, is *oke*; for 's' take a star, *sion*; for 't' a hand, *tot*; for 'o,' again, to have a variety, instead of the Egyptian tufted reed, as above, they might take an abbreviation of it, the curled line; for 'n,' we have the vulture, *noure*, or, better, the sign for inundation, *neph*. Fig. B gives an Egyptian specimen of the symbolical style, in what is generally called an anaglyph. It is a female winged sphinx, founded on a block of black granite. The sphinx was an emblem of strength and wisdom, the body being that of a lion, and the head human. The name *Tmauhmot* (daughter of Horus, a king of the eighteenth dynasty of Egypt) is read in the oval. This, then, is a symbolical image of the queen herself; and the flowers of lotus, underneath, are evidently, though emblematically, taken for the Nile, and for the whole country of Egypt. The sphinx, instead of a paw, has a hand, raised in the attitude of protection. The whole, then, seems to be in praise of a monarch, and to signify "a monument raised to the memory of Queen Tmauhmot, styled the guardian and protectress of the land of Egypt, by her wisdom and strength."

HILDEBRAND succeeded Alexander II. as pope in the year 1073, taking the name of Gregory VII. Being advanced by the suf-

frages of the cardinals without the emperor's authority, the better to confirm himself in the pontificate he abolished the imperial power of conferring investiture upon bishops and clergymen, and became an inveterate enemy of the Emperor Henry IV. He prevailed upon Rodolph, Duke of Suabia, to assume the title of emperor and take up arms against Henry; but Rodolph being overthrown and slain, Henry marched directly into Italy, besieged Rome, took the city, and established Clement III. upon the papal throne. Gregory fled to Salerno, and there died, after having enjoyed the papal dignity twelve years. He was the first who bore the exclusive title of pope, which theretofore had been common to other bishops.

HILL, ROWLAND, son of Sir Rowland Hill, was born at Hawkestone, Shropshire, in 1745, and educated at Eton and Cambridge. He was a Calvinistic Methodist, and took Whitfield for his model. His discourses were singular, being sometimes crowded with puns and stories, while at others their solemnity was unbroken. Some of his straits are mentioned in his diary. "1767, Jan. 1st, preached at Chesterton; we had the honor of a mob; no other harm was done than the windows broke." "Thursday, in a barn, for the first time, with much comfort. God send, if I am to live, this may not be my last barn. Some gownsmen were there, but they were not permitted to do more than gnash their teeth." Mr. Hill used to be circum-spect in receiving recruits. To a person who had a great desire to preach, and talked about hiding his talents, he replied that "the closer he hid them the better." Robert Hall once replied to a shoemaker, who expressed a similar reluctance to hide his talents in a napkin, "The smallest pocket-handkerchief you have will do, sir." Mr. Hill, in his "field campaigns," used to go to large towns on market-days, and address the assemblage in the market-houses. When he heard of a fair or a revel, he preached there in spite of the violence with which he was assailed, and often with success. His favorite text was "Come ye out from among them." The freshness and originality of his addresses attracted crowds to hear him. He preached on Calton Hill in Edinburgh to an audience of ten thousand. Nor was he admired by a

vulgar and uneducated class only; Sheridan used to say, "I often go to hear Rowland Hill, because his ideas come red-hot from the heart." The eccentricities of manner, the quaintness of expression, the anecdotes and witticisms in the pulpit, were forgotten by his regular hearers, in the rich vein of sterling piety and spiritual instruction that marked the service. He died April 11th, 1833.

HILLHOUSE, JAMES, a man very highly respected for his private virtues, and his great and long continued public services, was born at Montville, Conn., Oct. 21st, 1754, and died at New Haven, Dec. 29th, 1832. He was a member of the senate from 1796 to 1810.

HIPPIAS AND HIPPARCHUS, two sons of Pisistratus, tyrant of Athens, whom they succeeded 527 B.C. Hipparchus was slain in a conspiracy, 512 B.C., by Harmodius and Aristogiton, who had devoted themselves to their country. Hippias alone now held the reins of government, but he became odious, and on the siege of Athens by the Lacedæmonians, he surrendered the city and retired to Ligeum, on the Hellespont, 509 B.C. Thus Athens once more recovered its liberty. An attempt was afterward made to restore Hippias to the government of Athens. By some authors he is said to have perished at the battle of Marathon; but others assert that he died at Lemnos in poverty and distress.

HIPPOCRATES, a celebrated Greek physician, born 460 B.C. He is called the Father of Medicine. The time of his death is unknown.

HOADLEY, BENJAMIN, an eminent English divine, Bishop of Bangor and of Winchester, died in 1761, aged eighty-five.

HOBBES, THOMAS, a celebrated English philosopher, died in 1769, aged ninety-one.

HOCHE, LAZARE, born in 1768, was a brave and skillful general in the French revolutionary army. He accomplished the pacification of La Vendee and Brittany; headed the expedition against Ireland in 1796, which was dispersed by storms; and in 1797 was put in command of the army of the Sambre and the Meuse. He died in this year, after a short illness.

HOCHKIRCHEN, BATTLE OF, between the

Prussians under Frederick the Great, and the Austrians under Count Daun, Oct. 14th, 1758. Frederick was taken unawares, and was defeated.

HOFER, ANDREW, the Tell of the Tyrol, a heroic Tyrolese who headed an insurrection of his countrymen on the 10th of April, 1809. His resistance to the French was chivalric, and successful on many occasions. After he found farther resistance useless, he concealed himself, but was betrayed by a priest, conveyed to Mantua, and shot, February 20th, 1810. He met his fate with firmness, rejoicing that he had done his duty.

HOGARTH, WILLIAM, was born in London, Dec. 10th, 1697. He was apprenticed at an early age to a silversmith, but at the expiration of his time, in 1718, he took to engraving in copper for the booksellers. In 1730 he married the only daughter of Sir James Thornhill, against the father's will, and set up as a portrait painter with considerable success. He now commenced his remarkable series of satirical paintings reflecting on the social abuses of the time; producing "The Harlot's Progress" in 1734, "The Rake's Progress" in 1735, and "Marriage à la Mode" in 1745. In 1753 he appeared as an author in his "Analysis of Beauty." In 1757 he was appointed serjeant painter to the king. He died in London, Oct. 26th, 1764, and was buried at Chiswick.

HOGG, JAMES (commonly called 'the Ettrick Shepherd'), was born Jan. 25th, 1772; he greatly prided himself that his birth-day was the anniversary of that of Burns. He was a native of Ettrick Vale, in picturesque Selkirkshire. A love of romance and poetry, he inherited from his mother, whose memory was thickly stored with the ancient legends and ballads of Scotland; and his solitary watches over his flocks on the hills and among the glens heightened his imagination. The "Queen's Wake" established his fame as an author; it consists of a collection of tales and ballads supposed to be sung to Mary Queen of Scots by the native bards of Scotland, assembled at a royal wake at Holyrood, in order that the fair monarch might prove the wondrous powers of Scottish song. The worldly schemes of the Shepherd were seldom successful; he

made two disastrous attempts at farming; and his sole support, for the latter years of his life, was the remuneration afforded by his literary labors. He lived in a cottage which he had built at Altrive, on a piece of moorland presented to him by the Duchess of Buccleuch. His love of angling and field sports amounted to a passion, and when he could no longer fish or hunt, he declared his belief that his death must be near. In the autumn of 1835 he was attacked with a dropsical complaint; and on the 21st of November of that year, after some days of insensibility, he breathed his last as calmly, and with as little pain, as he ever fell asleep in his gray plaid on the hillside. His death was deeply mourned in the vale of Ettrick, for all rejoiced in his fame, and, notwithstanding his personal foibles, the Shepherd was generous, kind-hearted, and charitable far beyond his means.

HOHENLINDEN, a village of Bavaria, eighteen miles east of Munich, remarkable for the great defeat which the Austrian army sustained here on the 3d of November, 1800, from the French under Moreau.

HOLBEIN, HANS, an eminent Swiss painter, died in London, 1554, aged fifty-six. He was the favorite artist of Henry VIII.

HOLLAND. [See NETHERLANDS.]

HOLSTEIN, a duchy in the north of Germany, belonging to Denmark. It contains 3,259 square miles, and 479,000 inhabitants, mostly Lutherans. Almost the whole of the country is fruitful. The King of Denmark is Duke of Holstein, by virtue of which he has a place in the German confederation. War subsisted between Denmark and the duchies of Schleswig and Holstein in 1849 and 1850. The matters of difference were patched up by the intervention of Austria and Prussia.

HOLT, Sir JOHN, an eminent English lawyer and judge, died in 1709, aged sixty-seven. He was a firm opponent of the oppressions of the crown.

HOLWELL, JOHN ZEPHANIAH, was one of the few survivors of the party of 146 English, who were confined by the Nabob of Bengal in 1756, in what was called the Black Hole at Calcutta. Mr. Holwell wrote an account of this dreadful affair, which he survived forty-two years, dying in 1798, aged eighty-nine. [See BLACK HOLE.]

HOLYOKE, EDWARD AUGUSTUS, M. D., son of the Rev. Edward Holyoke, president of Harvard College, was born Aug. 1st, 1728, in Essex county, Mass. He was graduated at Harvard in 1746, and commenced the practice of medicine at Salem in 1749. He was distinguished in his profession, and published several scientific disquisitions. He died the 31st of March, 1829, being then over one hundred years of age.

HOMER, the most celebrated poet of antiquity, was, according to common tradition, born on the river Meles, not far from Smyrna. His father's name was Mæon, and his mother's Critheis. Seven cities contended for the honor of being his birth-place: Smyrna, Colophon, Chios, Argos, Athens, Rhodes, and Salamis. It is doubtful whether he lived in the tenth, ninth, or eighth century before Christ. Little is known of Homer. He has

HOMER.

been represented as blind, but this must have been a misfortune occurring in his latter days, for his descriptions could only have been given by a man possessed of sight. He wandered about singing his poems, which were handed down from mouth to mouth, and from generation to generation, after his death, until they were finally transmitted to paper, and thus preserved from oblivion. The poems attributed to Homer are the *Iliad* and the *Odyssey*: the subject of the *Iliad* is the revenge taken by Achilles on Agamemnon for depriving him of his mistress, Briseis, during the siege of Troy, and the evils which in consequence befell the Greeks: the *Odyssey* nar-

rates the adventures of Ulysses, returning from Troy to Ithaca, his native island.

HONORIUS, the first emperor of the Western empire of Rome, succeeded his father Theodosius the Great, with his brother Arcadius, A.D. 395. He was neither bold nor vicious, but he was of a modest and timid disposition, unfit for enterprise, and fearful of danger. He conquered his enemies by means of his generals, and suffered himself and his people to be governed by ministers who took advantage of their imperial master's indolence and inactivity. He died of the dropsy, in the thirty-ninth year of his age, Aug. 15th, A.D. 423.

HOOD, ROBIN, an outlaw in the time of Richard I., who dwelt chiefly in Sherwood Forest, Nottinghamshire, and was the most romantic and courteous of bandits, as well as the most powerful. He took from the rich, but he gave to the poor. It is said that he was bled to death by a nun, to whom he applied for phlebotomy, in the year 1247.

HOOD, SAMUEL, Viscount, was the eldest son of the Rev. Samuel Hood, vicar of Thorncombe, in Devonshire; at which place he was born in 1724. He went to sea at the age of sixteen, and, for his gallantry in taking a fifty-gun ship, was made a post-captain in 1759. In 1780, with the rank of admiral, he sailed to the West Indies, where he defeated the attempt made upon St. Christopher's by the Comte de Grasse. He also had an active part in the victory obtained over that commander on the 12th of April, 1782; for which he was created Baron Hood of Catherington, in the kingdom of Ireland. In 1784 he was elected into parliament for Westminster; he vacated his seat, on being named one of the lords of the admiralty, in 1787. In 1793 he was appointed to command in the Mediterranean, where he distinguished himself by taking possession of Toulon, and, when it was no longer tenable, destroying the arsenal, dock-yard, and shipping. After this he made himself master of Corsica, and then returned to England, where he was made a viscount, and governor of Greenwich Hospital. He died at Bath, January 27th, 1816.

HOOD, THOMAS, a poet and prose-writer of the utmost humor and pathos, died in 1845, aged forty-seven. His lot was lifelong toil, threatened by poverty, and embittered by ill health.

HOOKE, RICHARD, author of "Ecclesiastical Polity," died in 1600, aged forty-seven. This learned theologian having occasion to visit London, and arriving from Oxford wet and weary, received so much kindness and attention from his hostess that she completely won his confidence. The good man came to be persuaded by her that his constitution was tender; that it was best for him to have a wife, who might prove a nurse to him, such a one as might both prolong his life and make it comfortable; and such a one she could and would provide for him, if he thought fit to marry. The helpmate she provided was her own daughter, silly, clownish, and withal a perfect Xantippe. Hooker married her, however, according to his promise, and had an especial occasion to practice the spirit of resignation during his seventeen years of wedlock, the remnant of his life.

HOOPER, WILLIAM, a signer of the Declaration of Independence, was born at Boston, Mass., June 17th, 1742, the son of a Scotch clergyman, and was educated at Harvard. He studied law under James Otis, and commenced practice at Wilmington, N. C., in 1767. He was a member of the colonial legislature in 1773, and the next year was sent to the continental congress, where he served till 1777, when he resigned and returned home. In 1786 he was elected a judge, and in October, 1790, he departed from life. He advocated the cause of liberty both with pen and voice, and was its active champion. Among the documents from his pen was an address to the people of Jamaica in 1775.

HOPKINS, STEPHEN, a signer of the Declaration of Independence, was born in Scituate, R. I., March 7th, 1707. He was chosen speaker of the general assembly in 1741. In 1751 he was appointed chief-justice of the superior court of Rhode Island, and in 1774 a delegate to Congress. Previous to this, he had held for some years the office of governor of Rhode Island. In 1778 he was a fourth time chosen member of Congress. He died July 13th, 1785, at the age of seventy-eight. He was bred as a farmer, and afterward engaged in commerce at Providence. Although a self-taught man, he was an excellent mathematician, and well versed in political economy and science.

HOPKINSON, FRANCIS, a signer of the Declaration of Independence, was born in Philadelphia in 1737. After receiving a collegiate education and having studied law, he visited England for two years, and upon his return became distinguished in his profession. He resided at Bordentown, N. J., when the war of the Revolution broke out, and was chosen a delegate to Congress from that state in 1776. He strongly advocated independence, and was an active member. He was afterward judge of the district court for Pennsylvania. He was a wit and a poet, as well as a lawyer and judge. He died May 9th, 1790.

HORACE. QUINTUS HORATIUS FLACCUS, a celebrated Roman poet, was born at Venusium B.C. 65. He was well educated, and fought for liberty at Philippi, B.C. 42. He gained the favor of Mæcenas, but lived in retirement, and even refused the splendid offers of Augustus, preferring the peaceful solitude of his Sabine farm. He died suddenly, 9 B.C., in the fifty-seventh year of his age.

HORATII, three Roman brothers, who during the reign of Tullus, to prevent the effusion of blood in a general battle, engaged the Curiatii, three Alban brothers, to decide the contest. Two of the Horatii were slain, when the surviving brother, feigning flight, permitted the Curiatii, who were disabled by wounds, to approach him one by one, and then slew them singly, thus deciding the contest in favor of the Romans. The conqueror stained his triumph by murdering his sister, because, amidst her country's joy, she could shed tears at the death of her lover, one of the Curiatii.

HORATIUS, surnamed Cocles, 'the one-eyed,' alone sustained the attack of the Etrurian army, while his friends broke down the bridge over the Tiber that led to Rome, behind him. He then committed himself to the waves, armed as he was, and reached Rome in safety. This exploit was performed B.C. 507.

HOWARD, JOHN, the philanthropist, was born at Hackney, in 1726. He was bound apprentice to a grocer in London; but disliking the business, and inheriting an independent fortune, he purchased his indentures, and made the tour of France and Italy. On his return, he married a widow lady, much

older than himself, who died about three years afterward. In 1756 he undertook a voyage to Lisbon, to see the place after the earthquake; but on the voyage the ship was taken by a French privateer, and carried to France. On being released, Mr. Howard retired to a villa in the New Forest; and, in 1758, married a second time; but lost his lady in 1765. About this time he settled at Cardington, near Bedford, where his time was much occupied in benevolent objects, and in the education of his son, who afterward became hopelessly insane. In 1773 he received the office of high sheriff, which led him to make inquiries into the state of prisons. With this view he visited every prison in the united kingdom, and traveled through France, Germany, Holland, Italy, Spain, Portugal, and Turkey. He published, in 1777, a work entitled "The State of the Prisons in England and Wales," dedicated to the House of Commons. In 1780 appeared an appendix, with an account of the author's travels in Italy. He also printed a description of the Bastille, a translation of Tuscany's new code of civil law; and, in 1789, "An Account of Europe." The plague was now the object of his researches, and, with a design of ascertaining the nature of this disorder, and the means of curing it, he set out for the east; but died of a malignant epidemic, at Cherson, in the south of Russia, January 20th, 1790. A statue has been erected to his memory in St. Paul's Cathedral.

HOWARD, JOHN EAGER, a gallant officer in the American revolution, was born in Maryland, June 4th, 1752. He principally distinguished himself in the southern campaigns, and received a wound at the battle of Eutaw, from the effects of which he never recovered. He was chosen governor of Maryland in 1788, and filled the post for three years. From 1796 till 1803 he was a member of the senate of the United States. Col. Howard died in October, 1827.

HOWARD, CHARLES, Earl of Nottingham, was the son of William Lord Howard, of Effingham, and grandson of Thomas, the second Duke of Norfolk. He was born in 1536. He went in 1559 to congratulate Francis II. of France on his accession to the throne; and in 1569 was made general of the horse in the army sent against the Earls of Northumber-

HOW

land and Westmoreland. The next year he went with a fleet of men-of-war to convoy the Princess Anne of Austria to Spain; and in 1573 he succeeded his father in his titles and estate. The same year he was installed knight of the garter, and made lord chamberlain of the household; and in 1585 he was constituted lord high admiral of England. In 1588 he commanded the fleet which defeated and dispersed the Spanish armada; and, in 1596, when another invasion was apprehended, he was appointed commander-in-chief at sea, as the Earl of Essex was on the land. In this expedition Cadiz was taken, and the Spanish fleet burnt; for which he was made Earl of Nottingham and justice-itinerant of all the forests south of Trent. In 1601 he suppressed the Earl of Essex's rebellion, and was principally concerned in bringing that nobleman to the block. James I. continued him in all his employments; and at the coronation the earl acted as lord high steward. In 1605 he went ambassador to Spain; and in 1613 he conveyed the Princess Elizabeth, on her marriage, to Flushing. He died in 1624.

HOWARD, HENRY, Earl of Surrey, was the eldest son of the third Duke of Norfolk, by Elizabeth, daughter of Edward Stafford, Duke of Buckingham. He was born in 1516. He was well educated, talented, and chivalric. While at Florence he issued a general challenge, and in a splendid tournament maintained the beauty of his mistress Geraldine at the point of the lance; he was completely victorious. In 1542 he served in the army, under his father, in Scotland; and in 1544 he went as field-marshal to Boulogne, where, being then knight of the garter, he was constituted king's lieutenant and captain-general. Happening, however, to prove unfortunate in an attempt upon the enemy's convoy of provisions, he incurred the displeasure of Henry VIII., which hastened his ruin. Some intemperate language, used by him, was caught hold of; charges were brought against him, and he was beheaded on Tower Hill, January 19th, 1546-7.

HOWARD, THOMAS, Earl of Surrey, and third Duke of Norfolk, was born in 1473. He was bred to arms, and soon after the accession of Henry VIII. was honored with the order of the garter. He succeeded his brother, Sir Edward Howard, as high admiral, in 1513;

and the victory of Flodden Field was chiefly owing to his valor and skill. For this, the title of Duke of Norfolk was restored to his father, and he was himself created Earl of Surrey. In 1521 he went to Ireland as lord lieutenant, and while there suppressed a dangerous rebellion. Notwithstanding these services, he was sent to the Tower by Henry, at the close of his reign, and kept there till the accession of Mary, when he was released, and contributed to suppress Wyatt's rebellion. He died in 1554.

HOWE, GEORGE, Viscount, was the eldest son of Sir E. Scrope, second Viscount Howe in Ireland. He was the second in command in Abercrombie's expedition, and fell before Ticonderoga in 1758, aged thirty-four. He was the idol of the army, both regular and provincial, and his untimely death was lamented throughout the colonies.

HOWE, RICHARD, Earl, the second son of Sir Emanuel Scrope, second Viscount Howe, was born in 1725, and at the age of fourteen went on board the *Severn*, part of the squadron destined for the South Seas under Anson. In 1745 he was with Admiral Vernon, and soon after was made commander of the *Baltimore* sloop, in which, with another armed vessel, he beat off two French ships conveying troops and ammunition to the Pretender; for which he was made a post-captain. On the breaking out of the war with France, he commanded the *Dunkirk*; with which he took the *Alcide*, a French sixty-four, off Newfoundland. In 1757 he served under Sir Edward Hawke, and his ship, the *Magnanime*, battered the fort on the Aix till it surrendered. After this he was appointed commodore of a squadron, with which he took the town of Cherbourg, and destroyed the basin. When France entered into war to aid America against England, Lord Howe was sent to America to oppose D'Estaing. In 1782 he was made an English viscount, and appointed to the command of the fleet sent to the relief of Gibraltar, which object he accomplished. The next year he was made first lord of the admiralty; but soon resigned that station to Lord Keppel. In 1788 he was created an English earl. On the breaking out of hostilities with France, in 1793, he was appointed to the command of the channel fleet; and on the 1st of June, in the following year, he gained a complete vic-

tory over the French, who lost seven ships of the line. For this he received the thanks of parliament; the king visited him on board his ship, presented him with a valuable sword, and made him knight of the garter. The last service rendered by his lordship to his country, was in reducing the mutinous seamen to their duty by kindness, at Portsmouth in 1797. He died August 5th, 1799.

HOWE, Sir WILLIAM, brother of the preceding, succeeded General Gage in the command of the forces in America in 1775. He defeated the Americans in the battle of Long Island, 1776, took possession of New York, and in the October of the same year, repelled the Americans at Germantown. He was succeeded in his command by Clinton, in 1778. His death took place in 1814.

HUDSON, HENRY, an eminent naval commander and discoverer in North America, from 1607 to 1610. In the latter year, whilst navigating the bay which now bears his name, his crew mutinied, and put him, his son, and seven others on shore, where they no doubt perished.

HUGH CAPET, Duke and afterward King of France, was the son of Hugh the Great, who dying left him under the protection of Richard I., Duke of Normandy. Lothaire, King of France, pleased with Hugh's prudence and generosity, gave him, in 960, the dukedom of France, with the earldom of Paris and Poitou. Louis V., dying fifteen or sixteen months after his father, Hugh Capet was proclaimed king at Noyon, and crowned at Rheims, 987. Charles I., Duke of Lower Lorraine, son of Louis IV., the only man of the royal blood left in France, was taken prisoner by Hugh, and died in 992.

HUGUENOTS, the name given in 1560 by the Catholics of France to their Protestant countrymen, as a term of reproach. Thousands of them perished in the massacre of St. Bartholomew, and the persecutions that followed. Henry IV. secured their safety and rights by the edict of Nantes. Its revocation by Louis XIV., and the cruelties of the dragonnade, drove throngs into exile. The manufactures of England had their start from the Flenings who fled from the Low Countries before the pitiless Duke of Alva: they received new impulse from the Huguenot artisans. Many Huguenots sought an asylum beyond

the sea. Some settled in Rhode Island; others in Ulster and Orange counties, New York, where their descendants are numerous at this day; more made their home in South Carolina, sowing those seeds of civil liberty which ripened so nobly during the Revolution.

HULL, ISAAC, was born at Derby, Conn., in 1775. He began to follow the sea when a mere lad, and at the establishment of the navy received a lieutenant's commission. To him the first British flag was struck on the ocean, during the war of 1812; this was on the 19th of August, 1812, when the frigate *Guerriere*, commanded by Capt. Dacres, was captured by the frigate *Constitution*, after a close action of thirty minutes. Commodore Hull died at Philadelphia, Feb. 13th, 1843.

HULL, WILLIAM, was an officer in the Revolutionary army. He afterward reached the rank of brigadier-general and was governor of Michigan territory. At the commencement of the war of 1812, he commanded the north-western army. He surrendered his whole force at Detroit to Gen. Brock, Aug. 16th, 1812. For this reverse, Gen. Hull was condemned by a court-martial to be shot; a sentence which was mitigated in consideration of his previous services and his age. He lived to see his character vindicated, dying in 1825, aged seventy-two.

HUME, DAVID, the philosopher and historian, died at Edinburgh, his native city, Aug. 25th, 1776, aged sixty-five.

HUMPHREYS, DAVID, was born at Derby, Conn., July, 1752. In 1780 he was appointed aid to Gen. Washington, with whom he remained through the residue of the war, and at its termination accompanied him to Virginia. Col. Humphreys was distinguished for his gallantry and military skill at the siege of Yorktown. He remained with Gen. Washington until 1790, with the exception of two years' residence in France. In 1790 he was appointed minister to Portugal, and afterward to Spain. He died Feb. 21st, 1818, aged sixty-six. He was much interested in the introduction of merino sheep into this country.

HUNGARY, the country of the Magyars, or Hungarians. They are represented as derived from the Huns of Attila. A complete account of ancient Hungary would present little more than the melancholy picture of a perpetual seat of war. The Romans for a time

assumed the ascendant, and obtained a decided superiority over the opposite and conflicting parties. The Hungarians have been thought to belong to the Finnish nations, from the resemblance there is between certain words of their respective dialects. The Magyars appear to have been a principal division of that great northern people near the Altai Mountains, whence issued the hordes who introduced such changes in the character of nations, Asiatic and European. So far as the Magyars are concerned, their progress from the Altai Mountains seems obvious. About the end of the ninth century, we find a division of them entering the plains of Munkatz, under their leader, Almus, whose son Arpad was the first duke of Hungary. In a few years (896) Arpad had dispossessed several of the princes of Hungary, and contracted alliances with others. He subdued a considerable portion of the Moravian kingdom, and, in the ardor of conquest, was for attempting to establish himself in the territories of the Emperor Arnulph. Arpad finally extended his conquests into Bavaria, Suabia, Franconia, and Italy; his exertions were divided, but everywhere successful. His son Zoltan, in 907, had penetrated into Alsatia, Lorraine, and France. While the genius of the state was thus aspiring to eminence, the strength of others seemed proportionately paralyzed, as if the unremitting cruelties characteristic of Attila were again to be feared.

The imputation of ferocity affixed to the name of the Huns inspired terror, till their fourth duke, Geysa, diverted their ferocious dispositions into other channels. The attention he bestowed in giving a tinge of religion to the mind and manners of his countrymen, operated as an incentive to their civilization. It was not until the commencement of the eleventh century, that a people rude, and proud of their rudeness, were induced to lay aside their barbarous habits. Stephen, their last duke and first king, introduced the Christian religion, and those social institutions, which, if left to operate unrestrained, give a stamp to the character of a people. He died in 1038, after a reign of forty-one years; during which he had established laws in the interior, reunited Transylvania to his kingdom, subjugated the Sclavi and Bulgari-

ans, and effected much for the amelioration of society and morals.

On the death of Stephen, Hungary became subject to the tyranny of various princes, the country being involved, for nearly a century, in the horrors of civil war. In this distracted state of the kingdom, various usurpers aspiring to the throne, the churches were destroyed, and the ministers of religion persecuted. Any intervals of peace were interrupted by the Bulgarians, Wallachians, Russians, Croats, &c., renewing their inroads. Under Ladislaus I., 1077, the country enjoyed some tranquillity; religion, commerce, legislation, tempered the bold independence of a dark age; and as a warrior, he also became the temporary savior of his country. John Corvin, or Hunniades, was justly celebrated for his military achievements in the wars with Amurath II. and Mohammed II. His son, Matthias Corvin, was unanimously elected king in 1458, and gave early indications of great gifts and talents, adding not a little to the lustre of his father's acquirements. From his character, policy, military operations, and great power, he has been described as one of the most accomplished kings of Hungary. Such was the force of his mind, that his views extended to whatever could secure his government, and render it formidable. His ends were great, and his means prudent; he kept both the Turks and Austrians at bay, and, as a politician and hero, was watchful over his enemies, both at home and abroad. To his other eminent qualities, this king added a measure of literary reputation. He is said to have been conversant with the languages, arts, and sciences of his time; the country flourished under his establishments, civil and military; and the love of his subjects shows the great esteem in which he was held by them. Compared, generally, with his contemporaries in power, the energy of his mind seems worthy of admiration. He knew how to anticipate hostile designs, and we find the kingdom, under his government, preponderating in the balance of Europe. Matthias had no children, and the election of a new king occasioned a scene of distress. Under Louis II. in 1516, the Turks besieged Belgrade, which surrendered to their arms; and

this was followed by various other successes. In the famous battle of Mohatz (1526), Louis was defeated and slain; Buda was given up to pillage; and the ferocious barbarians, under Solyman II., after plundering the country, converted the scene of their depredations into an immense desert. The country was now convulsed with disputes about the succession, the Archduke Ferdinand being opposed by John Zapolski, who was finally seated on the throne. Zapolski died in 1540, and the Hungarians invited Ferdinand to the throne. The country was again desolated and crimsoned with blood. In 1564 Maximilian II., Emperor of Germany, laid claim to the crown, but it was not till 1570 that a peace was finally ratified between the Hungarians and Germans; John Sigismund, son of Zapolski, was created Prince of Transylvania. The next circumstance to be noticed and recorded, is the definitive subjection of the Hungarians to the imperial house of Austria. At the accession of Charles VI., Emperor of Germany, a definitive treaty, in 1711, terminated all differences; it was not till then that every principle of internal hostility, all those evils which had proved a hindrance to civilization, disappeared. As the Hungarians were now united to the Austrian dynasty, the series of their kings is that of the emperors.

The Austrian rule was on many accounts unpopular, and ardent patriots dreamed of a restoration of that independence which had been lost in the Austrian empire. When, in 1848, France set the fires of revolution a blazing, they soon caught in Hungary. A provisional government was set up, at the head of which was the eloquent Kossuth. For a time a brilliant struggle kept the Austrian power at bay; but dissensions weakened the patriots; Kossuth, great as were his eloquence and patriotism, lacked decision; the czar sent an army in aid of the imperial despotism; the Austrians were victorious in several fields; and on the 11th of August, 1849, Kossuth, in obedience to his colleagues, resigned his authority into the hands of Görgei, the commander of the army, and fled into Turkey. Görgei completed the negotiations he had before commenced with the Russian general, for an unconditional surrender. On

the 17th of August the Hungarians laid down their arms; the contest was at an end. The hapless nation suffered severely under the restored domination of Austria, which was now far more severe than ever.

Hungary, as at present limited, contains 69,325 square miles, and in 1857 had a population of 9,900,785. Pesth, the most populous city and the ancient capital of the kingdom, stands on the east bank of the Danube, opposite Buda; population 131,705.

HUNS, a warlike tribe of Scythia, or Tartary, who invaded Europe in the fifth century. The ravages of Attila, their leader, gained him the name of 'the scourge of God.' It was to check the invasions of this people, that the Chinese built their great wall about 200 B.C.

HUNTER, JOHN, the eminent surgeon, died very suddenly in St. George's Hospital, London, Oct. 16th, 1793, aged sixty-five. His elder brother, WILLIAM (1717-1783), was also a distinguished anatomist.

HUNTINGDON, SELINA, Countess of, was the second daughter of Washington, Earl Ferrers. She was born in 1707, and left the widow of Theophilus Hastings, Earl of Huntingdon, in 1747. She was the friend of Whitfield and the Wesleys, in aid of whose evangelical schemes, by the rearing of chapels, the maintenance of ministers, the foundation of seminaries for their training, &c., her ample jointure and her active labors were bestowed. She lived to the age of eighty-four.

HUNTINGTON, SAMUEL, a signer of the Declaration of Independence, was born in Windham, Conn., July 3d, 1732. He was the son of a farmer, and educated at a common school. At the age of twenty-two, he was admitted to practice law in his native place, but shortly afterward removed to Norwich. In 1764 he was representative of Norwich to the general assembly, and in the next year king's attorney; in 1774 he was made a judge of the superior court. In 1775 he was chosen a member of the council of Connecticut, and in 1776 he took his seat as a delegate to the general congress. In 1779 he succeeded John Jay as president of that body. He was made chief-justice of Connecticut, then lieutenant-governor; and in 1786

HUN

he succeeded Mr. Griswold, as governor of Connecticut, filling the office till his death, January 5th, 1796.

HUSS, JOHN, the celebrated reformer, was a native of Bohemia, born in 1370, and educated at the University of Prague. He early perceived the corruption of the Romish church, and exposed its prevalent abuses freely, although persecuted by several popes. He finally appeared at the council of Constance under a safe-conduct from the Emperor Sigismund: yet nevertheless he was thrown into prison, and, after some months of confinement, sentenced to be burned alive. This dreadful fate he met with resignation and lofty faith, July 6th, 1415, and his ashes were thrown into the Rhine. The rebellion of the followers of Huss lasted fifteen years, and filled Bohemia with bloodshed.

HUTCHINSON, THOMAS, born at Boston, 1711, graduated at Harvard College in 1727. He was appointed lieutenant-governor of Massachusetts in 1758, and chief-justice in 1760. In 1771 he was made royal governor of Massachusetts. He was succeeded by Gage in 1774, and retreated to England, where he lived in retirement at Brompton,

and died June 3d, 1780, in his sixty-ninth year. At one time a Boston mob attacked his house, which was nearly demolished. His uniform support of the ministerial measures made him exceedingly unpopular.

HYDER ALI, an eastern prince of Mohammedan origin, the formidable enemy to the British in India. He was frequently successful, and, in 1766 his dominions contained 70,000 square miles. He died in 1782, and was succeeded by Tippoo Saib, his son.

HYMEN. Hymenæus, an Athenian youth of extraordinary beauty, but low birth, became enamored of the daughter of one of the noblest of his countrymen. The rank of his mistress preventing his suit, he followed her wherever she went, disguised as a woman. A procession to Eleusis was seized by pirates, and Hymen, after sharing the captivity of his mistress, effected her rescue. He was rewarded by her hand, and so great was his felicity in wedlock that the Athenians instituted festivals in his honor about 1350 B.C., and solemnly invoked him at their nuptials, believing that no union could be joyous or fortunate without his aid.

I.

ICELAND, a large island in the Atlantic Ocean, near the confines of the polar circle, belonging to Denmark. Christianity was introduced into it in 981. Among its curiosities are the Geysers, or boiling springs, and the numerous volcanoes, the largest of which is Mount Hecla, whose terrific eruptions have often caused the greatest distress among the inhabitants. The islanders are simple, frugal, industrious, and pious; the lower classes are well informed. The staple exports are fish, oil, eider down, sulphur, and salted mutton. Iceland was discovered in the middle of the thirteenth century, and settled by Norsemen in 874.

ILLINOIS contains 55,405 square miles, and in 1860 had 1,711,951 inhabitants. The Mississippi forms the western boundary of this rich country; the Ohio the southern; the Wabash and Lake Michigan wash a large part

of the eastern line; while the interior is penetrated by such noble and navigable streams as the Illinois, the Rock, and the Kaskaskia. A small tract in the south is hilly, and the northern portion is also somewhat broken; but the general surface is almost a uniform level, or slightly undulating. About two-thirds of the state consisted of prairies, on whose wide expanses cultivation is rapidly encroaching. The barrens, or oak openings, partake as it were at once of the character of the forest and the prairie. They rise from a grassy turf seldom encumbered with brushwood, but not unfrequently broken by jungles of rich and gaudy flowering plants, and of dwarf sumach. Among the oak openings you find some of the most lovely landscapes of the west, and travel for miles and miles through varied parks of natural growth, with all the diversity of gently swelling hill and

dale: here, trees grouped, or standing single; and there, arranged in long avenues, as though by human hands, with slips of open meadow between. Sometimes the openings are interspersed with clear lakes of enchanting beauty. The alluvial bottoms are tracts of great fertility. Lead is found in the north-western corner of Illinois in exhaustless quantities. Bituminous coal, iron, and copper are also obtained. Maize and wheat are the great staples of the state. In the north are stony tracts, but elsewhere the plough may furrow millions of acres without turning even a pebble.

Settlements were made along the Mississippi by the French from Canada toward the close of the seventeenth century, as at Cahokia and Kaskaskia. The whole of this region was abandoned to the English by the peace of 1763. In 1809 Illinois was organized as a territory, and its admission into the Union followed in 1818. The state is named from its great central river, whose appellation is aboriginal, meaning 'the river of men.' By the constitution the elective franchise pertains to every white male major citizen, who has resided in the state for one year. Slavery is prohibited, and negroes are forbidden to enter the state. Dueling is a disqualification for office. The state senate is elected for four years, one-half biennially; the lower house for two years. The sessions are biennial. The governor is elected for four years. The three judges of the supreme court have terms of nine years, one being chosen trien-

nially by the people. There are seventeen circuit judges, chosen for four years. Considerable provision is made by the state for education.

Springfield, the capital, on the border of a beautiful prairie, had 6,500 inhabitants in 1853. The great city of Illinois is Chicago, on Lake Michigan. Where in 1832 was only a hamlet of 250 people is now a well-built, bustling emporium that numbers its thousands; in 1860 there were 109,260 inhabitants. Important railroads centre here, with which and the navigation of the fresh-water seas, its growth bids fair to continue as astonishingly. Alton, on the left bank of the Mississippi, three miles above the confluence of the Missouri, is the chief town of western Illinois; population 7,338. Peoria and Quincy are flourishing towns.

INDIA. This region, between Cape Comorin and the Himalaya Mountains, formerly called the Peninsula within the Ganges, is known in the Persian language as Hindustan, the country of the Hindoos. The area is about 1,300,000 square miles, or more than ten times the extent of Great Britain and Ireland. The population is estimated at 200,000,000. The coast-line amounts to 3,200 miles, of which 1,800 miles are washed by the Indian Ocean, and 1,400 miles by the Bay of Bengal. Intersected by vast and lofty mountain ranges, the Indian peninsula presents a remarkably varied surface of tableland, plain, and valley; and extending as it does from $8^{\circ} 4'$ to 34° N. lat., with some-

times tracts half a mile above the level of the sea, there are many varieties of climate and a great range of temperature.

The island of Rameserum, off the coast of Southern India, is low, sandy, uncultivated, but celebrated for the extent and splendor of its great pagoda; it is still visited by pilgrims from all parts of Hindustan. The isolated mountain region of Southern India rises to 7,000 and 8,000 feet, the highest land south of the Himalayas. Here are the dominions of the Rajah of Travancore and the Rajah of Cochin.

The region south of the river Nerbudda, separated from Southern India by the Gap of Coimbatore, is called the Deccan. It is mostly an elevated table-land, the greatest portion still under the sway of Hindoo or Mohammedan princes, in alliance with the British. The kingdom of Mysore, in the south, is governed by a Hindoo prince. In the north are the territories of the Nizam of Hyderabad, or Hyderabad; Hyderabad, the capital, is noted for its traffic in diamonds; this was formerly called the kingdom of Golconda. East of this are the possessions of the Rajah of Berar or Nagpoor. The territory of the Rajah of Colapore extends along the Western Ghauts. The Deccan is skirted on every side by lofty ranges of mountains, known as the Ghauts, from which the descent to the low narrow belt along the seashore is steep and difficult. The southern part of the narrow coast between the Western Ghauts and the Indian Ocean is called Malabar. On these Western Ghauts, between 12° and 14° N. lat., grows the only sandal-wood in Hindustan; it is an important export to China and Japan. The city of Goa, belonging to the Portuguese, lies on the western coast: once it was splendid and populous, with magnificent dwellings and many elegant churches and monasteries; these are now decaying, and the ancient town, now very unhealthy, is scantily peopled. A new, well-built town, five miles nearer the sea, called Panjim, is the residence of the Portuguese viceroy, and has 20,000 inhabitants. Mahé is a French settlement on this coast, with a trade in pepper. On the Nilgherry Mountains, only eleven degrees from the equator, the climate and productions of Europe are found. Here are established sanitary stations, where Eu-

ropeans may regain their health when impaired by a long residence in hot countries. The country between the Eastern Ghauts and the Bay of Bengal comprises the central and northern Carnatic, with the Guntoor Circar. Here is the Coromandel coast, Madras, the French settlement of Pondicherry, and the Danish one of Tranquebar. The coast is much exposed, and during the south-west monsoon the only smooth water is the harbor of Coringa.

Central India, or the mountain region of Northern Hindustan, has nearly the form of a triangle, whose base is the Vindhya Mountains, and the apex near Delhi. To this region belong Gujerat and Cutch. The country is for the most part in the possession of native rulers, the Mahratta princes, Scindia, Holkar, the Guicowar, the Rajpoots, and the Rajah of Rewa.

The Ganges rises among the highest Himalayas, and enters the sea by a many-branched delta, after a course of nearly 1,500 miles. The great plain drained by it and its affluents is the most fertile, the best cultivated, and the most thickly inhabited portion of Hindustan, containing more than one-half of its population. Here are the cities of Benares, Calcutta, Cawnpoor, Delhi, Lucknow, &c. This region is entirely under British rule; the kingdom of Oude was their last acquisition.

The Indus rises on the table-land of Thibet. The extensive plain of the Indus comprehends the Punjaub (country of the five rivers), Sinde, &c. The Punjaub has very fertile and very sterile tracts; rice is the chief object of agriculture. The Sikhs are the principal inhabitants. The Punjaub is now a British province, and Lahore the seat of rule. Sinde is indebted for its fertility to the inundations of the Indus; as far as these extend, the country yields abundant crops. It is thinly peopled. It was formerly ruled by chiefs of Belooch descent, called amcers; it is now annexed to the Bombay presidency.

The Himalayas form the northern boundary of India. The range is some 1,500 miles in length, with a breadth between 80 and 120 miles; it may occupy a surface of 150,000 square miles. In its arms the Cashmere valley is enclosed. The highest portion of the Himalayas is the Dhawalaghiri range, where

the summit of Ghosa Cotec attains an elevation of 28,000 feet above the level of the sea, the highest land known on the globe. The word 'Himalaya' is Sanscrit, meaning, 'the abode of frost.'

The aboriginal tribes, besides the Hindoos, are few and only found in the mountainous parts of India. The foreigners are partly Asiatics and partly Europeans. The Asiatics have come by sea and by land. To the former class belong the Arabs, who are very numerous on the coast of Malabar. Some Parsees, or Guebres, are dispersed through the cities on the coast between Bombay and Surat. The Asiatics who entered by land chiefly settled in the plains of the Ganges and the Indus. They came with the conquerors who at several epochs have established their empires here. They are mostly Afghans, are commonly called Patans, and number about 10,000,000. The Europeans are chiefly descendants of the Portuguese, and most numerous along the western coast. Their number is between one and two million. The British race is pre-eminent in power; yet it numbers less than 100,000.

India is rich in gems; not diamonds only, but rubies, emeralds, sapphires, turquoises, opals, amethysts, and almost every known gem, are found, of great purity and beauty. Gold is rare. There is iron of good quality. The celebrated Damascus blades bore testimony of old to the worth of Indian steel, and there is still some produced of equally fine quality. Lead, copper, zinc, and tin also exist in various districts. The forests furnish valuable woods—ebony, satin-wood, calamander, teak, saul-wood, and the useful bamboo. The most important crop of India is cotton. It is inferior to the cotton of the United States in length of fibre and in cleanliness. The other great staple of India is rice, grown in every variety of soil and in every climate. The land is rich in dyes. India rubber has long been exported to England. Tobacco is grown considerably, but of inferior quality. Maize is freely cultivated, but it is far from equalling to the American corn.

India is comprised in three great political divisions, the presidencies of Bengal (including the sub-presidency of Agra, or the north-western provinces), Madras, and Bombay, the former the seat of the governor-general

and the supreme council. These divisions include not only the territories under the direct rule of the British, but also most of the native states, some of which are subsidiary, some tributary, some protected, and some nominally independent; but all are more or less under British control. Nearly a million and a half sterling has been annually paid in pensions to conquered native princes.

The antiquity of the Hindoos is undoubtedly great; little change has taken place in their religion, manners, or customs, for more than two thousand years. Hindustan was very slightly known to the ancients. They had some vague idea of its extent and wealth, but they had little knowledge of its interior. Various attempts were made to subdue the land: Alexander the Great carried his victorious arms across the frontier; Seleucus advanced as far as the Ganges; Semiramis pushed her forces against the Indians; and other adventurers essayed their subversion. Whatever successes they gained appeared not to result to their advantage; the people resisted their invaders with great bravery. The Romans never extended their conquests as far as India.

Commerce between India and the western nations of Asia appears to have been carried on from the earliest times. Indian articles found their way into Europe through the Phœnician merchants. After the foundation of Alexandria in Egypt, the Indian traffic was sustained almost exclusively by its merchants.

Hardly anything is known of the history of India from the time of Alexander to the Mohammedan conquest. The Greek kingdom of Bactria, founded by Theodotus, a lieutenant of the Syrian monarchs, B.C. 255, comprised a considerable part of northern India. It was overthrown, B.C. 126, by the Tartars (called Scythians by the Greeks), who possessed the greater part of the north-western Hindustan till they were driven beyond the Indus, B.C. 56, by Vicramaditya I. The earliest invasion of the Mohammedans was made in the latter part of the tenth century under Mahmoud Ghazni, who led twelve expeditions in all into Hindustan, sacking cities, carrying off their treasure, and trying to exterminate the inhabitants, since he could not convert them to the faith of Islam. Inva-

sions and conquests followed, and in 1093 Delhi was taken, and made the capital of the Mohammedan empire in India. In 1398 Tamerlane descended upon India with his conquering horde of Tartars, massacring the inhabitants of every place through which he passed, and defeating the Indian army with immense slaughter. He carried away a great booty and a vast retinue of slaves, leaving the country a desert which he had found a garden. In 1526 Baber, a descendant of Tamerlane, took Delhi, and established the Tartar dynasty, or as it is commonly called, the Mogul empire. The emperor was known in Europe as the Great Mogul. Akbar, Shah Jehan, Aurungzebe, were emperors of great renown.

In 1738 Nadir Shah, or Kouli Khan, the ambitious monarch of Persia, crossed the Indus with a brave and veteran army, and soon decisively defeated the Mogul's troops. Nadir Shah's stay at Delhi was marked by rapacity and bloodshed; a hundred and fifty thousand of the inhabitants were massacred, and the conqueror is said to have borne off over \$100,000,000 in treasure! By this blow the power of the emperor was nearly destroyed; only one imperial army ever entered the field after this, and that was defeated by the Rohillas in 1749. Delhi, and a few miles around it, constituted almost the sole territory of the descendants of Tamerlane; while the governors of districts and provinces, under the names of rajahs, nabobs, and a variety of others, became independent sovereigns.

The Portuguese were the first nation of Europe that got a foothold in India; Vasco de Gama landed at Calicut, May 20th, 1498. By the possession of Malacca they commanded the trade of the Indian archipelago; and by their numerous settlements along the Malabar coast, especially at Goa and Diu, they monopolized the commerce with Europe. Under their rule the inquisition was planted in India, and its shambles dripped with horrors. In the beginning of the seventeenth century, the English, Dutch, and French began to make settlements along the coast, and the Portuguese lost their dominions almost as rapidly as they had acquired them. They still possess Goa, Damaun, and Diu. The Dutch never gained much political power in Hindustan, though at one time they carried

on the greater part of the Indian trade. The French obtained extensive possessions in the Deccan, of which they retain only Pondicherry, Carical, Yanaon, Mahe, and Chander-nagore.

The first maritime mercantile adventure from England direct to India was in 1591. In 1600 a charter was given to an association of merchants, under the designation of "The Governor and Company of London Merchants trading to the East Indies." In 1615 an English ambassador, Sir Thomas Roe, was sent to the court of the Mogul emperor, by whom he was cordially received. The English East India Company were pretty successful in their voyages; and after victoriously contending with the Portuguese in several naval engagements, they at length succeeded (1612) in forming a factory at Surat, on the Malabar coast, by permission of the Emperor Jehan Ghir. They had to struggle against the enmity of both the Portuguese and the Dutch. In 1639 permission was obtained to erect a fortress at Madras. Accident laid the foundation of their power in Bengal in 1652, when, through the influence of a medical gentleman who had successfully used his professional skill at the court of the Mogul, a license was given, for the merely nominal sum of thirty thousand rupees, permitting the English East India Company to trade to an unlimited extent, free from all payment of duties. The first English post was at Hooghly, twenty-three miles higher up the river than Calcutta. It was not until 1698 that the factory was removed to Calcutta, and Fort William built.

Bombay had been ceded to the Portuguese by the Mogul in 1630. It came into the possession of England on the marriage of Charles II. with the Infanta Catherine of Portugal. By the marriage contract, Charles was to receive £500,000 in money, the town of Tangier in Africa, and the island of Bombay with its dependencies, together with permission for his subjects to carry on a free trade with the Portuguese settlements in India and Brazil. The island was transferred to the East India Company in 1668.

The wars waged between France and England in the eighteenth century extended into India. Hostilities commenced in 1747, and were waged with spirit by both sides, the

abilities of Clive contributing to the successes of the English, until in 1755 a cessation took place. In 1756, the authorities at Calcutta having been induced by dread of the French to strengthen their fortifications, Surajah Dowlah, the soubahdar of Bengal, who had never been friendly to the English, made this a pretext for attacking the place. The outposts were assailed on the 18th of June, 1756, and after two days the fort was carried by storm. The tragedy of the Black Hole followed. On the first day of the next year Calcutta was retaken by the English; on the 23d of June following the nabob was defeated at Plassey by Clive; and early in July he was assassinated by the son of his successor. From this time may be dated the beginning of the absolute government of the English in Bengal.

On the Coromandel coast, meantime, affairs were going on very indifferently for the English. But things again took a turn, all the enterprises of the French commander going awry. His attempt upon Wandewash, in 1760, was extremely unfortunate. Chelaput, Arcot, Timery, Carical, Cillambaram, Alamparva, Trincomalee, Cuddalore, fell into the hands of the English. Pondicherry was invested, and capitulated Jan. 15th, 1761; the power of the French in India being thus annihilated.

In 1767 a new enemy appeared in the Deccan—Hyder Ali, Prince of Mysore, who had raised himself from the rank of a subordinate soldier and established a principality for himself. For several years he baffled the attempts of the English to crush him, and he often gained advantages over them in battle. In 1781 Sir Eyre Coote was appointed commander-in-chief; he defeated Hyder in several severe engagements. In the midst of the contest with the English Hyder died, and there succeeded him as Sultan of Mysore his bloodthirsty son, Tippoo Saib. He waged war for several years, till Seringapatam, the capital of Mysore, was stormed, and Tippoo slain, May 4th, 1799.

To enumerate in detail all the conquests and intrigues by which the British extended their empire in India would far outrun our limits. From 1801 to the close of 1805 the first Mahratta war lasted, in which Gen. Wellesley, the future Duke of Wellington,

distinguished himself, especially at Assaye. The second Mahratta war continued from 1806 till 1822. At the renewal of the Company's charter in 1813, only the monopoly in the trade between China and England was retained; unrestricted intercourse with the Indian possessions was allowed to British merchants. In 1824 the Burmese commenced hostilities; Rangoon was taken by the British, and the Burmese several times defeated; in February, 1826, the Burmese monarch, humbled and disheartened, made peace, ceding a large tract of territory, and paying £1,000,000 sterling.

At the renewal of the charter in 1833, not only was the monopoly of the China trade abolished, but the Company was restricted from carrying on any commercial operations whatever on its own account, and was confined entirely to the territorial and political management of the vast empire beneath its sway. The disastrous Afghan expedition we have already spoken of under AFGHANISTAN. As a sequel came hostilities with the Ameers of Scinde; their army of 30,000 foot and 5,000 horse was routed on a bloody field by Sir Charles Napier with a little band of 2,100, and Scinde was annexed to the British empire. The next great storm of bloodshed was the war with the Sikhs, who crossed the Sutlej and attacked the British at Ferozepore, Dec. 14th, 1845. At Moodkee, Ferozeshah, Aliwal, and Sobraon, within sixty days, the Sikhs were defeated, and the war ended. A second war with the Sikhs began in 1848. Chillianwallah and Goojerat were the decisive battles. March 14th, 1849, the Sikhs laid down their arms, and surrendered unconditionally. The Punjaub was annexed to the British dominions. In both wars the victories over the Sikhs were bought by a heavy sacrifice of British blood and life. In 1852 a second war with Burmah resulted in the annexation of Pegu; and in 1856 the large, rich province of Oude was taken from its profligate king.

Edmund Burke accused his countrymen of having sold every monarch, prince, and state in India, broken every contract, and ruined every prince and every state who had ever trusted them. India has presented a novel spectacle. A handful of strangers from a small ocean isle, dwelling among a people

differing every way from them, draw from the country a revenue of £27,000,000; they fill the highest offices of state; they have power over 98,000,000 of people, and exercise indirect authority over 52,000,000 more whom they suffer to be ruled through native princes. Their sway extends over a space half as large as Europe. The chiefs of this vast empire had neither crown nor sceptre. Subjected at home to the same laws as other citizens, placed under the same power, their rise was as silent as their fall; they reigned or died unknown to their subjects. These masters, these kings, were merchants—merchant princes in truth! they composed the English East India Company.

A veil may well be drawn over the bloody contests and oppressive measures by which the natives of India were crushed, their princes ruined and betrayed, their wealth stolen from them, and their rights trampled under foot, without remorse or hesitation. Eloquent and upright men in England indignantly denounced the conduct of the Company—in vain. Confiding in their wealth, steelled by an unrelenting avarice, proud in a constant success, they smiled at every attempt to shake their power or impeach their officers. The native sovereigns were not backward to inflict revolting cruelties in retaliation. It must be remembered that the Mohammedan rulers who had sway before the advent of the British, were themselves usurpers, and that their despotisms were cruel and treacherous. Notwithstanding the crimes that have sullied the rule of the British, it has on the whole been beneficial to the unhappy country. For the wrongs of which they were guilty they have reaped an awful harvest.

For a long time the Mohammedans of Upper India had been discontented with their subordinate position, but it was of no use to try to throw off the British yoke so long as the Hindoo soldiery continued true to their salt. The high-caste sepoy of the Bengal army being mostly Brahmins, they obtained a consideration for religious scruples and whims which gradually impaired and ultimately destroyed all discipline. When it became absolutely necessary to curtail some of their privileges, they considered themselves aggrieved, and to arrogance added discontent. The introduction of improved mus-

kets rendering the use of greased cartridges necessary, a quantity was sent out from England. The sepoy objected to them because they might have been greased with the fat of cows or pigs; the former is an object of especial veneration, the latter of abhorrence and hatred, and by tasting the fat of either caste would be lost. The issue of the obnoxious cartridges was at once discontinued. This was in January, 1857. A mutinous spirit, however, gradually cropped out in the Bengal native army. In March several regiments were disbanded, followed by others, till in June the army had lost, by disbandment and desertion, 30,000 men. In April eighty-five of the native cavalry at Meerut refused to use their cartridges; they were committed to jail, May 9th. On the 10th the native troops rose, fired on their officers, killing Col. Finnis and others, released their imprisoned comrades and hundreds of criminals, massacred many Europeans, fired the public buildings, and then marched off for Delhi. The sepoy there welcomed the mutineers and fraternized with them. Delhi was soon wholly in their hands. The titular king of Delhi was proclaimed emperor. The fate of the Europeans resident in Delhi was awful. Delicate women were stripped of their clothing, violated, turned naked into the streets, beaten with canes, pelted with filth, and abandoned to the beastly lusts of the rabble until welcome death relieved them. Men were slowly hacked to pieces, burned to death, or horribly mutilated. A sepoy snatched a child from its mother's arms, and dashed its brains out on the pavement before her. Atrocities so terrible and disgusting that they can never be hinted at on the page of history were the fate of the Englishmen and Englishwomen throughout this reign of horror.

Similar mutinies followed at various points, accompanied by similar outrages. In several instances some of the rebelling sepoy protected their British officers and enabled them to escape; in others they were loud in professing loyalty, and swore to defend the English to the last drop of their blood,—yet the moment after, perfidiously shooting them down, and marching to join the insurgents at Delhi. It became evident that the whole Bengal army was leavened with the spirit of evil.

It was a force of upward of 150,000 men. The European troops in Bengal were less than 25,000, and were distributed through the country at about a hundred military stations. Some disaffection appeared in the Bombay army, but it was more promptly met; there had been less regard to high caste paid there, and there was better discipline. The Madras sepoys generally exhibited a striking example of fidelity. Most of the native princes kept their faith with the British government during this critical period. The villagers showed little love for the insurgents, a fact testifying that the trouble was a mutiny, not a popular insurrection.

The news of these horrible massacres caused great excitement in England. Regiment after regiment was sent to the relief, and Sir Colin Campbell hurried on to take the command. Lucknow was besieged by the insurgents, and the men of the garrison of Cawnpore were massacred by Nena Sahib. The heroic Havelock came up too late to avert this terrible catastrophe, and the day before he entered Cawnpore Nena Sahib finished the tragedy by murdering the women and children. This was in the middle of July, 1857. Not till the 19th of September was Havelock's force strong enough to advance to the relief of the long beleaguered band at Lucknow. On the 25th, when a few hours must have given the besieged over to their pitiless foe, Havelock and succor came, and they were saved. Meanwhile a British army had gathered before the walls of Delhi, and on the 7th of September the siege commenced. Several successful assaults were made, with great loss of life, and on the evening of the 20th, the rebels evacuated the city and suburbs. Among the prisoners made was the wretched old King of Delhi; his life and that of his wife were spared; his two sons and grandson were shot. The fall of Delhi scattered the rebels through the land, and the war assumed more of a guerrilla character.

The force with which Havelock relieved Lucknow not being strong enough to protect the retreat of the women and children to Cawnpore, he remained at Lucknow; the insurgents again besieged it, and the position of its defenders became quite critical. One of Sir Colin Campbell's first movements was

for its relief. He prosecuted hostilities against the insurgents with his proverbial energy, and with much hard fighting before the close of 1858 the mutiny was quelled. Sir Colin was elevated to the peerage as Baron Clyde.

The missionaries in India were not spared in this whirlwind of fire and blood. Ten of these devoted men, with their wives, were slain; of whom four belonged to the American Presbyterian mission at Futtehgur. The destruction of mission property was immense. The mission bungalow residences, the schools, the churches or chapels, the libraries and stores of books, were destroyed. The extensive printing-presses of the American mission at Allahabad, and of the Church of England mission at Agra, with the fonts of type, and Bible, and tract, and school-book depositories,—the accumulated results of the knowledge, experience, and toil of many a devoted spirit for many years,—all disappeared.

In 1858 the East India Company ceased to exist, and by act of parliament the control of India came into the hands of the crown.

The following have been the governors-general of India :—

Warren Hastings assumed the government April 13th, 1772.
 Sir John Macpherson, Feb. 1st, 1785.
 Lord Cornwallis, Sept. 12th, 1786.
 Sir John Shore (afterward Lord Teignmouth), Oct. 28th, 1793.
 Lord (afterward Marquis) Cornwallis again: he relinquished the appointment.
 Sir Alured Clarke, April 6th, 1798.
 Lord Mornington (afterward Marquis Wellesley), May 17th, 1798.
 Marquis Cornwallis again, July 30th, 1805.
 Sir George Hilario Barlow, Oct. 10th, 1805.
 Lord Minto, July 31st, 1807.
 Earl of Moira (afterward Marquis Hastings), Oct. 4th, 1813.
 Hon. John Adam, Jan. 13th, 1823.
 Rt. Hon. George Canning; he relinquished the appointment.
 Lord Amherst, Aug. 1st, 1823.
 Hon. Wm. Butterworth Bayley, March 13th, 1828.
 Lord Wm. Cavendish Bentinck, July 4th, 1828.
 Sir Charles Theophilus (afterward Lord) Metcalfe, March 20th, 1835.
 Lord Auckland, March 4th, 1836.
 Lord Ellenborough, Feb. 28th, 1842.
 William Wilberforce Bird, June 15th, 1844.
 Sir Henry (afterward Viscount) Hardinge, July 23d, 1844.
 Lord Dalhousie, Jan. 12th, 1848.
 Lord Canning, July, 1855.

Calcutta, the capital of the province of Bengal, and the seat of supreme government for British India, is situated on the east bank of the Hoogly, one of the arms of the Ganges, a hundred miles from the sea. Drainage has ameliorated the unhealthiness of its site. It was a small native village when the English established their factory in 1656. Fort William was built by Clive in 1757. The town extends more than six miles along the river, having an average width of three miles. The population, with the suburbs, is estimated at 500,000, made up of a strange hodgepodge of Eurasians (half-breeds), Armenians, Jews, Moguls, Parsees, Arabs, Burmese, Madrasses, native Christians, and British. The great mass speak the Bengalee language, and many the Hindustanee also. No springs are found for a hundred and forty feet below the surface, and for good water the people are dependent upon tanks filled by the periodical rains. Calcutta is the great emporium of trade and commerce for all Bengal. Flocks of kites, vultures, crows, and adjutant cranes clear away the surplus food provided for Europeans, which is thrown at night into the streets, since it can not be kept in that climate, and the religious prejudices of the natives forbid them to consume it. These feathered scavengers are aided by foxes, jackals, and wild dogs from the jungles, who prowl and howl through the ways at night. The markets are abundantly supplied with choice meats, game, fish, and fruits. Several institutions for literary, scientific, and educational objects have been established by the English.

The sacred city of Benares, in Bengal, rises like an amphitheatre on the high northern bank of the Ganges. It has more than 600,000 inhabitants, and the dense masses at the great Hindoo festivals present an extraordinary scene. The natives call Benares *Casi* or *Cashi*, 'the splendid,' and it is regarded with peculiar reverence. It abounds in temples. A college for the instruction of Hindoos in their own literature was founded here by the British government in 1791. Benares is a great mart for diamonds and other gems, which are brought principally from the Bundelcund. The city was ceded to the East India Company by the Nabob of

Oude in 1775. A Hindoo imagines that if he dies in Benares, his eternal felicity is certain.

The city of Bombay is situated on an island of the same name, on the western coast of India; population, 566,000. It is belted with fortifications. The trade of Bombay is very great, cotton being the largest export.

Madras lies on the eastern coast. Fort St. George was built in 1639, and a factory established here. The population is 300,000, and there are several populous suburbs. The coast has no indentation, nor has Madras any harbor or pier. A heavy swell rolls in shore throughout the year, and vessels anchor in the open roads a mile or so out. Considerable difficulty is frequently experienced in landing passengers and goods.

The languages of India may be divided into two great classes. I. Languages derived from the Sanscrit, spoken in the northern and central provinces—the Hindee, Bengalee, Punjaabee, Mahratta, Guzerattee, Cutchee, Boondela, Brig Bhakhur, Ooriya, and Asamee. II. Languages less closely dependent upon the Sanscrit, spoken in the southern parts—the Telooگو, Tamul, Canarese, Malayala, and Cingalese. The common language of Mohammedans is Hindustanee; this is a compound of Hindee, the primitive language of the Hindoos, with Arabic and Persian, the speech of their Mohammedan conquerors. Legislative acts are translated into Persian, Bengalee, and Hindustanee.

The Hindoos from earliest times have been divided into four castes, or races. The Brahmins occupy the first rank; their proper duties are to teach the Vedas or sacred books, to perform sacrifices to the gods, and to meditate upon divine and holy objects. The Kshatriya, or military class, is said by the Brahmins to be extinct, but the Rajpoots claim to belong to this class. The Vaisyas are agriculturists, herdsmen, and hunters. The Sudras are handicraftsmen and artisans, and the lowest and most degraded class in Hindoo society. The Hindoos of the present day are divided into numerous sects, all of modern origin, and most of them differing very much from the ancient religion.

INDIANA has an area of 33,809 square miles, and in 1860 had a population of 1,350,428. In some quarters the surface is hilly, but the greater portion of the state is level or slightly undulating. The land is generally rich and productive, and along the streams lie strips of alluvion that are almost exhaustless in fertility. The state is well watered by many fine streams, some of them navigable, as the Wabash and the White. It is rich in indigenous timber; the oak, the walnut, the sycamore, and the poplar attain a noble size; oaks and beeches are the most prevalent. Indiana is a great grain-growing state; her manufactures are yet in embryo. Bituminous coal is abundant.

The first settlement in Indiana was made at Vincennes on the Wabash, by the French, in 1702. All this region passed into the hands of the British by treaty, and was wrested from them in the Revolution. The early white dwellers in these then distant wilds suffered severely from the tomahawk and scalping-knife of the savage. Indiana was admitted into the Union in 1816. The present constitution was framed in 1851. The governor is elected for four years; the senate for the same term; and the representatives for two years. The general assembly meets biennially on the first Monday of January. The right of suffrage extends to every white male citizen of the United States who is of age and has resided in the state six months, and to every white foreign-born male who shall have resided in the United States

one year, in the state six months, and have duly declared his intention to become a citizen of the United States. The constitution prohibits the immigration of negroes. Liberal legislation has provided for public instruction, and there are institutions at Indianapolis where all the blind and deaf-mute children of the state are educated without charge for board or tuition.

Indianapolis, the capital, was laid out in 1821: in 1820 its site was covered with a dense forest, which in 1860 had given place to the homes of 18,611 people. It was planned upon noble dimensions; the broad streets, intersecting one another at right angles, bear the names of the different states of the Union. Evansville, on the Ohio, is a thriving town of (1853) 8,000 inhabitants. New Albany, farther up the river, is laid out with great regularity, is the seat of a good business, and the largest town in the state; population in 1860, 15,000. Madison, still above, is handsomely built of brick, with broad straight streets, and is a place of enterprise; population in 1858, 12,000.

INDIANS. The aboriginal population of America consists of two distinct races—the Esquimaux, inhabiting the seaboard districts of the Arctic regions; and the copper-colored Indians, who were spread over all the rest of the continent. The question as to the origin of the latter has never been solved, and perhaps is beyond the province of history. Notwithstanding some partial differences of complexion and stature, and a prodigious

diversity in languages, a strong family character pervades the Indians of both Americas. Humboldt testifies that the Indians of New Spain bear a general physical resemblance to those of Canada, Florida, Peru, and Brazil. In their civil and social state, however, there has been a great difference among the aborigines. The Aztecs of Mexico, the inhabitants of Cundinamarca, the Peruvians, and the ancient possessors of Central America, all made much progress in civilization, contrasting strongly with the bold and terrible traits of the barbarous tribes, many of whom seemed sunk in the lowest misery.

From Hudson's Bay to Mexico, and from the Atlantic to the Rocky Mountains, the whites found the country possessed by many petty and independent tribes, who were generally enemies to one another. They were in the rudest state of society, wandering from place to place, without science and without arts, with no metallic instruments, and owning no domestic animals. A little corn was raised by the labor of their women with a clamshell or the scapula of a buffalo; this they devoured with savage improvidence, and subsisted during the rest of the year upon precarious supplies of game and fish. They were thinly scattered over a wide extent of country, fixing their summer residence upon some fertile spot, and roaming during the winter, with their families and their mat or skin houses, in search of the animals necessary for food or clothing. Their numbers never could have been considerable, for their habits could exist only in a boundless forest and among a sparse population. Where each family requires for its daily consumption a deer, an elk, or a buffalo, the herd which is to supply the demand must occupy an extensive district of country. Their hostilities often brought on a scarcity of provisions, which led to famine, frightful suffering, and death. Some of the tribes indulged in the horrid banquet of human flesh.

Throughout the continent, with some rare exceptions, the woman was the slave of the man: she performed all the menial offices, bore the burdens, tilled the ground, and in many cases was not counted worthy to eat or speak before the other sex. Polygamy was by no means uncommon, though often

checked by the difficulty of procuring, or the hardship of supporting, more than one wife.

In general the American Indians seem to have entertained the idea of a Great Spirit, a Master of Life, in short a Creator; and of an Evil Spirit, holding divided empire over nature with the other. Many of them had priests, prophets, sorcerers, in whose supernatural powers they put trust; and most, if not all, appear to have believed in a future state. The Algonquin nations believed in the existence of a Supreme Creator, the Kacha Manito, or Good Spirit; of Malcha Manito, or Evil Spirit; and of inferior spirits. They sought to obtain the favor of these by certain ceremonies, and sometimes by sacrifices and offerings. They had some notions of a future life, in which the good should spend their time in hunting and mirth, and the bad grunt and sweat in hard labor. They had sorcerers whose spells were highly esteemed for the cure of diseases and for luck in their enterprises; the medicine-bags or charms were carefully worn about the person or hung up in the lodge. For the cure of diseases, they practiced bleeding, used the steam bath, employed various herbs and roots, and trusted much to the efficiency of songs, dances, and other ceremonies performed under the direction of the medicine men.

The aboriginal population of the territory of the United States, instead of merging into the European stock that settled among them, have wasted away, and become almost extinct east of the Mississippi. Wars with the whites, too often provoked by the cupidity and rascality of the latter; the gradual destruction of the game on which they depended for subsistence; and the vices taught them by intercourse with civilization,—these causes combined to lessen their numbers, until the numerous tribes that once occupied all the openings in the great primitive American forest have wholly died out, or have dwindled to a few miserable individuals.

The region between the Atlantic and the Rocky Mountains, and between the Gulf of Mexico and Hudson's Bay, seems to have been divided among five great nations or families of tribes—the Algonquin, or Chipewya; the Huron, or Wyandot; the Floridian; the Sioux, or Dahcotah; and the Pawnee. Each of these families comprised many

independent and often hostile tribes; which, however, are proved to have spoken cognate dialects, and therefore to have sprung from a common stock.

The leading tribes of New York—the Mohawks, Senecas, Cayugas, Oneidas, Onondagas (all belonging to the Huron family), to whom were afterward added the Tuscaroras from North Carolina—were banded in a powerful confederacy, known as the Five Nations or Iroquois. [See SIX NATIONS.] The Mohawks, the leaders of these Romans of the new world,—as they have been called on account of their warlike spirit and extensive conquests,—removed to Canada in 1776, and were followed by a portion of the Cayugas. These once powerful nations have diminished to an insignificant band.

The Algonquin race once possessed all the country between the Tennessee and Roanoke, and the St. Lawrence and the lakes, and even much farther north; with the exception of the comparatively small enclosed tract inhabited by the Huron nations. The Indians of New England were of this race, as were the Chippewas, or Ojibwas, Ottawas, Potawatamies, Sacs and Foxes, Shawnees, Kickapoos, Miamis, and Lenni Lenapes, or Delawares.

The Sioux, or Dahcotahs, occupying the country between the upper Missouri and the upper Mississippi, are one of the most powerful nations yet remaining. There are many other tribes that belong to this stock; as the Winnebagoes, Osages, Crows, Blackfeet, &c. The Pawnees, Camanches, and other tribes of the Pawnee family are well mounted, and nomadic in their life, following the buffalo in his annual migrations from north to south, and in his continual roamings in search of new pastures. The mounted Apache hordes are warlike and powerful, and are rarely at peace.

An extensive tract of country, west of Arkansas, has been set apart by the United States for the permanent residence of the various tribes of Indians that have been removed from the states. The principal of these are the Cherokees, Creeks, Choctaws, Osages, Chickasaws, Potawatamies and Chippewas, Pawnees, Seminoles, Sacs and Foxes, Shawnees and Senecas, and Delawares. The Cherokees are the most civilized; the Creeks and Choctaws come next. Under the guidance of missionaries, who have settled among

them, and with the sanction and assistance of the commissioner of Indian affairs, they have established regular governments, legislatures, judicial officers, churches, schools, newspapers, &c.; have introduced the manufacture of agricultural implements, cloth, and most articles of ordinary farm and domestic use; cultivate the land with a considerable amount of skill; rear horses and cattle; build houses; and export maize, cotton, hides, &c. By the treaty of removal and settlement, the federal government furnishes them with blacksmiths, wheelwrights, and some other mechanics, and at their first settlement gave them a stock of cattle, &c. Many of the tribes possess slaves. The Seminoles were exceedingly loath to depart from their old homes in the glades of Florida, and fought desperately against the removal.

The North American Indians were distinguished for a quick understanding, a retentive memory, and a stoicism which would have excited the envy of the philosophers of ancient Greece. The desire for revenge was to an Indian one of the most powerful incitements to action. He knew nothing of the principle that leads a Christian to return good for evil. He rarely if ever forgot an injury. As an exception to this, however, the following anecdote appears worthy to be related. An Indian, having wandered far from his comrades, found himself near a white man's dwelling, foot-worn and thirsty. The owner of the house was standing at the door. The Indian begged a morsel of food and a cup of water, to sustain his sinking frame. "Begone! dog of an Indian!" was the surly reply. Some years after this the Englishman, on a hunting excursion, lost himself in the forest. At the moment of despair, he perceived an Indian wigwam, and having applied for shelter, was welcomed with ready hospitality. The Indian host busied himself in making every arrangement for the comfort of his guest. His horse was fed and cared for, a supper was provided, and a bed of soft skins invited him to repose his weary limbs. In the morning, when the white man signified his desire to depart, the Indian offered to be his guide. Having conducted him to the outskirts of the forest, the Indian pointed out his path. The English-

man thanked him, and was about to go. "Stay yet a moment," said the Indian; "I see that you do not know me,—but I know you well. Some ten years since, a poor Indian came to your door, and asked you to give him a morsel of bread and a cup of water. You refused him. I am that red man. I swore to be revenged. Am I not? Now go your ways, and forget not to tell your white brethren that there is at least one Indian who can practice what they preach."

The Indians were noted for their bravery. In war they seldom gave quarter, and prisoners were generally tortured, and burnt at the stake. It was the pride of a vanquished warrior or chieftain to endure these tortures without a murmur, and to perish singing with an unflinching voice his triumphant death-song, in which he recounted his previous exploits, the number of foes that had fallen beneath his hatchet and whose scalps adorned his wigwam, and rejoiced at the prospect of reaching those Elysian fields of after life, where through eternity the immortal huntsman chased undying game.

The traditions of the Iroquois abound with touching tales of the injustice they sustained from the whites, from their first settling in the country. "We and our tribes," they say, "lived in peace and harmony with each other before the white people came into this country; our council house extended far to the north and the south. In the middle of it we could meet from all parts to smoke the pipe of peace together. When the white men arrived in the south we received them as friends; we did the same when they came in the east. We knew not but the Great Spirit had sent them to us for some good purpose, and therefore we thought they must be a good people. We were mistaken. The whites will not rest contented until they shall have destroyed the last of us, and made us disappear entirely from the face of the earth."

Menandon, an Oneida chief, who was a Christian, lived to be a hundred and twenty years old, long surviving the minister through whose teachings he had been converted. Just before he died, he said, "I am an aged hemlock. The winds of one hundred years have whistled through my branches. I am dead at top [referring to his blindness]. Why I yet live, the Good Spirit

only knows. Pray to Jesus that I may wait my appointed time to die; and when I die, lay me by the side of my minister and father, that I may go up with him to the great resurrection."

The Indians have shown instances of strong sentiment. Schoolcraft relates that a noble-minded girl, named Oolaita, being attached to a young chief of her own tribe, was commanded by her parents to marry an old warrior, renowned for his wisdom and influence in the nation. She left her father's house while the marriage-feast was preparing, and throwing herself from an awful precipice, was dashed to pieces. A Sioux Helen caused a division of that nation. Ozalapaila, the wife of one of the chiefs, having been carried off by another leading warrior of the same tribe, and the husband and brothers of the woman having been slain in the attempt to recover her, the quarrel gradually extended from the friends of the two parties to the whole nation, and ended in a fierce civil war.

Drunkenness has been a great curse to the race. An Indian who had been brought up in Minisink, near the Delaware water-gap, to whom the German inhabitants of that neighborhood had given the name of Cornelius Rosenbaum, told Mr. Heckewelder that he had once, when under the influence of strong liquor, killed the best Indian friend he had, fancying him to be his worst avowed enemy. He said that the deception was complete, and that the face of his friend presented to his intoxicated eyes all the features of the man with whom he was in a state of hostility. It is impossible to express the horror with which he was struck when he awoke from that delusion; he was so shocked, that he resolved from that moment never more to taste the maddening poison, of which he was convinced the devil was the inventor; for it could only be the evil spirit that made him see his enemy when his friend was before him, and produced so strong a delusion on his bewildered senses that he actually killed him. From that time until his death, which happened thirty years afterward, he never drank a drop of ardent spirits, which he always called "the devil's blood," and was firmly persuaded that the devil, or some of his inferior spirits, had a hand in preparing it.

INGOUR, a river rising in the Caucasus, and falling into the Black Sea. Omar Pacha, marching to the relief of Kars, crossed this river with 10,000 men, Nov. 6th, 1855, and attacked the Russians, 12,000 strong, encamped on the left bank, who after a struggle retreated with the loss of 400 men. Kars, however, was not saved.

INKERMANN, BATTLE OF. The Russians sallied from Sebastopol, and attacked the British at Inkermann, before daybreak, Nov. 5th, 1854. The British fought desperately, but being far outnumbered by the attacking force, were only saved by the arrival of a French division. The contest was most bloody. Sir George Cathcart was among the British slain.

INNSBRUCK, or INNSBRUCK, the capital of the Tyrol, situated on the Inn. Population, 13,000. The valley in which it stands was the scene of several of the events that took place during the heroic resistance made by the Tyrolese to the French and Bavarians in 1809.

INQUISITION. The Inquisition, or Holy Office, as it is called, was an institution of the Catholic church, established in Spain, Portugal, Italy, and other Romanist countries, to try persons accused of holding opinions contrary to those received by the church. The members of this jurisdiction were called inquisitors, because, without any proof of a person's guilt, they seized him upon common report, and investigated his conduct, they themselves deciding upon his guilt or innocence.

There is some controversy about the origin of the Inquisition, but it is allowed that Pope Innocent III. first gave rise to the Holy Office. While this man was at the head of the Catholic church, the Albigenses of France, who refused to embrace the monstrous doctrines of the Roman Catholic church, were persecuted and hunted like wild beasts. It was in the beginning of the thirteenth century, that Pope Innocent sent Pierre de Castelman, Archdeacon of Maguelonne, and Rainier, another priest, to stir up a spirit of zeal and persecution against the heretics. Dominic, a famous Spaniard, founder of the order of Preachers, fell in with the messengers of the pope in the year 1206, and labored, with energy, to put an end to the heresy, as any opinion different

from the doctrines of the church was called. These priests inquired into the conduct of the princes, and other men in power, toward the heretics, and from the scrutiny to which they subjected suspected persons were called inquisitors. They had no court and no decisive authority, being mere spies of the pope. St. Dominic is said to have founded the first regular tribunal at Toulouse. Innocent III. signified his approbation, and authorized the establishment in the year 1215. Gregory IX. gave the institution into the hands of the Dominicans.

So cruel were the proceedings of the Inquisition, that even Catholics endeavored to prevent its establishment in different countries; but Spain, a country famous for its devotion to the Catholic religion, and for its ignorance, became its chosen seat. The Spanish Inquisition is always spoken of with horror and indignation. In Spain it was first introduced in 1478. The first inquisitor-general and the first court were constituted in 1481. The kings of Castile, before they were crowned, took an oath that they, as well as their subjects, should be under the power of the Holy Office, as it was impiously called. The inquisitors received their power from the pope's mouth, or by means of letters, and he alone had power to remove them from office.

Nothing could be more horrible than the proceedings of the inquisitors. Without being permitted to know who accused him, a man was suddenly seized; his dearest friends abandoned him at once, none daring to speak to him. From the midst of the luxuries of life, he was hurried to a loathsome dungeon. Upon the slightest pretense, the torture was applied, and many an innocent person, in the pangs of death, was forced to accuse himself. The very advocate who plead for them was in terror of the Inquisition, and completely in its power; the slightest sentence he uttered, which could possibly be turned against him, was enough to place him also in danger of life.

There were two classes of punishments, the ecclesiastical or religious punishments, and the civil. The ecclesiastical punishments were excommunication, loss of a Christian burial in consecrated ground, and loss of all right to hold offices. As civil punishments, the inquisitors disinherited the children of the criminal; that is, declared that if their father

died a heretic, they, although Catholics, should not hold any of his property. They also pronounced the sentence of infamy, which deprived a man of all his property, of all right to hold an office, and of all power, even over his children and servants. Criminals were also imprisoned. They incurred the ban, or curse, by which they lost all the rights of a human being, were driven out of all society, and might be falsely accused, beaten, and robbed, without any hope of getting redress. In fact, if any lawyer defended them against an accusation, he was pronounced infamous and deprived of office.

The last and most frightful punishment was that of being burned alive, sometimes with an iron gag in the mouth, which prevented the agonized sufferer from uttering an intelligible cry. Often, however, while burning, they were left at liberty to speak, and supplicated for mercy in a manner which would have moved any but the hardest-hearted to pity; and yet the pitiless inquisitors dared to say that their actions found favor in the eyes of Heaven.

The tortures to which the inquisitors put the accused, to make them confess their guilt, were dreadful. The tortures were of five kinds. First, their being threatened with the torture; second, their being carried to the place of torture; third, their being stripped and bound; fourth, their being hoisted on the rack; fifth, squassation, in which the limbs were all disjointed.

Squassation was thus performed. The prisoner's hands being tied behind his back, heavy weights were attached to his feet, and he was hoisted up by a rope, until his head touched the pulley. Hanging in this awful situation for some time, his limbs and joints became stretched frightfully; and when suddenly let to fall, the fall being checked by the rope before he touched the ground, all his limbs were disjointed. The horrible pain he now felt was increased by the immense weight hanging at his feet. The Inquisition inflicted squassation, when determined on, once, twice, or even three times in the space of an hour. What could the poor wretch enjoy of life, if he gained his liberty at length?

When we examine farther into the annals of the Inquisition, humanity shudders. Lovely and innocent women had their delicate frames

torn to pieces by the racks of these monsters, because they refused to acknowledge that as the true religion which sanctioned such enormities. Such were the torments inflicted upon Jane Bohorques and her attendant, a young Protestant girl. They were afterward burnt at the *auto da fê*, or act of faith.

These acts of faith, when a large number of the condemned were often collected to suffer at once, were always held upon festival days. The procession issued from the halls of the Inquisition, the Dominican friars, with the standard of their order, coming first. On one side their flag had the picture of Saint Dominic, on the other the motto, "Justice and Mercy"! After these came the penitents, all in sleeveless black coats, with lighted wax tapers, and barefooted. Those who had narrowly escaped burning, followed next in order, with flames pointing downward painted on their coats. The relapsed came next, with habits covered with flames pointing upward. Lastly marched those who were peculiar enemies to the Romish doctrines; their habits were covered with flames, pointing upward, and on their breasts they bore a likeness of themselves, in the act of being devoured by wild beasts and serpents.

At Lisbon, the place where they were burned was the Ribera, containing as many stakes as there were condemned criminals, surrounded with furze. The stakes of the professed, as they were called, were about four yards high, with a seat for the prisoner upon a board, within a yard of the top. The negative and relapsed prisoners were first strangled and burned; the professed then ascended the ladder with a Jesuit upon each side, who exhorted them to confess their sins and return to the Romish church. If they refused, the priests descended the ladder, and the executioner chained them to the stake. After an interval the priests again ascended, and if the prisoners proved still obstinate, they were forsaken, and the spectators called out, "Let the dogs' beads be made!" The operation alluded to was performed by thrusting poles, having flaming bunches of furze at the end, against the faces of the criminals. These were generally held against them until their faces were burnt to a coal, the whole proceeding eliciting shouts of approbation and joy.

After this the furze at the foot of the stake

was fired, and, in general reached no higher than the knees of the condemned, so that they were literally roasted to death. In a calm they might die in half an hour; in a high wind seldom under two hours.

In ancient times, the Spaniards thought the entertainment afforded by the horrid spectacle of an *auto da fê*, equal to that derived from a bull-fight or a dance. In honor of Elizabeth, the new queen, daughter of Henry II. of France, a girl of thirteen, one was held in 1560, in which, not content with burning some human beings, they consumed a few effigies.

Napoleon abolished this terrible Inquisition, and this just exercise of power should be remembered when many of his crimes are brought to view. When Ferdinand was restored, by the success of Napoleon's opponents, to the Spanish throne, he re-established it. The Cortes swept it away in 1820. There never was another institution of such dreadful cruelty, nor one in which the laws of religion and mercy were so daringly defied, under pretense, too, of vindicating morality and pure piety.

If the Inquisition, in modern days, was less bloody than formerly, we are to attribute it, not to the spirit of the institution, but to the increase of light, which will finally, we trust, put an end to all abuses.

IONIA, a district of Asia Minor, peopled by a migration from Attica about B.C. 1044. Ionia was divided into twelve small states, which formed a celebrated confederacy often spoken of by the ancients. These states were Priene, Miletus, Colophon, Clazomenæ, Ephesus, Lebedos, Teos, Erythræ, Phocæa, Smyrna, and the capitals of Samos and Chios. After they had enjoyed, for some time, their freedom and independence, they were made tributary to the power of Lydia by Cræsus. The Athenians assisted them to shake off the yoke of the Asiatic monarchs, but they soon forgot their duty and relation to their mother country, and joined Xerxes when he invaded Greece. They were delivered from the Persian yoke by Alexander, and finally were reduced by the Romans under Sylla. Smyrna, unchanged in name, and prosperous in commerce, alone remains, and is the most important city in Asia Minor.

IONIAN ISLANDS, the collective name of a group west of Greece, comprising Cephallonia (the ancient Cephallenia), Corfu (Corcyra), Santa Maura (Leucas), Zante (Zakynthos), Cerigo (Cythera), Ithaca, and Paxo. They were long a republic under English "protection," but were re-united to Greece on the accession of the present king, George I. Population, 227,000. Corfu is their capital.

IOWA has an area of 50,914 square miles; population in 1860, 674,948. Her domain lies in the embrace of the two largest rivers of our country, navigable far beyond her limits. The interior is traversed by lesser, but noble and

often navigable rivers, the Des Moines, Iowa, Red Cedar, Boyer, Nodaway, Nishnabotna, &c. Heavy timber groves skirt the numerous streams, and frequent clumps dot the landscape on every hand, like islands in the prairie.

rie sea. The face of the country is a rolling prairie, fertile and virgin, varied with the luxuriant river valleys and much prized timber lands. Valuable lead mines occur in the neighborhood of Dubuque; coal is largely diffused through the state; extensive beds of gypsum are found in Webster county; and iron and copper have been discovered to some extent. Wheat and corn are the staple productions of Iowa; tobacco is grown in the western section to some extent; the soil is well adapted for any of the productions common to the temperate zone, especially to raising fruit.

Until 1832 Iowa was a wilderness, in the hands of the Indians. The wave of emigration broke across the Mississippi, upon its smiling valleys and prairies; in 1838 it was organized as a territory; and in 1846 it became a sovereign state and member of the Union. By the constitution, every white male citizen of the United States, twenty-one years old (idiotic, insane, or infamous persons excepted), who has resided in the state six months, and in the county twenty days, has the right of suffrage. The sessions of the general assembly are biennial: the senators are chosen for four years, one-half biennially, and the representatives for two years. The governor is elected biennially. The judicial power is vested in a supreme court, consisting of a chief-justice and two associates, chosen by the general assembly for six years; in district courts, the judges of which are elected for five years by the people of the respective districts; and in justices of the peace. Liberal support has been provided for common schools and academics. The Iowa State University is located at Iowa City; normal schools have been provided; common schools nurture the youth of every hamlet; and a deaf-mute asylum, and an institution for the blind, both at Iowa City, care for those unfortunate classes. In this matter of education the Hawkeye state is surpassed by none of her sisters in the great North-west.

Des Moines City (formerly called Fort Des Moines) is the capital of Iowa. A frontier fort was erected here at an early day. The town was laid out in 1846, and in 1856, the year it was made the capital, had some 2,500 inhabitants. Iowa City, the former seat of government, was laid out in 1839, and in

1856 had 5,500 inhabitants. Davenport is built on the broad bottom land of the Mississippi, opposite Rock Island; tasteful dwellings extending up the beautiful bluffs, and into the prairie beyond; population in 1853, 4,500. Burlington, called the oldest town in the state, stands lower down the Mississippi. As an instance of the rapid growth of Iowa, shared by all her towns and hamlets, we may say that in 1850 Burlington had 2,000 dwellers: in 1856 its population was 16,000, and thrift and wealth had gained proportionally. Dubuque, on the Mississippi, in the heart of the great lead region, is one of the largest and finest towns in the state, standing on a natural terrace, bounded on the west by a range of high bluffs, whose summits command a landscape of varied beauty. Dubuque had its name from M. Dubuque, a Frenchman who obtained a grant from the Spanish government for mining lead here. It was the first European settlement in Iowa, dating to 1786. The population in 1860 was 13,000. Keokuk, at the mouth of the fertile valley of the Des Moines, is another of the progressive cities of Iowa, with a population of over 10,000.

IPSUS, BATTLE OF. Seleucus was confirmed upon his throne by the defeat and death of Antigonus in this contest, B.C. 301. On the one side were Antigonus and his son; on the other Seleucus, Ptolemy, Lysimachus, and Cassander. The former led into the field an army of above 70,000 foot and 10,000 horse, with 75 elephants. The latter's forces consisted of 64,000 infantry, besides 10,500 horse, 400 elephants, and 120 armed chariots.

IRELAND, the second in size of the British islands, has an area of 32,508 square miles; population in 1861, 5,764,543. The surface of Ireland is less rugged than that of Scotland, and more varied and undulating than that of England. Its freshness and verdure have gained it the poetical name of the Emerald Isle. Its ancient name was Erin, and by the Romans it was known as Hibernia. It is divided into four provinces, Ulster, Leinster, Connaught, and Munster, which are subdivided into thirty-two counties. The executive government is administered by a viceroy, whose official title is lord lieutenant general and general governor of Ireland. The judiciary is similar to that of England.

There are two ecclesiastical provinces, whose primates are the Archbishop of Armagh and the Archbishop of Dubhn. There are ten suffragan bishops. The Roman Catholic dignitaries are the four archbishops of Armagh, Dublin, Cashel, and Tuam, with twenty-five bishops.

Dublin, the metropolis of Ireland, is situated on both sides of the Liffey, as it enters Dublin Bay. It is a beautiful city; the public buildings are of stone, and few cities contain an equal number of magnificent edifices. The University of Dublin, or Trinity College, founded by Queen Elizabeth in 1593, is a well endowed institution. Population of Dublin in 1861, 249,783. Cork, the second city of Ireland, situated on the Lee, with a population in 1851 of 167,450, is a large and flourishing place, and was built by the Danes in the sixth century. After the revolution of 1688 it was occupied by James II.; it was taken by Marlborough in 1690. The harbor of Cork is one of the noblest in the world. Belfast (population in 1851, 125,491) is the chief town in the province of Ulster, and the principal place of trade in Ireland. Linens, damasks, diapers, and cottons are actively manufactured. The town had its origin in the early part of the seventeenth century. Limerick, on the Shannon, had in 1851, 53,448 inhabitants. It is a place of great antiquity, supposed by some to be the Regia of Ptolemæus, and was a place of some note in the fifth century when visited by St. Patrick.

There are no serpents or other venomous reptiles in Ireland; St. Patrick is said to have driven them all into the sea. At the lake of Killarney, the peasants still preserve the following ludicrous tradition. When the labors of St. Patrick were drawing to a close, there was one enormous serpent who sturdily refused to emigrate, and baffled the attempts of the good saint for a long time. He haunted the romantic shores of Killarney, and was so well pleased with his place of residence, that he never contemplated the prospect of removing without a deep sigh. At length St. Patrick, having procured a large oaken chest, with nine strong bolts to secure its lid, took it on his shoulder one fine sunshiny morning, and trudged over to Killarney, where he found the serpent basking in the sun. "Good

morrow to ye!" said the saint. "Bad luck to ye!" replied the serpent. "Not so, my friend," replied the good saint; 'you speak unwisely; I'm your friend. To prove which, haven't I brought you over this beautiful house as a shelter to you? So be aisy, my darlint." But the serpent, being a cunning reptile, understood what blarney meant, as well as the saint himself. Still, not wishing to affront his apparently friendly visitor, he said, by way of excuse, that the chest was not large enough for him. St. Patrick assured him that it would accommodate him very well. "Just get into it, my darlint, and see how aisy you'll be." The serpent thought to cheat the saint; he whipped into the chest, but left an inch or two of his tail hanging out over the edge. "I told you so," said he; "there's not room for the whole of me." "Take care of your tail, my darlint!" cried the saint, as he whacked the lid down on the serpent. In an instant the tail disappeared, and St. Patrick proceeded to shoot all the bolts. He then took the chest on his shoulders. "Let me out!" cried the serpent. "Aisy," cried the saint; "I'll let you out to-morrow." So saying, he threw the box into the waters of the lake, to the bottom of which it sank to rise no more. But forever afterward, the fishermen affirmed that they heard the voice of the poor cozened reptile eagerly inquiring, "Is to-morrow come yet? Is to-morrow come yet?"

The early history of Ireland is involved in great obscurity, and it is impossible to distinguish fact from fiction in the tales of its early historians. Some of them trace the line of ancient kings to antediluvian time, and one commences his annals with the creation of Adam, and has a chapter recounting the invasions of Ireland before the deluge. According to one legend, fifty women and three men under the lead of Banba, a daughter of Cain, took possession of Ireland before the flood. They lived in the country forty years, until a plague came upon them and destroyed the whole colony in a single week. Others assert that three Spanish fishermen, having accidentally discovered Ireland, went home for their wives, and on their return to the island were overtaken by the deluge and drowned. According to a third authority, Bith, a son of Noah, having been denied admission to th-

ark, forsook the God of his father, and with several others had recourse to an idol. The idol could not tell them when the deluge would take place; but, following its advice, they built a ship and put to sea. After having been tossed for seven years and a quarter, through adventures as various as those of Ulysses or Eneas, they landed at Cork. The party consisted of three men and fifty women. The former divided the latter among them, and settled in different parts of the island. Two of the men died, and their wives came to the third, who fled before them out of Leinster, leaving his favorite wife to die of grief. These things happened six days before the deluge. The learned and reverend historian makes the following judicious remarks: "The reader must observe that I do not give down these invasions or occupations as true history. I have recounted them here, merely because I found them mentioned in ancient books; and, moreover, I can not conceive how our antiquaries could have obtained these accounts of persons that arrived in Ireland before the flood, if it were not from those aerial demons who were their family followers in pagan times, or unless they had found them engraved upon some rocks, that remained after the flood had subsided. I do not, however, insist that there might not have existed, at the time of St. Patrick's coming to Ireland, some very old and venerable man, who had lived through many centuries before that time, and that this man gave that apostle an account both of everything he remembered himself and of all the traditions he had received from his ancestors concerning the past ages. I do think that there was some such kind of personage in those times, who had lived more than three hundred years, and who related many ancient traditions to St. Patrick."

The same writer (Dr. Geoffrey Keating) accounts for the absence of serpents in Ireland by a legend of high antiquity, the scene of which is in Egypt. A serpent chanced to bite Gaedal Niul's son while he was swimming, and his life was endangered thereby. Niul followed the advice of his household and brought the boy to Moses without delay, who prayed to God and touched the wound with his rod, and it was immediately healed. He

then affirmed that no venomous creature should have power in any country wherein the posterity of that youth should dwell. "And this prophecy has been fulfilled in the isle of Crete or Candia, where some of his posterity remain, in which island, as in Ireland, no venomous serpents can exist; for although, according to some authors, we have had some serpents in Ireland before St. Patrick's time, I am yet of opinion that they were not venomous. I am likewise inclined to think that infernal demons are meant by those serpents spoken of in the life of St. Patrick."

It is supposed that the Phœnicians reached Ireland in their voyagings. The Irish are of Celtic descent. The island suffered from incursions of the Danes. Brian Boiroimhe, a valiant and renowned prince, defeated them at Clontarf in 1039, and was assassinated in his tent the same night, while in the act of prayer. Strongbow (the surname of the Earl of Pembroke), at the request of Dermot McMorrogh, a dethroned king of Leinster, invaded Ireland in 1169; a great part of the island was soon conquered by the English, who by degrees became masters of the whole country, though rebellions were frequent. A parliament was summoned at Dublin, May 1st, 1536, which declared Henry VIII. the supreme head on earth of the church of Ireland, and annulled the papal power. Every person who refused to take the oath of supremacy, was declared guilty of high treason. But, to resist the royal usurpations, confederacies were formed, and the reformation was rendered so odious to the Irish that it made slow progress among them. Though the liturgy of the church of England was performed for the first time on Easter Sunday, 1551, the bulk of the nation still adhered steadfastly to their ancient faith, and the cause of the Romish religion became the cause of the nation. The attempts to force a people to renounce the faith which they had received from St. Patrick, and to receive a new system of religion with an English ritual, naturally became blended with the national prejudices against English oppression. A general system of rebellion to shake off the English yoke was organized in Ireland about 1596; the most formidable of the rebel chiefs was O'Neil, who, disdaining the title of Earl

of Tyrone, had assumed the rank and appellation of King of Ulster, and received a supply of arms and ammunition from Spain. This rebellion was finally terminated by the submission of O'Neil.

The conduct of James I. in 1601 estranged the affections of the Irish, and, during the reign of Charles I., a rebellion broke out which deluged the country in blood. The Catholics plotted the extirpation of the English. Parliament sent Cromwell into the island, and his unsparing measures reduced it to obedience; twenty thousand Irishmen were sold as slaves, and forty thousand entered into foreign service to escape from tyranny at home.

On the death of the great protector, Richard Cromwell confirmed his brother Henry in the government of Ireland, by the new title of lord lieutenant. Henry exerted himself with vigor to support the tottering authority of his brother; but, after the abdication of Richard, Charles II. was proclaimed with every manifestation of joy in all the great towns of Ireland. On the accession of James II. to the throne of England, the Duke of Ormond gave place in the government of Ireland to the Earl of Clarendon. The cruel Earl of Tyrconnel was appointed commander-in-chief of the army, and made independent of the lord lieutenant. This, and other proceedings in favor of the Catholics, alarmed the Protestant part of the kingdom, and most of the traders, and those whose fortunes were transferable, fled from the country. The distracted state of this unhappy kingdom, at the period of the revolution in 1688, can hardly be described. The Protestants in the north proclaimed William and Mary. James, who had sailed from Brest, with a large armament, landed at Kinsale, in March, 1689. He was opposed by an English army commanded by William in person. A dreadful civil war took place, but at length the battle of the Boyne, on the 1st of July, 1690, decided the fate of James, who fled to France. The Irish subjects outlawed for the rebellion of 1688, amounted to 300,978, and their Irish possessions comprised 1,600,000 acres. In 1796 the injured Irish, denied the enjoyments of their dearest rights, and condemned to political disability on account of professing

the Catholic religion, once more rebelled. The French favored them, but only a small French force ever landed, and they surrendered to the superior army of Cornwallis. The insurgents, being excluded from all quarters, fled, and were pursued with great slaughter. On the 1st of January, 1801, the union of Great Britain with Ireland was effected. The political disabilities of the Catholics were removed in 1829, but still the condition of Ireland was unhappy.

One cause of the distresses of Ireland was absenteeism, the absence in England of great landed proprietors, whose estates were underlet by rapacious agents that ground the poor tenants without mercy. In spite of religious intolerance and civil disqualifications; of statutes which rendered commerce a crime, and laws which made industry penal; of abuses of power under William, and of taxes quadrupled under the last of the Stuarts and the first of the Brunswicks,—still something like a counterpoise was found to balance these political evils, in the home residence of the educated gentry, and in the political bustle and activity of an Irish parliament. As soon as the positive calamities of war and confiscation ceased; as soon as an approach was made to European habits and policy, and industry was permitted to find a scope and a reward for its exertions,—the nation made a sudden and a rapid progress in civilization and comfort, simply through the efficiency of its own resources, and the demands of its own market. It was in vain that the talismanic words 'Irishmen' and 'Papist' were employed to arm passion and prejudice against the country; it was in vain that commercial jealousy threw shackles round its infant manufactures. In spite of these and many other obstacles, the moral strength of a country always distinguished for the natural endowments of its population, rose superior to the cruel pressure of its political inflictions; and the domestic activity and intellectual improvement of the people—slow and limited as they appear, when compared with the advances of the sister kingdom—proceeded with a rapidity little short of miraculous, under so stultifying a system of legislation and government. It was then that the light of national genius concentrated its long scattered

rays to a point, and shining steadily from its proper focus, threw out those inextinguishable sparks of moral lustre,

"which are wont to give
Light to a world, and make a nation live."

It was then that the powerful collision of active, ardent, and energetic minds produced that brilliant burst of talent which, for something more than a century, flung over the political darkness of the land a splendor to which her struggles and her misfortunes served only to give a stronger relief and more brilliant effect. It was then that, after ages of mental depression, the Irish intellect broke out, like the Irish rebellion, "threescore thousand strong," when none expected or were prepared for the splendid irruption. The old mart of learning was re-opened to the erudite of Europe, as in those times when, if a sage was missing, it was said "*emandatus est ad disciplinam in Hibernia*;" and the rich stream of native humor, which, like a caverned river, had hitherto "kept the noiseless tenor of its way," darkened by impending shadows, now rushed forth with the rapidity of a torrent, pure, sparkling, and abundant, at the first vent afforded to its progress.

The legislative union with Great Britain has been very unpopular with Irish patriots, and from 1829 to 1847 a great movement, headed by Daniel O'Connell, agitated for its repeal. In 1847 and the two successive years, a disease blighted the potato crop, and the twin curses of pestilence and famine brooded over the hapless island. Revolution was the cry on the continent, and an abortive insurrection was planned in Ireland. The leaders, Smith O'Brien, John Mitchell, Thomas Francis Meagher, Terence McManus, and others, were sentenced to death; a fate commuted by the crown to transportation, from which they have all escaped or have been pardoned.

By an act of 1849, a commission for the sale of encumbered estates was appointed, whose operations have been highly beneficial, and promise much improvement in the social condition of the Irish people. Large domains have been transferred from bankrupt proprietors, who groaned under irredeemable mortgages and had no capital to employ labor, to the hands of competent and progressive landlords, of whom a large proportion are skillful cultivators from England and Scot-

land. The tendency will be to lessen the evil of absenteeism, and thus do away with the middle-men, who have formed one standing and regular Irish grievance. It was the common method in Ireland to extort the last farthing which the tenant was willing to give for land rather than quit it, and the machinery by which such a practice was carried into effect, was that of the middle-man. He gave high prices, that he might obtain higher from the occupant; more was paid by the actual occupant than was consistent with the preservation of the land; it was injured, ran out, and the most shocking consequences ensued from it. There was little manufacture in Ireland; the price of labor was low; the demand for labor irregular. If a poor man was driven, by distress of rent, from his potato garden, he had no other resource; all was lost; he would do the impossible (as the French say) to retain it—subscribe any bond, and promise any rent. The middle-man had no character to lose; and he knew when he took up the occupation that it was one with which pity had nothing to do. On he drove, and backward the poor peasant receded, losing something at every step, till he came to the very brink of despair; and then he recoiled and murdered his oppressor, and was a White Boy, or a Right Boy; and the soldier shot him, and the judge hanged him.

IRENÆUS, St., was a native of Asia Minor, and a pupil of Polycarp. He is supposed to have come to Gaul, while a young man, and died at Lyons, of whose church he was bishop, about the close of the second century.

IRETON, HENRY, the son-in-law of Cromwell, and a distinguished parliamentary general, was lord deputy of Ireland during the commonwealth. He died at Limerick in 1651, aged forty-one.

IRON MASK. The Man in the Iron Mask was the most singular prisoner ever confined within the walls of the Bastille; notwithstanding all the curiosity and conjecture that have been employed to ascertain his quality and pedigree, nothing authentic has transpired to the present time. In 1698 he was brought from the island of St. Marguerite by Mons. de St. Mars, the newly appointed governor of the Bastille; he was attended with the greatest respect, maintained a sumptuous

table, and had every possible indulgence shown him until the time of his death, Nov. 19th, 1703. This mysterious prisoner, on his removal to the Bastille, was carried in a litter, accompanied by several men on horseback, who had orders to put him to death, if he made the slightest attempt to show his face or otherwise discover himself. His face was concealed with a mask of black velvet, with springs of steel or whalebone, which were so constructed that he could eat without taking it off. A physician of the Bastille, who had often attended him, said he had never seen his face, though he had frequently examined his tongue and other parts of his body; but added that he was admirably well made, that his skin was brown, his voice interesting, that he was very accomplished, read much, played on the guitar, and had an exquisite taste for lace and fine linen.

The pains taken in his concealment show that he was a person of considerable quality and importance, and from the following circumstances it appears singular that he was never discovered. Whilst at St. Marguerite, he one day wrote something with his knife on a silver plate, which he threw from the window toward a boat lying near the tower. A fisherman took up the plate and brought it to the governor, who, with great astonishment, asked the man if he had read the writing or showed it to any one, and, although the fisherman answered in the negative, kept him in confinement until he was perfectly satisfied, after which he dismissed him, saying, "It is lucky for you that you can not read." The Abbé Papon says: "In the year 1778 I had the curiosity to visit the apartment of this unfortunate prisoner: it looks toward the sea. I found in the citadel an officer in the independent company there, seventy-nine years of age. He told me that his father had often related to him that a young lad, a barber, having seen one day something white floating on the water, took it up; it was a very fine shirt, written almost all over. He carried it to Mons. de St. Mars, who, having looked at some parts of the writing, asked the lad, with an appearance of anxiety, if he had not had the curiosity to read it? He assured him he had not; but two days afterward the boy was found dead in his bed."

Immediately after the prisoner's death, his apparel, linen, clothes, mattresses, and everything that had been used by him, were burnt; the walls of his room were scraped, the floor was taken up, and every precaution used that no trace of him might be left behind. When he was on the road from St. Marguerite to his last residence, Mons. de St. Mars, was overheard to reply to a question of the prisoner, relative to any design against his life: "No, prince, your life is in safety; you must only allow yourself to be conducted." A prisoner told M. la Grange Chancel that he was lodged, with other prisoners, in the room immediately over this celebrated captive, and found means of speaking to him by the vents of the chimney; but he refused to inform them who he was, alleging that it would cost him his own life, as well as the lives of those to whom the secret might be revealed.

Various have been the individuals supposed to have been the masked prisoner: the Duc de Beaufort; the Count de Vermandois, natural son to Louis XIV. by the Duchess de la Valliere; the Duke of Monmouth, natural son of Charles II. of England; Gerolami Magni, minister of the Duke of Modena; the offspring of a secret marriage between Anne of Austria and Cardinal Mazarin, &c., &c. Voltaire says that the secret was known to Monsieur de Chamillard, and that the son-in-law of that minister conjured him on his death-bed to tell the name of the man with the mask; but he replied it was a state secret, which he had sworn he would never divulge.

The supposition now generally received is that this unfortunate person was the twin brother of Louis XIV., born eight hours after this monarch, and the unhappy victim of superstition and cruelty. Louis XIII., being weak enough to give credit to the prediction of some impostors, that if the queen should be delivered of twins, the kingdom would be involved in civil war, ordered the birth of this prince to be kept a profound secret, and had him privately educated in the country as the illegitimate son of a nobleman; but on the accession of Louis XIV., the young man gave indications of having discovered his parentage. His brother being informed of this, ordered him to be imprisoned for

life, and to wear a mask in order to prevent his being recognized.

ISABELLA of CASTILE was born in 1450. Civil dissensions made her the heiress and successor of her brother Henry, whose daughter Joanna was set aside. Of the many suitors for her hand, the King of Portugal, the Duc de Guienne, brother of Louis XI. of France, the Duke of Clarence, brother of Edward IV. of England, and Don Ferdinand, the heir of Arragon, she chose the latter, and was united to him in 1474. By this match nearly the whole Christian dominions of Spain were united in one monarchy. It was through the generous patronage of Isabella that Columbus was enabled to set sail on that momentous voyage from which he landed upon the strand of a virgin hemisphere. Isabella died in 1504.

ISMAIL, a strongly fortified town in Russia, in Bessarabia, on the north side of the Danube, thirty-three miles from the Black Sea. It is memorable for its siege, in 1790, by the Russians under Suwarrow. It was taken by a terrible assault, on the 23d of December. Of the Turks 30,000 were massacred in cold blood; 6,000 women were butchered, and the town was fired. The Russians lost 5,000 men on the day of capture, and more than twice that number in previous operations.

ISSUS, BATTLE OF, the second great defeat of Darius by Alexander, 333 B.C. The queen and family of the Persian monarch were taken by the Macedonians.

ITALY. The present kingdom was formed by the adhesion of one part of the country after another to the government of Victor Emanuel. This movement commenced even before the peace of Villa Franca, which was finally signed at Zurich, Nov. 10, 1859. Tuscany, on the 15th of the previous August, had declared for the new kingdom; Modena on the 20th, Parma Sept. 3d. The first Italian parliament met at Turin, Feb. 18, 1861, and on the 28th enacted the new title of King of Italy. The British government recognized the new Kingdom in March. In 1864, Florence was made the capital instead of Turin. The area of the kingdom of Italy is 98,075 square miles, and its population, in 1862, was 21,776,953.

Italy has borne, at different periods, the

different names of Saturnia, Ænotria, Hesperia, Ausonia, Tyrrhenia. It has been called the garden of Europe; and the panegyric which Pliny bestows upon it does not seem in any degree exaggerated. The ancient inhabitants called themselves Aborigines, offspring of the soil, and the country was soon after peopled by colonies from Greece. Italy has been the mother of arts as well as of arms, and the immortal monuments which remain of the eloquence and poetical genius of its inhabitants, are universally known. The early part of the history of this country, is, however, involved in the greatest obscurity. The first light thrown on this land of darkness was by the settlement of Greek colonies in the south, where, eventually, a large tract of country was called Magna Græcia. The early history of Italy is linked with the annals of Rome.

Italy continued subject to one power, for more than eight hundred years, until the fifth century, when the Goths crossed the barriers of the Alps. Toward A.D. 560 the Longobards entered the north of Italy, took Milan and Pavia, and founded a kingdom which continued during two centuries, until overthrown by Charlemagne. After his death Italy belonged to his successors on the imperial throne, but their tenure was precarious; the great barons laboring to assert their independence, and the popes to extend their temporal dominion. The subsequent history is little more than a succession of military struggles, of little interest, until 960, when Otto I. repaired, in person, to the north of Italy, granted municipal rights to the cities, and improved the interior government in general. The whole was united to the German empire; but from this compact fresh feuds and commotions followed: the Italian nobility were jealous of their privileges; conspiracies were formed, detected, and suppressed, and no constant alligiance was exhibited to the German government, or the magistracy put into authority by it. A series of wars continued for several ages. In the fourteenth century, Italy was divided into the kingdom of Naples, the estates of the Church, Tuscany, Parma, and Lombardy, the Genoese and the Venetian territories, and other petty states. For two centuries the Venetians and Genoese were

the most considerable commercial people in Europe. Venice, in particular, possessed large foreign colonies; and, in 1194, she took Constantinople and held in sovereignty portions of what now constitutes Turkey in Europe and Greece. The foundation of the temporal power of the popes was laid about 1080, by Matilda, Countess of Tuscany, who bequeathed a large portion of her dominions to Gregory VII. After that time the popes successively made great acquisitions of territory: but, in 1798, Rome was taken by Berthier, and Bonaparte annexed the papal dominions to France. They were, however, restored in 1814. Napoleon made many changes in the states of Italy, but after his fall the former condition was restored. [*See* NAPLES, SARDINIA, TUSCANY, &c.]

ITURBIDE, AUGUSTUS, was born in 1784. When Mexico threw off the Spanish yoke, he was the commander of the royal army in

the north. He declared for the independence of the Mexican people, and the Spaniards being driven forth, succeeded in making himself emperor in 1822. Anarchy made his rule not quite imperial; he abdicated in March, 1823, his divorced empire promising him an affluent alimony, and he agreeing to dwell in Italy. Unsatisfied ambition led him back to Mexico in 1824; the congress declared him an outlaw, and he was shot a few days after his arrival.

IVRY, or YVRES, BATTLE OF, between Henry IV. of France, aided by his chief nobility, and the generals of the Catholic league, over whom the king gained a signal victory. This success enabled Henry to blockade Paris, and reduce that capital to the last extremity by famine; but the Duke of Parma, by orders of Philip of Spain, marched to the relief of the league, and obliged the king to raise the blockade.

J.

JACKSON, ANDREW, was the seventh president of the United States. His ancestors were of the Presbyterian faith, and among the Scotch emigrants to the province of Ulster in Ireland, under the policy of James I., who stocked the confiscated estates of the Irish with colonists from England and Scotland. Hugh Jackson, the grandfather of Andrew, was a linen-draper near Carrickfergus; his four sons were reputable farmers, and the youngest of them, Andrew, married Elizabeth Hutchinson, by whom he had in Ireland two sons, Hugh and Robert. To improve his condition, he emigrated to America, in company with several of his neighbors, in 1765, and settled on Waxhaw Creek, just within the limits of North Carolina, where others of his countrymen had formed a settlement and reared a meeting-house. At a later period, Samuel, a son of another of the brothers, came over, and became a citizen of Philadelphia.

On this plantation, in Mecklenburg county, N. C., Andrew Jackson saw the light, March

15th, 1767, only five days before the eyes of his father were closed in death. A few weeks after, the widow, with her orphan boys and new-born babe, removed into South Carolina and made her home at another point on the Waxhaw. There was spent the infancy and early youth of the future hero. The lone mother's means were slender, but she longed to see her youngest son a minister of the gospel, and he was early placed in a neighboring academy. He was making fair progress in his studies, when the Revolution broke out, and South Carolina soon became a theatre of war. His elder brother, Hugh, lost his life in the fatigues of service against the foe. A battle was fought at Waxhaw settlement in May, 1780, in which 113 Americans were killed and 150 wounded. Waxhaw meeting-house was converted into a temporary hospital, and there the wounded were borne. The mangled corpses of slaughtered patriots recalled to the youth that looked upon them, the tales of British cruelty and wrong he had so often heard from his mother,

JACKSON AT THE HERMITAGE.

as she related scenes of tyranny in Ireland, from which his father had fled to find an asylum in the Carolinas.

In the summer of 1780, then a boy of little more than thirteen, he shouldered a musket, and with his brother Robert joined a corps of volunteers attached to Gen. Sumter's brigade. An action took place August 6th, 1780, at a place called Hanging Rock, between the Americans and British soldiers aided by Tories. Davie's corps, in which the young Jacksons fought, distinguished itself and suffered heavy loss; but the brothers were unhurt.

For several months the region between the Great Pedee and Saluda rivers was the stage of hot warfare. Andrew and Robert were too young to mingle in all the dangers and hardships of partisan life. The settlers about the Waxhaw were firm republicans by birth and spirit, and were special marks for British hate. Mrs. Jackson retired with her sons

into North Carolina for some time. In 1781 both of the boys were captured by a party of dragoons. Andrew was ordered by a Tory officer to clean his muddy boots; the boy-soldier proudly refused, and parried with his left arm a sword-stroke murderously aimed at his head. His hand was wounded, and he bore the scar for life. Robert was ordered to perform the same menial office, and upon a refusal as prompt as his brother's, the brutal major gave him a sword-cut upon the head, from the effect of which he never recovered. With other prisoners, the youths were confined some time in Camden, where they suffered severely, from their undressed wounds, from ill treatment, and from the small pox, which raged among the prisoners. Their mother hurried to Camden; by an exchange of prisoners, her sons were yielded to her, hardly more than mere wrecks of their former selves. With five released neighbors, the widow and her boys started for their home

on the Waxhaw. For the company there were but two horses. Mrs. Jackson rode one, without saddle or bridle, and on the other the weak and wounded Robert was borne. Andrew, not yet recovered from the small-pox, barefooted and half-naked, trudged on foot the weary way of forty miles. Two hours before reaching home, a heavy rain drenched the party, and the disease left the skin of the boys to pervade their systems. Robert lived but two days; for a fortnight Andrew was delirious with a raging fever, and lingered upon the brink of death. Not long after his recovery, his noble mother died from a fever contracted on the prisonships at Charleston, whither she had gone to nurse and tend the victims who were there suffering and dying.

Andrew Jackson was thus left alone on the earth. For some time he was wayward and dissolute in his habits, till suddenly changing his course of life, he commenced the study of law, at Salisbury, N. C. This was in the winter of 1784, in his eighteenth year; in little more than two years he was licensed to practice. Without asking, he received from the governor the appointment of solicitor for the western district, embracing the present state of Tennessee. In the spring of 1788, then just of man's age, he crossed the mountains to take up his abode. The country was wild and sparsely settled, the white man having to struggle boldly and bloodily with the fierce savage. Jackson was engaged in several expeditions against the Indians; his bravery attracted their notice, and they gave him the names of *Sharp Knife* and *Pointed Arrow*.

After dwelling awhile at Jonesborough, he determined to make Nashville his home, and there boarded in the pleasant family of Mrs. Donelson, the widow of Col. Donelson, an emigrant from Virginia. Rachel, the daughter of Mrs. Donelson, was celebrated for her beauty and affability. She was then in the bloom of early womanhood. She had been wedded to Captain Robards, a dissolute and brutal man, and had sought sanctuary from his cruel treatment under her mother's roof. Alarmed by a rumor that he was coming to Nashville, she left there in the spring of 1791, with the family of a friend, and went down the river to Natchez. Jackson accom-

panied the party as a protector against the dangers of the journey. When he returned to Nashville he learned that Capt. Robards had applied to the legislature of Virginia for a divorce, and was credibly informed that the prayer had been granted. He at once hastened to Natchez with the welcome tidings. He had admired Rachel Donelson before; and now that she was free to marry, and love for her was not illicit, his regard at once warmed into ardent affection. His suit was accepted; in the autumn they were married. In December, 1793, Jackson was startled to learn that the Virginia legislature did not grant a divorce, but only authorized a suit to be brought in a Kentucky court. That suit had just terminated and the divorce had been granted. In January, 1794, Jackson was again regularly married. His conduct was ever singularly delicate and chivalrous toward woman, and when partisan rancor tried to asperse him, those who were familiar with the circumstances of this case, vindicated his conduct as perfectly honorable and virtuous.

He now applied himself assiduously to his profession. The prodigal debtors, with whom he came in contact in the collection of debts, clubbed together to drive him from the country. He flinched not, and their animosity brought upon him several personal encounters, in which he was uniformly victorious. His nerve, strength, and agility were qualities to win him the liking of the hardy frontiersmen of Tennessee, and after assisting in 1796 to form a state constitution, he was chosen the first representative of the new commonwealth in Congress. He served one session, and then, having been chosen senator by the legislature, took that seat Nov. 22d, 1797. Unambitious of political distinction, he resigned his seat in the senate after one session, went back to Tennessee, and was made judge of the supreme court of the state, a post which he held some six years.

For some years, he tasted the retirement which he had so long desired, devoting his time to the pursuits of agriculture. In 1802 he had been appointed major-general of the militia of Tennessee. When the war with Great Britain came in 1812, he was called into the field. The expedition against the Creeks, who had been stirred to hostility

by emissaries in the interest of England, was conducted by him with eminent success. In May, 1814, he received a commission as major-general in the regular army. The threatened descent of the British upon Louisiana soon drew his attention to that quarter; the measures which through his energy were adopted for resistance and defense, were crowned with victory upon the field of Chalmette, Jan. 8th, 1815, when backwoods marksmen and tough cotton-bales proved more than a match for veterans who had been victorious in the Peninsula and the great fight of Waterloo.

Gen. Jackson took his seat in the senate of the United States, as senator from Tennessee, in December, 1823. He was a prominent candidate for the presidency in 1824, and in 1828 and 1832 was elected to that high office. His administration was marked by a fierce contest with the United States bank. At the close of his second term, he retired to his favorite residence, at the Hermitage in Tennessee, where he passed the remnant of his days. He died on the 8th of June, 1845. His countrymen, throughout the land, joined in testimonies of respect to his memory.

JACKSON, JAMES, an officer in our Revolutionary army, was born in England in 1757, and settled in Georgia in 1772. He was engaged in the attack on Savannah, when but nineteen years old, and a few years afterward was chosen brigade-major in the Georgia militia. After the close of the war, throughout which he displayed great gallantry and prudence, he commenced the practice of law, and in 1788 he became a member of the legislature. In 1788 he was chosen governor of Georgia, but modestly declined the honor on account of his youth and inexperience. He held the post, however, from 1798 to 1801. He was afterward chosen United States senator, and died in Washington, March 19th, 1806.

JACOBINS. The Jacobin club originated in 1789, from a secret association of about forty gentlemen and men of letters, who had united to discuss and disseminate political and other opinions; they were called Jacobins because they met in the hall of the Jacobin friars at Paris. The club became numerous and popular; fraternal societies were founded in all the principal towns of the kingdom; and the share of the Jacobins in

the ensuing revolution need not be told here. The club law of Oct. 16th, 1794, gave the death-blow to the Jacobin club.

JACQUARD, MARIE JOSEPH, the inventor of the celebrated loom, was born at Lyons in 1752, and died in 1834.

JAFFA, anciently Joppa, a seaport of Syria, twelve leagues north-west of Jerusalem; populatio. 4,000. It was taken by Bonaparte in 1799. His soldiers suffered terribly here from the plague.

JAMAICA is the largest and most important of the West India islands belonging to Great Britain. It is about 150 miles long, and 40 broad. It is less fertile than some others of the West Indies, but is a rich and valuable country. It is subject to earthquakes. Sugar, rum, molasses, indigo, coffee, pimento, and ginger are the most valuable articles of export. The present population is about 380,000, of whom 15,000 are whites. The island was discovered by Columbus, May 3d, 1494. In 1655 it was taken from the Spanish by the English under the command of Admiral Penn and General Venables. In 1795 a war commenced between the Maroons, the runaway slaves of the Spanish settlers, and the white inhabitants; the barbarous expedient of using bloodhounds being resorted to, for the purpose of tracing the mountain haunts of the negroes, they were at last compelled to surrender at discretion.

Spanish Town, or Santiago de la Vega, is the seat of the colonial legislature. Kingston is the largest town in the island; population over 35,000. Port Royal, once the capital, has been often and severely smitten by earthquakes, hurricanes, and flames.

JAMES I., King of Scotland, was born in 1394. At the age of eleven years, he was sent to France, that he might escape the danger to which he was exposed from the ambition of his uncle, the Duke of Albany; but, falling into the hands of the English, he and his retinue were confined in England, where, however, the young prince received an excellent education. His talents were of a high order. Washington Irving has given an interesting account of him in the *Sketch Book*, which we condense.

I visited the ancient keep of the castle [at Windsor], where James I. of Scotland, the pride and theme of Scottish poets and histo-

rians, was for many years of his youth detained a prisoner of state. It is a large gray tower, that has stood the brunt of ages, and is still in good preservation. It stands on a mound which elevates it above other parts of the castle, and a great flight of steps lead into the interior. In the armory, which is a Gothic hall, furnished with weapons of various kinds and ages, I was shown a coat of armor hanging against the wall, which I was told had once belonged to James. From hence I was conducted up a staircase to a suite of apartments of faded magnificence, hung with storied tapestry, which formed his prison, and the scene of that passionate and fanciful amour, which has woven into the web of his story the magical hues of poetry and fiction.

The whole history of this amiable but unfortunate prince is highly romantic. The intelligence of his capture, coming in the train of many sorrows and disasters, proved fatal to his unhappy father. The news, we are told, was brought to him while at supper, and did so overwhelm him with grief, that he was almost ready to give up the ghost into the hands of the servants that attended him. But being carried into his bed-chamber, he abstained from all food, and in three days died of hunger and grief at Rothesay.

James was detained in captivity above eighteen years; but, though deprived of personal liberty, he was treated with the respect due to his rank. He was well taught, we are told, to fight with the sword, to joust, to tourney, to wrestle, to sing and dance; he was an expert mediciner, right crafty in playing both of lute and harp, and sundry other instruments of music, and was expert in grammar, oratory, and poetry.

In prison he wrote "The King's Quhair" (Book). The subject of the poem is his love for the Lady Jane Beaufort, daughter of the Earl of Somerset, and a princess of the blood royal of England, of whom he became enamored in the course of his captivity. His passion for the Lady Jane, as it was the solace of his captivity, so it facilitated his release, it being imagined by the court that a connection with the blood royal of England would attach him to its own interests. He was ultimately restored to his liberty and crown, having previously espoused the Lady

Jane, who accompanied him to Scotland, and made him a most tender and devoted wife.

He found his kingdom in great confusion, the feudal chieftains having taken advantage of the troubles and irregularities of a long interregnum, to strengthen themselves in their possessions, and place themselves above the power of the laws. James sought to found the basis of his power in the affections of his people. He attached the lower orders to him by the reformation of abuses, the temperate and equable administration of justice, the encouragement of the arts of peace, and the promotion of everything that could diffuse comfort, competency, and innocent enjoyment through the humblest ranks of society. He mingled occasionally among the common people in disguise; visited their firesides; entered into their cares, their pursuits, and their amusements; informed himself of the mechanical arts, and how they could be best patronized and improved; and was thus an all-pervading spirit, watching with a benevolent eye over the meanest of his subjects. Having in this generous manner made himself strong in the hearts of the common people, he turned himself to curb the power of the factious nobility; to strip them of those dangerous immunities which they had usurped; to punish such as had been guilty of flagrant offenses; and to bring the whole into proper obedience to the crown. For some time they bore this with outward submission, but with secret impatience and brooding resentment. A conspiracy was at length formed against his life, at the head of which was his own uncle, Robert Stewart, Earl of Athol, who, being too old himself for the perpetration of the deed of blood, instigated his grandson, Sir Robert Stewart, together with Sir Robert Graham, and others of less note, to commit the deed. They broke into his bed-chamber at the Dominican convent near Perth, where he was residing, and barbarously murdered him by oft-repeated wounds. His faithful queen, rushing to throw her tender body between him and the sword, was twice wounded in the ineffectual attempts to shield him from the assassin; and it was not until she had been forcibly torn from his person, that the murder was accomplished.

This tragedy was acted Feb. 20th, 1437.

When the footsteps of the ruthless assassins were heard approaching the door of the royal apartment, Catharine Douglas, one of the queen's ladies, secured it for a moment, by thrusting her arm through the staple, and sustaining, with unwavering fortitude, the shocks of the assailants, till her arm was broken and the door forced.

The sentiments with which Mr. Irving concludes his sketch of James, are best conveyed in his own beautiful language. "Others may dwell on the illustrious deeds of James as a warrior and a legislator; but I have delighted to view him merely as the companion of his fellow-men, the benefactor of the human race, stooping from his high estate to sow the sweet flowers of poetry and song in the paths of common life. He was the first to cultivate the vigorous and hardy plant of Scottish genius, which has since been so prolific of the most wholesome and highly flavored fruit. He carried with him into the sterner regions of the north, all the fertilizing arts of southern refinement. He did everything in his power to win his countrymen to the gay, the elegant, and gentle arts, which soften and refine the character of a people, and wreath a grace round the loftiness of a proud and warlike spirit. * He wrote many poems, which, unfortunately for the fullness of his fame, are now lost to the world; one which is still preserved, called 'Christ's Kirk of the Green,' shows how diligently he had made himself acquainted with the rustic sports and pastimes which constitute such a source of kind and social feeling among the Scottish peasantry, and with what simple and happy humor he could enter into their enjoyments. He contributed greatly to improve the national music; and traces of his tender sentiment and elegant taste are said to exist in those witching airs still piped among the wild mountains and lonely glens of Scotland. He has thus connected his image with whatever is most gracious and endearing in the national character; he has embalmed his memory in song, and floated his name down to after ages in the rich stream of Scottish melody. The recollection of these things was kindling at my heart, as I paced the silent scene of his imprisonment. I have visited Vauluse with as much enthusiasm as a pilgrim would visit the shrine at Loretto; but I have never felt more

poetical devotion than when contemplating the old tower and the little garden at Windsor, and musing over the romantic loves of the Lady Jane and the royal poet of Scotland."

JAMES VI. of Scotland and I. of England. [See STUART, HOUSE OF.]

JAMES II. of England. [See STUART.]

JANE, daughter of Ferdinand and Isabella, born in 1482, became mother of the emperors Charles V. and Ferdinand I. The death of her husband, Philip, Archduke of Austria, affected her reason; she became insane in 1506, and remained so to her death, 1555, forty-nine years.

JANIZARIES. These formidable foot-soldiers, at first the guards of the Ottoman monarchs, and for a long time the arbiters of their fate, were finally broken up in 1826, the date of their last rebellion, when three thousand of them were slain. They were established by Amurath I., and originally consisted of the finest Christian slaves, educated in the Mohammedan religion and arms. When first formed, this new militia was consecrated in the presence of the sultan, by a dervish, who, standing in the front of their ranks, stretched the sleeve of his gown over the head of the foremost soldier, and delivered his blessing in these words: "Let them be called Janizaries [*yengi cheri*, or new soldiers]; may their countenances be ever bright, their hand victorious, their swords keen; may their spear always hang over the heads of their enemies; and, wheresoever they go, may they return with a white face." *White and black face* are common and proverbial expressions of praise and reproach in the Turkish language.

JANUS, a deity believed by the Romans to have the double office of opening and shutting the gate of heaven. He was represented with two faces. His temple at Rome was built in the form of a square, and was opened in time of war, and shut in time of peace. It was shut only twice in seven centuries; in the reigns of Numa and Augustus.

JAPAN, an empire to the east of China, composed of a great number of islands. The principal are Nippon, Kioosioo, and Sitkokf. The Japanese have nominally two emperors; one is the supreme pontiff, and oracle of religion, and the other a secular emperor, who is invested with absolute au-

thority. The latter's residence is at Jeddo, a large city, the capital of the empire, in the island of Nippon. The Japanese are enterprising, hardy, and enlightened. The soil is fertile, and agriculture has attained great perfection. The silks, cottons, porcelain, lacquered wares, &c., are in high repute. The area of the Japanese empire is estimated by some at 160,000, and by others at 260,000 square miles. Of its population there is no more certain knowledge, some calling it 25,000,000, and others carrying it to double that amount.

The jealous restrictions upon intercourse with foreigners have preserved this insular empire as a *terra incognita*. The Dutch have long been allowed to trade at the port of Nagasaki. In 1619 ambassadors are said to have come from Japan to do homage to Pope Paul as the head of the church, for their master had been won to the Christian faith by the preaching of Jesuit missionaries. The ambition of the Jesuits, and the intrigues of the jealous Dutch, caused the expulsion of the former in 1622. Commodore Perry, with an American squadron dispatched for the purpose, visited Japan in 1853 and 1854, and concluded a commercial treaty, by which a few ports are partially opened to American ships. The British obtained similar concessions in October, 1854.

JASPER, WILLIAM, was distinguished for gallantry in the Revolutionary war. June 28th, 1776, in the celebrated attack of Sir Peter Parker on Fort Moultrie, he replaced, in the midst of an iron rain, the American flag after it was shot away by a cannon-ball. He, with the aid of Sergeant Newton, waylaid, surprised, and captured a British guard of eight men, releasing an American of the name of Jones, whom they were conducting to certain death at Savannah. This extraordinary exploit was performed within about two miles from the British lines. Brave Sergeant Jasper was killed in the attack on Savannah, Oct. 9th, 1779.

JAVA, a large island in the eastern seas, 642 miles long, and 128 broad. In 1849 the population amounted to 9,560,000, of whom not more than 20,000 were of European descent. Java was discovered by the Portuguese in 1510. But the Dutch obtained their possessions, and the island was divided between them and the native princes. There

are many volcanic peaks. The island is exceedingly fertile, producing rice, cotton, coffee, pepper, sugar, drugs of all kinds, and various fruits. The coffee of this island is renowned. There are also mines of gold, rubies, diamonds, and emeralds. In 1811 the island was taken by the British, but it was restored by the treaty of Paris in 1814. The natives are much oppressed, and have several times revolted. The Dutch now have the sovereignty of all the island. Batavia, a city and seaport on the north coast near the western end, is the capital of all the Dutch East Indies: lon. 106° 54' E.; lat. 6° 12' S. Population 118,000. The Dutch founded the city in 1619, and after being taken by the British in 1811, it was restored to the Dutch in 1816. The bay would be good if it were easily accessible. The old town is built on a low marshy foundation, at the junction of small rivers, and some of the canals in the streets contain stagnant water. Hence originates the intermittent fever, so frequently fatal to strangers. A new town has arisen on the elevated ground farther inland. Batavia once had an immense trade, and the name of Queen of the East, but the British have outrivaled the Dutch in the traffic of the Indies, and Batavia has declined accordingly. The quarter of the native population is exceedingly mean, while the European houses are neat rather than elegant.

JAY, JOHN, an American statesman and jurist, was born of Huguenot ancestry, in the city of New York, Dec. 1st, 1745, o.s., and was educated at King's (now Columbia) College. In 1768 he was admitted to practice law, and in 1774 was chosen a delegate to the first provincial congress which met at Philadelphia. Two years afterward he was chosen president of Congress. In 1778 he was chosen chief-justice of New York, the constitution of which he had been instrumental in framing. The next year he was sent on a mission to Spain, to procure aid and a recognition of our independence. In 1782 he was one of the commissioners appointed to negotiate a treaty of peace with Great Britain. On his return, Mr. Jay was placed at the head of the department for foreign affairs, in which office he continued until appointed chief-justice of the United States. In 1794 he was sent as envoy extraordinary to Great

MONTICELLO.

Britain, and on his return the next year entered on the duties of office of governor of the state of New York, to which he had been elected during his absence. From this station he retired to private life in 1801. He died May 17th, 1829. Our country has no purer patriot than John Jay in her list of worthies.

JEFFERSON, THOMAS. The family of Jefferson were among the early emigrants from Great Britain. Thomas, the third president of the United States of America, was born at Shadwell, Virginia, April 2d, 1743, o.s. His father, Peter Jefferson, a man of some distinction in the colony, died in 1757, leaving a widow (who lived until 1776) with two sons and six daughters. Of the handsome paternal estate, Thomas, the eldest child, received the lands he called Monticello, on which he resided when not in public life. He spent two years at William and Mary's College, and then commenced the study of the law, which he was admitted to practice in 1767.

By birth Mr. Jefferson belonged to the aristocracy of Virginia; by nature he was a republican; and he espoused with all his might the popular cause against the encroachments of Britain. In 1769 he took his seat in the general assembly of Virginia, which

the governor of Virginia dissolved. Mr. Jefferson, before that event, had made an effort for the emancipation of the slaves of Virginia. He was then elected to fill the place of Peyton Randolph in Congress, and assumed his seat in that body, June 21st, 1775. He was one of the committee appointed to draw up a declaration of independence, and that document, with few alterations, was his own composition. His seat in Congress he resigned, because he felt that he could be more useful in organizing the republican government of Virginia. Among the laws proposed by him, and adopted by the commonwealth, were those prohibiting the future importation of slaves; for abolishing primogeniture, and providing for the equal partition of inheritances; for establishing religious freedom; and for a system of general education; which last, however, was never carried into practice in the state. June 1st, 1779, he was chosen governor of Virginia, but after two years he resigned, being of opinion that a military man would be better suited for the emergencies of the times.

Mr. Jefferson was the author of our present system of coins and decimals, proposing it in 1784; another scheme was favored by Robert Morris. On the 5th of July, 1784,

Mr. Jefferson sailed for Paris, having been appointed by Congress a third commissioner to negotiate treaties of commerce with other nations, Mr. Adams and Dr. Franklin being the other two. He was actively engaged until 1789, when he returned to the United States and was appointed secretary of state. Dec. 1st, 1790, he resigned this office, and lived in retirement until 1797, when he was chosen vice-president of the United States. In 1801 he was chosen president. He filled the office of chief magistrate for eight years, when he retired to his seat at Monticello, where he died on the 4th of July, 1826, the same day, on which Mr. Adams expired.

Mr. Jefferson made himself known as an author in 1781, by his "Notes on Virginia." In private life he was hospitable, and pleasing in his manners; in public, the unyielding, sagacious and talented leader of the Republican party. A monument of his regard for education remains in the university established at Charlottesville, in which he filled the office of rector for some years. In a private memorandum, he desired that a small granite obelisk might be raised above his ashes, with this inscription:

Here was buried

THOMAS JEFFERSON,

Author of the Declaration of Independence,
Of the Statute of Virginia for Religious Freedom,
and

Father of the University of Virginia.

In January, 1772, he married Mrs. Martha Skelton, a young widow, the daughter of Mr. John Wayles. She died in 1782, leaving three daughters, one of whom died young; one married John W. Eppes, and the other Gov. Thos. M. Randolph, both of Virginia. Mrs. Randolph survived her father.

The following sketch of Mr. Jefferson's personal appearance and habits is condensed from Randall's painstaking biography. His appearance was engaging. His face, though angular, and far from beautiful, beamed with intelligence, with benevolence, and with the cheerful vivacity of a happy, hopeful spirit. His complexion was ruddy, and delicately fair; his reddish chestnut hair luxuriant and silken. His full, deep-set eyes, the prevailing color of which was a light hazel, were peculiarly expressive. He stood six feet two and a half inches in height, and though very

slim at this period, his form was erect and sinewy, and his movements displayed elasticity and vigor. He was an expert musician, a fine dancer, a dashing rider, and there was no manly exercise in which he could not play well his part. His manners were unusually graceful, but simple and cordial. His conversation already possessed no inconsiderable share of that charm which, in after years, was so much extolled by friends, and to which enemies attributed so seductive an influence in moulding the young and the wavering to his political views. There were a frankness, earnestness, and cordiality in its tone; a deep sympathy with humanity; a confidence in man, and a sanguine hopefulness in his destiny,—winning irresistibly upon the feelings, not only of the ordinary hearer, but of those grave men whose commerce with the world had perhaps led them to form less glowing estimates of it. Mr. Jefferson's temper was gentle, kindly, and forgiving. If it naturally had anything of that warmth which is the usual concomitant of affections and sympathies so ardent,—and it no doubt had,—it had been subjugated by habitual control. Yet, under its even placidity, there were not wanting those indications of calm self-reliance and courage which all instinctively recognize and respect. There is not an instance on record of his having been engaged in a personal rencontre, or his having suffered a personal indignity. Possessing the accomplishments, he avoided the vices, of the young Virginia gentry of the day, and a class of habits which, if not vices themselves, were too often made the preludes to them. He never gambled. To avoid importunities to games which were generally accompanied with betting, he never learned to distinguish one card from another; he was moderate in the enjoyments of the table; to strong drinks he had an aversion which rarely yielded to any circumstances; his mouth was unpolled by oaths or tobacco! Though he speaks of enjoying "the victory of a favorite horse," and the "death of the fox," he never put but one horse in training to run; never ran but a single race; and he very rarely joined in the pleasant excitement of the chase: he knew it to be too pleasant for the aspiring student. With such qualities of mind and character, with the favor of powerful friends and relatives, and

even of viceroyalty to urge him onward, Mr. Jefferson was not a young man to be lightly regarded by the young or old of either sex.

Of his singular precision, down to minute details, and his habit of careful observation, Randall gives many instances. Never was there a more methodical man, from great matters down to the merest seeming trifles; never so diligent a recorder of them! In his garden book, for example, the times of planting, sprouting, coming to the table, or ripening of his multitude of esculents are severally noted; the plots of ground containing them, the rows of plants, and sometimes the separate plants in each row, are numbered; diagrams, as neatly drawn as engravings, present the different plots or beds collectively to the eye, and display their annual rotations. Meteorological observations, recorded punctually at three different periods of the day, extend through a long course of years, and through some of the busiest ones of his life. The pocket account-books include the minutest items of his daily expenditure, down to two or three pennies paid for a shoestring, or tossed into a beggar's hat in Paris; and we think we remember one or two entries of a single penny, to make the inexorable cash-book balance exactly! The object of the disbursement is generally specified. Account-books kept thus present a curious history of a man's life; and Mr. Jefferson's tell where he went, and what he bought, every day for thirty years. When he is away from home, his monthly expenses are often tabularized, so as to separately exhibit the aggregate expenditure for each principal article; as for meat, bread, wine, &c.; and this is habitually done where official position required him to keep an extensive establishment. He makes memoranda of minute economical facts of every description. Those in regard to farming and gardening are innumerable. Even household details do not escape his attention. We often find how much of this or that it will take to supply the wants of a person or family; how much oil will supply a lamp for a certain number of hours; comparative cost of lamps and candles, &c., &c.

In everything pertaining to natural history, we have a series of almost microscopic observations. We will name one, which, in what may be termed the department of economic-

natural history (a department in which he seems to have specially delighted), exhibits something which it is hard, at the first blush, to define. This is a table beautifully drawn up, giving the average earliest and latest appearance of thirty-seven varieties of vegetables in the Washington market during the whole eight years of his presidency! To think of a leader of a great civil revolution, the founder of a new party and creed, the statesman engaged in the pressing cares of a nation, watching with a green-grocer's assiduity, and recording with more than a green-grocer's precision, the first and last appearance of radishes, squashes, cabbages, and cauliflowers in the market, suggests a curious train of reflection.

He observed the rule of entering information under appropriate heads, in regard to all facts thought worthy of record. Thus his agricultural observations are ultimately arranged under seventeen general heads, and these divided into upward of fifty subdivisions. Everything, even to his expense accounts, has a paged index, made by himself. We look in vain for an illegibly scrawled word or figure; though we find him on one occasion making all his entries, for two or three months, with his *left* hand, owing to a broken wrist.

JEFFREY, FRANCIS. This brilliant reviewer was the son of a respectable Scottish attorney, born at Edinburgh in 1772, and educated at Glasgow and Oxford. He was called to the Edinburgh bar in 1794, and remained several years an advocate with little practice. He was one of the band of youth who sat at the feet of Dugald Stewart, and whose first incentives to distinction in the more difficult paths of knowledge, as well as their almost universal adoption of the liberal school of politics, were in some degree attributable to the teachings of that distinguished man. Among them were Brougham and Horner. One day early in 1802, in the eighth or ninth story, or flat, then the elevated residence of Jeffrey, he was visited by Horner and Sydney Smith, the latter a young curate temporarily resident in Edinburgh, preaching, teaching, and joking with a flow of wit, humanity, and sense, that fascinated everybody. Smith started the notion of the "Edinburgh Review," and was immediately voted its editor by the two Scotchmen. The pro-

ject was communicated to others of the literary knot, among others Henry Brougham, then as brilliant and erratic as his subsequent life has shown him. The project hung fire at first; those who promised to contribute were slow at fulfilling: Jeffrey had nearly finished four articles, Horner had partly written four, and more than half the number was printed; and yet well nigh the other half had still to be written. The memorable 'blue and yellow' at last appeared in November, after a somewhat tedious gestation of ten months. Sydney Smith was the only one who had promptly done his task: as early as April he had completed more than half of what he contributed, while nobody else had put pen to paper; and shortly after the number appeared, he was probably not sorry to be summoned, with his easy pen and cheerful wit, to London, abandoning the cares of editorship to Jeffrey. To this place of honor Jeffrey's articles in the first number proved his right. Under his management the "Edinburgh Review" at once became a new power in literature. The freshness, originality, boldness, and independence of its criticisms, on literature, science, and government, and the beauty, brilliancy, and strength which characterized its contents, gave it a splendid success. Nothing of the kind had ever been: it opened a new era in criticism. It was also famous as a political journal, and did powerful battle for the liberal school of English politics, for the Whigs against Toryism. So much was its power feared that in 1809 the "Quarterly Review" was started in London by the Tories as a necessity against it.

Of course mistakes were made. Jeffrey's memorable criticism upon Wordsworth, commencing "This will never do," was contradicted by time. The Edinburgh reviewers at the outset were young men, and their sallies could not but be blemished with some indiscretions. The influence of the review upon the literature of England was sound and healthy. As a biographer of Jeffrey has said: "Nothing could be conceived more charming than the earnest, playful, delightful way in which his comments adorned and enriched the poets he admired. Hogarth is not happier in Charles Lamb's company, than is the homely vigor and genius of Crabbe

under Jeffrey's friendly leaning; he returned fancy for fancy to Moore's exuberance, and sparkled with a wit as keen; he 'tamed his wild heart' to the loving thoughtfulness of Rogers, his scholarly enthusiasm, his pure and vivid pictures; with the fiery energy and passionate exuberance of Byron, his bright, courageous spirit broke into earnest sympathy; for the clear and stirring strains of Campbell he had an ever lively and liberal response; and Scott, in the midst of many temptations to an exercise of severity, never ceased to awaken the romance and generosity of his nature." Mr. Jeffrey was both editor and contributor to the review, poetry and elegant literature being his chosen field.

Not only did he distinguish himself in letters; he acquired a brilliant reputation in his profession. In 1821 and 1822 he was chosen lord rector of the university of Glasgow; and in 1829, being elected dean of the faculty of advocates, he resigned his editorship, deeming that position properly incompatible with his new one as the head of a great law corporation. The Whigs coming into power the following year, he was made lord advocate, the first office under the crown in Scotland, and sat for a time in parliament. Although in this new sphere he was both useful and able, it was not his natural element, and he gladly accepted in 1834 a promotion to the Scottish bench, as one of the judges of the court of sessions. This was in his sixty-second year, and for nearly sixteen years he continued the chief ornament of the court in which he sat. From this appointment he gained the title of lord, by which he was thereafter commonly known. He died in January, 1850, after a short illness, a genial, kindly man to the last, and was universally regretted. His was a youth of enterprise, a manhood of brilliant success, and 'honor, love, obedience, troops of friends' encircled his later years.

Lord Jeffrey was twice married. His second wife, a grand-niece of the noted John Wilkes, was born in America, and he crossed the Atlantic in 1813 to be wedded to her. She survived him not quite four months.

JEFFREYS, GEORGE, Baron Wren, was born at Acton in Denbighshire, in 1648. He was not regularly admitted to the bar, but being at Kingston assizes in the year of the

plague, 1666, when there were scarcely any barristers present, he was permitted to plead, and from that time continued to do so, without having his title questioned. In 1683 he was made chief-justice of the king's bench. At the accession of James II., he was created Baron Jeffreys of Wem, in the county of Salop. On the suppression of the Duke of Monmouth's rebellion, he was sent to try the prisoners in the west, where he committed the most shocking cruelties, for which, at his return, he was constituted lord chancellor of England. Macaulay has thus searchingly sketched the character of this notorious judge.

He was a man of quick and vigorous parts, but constitutionally prone to insolence and to the angry passions. When just emerging from boyhood, he had risen into practice at the Old Bailey bar, a bar where advocates have always used a license of tongue unknown in Westminster Hall. Here, during many years, his chief business was to examine and cross-examine the most hardened miscreants of a great capital. Daily conflicts with prostitutes and thieves called out and exercised his powers so effectually that he became the most consummate bully ever known in his profession. All tenderness for the feelings of others, all self-respect, all sense of the becoming, were obliterated from his mind. He acquired a boundless command of the rhetoric in which the vulgar express hatred and contempt. The profusion of maledictions and vituperative epithets which composed his vocabulary could hardly have been rivaled in the fish-market or the bear-garden. His countenance and his voice must always have been unamiable; but these natural advantages—for such he seems to have thought them—he had improved to such a degree that there were few who, in his paroxysms of rage, could see or hear him without emotion. Impudence and ferocity sat upon his brow. The glare of his eyes had a fascination for the unhappy victim on whom they were fixed; yet his brow and eye were said to be less terrible than the savage lines of his mouth. His yell of fury, as was said by one who had often heard it, sounded like the thunder of the judgment day. These qualifications he carried, while still a young man, from the bar to the bench.

He early became common sergeant, and then recorder of London. As judge at the city sessions he exhibited the same propensities which afterward, in a higher post, gained for him an unenviable immortality. Already might be remarked in him the most odious vice which is incident to human nature, a delight in misery merely as misery. There was a fiendish exultation in the way in which he pronounced sentence on offenders. Their weeping and imploring seemed to titillate him voluptuously; and he loved to scare them into fits by dilating with luxuriant amplification on all the details of what they were to suffer. Thus, when he had an opportunity of ordering an unlucky adventurer to be whipped at the cart's tail, "Hangman," he would exclaim, "I charge you to pay particular attention to this lady! Scourge her soundly, man! Scourge her till the blood runs down! It is Christmas; a cold time for madam to strip in! See that you warm her shoulders thoroughly!" He was hardly less facetious when he passed judgment on Ludowick Muggleton, the drunken tailor who fancied himself a prophet. "Impudent rogue!" roared Jeffreys, "thou shalt have an easy, easy, easy punishment!" One part of this easy punishment was the pillory, in which the wretched fanatic was almost killed with brickbats.

The nature of Jeffreys had been hardened to that temper which tyrants require in their worst implements. He had hitherto looked for professional advancement to the corporation of London. He had therefore professed himself a Roundhead, and had always appeared to be in a higher state of exhilaration when he explained to popish priests that they were to be cut down alive, and were to see their own bodies burned, than when he passed ordinary sentences of death. But, as soon as he had got all that the city could give, he made haste to sell his forehead of brass and his tongue of venom to the court. The renegade soon found a patron in the obdurate and revengeful James, but was always regarded with scorn and disgust by Charles, whose faults, great as they were, had no affinity with insolence and cruelty. "That man," said the king, "has no learning, no sense, no manners, and more impudence than ten carted street-walkers." Work was to be

done, however, which could be trusted to no man who revered law or was sensible of shame; and thus Jeffreys, at an age at which a barrister thinks himself fortunate if he is employed to lead an important cause, was made chief justice of the king's bench.

His enemies could not deny that he possessed some of the qualities of a great judge. His legal knowledge, indeed, was merely such as he had picked up in practice of no very high kind; but he had one of those happily constituted intellects which, across labyrinths of sophistry and through masses of immaterial facts, go straight to the true point. Of his intellect, however, he seldom had the full use. Even in civil causes his malevolent and despotic temper perpetually disordered his judgment. To enter his court was to enter the den of a wild beast, which none could tame, and which was as likely to be roused to rage by caresses as by attacks. He frequently poured forth on plaintiffs and defendants, barristers and attorneys, witnesses and jurymen, torrents of frantic abuse, intermixed with oaths and curses. His looks and tones had inspired terror when he was merely a young advocate struggling into practice. Now that he was at the head of the most formidable tribunal in the realm, there were few indeed who did not tremble before him. Even when he was sober, his violence was sufficiently frightful; but, in general, his reason was overclouded, and his evil passions stimulated by the fumes of intoxication. His evenings were ordinarily given to revelry. People who saw him only over his bottle would have supposed him to be a man gross indeed, sottish, and addicted to low company and low merriment, but social and good-humored. He was constantly surrounded on such occasions by buffoons, selected for the most part from among the vilest pettifoggers who practiced before him. These men bantered and abused each other for his entertainment. He joined in their ribald talk, sang catches with them, and, when his head grew hot, hugged and kissed them in an ecstasy of drunken fondness. But, though wine at first seemed to soften his heart, the effect a few hours later was very different. He often came to the judgment seat, having kept the court waiting long, and yet having but half slept off his

debauch, his cheeks on fire, his eyes staring like those of a maniac. When he was in this state, his boon companions of the preceding night, if they were wise, kept out of his way, for the recollection of the familiarity to which he had admitted them inflamed his malignity, and he was sure to take every opportunity of overwhelming them with execration and invective. Not the least odious of his many odious peculiarities was the pleasure which he took in publicly browbeating and mortifying those whom, in his fits of maudlin tenderness, he had encouraged to presume on his favor.

When the Prince of Orange arrived, and James had abandoned his kingdom, Jeffreys, knowing his unpopularity, endeavored to escape in disguise. There was true retribution in his detection. A scrivener at Wapping, whose trade was to furnish the seafaring men there with money at high interest, had some time before lent a sum on bottomry. The debtor applied to equity for relief against his own bond, and the case came before Jeffreys. The counsel for the borrower, having little else to say, said that the lender was a Trimmer. The chancellor instantly fired. "A Trimmer! where is he? Let me see him. I have heard of that kind of monster. What is it made like?" The unfortunate creditor was forced to stand forth. The chancellor glared fiercely on him, stormed at him, and sent him away half dead with fright. "While I live," the poor man said, as he tottered out of the court, "I shall never forget that terrible countenance." And now the day of retribution had arrived. The Trimmer was walking through Wapping, when he saw a face at the window of an alehouse. The eye-brows had been shaved away; the dress was that of a common sailor from Newcastle, and was black with coal dust; but there was no mistaking the savage mouth and eye of Jeffreys. The alarm was given. In a moment the house was surrounded by hundreds of people shaking bludgeons and bellowing curses. The fugitive's life was saved by a company of the train-bands, and he was carried before the lord mayor.

The mayor was a simple man who had passed his whole life in obscurity, and was bewildered by finding himself an important

actor in a mighty revolution. The events of the last twenty-four hours, and the perilous state of the city which was under his charge, had disordered his mind and his body. When the great man, at whose frown, a few days before, the whole kingdom had trembled, was dragged into the justice room begrimed with ashes, half dead with fright, and followed by a raging multitude, the agitation of the unfortunate mayor rose to the height. He fell into fits, and was carried to his bed, whence he never rose. Meanwhile the throng without was constantly becoming more numerous and more savage. Jeffreys begged to be sent to prison. An order to that effect was procured from the Lords, who were sitting at Whitehall, and he was conveyed in a carriage to the Tower. Two regiments of militia were drawn out to escort him, and found the duty a difficult one. It was repeatedly necessary for them to form, as if for the purpose of repelling a charge of cavalry, and to present a forest of pikes to the mob. The thousands who were disappointed of their revenge pursued the coach, with howls of rage, to the gate of the Tower, brandishing cudgels, and holding up halters full in the prisoner's view. The wretched man, meantime, was in convulsions of terror. He wrung his hands; he looked wildly out, sometimes at one window, sometimes at the other, and was heard even above the tumult crying, "Keep them off, gentlemen! for God's sake, keep them off!" At length, having suffered far more than the bitterness of death, he was safely lodged in the fortress, where some of his most illustrious victims had passed their last days, and where his own life was destined to close in unspeakable ignominy and horror, April 18th, 1789.

JEMMAPES, BATTLE OF, in Flanders. In this obstinate contest, Nov. 5th, 1792, Gen. Dumouriez, with 40,000 French, defeated 28,000 Austrians strongly intrenched.

JENA, a town of Saxe-Weimar, containing a famous university, and 6,500 inhabitants, and memorable for the hard-fought battle between the French and Prussians, on the 14th of October, 1806. Napoleon headed the French troops, and the Duke of Brunswick the Prussians. The battle was sanguinary in the extreme; 250,000 or 300,000 men, of which the two armies were composed, with 700 or 800 pieces of artillery, scattered death

in every direction, and exhibited one of the most awful scenes recorded in history. The result was decisive in favor of the French. The Duke of Brunswick was mortally wounded. The power of Prussia was crushed, and Napoleon entered Berlin.

JENNER, EDWARD, the discoverer of vaccination, was born at Berkeley in Gloucestershire, May 17th, 1749, and bred to the profession of medicine. His celebrated discovery was made in 1798, but was incredulously received. Parliament at last voted him £10,000. Jenner died Jan. 26th, 1823. Napoleon valued Dr. Jenner's discovery so highly that he released a large number of English prisoners at his request.

JEROME, or HIERONYMUS, was born of Christian parents, in Dalmatia. He was deeply immersed in the theological controversies of the day, and his works were voluminous. He excelled all his contemporaries in erudition. His translation of the Scriptures into Latin is known as the Vulgate. Jerome died in 420, at the age of ninety.

JEROME OF PRAGUE, a Bohemian reformer, was the scholar of Wickliffe and John Huss, and began to publish their doctrines. In 1415 he was examined before the council of Constance, when Huss was in prison. He contrived, however, to escape, but was taken, delivered into the hands of a magistrate, and burned, May 30th, 1416.

JERUSALEM, a celebrated city of Palestine. Its environs are barren and mountainous, and the town is irregularly built. The number of inhabitants is 25,000, about one-half being Mohammedans, and a sixth Jews. There are many Roman and Greek convents in the city. The Church of the Holy Sepulchre has been an object of veneration and curiosity for fifteen centuries. The Mosque of Omar, on the site of the ancient Temple, is splendid edifice.

Melchisedek is called the founder of Jerusalem. It was a long time in the hands of the Jebusites, from whom King David took it. Solomon built the temple on Mount Moriah. After his death Sesostris, King of Egypt, took the city, and plundered it, during Rehoboam's reign. In short, it was five times taken. Its most memorable siege was that by Titus, A.D. 70, when the city and the temple were entirely destroyed; 1,110,000 persons are said to have

perished, and 97,000 to have been made prisoners, and afterward either sold as slaves, or wantonly exposed, for the sport of their cruel victors, to the fury of wild beasts.

Milman, the historian of the Jews, eloquently describes the destruction of the temple. An appalling spectacle to the Roman, what was it to the Jew? The whole summit of the hill which commanded the city blazed like a volcano. One after another the buildings fell in, with a tremendous crash, and were swallowed up in the fiery abyss. The roofs of cedar were like sheets of flame; the gilded pinnacles shone like spikes of red light; the gate towers sent up tall columns of flame and smoke. The neighboring hills were lighted up; and dark groups of people were seen watching in horrible anxiety the progress of the destruction: the walls and heights of the upper city were crowded with faces, some pale with the agony of despair, others scowling unavailing vengeance. The shouts of the Roman soldiery, as they ran to and fro, and the howlings of the insurgents who were perishing in the flames, mingled with the roaring of the conflagration and the thundering sound of falling timbers. The echoes of the mountains replied, or brought back the shrieks of the people on the heights: all along the walls resounded screams and wailings; men who were expiring with famine, rallied their remaining strength to utter a cry of anguish and desolation. The slaughter within was even more dreadful than the spectacle from without. Men and women, old and young, insurgents and priests, those who fought and those who entreated mercy, were hewn down in indiscriminate carnage. The number of the slain exceeded that of the slayers. The legionaries had to clamber over heaps of dead, to carry on the work of extermination. John, at the head of some of his troops, cut his way through, first into the outer court of the temple, afterward into the upper city. Some of the priests upon the roof wrenched off the gilded spikes with their sockets of lead, and used them as missiles against the Romans below. Afterward they fled to a part of the wall about fourteen feet wide; they were soon summoned to surrender; but two of them, Mair, son of Belgo, and Joseph, son of Delia, plunged headlong into the flames!

The Emperor Adrian began to rebuild the

city, sixty years after its destruction. During the decay of the Byzantine empire the city fell into the hands of the Mohammedans. In the seventh and eighth centuries, the Crusaders contended fiercely for the possession of Jerusalem, and it was taken by the host which Godfrey of Bouillon headed, the 15th of July, 1099. The Christians founded a kingdom there, which was ended by the Turks in 1187. [See CRUSADES.] Jerusalem was taken by the French under Bonaparte, in February, 1799.

JESUITS. The religious order of the Jesuits was founded by a military gentleman of Biscay named Ignatius Loyola. The order at first was sometimes called Loyolists, and sometimes Inghists, from the founder's Spanish name, Inigo de Cyuipuscoa. Ignatius assembled at Rome ten of his companions, chosen, for the most part, from the university of Paris, in the year 1538. He submitted the plan of his institution, which he said was inspired by divinity, to Pope Paul III. A committee appointed by that pontiff to examine the character of the institution, declared it inimical to the interests of the church, as well as unnecessary. The opposition to the establishment of the order was overcome by a promise, in addition to the three vows of poverty, celibacy, and monastic obedience, to take an oath of implicit submission to the pope, agreeing to go whithersoever he should direct, and to claim nothing for support from the holy see. In the very charter, however, by which the followers of Ignatius bound themselves to the interests of the pope, they agreed blindly to obey their general. The pope finally confirmed the institution by a bull, or decree, in the year 1540. The founder of the order of Jesuits being originally a rude soldier, it has been supposed he was a mere tool in the hands of artful men, and that he was not in reality the author of the writings which bear his name. The order was confirmed under the title of the "Company of Jesus." It is said that when the little band who formed the germ of this great order, were deliberating what answer they should return to those who were continually questioning them as to their calling and institute, Ignatius, ever full of military ideas, said: "As our general is no other than Jesus Christ; as his cross is our standard; his law, even in its counsels, our rule; his name our chief

consolation and our only hope; let us tell men the simple truth, that we are the little battalion of Jesus Christ." Such is the origin of the title 'Society of Jesus,' which has been shortened into the name of Jesuits.

At first the number of members was limited to sixty, but this restriction was removed, and the Jesuits multiplied rapidly. In the year 1710, the order had 24 professed houses; 59 houses of probation; 340 residences; 612 colleges; 200 missions; 150 seminaries and boarding schools; and consisted of 19,998 Jesuits. The code of laws by which the Jesuits were governed was perfected by Layner and Aquaviva, who succeeded Loyola as general of the order, and were possessed of even more talent than their predecessor.

Many causes contributed to insure the success of the institution. The Jesuits were required to be more active than other monks, having little to do with the usual monastic functions. They were soldiers devoted to the service of God and the pope. They cultivated the acquaintance of the great, and were deeply imbued with the spirit of intrigue. Loyola made the government of the institution purely monarchical. The general was chosen for life by deputies from the different provinces. His power was absolute, and no case and no individual were exempt from it. The general had a despotic power over the members of the institution; a much greater power than the head of any monastic order had ever before exercised. The Jesuits were not only obliged to obey their general in outward observances, but to him they submitted the direction of their minds. Each novice was obliged, every six months, to manifest his conscience to his superior or to some one appointed by him; and these novices were closely watched by others of the order, who were directed to give notice to the general of anything important. The heads of the several houses were obliged to transmit frequent reports of the character and conduct of the departments over which they presided, to the superior, and these reports were carefully kept and arranged, that the general might refer at once to the account of particular houses at any period. The provincials and heads of departments of the order transmitted full and minute accounts of the civil state

of the respective countries in which they resided.

The education of youth was an object which the Jesuits were particularly anxious to promote and direct, and the business of education was soon almost entirely conducted by them. In spite of their vow of poverty, they contrived to amass vast possessions, and in the East and West Indies carried on a very lucrative commerce. They were the confessors to monarchs and men of rank, and the influence they acquired was very great. They sought to acquire and enlarge property, and in South America, being possessed of wealthy dominions, they ruled over some hundred thousand subjects, as monarchs. They favored the passions of mankind by sanctioning unbridled license of manners, through the moral code they taught. Regular and severe in their own habits, they were enabled to make a selfish use of the irregularities they countenanced.

They were not unacquainted with the persuasive power of the tortures of the inquisition, in making proselytes. One of their most noted missionaries was Francis Xavier, called the apostle of India. He sailed for the Portuguese settlements in India, in 1542, and soon spread the doctrines of the Romish church over the continent and surrounding islands. It is not our intention to detail the proceeding of the Jesuits in the process of making foreign proselytes, nor the controversies to which it gave rise. They were accused of making compromises with some sects, permitting them to retain profane customs and improper rites, in consideration of their publicly embracing the doctrines of the Romish church. As we have before hinted, it is quite probable that as many converts were made by terror as by mildness, since the Jesuits were willing to do anything to maintain a show of success.

They took possession of the fertile South American province of Paraguay, in the seventeenth century, and labored to disseminate military arts and improvements among the Indians. They introduced the comforts of civilization among the inhabitants, and thus in the first place gained their affection and esteem. Proceeding in this manner, they gradually strengthened their influence so

that a few priests readily ruled some hundred thousand Indians. But these priests did not maintain the purity of conduct which they had given reason at first to suppose would be their constant guide in all their actions. They soon manifested schemes of the most daring ambition and most insatiable avarice. They yearly sent home to the European Jesuits, immense quantities of gold, which they procured principally from Paraguay. They armed the Indians, and excited them to hatred against the Spaniards and Portuguese, evidently showing their intentions of making a separate sovereignty of Paraguay. In 1750 the courts of Madrid and Lisbon entered into a treaty for fixing the boundaries of their respective possessions in South America. When this treaty came to be executed in the year 1752, the Jesuits opposed it, and animated the Indians strenuously to resist the Portuguese and Spaniards, in the war which followed. The disgrace of the Jesuits at the Portuguese court originated in their conduct on this occasion.

In France the intrigues and the seditious writings of the Jesuits caused them to be expelled by several parliaments, and denounced as corrupters of youth and enemies of government. The Sorbonne issued a decree in 1554, by which they condemned the institution, as being calculated rather for the ruin than the edification of the faithful. Louis XIII. again countenanced them, and Cardinal Richelieu and Louis XIV. showed them favor. In the reign of the latter monarch, they obtained the revocation of the edict of Nantes in favor of the Protestants. They had gained an almost complete triumph over their enemies, the Jansenists, when, among other things, their refusal to administer the sacrament to the Jansenists, created a turn of the tide against them which ended in their dissolution.

The Jesuits were tried before the grand chamber of the parliament of Paris, and lost their case, which grew out of a desire to compound their debts, when, having carried on great commerce in Martinico, they had sustained heavy losses by war. An examination into their own books only proved the charges against them. Professing poverty, they were found to possess riches; pretending to moderation and justice, they were convicted of inculcating principles which

endangered the well being of the king and realm.

The Jesuits were expelled from England in 1604; from Portugal in 1759; from France in 1764; from Spain in 1767; and their society was abolished by Pope Clement XIV., in 1773. Had they adhered to the principles they professed, in the outset, and merely aimed at civilizing and converting savages, and increasing knowledge at home, the institution would have been as justly celebrated, as it is now denounced for ambition, avarice, cruelty, and corruption.

The order was restored by Pius VII. in 1814, and has since been tolerated in various countries. It has a secret and extensive existence.

Macaulay has glowingly sketched the character of this wonderful religious corps. In the sixteenth century, the pontificate, exposed to new dangers more formidable than had ever before threatened it, was saved by a new religious order, which was animated by intense enthusiasm and organized with exquisite skill. When the Jesuits came to the rescue of the papacy, they found it in extreme peril; but from that moment the tide of battle turned. Protestantism, which had, during the whole generation, carried all before it, was stopped in its progress, and rapidly beaten back from the foot of the Alps to the shores of the Baltic. Before the order had existed a hundred years, it had filled the whole world with memorials of great things done and suffered for the faith. No religious community could produce a list of men so variously distinguished; none had extended its operations over so vast a space; yet in none had there ever been such perfect unity of feeling and action. There was no region of the globe, no walk of speculative or of active life, in which Jesuits were not to be found. They guided the counsels of kings. They deciphered Latin inscriptions. They observed the motions of Jupiter's satellites. They published whole libraries, controversy, casuistry, history, treatises on optics, Alcaic odes, editions of the fathers, madrigals, catechisms, and lampoons. The liberal education of youth passed almost entirely into their hands, and was conducted by them with conspicuous ability. They appear to have discovered the precise point to which intellectual culture can be carried without risk of intel-

lectual emancipation. Enmity itself was compelled to own that, in the art of managing and forming the tender mind, they had no equals. Meanwhile they assiduously and successfully cultivated the eloquence of the pulpit. With still greater assiduity and still greater success they applied themselves to the ministry of the confessional. Throughout Catholic Europe the secrets of every government and of almost every family of note were in their keeping. They glided from one Protestant country to another under innumerable disguises, as gay cavaliers, as simple rustics, as Puritan preachers. They wandered to countries which neither mercantile avidity nor liberal curiosity had ever impelled any stranger to explore. They were to be found in the garb of mandarins, superintending the observatory at Peking. They were to be found, spade in hand, teaching the rudiments of agriculture to the savages of Paraguay. Yet, whatever might be their residence, whatever might be their employment, their spirit was the same, entire devotion to the common cause, implicit obedience to the central authority. None of them had chosen his dwelling-place or his avocation for himself. Whether the Jesuit should live under the arctic circle or the equator; whether he should pass his life in arranging gems and collating manuscripts at the Vatican, or in persuading naked barbarians in the southern hemisphere not to eat each other,—were matters which he left with profound submission to the decision of others. If he was wanted at Lima, he was on the Atlantic in the next fleet. If he was wanted at Bagdad, he was toiling through the desert with the next caravan. If his ministry was needed in some country where his life was more insecure than that of a wolf; where it was a crime to harbor him; where the heads and quarters of his brethren, fixed in the public places, showed him what he had to expect,—he went without remonstrance or hesitation to his doom. Nor is this heroic spirit yet extinct. When, in our own time, a new and terrible pestilence passed round the globe; when, in some great cities, fear had dissolved all the ties which hold society together; when the secular clergy had deserted their flocks; when medical succor was not to be purchased by gold; when the strongest natural affections had yielded to love of life,—even then the Jesuit was found

by the pallet which bishop and curate, physician and nurse, father and mother, had deserted, bending over infected lips to catch the faint accents of confession, and holding up to the last, before the expiring penitent, the image of the expiring Redeemer.

But with the admirable energy, disinterestedness, and self-devotion which were characteristic of the society, great vices were mingled. It was alleged, and not without foundation, that the ardent public spirit which made the Jesuit regardless of his ease, of his liberty, and of his life, made him also regardless of truth and of mercy; that no means which could promote the interest of his religion seemed to him unlawful, and that by the interest of his religion he too often meant the interest of his society. It was alleged that, in the most atrocious plots recorded in history, his agency could be distinctly traced; that, constant only in attachment to the fraternity to which he belonged, he was in some countries the most dangerous enemy of freedom, and in others the most dangerous enemy of order. The mighty victories which he boasted that he had achieved in the cause of the church were, in the judgment of many illustrious members of that church, rather apparent than real. He had, indeed, labored with a wonderful show of success to reduce the world under her laws, but he had done so by relaxing her laws to suit the temper of the world. Instead of toiling to elevate human nature to the noble standard fixed by divine precept and example, he had lowered the standard till it was beneath the average level of human nature. He gloried in multitudes of converts who had been baptized in the remote regions of the east; but it was reported that from some of these converts the facts on which the whole theology of the gospel depends had been cunningly concealed, and that others were permitted to avoid persecution by bowing down before the images of false gods, while internally repeating *Paters* and *Aves*. Nor was it only in heathen countries that such arts were said to be practiced. It was not strange that people of all ranks, and especially of the highest ranks, crowded to the confessionals in the Jesuit temples, for from those confessionals none went discontented away. There the priest was all things to all men. If he had to deal with a mind truly devout,

he spoke in the saintly tone of the primitive fathers; but with that very large part of mankind who have religion enough to make them uneasy when they do wrong, and not religion enough to keep them from doing wrong, he followed a very different system. Since he could not reclaim them from guilt, it was his business to save them from remorse. He had at his command an immense dispensary of anodynes for wounded consciences. In the books of casuistry which had been written by his brethren, and printed with the approbation of his superiors, were to be found doctrines consolatory to transgressors of every class. There the bankrupt was taught how he might, without sin, secrete his goods from his creditors. The servant was taught how he might, without sin, run off with his master's plate. The pander was assured that a Christian man might innocently earn his living by carrying letters and messages between married women and their gallants. The high-spirited and punctilious gentlemen of France were gratified by a decision in favor of dueling. The Italians, accustomed to darker and baser modes of vengeance, were glad to learn that they might, without any crime, shoot at their enemies from behind hedges. To deceit was given a license sufficient to destroy the whole value of human contracts and of human testimony. In truth, if society continued to hold together, if life and property enjoyed any security, it was because common sense and common humanity restrained men from doing what the society of Jesus assured them they might with a safe conscience do.

So strangely were good and evil intermixed in the character of these celebrated brethren; and the intermixture was the secret of their gigantic power. That power could never have belonged to mere hypocrites. It could never have belonged to rigid moralists. It was to be attained only by men sincerely enthusiastic in the pursuit of a great end, and at the same time unscrupulous as to the choice of means.

JEWS. Abraham received the name of Hebrew from the Canaanites among whom he dwelt. The derivation of the word is uncertain. Its signification before the time of Jacob, or Israel, is unknown, but it appears to have been applied afterward exclusively to the posterity of Jacob, and to have been synonymous with Israelites. After the Bab-

ylonish captivity the appellation was changed to Jews. Their history begins, of course, with Abraham.

After the call of Abraham, he went at first to Canaan, which God had promised to his posterity, taking with him Sarah his wife, and Lot, the son of his brother, and here led a wandering life, removing in search of pasture with his flocks, from place to place, and dwelling with his family in tents. By the bounty of the Lord, his wealth increased, and he became rich in flocks, in gold, and in silver. Under Isaac and Jacob, the Hebrews still formed a great nomadic family, without changing their habits and manners. Jacob had twelve sons, from whom sprang the twelve tribes of the Hebrew people. These were Reuben, Simeon, Levi, Dan, Judah, Naphtali, Gad, Asher, Issachar, Zebulun, Joseph, and Benjamin. Joseph, having been sold to some wandering merchants by his jealous brethren, was taken to Egypt, and rose to a high rank at the court of Pharaoh. This led to the emigration of his father's family to Egypt, about 1700 B.C. During the lifetime of Joseph, the Hebrews were well treated, but after his death a tyrannical king filled the throne, and the persecutions they endured threatened to annihilate the nation. God raised up a deliverer in the person of Moses, and the children of Israel, having left the land of Egypt, were conducted over the bed of the Red Sea, and afterward providentially preserved in the desert. At Sinai, the Lord promulgated his laws from the summit of that awful mountain. Notwithstanding the blessings which had been heaped upon them, the Hebrews murmured, and became idolatrous, and were in consequence punished for their sins. The various nations inimical to the Hebrews were repulsed with loss. Moses having died on Mount Nebo, before the entrance into the promised land, his place was filled by the warlike Joshua. The waters retired before the bearers of the ark, and the people crossed the Jordan in safety. The walls of the city of Jericho were destroyed by the Lord, and the inhabitants slain by the Israelites. The period of the judges abounded in heroic exploits of individual valor, among which those of Samson are the most celebrated. At length, about 1095 B.C., the monarchy was established, Saul being the first king. Saul achieved some brilliant

victories, but as he became disregarding of the counsels of the prophet Samuel, the latter privately anointed David, the son of Jesse, a valorous youth, whose fame eclipsed that of Saul. The reign of David extended from 1055 to 1015. It was rendered brilliant by victories over the Jebusites, Philistines, Amalekites, Idumeans, Moabites, Ammonites, and Zeba, but unhappy by the domestic misfortunes and crimes which embittered the heart of King David. Under Solomon, his son, whose reign extended from 1015 to 975, the nation attained a high degree of splendor and consequence, while his stern strength and pure integrity sank under the corrupting influence of wealth and luxury. Toward the latter part of his reign, Solomon, enervated by the pleasures of his seraglio, and enthralled by female favorites, permitted the worship of false gods, and forsook Him to whom he owed his glory. The revolt of the ten tribes under Jeroboam took place, while Rehoboam succeeded to the government of Judah and Benjamin. The ten tribes formed the kingdom of Israel, the latter that of Judah. Sichem at first, and afterward Samaria, was the capital of Israel, and Jerusalem that of Judah. The contest between the two states was furious, and not unequal. In general the kingdom of Judah preserved the worship of the true God, while that of Israel was idolatrous. The kingdom of Israel existed two hundred and fifty-four years after the separation, under nineteen kings, whose authority was gained and lost by violent revolutions. Shalmaneser, King of Assyria, ended the kingdom, and carried the people captive into Asia, B.C. 721.

The kingdom of Judah existed under twenty kings of the house of David, until 587 B.C., when Nebuchadnezzar took Jerusalem, and carried away the inhabitants captive. During the captivity flourished Daniel, Jeremiah, and other prophets, who were commissioned by God to inform the Hebrew people of the fate which awaited them. From the time of the captivity they are more often known under the name of Jews. Their captivity was terminated by Cyrus, King of Persia, who published an edict permitting all the Jews to return to their country, and to rebuild the temple of Jerusalem, 536 B.C. They placed the foundations of the temple;

but the Samaritans, inveterate enemies of the Jews, procured a suspension of their operations. Nevertheless, Darius, informed of the edict of Cyrus, permitted the completion of the temple. The Jews labored with such spirit, that, four years after, the walls of Jerusalem were rebuilt, and their worship re-established. Nehemiah, being chosen governor of Judea, neglected no exertions to maintain the public observance of the laws of God. Esther, a Jewish maiden, having found favor in the eyes of Ahasuerus, King of Persia, this monarch confirmed the immunities of the Jews, preserved them from massacre, and severely punished their implacable enemies.

In the time of the high-priest Onias, Seleucus, King of Syria, sent Heliodorus to seize all the gold of the temple. He came to Jerusalem and entered the temple, intending to obey the royal command. It was in vain that the high-priest represented to him that the treasures were deposits, destined for the support of the fatherless and widows. The legend runs that Heliodorus turned a deaf ear to his remonstrances, and was already on the threshold of the treasury, when he beheld a white horse, richly caparisoned, whose rider wore a terrible aspect, with armor of gold. At the same time Heliodorus was attacked by two young men of surpassing beauty, and would have been slain, but for the interposition of Onias, who implored the pardon of the Almighty, and offered up a sacrifice to appease his wrath.

Antiochus Epiphanes, or the Illustrious, the successor of Seleucus, an impious prince, deprived Onias of the sacerdotal office, and sold it to the highest bidder. He entered Jerusalem with a powerful army, and killed or enslaved 80,000 men. He had the boldness to enter the temple, and to bear away the altar and golden table, the golden candlestick, the precious vessels, and all the money that the treasury contained, and even undertook to abolish the religion of the Jews, forbidding them, on pain of death, to maintain their worship, and erecting the statue of Jupiter Olympius on the altar of the temple. The Jews were forced to attend the profane sacrifices, and compelled to eat the flesh of animals prohibited by their law. Under this

persecution many of the Jews yielded, but there were some who remained firm, in the midst of martyrdom.

Judas Maccabæus raised the standard of revolt, and rendered his name formidable to the enemies of the Jews, for, having collected an army of six thousand men, he performed prodigies of valor in defense of the religion and liberties of their fathers. He conquered and killed Apollonius, governor of Samaria, and the general of the Syrian army. Everywhere victory crowned his efforts, till the valiant leader fell in battle, after slaying many of his enemies. Jonathan and Simon, his brothers, emulated his glory. Afterward the Jews came under the rule of Rome. The Jews refused to recognize Jesus Christ, who was born in the reign of Herod, King of the Jews, as the Messiah. Christ foretold the destruction of Jerusalem, which was taken by Titus, A.D. 70, after a siege of unparalleled horror. This was the signal of the complete dispersion of the Jews, in fulfillment of the divine warning.

Their history in the middle ages is a tale of suffering. They were early dealers in money, and from kings and nobles they endured exactions that it must have required heavy usury to repay. To enumerate the cruelties put upon them, or barely mention the many massacres in which they perished, would exhaust a goodly volume. They were banished from England in 1290 by Edward I., and were shut out thenceforth till the time of Cromwell. From France they were several times driven, and as often recalled to be plundered again; they were finally expelled by Charles VI. In Spain their sufferings were greater even than elsewhere. For them the hungry fires of the inquisition were lit, and in 1492 Ferdinand and Isabella ordered them to depart from Spain within four months. Eight hundred thousand men, women, and children were thus driven forth from home. Multitudes perished. Portugal was the refuge of many, who had gold to purchase the liberty of tarrying there. The Portuguese monarch had cruel compassion upon them; his treaty with Spain forbade him to allow the Jews a permanent residence in his realm, and he thought to save some by making them Christians. With a promise of ships to bear them away, he beguiled them to gather at

Lisbon. There the orders were that the children should be torn from their parents, that they might be nurtured in the bosom of the true church. A scene of anguish followed. Many a father slew his son, rather than abandon him; and many a mother, pretending Christianity that she might not be exiled from a daughter, soon betrayed her insincerity, and was murdered by the tortures of the inquisition. Throughout Europe it was believed that in their rites the Jews crucified children, and whenever a distemper raged, the cry was that they had poisoned the wells and streams. Any such rumor was the watchword for their butchery, the plucking of their eyes or teeth, the extirpation of their homes, and the seizure of their estates. In modern times, these atrocities have ceased, but yet the Jew is too often the object of an unjust loathing, if not hatred.

JOAN OF ARC (JEANNE D'ARC), called the Maid of Orleans, was born of low parentage at Domremy, a village on the borders of Lorraine. When the affairs of France were in a deplorable state, and the city of Orleans was so closely besieged by the Duke of Bedford that its fall appeared inevitable, Joan claimed to have received a divine commission to expel the invaders. At this time, a belief in supernatural endowments was by no means uncommon, and, far from being confined to the lower classes, pervaded the minds of the loftiest and most pretending. Joan, on being introduced to Charles VII., offered to raise the siege of Orleans, and conduct her prince to Rheims, there to be crowned with the usual solemnities; at the same time demanding for herself a consecrated sword which had long hung suspended in the church of St. Catharine. Her request was granted, and she fulfilled her promises, entered Orleans with supplies in triumph, and appeared, clad in a splendid suit of armor, at the coronation of Charles, which took place in the cathedral of Rheims. The gallant maid, her mission done, now sought to retire into private life, but she was urged to stay. She yielded to the general wish with fatal facility; fatal, because, having been taken with the garrison of Compiegne, she was, to the disgrace of Bedford and the English, condemned to death as a witch, and burned at the stake, in the market-place of

Rouen, May 30th, 1431. She was never a servant, as English writers have represented, and was a lovely girl of eighteen when she first sought an audience of Charles. An authentic portrait, yet extant, shows that she possessed a face and figure of exquisite loveliness; a countenance to which a beaming eye, and a tender expression of melancholy, imparted an interest which rendered her fascination irresistible. She led the French to victory, but never stained her hand with bloodshed.

JOHN, King of England. [See PLANTAGENET.]

JOHNSON, SAMUEL, LL. D., one of the most eminent literary men of the eighteenth century in England, was born at Lichfield, in Staffordshire, in 1709, and was the son of a bookseller. He entered Pembroke College, Oxford, at the age of nineteen, but his father's losses compelled him to leave without taking a degree. For some years after leaving college, he was unsettled in his views, which, however, chiefly turned to literature. In 1735 he married Mrs. Porter, a mercer's widow of twice his own age; he describes the affair as a "love match on both sides." In 1737 he came to London in company with David Garrick, who had been one of his pupils, to seek his fortune. Here he supported himself by his pen, his first publication in London being a poem in imitation of one of Juvenal's satires. He was for many years a contributor to the *Gentleman's Magazine*. In 1747 he issued his plans for an English dictionary, a work which, when published, fully equaled the high expectations which had been formed of it. His periodical papers, "The Rambler" and "The Idler," displayed the talents of the author in a favorable light. The moderate success of the tragedy of "Irene" convinced Dr. Johnson that he was incapable of producing dramas which would reflect honor on his pen. His fine romance of "Rasselas" was written in the evenings of one week to defray his mother's funeral expenses. In 1762 he received a government pension of £300 a year. He published some political pamphlets against the revolted colonists of America, which, however, do not display very great argumentative powers. His last undertaking, "Lives of the Poets," was completed in

1781. He died December 13th, 1784, and was interred in Westminster Abbey, where a statue is erected to his memory.

His biography, by his intimate friend Boswell, is one of the best works of the kind ever written, and still continues to enjoy high popularity. Boswell said to Madame d'Arblay: "Yes, madam; you must give me some of your choice little notes of the doctor's; we have seen him long enough upon stilts; I want to show him in a new light. Grave Sam, and great Sam, and solemn Sam, and learned Sam—all these he has appeared over and over. Now I want to entwine a wreath of the graces across his brow; I want to show him as gay Sam, agreeable Sam, pleasant Sam; so you must help me with some of his beautiful billets to yourself."

JONES, JACOB, born in Delaware, 1770, entered the navy at the age of twenty-nine. He commanded the Wasp at the capture of the British brig Frolic, Oct. 18th, 1812. The next day the Wasp and her prize were taken by the Poictiers, a British seventy-four, and carried into Bermuda. Commodore Jones died at Philadelphia, August 3d, 1850.

JONES, JOHN PAUL, was a younger son of a gardener who dwelt at Arbigland, on Solway Frith, in Scotland. He was born July 6th, 1747, and when but a boy of twelve was apprenticed to a shipping merchant of White Haven, the principal port of the Solway. He made several voyages to Virginia; then his master was unfortunate in business; and at the age of sixteen he was left to control himself. Several White Haven vessels were engaged in the slave-trade; young Paul got the berth of third mate in one of them; at nineteen he had advanced to be first mate of the Two Friends, one of the largest White Haven vessels in the traffic. Then he was engaged for a time in the West India trade; finally he left Scotland forever, and abandoned sea for shore. When the Revolution broke out he was living in poverty near Fredericksburg, Va. He at once offered Congress his services in the navy then to be formed; and about this time, from reasons ever unknown, he added 'Jones' to his patronymic. He was commissioned as lieutenant, first on the list, in December, 1775, and was appointed to the Alfred, a clumsy merchantman that had been altered into a frigate of thirty guns. It

was the flagship of the small fleet of Commodore Hopkins; and on a bright morning, early in February, 1776, as the commodore came on board, Lieut. Jones with his own hands hoisted the first American ensign ever displayed on a man-of-war. It was of yellow silk, bearing the figure of a pine-tree, and the significant device of a rattlesnake, with the ominous words, "Don't tread on me!"

The gallantry, fearlessness, and value of Jones soon became proverbial, and early in August he was rewarded with a captain's commission. In 1777 he was put in command of the *Ranger* (a ship of eighteen guns just built for the service at Portsmouth, N. H.), hoisted the new flag of the stars and stripes, and sailed for France. The next spring he took the first of his famous cruises along the British coast, and made an unsuccessful attempt to burn the town of White Haven; for this his excuse was a desire to avenge some of the wanton burnings in America, and to teach the British "that not all their boasted navy could protect their own coasts;" but the attempt can not be justified. He visited the scenes of his boyhood, boldly anchored in the Solway at noon, and landed with a small party, intending to make a prisoner of the Earl of Selkirk, the benefactor of his father. But he was foiled by the nobleman's absence. Against his earnest remonstrances, the men insisted upon plundering the mansion of its plate. When the prizes were sold at Brest, Jones bought the silver and restored it, accompanied by an extravagant letter, to Lady Selkirk. His return to France was marked by a hot contest with the English sloop *Drake* off Carrickfergus, in which the *Ranger* was victorious. In expectation of the command of a larger vessel, Jones relinquished the *Ranger*. After gallant delay, the *Duc de Duras*, an old and unseaworthy ship of forty guns, was fitted out for him; in compliment to Dr. Franklin he named her *Bon Homme Richard*. More delay intervened, but at last, the 14th of August, 1779, he left L'Orient with a squadron of seven sail, for another cruise off the British coast. A heavy storm scattered the little fleet, but the *Bon Homme Richard* and the frigate *Alliance*, with two smaller vessels, after taking some prizes off the English and Irish shores, came together at Cape Wrath,

a northern point of Scotland. They spread terror along the eastern coast, and late in the afternoon of the 16th of September, the four vessels lay in the Frith of Forth, within sight of Edinburgh castle. Jones's intention was to seize the shipping at Leith, to menace the town with the torch, and obtain a heavy ransom "toward the reimbursement which Britain owed to the much injured citizens of the United States." Wild alarm spread along the threatened coast. Early the next morning the *Bon Homme Richard* was seen standing toward Kirkcaldy, on the northern shore. In an agony of fear the people gazed at her, and the odd minister of the place, kneeling on the beach, thus wrestled with the Lord: "Now, dear Laird, dinna ye think it a shame for ye to send this vile piret to rob our folk o' Kirkcaldy, for ye ken they're poor enow already, and hae naething to spare. The wa' the ween blaws, he'll be here in a jiffie, and wha kens what he may do? He's nae too good for ony thing. Mickle's the mischief he's dune already. He'll burn their hooses, tak' their very claes, and tirl them to the sark; and, waes me! wha kens but the bluidy villain may tak' their lives! The puir weemen are maist frightened out o' their wits, and the bairns skirling after them. I canna thol't it! I hae been lang a faithfu' servant to ye, Laird; but gin ye dinna turn the ween aboot, and blaw the scoundrel out o' our gate, I'll na staur a fit, but wull just sit here till the tide comes. Sae, tak' yere wull o't."

The wind veered, and Jones was forced to put to sea. A week later he fell in with a fleet of Baltic merchantmen, convoyed by the new ship *Serapis*, forty-four guns, and the Countess of Scarborough, twenty guns. Landais, the treacherous captain of the *Alliance*, who had caused Jones much trouble during the cruise, disobeyed all signals, and held his ship aloof. The *Vengeance* followed this cowardly example; while the *Pallas*, the other small vessel, engaged the Countess of Scarborough. The *Bon Homme Richard* and the *Serapis* battled together. Such another sea-fight as this of the 23d of September, 1779, off Flamborough Head, has never been seen. The breeze almost died away; and at twilight the ships were not within reach of each other's guns. They were so close to the shore that crowds of eager watchers gathered to witness

the spectacle. For a little while the curtain of night mantled them; then a full, bright moon came up, and the terrible struggle began. The fire of the *Serapis* made large havoc in the rotten timbers of the *Richard*, but in a few minutes the latter ran into her antagonist, the spars and rigging of both were entangled, and the great guns were almost useless. Jones was repulsed in a trial to board. His flag was hidden by the smoke. Pearson, captain of the *Serapis*, cried out, "Has your ship struck?" "I have not yet begun to fight," was the answer.

The ships yawned apart for a moment, and then lay broadside to broadside, the muzzles of the guns touching. Jones lashed his ship to the *Serapis*, and in this fierce embrace the awful cannonade went on. The fight raged with fiendish fury; the crew of the *Richard* suffered terrible loss, and their ship leaked badly. To add to their danger, the treacherous Alliance now came up and poured broadside after broadside into them. There could be no mistake or excuse for this dreadful villainy; the moonlight was bright, the position of the combatants clear. The courage of Jones did not falter, although his position was so critical, and his ship was slowly sinking. The hand-grenades of his marines set the *Serapis* on fire. Capt. Pearson had not the obstinacy of his foe, though he had fought with great bravery, and at last he surrendered to his really weaker enemy. "It is painful," he said to Jones, in a surly manner, "to deliver up my sword to a man who has fought with a halter around his neck." Jones preserved his temper, and courteously replied, as he returned the weapon, "Sir, you have fought like a hero; and I make no doubt but your sovereign will reward you in the most ample manner." He said rightly; George III. knighted Pearson for the bravery he here displayed. When Jones heard of this, he remarked, "Well, he deserves it; and if I fall in with him again, I will make a lord of him!"

The battle had raged three hours. Flames were now rapidly devouring both vessels. The *Bon Homme Richard* was damaged past recovery. The flames were extinguished on the *Serapis*, prisoners and men were all transferred to her, and the shattered wreck of the *Richard* went down beneath the billows.

The merchantmen under convoy had escaped, through the criminal conduct of the commanders of the Alliance and the Vengeance; but the Countess of Scarborough had yielded to the *Pallas* after an hour's fight, notwithstanding the nefarious Landais had fired into the latter, as he did into the *Richard*. After tossing about on the North Sea for ten days, Jones ran into the *Texel* with his little squadron and prizes, only a few hours before eleven British ships of war that had been sent after him appeared in the offing. His brilliant exploit excited great admiration at Amsterdam, and afterward at Paris. The French king gave him a sword of honor and a cross of the military order of merit. The American congress, eight years later, voted him a gold medal.

After the conclusion of peace, Jones, restless, and longing for action and adventure, accepted the post of rear-admiral in the Russian navy in 1788, and was employed against the Turks on the Black Sea. He soon, however, fell into disfavor with Potemkin, the favorite of Catharine, was granted leave of absence, and never recalled into service. He died of dropsy in the chest, July 18th, 1792, at Paris, aged only forty-five. His grave is unknown. He was a man of dauntless courage, and of great service to his adopted country. Among his most marked traits, an overweening vanity was conspicuous.

JONES, Sir WILLIAM, a poet, statesman, and oriental scholar, born in London, 1746, died in Hindostan, April 27th, 1794, aged forty-seven. His attainments in law and general science were profound and varied. As a linguist he has never been surpassed: he was the master of twenty-eight languages, and his knowledge extended over the literature and antiquities of which they were the key.

JONSON, BEN, was the posthumous son of a clergyman in Westminster, where he was born in 1574, about a month after his father's decease. His family was originally from Scotland, whence his grandfather removed to Carlisle, in the reign of Henry VIII. Benjamin received his education under the learned Camden, at Westminster school; and had made extraordinary progress in his studies, when his mother, who had married a bricklayer for her second husband, took him

away to work under his step-father. From this humble employment he escaped, by enlisting as a soldier in the army, then serving in the Netherlands against the Spaniards. An exploit which he here performed, of killing an enemy in a single combat, gave him room to boast ever after of a degree of courage which has not often been found in alliance with poetical distinction.

On his return, Jonson entered himself at St. John's College, Cambridge, which he was shortly obliged to quit, from the scanty state of his finances. He turned his thoughts to the stage, and applied for employment at the theatres; but his talents as an actor could only procure for him admission at an obscure playhouse in the suburbs. Here he had the misfortune to kill a fellow-actor in a duel, for which he was thrown into prison. The state of mind to which he was here brought, gave the advantage to a Popish priest in converting him to the Catholic faith, under which religion he continued for twelve years.

After his liberation from prison, he married, and applied in earnest to writing for the stage, in which he appears to have already made several attempts. His comedy of "Every Man in his Humor," the first of his acknowledged pieces, was performed with applause in 1596; after which he continued to furnish a play yearly, till his time was occupied by the composition of the masques and other entertainments by which the accession of James was celebrated. Dryden, in his "Essay on Dramatic Poetry," speaks of him as the "most learned and judicious writer which any theatre ever had."

In 1616 he published a folio volume of his works, which procured for him a grant from his majesty of the salary of poet-laureate for life, though he did not take possession of the post till three years after. Jonson was reduced to necessitous circumstances in the latter part of his life, though he obtained from Charles I. an advance of his salary as laureate. He died in 1637 at the age of sixty-three, being at that time considered as at the head of English poetry. He was interred in Westminster Abbey, where an inscription was placed over his grave, familiarly expressive of the reputation he had acquired among his countrymen: "O rare Ben Jonson." Six months after his death, a col-

lection of poems to his honor, by a number of the most eminent writers and scholars in the nation, was published, with the title of "Jonsonius Virbius; or the Memory of Ben Jonson, revived by the Friends of the Muses."

We subjoin his beautiful epitaph on the Countess of Pembroke, sister to Sir Philip Sidney.

"Underneath this marble herse
Lies the subject of all verse,
Sidney's sister, Pembroke's mother;
Death, ere thou hast slain another
Learn'd, and fair, and good as she,
Time shall throw his dart at thee."

JOSEPH II., Emperor of Germany, son of Francis I. and Maria Theresa, and brother of Marie Antoinette, was born in 1741. His father died in 1765, but he did not really reign till the death of his mother in 1780, when he became King of Hungary and Bohemia. Joseph made his reign conspicuous by his designs for the good of his subjects. He aimed at the most extensive and important reformations, but was not aware of the strength of those prejudices and evils which presented themselves in his path at the very outset, and continued to obstruct it throughout the whole of his career. The education of Joseph had been carefully attended to, and at the age of nineteen he was married to Isabella, infanta of Parma. In 1764 he was crowned King of the Romans. The death of his first wife, whom he loved with more than usual fondness, was a severe blow to him, but in 1765 he married the sister of the Elector of Bavaria. It was in this year that he ascended the throne, without encountering the slightest opposition. Having always displayed a military ambition, he was now happy in remodeling his armies and perfecting their discipline, not restricting his reformation to the army, but making it felt in all the departments of government. After having returned from a tour through his own dominions, and through Prussia, Italy, France, and Russia, he set apart one day in each week for hearing the complaints and petitions of all, even the meanest of his subjects. "It behooves me," said he, "to do justice; and it is my invariable intention to render it to all the world, without respect of persons." It is a pity that he forgot this maxim when he accepted the invitation of the royal anat-

omists, and assisted in the dismemberment of Poland, in 1772. Joseph encouraged the liberty of the press, and even permitted strictures to be made on his own conduct and measures, provided they were not couched in the language of coarse pasquinade. "If," said he, "they be founded in justice, we shall profit by them; if not, we shall disregard them."

Many curious adventures are said to have occurred to the emperor, when, as was his custom, he drove about in the garb of a private citizen. One day, as he was riding thus alone, he was accosted familiarly by a soldier, who mistook him for a man of the middle class, and asked the emperor to give him a ride. "Willingly," exclaimed Joseph; "jump in, comrade, for I am in something of a hurry." The soldier sprang into the cabriolet, and sovereign and subject sat side by side on the same seat. The soldier was loquacious. "Come, comrade!" said he, slapping the emperor familiarly on the back; "are you good at guessing?" "Perhaps I am," replied Joseph; "try me." "Well, then, my boy, conjure up your wits, and guess what I had for breakfast this morning." "Sour krout." "Come, none of that! try again, comrade." "Perhaps a Westphalia ham," said the emperor, willing to humor his companion. "Better than that!" exclaimed the soldier. "Sausages from Bologna, and Hockheimer from the Rhine?" "Better than that! d'ye give it up?" "I do." "Open your eyes and ears then," said the soldier bluntly; "I had a pheasant, by Jove! shot in the Emperor Joe's park, ha! ha!" When the exultation of the soldier had subsided, Joseph said quietly: "I want to try your skill in guessing, comrade. See if you can name the rank I hold." "You're a—no—hang it! you're not smart enough for a cornet." "Better than that," said the emperor. "A lieutenant?" "Better than that." "A captain?" "Better than that." "A major?" "Better than that." "General?" "Better than that." The soldier was now fearfully agitated; he had doffed his hat, and sat bareheaded; he could hardly articulate. "Pardon me, your excellency; you are field-marshal." "Better than that," replied Joseph. "Lord help me!" cried the soldier, "you're the emperor!" He threw himself

out of the cabriolet, and kneeled for pardon in the mud. The emperor often laughed over it heartily, and the soldier received a mark of favor which he could not forget.

On another occasion, Joseph, turning a corner shortly, ran the wheel of his vehicle against an old woman's fruit-stall, and upset it, scattering the good things in every direction. The ragged urchins in the immediate vicinity fell upon the tempting fruit, and hastily gathering it, ate it, mud and all. As soon as the old woman gained her feet, she gave utterance to a volley of abuse, and the emperor was glad to escape and permit the predatory youths of the suburbs to take their share of the vituperative epithets of the enraged fruit-seller. As soon as he had reached his palace, Joseph dispatched some of his officers to make reparation to the old woman. Surrounded by a group of men in splendid uniforms, the old lady was terrified when they informed her that the driver of the cabriolet was her emperor. Indistinct ideas of halts and executioners were flitting across her mind, when she was awakened to the reality by the sight of a purse full of gold pieces, which the officers threw upon her table. She opened her lips to bless the emperor, but his messengers had put spurs to their horses, and were seen galloping off in the distance. "I think," said the emperor, "she has no reason to complain; for she has been amply paid, and has had the pleasure of abusing me unmercifully, while I heard her with the patience of a saint."

Various events occurred to disturb the tranquillity of Joseph during his reign, and he died on the 20th of February, 1790.

JOSEPHINE (ROSE TASCHER DE LA PAGE-RIE) was born in Martinique, June 24th, 1763, and married at an early age to Viscount Beauharnais, who was executed in the reign of terror. Josephine married Bonaparte in 1796. She lived to see Napoleon raised to the zenith of his power, and then hurled from the summit he had gained. But at that hour of affliction the affectionate Josephine had no longer a right to be near the man she adored, for he had divorced her to marry Maria Louisa, from motives of policy and in hope of an heir. Josephine retired to her beautiful seat of Malmaison with the title of empress-queen-dowager. She was called

the star of Napoleon; and his better destiny forsook him when he cast off his amiable and lovely wife. She died May 29th, 1814, her last words being, "*L'île de l'Elbe—Napoleon!*" The poor mourned in her a faithful friend, the artists of the capital a kind and munificent patron, and the lovers of Napoleon the peerless woman who had graced his throne in the brightest moments of his career. Truly did the emperor say, "If I win battles, Josephine wins hearts."

JOSEPHUS, FLAVIUS, a Jewish historian, born A.D. 37. He signalized himself by supporting a siege of forty-seven days against Vespasian and Titus in a town of Judea. The city was finally taken by treachery, and thousands of the inhabitants were slain, the number of captives being only 1,200. Josephus saved his life by flying into a cave, and finally surrendered to Vespasian, who gave him his liberty, and treated him with great favor. Josephus was present at the siege of Jerusalem. He died A.D. 93, in the fifty-sixth year of his age.

JOORDAN, JEAN BAPTISTE, born in 1762, was a general of the French revolution, and became a marshal of the empire. He won the day at Fleurus, but he lost the battle of Vittoria. He died in 1833.

JUBA, the second of that name, was the son of Juba I. of Numidia, and was among the captives led to Rome to grace the triumph of the victorious Cæsar. He gained the hearts of the Romans by the courteousness of his manners, and Augustus rewarded his fidelity by giving him in marriage Cleopatra, the daughter of Antony and Cleopatra, and conferring upon him the title of King of Mauritania and making him master of all the territories which his father once possessed. His popularity was so great that the Athenians raised a statue to him, and the Ethiopians worshiped him as a divinity. He died A.D. 23.

JUGGERNAUT (lord of the world), a celebrated temple in Hindostan, on the coast of Orissa. The idol is a shapeless stone, with a hideous black face, diamonds for eyes, and crimson jaws yawning open. This is the representative of Vishnu, the preserver of the world. On days of festival, the idol is placed on a tower, sixty feet high, moving on wheels, beneath which the blinded Hin-

doos throw themselves on the ground and are crushed by the progress of the car. More than a million devotees seek this shrine annually, many of whom leave their bones whitening on the adjoining ways.

JUGURTHA, son of Mastanabal, murdered Hiempsal, the son of his uncle Micipsa, and exiled Adherbal, the brother of Hiempsal, to seat himself on the throne of Numidia. Adherbal supplicated the aid of the Romans, but the gold of Jugurtha procured a decision in his favor. Adherbal, who surrendered to the usurper, was inhumanly murdered, and the Roman people breathing vengeance against the murderer, the senate were constrained to declare war upon him. The Jugurthine war required an immense expenditure of blood and treasure, but Jugurtha was finally defeated by Marius, and starved to death in a Roman prison, 106 B.C. Then Numidia became a Roman province.

JULIAN the Apostate (FLAVIUS CLAUDIANUS), son of Julius Constans, the brother of Constantine the Great, was born at Constantinople. The massacre which attended the elevation to the throne of Constans, son of Constantine the Great, nearly proved fatal to Julian and his brother Gallus. The two brothers were privately educated together, and taught the doctrines of the Christian religion. Gallus received the instructions of his teachers with deference and submission; but Julian fed his dislike for Christianity by secretly cherishing a desire to become one of the votaries of paganism. He was banished to rule over Gaul, with the title of Cæsar, by Constans, and there he showed himself worthy of the imperial dignity by his prudence, valor, and the numerous victories he obtained over the enemies of Rome in Gaul and Germany. His mildness, as well as his condescension, gained him the hearts of his soldiers; and when Constans, to whom Julian became an object of suspicion, ordered him to send part of his forces to the east, the army immediately mutinied, and promised eternal fidelity to their leader, refusing to obey the order of Constans. They even compelled Julian, by threats and entreaties, to accept the title of emperor, and the death of Constans, which soon after happened, left him sole master of the Roman empire, A.D. 361.

His immediate disavowal of the doctrines of

TEMPLE OF JUPITER OLYMPIUS AT ATHENS.

Christianity procured Julian the title of the Apostate. His change of religious opinion was attributed to the austerity with which he had been taught the doctrines of Christianity, or, according to others, to the literary conversation and persuasive eloquence of some of the Athenian philosophers. After he had made his public entry into Constantinople, he determined to continue the Persian war, and check those barbarians, who had for sixty years derided the indolence of the Roman emperors. Having crossed the Tigris, he burned his fleet and boldly advanced into the enemy's country. He defeated the Persian forces, but died of a wound received in battle, A.D. 363, aged thirty-three years.

JUNIUS. From 1769 to 1772 a series of political letters appeared in Woodfall's *Public Advertiser*, at London, that by their force of invective, their keenness of sarcasm, and the clear, brilliant style in which they were couched, produced a powerful impression, and

they have since taken a place among the standard works in our language. Every effort that could be devised by the government, or prompted by private indignation, was made to discover their writer, but the authorship remains an unsolved mystery to this day. Perhaps they have been most generally ascribed to Sir Philip Francis; but they have also been plausibly assigned to Lord George Sackville, Edmund Burke, John Wilkes, William Gerard Hamilton (commonly called Single-speech Hamilton), Mr. Dunning (afterward Lord Ashburton), Gen. Charles Lee, the Duke of Portland, Mr. Adair, Rev. J. Rosenhagen, John Roberts, Charles Lloyd, Samuel Dyer, Hugh Boyd, Horne Tooke, Lord Chatham, Dr. Francis Glover, John Lewis De Solme, Rev. James Wilmot, Gibbon the historian, Suett the comedian, the Earl of Chesterfield, Daniel Wray, Earl Temple, Sir Robert Rich, Gov. Pownall, &c. "I am the depository of my own secret, and it shall perish with me," said Junius.

JUPITER, in mythology, the son of Rhea and Saturn, was concealed from his father, who devoured his offspring, and brought up in Crete, where he was nursed by the nymph Amalthea. He forced Saturn to surrender to him the empire of the world, which he shared among his brothers, giving the ocean to Neptune, and hell to Pluto, remaining himself master of the heavens; he was called the father of gods and men. The giants, descended from his uncle Titan, made war upon him, but were defeated. He gave Juno, his wife and sister, ample cause for jealousy, and from the multiplicity of his intrigues was almost literally the father of his people. He was generally represented with thunderbolts in his hand, the eagle at his side, his flowing hair encircled with a diadem. His figure was majestic, and a long beard added to the imposing aspect of his lofty countenance. Bulls, in preference to other animals, were sacrificed to him.

JUNOT, ANDOCHE, was born in 1771. At the siege of Toulon in 1794, Lieut. Bonaparte was dictating a dispatch on a drumhead to a sergeant of artillery: a ball struck the ground hard by, scattering the dirt all about. "Very lucky," gayly cried the sergeant, not flinching; "we need no sand." His bearing impressed the lieutenant to say, "What can I do for you?" "Everything!" said the sergeant; "you can change my worsted shoulder-knot into an epaulette." The lieutenant did more than this. Sergeant Junot became a marshal of the empire and Duke of Abrantes. He died in 1813.

JUSTIN MARTYR was born of pagan parents in Samaria about the beginning of the second century. While yet a young man he was converted to Christianity, his restless

mind having sifted the various philosophies of the Greeks, and wrote many treatises in defense of the faith upon which he settled. He suffered martyrdom in the reign of Marcus Antoninus, about A.D. 165.

JUSTINIAN I., surnamed the Great, Emperor of the East, celebrated as a lawgiver, was born in 483, of an obscure family. He shared the fortune of his uncle, Justin I., who, from a lowly station, was raised to the throne. Justinian flattered the people and the senate, and, in 527, on the death of his uncle, was proclaimed emperor. He gained great victories, and enacted admirable laws, but he loaded his subjects with taxes, and was severe to strangers, while the crimes of his own servants went unpunished. He died in 565, in the eighty-third year of his age. The digest of the Roman law, known as the Justinian code, is the great glory of his reign.

JUVENAL, DECIVS JUNIVS, flourished at Rome in the latter half of the first century. He was sent to Egypt by Domitian, who dreaded his satire, but returned under Trajan, in the eighty-second year of his age. His sixteen satires are powerful and caustic.

JUXON, WILLIAM, an English prelate, was born at Chichester, in 1582. In 1635 he was advanced to the post of lord high treasurer, which no churchman had held since the reign of Henry VII. This office he resigned in 1641, when it was admitted by all parties that he had conducted himself without reproach. After attending his royal master, Charles I., during his imprisonment in the Isle of Wight, and on the scaffold, he went into retirement; but at the restoration he was made Archbishop of Canterbury, and had the satisfaction of placing the crown on the head of Charles II. He died June 4th, 1663.

JUX

K.

KALMUCKS, a branch of the Mongol race, of great antiquity. Their tribes are scattered. In 1759 a part of them, consisting of eighteen hundred families, settled on the Volga, and placed themselves under the protection of the Russian government, to whom they paid voluntary allegiance. Others are settled in different parts. Many of them are Mohammedans. Their personal appearance is far from pleasing, and their habits are extremely rude.

KAMES. HENRY HOME (1696-1782), a Scotch lawyer and judge,—in which latter capacity, according to the custom of the country, he took a title as Lord Kames,—was conspicuous in the brilliant literary society of Edinburgh, and wrote several metaphysical and ethical treatises, the best of which is "The Elements of Criticism."

KANE, ELISHA KENT, was born at Philadelphia, Feb. 3d, 1820. The most remarkable trait of his boyhood was a love for feats of daring and difficulty. He resorted to the University of Virginia for a collegiate education, but was arrested midway in the course by startling manifestations of the disease which finally ended his life. For a long time his life was despaired of by his family, and when he recovered it was only to be informed that he might at any moment fall as suddenly as from a musket-shot. He was now in his eighteenth year, and about to commence the serious business of life with the knowledge that he had in his system a fatal disease which might suddenly terminate his earthly career at a moment's warning, and which was sure to be always a source of pain and suffering. His father said to him, "Elisha, if you must die, die in the harness," and he resolved to act in conformity with the advice, which was, in reality, a matter of necessity, for inaction was more injurious to him than constant exposure to dangers, and he found that the only way to combat with his enemy was to keep himself incessantly employed. There is the best authority for the opinion, according to his biographer, that his ailments had always in them a preponderating character of neuropathic disturbance. Even when he was com-

paratively free from the acute form of rheumatic disorder, his nerves were tingling and rioting with irritation. But in the midst of this nervous rioting he was calm, sedate, serious, and thoughtful. His friends believing that his disease rendered him unfit for the profession of an engineer, for which he had been preparing, he began the study of medicine. In his twenty-first year he was elected resident physician in the Pennsylvania Hospital. He attended strictly to his duties for six months, while he was laboring under so severe an attack of cardiac disease as to be unable to sleep in a horizontal position, and never closing his eyes at night without the feeling that the chances were against his ever opening them again in this world. He distinguished himself by his inaugural thesis on "Kystein," which attracted attention even among the savans of Europe. His father, being satisfied that the routine of a physician's life would be fatal to his son's constitution, obtained for him, without his knowledge, an appointment as a surgeon in the navy. He was greatly indisposed to the place, and the position he held on shipboard was always odious to him. His aversion to a sea life amounted to detestation; but he yielded to his father's wishes, and after his examination prepared himself cheerfully for his new duties.

He was appointed upon the diplomatic staff as surgeon to the first American embassy to China in 1843, when Mr. Cushing was sent out as commissioner. On the voyage out he had the advantage of stopping at Madeira and Rio Janeiro, at which latter place he improved his time by making an ascent of the eastern Andes, which rear their fantastic forms on the coast of Brazil. The notes which he made of this exploration were unhappily lost while he was traveling on the Nile. On the voyage from Rio to Bombay he employed himself assiduously in the study of navigation and modern languages. When the frigate arrived at Bombay, Mr. Cushing, who had gone out overland, intending to come on board at that port, had not come. Dr. Kane directly began to visit the caves of

Elephanta, and every other object of interest in the neighborhood, and then started on an elephant hunt in the island of Ceylon.

They reached Canton in July, 1844. Kane soon tired of the sluggishness of diplomacy in the celestial empire, and, obtaining leave of absence, set off to explore the Philippine Islands, which he effected mainly on foot. He was the first man who descended into the crater of Tael; lowered more than a hundred feet by a bamboo rope from the overhanging cliff, and clambering down some seven hundred more through the scoriæ, he made a topographical sketch of the interior of this great volcano, collected a bottle of sulphurous acid from the very mouth of the crater; and, although he was drawn up almost senseless, he brought with him his portrait of this hideous cavern, and the specimens which it afforded. The natives were much outraged at this impious invasion of the dwelling place of their deity, so that his life was also in peril from them.

After the departure of the embassy for home, he remained at Canton to establish himself as a physician; but, at the end of six months, he was brought down with the rice fever, and came near dying, recovering only after a long illness. He returned home overland. Before he reached Philadelphia, he had ascended the Himalayas, and triangulated Greece, on foot; he had visited Ceylon, the Upper Nile, and all the mythologic region of Egypt, traversing the route and making the acquaintance of the learned Lepsius, who was then prosecuting his archaeological researches. He twice narrowly escaped death; once in a skirmish with the Bedouins, in which he was wounded in the leg, and then from an attack of plague.

Dr. Kane would have resigned his post in the navy, had not honor forbidden this in view of the impending war with Mexico. He was ordered to the frigate United States, bound for the coast of Africa. Here he visited the slave factories, from Cape Mount to the river Bonny, and, through the infamous Da Souza, got access to the barracoons of Dahomey, and contracted, besides, the coast fever, from the effects of which he never wholly recovered. He came home invalided. Believing that his constitution was broken, and his health rapidly going, he called upon

President Polk, and demanded an opportunity for active service that might crowd the little remnant of his life with achievements in keeping with his ambition. He was charged with dispatches to Gen. Scott, of great moment and urgency, which must be carried through a region occupied by the enemy. Landed at Vera Cruz, he asked for an escort to convey him to the capital, but the officer in command had no troopers to spare: he must wait, or he must accept, instead, a band of ruffian Mexicans called the spy company, who had taken to the business of treason and trickery for a livelihood. He accepted them, and went forward. Near Puebla his troops encountered a body of Mexicans escorting a number of distinguished officers to Orizaba, among whom were Gen. Gaona, governor of Puebla, his son Maximilian, and Gen. Torejon, who commanded the brilliant charge of horse at Buena Vista. The surprise was mutual, but the spy company had the advantage of the ground. At the first instant of the discovery, and before the rascals fully comprehended their involvement, the doctor shouted in Spanish, "Bravo! the capital adventure! colonel, form your line for the charge!" And down they went upon the enemy; Kane and his gallant Kentucky charger ahead. Understanding the principle that sends a tallow candle through a plank, and that the momentum of a body is its weight multiplied by its velocity, he dashed through the opposing force, and turning to engage after breaking their line, he found himself fairly surrounded, and two of the enemy giving him their special attention. One of these was disposed of in an instant by rearing his horse, who, with a blow of his fore-foot, floored his man; and wheeling suddenly, the doctor gave the other a sword wound, which opened the external iliac artery, and put him *hors de combat*. This subject of the doctor's military surgery was the young Maximilian. The brief melee terminated with a cry from the Mexicans, "We surrender." Two of the officers made a dash for an escape: the doctor pursued them, but soon gave up the chase. When he returned, he found the ruffians preparing to massacre the prisoners. As he galloped past the young officer whom he had wounded, he heard him cry, "Senor, save my father." A

group of the guerilla guards were dashing upon the Mexicans, huddled together, with their lances in rest. He threw himself before them; one of them transixed his horse, another gave him a severe wound in the groin. He killed the first lieutenant, wounded the second lieutenant, and blew a part of the colonel's beard off with the last charge of his six-shooter; then grappling with them and using his fists, he brought the party to terms. The lives of the prisoners were saved, and the doctor received their swords. As soon as General Gaona could reach his son, who lay at a little distance from the scene of the last struggle, the doctor found him sitting by him, receiving his last adieu. Shifting the soldier and resuming the surgeon, he secured the artery, and put the wounded man in a condition to travel. The ambulance got up for the occasion contained at once the wounded Maximilian, the wounded second lieutenant, and the man that had prepared them for slow traveling, himself on his litter, from the lance wound received in defense of his prisoners! When they reached Puebla, the doctor's wound proved the worst in the party. He was taken to the government house, but the old general, in gratitude for his generous services, had him conveyed to his own house. General Childs, the American commander at Puebla, hearing of the generosity of his prisoner, discharged him without making any terms, and the old general became the principal nurse of his captor and benefactor, dividing his attentions between him and his son, who lay wounded in an adjoining room. This illness of our hero was long and doubtful, and he was reported dead to his friends at home.

After the war was ended, he was sent to the Mediterranean in the store-ship *Supply*, and, while on this voyage, was seized with an attack of tetanus, the most terrible of all disorders, when, to use his own expression, his body felt as though it was composed of fiddle-strings, and a host of devils were tuning him up. He had not the faintest hope of recovering from this disorder, but he did, and returned to Norfolk, not quite dead, in September, 1849. After a brief rest at home, he was employed in the coast survey.

He was bathing in the tepid waters of the Gulf of Mexico, on the 12th of May, 1850, when he received his telegraphic order to

proceed forthwith to New York, for duty upon the Arctic expedition. In nine days from that date he was beyond the limits of the United States on his dismal voyage to the polar seas. Of this first American expedition in search of Franklin, he was the surgeon, naturalist, and historian. It returned, after an absence of sixteen months, for nine of which it had been fast in the ice, without accomplishing the generous object for which it had gone. The commander of this expedition, Lieutenant De Haven, had never even heard of Doctor Kane until they met for the first time in the navy yard at Brooklyn, the day before they set sail. When he took the measure of the man upon whom the health of himself and crew must depend, he felt a misgiving that he was not the right man for the place; if there had been time, he would have requested the department to exchange him for some more promising person. He made up his mind to send the feeble-looking little doctor back as soon as he got to Greenland, if he should hold out so long. The doctor was as usual sea-sick. When they touched at Whale-fish Island, after having been thirty-one days at sea, an English transport ship was found there, in which De Haven benevolently proposed to send the doctor home as an invalid. The doctor looked at the commanding officer in blank dismay, and firmly said, "I won't go." De Haven soon knew him better.

Immediately after his return, Kane set about organizing a second expedition. Of this he was the commander. He left New York, in the *Advance*, a brig of 120 tons, May 30th, 1853, his destination being the highest point attainable through the northward of Baffin's Bay, in search of Sir John Franklin. He found a temperature of 100° below the freezing point, and verified by actual sight the fact of an open sea in this frigid region, which had long been questioned. The farthest point attained was a precipitous headland, named Cape Independence, in lat. $81^{\circ} 22' N.$, and long. $65^{\circ} 35' W.$ From it the western coast was seen stretching to the north, with an iceless horizon, and a heavy swell rolling on with white caps. Two islands on the eastern threshold of this sea were named after Sir John Franklin and his companion, Captain Crozier. On the west,

the coast was observed to be mountainous, and the farthest distinctly sighted point was a lofty mountain, estimated to be in lat. $82^{\circ} 30'$, and long. 66° west (approximate), which Dr. Kane proposed to name after Sir Edward Parry, who, "as he has carried his name to the most northern latitude yet reached, should have in this, the highest known northern land, a recognition of his pre-eminent position among Arctic explorers."

The winter of 1854 passed with many trials, and in the following summer it became necessary to abandon the brig and retreat. On the 17th of May, Dr. Kane commenced his return in sledge-boats. On the 6th of August, in eighty-three days after leaving the ship, through many perils and escapes, he arrived at Upernavik, where the Danish authorities gave him a cordial welcome. He returned to New York on the 11th of October, 1855, after an absence of thirty months. Anxiety had begun to be felt for the safety of his party, and in the spring an expedition had been sent out for its relief, under command of Lieut. Hartstene. Kane and Hartstene fell in with each other, Sept. 18th, and returned to New York together. The thrill of delight which greeted the former's appearance was saddened by the low state of his health. He visited England, hoping to be recuperated by the journey. Lady Franklin had hoped he might lead yet one more party upon the search which her devoted heart could not yet give over. But Kane's strength sank lower and lower. A resort to the mild clime of Cuba was of no avail. He died at Havana, Feb. 16th, 1857.

Dr. Kane was five feet six inches in height, and in his best health weighed about one hundred and thirty-five pounds. His complexion was fair, and his hair soft and silken, of a dark chestnut color. His eyes were dark gray, but lustrous, with a wild light, when his feelings were excited; and when he was in the torrent-tide of enraptured action, the light beamed from them like flashing scimitars, and in an impassioned moment they gleamed frightfully. In company, when the talk ran glib, and everybody would be heard, he was silent, but terse and elastic as a steel spring under pressure. He had a way of looking attentive, docile, and as interested as a child's fresh wonder; but no one would

mistake the expression for the admiration of inexperience or incapacity; yet it cheated many a talker into a self-complaisance that lost him the opportunity of learning something of the man he wanted to know. Idle curiosity never made anything of him, and he did nothing at gossip; but inquiry with an aim was never disappointed.

His biographer, Dr. Elder, asked him once, after his return from his last Arctic expedition, "for the best proved instance that he knew of the soul's power over the body; an instance that might push the hard-baked philosophy of materialism to the consciousness of its own idiocy." He paused a moment, and then said with a spring, "The soul can lift the body out of its boots, sir. When our captain was dying,—I say dying, I have seen scurvy enough to know,—every old scar in his body was a running ulcer. If conscience festers under its wounds correspondingly, hell is not hard to understand. I never saw a case so bad that either lived or died. Men die of it usually long before they are so ill as he was. There was trouble aboard; there might be mutiny. So soon as the breath was out of his body we might be at each others' throats. I felt that he owed even the repose of dying to the service. I went down to his bunk, and shouted in his ear, 'Mutiny, captain, mutiny!' He shook off the cadaveric stupor: 'Set me up,' he said, 'and order these fellows before me.' He heard the complaint, ordered punishment, and from that hour convalesced. Keep that man awake with danger, and he wouldn't die of anything until his duty was done."

Kane was a Christian gentleman. Dr. Elder makes a declaration which few biographers can make: "Bless the memory of the man for the happiness I have this day, in declaring that I have not been obliged to suppress a letter or a line for the sake of his fame." His brief life was crowded with action and adventure. He visited India, Africa, Europe, South America, the islands of the Pacific, and twice penetrated the Arctic region to the highest latitudes attained by civilized man. He encountered the extremest perils of sea and land, in every climate of the globe; he discharged in turn the severest duties of the soldier and the seaman; attached to the United States navy as a surgeon, he

nevertheless engaged at one time in the coast survey of the tropical ocean, and in a month or two we find him exploring the frigid zone; and all the while that his personal experiences had the character of romantic adventure, he was pushing them in the spirit of scientific and philanthropic enterprise, while suffering from an organic disease which might snap his thread of life at any moment.

KANSAS was organized as a territory of the United States in 1854. It includes a vast tract of country, stretching west to the crests of the Rocky Mountains; but its richest part lies along the western boundary of Missouri, and thence westward for a hundred and fifty miles. This district is watered by the Missouri, the Kansas and its tributaries, and by the many headwaters of the Osage and the Arkansas; it is a prairie country, the timber being chiefly confined to the banks of the streams; though these are so numerous that the unwooded tracts are seldom more than five miles across. The prairies are all rolling, and in some spots hilly. The soil is a rich, black loam. Coal crops out on many of the water-courses, and may be found to be abundant. The climate of Eastern Kansas resembles that of Kentucky and Missouri: it is warm in summer, and in winter mild, with now and then a few severe frosty and stormy days and nights. The wet season is in May and June, when the rivers fill, and some overflow their banks. The fall is the driest season of the year. Snow in winter rarely exceeds two or three inches in depth, and soon disappears. The greater part of the territory is salubrious, being high and dry. The low, marshy grounds form but a small portion of Kansas, and consequently there is but little danger from malaria.

The face of the country is a continual succession of undulating ridges and valleys. In the western section, there is every variety of soil and aspect, and the scenery rises to great sublimity and grandeur. There are sparkling streams and placid lakes, and an amount of water-power surpassing that of any settled portion of the United States.

The area is 114,793 square miles.

Kansas is a portion of the great tract of country ceded to the United States by France in 1803, known as the Louisiana purchase, and including also the states of Louisiana,

Arkansas, Missouri, Iowa, and Minnesota, and the Indian and Nebraska territories. After the adoption of the policy of Indian removals, the domain of Kansas, except a small part reserved for the original inhabitants, was set apart as the abode of bands who had been removed from their ancient hunting grounds east of the Mississippi. Here were placed the Wyandots, the Potawatomes, the Kickapoos, the Shawnees, and other tribes, the smoke of whose wigwams once wreathed among the forests and prairies north-west of the Ohio. Some of these Indians became partly civilized, had farms, and lived much in the fashion of the poorer class of Western settlers. They had been induced to remove hither by the promise that this should be their permanent home. But the overland emigration to Oregon and California, passing directly through their territory, made its value known; the tide of emigration reached the border; the fine country was seen with greedy eyes; and the necessity of a communication with the Pacific shore, and of a settled country along the road, gave a plausible excuse for a speedy occupation. Treaties were concluded with several of the Indian tribes, by which large tracts were opened to settlers; and in May, 1854, the territories of Kansas and Nebraska were organized by act of Congress. The violent contest that sprang up between proslavery men and the friends of free labor to obtain the shaping of the destiny and institutions of this fertile empire, impelled an unprecedented tide of emigrants over the borders, while it led to many cruel wrongs and unhappy disorders. Civil war desolated the infant settlements, and the blood of freemen was poured upon the soil.

In 1858 gold was discovered at Pike's Peak, among the mountains in the western section of the territory. A large emigration rushed thither the next spring. Multitudes returned disappointed, penniless, and starving. The final result of the Kansas struggle was, that it was admitted to the Union as a free state, Jan. 29, 1861. Its capital is Topeka, and its population in 1860 was 107,206.

Leavenworth, on the Missouri, three miles below Fort Leavenworth, is the largest town in Kansas; it contains 10,000 inhabitants. Lawrence has 5,000 inhabitants.

KANT, IMMANUEL, a distinguished metaphysician, was born at Königsberg, in Prussia, April 21st, 1724, and there resided during his long and tranquil life, dying Feb. 24th, 1804.

KARS, a town of Turkish Armenia, renowned for its defense by Gen. Williams with 15,000 Turks, three months' provisions, and three days' ammunition, against the Russian general Mouravieff with an army of 40,000 infantry and 10,000 cavalry, from June 18th to Nov. 25th, 1855. The sufferings of the garrison were very great from cholera and want of food. On the 29th of September, the Russians assaulted, four times gaining the redoubt, and being as often driven back. Their loss was above 6,000; that of the garrison 800. They continued the siege, and on the 25th of November famine compelled the garrison to capitulate. The British government made the gallant defender a baronet, with the title, Sir William Fenwick Williams of Kars.

KATSBACH, a river of Silesia, near which a battle was fought Aug. 26th, 1813, between the Prussians under Blücher and the French under Macdonald. This was a part of the great conflict known as the battle of Dresden.

KAUFMAN, ANGELICA, an eminent French female painter; died 1807, aged sixty-seven.

KAUNITZ, WENCELAUS ANTHONY, Prince of, a great statesman of Austria, and the able counselor of Maria Theresa, born in 1711, died in 1794.

KEAN, EDMUND, one of the greatest tragedians that ever trod the English stage, was born in London, 1787. He came upon the boards while yet a lad, and his promise in elocution attracting the attention of Dr. Drury, that gentleman placed him at Eton, where he remained three years. After various provincial appearances, he made his debut as Shylock, at Drury Lane, Jan. 26th, 1814. The house was thin, but enough were present to render a verdict of fame, which crowded audiences thereafter stamped with approval. Kean visited America in 1820, and again soon after. The career of this meteor in the dramatic firmament was marked by many errors and weaknesses. The same impulsiveness in which they often originated, was the spring to profuse charities and large-hearted benevolence. He died in England, May 15th, 1833.

His son, Charles Kean, inherited a large share of his talents, while endowed with more prudence and stability.

KEATS, JOHN, was born in London, Oct. 29th, 1796, and in youth was apprenticed to a surgeon. The seeds of consumption were in his frame, and when "Endymion," his first poem, was savagely cut up in the *Quarterly Review*, such was the agony of the sensitive poet that he ruptured a blood vessel in the lungs. The disease progressed apace; it was not to be checked by the warm Italian clime to which he resorted; the poet "felt the daisies already growing over him," and died at Rome, Dec. 27th, 1820.

KEITH, JAMES, a field-marshal in the Russian service, was born in Scotland, in 1696. In 1715 he joined the Pretender, and was wounded at the battle of Sheriffmuir, but made his escape to France. From Paris he went to Spain, and obtained a command in the Irish brigade; but, on accompanying the Spanish embassy to Russia, he entered into the service of that state, was promoted to the rank of lieutenant-general, and invested with the order of the Black Eagle. By his skill Oczagora was taken; and, in the war with Sweden, he materially contributed to the victory of Wilmanstrand, and the taking of Åland. He had, afterward, a share in raising Elizabeth to the throne; but, not being rewarded according to his services, he left Petersburg for Prussia, where the king made him governor of Berlin, and field-marshal. He was killed at the battle of Hochkirchen, Oct. 14th, 1758. Such was the esteem he won, even from opponents, that Count Daun and Count Lacy, the Austrian commanders, wept at the sight of his lifeless remains, and ordered their burial with military honors.

KELLERMANN, FRANCIS CHRISTOPHER, Duke of Valmy, a general of the French revolution, was born at Strasburg, in 1735. His victory at Valmy, over the Austrians and Prussians, Sept. 20th, 1792, was the first of the series of victories the French were destined to win. After the fall of Napoleon, Kellermann made his peace with the restored dynasty, and died in 1820.

KEMBLE, JOHN PHILIP, was born in Lancashire, 1757. He came of a theatrical family: Roger, his father, was a country manager; Sarah, his sister, was Mrs. Siddons, than

which need more be said of her? Charles and Stephen, his brothers, were actors well liked. John, in his classic rendering of characters in tragedy, approached the greatness of his sister. He died at Lausanne, Feb. 26th, 1823, of a paralytic attack.

KENT, JAMES, one of America's greatest jurists, was a native of Dutchess county, N. Y., and born July 31st, 1763. He graduated at
